

## Inception Radio Network

UFO Headline News Thursday June 8th,  
2017

1  
00:00:07,460 --> 00:00:05,120  
hello it's Thursday June 8 2017 if you

2  
00:00:10,339 --> 00:00:07,470  
are listening to inception radio network

3  
00:00:15,320 --> 00:00:10,349  
voice of the fringe majority this is

4  
00:00:17,420 --> 00:00:15,330  
Carol Karl with UFO headline news well

5  
00:00:21,679 --> 00:00:17,430  
lo and behold guess what's up tonight

6  
00:00:23,870 --> 00:00:21,689  
moon wise a strawberry moon up at sunset

7  
00:00:25,939 --> 00:00:23,880  
and according to the folks at earth sky

8  
00:00:29,060 --> 00:00:25,949  
it's going to look plenty full as it

9  
00:00:31,490 --> 00:00:29,070  
groups up with the star Antares and the

10  
00:00:34,190 --> 00:00:31,500  
planet Saturn in the southeastern sky at

11  
00:00:36,100 --> 00:00:34,200  
nightfall as our earth turns underneath

12  
00:00:39,139 --> 00:00:36,110  
the heavens the full looking moon

13  
00:00:42,319 --> 00:00:39,149

Antares and Saturn will move westward

14

00:00:44,119 --> 00:00:42,329

across the sky the celestial threesome

15

00:00:46,610 --> 00:00:44,129

will climb highest up tonight around

16

00:00:49,580 --> 00:00:46,620

midnight and they'll sit low in the West

17

00:00:51,770 --> 00:00:49,590

until dawn June 9th in North America we

18

00:00:54,979 --> 00:00:51,780

commonly call the June full moon the

19

00:00:58,729 --> 00:00:54,989

strawberry moon this year strawberry

20

00:01:02,270 --> 00:00:58,739

moon turns precisely full June 9th 2017

21

00:01:05,899 --> 00:01:02,280

at 1310 Universal time to showcase the

22

00:01:07,640 --> 00:01:05,909

smallest moon of 2017 although the full

23

00:01:10,010 --> 00:01:07,650

moon occurs at the same instant

24

00:01:12,620 --> 00:01:10,020

worldwide the clock reading of course

25

00:01:15,200 --> 00:01:12,630

varies by time zone you can find a link

26

00:01:17,120 --> 00:01:15,210

later at UFO headline news calm all

27

00:01:19,940 --> 00:01:17,130

those times we'll be right there

28

00:01:22,310 --> 00:01:19,950

from North America except for those

29

00:01:25,160 --> 00:01:22,320

parts of Alaska and the Aleutian Islands

30

00:01:27,499 --> 00:01:25,170

we won't be able to see the moon at the

31

00:01:30,319 --> 00:01:27,509

exact instant it turns full because it's

32

00:01:32,420 --> 00:01:30,329

going to be below our horizon from North

33

00:01:34,999 --> 00:01:32,430

America the moon is closest to being

34

00:01:37,340 --> 00:01:35,009

full in our sky just before moon set

35

00:01:40,670 --> 00:01:37,350

which is around sunrise

36

00:01:43,609 --> 00:01:40,680

June 9th because the moon at the instant

37

00:01:46,160 --> 00:01:43,619

of full is nearly 5 degrees north of the

38

00:01:48,289 --> 00:01:46,170

ecliptic Earth's orbital plane it'll

39

00:01:51,590 --> 00:01:48,299

actually be possible to see the exact

40

00:01:54,380 --> 00:01:51,600

full moon after sunrise if you're in a

41

00:01:57,920 --> 00:01:54,390

northern outpost like Alaska for

42

00:02:01,190 --> 00:01:57,930

instance at Anchorage Alaska June 9 27

43

00:02:04,100 --> 00:02:01,200

teen the Sun will rise at 4:25 a.m.

