

08-005: Mate Connector

04:34:14

6

77

Instructions

Locate avionics male and female connector parts. Make the connection and confirm that seal is secure.

Complete Step

← 08-004: Insert Backshell

08-006: Test Connection →

1
00:00:00,000 --> 00:00:04,440
The Vehicle Assembly Building is not
only the world's tallest single story

2
00:00:04,440 --> 00:00:08,809
building but it's the epicenter for
engineers, technicians and ground

3
00:00:08,809 --> 00:00:13,719
operations. These individuals strive to
create for a better tomorrow and they need

4
00:00:13,719 --> 00:00:18,420
tomorrow's technology to do it today. The
number of wearables out there is growing

5
00:00:18,420 --> 00:00:24,500
extremely fast. We really did find a gap in
current technology to sink our teeth in.

6
00:00:24,500 --> 00:00:31,119
We've learned that we need a high-quality communication device. In
my 30 years as an engineer out here

7
00:00:31,119 --> 00:00:37,000
I don't think I have seen a project progress faster than this IDEAS project.

8
00:00:37,000 --> 00:00:43,129
This is a device built for the user. If they don't love it we won't feel like we've done our jobs.

9
00:00:43,129 --> 00:00:47,090
As we continue to meet with the users we are getting to
share that future with them

10
00:00:47,090 --> 00:00:51,770
And soon we'll be sending our device into the
field with the users. Working in the lab

11
00:00:51,770 --> 00:00:56,000

is one thing but working on the job is everything.

12

00:00:56,000 --> 00:00:58,050

To my knowledge there's nothing like this

13

00:00:58,050 --> 00:01:02,550

out there it's very specialized for this
industry. I'm very excited about the IDEAS
