

1
00:00:06,289 --> 00:00:04,460
so they're built three sections high and

2
00:00:13,669 --> 00:00:06,299
I'm going to show you that all the

3
00:00:16,250 --> 00:00:13,679
floors can support a lot of these are

4
00:00:18,429 --> 00:00:16,260
fairly substantial flaws compared to

5
00:00:26,900 --> 00:00:18,439
their wetness will be the equivalent of

6
00:00:29,779 --> 00:00:26,910
several tanks I believe very heavy does

7
00:00:31,880 --> 00:00:29,789
not fall down a single section by itself

8
00:00:34,220 --> 00:00:31,890
is strong enough to be picked up by home

9
00:00:50,799 --> 00:00:34,230
the answer to of the flaws and then use

10
00:00:55,670 --> 00:00:53,810
what we want to know if what happened at

11
00:00:58,220 --> 00:00:55,680
the top of the building were to pull

12
00:01:01,819 --> 00:00:58,230
down and fall into the bottom part

13
00:01:03,590 --> 00:01:01,829

rebuilding the attitude then before oh
