

1  
00:00:00,229 --> 00:00:01,850  
You know it's not easy being Pluto.

2  
00:00:01,850 --> 00:00:04,750  
It's cold and dark out there, so far from  
the sun.

3  
00:00:04,750 --> 00:00:06,460  
It's now a dwarf planet.

4  
00:00:06,460 --> 00:00:09,389  
And no one talks seriously about colonizing  
it.

5  
00:00:09,389 --> 00:00:12,230  
But Pluto's luck is about to change.

6  
00:00:12,230 --> 00:00:16,640  
NASA's New Horizons mission is exploring  
the limits of our solar system, and PLUTO

7  
00:00:16,640 --> 00:00:19,420  
and its moons are the star of the show.

8  
00:00:19,420 --> 00:00:25,140  
After traveling 3 BILLION miles in more than  
9 years, the New Horizons spacecraft will

9  
00:00:25,140 --> 00:00:27,650  
fly by Pluto on July 14th.
