

1

00:00:00,000 --> 00:00:06,000

He is considered the most brilliant mind of the 20th century.

2

00:00:06,000 --> 00:00:13,000

His brain was wired in a different way than normal human beings.

3

00:00:13,000 --> 00:00:18,000

With radical theories that redefine the forces of nature.

4

00:00:18,000 --> 00:00:22,000

We thought we had a pretty good understanding of how the universe worked.

5

00:00:22,000 --> 00:00:24,000

Einstein showed that we were just wrong.

6

00:00:24,000 --> 00:00:30,000

But was Albert Einstein's genius somehow otherworldly?

7

00:00:30,000 --> 00:00:35,000

Any time that there is an individual with extraordinary gifts,

8

00:00:35,000 --> 00:00:38,000

is it possible that they're a little bit more than human?

9

00:00:38,000 --> 00:00:43,000

And could that genius unlock the secrets of the universe?

10

00:00:43,000 --> 00:00:48,000

It's Einstein's theories, which allows for the real possibility of time travel.

11

00:00:48,000 --> 00:00:52,000

Millions of people around the world believe

12

00:00:52,000 --> 00:00:56,000

we have been visited in the past by extraterrestrial beings.

13

00:00:56,000 --> 00:00:59,000

What if it were true?

14

00:00:59,000 --> 00:01:04,000

Did ancient aliens really help to shape our history?

15

00:01:04,000 --> 00:01:09,000

And if so, might evidence of alien contact

16

00:01:09,000 --> 00:01:15,000

help to unlock the mystery behind the genius of Albert Einstein?

17

00:01:22,000 --> 00:01:50,700

Episode

18

00:01:52,000 --> 00:01:56,000

May 29, 1919.

19

00:01:56,000 --> 00:01:59,000

During a rare total solar eclipse,

20

00:01:59,000 --> 00:02:06,000

astrophysicist Arthur Eddington photographs the deflection of starlight around the darkened sun

21

00:02:06,000 --> 00:02:12,000

to try and prove Albert Einstein's much-disputed theory of general relativity.

22

00:02:13,000 --> 00:02:19,000

The theory of general relativity says light will bend in a gravitational field.

23

00:02:19,000 --> 00:02:26,000

So when the eclipse blocks out the sun, the stars close to the sun can now be seen,

24

00:02:26,000 --> 00:02:34,000

and if the light bends, they'll be in a slightly different position.

25

00:02:35,000 --> 00:02:44,000

Einstein was exactly right to light-bend just as much as he predicted it would bend.

26

00:02:44,000 --> 00:02:50,000

Newspapers around the world had headlines saying Einstein's theory was vindicated,

27

00:02:50,000 --> 00:02:55,000

and in fact space and time were a lot stranger than we had imagined.

28

00:02:58,000 --> 00:03:03,000

In his lifetime, Albert Einstein was a worldwide celebrity,

29

00:03:03,000 --> 00:03:06,000

whose name personified the word genius.

30

00:03:06,000 --> 00:03:12,000

His groundbreaking discoveries redefined Isaac Newton's laws of physics

31

00:03:12,000 --> 00:03:18,000

and created a completely new understanding of how the universe works.

32

00:03:18,000 --> 00:03:26,000

Before Einstein, physicists viewed space and time as simple, unchanging, static ideas

33

00:03:26,000 --> 00:03:32,000

that objects existed in and that events took place in.

34

00:03:32,000 --> 00:03:37,000

According to Einstein, the existence of matter and energy in space can change its shape,

35

00:03:37,000 --> 00:03:40,000

it can warp time, it can distort it.

36

00:03:40,000 --> 00:03:46,000

And his theory of relativity totally upended everything we thought about these most fundamental of physical concepts.

37

00:03:46,000 --> 00:03:52,000

Before his theory of relativity, our understanding of space was equivalent to a time

38

00:03:52,000 --> 00:03:55,000

when we believed the Earth was flat essentially.

39

00:03:55,000 --> 00:04:02,000

Einstein's theory of relativity expanded our understanding of the universe on that level.

40

00:04:03,000 --> 00:04:07,000

Albert Einstein was a genius, and his genius was looking at this stuff

41

00:04:07,000 --> 00:04:10,000

and just thinking about it from a completely different angle.

42

00:04:10,000 --> 00:04:14,000

And that's what really allowed him to make huge progress in areas that other people

43

00:04:14,000 --> 00:04:17,000

had been able to make up to that point.

44

00:04:17,000 --> 00:04:23,000

But what was the origin of Einstein's revolutionary scientific breakthroughs?

45

00:04:23,000 --> 00:04:31,000

Was it a product of his innate gifts, or might it have come from somewhere else?

46

00:04:33,000 --> 00:04:39,000

Albert Einstein was born on March 14th, 1879 in Ulm, Germany.

47

00:04:39,000 --> 00:04:46,000

As a child, he displayed an unusual interest in the less tangible forces of the world.

48

00:04:46,000 --> 00:04:51,000

His father, when he was ill one time, showed him a compass.

49

00:04:51,000 --> 00:04:54,000

And Einstein, as a child, was so amazed.

50

00:04:54,000 --> 00:04:59,000

Here there was this invisible force that caused the compass needle to point in,

51

00:04:59,000 --> 00:05:01,000

and that sparked his imagination.

52

00:05:01,000 --> 00:05:03,000

What is that? How does that happen?

53

00:05:03,000 --> 00:05:07,000

So this is sort of the beginning of things that made him realize

54

00:05:07,000 --> 00:05:12,000

that what we saw in the world had sort of a mysterious connection.