44

00:02:08,059 --> 00:02:04,110

local time and the moon turns full at

45

00:02:10,940 --> 00:02:08,069

5:10 a.m. local time setting at 5:31

46

00:02:12,170 --> 00:02:10,950

a.m. up there there's a great image

47

00:02:13,700 --> 00:02:12,180

posted with this article

48

00:02:16,070 --> 00:02:13,710

it's from the United States

49

00:02:19,100 --> 00:02:16,080

Naval Observatory and it shows the day

50

00:02:22,520 --> 00:02:19,110

and night sides of Earth at the instant

51  
00:02:23,930 --> 00:02:22,530  
of this June 2017 full moon and from

52  
00:02:26,690 --> 00:02:23,940  
that map you can see the full moon

53  
00:02:29,450 --> 00:02:26,700  
occurs at midday June 9th for Iceland

54  
00:02:32,110 --> 00:02:29,460  
and at midnight that's zero hours on

55  
00:02:35,270 --> 00:02:32,120  
June 10th for far eastern Russia and

56  
00:02:37,460 --> 00:02:35,280  
Oceania the shadow line passing to the

57  
00:02:39,740 --> 00:02:37,470  
west of the Americas that indicates

58  
00:02:42,320 --> 00:02:39,750  
where it's sunrise June 9th the shadow

59  
00:02:45,200 --> 00:02:42,330  
line that runs across Asia will show you

60  
00:02:47,900 --> 00:02:45,210  
the sunset for that night it's a cool

61  
00:02:49,520 --> 00:02:47,910  
graphic check it out at full moon the

62  
00:02:51,890 --> 00:02:49,530  
moon is pretty much opposite the Sun

63  
00:02:55,130 --> 00:02:51,900

setting at about the time the Sun is

64

00:02:57,410 --> 00:02:55,140

rising or conversely rising yet about

65

00:02:59,360 --> 00:02:57,420

the time the Sun is setting in the

66

00:03:03,230 --> 00:02:59,370

Arctic regions of the globe there are

67

00:03:06,700 --> 00:03:03,240

now 24 hours of daylight and in the

68

00:03:09,410 --> 00:03:06,710

Antarctic regions there is no Sun at all

69

00:03:12,140 --> 00:03:09,420

technically speaking we in North America

70

00:03:14,720 --> 00:03:12,150

are seeing a waxing gibbous moon on the

71

00:03:17,720 --> 00:03:14,730

evening of June 8 and a waning gibbous

72

00:03:20,090 --> 00:03:17,730

moon on the ninth even so the moon is

73

00:03:22,580 --> 00:03:20,100

going to look plentiful all night long

74

00:03:25,070 --> 00:03:22,590

in North America and around the world as

75

00:03:28,040 --> 00:03:25,080

it lights up the night time from dusk

76

00:03:30,620 --> 00:03:28,050

till dawn the moon appears fall to the

77

00:03:33,050 --> 00:03:30,630

eye and remains more or less opposite

78

00:03:36,740 --> 00:03:33,060

the Sun for these next few nights so

79

00:03:40,280 --> 00:03:36,750

here is ye-olde bottom line at dusk and

80

00:03:43,250 --> 00:03:40,290

nightfall June 8 2017 look for the full

81

00:03:46,040 --> 00:03:43,260

looking moon the strawberry moon in

82

00:03:48,980 --> 00:03:46,050

North America low in the southeast not

83

00:03:52,730 --> 00:03:48,990

far from Saturn and Antares on the Great

84

00:03:54,560 --> 00:03:52,740

Dome of sky here's an article making the

85

00:03:57,410 --> 00:03:54,570

rounds of the internet interesting

86

00:04:00,860 --> 00:03:57,420

information we grab this from Earth Sky

87

00:04:03,820 --> 00:04:00,870

org from their space bureau it gets a

88

00:04:07,090 --> 00:04:03,830

byline for Elinor M ster here we go a

89

00:04:09,320 --> 00:04:07,100

planet hotter than most stars

90

00:04:12,140 --> 00:04:09,330

astronomers have discovered a

91

00:04:14,990 --> 00:04:12,150

jupiter-like world hotter than most

92

00:04:19,190 --> 00:04:15,000

stars the planet has a year that's only

93

00:04:22,700 --> 00:04:19,200

1.5 days long and might have a tail like

94

00:04:25,870 --> 00:04:22,710

a comet Elinor M ster gets the byline

95

00:04:27,510 --> 00:04:25,880

for this article as well and she writes

96

00:04:30,210 --> 00:04:27,520

astronomers have disk

97

00:04:35,999 --> 00:04:30,220

a jupiter-like world they're naming it

98

00:04:38,730 --> 00:04:36,009

ke LT - nine lowercase B the ke LT part

99

00:04:41,249 --> 00:04:38,740

that's all uppercase it's got add a side

100

00:04:44,219 --> 00:04:41,259

temperature of more than seven thousand

101  
00:04:46,140 --> 00:04:44,229  
eight hundred degrees Fahrenheit which

102  
00:04:48,420 --> 00:04:46,150  
translates to four thousand three

103  
00:04:51,059 --> 00:04:48,430  
hundred sixteen degrees Celsius that's

104  
00:04:53,999 --> 00:04:51,069  
hotter than most stars and only about

105  
00:04:54,719 --> 00:04:54,009  
2,000 degrees Fahrenheit or 1000 degrees

106  
00:04:58,350 --> 00:04:54,729  
Celsius

107  
00:05:00,180 --> 00:04:58,360  
cooler than our Sun enter Scott Gaudi

108  
00:05:03,089 --> 00:05:00,190  
he's a strong of a professor at Ohio

109  
00:05:05,100 --> 00:05:03,099  
State University and he led a study on

110  
00:05:07,589 --> 00:05:05,110  
this topic it's been described in the

111  
00:05:11,490 --> 00:05:07,599  
journal Nature very recently June 5th

112  
00:05:14,339 --> 00:05:11,500  
