

NASA'S JOURNEY TO

# MARS

#JOURNEYTOMARS

1

00:00:00,000 --> 00:00:04,500

My name is Charles Bolden, I am actually the NASA Administrator.

2

00:00:15,500 --> 00:00:23,500

When people ask me about space technologies that I think are important or things that really grip me the first th

3

00:00:23,500 --> 00:00:30,300

That's the game changing technology that we need to make travel to Mars easier

4

00:00:30,340 --> 00:00:38,500

on the human being because we can theoretically cut the transit time, if we can cut it in half we significantly lim

5

00:00:38,500 --> 00:00:46,500

The most important reason for us to delve into exploration, particularly deep space exploration is because of th

6

00:00:46,500 --> 00:00:57,500

that it compels us to develop and almost always they turn out to be technologies that serendipitously answer q

7

00:00:57,500 --> 00:01:05,040

Now because of the work we've been doing in water regeneration systems on board The International Space S

8

00:01:05,120 --> 00:01:09,800

we can actually put some of these water purification systems out into the world.

9

00:01:09,800 --> 00:01:17,500

You probably hear me talk a lot about what I do and why I get excited about it but I'm most excited because thi

10

00:01:17,500 --> 00:01:22,500

we're trying to blaze the trails so that you can do something that humanity has never done before and

11

00:01:22,500 --> 00:01:27,500

will give you something that you can one day sit down with your children and grandchildren