55

00:05:13,000 --> 00:05:22,000

This curiosity led young Einstein to a physics degree from the Swiss National Polytechnic in Zurich.

56

00:05:22,000 --> 00:05:29,000

But following his graduation, the aspiring physicist struggled to find work.

57

00:05:29,000 --> 00:05:35,000

He wasn't able to get immediately a job that he wanted, which is teaching physics.

58

00:05:35,000 --> 00:05:40,000

So he took the job that was through a friend of his at a patent office.

59

00:05:40,000 --> 00:05:45,000

The patent office helped him sharpen his mind by examining these patents.

60

00:05:45,000 --> 00:05:51,000

And eventually it also gave him the time that he needed to think about these things that puzzled him.

61

00:05:53,000 --> 00:05:58,000

It was during this time that something remarkable happened to Albert Einstein.

62

00:05:58,000 --> 00:06:05,000

Something which suggests that Einstein was communicating with a realm outside our galaxy.

63

00:06:06,000 --> 00:06:13,000

A realm that some ancient astronaut theorists believe may be designed by extraterrestrials.

64

00:06:13,000 --> 00:06:19,000

Albert Einstein was very adept at putting himself into altered states of consciousness

65

00:06:19,000 --> 00:06:26,000

through what he called his thought experiments, which were a kind of three-dimensional metaphorical reverie.

66

00:06:27,000 --> 00:06:33,000

This was the kind of thing of putting himself into a place that most of us won't go

67

00:06:33,000 --> 00:06:44,000

and exploring that space so that he could receive very, very novel and new ideas.

68

00:06:45,000 --> 00:06:51,000

Thought experiments enable you to visually or geometrically approach a problem

69

00:06:51,000 --> 00:06:54,000

that maybe mathematically might be difficult.

70

00:06:57,000 --> 00:07:01,000

For example, Einstein liked to think about what it would be like from a first-person perspective

71

00:07:01,000 --> 00:07:05,000

sitting on a beam of light moving through space.

72

00:07:05,000 --> 00:07:07,000

What would you see from that perspective?

73

00:07:07,000 --> 00:07:11,000

He had all sorts of different visual ways of thinking about physics.

74

00:07:16,000 --> 00:07:21,000

In 1905, after immersing himself in these thought experiments,

75

00:07:21,000 --> 00:07:29,000

Einstein authored four papers that would redefine mankind's perception of the universe in multiple ways.

76

00:07:31,000 --> 00:07:38,000

Included in that year was a paper which essentially proved that atoms were real entities that really existed.

77

00:07:39,000 --> 00:07:41,000

That was a very controversial idea at the time.

78

00:07:41,000 --> 00:07:45,000

In that year, he published a paper on what's called the photoelectric effect.

79

00:07:45,000 --> 00:07:48,000

Everybody believed that light was a wave.

80

00:07:48,000 --> 00:07:54,000

Einstein said, no, light really acts like a particle, and it comes in little discrete packets.

81

00:07:55,000 --> 00:08:02,000

These particles of light eventually led Einstein to the notion of the stimulated emission, so we have lasers.

82

00:08:03,000 --> 00:08:08,000

We use lasers for everything from eye surgery to cutting metals.

83

00:08:09,000 --> 00:08:12,000

One of his papers included the equation equals mc^2 .

84

00:08:14,000 --> 00:08:16,000

It said you could create mass, you could destroy mass,

85

00:08:16,000 --> 00:08:21,000

and it gave us an idea of how mass might come into existence in the first place.

86

00:08:22,000 --> 00:08:27,000

Einstein showed that mass can be converted into useful kinetic energy,

87

00:08:27,000 --> 00:08:32,000

and so this is the basis of the energy we get out of nuclear fission and nuclear fusion.

88

00:08:36,000 --> 00:08:41,000

And another paper he published that year became the beginning of his theory of relativity.

89

00:08:43,000 --> 00:08:46,000

This was an amazing array of things to do for a scientist.

90

00:08:46,000 --> 00:08:51,000

In an entire career, the fact that Einstein did it all in one year is virtually miraculous.

91

00:08:53,000 --> 00:08:58,000

To get a sense of how dramatic those papers were,

92

00:08:58,000 --> 00:09:01,000

imagine if someone came up to you and said,

93

00:09:01,000 --> 00:09:07,000

everything that you know about space and time and matter and energy is wrong.

94

00:09:09,000 --> 00:09:15,000

And then they would give you all the math and all the explanation of why everything that you know is totally wrong.

95

00:09:15,000 --> 00:09:19,000

It's often referred to as the Anis Morabulus papers,

96

00:09:19,000 --> 00:09:23,000

which basically means the miracle year or wonderful year.

97

00:09:26,000 --> 00:09:31,000

What was the source behind Einstein's incredible insight about the laws of physics?

98

00:09:34,000 --> 00:09:38,000

Is it possible, as ancient astronaut theorists contend,

99

00:09:38,000 --> 00:09:42,000

that Einstein's ability to enter altered states of consciousness

100

00:09:43,000 --> 00:09:47,000

connected him to an extraterrestrial world,

101

00:09:47,000 --> 00:09:53,000

one that allowed him to access information about the inner workings of the universe.

102

00:09:53,000 --> 00:09:59,000

Einstein said that when he first developed the concept of relativity,

103

00:09:59,000 --> 00:10:03,000

it was like a storm going off in his head.

104

00:10:06,000 --> 00:10:10,000

And this would show that he had a different kind of a brain,

105

00:10:10,000 --> 00:10:15,000

and his brain was wired in a different way than normal human beings.