2017 here's a statement from Gowdy quote

113  
00:05:17,089 --> 00:05:14,349

this is the hottest gas giant planet

114

00:05:22,469 --> 00:05:17,099

that has ever been discovered and quotes

115

00:05:26,580 --> 00:05:22,479

but ke LT - nine B's star which is just

116

00:05:29,100 --> 00:05:26,590

ke LK - nine is even hotter so hot in

117

00:05:32,969 --> 00:05:29,110

fact that it's probably vaporizing the

118

00:05:35,760 --> 00:05:32,979

planet say astronomers the ke lt9 star

119

00:05:38,879 --> 00:05:35,770

is only three million years old which is

120

00:05:41,760 --> 00:05:38,889

young in star time it's more than twice

121

00:05:44,100 --> 00:05:41,770

as large and nearly twice as hot as our

122

00:05:46,350 --> 00:05:44,110

Sun and given that the planet's

123

00:05:49,350 --> 00:05:46,360

atmosphere is constantly blasted with

124

00:05:51,770 --> 00:05:49,360

high levels of ultraviolet radiation the

125

00:05:54,719 --> 00:05:51,780

planet may even be shedding a tail of

126

00:05:58,320 --> 00:05:54,729

evaporated planetary material like a

127

00:06:00,420 --> 00:05:58,330

comet study co-author Kievan station is

128

00:06:02,730 --> 00:06:00,430

a professor of physics and astronomy at

129

00:06:07,740 --> 00:06:02,740

Vanderbilt University here's his quote

130

00:06:10,560 --> 00:06:07,750

ke LT - 9 or Celt 9 radiates so much

131

00:06:12,540 --> 00:06:10,570

ultraviolet radiation it may completely

132

00:06:15,029 --> 00:06:12,550

evaporate the planet

133

00:06:18,260 --> 00:06:15,039

end quote but that's assuming the star

134

00:06:22,649 --> 00:06:18,270

doesn't grow to engulf the planet first

135

00:06:26,219 --> 00:06:22,659

assassin continues quote ke LT - 9 will

136

00:06:28,290 --> 00:06:26,229

swell to become a red giant star in just

137

00:06:30,719 --> 00:06:28,300

a few hundred million years the

138

00:06:34,080 --> 00:06:30,729

long-term prospects for life or real

139

00:06:37,740 --> 00:06:34,090

estate for that matter on ke LT - 9 B

140

00:06:40,379 --> 00:06:37,750

are not looking good and quotes and NASA

141

00:06:41,070 --> 00:06:40,389

chimes end quote because the planet is

142

00:06:43,830 --> 00:06:41,080

tidally

143

00:06:46,439 --> 00:06:43,840

locked to its star as the moon is to the

144

00:06:48,719 --> 00:06:46,449

earth one side of the planet is always

145

00:06:52,170 --> 00:06:48,729

facing toward the star and one side is

146

00:06:54,990 --> 00:06:52,180

in perpetual darkness molecules such as

147

00:06:57,209 --> 00:06:55,000

water carbon dioxide and methane can't

148

00:06:59,399 --> 00:06:57,219

form on the day side because it's

149

00:07:01,830 --> 00:06:59,409

bombarded by too much ultraviolet

150

00:07:05,040 --> 00:07:01,840

radiation the properties of the night

151  
00:07:07,700 --> 00:07:05,050  
side are still mysterious molecules may

152  
00:07:11,339 --> 00:07:07,710  
be able to form there but probably only

153  
00:07:14,240 --> 00:07:11,349  
temporarily and quilt this planet is

154  
00:07:17,100 --> 00:07:14,250  
also unusual in that it orbits

155  
00:07:19,559 --> 00:07:17,110  
perpendicular to the spin axis of its

156  
00:07:21,869 --> 00:07:19,569  
star that would be analogous to the

157  
00:07:25,529 --> 00:07:21,879  
planet orbiting perpendicular to the

158  
00:07:29,249 --> 00:07:25,539  
plane of our solar system so one year on

159  
00:07:32,249 --> 00:07:29,259  
this planet is less than two days the KE

160  
00:07:34,890 --> 00:07:32,259  
LT - 9b planet was found using one of

161  
00:07:38,219 --> 00:07:34,900  
the two telescopes called Celt or here

162  
00:07:44,180 --> 00:07:38,229  
we go kilo degree extremely little

163  
00:07:48,269 --> 00:07:44,190

telescope K ELT which brings us ke LT -

164

00:07:50,580 --> 00:07:48,279

9b that new planet bottom-line newly

165

00:07:54,480 --> 00:07:50,590

discovered planet is hotter than most

166

00:07:58,200 --> 00:07:54,490

stars speaking of stars let's segue this

167

00:08:01,350 --> 00:07:58,210

next article in right about here it gets

168

00:08:06,329 --> 00:08:01,360

a byline for Erik Mack who writes for CN

169

00:08:10,790 --> 00:08:06,339

et headline bent light from distant star

170

00:08:13,499 --> 00:08:10,800

proves Einstein right 100 years later

171

00:08:15,209 --> 00:08:13,509

just over a century after Albert

172

00:08:17,610 --> 00:08:15,219

Einstein managed to grok how the

173

00:08:20,040 --> 00:08:17,620

universe works without the aid of the

174

00:08:22,439 --> 00:08:20,050

fancy algorithms and space telescopes we

175

00:08:25,649 --> 00:08:22,449

have today modern astronomy and

176  
00:08:28,159 --> 00:08:25,659  
technology has again issued and I told

177  
00:08:31,009 --> 00:08:28,169  
you so on his behalf

178  
00:08:34,170 --> 00:08:31,019  
Einstein's general theory of relativity

179  
00:08:36,600 --> 00:08:34,180  
predicts that the gravity of stars acts

