

Unidentified Submerged Object?????

1
00:00:05,510 --> 00:00:02,030
several people have asked me about this

2
00:00:07,309 --> 00:00:05,520
Use an unidentified submerged object I

3
00:00:08,810 --> 00:00:07,319
reached out to Tahoe deep to get the

4
00:00:10,549 --> 00:00:08,820
original footage and they sent over

5
00:00:12,350 --> 00:00:10,559
nearly six minutes

6
00:00:14,030 --> 00:00:12,360
the submersible is moving through the

7
00:00:16,849 --> 00:00:14,040
water so you see all these suspended

8
00:00:18,529 --> 00:00:16,859
specs move past it the object appears to

9
00:00:21,050 --> 00:00:18,539
be moving under its own power because it

10
00:00:22,970 --> 00:00:21,060
moves in a somewhat different direction

11
00:00:24,590 --> 00:00:22,980
it also appears further away as it's

12
00:00:27,230 --> 00:00:24,600
dimmer than the specs making it look

13
00:00:28,849 --> 00:00:27,240

much bigger but I think it's more likely

14

00:00:30,109 --> 00:00:28,859

this is just a bit of debris floating in

15

00:00:32,389 --> 00:00:30,119

the water and the differences are

16

00:00:33,950 --> 00:00:32,399

because it's near not far away

17

00:00:36,110 --> 00:00:33,960

adding an echo makes the different

18

00:00:37,670 --> 00:00:36,120

trajectory clear most of the specs move

19

00:00:40,310 --> 00:00:37,680

in the same direction reflecting the

20

00:00:42,650 --> 00:00:40,320

movement of the sub The Uso moves at an

21

00:00:46,250 --> 00:00:42,660

angle but it's not the only one we see

22

00:00:48,650 --> 00:00:46,260

this at 123 and again at 320 both in the

23

00:00:51,590 --> 00:00:48,660

same location both of the same angle and

24

00:00:53,990 --> 00:00:51,600

both dimmer than the background specs

25

00:00:57,770 --> 00:00:54,000

at 202 there's this large object

26
00:00:59,450 --> 00:00:57,780
drifting in the background but dimmer so

27
00:01:01,790 --> 00:00:59,460
I think all that's happening is that the

28
00:01:02,510 --> 00:01:01,800
Uso is a bit of debris floating in the

29
00:01:04,789 --> 00:01:02,520
water

30
00:01:07,429 --> 00:01:04,799
it seems to move fast because it's close

31
00:01:09,230 --> 00:01:07,439
to the sub just perspective it moves at

32
00:01:11,390 --> 00:01:09,240
a different angle because it's close to

33
00:01:14,030 --> 00:01:11,400
the sub and at this point the water is

34
00:01:16,429 --> 00:01:14,040
starting to flow around the sub laminar

35
00:01:18,890 --> 00:01:16,439
flow and so it's flowing away from the

36
00:01:20,870 --> 00:01:18,900
center it's probably dim because it's

37
00:01:22,670 --> 00:01:20,880
not being lit directly as it's close to

38
00:01:24,289 --> 00:01:22,680

the sub out of the direct light it's

39

00:01:25,850 --> 00:01:24,299

like this dim bit of the sub on the

40

00:01:27,950 --> 00:01:25,860

right

41

00:01:29,990 --> 00:01:27,960

and since the several other smaller

42

00:01:31,850 --> 00:01:30,000

objects that do the same things there's

43

00:01:33,469 --> 00:01:31,860

really no need to suggest that this is

44

00:01:34,850 --> 00:01:33,479

anything other than a bit of underwater

45

00:01:37,190 --> 00:01:34,860

debris