106

00:10:17,000 --> 00:10:21,000

Albert Einstein was known to spend hours on him sitting in a chair,

107

00:10:21,000 --> 00:10:25,000

formulating an idea or a thought to its inception.

108

00:10:25,000 --> 00:10:29,000

Now, was he tapping into some type of advanced field of knowledge?

109

00:10:29,000 --> 00:10:33,000

It's very possible Einstein used this type of technology to a certain level.

110

00:10:34,000 --> 00:10:37,000

When we look at history and when we look at the people themselves,

111

00:10:37,000 --> 00:10:41,000

who are the giants on whose shoulders we stand,

112

00:10:41,000 --> 00:10:45,000

what they are saying is that this information wasn't theirs,

113

00:10:45,000 --> 00:10:48,000

but that something beyond them, something which was larger,

114

00:10:48,000 --> 00:10:50,000

something which was divine,

115

00:10:50,000 --> 00:10:54,000

allowed them to receive this information and give it to the world.

116

00:10:58,000 --> 00:11:03,000

All the knowledge of the universe exists in the cosmos,

117

00:11:03,000 --> 00:11:09,000

and maybe Einstein was able to access that knowledge

118

00:11:09,000 --> 00:11:13,000

that he was more in tune with this,

119

00:11:13,000 --> 00:11:18,000

what I would even refer to as a metaphysical world,

120

00:11:18,000 --> 00:11:21,000

that he had this direct access.

121

00:11:21,000 --> 00:11:24,000

He didn't know how he did this,

122

00:11:24,000 --> 00:11:28,000

but his being knew it, his essence,

123

00:11:28,000 --> 00:11:36,000

that through his being, he was able to unlock the secret of the universe.

124

00:11:39,000 --> 00:11:46,000

Did Albert Einstein's use of God experiments grant him access to an extraterrestrial realm,

125

00:11:46,000 --> 00:11:49,000

as some ancient astronaut theorists believe?

126

00:11:50,000 --> 00:11:53,000

Perhaps the answer lies not in other worlds,

127

00:11:53,000 --> 00:11:59,000

but locked away within the pieces of Albert Einstein's brain.

128

00:12:05,000 --> 00:12:10,000

Princeton, New Jersey, April 18, 1955.

129

00:12:10,000 --> 00:12:17,000

World-renowned physicist Albert Einstein dies from a ruptured aneurysm in his heart.

130

00:12:18,000 --> 00:12:23,000

Hours later, Princeton hospital pathologist Thomas Harvey

131

00:12:23,000 --> 00:12:26,000

carefully removes the famed scientist's brain.

132

00:12:26,000 --> 00:12:33,000

When Albert Einstein died, there was an autopsy performed on him in 1955,

133

00:12:33,000 --> 00:12:35,000

at Princeton University,

134

00:12:35,000 --> 00:12:40,000

and the man who performed the autopsy removed Einstein's brain,

135

00:12:40,000 --> 00:12:43,000

and he actually took Einstein's brain out of his head,

136

00:12:43,000 --> 00:12:48,000

and he put it in a cookie jar filled with formaldehyde, and he held on to it.

137

00:12:48,000 --> 00:12:54,000

So there was an urban legend that went around that said that somebody had Einstein's brain,

138

00:12:54,000 --> 00:12:56,000

which was actually true.

139

00:12:57,000 --> 00:13:03,000

What everyone didn't realize is that the key thing that defined Einstein, which was his brain,

140

00:13:03,000 --> 00:13:07,000

was being driven around in the backseat of a car of this physician.

141

00:13:07,000 --> 00:13:09,000

It was a very weird story.

142

00:13:09,000 --> 00:13:14,000

His motivation was not just simply the ghoulish thing of having this great trophy,

143

00:13:14,000 --> 00:13:16,000

but it was to try to see if he could understand,

144

00:13:16,000 --> 00:13:20,000

and he began to give slices of it to neurobiologists and neurophysiologists

145

00:13:20,000 --> 00:13:24,000

to see if they could understand what it was about Einstein that was different.

146

00:13:27,000 --> 00:13:31,000

Philadelphia, Pennsylvania, present day.

147

00:13:33,000 --> 00:13:38,000

45 miles south from the hospital where Albert Einstein's brain was removed.

148

00:13:39,000 --> 00:13:43,000

And hidden away behind the walls of this museum,

149

00:13:43,000 --> 00:13:48,000

resides what's left of arguably the greatest mind in human history.

150

00:13:51,000 --> 00:13:57,000

Here at the Mutter Museum, we have mummified human remains,

151

00:13:57,000 --> 00:14:02,000

skeletons of mutated bodies,

152

00:14:03,000 --> 00:14:08,000

but our most important artifact is right here, Einstein's brain.

153

00:14:10,000 --> 00:14:15,000

We have a wide range of artifacts, but they are all in the medical spectrum.

154

00:14:15,000 --> 00:14:21,000

Einstein's brain, it's an amazing representation of not only a medical specimen,

155

00:14:21,000 --> 00:14:24,000

but one that represents one of the greatest minds in the world.

156

00:14:25,000 --> 00:14:31,000

In 2011, the Mutter Museum received 46 slides of Einstein's brain

157

00:14:31,000 --> 00:14:37,000

from Dr. Lucy Rourke Adams, who acquired them from an employee of Thomas Harvey.

158

00:14:37,000 --> 00:14:44,000

I've been extraordinarily fortunate to have been the caretaker of these slides for over 40 years.