180  
00:08:39,389 --> 00:08:36,610  
as a kind of magnifying glass for other

181  
00:08:42,180 --> 00:08:39,399  
more distant stars when a nearer star

182  
00:08:44,519 --> 00:08:42,190  
passes in front of them this is because

183  
00:08:47,970 --> 00:08:44,529  
the gravity of huge objects like stars

184  
00:08:49,910 --> 00:08:47,980  
actually causes the fabric of space to

185  
00:08:52,439 --> 00:08:49,920  
curve around them

186  
00:08:54,280 --> 00:08:52,449  
Einstein surmised that as light from

187  
00:08:57,040 --> 00:08:54,290  
more distant stars passed by

188  
00:09:00,460 --> 00:08:57,050

it too would be curved or bent by the

189

00:09:02,590 --> 00:09:00,470

foreground stars gravity but observing

190

00:09:05,139 --> 00:09:02,600

this effect would require a near perfect

191

00:09:08,470 --> 00:09:05,149

alignment of two stars from the vantage

192

00:09:11,230 --> 00:09:08,480

point of Earth quote when a star in the

193

00:09:13,749 --> 00:09:11,240

foreground passes exactly between us and

194

00:09:15,550 --> 00:09:13,759

a background star end quote this is

195

00:09:18,490 --> 00:09:15,560

Carey Oswalt of embry-riddle

196

00:09:21,569 --> 00:09:18,500

Aeronautical University explaining he

197

00:09:24,879 --> 00:09:21,579

continues gravitational microlensing

198

00:09:28,120 --> 00:09:24,889

results in a perfectly circular ring of

199

00:09:31,749 --> 00:09:28,130

light a so-called Einstein ring and

200

00:09:34,180 --> 00:09:31,759

quote Einstein rings have been observed

201  
00:09:37,360 --> 00:09:34,190  
a much larger brighter cosmic objects

202  
00:09:39,850 --> 00:09:37,370  
like galaxies or supernovas behind a

203  
00:09:42,639 --> 00:09:39,860  
foreground galaxy but finding that

204  
00:09:46,090 --> 00:09:42,649  
perfect alignment of a pair of single

205  
00:09:49,540 --> 00:09:46,100  
stars is tricky some evidence of the

206  
00:09:51,220 --> 00:09:49,550  
effect came in 1919 when curving

207  
00:09:53,499 --> 00:09:51,230  
starlight could be measured around a

208  
00:09:55,960 --> 00:09:53,509  
solar eclipse but observing light

209  
00:09:58,030 --> 00:09:55,970  
bending around a star beyond our own

210  
00:10:02,590 --> 00:09:58,040  
solar system was a far greater challenge

211  
00:10:04,870 --> 00:10:02,600  
in 1936 Einstein wrote in the Journal of

212  
00:10:07,180 --> 00:10:04,880  
science that he felt there was no hope

213  
00:10:10,840 --> 00:10:07,190

of ever observing this phenomenon

214

00:10:14,019 --> 00:10:10,850

directly however on Wednesday a new

215

00:10:15,850 --> 00:10:14,029

study published in science provides the

216

00:10:18,879 --> 00:10:15,860

first evidence of Einsteins

217

00:10:22,139 --> 00:10:18,889

quote gravitational microlensing and

218

00:10:24,900 --> 00:10:22,149

quotes by a star other than our Sun

219

00:10:27,579 --> 00:10:24,910

using the Hubble Space Telescope an

220

00:10:29,500 --> 00:10:27,589

international team led by Kalish cease

221

00:10:32,199 --> 00:10:29,510

ahoo of the Space Telescope Science

222

00:10:34,240 --> 00:10:32,209

Institute measured the deflection of

223

00:10:37,059 --> 00:10:34,250

light from a distant star as it passed

224

00:10:41,679 --> 00:10:37,069

in front of a nearby white dwarf star

225

00:10:43,720 --> 00:10:41,689

that star's name is Stein 2051 B this

226  
00:10:46,809 --> 00:10:43,730  
happened several times over a two-year

227  
00:10:49,300 --> 00:10:46,819  
period while the two stars weren't in

228  
00:10:51,490 --> 00:10:49,310  
perfect alignment they were close enough

229  
00:10:53,170 --> 00:10:51,500  
that the asymmetrical version of an

230  
00:10:56,439 --> 00:10:53,180  
Einstein ring that the astronomers

231  
00:10:58,949 --> 00:10:56,449  
observed still demonstrated the bending

232  
00:11:02,290 --> 00:10:58,959  
of light that Einstein had predicted

233  
00:11:05,829 --> 00:11:02,300  
this allowed them to measure the mass of

234  
00:11:08,110 --> 00:11:05,839  
Stein 20:51 B and determine what the

235  
00:11:10,780 --> 00:11:08,120  
stars made of which has been a long

236  
00:11:13,030 --> 00:11:10,790  
standing mystery for scientists in an

237  
00:11:15,790 --> 00:11:13,040  
article accompanying the study in the

238  
00:11:19,269 --> 00:11:15,800

journal science it's noted that mass is

239

00:11:22,510 --> 00:11:19,279

quote the single most important property

240

00:11:24,160 --> 00:11:22,520

of a white dwarf star and quote the

241

00:11:26,440 --> 00:11:24,170

research by say who and colleagues

242

00:11:28,450 --> 00:11:26,450

provides a new tool for determining the

243

00:11:31,450 --> 00:11:28,460

masses of objects we can't easily

244

00:11:33,700 --> 00:11:31,460

measure by other means and having a new

245

00:11:36,850 --> 00:11:33,710

tool for measuring those masses of white

246

00:11:40,150 --> 00:11:36,860

dwarfs is particularly useful given that

247

