

EveryWear is a new personal assistant for astronauts, improving data collection and saving time.

1
00:00:17,830 --> 00:00:15,110

[Music]

2
00:00:20,950 --> 00:00:17,840

[Applause]

3
00:00:23,670 --> 00:00:20,960

so everywhere is uh basically making use

4
00:00:25,509 --> 00:00:23,680

of the ipads that are currently used on

5
00:00:26,550 --> 00:00:25,519

a daily basis by the astronaut on board

6
00:00:29,349 --> 00:00:26,560

iss

7
00:00:30,950 --> 00:00:29,359

and we get inside this ipad and we have

8
00:00:33,190 --> 00:00:30,960

a dedicated app

9
00:00:35,430 --> 00:00:33,200

that collects physiology and medical

10
00:00:37,590 --> 00:00:35,440

data so this is really bringing to the

11
00:00:39,590 --> 00:00:37,600

space station something that

12
00:00:43,270 --> 00:00:39,600

most of the people here are used to do

13
00:00:46,229 --> 00:00:43,280

on earth is using a dedicated ipad or

14

00:00:49,110 --> 00:00:46,239

iphone or any smartphone

15

00:00:51,110 --> 00:00:49,120

supports applications that help to

16

00:00:53,510 --> 00:00:51,120

collect data

17

00:00:55,670 --> 00:00:53,520

so it can be through the touchscreen

18

00:00:57,590 --> 00:00:55,680

interface but can be also all the

19

00:00:58,980 --> 00:00:57,600

wearable sensors that are coming

20

00:01:07,510 --> 00:00:58,990

together with it

21

00:01:09,990 --> 00:01:07,520

[Music]

22

00:01:13,590 --> 00:01:10,000

this is new in the sense that on board

23

00:01:23,510 --> 00:01:13,600

iss it is really the start of developing