159

00:14:44,000 --> 00:14:48,000

And I regard them as a scientific treasure,

160

00:14:48,000 --> 00:14:53,000

the best way to describe his brain was that it looked like the brain of a young person.

161

00:14:54,000 --> 00:15:02,000

At age 76, he has beautiful preservation of the neurons and no degenerative disease of any kind.

162

00:15:05,000 --> 00:15:11,000

How is it possible that at the advanced age of 76, Albert Einstein's brain,

163

00:15:11,000 --> 00:15:16,000

possessed the neurons of a healthy young man?

164

00:15:16,000 --> 00:15:21,000

Why was his brain unique to that of other humans?

165

00:15:21,000 --> 00:15:26,000

Even more curious is the fact that Einstein's parietal lobe,

166

00:15:26,000 --> 00:15:31,000

the part of the brain believed to be involved in the manipulation of objects

167

00:15:31,000 --> 00:15:36,000

and the processing of numbers, was 15% worse than the brain.

168

00:15:36,000 --> 00:15:41,000

These are actual images taken in 1955 of Albert Einstein's brain.

169

00:15:41,000 --> 00:15:46,000

One thing to point out here is you can see the red line is relatively expanded

170

00:15:46,000 --> 00:15:51,000

compared to normal brains, marking the expansion of the parietal lobe.

171

00:15:51,000 --> 00:15:56,000

The parietal lobe of Albert Einstein is truly anomalous.

172

00:15:56,000 --> 00:16:00,000

It's a very large number of human brains,

173

00:16:00,000 --> 00:16:05,000

but the parietal lobe of Albert Einstein is truly anomalous.

174

00:16:05,000 --> 00:16:10,000

It's unique. It's intriguing to think that this might have something to do

175

00:16:10,000 --> 00:16:15,000

with his unique ability to put himself into these very abstract scenarios.

176

00:16:15,000 --> 00:16:20,000

There is no one for thinking, what would it be like if I was traveling at the speed of light?

177

00:16:22,000 --> 00:16:24,000

That's a hard place to put your mind in.

178

00:16:24,000 --> 00:16:27,000

The parietal lobe might be involved in these types of abstract thoughts.

179

00:16:28,000 --> 00:16:34,000

So the fact that we see kind of an anomalous anatomy in the parietal lobe of Einstein,

180

00:16:34,000 --> 00:16:36,000

it's intriguing.

181

00:16:38,000 --> 00:16:45,000

In the 1980s at UC Berkeley, Dr. Marion Diamond discovered another amazing feature

182

00:16:45,000 --> 00:16:47,000

about Einstein's brain structure.

183

00:16:48,000 --> 00:16:55,000

Diamond found that it contained over 70% more glial cells than the average human brain.

184

00:16:56,000 --> 00:17:00,000

The brain is not just the communication between neurons,

185

00:17:01,000 --> 00:17:05,000

but the communication between neurons and glia.

186

00:17:05,000 --> 00:17:10,000

Glia are crucial for the very basic carrying of information.

187

00:17:11,000 --> 00:17:16,000

We could hypothesize that a brain with a larger number of glia per neuron

188

00:17:16,000 --> 00:17:21,000

could have advantageous effects on brain performance and has cognitive abilities.

189

00:17:21,000 --> 00:17:26,000

Probably 99.9% of the brains across mankind are identical.

190

00:17:27,000 --> 00:17:29,000

But certain brains stand out.

191

00:17:30,000 --> 00:17:37,000

And in the case of Einstein, this was a genius who seems to have had some kind of hardware that was different.

192

00:17:39,000 --> 00:17:45,000

What could be the reason for the extraordinary genetic makeup of Albert Einstein's gray matter?

193

00:17:46,000 --> 00:17:50,000

Is it possible, as ancient astronaut theorists believe,

194

00:17:50,000 --> 00:17:59,000

that his advanced brain allowed him to receive and decipher messages from another worldly realm upon entering a trance-like state?

195

00:18:00,000 --> 00:18:05,000

Could this explain how he was able to envision his foreground breaking papers

196

00:18:05,000 --> 00:18:11,000

that transformed man's understanding of the universe in under a year's time?

197

00:18:12,000 --> 00:18:19,000

How could one person in one year create and write such important papers?

198

00:18:19,000 --> 00:18:24,000

And his own colleagues had no idea what he was talking about.

199

00:18:24,000 --> 00:18:31,000

The way Einstein thought was completely different than people before him.

200

00:18:32,000 --> 00:18:36,000

How do we account for Einstein's large brain capabilities?

201

00:18:36,000 --> 00:18:41,000

Is it something in human evolution that's just causing him to evolve faster?

202

00:18:42,000 --> 00:18:46,000

Or was he potentially given some type of leg-up genetically?

203

00:18:47,000 --> 00:18:51,000

Maybe some type of extraterrestrial gene that we still haven't yet identified.

204

00:18:52,000 --> 00:18:57,000

Are there individuals out there that may have DNA sequences that we're not familiar with,

205

00:18:57,000 --> 00:19:03,000

that are unknown, that are non-terrestrial, that have never been discovered before?

206

00:19:04,000 --> 00:19:09,000

Any time that there is an individual with extraordinary gifts,

207

00:19:09,000 --> 00:19:12,000

is it possible that they're a little bit more than human?

208

00:19:14,000 --> 00:19:20,000

Could Einstein's extraordinary brain anatomy explain his remarkable genius?

209

00:19:20,000 --> 00:19:26,000

Or could it be that his use of thought experiments and his unique brain structure

210

00:19:26,000 --> 00:19:31,000

allowed him to receive and decipher information from another worldly source?