00:11:43,540 --> 00:11:40,160

97% of stars in the universe will one

248

00:11:46,690 --> 00:11:43,550

day become or already are white dwarves

249

00:11:48,850 --> 00:11:46,700

they tell us about our future as well as

250

00:11:51,250 --> 00:11:48,860

our history and if history is any

251  
00:11:53,019 --> 00:11:51,260  
indication of the future it tells us

252  
00:11:55,720 --> 00:11:53,029  
that Albert Einstein will likely

253  
00:11:58,690 --> 00:11:55,730  
continue to be proven correct as our

254  
00:12:02,410 --> 00:11:58,700  
technology continues to catch up to his

255  
00:12:05,079 --> 00:12:02,420  
predictions and how cool is that check

256  
00:12:08,920 --> 00:12:05,089  
this out for coolness it's UFO stalker

257  
00:12:10,329 --> 00:12:08,930  
calm cyber sighting roadtrip time we're

258  
00:12:13,480 --> 00:12:10,339  
going to start with a black triangle

259  
00:12:17,620 --> 00:12:13,490  
sighting in Herrin Illinois that spelled

260  
00:12:20,560 --> 00:12:17,630  
H er R I n move on case number eight

261  
00:12:23,530 --> 00:12:20,570  
four two one six it's an older sighting

262  
00:12:25,780 --> 00:12:23,540  
it's from May but the end of May so not

263  
00:12:28,800 --> 00:12:25,790

that old this year it wasn't reported

264

00:12:32,650 --> 00:12:28,810

till the 5th of June here's the summary

265

00:12:38,260 --> 00:12:32,660

large triangle shape flying extremely

266

00:12:40,510 --> 00:12:38,270

fast no light very low no sound sighting

267

00:12:43,810 --> 00:12:40,520

specifics provided by this witness give

268

00:12:47,140 --> 00:12:43,820

us a viewing distance 501 feet and then

269

00:12:49,930 --> 00:12:47,150

becoming one mile the altitude was 500

270

00:12:52,420 --> 00:12:49,940

feet or less the sighting duration was

271

00:12:55,329 --> 00:12:52,430

quick five seconds object features

272

00:12:57,940 --> 00:12:55,339

unknown this object flew in a

273

00:13:00,730 --> 00:12:57,950

straight-line path and its shape well we

274

00:13:02,740 --> 00:13:00,740

heard previously is a triangle the

275

00:13:05,620 --> 00:13:02,750

maximum temperature at the time of this

276

00:13:08,890 --> 00:13:05,630

event was 84 degrees Fahrenheit 29

277

00:13:12,000 --> 00:13:08,900

degrees Celsius minimum temperature 62

278

00:13:15,280 --> 00:13:12,010

degrees Fahrenheit 17 degrees Celsius

279

00:13:17,740 --> 00:13:15,290

maximum visibility was 20 miles 32

280

00:13:20,740 --> 00:13:17,750

kilometers the minimum visibility 10

281

00:13:21,350 --> 00:13:20,750

miles 16 kilometers and it's noted that

282

00:13:22,940 --> 00:13:21,360

at the

283

00:13:26,000 --> 00:13:22,950

I'm of this sighting there was nothing

284

00:13:29,440 --> 00:13:26,010

abnormal about the weather let's read

285

00:13:31,759 --> 00:13:29,450

the sighting first person while outside

286

00:13:34,480 --> 00:13:31,769

me and a friend was testing out my new

287

00:13:37,220 --> 00:13:34,490

telescope trying to focus in on Saturn

288

00:13:39,170 --> 00:13:37,230

we was out there for around an hour so

289

00:13:42,829 --> 00:13:39,180

we were trying to figure it out

290

00:13:45,500 --> 00:13:42,839

I was almost dialed in on Saturn with a

291

00:13:48,139 --> 00:13:45,510

sight scope while my friend quietly but

292

00:13:51,290 --> 00:13:48,149

urgently told me to look and nudged me

293

00:13:54,019 --> 00:13:51,300

when I looked at what he was pointing at

294

00:13:56,930 --> 00:13:54,029

in the sky at first I was thinking it's

295

00:14:00,860 --> 00:13:56,940

a shooting star but this was no shooting

296

00:14:04,670 --> 00:14:00,870

star we saw a triangle-shaped ship

297

00:14:07,220 --> 00:14:04,680

flying very fast and very low it was

298

00:14:10,940 --> 00:14:07,230

really more like a glide with no noise

299

00:14:13,639 --> 00:14:10,950

no light it was only about five seconds

300

00:14:15,980 --> 00:14:13,649

but long enough for both of us to tell

301  
00:14:18,829 --> 00:14:15,990  
this was something neither one of us was

302  
00:14:22,000 --> 00:14:18,839  
supposed to see it was almost like a

303  
00:14:25,009 --> 00:14:22,010  
camouflage a silhouette in the night sky

304  
00:14:29,870 --> 00:14:25,019  
I'd say this thing was about 400 feet

305  
00:14:32,090 --> 00:14:29,880  
wide and 300 feet long now I can't say

306  
00:14:34,790 --> 00:14:32,100  
if it's related or not but I've had some

307  
00:14:38,360 --> 00:14:34,800  
weird physical and psychological events

308  
00:14:40,519 --> 00:14:38,370  
following this encounter gentle

309  
00:14:42,319 --> 00:14:40,529  
listeners the witness leaves us on a bit

310  
00:14:44,449 --> 00:14:42,329  
of a cliffhanger here there is no

311  
00:14:46,759 --> 00:14:44,459  
punchline we don't know what this

312  
00:14:50,360 --> 00:14:46,769  
weirdness this high strangeness was oh

313  
00:14:52,790 --> 00:14:50,370

boy don't we all want to know if you

314

