

**Women's**

**History**

**Month**

1

00:00:00,969 --> 00:00:05,330

When we think of the women of NASA, we often think of the legends.

2

00:00:05,330 --> 00:00:09,910

Like those who became the first American women to launch into space.

3

00:00:09,910 --> 00:00:12,810

But the list doesn't stop there.

4

00:00:12,810 --> 00:00:19,220

Thousands of us have been bold in our pursuit of knowledge, exploration, and discovery – both

5

00:00:19,220 --> 00:00:21,890

in the spotlight and behind the scenes.

6

00:00:21,890 --> 00:00:24,779

And every day, we're pushing the envelope further.

7

00:00:24,779 --> 00:00:31,509

In the past year alone, we conducted the first, all-woman spacewalk, broke records for the

8

00:00:31,509 --> 00:00:37,630

longest single spaceflight by a woman, and added six women to our astronaut corps.

9

00:00:37,630 --> 00:00:43,620

Behind the scenes, we made other accomplishments like piloting observatories, leading

10

00:00:43,620 --> 00:00:47,930

missions to places we've only dreamed of and so much more.

11

00:00:47,930 --> 00:00:49,830

But this is just the beginning.

12  
00:00:49,830 --> 00:00:57,460  
Soon, we will go even farther: directing launches,  
taking our first steps on the Moon with the

13  
00:00:57,460 --> 00:01:02,040  
Artemis Program and making groundbreaking  
discoveries.

14  
00:01:02,040 --> 00:01:08,640  
Inspiring the future explorers, scientists  
and engineers who will one day take our first

15  
00:01:08,640 --> 00:01:11,790  
steps on  
Mars.

16  
00:01:11,790 --> 00:01:17,080  
During the first all-woman spacewalk, astronaut  
Jessica Meir said something we should all

17  
00:01:17,080 --> 00:01:19,850  
keep  
in mind: "There's been a long line of

18  
00:01:19,850 --> 00:01:23,780  
female scientists, explorers, engineers and  
astronauts and

19  
00:01:23,780 --> 00:01:28,210  
we have followed in their footsteps to get  
us where we are today."