211

00:19:33,000 --> 00:19:42,000

Perhaps answers can be found by examining the incredible minds behind other geniuses throughout human history.

212

00:19:44,000 --> 00:19:48,000

Stockholm, Sweden, 1921

213

00:19:49,000 --> 00:19:56,000

The Royal Swedish Academy of Sciences awards Albert Einstein with the Nobel Prize in Science

214

00:19:56,000 --> 00:20:01,000

for his groundbreaking contributions to theoretical physics.

215

00:20:01,000 --> 00:20:05,000

But what separated Einstein from his contemporaries?

216

00:20:05,000 --> 00:20:12,000

How did the 42-year-old physicist achieve such a seemingly perfect blueprint of the universe?

217

00:20:12,000 --> 00:20:19,000

We see that across time and space we have pockets of people who have received tremendous amounts of information,

218

00:20:19,000 --> 00:20:22,000

which really have propelled civilization along.

219

00:20:22,000 --> 00:20:25,000

Obviously the question then is, do they have special brains,

220

00:20:25,000 --> 00:20:30,000

or is this just something which happens by concentrating on the right thing to access this information?

221

00:20:32,000 --> 00:20:36,000

Is it possible that Albert Einstein's practice of thought experiments

222

00:20:36,000 --> 00:20:42,000

allowed his genetically advanced brain to receive messages from a metaphysical realm,

223

00:20:42,000 --> 00:20:45,000

as ancient astronaut theorists believe?

224

00:20:46,000 --> 00:20:51,000

If so, could there be evidence of other geniuses across human history,

225

00:20:51,000 --> 00:20:57,000

whose greatest breakthroughs materialized through altered states of consciousness?

226

00:21:02,000 --> 00:21:04,000

Athens, Greece

227

00:21:05,000 --> 00:21:10,000

Outside the Hellenic Military Academy sits a statue of a war hero

228

00:21:10,000 --> 00:21:16,000

and the founding father of Western philosophy, Socrates.

229

00:21:21,000 --> 00:21:26,000

Socrates' contemporaries describe the philosopher as being strange in many ways,

230

00:21:26,000 --> 00:21:31,000

including spending hours each day consumed by his own thoughts.

231

00:21:32,000 --> 00:21:42,000

One of the most stunning examples of Socrates' daydreaming actually happens while on campaign as a soldier at the Siege of Potidaea.

232

00:21:44,000 --> 00:21:50,000

Socrates was caught in the grip of a thought or an idea,

233

00:21:50,000 --> 00:21:59,000

and he remained fixed and thinking silently for an hour, for another hour, for another hour.

234

00:22:00,000 --> 00:22:12,000

He displayed an extraordinary endurance that his peers may have found odd and suspicious and puzzling.

235

00:22:13,000 --> 00:22:21,000

We often think that a genius is eccentric, but I think some of their eccentricity comes from the fact that they really are in touch with other realities.

236

00:22:21,000 --> 00:22:27,000

In the case of Socrates, he said that he was able to access a demon.

237

00:22:29,000 --> 00:22:33,000

Now a demon for Socrates is not some evil creature,

238

00:22:33,000 --> 00:22:42,000

but the ancient Greeks had this subcategory of gods who really were talking to human beings,

239

00:22:42,000 --> 00:22:46,000

explaining the mysteries of life to us, explaining why we were here.

240

00:22:48,000 --> 00:22:55,000

Is Socrates' so-called demon evidence that the founder of Western philosophy was mentally unstable?

241

00:22:56,000 --> 00:23:08,000

Or could Socrates' demon be proof that he was in contact with an extraterrestrial intelligence that was sending him messages from a distant realm in the cosmos?

242

00:23:09,000 --> 00:23:16,000

I think it's too easy just to say that, yeah, Socrates was nuts, or that he was schizophrenic, or that he was hearing voices.

243

00:23:17,000 --> 00:23:26,000

The demon is some kind of messenger, some kind of bridge between him and the realm of the metaphysical that he is trying to attain.

244

00:23:29,000 --> 00:23:39,000

Did Socrates' practice of deep meditation connect him to an extraterrestrial intelligence, as some ancient astronaut theorists contend?

245

00:23:40,000 --> 00:23:49,000

If so, could there be other geniuses with similar claims that they received information from a higher realm while in a trance-like state?

246

00:23:51,000 --> 00:24:03,000

In the case of Leonardo da Vinci, in his writings, he describes laying down on a bed in his room and taking a candle and placing the candle at the foot of the bed.

247

00:24:03,000 --> 00:24:13,000

And he would lie down in the bed and look at the flickering of the flame on the ceiling, and it would put him into a very, very deep state in which he would be able to imagine and come up with new ideas.

248

00:24:15,000 --> 00:24:22,000

Puccini said that his great opera, *Madonna Butterfly*, was from God, that he wrote it down, but it came directly from a divine source.

249

00:24:24,000 --> 00:24:31,000

William Blake, whose entire opus, his writing and painting was based on repeated angelic

visitations.

250

00:24:32,000 --> 00:24:35,000

Brahms said that his music came from something beyond himself.

251

00:24:37,000 --> 00:24:50,000

We don't know if they're in fact receiving communication from some divine or powerful source beyond their own skin, or if they may be in touch with their own unconscious or deeper wisdom that they're not customarily hearing from.

252

00:24:51,000 --> 00:25:04,000

In the 1900s, Serbian-born inventor Nikola Tesla pioneered modern electrical engineering and was the driving force behind today's wireless technology.