00:14:56,360 --> 00:14:52,800

want to know what happened in North own

315

00:14:59,870 --> 00:14:56,370

stead Ohio well here we go it's move on

316

00:15:02,480 --> 00:14:59,880

case number 8 4 0 3 1 the date of this

317

00:15:05,960 --> 00:15:02,490

sighting is the 27th of May this year

318

00:15:09,319 --> 00:15:05,970

and it was reported May 28th the summary

319

00:15:13,340 --> 00:15:09,329

we saw a bright orange light flying in

320

00:15:14,720 --> 00:15:13,350

straight paths west to east sighting

321

00:15:17,389 --> 00:15:14,730

specifics well

322

00:15:20,840 --> 00:15:17,399

viewing distance 501 feet to one mile

323

00:15:22,850 --> 00:15:20,850

the altitude was over 500 feet and at

324

00:15:25,910 --> 00:15:22,860

the time there was no cloud cover over

325

00:15:28,579 --> 00:15:25,920

North Olmsted Ohio the sighting duration

326

00:15:31,010 --> 00:15:28,589

was one minute 31 seconds the object

327

00:15:33,439 --> 00:15:31,020

features well there simply described as

328

00:15:34,970 --> 00:15:33,449

none the object flight path

329

00:15:37,189 --> 00:15:34,980

straight-line path

330

00:15:39,860 --> 00:15:37,199

and this object was shaped like a circle

331

00:15:42,530 --> 00:15:39,870

here is the weather report maximum

332

00:15:44,750 --> 00:15:42,540

temperature 66 degrees Fahrenheit 19

333

00:15:48,680 --> 00:15:44,760

degrees Celsius dropping down to a

334

00:15:51,230 --> 00:15:48,690

minimum 59 degrees Fahrenheit 15 degrees

335

00:15:54,439 --> 00:15:51,240

Celsius all those visibility factors

336

00:15:57,560 --> 00:15:54,449

maximum mean and minimum were the same

337

00:16:00,560 --> 00:15:57,570

the standard 10 miles 16 kilometers and

338

00:16:01,340 --> 00:16:00,570

nope nothing abnormal about the weather

339

00:16:04,550 --> 00:16:01,350

here

340

00:16:07,310 --> 00:16:04,560

let's read my neighbor and I were

341

00:16:10,269 --> 00:16:07,320

standing outside enjoying a fire when he

342

00:16:13,460 --> 00:16:10,279

pointed up and said what's that thing I

343

00:16:16,970 --> 00:16:13,470

then noticed a bright orange light orb

344

00:16:20,180 --> 00:16:16,980

to the west we began to try to identify

345

00:16:22,340 --> 00:16:20,190

this craft we eliminated the fact that

346

00:16:25,100 --> 00:16:22,350

it could be a fixed-wing aircraft I

347

00:16:27,290 --> 00:16:25,110

thought it could be a helicopter since

348

00:16:30,259 --> 00:16:27,300

there is some helicopter traffic in the

349

00:16:33,259 --> 00:16:30,269

area but we soon eliminated that as the

350

00:16:35,750 --> 00:16:33,269

object continued flying east toward us

351  
00:16:39,340 --> 00:16:35,760  
it made no sound and the bright orange

352  
00:16:42,680 --> 00:16:39,350  
light was not normal for a helicopter

353  
00:16:44,840 --> 00:16:42,690  
then it could be the Chinese lanterns we

354  
00:16:47,750 --> 00:16:44,850  
thought but the flight path seemed

355  
00:16:49,009 --> 00:16:47,760  
controlled from west to east my neighbor

356  
00:16:51,199 --> 00:16:49,019  
ran to grab his wife

357  
00:16:54,110 --> 00:16:51,209  
I took my phone out to begin filming

358  
00:16:56,840 --> 00:16:54,120  
this orange orb but then it pulsated and

359  
00:16:59,689 --> 00:16:56,850  
it fizzled out the second I attempted to

360  
00:17:02,780 --> 00:16:59,699  
film it this was most definitely unusual

361  
00:17:05,090 --> 00:17:02,790  
as we do have air traffic in the area

362  
00:17:07,760 --> 00:17:05,100  
and since I'm familiar with most of

363  
00:17:11,600 --> 00:17:07,770

these aircraft and I can identify most

364

00:17:14,480 --> 00:17:11,610

aircraft well I'm curious to see if we

365

00:17:17,510 --> 00:17:14,490

can identify this orange object and see

366

00:17:20,179 --> 00:17:17,520

if there are any other witnesses Oh a

367

00:17:21,890 --> 00:17:20,189

perfect place to remind you gentle

368

00:17:22,370 --> 00:17:21,900

Isner's if you're not aware of this

369

00:17:25,699 --> 00:17:22,380

already

370

00:17:28,880 --> 00:17:25,709

UFO stalker comm offers a place to

371

00:17:31,640 --> 00:17:28,890

comment provide your input your analysis

372

00:17:34,280 --> 00:17:31,650

and most critically if you saw that

373

00:17:37,250 --> 00:17:34,290

thing too the posting witness would love

374

00:17:41,390 --> 00:17:37,260

some sort of feedback why do you say we

375

00:17:44,659 --> 00:17:41,400

glide on down to San Antonio Texas MUFON

376

00:17:47,970 --> 00:17:44,669

Case number eight four one four six date

377

00:17:53,490 --> 00:17:47,980

of the sighting six to 2017 the

378

00:17:57,330 --> 00:17:53,500

submitted 6-3 2017 in summary to lower

379

00:18:01,200 --> 00:17:57,340

and three higher but together flying in

380

00:18:04,230 --> 00:18:01,210

Northwest direction citing specifics

381

00:18:06,980 --> 00:18:04,240

viewing distance over one mile altitude

382

00:18:10,919 --> 00:18:06,990

