

1

00:00:00,099 --> 00:00:07,149

Hello I'm Stephanie Martin at Kennedy Space Center and let's go Inside KSC

2

00:00:07,149 --> 00:00:11,460

Engineers in the Space Station Processing Facility tested the mechanisms that will connect

3

00:00:11,460 --> 00:00:17,520

Boeing's CST-100 spacecraft with the second International Docking Adapter.

4

00:00:17,520 --> 00:00:21,920

The IDA, as it's called, will be taken to the space station on a future cargo resupply

5

00:00:21,920 --> 00:00:22,920

mission.

6

00:00:22,920 --> 00:00:27,060

It will be one of two connection points for Commercial Crew spacecraft visiting the orbiting

7

00:00:27,060 --> 00:00:29,520

laboratory.

8

00:00:29,520 --> 00:00:34,310

The Kepler space observatory may have discovered the most Earth-like planet yet outside the

9

00:00:34,310 --> 00:00:36,609

solar system, NASA announced recently.

10

00:00:36,609 --> 00:00:42,019

Launched from Kennedy in 2009, Kepler has found more than a thousand planets outside

11

00:00:42,019 --> 00:00:47,589

our solar system and given astronomers reason

to believe the cosmos is filled with worlds

12

00:00:47,589 --> 00:00:51,499

orbiting most of the stars in the universe.
