

1  
00:00:01,540 --> 00:00:02,640  
Earth.

2  
00:00:04,140 --> 00:00:05,360  
Home.

3  
00:00:06,240 --> 00:00:08,800  
Of all the planets NASA has explored,

4  
00:00:08,800 --> 00:00:12,720  
none\hhave\hmatched the dynamic complexity of our own.

5  
00:00:15,520 --> 00:00:16,420  
Deserts.

6  
00:00:16,420 --> 00:00:18,220  
Tropical forests.

7  
00:00:18,220 --> 00:00:19,200  
Icy poles.

8  
00:00:19,940 --> 00:00:22,340  
Massive storms rage over land and oceans.

9  
00:00:23,100 --> 00:00:25,840  
A unique\hatmosphere protects and insulates us.

10  
00:00:26,540 --> 00:00:29,000  
Liquid water spans its vast surface.

11  
00:00:29,540 --> 00:00:32,280  
And a delicate balance of systems gives way

12  
00:00:32,280 --> 00:00:33,940  
to a kaleidoscope of life.

13  
00:00:35,940 --> 00:00:38,640

Earth\his a very special place.

14

00:00:39,080 --> 00:00:41,180

From the vantage point of space,

15

00:00:41,180 --> 00:00:43,340

the perspective\hof sky\hand sea,

16

00:00:43,340 --> 00:00:44,960

and all across the land,

17

00:00:44,960 --> 00:00:47,700

we study our planet not only to learn about it,
