

**Orion Shipped to Denver for More Testing**

1

00:00:00,480 --> 00:00:05,790

Hey I'm Josephine Pereira of Kennedy Space Center let's go Inside KSC.

2

00:00:05,790 --> 00:00:12,389

The launch platform and service tower for the Space Launch System rocket and Orion spacecraft

3

00:00:12,389 --> 00:00:16,900

completed a round of modifications to strengthen the Mobile Launcher for the weight of the

4

00:00:16,900 --> 00:00:20,390

largest booster since the Saturn V.

5

00:00:20,390 --> 00:00:26,060

The 400-foot-tall ML will be the starting point for SLS missions that will lift astronauts

6

00:00:26,060 --> 00:00:30,289

to deep space destinations including Mars in the future.

7

00:00:30,289 --> 00:00:36,350

The first Orion to perform a flight test was packed up at Kennedy and shipped out to Lockheed

8

00:00:36,350 --> 00:00:40,260

Martin's Denver facility for more testing.

9

00:00:40,260 --> 00:00:45,080

The spacecraft has been pored over from all angles following its December mission to see

10

00:00:45,080 --> 00:00:48,440

how it will behave while carrying astronauts through deep space.
