

1

00:00:00,260 --> 00:00:05,750

Hi! I'm NASA Kennedy's Mary Kirkland, and we're going Inside KSC!

2

00:00:07,020 --> 00:00:12,720

The next space station supply mission, SpaceX CRS-8, is set to launch Friday aboard

3

00:00:12,730 --> 00:00:18,050

the Falcon 9 rocket. It will deliver nearly 7,000 pounds of science, crew supplies and

4

00:00:18,050 --> 00:00:24,250

hardware inside the Dragon capsule. Payloads include plant pillows for the Veg-03 experiment,

5

00:00:24,250 --> 00:00:29,529

rodents for a medical study and an expandable module called BEAM; short for the Bigelow

6

00:00:29,529 --> 00:00:31,629

Expandable Activity Module.

7

00:00:32,460 --> 00:00:36,680

Work platforms continue to arrive at the Vehicle Assembly Building in anticipation of building

8

00:00:36,690 --> 00:00:42,929

NASA's Space Launch System rocket. Delivery of this platform brings the total to 10 platforms,

9

00:00:42,929 --> 00:00:47,539

or half of the work platforms delivered to Kennedy. They will provide access for testing

10

00:00:47,539 --> 00:00:50,439

and processing of the SLS and Orion spacecraft.
