

1

00:00:00,310 --> 00:00:07,129

Hey I'm Jack Fox of Kennedy Space Center lets go Inside KSC.

2

00:00:07,129 --> 00:00:10,910

More lettuce and cabbage seeds are bound for the International Space Station after

3

00:00:10,910 --> 00:00:16,589

scientists at Kennedy placed them carefully inside 18 "pillows" specially designed to

4

00:00:16,589 --> 00:00:19,359

allow seed growth in microgravity.

5

00:00:19,359 --> 00:00:25,050

The small pillows will go into orbit aboard the SpaceX CRS-7 mission.

6

00:00:25,050 --> 00:00:30,679

Astronauts will tend the plants as they grow inside the Veggie experiment.

7

00:00:30,679 --> 00:00:36,290

The 3-mile-long shuttle landing facility at Kennedy, known as the SLF, has been signed

8

00:00:36,290 --> 00:00:38,800

over to Space Florida for the management of its

9

00:00:38,800 --> 00:00:40,540

every day workings.

10

00:00:40,540 --> 00:00:45,460

The SLF is a unique facility originally built to host the landings of the space shuttle

11

00:00:45,460 --> 00:00:46,340  
fleet.

12  
00:00:46,340 --> 00:00:51,280  
Numerous companies have been using it in recent  
years for aerospace evaluations and that

13  
00:00:51,280 --> 00:00:53,550  
is expected to continue.

14  
00:00:53,550 --> 00:00:58,600  
It is also popular for automotive research  
and development since it is a very safe, wide-open

15  
00:00:58,600 --> 00:01:02,960  
concrete area that gives optimum testing conditions.
