

STENNIS SPACE CENTER

1
00:00:00,170 --> 00:00:05,190

My name is Barry Robinson, and I'm the Engineering Program Manager for the B-2 Restoration Build-out

2
00:00:05,190 --> 00:00:18,520

and activation of the B-2 test stand for the SLS core stage and this is my office. (Music)

3
00:00:18,520 --> 00:00:24,210

The project that we're working on right now, involves the SLS core stage. Where we'll

4
00:00:24,210 --> 00:00:29,460

"green Run" the core stage here at Stennis Space Center. The core stage is the center

5
00:00:29,460 --> 00:00:34,449

portion of the vehicle. It does not include the Orion capsule but it does include the

6
00:00:34,449 --> 00:00:37,550

four RS25 engines which were formerly Space Shuttle's main engines.

7
00:00:37,550 --> 00:00:41,609

What really excites me the most about this project is the utilization of new fabrication

8
00:00:41,609 --> 00:00:46,179

techniques, new technology. We're rebuilding electrical systems everything that was here

9
00:00:46,179 --> 00:00:51,749

from the sixties that has to be rebuilt or restored. We're rebuilding our piping systems

10
00:00:51,749 --> 00:00:54,709

our high pressure industrial water systems which were used for thermal cooling and also
