

1
00:00:03,110 --> 00:00:01,829
what we do in the event that there's an

2
00:00:04,789 --> 00:00:03,120
anomaly

3
00:00:06,630 --> 00:00:04,799
number one we try to keep the anomalies

4
00:00:08,150 --> 00:00:06,640
to an absolute minimum but if something

5
00:00:10,150 --> 00:00:08,160
unexpected happens with the launch

6
00:00:12,150 --> 00:00:10,160
vehicle of the spacecraft we'll take a

7
00:00:14,629 --> 00:00:12,160
small team of experts in spacecraft

8
00:00:16,630 --> 00:00:14,639
launch vehicle launch site over to a

9
00:00:18,630 --> 00:00:16,640
special net the anomaly net and talk

10
00:00:20,230 --> 00:00:18,640
through the problem the anomaly net is

11
00:00:22,390 --> 00:00:20,240
communications net that is preserved

12
00:00:24,230 --> 00:00:22,400
exclusively for the use of the anomaly

13
00:00:27,109 --> 00:00:24,240

team and there we will work out the

14

00:00:28,790 --> 00:00:27,119

steps to identify the problem resolve it