253

00:25:07,000 --> 00:25:12,000

In his writings, Tesla describes his method of approaching a complex engineering problem.

254

00:25:13,000 --> 00:25:38,000

Nikola Tesla was someone who wrote extensively about using very, very powerful visualizations. In fact, he said that he was able to visualize a motor and then actually run research and development, R&D, on the motor in his mind so that he could tell where there might be, for example, mistakes or flaws.

255

00:25:39,000 --> 00:25:44,000

And he would be able to do almost all of that in his mind in these altered states of consciousness.

256

00:25:46,000 --> 00:25:51,000

Nikola Tesla is a person who believed in the existence of extraterrestrial beings.

257

00:25:52,000 --> 00:25:59,000

He is a person who really believes that he can communicate with other galaxies.

258

00:26:00,000 --> 00:26:07,000

Perhaps the greatest piece of evidence, that Tesla believed he was in communication with other worldly beings.

259

00:26:07,000 --> 00:26:13,000

Can be found in a letter he sent to the American Red Cross in December of 1900.

260

00:26:14,000 --> 00:26:25,000

In the letter he writes, we have a message from another world, unknown and remote. It reads 1, 2, 3.

261

00:26:27,000 --> 00:26:33,000

Tesla was a genius with certain eccentricities. Everything he did was in threes.

262

00:26:33,000 --> 00:26:48,000

And it is interesting, I think, because this is a level of symbolism, when we realize that so many of our ancestors, whenever they are talking about communication with the divine and how the divine downloaded this information to them, we'll see this rich layer of symbolism there as well.

263

00:26:49,000 --> 00:26:53,000

Why was Tesla so obsessed with the number three?

264

00:26:54,000 --> 00:27:06,000

Could this be a clue that Tesla was using his own internal form of wireless communication to connect with cosmic advisors, as ancient astronaut theorists believe?

265

00:27:07,000 --> 00:27:13,000

And could this also explain the remarkable genius of India's Srinivasa Ramanujan?

266

00:27:14,000 --> 00:27:23,000

Although Ramanujan was an unexceptional student, he is widely considered the greatest mathematician in history.

267

00:27:24,000 --> 00:27:35,000

And according to his journals, Ramanujan believed he was being guided subconsciously by another worldly being, the Hindu god, Namagiri.

268

00:27:36,000 --> 00:27:45,000

Namagiri was the family deity of Ramanujan. And basically, everything the family did was linked with this deity.

269

00:27:46,000 --> 00:27:56,000

Much of his creative work was actually done by going to bed with an intention to be visited by a Hindu deity that he worshipped.

270

00:27:57,000 --> 00:28:01,000

And when he would fall asleep, he would become lucid in the dream time.

271

00:28:02,000 --> 00:28:08,000

And he would receive enormous amounts of information.

272

00:28:09,000 --> 00:28:21,000

In one particular dream, he talks about seeing a very large red wall and a hand that came out and wrote equation after equation after equation after equation.

273

00:28:22,000 --> 00:28:28,000

He memorized the equations and when he woke up, he actually then went to work verifying the proofs.

274

00:28:28,000 --> 00:28:35,000

The vast majority of all of his equations were new and important and utterly groundbreaking.

275

00:28:36,000 --> 00:28:47,000

All of the science that we need to eventually be able to create portals, stargate travel, teleportation, it all needs a mathematical foundation.

276

00:28:48,000 --> 00:28:55,000

And the closest that we have right now is the Ramanujan equations that we've been able to decipher so far.

277

00:28:56,000 --> 00:29:03,000

It is an irrefutable fact that mathematics is the language of the universe.

278

00:29:04,000 --> 00:29:13,000

So if Ramanujan's formulate do in fact check out who knows what the potential is of those conclusions.

279

00:29:14,000 --> 00:29:18,000

It could be life altering. It could be revolutionary.

280

00:29:18,000 --> 00:29:30,000

Can it only be a coincidence that many of the greatest minds in human history claim to have received information from an other worldly source?

281

00:29:31,000 --> 00:29:46,000

Or could it be possible that Socrates, Nikola Tesla, Srinivasa Ramanujan, as well as other geniuses in human history were using altered states of consciousness to access an alien realm?

282

00:29:47,000 --> 00:29:54,000

A realm that some ancient astronaut theorists believe contains the entire knowledge of the universe.

283

00:29:55,000 --> 00:29:59,000

If so, where might this field of knowledge exist?

284

00:30:00,000 --> 00:30:07,000

Perhaps answers can be found in Asia within the pages of an ancient Hindu text.

285

00:30:07,000 --> 00:30:24,000

Angkor, Cambodia. Here in the northwestern jungle stands the largest Hindu temple in the world, Angkor Wat.

286

00:30:25,000 --> 00:30:40,000

Built in the 12th century, the temple's design is meant to represent Mount Meru, a mythical mountain that exists in the cosmos that the Hindu believed was the center of the metaphysical universe.

287

00:30:41,000 --> 00:30:49,000

Numerous stone carvings adorn the walls of the temple, depicting scenes from the Hindu epic the Mahabharata.

288

00:30:50,000 --> 00:31:01,000

Within the pages of this ancient text of Hindu mythology, there is a description of a non-physical plane of existence in the universe called the Akashic record.

289

00:31:02,000 --> 00:31:16,000

Akasha is actually a Sanskrit word and the Akashic record is a term that basically the idea behind it is that all of the information in the universe is pre-existing and an individual can actually tap into that information.

290

00:31:17,000 --> 00:31:22,000

Our ancestors began to look more into this and the Akashic records came about.