over five hundred feet no cloud cover

383

00:18:13,530 --> 00:18:10,929

sighting duration 15 minutes object

384

00:18:16,970 --> 00:18:13,540

features none object flight path

385

00:18:19,950 --> 00:18:16,980

straight line path object shape other

386

00:18:23,340 --> 00:18:19,960

there isn't any weather report but

387

00:18:25,140 --> 00:18:23,350

here's the report itself my wife and

388

00:18:28,230 --> 00:18:25,150

daughter and I were getting a snow cone

389

00:18:32,159 --> 00:18:28,240

at the corner of Bandera Road and 1604

390

00:18:35,070 --> 00:18:32,169

and as we got into the car my 23 year

391

00:18:38,610 --> 00:18:35,080

old daughter said hey dad why are those

392

00:18:40,440 --> 00:18:38,620

planes flying so close together as I

393

00:18:42,720 --> 00:18:40,450

look into the sky I saw what my daughter

394

00:18:46,230 --> 00:18:42,730

was talking about and I made a joke Hey

395

00:18:49,200 --> 00:18:46,240

look those are UFOs you just found as I

396

00:18:52,049 --> 00:18:49,210

really looked at them I noticed that

397

00:18:54,299 --> 00:18:52,059

they were not right and when they turned

398

00:18:57,330 --> 00:18:54,309

off they really were not airplanes

399

00:19:00,360 --> 00:18:57,340

either we live close to an Air Force

400

00:19:03,150 --> 00:19:00,370

Base and we here in see planes everyday

401  
00:19:06,270 --> 00:19:03,160  
also we're not that far from the San

402  
00:19:08,549 --> 00:19:06,280  
Antonio Airport these lights were not in

403  
00:19:10,740 --> 00:19:08,559  
the right flight pattern to go either to

404  
00:19:13,080 --> 00:19:10,750  
the Air Force Base or to the airport

405  
00:19:16,380 --> 00:19:13,090  
they were flying towards us and to our

406  
00:19:18,659 --> 00:19:16,390  
right there were two lower and two

407  
00:19:22,500 --> 00:19:18,669  
higher and as they were flying one by

408  
00:19:24,360 --> 00:19:22,510  
one they would turn off slowly their

409  
00:19:26,549 --> 00:19:24,370  
lights would dim then as they began that

410  
00:19:29,909 --> 00:19:26,559  
turn starting with the one in front and

411  
00:19:33,090 --> 00:19:29,919  
then the next and so on and that's when

412  
00:19:35,039 --> 00:19:33,100  
I realized they couldn't be planes the

413  
00:19:37,620 --> 00:19:35,049

last one we saw would be the fourth one

414

00:19:39,750 --> 00:19:37,630

on that row and it came out from where

415

00:19:42,960 --> 00:19:39,760

there was some Lightning starting to

416

00:19:45,539 --> 00:19:42,970

happen inside a cloud the sky had seemed

417

00:19:48,180 --> 00:19:45,549

clear other than that one cloud the

418

00:19:50,549 --> 00:19:48,190

Lightning was coming from now when the

419

00:19:53,250 --> 00:19:50,559

third one went out when its lights went

420

00:19:56,430 --> 00:19:53,260

out we didn't see another so I took off

421

00:20:00,810 --> 00:19:56,440

driving back towards our house as I got

422

00:20:01,840 --> 00:20:00,820

to highway 1604 we noticed another so I

423

00:20:04,090 --> 00:20:01,850

pulled over

424

00:20:06,280 --> 00:20:04,100

after the part on the street where all

425

00:20:09,160 --> 00:20:06,290

the shops were and now we were totally

426

00:20:10,960 --> 00:20:09,170

in the dark but I could see better I got

427

00:20:13,480 --> 00:20:10,970

out of my truck and watched as this

428

00:20:15,790 --> 00:20:13,490

fourth one went the same way as the

429

00:20:18,010 --> 00:20:15,800

other three there were no clouds in the

430

00:20:21,400 --> 00:20:18,020

sky when their lights would turn off and

431

00:20:22,840 --> 00:20:21,410

then they were gone I would have stayed

432

00:20:24,430 --> 00:20:22,850

to see if anything else would have

433

00:20:26,860 --> 00:20:24,440

happened but we had to leave because

434

00:20:29,710 --> 00:20:26,870

Mother Nature called and I had to answer

435

00:20:31,000 --> 00:20:29,720

so I didn't see whether anything else

436

00:20:33,370 --> 00:20:31,010

happened after that

437

00:20:37,090 --> 00:20:33,380

Oh Mother Nature can be very

438

00:20:38,980 --> 00:20:37,100

inconvenient can she not somehow there's

439

00:20:41,290 --> 00:20:38,990

something compelling about witnesses who

440

00:20:44,440 --> 00:20:41,300

definitely know what is usually in their

441

00:20:47,170 --> 00:20:44,450

sky airport wise Air Force Base wise and

442

00:20:50,320 --> 00:20:47,180

there's something that's not right it

443

00:20:54,160 --> 00:20:50,330

stands out let's go to North Las Vegas

444

00:20:57,970 --> 00:20:54,170

MUFON case number 8 for 2 to 8 this

445

00:20:59,950 --> 00:20:57,980

occurred on the 3rd of June 2017 it was

446

00:21:02,740 --> 00:20:59,960

reported three days later here's the

447

00:21:05,590 --> 00:21:02,750

summary bright object appearing to have

448

00:21:08,770 --> 00:21:05,600

wings but changing when viewed through

449

00:21:11,290 --> 00:21:08,780

