

1  
00:00:18,240 --> 00:00:15,870  
yeah remember we just talked about

2  
00:00:21,570 --> 00:00:18,250  
pressure differentials that figure the

3  
00:00:23,850 --> 00:00:21,580  
difference in pressure come on power we

4  
00:00:40,470 --> 00:00:23,860  
can get out of their rockets well their

5  
00:00:55,790 --> 00:00:40,480  
rocket is just like this balloon you

6  
00:02:01,590 --> 00:00:58,310  
to started accelerating here at KSC

7  
00:02:52,600 --> 00:02:48,070  
Oh Jules moving around in the gas right

8  
00:02:53,830 --> 00:02:52,610  
now it's shrinking but what's happening

9  
00:02:58,120 --> 00:02:53,840  
to those molecules that were moving

10  
00:03:07,150 --> 00:02:58,130  
around really really fast baby they are

11  
00:03:10,030 --> 00:03:07,160  
they're slowing down he didn't sleep

12  
00:03:11,949 --> 00:03:10,040  
with his arms out as he hasn't now or he

13  
00:03:13,479 --> 00:03:11,959

can tuck him inside and here's the

14

00:03:15,430 --> 00:03:13,489

pillow on the back so if he needs the

15

00:03:17,110 --> 00:03:15,440

pillow for his head he can do that are

16

00:03:22,150 --> 00:03:17,120

there any questions about blinking his

17

00:03:34,100 --> 00:03:22,160

face to get the pillow like at the