291

00:31:23,000 --> 00:31:31,000

Basically, the notion is this, that somehow all the information not just from mankind but everywhere in the universe is somehow accessible.

292

00:31:32,000 --> 00:31:41,000

Some cultures actually say that this information really is a gift of the gods, that they left this somehow behind for us to use at our own will.

293

00:31:41,000 --> 00:31:48,000

And we are able to download this information from this other realm, this whole of records, whatever you want to call it.

294

00:31:49,000 --> 00:31:54,000

An interesting thing to correlate with the Akashic record might be from Star Wars, the Force.

295

00:31:55,000 --> 00:32:00,000

Some type of cosmic energy that's omnipresent and we have the ability to tap into this.

296

00:32:01,000 --> 00:32:07,000

This is something very new in our own sciences, trying to discover and understand this field of knowledge.

297

00:32:11,000 --> 00:32:21,000

Is it possible that Albert Einstein's method of meditation, which he called his thought experiments, was actually connecting him to the Akashic record?

298

00:32:22,000 --> 00:32:27,000

Could the Akashic record be the source of inspiration behind the world's geniuses?

299

00:32:28,000 --> 00:32:32,000

If so, how could such a metaphysical plane of knowledge exist?

300

00:32:33,000 --> 00:32:38,000

Perhaps the answer can be found in one of Albert Einstein's many theories.

301

00:32:39,000 --> 00:32:46,000

In 1935, Albert Einstein published a paper describing quantum entanglement.

302

00:32:47,000 --> 00:32:57,000

It theorized that if a particle is split into two parts, both remain linked to one another, even when separated over vast distances.

303

00:32:58,000 --> 00:33:05,000

The experiments showed that two particles separated in space and time demonstrated a connectivity.

304

00:33:06,000 --> 00:33:11,000

If you change the spin of one particle, the other particle would actually change its spin as well.

305

00:33:12,000 --> 00:33:21,000

In other words, if something happens to one, the other responds in the same or equal and opposite manner.

306

00:33:22,000 --> 00:33:25,000

And that this occurs instantaneously.

307

00:33:26,000 --> 00:33:28,000

So it's a form of instantaneous communication.

308

00:33:29,000 --> 00:33:34,000

It's what Einstein referred to as spooky communication at a distance.

309

00:33:38,000 --> 00:33:44,000

What we have to remind ourselves is that we are made of stardust.

310

00:33:45,000 --> 00:33:55,000

Our whole body consists of material that has been here since before the beginning of time.

311

00:33:56,000 --> 00:34:04,000

And these particles that we consist of, each and every particle contain the knowledge of the universe.

312

00:34:05,000 --> 00:34:15,000

It's not only real, but it can explain to us so much weirdness in this world which we still don't understand and call paranormal.

313

00:34:16,000 --> 00:34:21,000

And this would include the idea of telepathy and remote viewing.

314

00:34:22,000 --> 00:34:30,000

Remote viewing is the practice of using deep concentration to visualize locations or objects beyond sight and sound.

315

00:34:31,000 --> 00:34:46,000

Starting in the 1970s, the United States initiated a program called Project Stargate to train individuals to access a higher realm of knowledge.

316

00:34:47,000 --> 00:34:56,000

Using controlled scientific settings, remote viewers attempted to sense unknown targets and then record their impressions on paper.

317

00:34:57,000 --> 00:35:06,000

The US government have funded remote viewing programs as did the Soviets, as have various other governments around the world.

318

00:35:07,000 --> 00:35:22,000

Remote viewing exercises have taken place for people to try and observe that which is on the moon, on Mars, and these are proper scientific programs with accuracy.

319

00:35:22,000 --> 00:35:28,000

The US military remote viewing program has scientific protocols for how to do this.

320

00:35:29,000 --> 00:35:41,000

There are really specific techniques where an individual can put out a question or a query and if they are in that altered state of consciousness, they will receive information.

321

00:35:42,000 --> 00:35:48,000

If you read the biographies of famous geniuses and things like that, each one of them has their own description for how to do this.

322

00:35:49,000 --> 00:36:00,000

Why would the government spend millions of dollars in all these advanced studies in areas like remote viewing unless there is some type of valid need to experiment with these types of technology?

323

00:36:01,000 --> 00:36:15,000

If we think about the fact that we're all pretty much made of the same elements in the universe, is there maybe some atomic level of energy that allows us to communicate and tap into knowledge that we're now starting to rediscover?

324

00:36:18,000 --> 00:36:27,000

Is it possible that remote viewers were attempting to replicate the meditative techniques behind Albert Einstein's thought experiments?

325

00:36:28,000 --> 00:36:35,000

Can this explain how remote viewers might possess the capability to transcend both sight and sound?

326

00:36:36,000 --> 00:36:47,000

Could Einstein's thought experiments be the inspiration behind the incredible breakthroughs of Socrates, Nikola Tesla, and other geniuses throughout history?

327

00:36:48,000 --> 00:37:04,000

All these different geniuses, Ramanujan, Tesla, Socrates, according to their own diaries, always said that they were in communication with some type of otherworldly entities.

328

00:37:07,000 --> 00:37:16,000

So were all these people just crazy or is it possible that the universe is far more complex than we think?

329

00:37:19,000 --> 00:37:29,000

Is it possible that mankind's greatest minds had the ability to access a realm of knowledge left behind by otherworldly beings?

330

00:37:30,000 --> 00:37:37,000

Could this be evidence that the Akashic record actually exists just as the ancient Hindu believed?

