

1

00:00:01,180 --> 00:00:07,169

Hey I'm NASA Kennedy's Presha Knight taking you Inside KSC.

2

00:00:07,169 --> 00:00:11,440

The first stage of a United Launch Alliance Atlas V arrived at Cape Canaveral Air Force

3

00:00:11,440 --> 00:00:16,640

Station ahead of the December 3rd launch of the next cargo resupply mission to the International

4

00:00:16,640 --> 00:00:17,440

Space Station.

5

00:00:17,440 --> 00:00:23,440

An Enhanced Cygnus spacecraft built by Orbital ATK will carry about 7,100 pounds of gear

6

00:00:23,440 --> 00:00:25,590

and supplies to the space-based laboratory.

7

00:00:25,590 --> 00:00:30,650

The central column of the Crew Access Tower under construction for missions on Boeing's

8

00:00:30,650 --> 00:00:37,950

CST-100 Starliner spacecraft reached 200 feet high at Space Launch Complex 41.

9

00:00:37,950 --> 00:00:42,280

Workers at an offsite construction yard also connected the tower's Crew Access Arm to

10

00:00:42,280 --> 00:00:46,530

the White Room. The two components will be tested extensively before they arrive at the

11

00:00:46,530 --> 00:00:50,960

launch pad. Both will bridge the gap from the tower to the spacecraft and allow astronauts

12

00:00:50,960 --> 00:00:57,530

to safely board the Starliner as its stands atop United Launch Alliance's Atlas V rocket.
