

1

00:00:00,800 --> 00:00:07,480

Food grown in space... Harvested and eaten
by NASA astronauts... For the first time ever!

2

00:00:07,490 --> 00:00:12,349

It's more than a gardening experiment.
It's a step closer to Mars.

3

00:00:12,349 --> 00:00:17,539

This is the first step to kinda of answering
those questions: What will we grow on Mars

4

00:00:17,539 --> 00:00:18,650

and how will we do it?

5

00:00:18,650 --> 00:00:24,210

Cultivating a technology making deep space
missions possible... Giving astronauts the

6

00:00:24,210 --> 00:00:27,099

ability to grow their own food.

7

00:00:27,099 --> 00:00:31,119

For the first time to have astronauts eat
what they grow in space, it's just so exciting

8

00:00:31,119 --> 00:00:32,640

to be a part of that.