331

00:37:38,000 --> 00:37:50,000

And if a select few have the power to tap into this alien realm, does this mean that the extraterrestrials who created it can influence them as well?

332

00:37:53,000 --> 00:38:06,000

Albert Einstein's incredible legacy, which includes over 300 scientific papers, continues to

influence the world more than a half century since his death.

333

00:38:07,000 --> 00:38:16,000

And while Einstein redefined our understanding of the universe, perhaps his greatest contribution to mankind is still to come.

334

00:38:17,000 --> 00:38:18,000

Time travel.

335

00:38:19,000 --> 00:38:27,000

It's Einstein's special theory of relativity, speed of light, and the general theory of relativity, which allows for the real possibility of time travel.

336

00:38:28,000 --> 00:38:47,000

Some scientists today believe that Einstein's theory of relativity creates the possibility to travel through a portal or wormhole called an Einstein-Rosen bridge, a space anomaly that may actually be a gateway to parallel universes.

337

00:38:48,000 --> 00:38:55,000

In the theory of general relativity, space actually acts like something that you can bend and warp and make holes in.

338

00:38:56,000 --> 00:38:59,000

So an Einstein-Rosen bridge is a particular example of a wormhole.

339

00:39:00,000 --> 00:39:10,000

And a wormhole is a structure in space and time that involves kind of tearing a hole in space, stretching the material if you think of space being a material and reconnecting it somewhere else.

340

00:39:11,000 --> 00:39:19,000

An Einstein-Rosen bridge takes two points in space and connects them so that if you travel in one end, you come out the other.

341

00:39:20,000 --> 00:39:29,000

Even though those two points appear in different universes, it's essentially a teleporter, something that allows you to get between two distant places instantaneously.

342

00:39:32,000 --> 00:39:38,000

Could Einstein's theoretical wormhole actually serve as a portal to another universe?

343

00:39:40,000 --> 00:39:47,000

Perhaps opening a gateway that will one day establish contact between humans and extraterrestrials.

344

00:39:49,000 --> 00:39:59,000

When we take a look at the idea that there are wormholes and that these are actually generally accepted by some of the most brilliant individuals on the planet,

345

00:40:00,000 --> 00:40:11,000

what you begin to see is that all of these pieces are in place to suggest that there is intelligent life elsewhere in the universe,

346

00:40:11,000 --> 00:40:22,000

and that there is also the likelihood or possibility that we have had contact in the past or have ongoing contact now or may have contact in the future as well.

347

00:40:23,000 --> 00:40:33,000

Was Albert Einstein's monumental work actually a lifelong quest to establish contact with extraterrestrials?

348

00:40:34,000 --> 00:40:41,000

Did otherworldly beings provide him with information about how to transcend both space and time?

349

00:40:42,000 --> 00:40:44,000

If so, why?

350

00:40:45,000 --> 00:40:53,000

We find that the greatest discoveries across time and space don't come to hard work or intensive labor,

351

00:40:53,000 --> 00:41:05,000

but that really did genius somehow is able to access a realm and that that realm is able to pretty much download that information to them and makes them remember forever onwards as geniuses.

352

00:41:06,000 --> 00:41:14,000

In history you have certain people whose genius is just so incredible, it's like they're able to see the future,

353

00:41:14,000 --> 00:41:20,000

and they're not going to just influence the world then and in the future,

354

00:41:20,000 --> 00:41:25,000

but what they're going to do is going to dramatically change the world forever.

355

00:41:26,000 --> 00:41:35,000

We tend to think of civilization as this slow ab of information that somehow across the flow of time we have progressed,

356

00:41:35,000 --> 00:41:44,000

but really this is not the case. We have made giant strides forwards because at pockets in time there were certain geniuses living.

357

00:41:45,000 --> 00:42:01,000

Are extraterrestrials accelerating the cognitive abilities of a select few to help further the development of human civilization as some ancient astronaut theorists believe?

358

00:42:01,000 --> 00:42:06,000

Could this explain Albert Einstein's extraordinary neural anatomy?

359

00:42:07,000 --> 00:42:21,000

Is it only a coincidence that arguably the greatest mind in the history of the world had a higher concentration of glial cells and a wider parietal lobe than the average human brain

360

00:42:21,000 --> 00:42:28,000

and was as healthy as the brain of a young man when he died? That is extraordinary evidence.

361

00:42:29,000 --> 00:42:42,000

If we were able to study the brains of some of these other genius, Isaac Newton of Nikola Tesla and perhaps now of someone like Stephen Hawking,

362

00:42:42,000 --> 00:42:50,000

I think we would find that their brains too are significantly different than a normal human's.

363

00:42:51,000 --> 00:42:59,000

There seems to be something within our DNA whereby we go in one direction and we seem to have a normal human being,

364

00:42:59,000 --> 00:43:06,000

but also certain things within our DNA are able to make us a genius and definitely Einstein was one of them.

365

00:43:06,000 --> 00:43:14,000

But what makes this switch work is something which we have been completely incapable of answering.

366

00:43:15,000 --> 00:43:22,000

Were the greatest minds in human history receiving information from other worldly beings?

367

00:43:22,000 --> 00:43:26,000

Are geniuses the link between us and them?

368

00:43:26,000 --> 00:43:36,000

Could Albert Einstein's thought experiments be the key to unlock the genius that exists in each and every one of us?

369

00:43:37,000 --> 00:43:42,000

If so, who will be the next Einstein?

370

00:43:42,000 --> 00:43:46,000

Where will he or she come from?

371

00:43:46,000 --> 00:43:51,000

And what new dimensions will they reveal to mankind?
