

A detailed 3D rendering of the Gateway Lunar Outpost in space. The central element is the Power Service Module (PSM), a large cylindrical structure with a textured metallic surface. Attached to the PSM are the Habitation and Logistics Outpost (HALO) modules, which are spherical and feature various external instruments and antennas. Two large, rectangular solar panel arrays are extended from the PSM, showing a grid-like pattern of photovoltaic cells. In the background, a smaller satellite or probe is visible, connected to the main structure by a thin tether. The entire scene is set against a dark, star-filled space background.
