14,200,620

1

00:00:01,260 --> 00:00:08,500

At NASA, we're working toward our goal of landing the first woman and next man on the Moon by 2024

2

00:00:09,060 --> 00:00:16,640

Then over the next decade, the Artemis program will build a sustainable presence on the Moon ...

3

00:00:17,700 --> 00:00:20,080

NASA is looking for companies to collect lunar samples

4

00:00:21,440 --> 00:00:25,760

To meet NASA's requirements, a company would need to collect a small amount of

5

00:00:25,760 --> 00:00:29,200

lunar soil or rocks from any location on the lunar surface ...

6

00:00:30,560 --> 00:00:35,600

provide imagery to NASA of the collection with location data

7

00:00:35,600 --> 00:00:39,760

and transfer ownership to NASA

8

00:00:41,280 --> 00:00:47,600

The collection and transfer will be a proof of concept for conducting space commerce on the Moon

9

00:00:47,840 --> 00:00:51,640

Then commercial space innovators and entrepreneurs can identify new ways to

10

00:00:51,640 --> 00:00:54,960

invest in human exploration and development on the Moon
