

1
00:00:04,056 --> 00:00:11,736

As many of you are aware this past Saturday celebrated the full moon for this month with the moon

2
00:00:11,736 --> 00:00:16,196

at that time being the closest to the Earth. Usually that happens

3
00:00:16,196 --> 00:00:22,396

about once a year. There's one of the closer passes and provided a unique opportunity

4
00:00:22,396 --> 00:00:26,446

for the crew aboard the International Space Station to capture some video

5
00:00:26,916 --> 00:00:34,016

of what is affectionately known as the "supermoon" on this past Saturday evening.

6
00:00:34,146 --> 00:00:42,096

The full moon rose on the horizon and the crew captured some very unique views of the moon
