

1
00:00:02,870 --> 00:00:04,710
This is Mission Control Houston.

2
00:00:04,710 --> 00:00:09,680
The Expedition 31 crew no
doubt down in the cupola,

3
00:00:09,680 --> 00:00:12,160
taking a look at Dragon.

4
00:00:12,160 --> 00:00:17,190
It's getting close to flying
directly underneath the station.

5
00:00:17,190 --> 00:00:21,720
There's still about a mile
and a half between Dragon

6
00:00:21,720 --> 00:00:24,140
and the International
Space Station.

7
00:00:24,140 --> 00:00:28,260
But this crew onboard the
orbiting complex getting a look

8
00:00:28,260 --> 00:00:31,200
at something that nobody
else in space has seen,

9
00:00:31,200 --> 00:00:34,460
which is the first
private spacecraft to fly

10
00:00:34,460 --> 00:00:36,550
up toward the International
Space Station.

11
00:00:36,550 --> 00:00:43,110

As these two fly in parallel
it's important to note

12

00:00:43,110 --> 00:00:45,340

that the last time we saw
an American spacecraft

13

00:00:45,340 --> 00:00:48,330

from this standpoint
was almost a year ago

14

00:00:48,330 --> 00:00:51,490

as space shuttle
Atlantis bid farewell