binoculars there are photos accompanying

450

00:21:14,470 --> 00:21:11,300

this report the viewing distance was

451  
00:21:17,380 --> 00:21:14,480  
over one mile the altitude 500 feet or

452  
00:21:20,080 --> 00:21:17,390  
less this was a long sighting two hours

453  
00:21:22,030 --> 00:21:20,090  
but in spite of that length of time the

454  
00:21:24,760 --> 00:21:22,040  
object features are simply reported as

455  
00:21:28,120 --> 00:21:24,770  
unknown the object flight path is

456  
00:21:30,400 --> 00:21:28,130  
reported as hovering then path and it

457  
00:21:33,610 --> 00:21:30,410  
was shaped like a cylinder here's the

458  
00:21:35,800 --> 00:21:33,620  
report when looking at this object with

459  
00:21:38,460 --> 00:21:35,810  
the naked eye it simply appeared to be

460  
00:21:41,140 --> 00:21:38,470  
very brightly lit and to have wings

461  
00:21:44,830 --> 00:21:41,150  
however upon viewing with binoculars

462  
00:21:47,140 --> 00:21:44,840  
this object changed and again it changed

463  
00:21:49,750 --> 00:21:47,150

one looked at with night vision app on

464

00:21:51,850 --> 00:21:49,760

the phone also with the naked eye there

465

00:21:54,460 --> 00:21:51,860

was no change in shape or motion

466

00:21:57,820 --> 00:21:54,470

noticeable viewing through binoculars

467

00:21:59,860 --> 00:21:57,830

changed this shape radically now I could

468

00:22:02,440 --> 00:21:59,870

see there was first a sort of cylinder

469

00:22:05,830 --> 00:22:02,450

shape with equal parts colored red white

470

00:22:08,110 --> 00:22:05,840

and blue glowing very brightly then it

471

00:22:09,910 --> 00:22:08,120

looked like a beaming spotlight and at

472

00:22:12,520 --> 00:22:09,920

first I thought it was beaming a light

473

00:22:14,250 --> 00:22:12,530

to the ground but as I watched it seemed

474

00:22:16,380 --> 00:22:14,260

to cause something to me

475

00:22:19,620 --> 00:22:16,390

he realized at the end of this beam

476  
00:22:22,470 --> 00:22:19,630  
which widened this thing looked like a

477  
00:22:25,280 --> 00:22:22,480  
sparkly cloud it kind of shimmered or

478  
00:22:27,390 --> 00:22:25,290  
had shimmering iridescent bits in it at

479  
00:22:29,760 --> 00:22:27,400  
times when it was doing this it

480  
00:22:32,390 --> 00:22:29,770  
maintained the same distance between it

481  
00:22:35,550 --> 00:22:32,400  
and the object at the end of the beam

482  
00:22:37,830 --> 00:22:35,560  
while it did this it was sort of

483  
00:22:40,230 --> 00:22:37,840  
floating around in the sky and then

484  
00:22:42,300 --> 00:22:40,240  
occasionally that first section the red

485  
00:22:45,150 --> 00:22:42,310  
white and blue cylinder would change

486  
00:22:47,070 --> 00:22:45,160  
into a sort of half circle of lights

487  
00:22:49,380 --> 00:22:47,080  
these lights looked like candle flames

488  
00:22:52,710 --> 00:22:49,390

they were next to one another five or

489

00:22:54,660 --> 00:22:52,720

six candle flames in a semicircle it

490

00:22:57,960 --> 00:22:54,670

would alternate between these the whole

491

00:23:00,990 --> 00:22:57,970

time often when it moved it reminded me

492

00:23:03,510 --> 00:23:01,000

of the way a butterfly moves this object

493

00:23:05,970 --> 00:23:03,520

was watched for two hours and then the

494

00:23:08,340 --> 00:23:05,980

Sun came up as it grew lighter outside

495

00:23:11,130 --> 00:23:08,350

the craft seemed to just begin floating

496

00:23:14,130 --> 00:23:11,140

upward and rose higher and higher till I

497

00:23:16,080 --> 00:23:14,140

eventually couldn't see it when I viewed

498

00:23:17,640 --> 00:23:16,090

this through the night-vision app it

499

00:23:20,490 --> 00:23:17,650

appeared just to be a very bright

500

00:23:23,130 --> 00:23:20,500

glowing object that left trails no

501  
00:23:25,020 --> 00:23:23,140  
details were visible the only time you

502  
00:23:27,870 --> 00:23:25,030  
could see these details or even see it

503  
00:23:29,760 --> 00:23:27,880  
doing anything was with binoculars to

504  
00:23:32,310 --> 00:23:29,770  
the naked eye it just looked like a

505  
00:23:34,410 --> 00:23:32,320  
brightly lit aircraft it didn't appear

506  
00:23:37,500 --> 00:23:34,420  
to be doing anything you couldn't see it

507  
00:23:40,710 --> 00:23:37,510  
moving making any beams no rings nothing

508  
00:23:45,210 --> 00:23:40,720  
but through those binoculars I could see

509  
00:23:47,550 --> 00:23:45,220  
these things extraordinary with our

510  
00:23:51,540 --> 00:23:47,560  
naked eyes we can see that it's time for

511  
00:23:53,850 --> 00:23:51,550  
us to go because that's a wrap thank you

512  
00:23:56,790 --> 00:23:53,860  
for listening to inception radio network

513  
00:23:59,850 --> 00:23:56,800

follow today's broadcast at UFO headline

514

00:24:01,260 --> 00:23:59,860

news on take care of each other we are

515

00:24:03,780 --> 00:24:01,270

all in this together
