

1
00:00:00,299 --> 00:00:07,000

I'm NASA Kennedy's Bob Holl, taking you inside KSC!

2
00:00:07,000 --> 00:00:11,440

Employees are back at work this week as Kennedy recovers from Hurricane Matthew.

3
00:00:11,440 --> 00:00:14,720

The powerful Category 3 storm struck last week.

4
00:00:14,720 --> 00:00:19,659

Matthew's eye remained just offshore, passing within 20 to 25 miles of the spaceport early

5
00:00:19,659 --> 00:00:22,589

in the morning on Friday, October 7.

6
00:00:22,600 --> 00:00:29,150

Winds as high as 118 knots were detected 100 feet above the ground at Launch Pad 39B, with

7
00:00:29,150 --> 00:00:31,119

75-knot winds at the surface.

8
00:00:31,119 --> 00:00:35,809

Some center facilities suffered damage, but there was no damage to flight hardware.

9
00:00:35,809 --> 00:00:39,030

Employees returned to work October 11.

10
00:00:39,030 --> 00:00:43,719

NOAA's GOES-R weather satellite safely rode out the storm in the Astrotech payload processing

11
00:00:43,719 --> 00:00:49,030

facility in nearby Titusville, and the United

Launch Alliance Atlas V rocket for that mission

12

00:00:49,030 --> 00:00:51,030

continues to come together.

13

00:00:51,030 --> 00:00:55,260

The rocket's first-stage booster was delivered to Cape Canaveral Air Force Station on Sunday

14

00:00:55,260 --> 00:00:58,030

aboard an Antonov cargo aircraft.

15

00:00:58,030 --> 00:01:02,570

GOES-R is slated to launch from Space Launch Complex 41 in November.
