

1

00:00:00,380 --> 00:00:04,650

Hi, I'm Trent Smith, Veggie project manager here at NASA's Kennedy Space Center.

2

00:00:04,650 --> 00:00:07,520

And with Veggie, we're answering questions of science about what type of plants we can

3

00:00:07,520 --> 00:00:10,870

grow in space to supplement astronauts' diets.

4

00:00:10,870 --> 00:00:16,740

We've planted 18 plant growth pillows with new crops we've never grown in space before.

5

00:00:16,740 --> 00:00:21,519

Those crops include Dragoon lettuce and extra dwarf Pak Choy, which were first identified

6

00:00:21,519 --> 00:00:24,839

and tested by Fairchild Challenge down in South Florida.

7

00:00:24,839 --> 00:00:28,609

And we also have Wasabi Mustard Green and Red Russian Kale.

8

00:00:28,609 --> 00:00:33,770

These plants are being tested for long-duration human exploration to supplement nutrients

9

00:00:33,770 --> 00:00:35,140

that degrade over time.
