

**INSIDE
KSC!**

1

00:00:00,659 --> 00:00:05,830

Hi, I'm NASA Kennedy's Amanda Griffin and I'm taking you Inside KSC!

2

00:00:05,830 --> 00:00:10,849

The last of the major components of a United Launch Alliance Delta IV Heavy rocket were

3

00:00:10,849 --> 00:00:14,259

delivered last week aboard the company ship, Mariner.

4

00:00:14,259 --> 00:00:18,480

The rocket's second stage, along with the third and final first-stage booster core,

5

00:00:18,480 --> 00:00:20,440

arrived together at Port Canaveral.

6

00:00:20,440 --> 00:00:25,010

Each piece was carefully offloaded, then transported to processing facilities at Launch Complex

7

00:00:25,010 --> 00:00:27,929

37 at Cape Canaveral Air Force Station.

8

00:00:27,929 --> 00:00:32,080

The Delta IV Heavy is slated to launch NASA's Parker Solar Probe next year.

9

00:00:32,080 --> 00:00:36,470

Kennedy is taking precautions ahead of the possible arrival of Hurricane Irma during

10

00:00:36,470 --> 00:00:37,950

the next few days.

11

00:00:37,950 --> 00:00:42,010

The powerful storm is currently predicted

to affect Florida as a possible Category 4

12

00:00:42,010 --> 00:00:43,520

or 5 major hurricane.

13

00:00:43,520 --> 00:00:48,850

In October 2016 the spaceport was affected by Hurricane Matthew, which passed just offshore

14

00:00:48,850 --> 00:00:51,110

as a Category 3 storm.

15

00:00:51,110 --> 00:00:55,329

Kennedy's Damage Assessment and Recovery Team, or DART, identified all the needed repairs

16

00:00:55,329 --> 00:01:00,040

- such as damaged roofs, water intrusion and power outages.

17

00:01:00,040 --> 00:01:02,920

Kennedy returned to normal operations a few days later.
