

... that the insects. They were thinking we had
described them as insects. The members of the
... and legs. The insects were beetles, however, though
they had eyes on stalks that emerged from the top of their heads.
The stalks moved independently of one another and
... and the components as they guided by.

... they covered a green mat of plant
life and water. Later, after seeing a specimen sent to us in
a plastic bag, Betty was identified as a 10-11 year old
... the appearance—size of many. It later turned
out—as being exactly in nature.

Bill Stewart & Peter The Astronomer 4/8/68 (Eggs and 12th, N.E.
Public Nat, 1976)
