

1
00:00:06,470 --> 00:00:04,870
the cygnus is going to be docking or

2
00:00:11,030 --> 00:00:06,480
being birthed to

3
00:00:14,870 --> 00:00:12,790
again four latches will reach out grab

4
00:00:16,550 --> 00:00:14,880
on to sickness and pull it in

5
00:00:18,870 --> 00:00:16,560
the crew will be monitoring that they

6
00:00:22,230 --> 00:00:18,880
will be sending the commands

7
00:00:24,470 --> 00:00:22,240
to engage all 16 bolts

8
00:00:26,070 --> 00:00:24,480
at least the first step of it

9
00:00:27,029 --> 00:00:26,080
and then the team here in mission

10
00:00:29,109 --> 00:00:27,039
control

11
00:00:30,870 --> 00:00:29,119
the position known as oso the operations

12
00:00:33,110 --> 00:00:30,880
support officer

13
00:00:35,430 --> 00:00:33,120

will be responsible for the rest of the

14

00:00:36,630 --> 00:00:35,440

bolt tightening it is a multi-step

15

00:00:39,990 --> 00:00:36,640

process they have to go through to do

16

00:00:42,310 --> 00:00:40,000

that and it takes a little bit of time

17

00:00:43,830 --> 00:00:42,320

but cygnus will be officially

18

00:00:45,190 --> 00:00:43,840

installed on the station once that

19

00:00:46,389 --> 00:00:45,200

second stage capture the latches

20

00:00:48,549 --> 00:00:46,399

actually does take place and of course

21

00:01:02,709 --> 00:00:48,559

we'll notify you that of that whenever

22

00:01:06,149 --> 00:01:04,710

the robotics officer in mission control

23

00:01:08,630 --> 00:01:06,159

here in houston confirming that there's

24

00:01:45,030 --> 00:01:08,640

about a meter now separating

25

00:01:49,030 --> 00:01:46,230

houston

26

00:01:54,069 --> 00:01:49,040

station on cbn

27

00:01:59,030 --> 00:01:55,910

with that

28

00:02:01,030 --> 00:01:59,040

at 705 am central time we will call the

29

00:02:02,230 --> 00:02:01,040

installation of the orbital sciences

30

00:02:03,590 --> 00:02:02,240

signal to the international space

31

00:02:05,350 --> 00:02:03,600

station complete

32

00:02:07,990 --> 00:02:05,360

second stage capture has been wrapped up

33

00:02:10,070 --> 00:02:08,000

by the crew of expedition 38 so cygnus

34

00:02:11,830 --> 00:02:10,080

now officially installed

35

00:02:14,670 --> 00:02:11,840

on the international space station at

36

00:02:17,990 --> 00:02:14,680

705 am central time the two spacecraft

37

00:02:19,350 --> 00:02:18,000

260 miles above earth just to the
