

1

00:00:00,060 --> 00:00:03,870

NASA made the final selection for three of the competitors and the top three

2

00:00:03,870 --> 00:00:08,980

designs at the fourth ground tournament received a ride on the SLS rocket.

3

00:00:08,980 --> 00:00:12,540

We're going to space. Excited might be an understatement. It's an amazing

4

00:00:12,540 --> 00:00:16,500

opportunity. We built it, we designed it, we engineered everything and we're one

5

00:00:16,500 --> 00:00:20,820

of the few people who have ever in the history of mankind gotten to touch

6

00:00:20,820 --> 00:00:24,520

something, work on something, design something, that will fly out past the Moon

7

00:00:24,520 --> 00:00:28,800

and beyond. It was such a feeling of pride the moment they announced our name.

8

00:00:28,800 --> 00:00:32,480

What comes next is we're actually building the CubeSat, getting it prepared

9

00:00:32,480 --> 00:00:36,880

for launch. But once you're in space the 13 CubeSats will be ejected.

10

00:00:36,880 --> 00:00:41,879

We're racing to the Moon and racing to deep space. There's that grand prize off in

11

00:00:41,879 --> 00:00:46,230

the distance of winning a million plus  
dollars for achieving lunar orbit or

12

00:00:46,230 --> 00:00:49,680

getting a certain distance from  
Earth and still being able to

13

00:00:49,680 --> 00:00:52,600

communicate back. I'm pretty confident  
in what we've put together so far.
