

1

00:00:03,460 --> 00:00:06,320

\h Astronaut Nicole Stott: Jeff and I are here today working on some robotics operations,

2

00:00:06,320 --> 00:00:11,010

\h some training for some of the robotics that we'll be doing on the space station

3

00:00:11,010 --> 00:00:15,210

\h with the new Japanese cargo carrier called the HTV.

4

00:00:15,210 --> 00:00:20,520

\h This will be one of the many robotics tasks that we have on-board with the HTV

5

00:00:20,520 --> 00:00:25,940

\h as well as other robotics activities going on just across the station in general.

6

00:00:25,940 --> 00:00:29,840

\h This one is kind of cool because we get to use two of the arms that are on station now,

7

00:00:29,840 --> 00:00:36,040

\h both the SSRMS and then the new JEM robotic manipulator system,

8

00:00:36,040 --> 00:00:41,290

\h and today we're training how we would move one of these external pallets

9

00:00:41,290 --> 00:00:48,710

\h from the location it would be on on the Japanese Laboratory Module on the outside of that module,

10

00:00:48,710 --> 00:00:55,320

\h and we'll take it from the Japanese arm, and that arm will hand it off to the US SSRMS,
