

**OVER SIZE LOAD**

1

00:00:00,149 --> 00:00:07,149

Hi, I'm Yvette Aponte of NASA Kennedy, you're going Inside KSC!

2

00:00:07,630 --> 00:00:12,450

The new "ride" of NASA astronauts to deep space is, literally, moving closer to its

3

00:00:12,450 --> 00:00:14,209

maiden voyage. The Orion

4

00:00:14,209 --> 00:00:18,820

spacecraft "rolled over" from where it was built by Lockheed Martin, the Neil Armstrong

5

00:00:18,820 --> 00:00:19,650

Operations and

6

00:00:19,650 --> 00:00:24,359

Checkout Building, to the nearby Payload Hazardous Servicing Facility, where it'll be fueled

7

00:00:24,359 --> 00:00:25,169

for its uncrewed

8

00:00:25,169 --> 00:00:31,109

Exploration Flight Test-1 in December. EFT-1 will check out systems Orion'll need to take

9

00:00:31,109 --> 00:00:32,009

humans to places

10

00:00:32,009 --> 00:00:34,170

like asteroids and Mars.

11

00:00:34,170 --> 00:00:40,360

In low-Earth orbit, the crew of the International Space Station awaits its next resupply mission,

12

00:00:40,360 --> 00:00:41,660

SpaceX-4.

13

00:00:41,660 --> 00:00:46,800

Two payloads bound for the orbiting lab were prepared here at Kennedy: the BRIC-19 plant-research

14

00:00:46,800 --> 00:00:47,980

study, and

15

00:00:47,980 --> 00:00:54,010

the ISS-RapidScat "scatterometer" that'll observe ocean winds.
