

1

00:00:00,000 --> 00:00:02,000

That looks like a good spot.

2

00:00:02,000 --> 00:00:03,000

You see the mason?

3

00:00:03,000 --> 00:00:06,000

The moon's gonna be giving us some backlighting.

4

00:00:06,000 --> 00:00:08,000

You see the glow, the flicker?

5

00:00:08,000 --> 00:00:11,000

Yeah, it looks like the whole top of the mountain is glowing.

6

00:00:11,000 --> 00:00:12,000

Look at that.

7

00:00:12,000 --> 00:00:13,000

There it is again.

8

00:00:13,000 --> 00:00:14,000

That's a definite beam.

9

00:00:14,000 --> 00:00:16,000

Yeah, that's spiking.

10

00:00:16,000 --> 00:00:17,000

That could be dangerous.

11

00:00:17,000 --> 00:00:18,000

My head is hurting bad.

12

00:00:18,000 --> 00:00:20,000

Let's get you the heck out of here.

13

00:00:20,000 --> 00:00:21,000

I'm serious.

14

00:00:21,000 --> 00:00:23,000

This could be life threatening.

15

00:00:23,000 --> 00:00:26,000

He needs to be in the car right now on the way the emergency went.

16

00:00:30,000 --> 00:00:33,000

There is a ranch in northern Utah.

17

00:00:33,000 --> 00:00:41,000

It is considered the epicenter of the strangest and most disturbing phenomena on Earth.

18

00:00:41,000 --> 00:00:51,000

Animal mutilations, bizarre UFO sightings, and unusual energies that have proven harmful to humans.

19

00:00:51,000 --> 00:00:57,000

For 20 years, the federal government tried to find answers and failed.

20

00:00:57,000 --> 00:01:04,000

Now, a new team of dedicated scientists, researchers, and experts has taken over.

21

00:01:04,000 --> 00:01:14,000

They are determined to solve the mystery and reveal the secret of Skinwalker Ranch.

22

00:01:24,000 --> 00:01:25,000

What's going on, Dragon?

23

00:01:25,000 --> 00:01:26,000

Hey, Brandon.

24

00:01:26,000 --> 00:01:36,000

So, as you know, we had the team out last night and we started picking up really heavy RF signals and things like that, like we have previously.

25

00:01:36,000 --> 00:01:37,000

Yeah.

26

00:01:37,000 --> 00:01:49,000

And all of a sudden, Tom started saying that he had a headache and then reached back to the spot on the back of his head where he'd previously had his serious injury and said that he was having pain

there again.

27

00:01:49,000 --> 00:01:50,000

Oh, my gosh.

28

00:01:50,000 --> 00:01:57,000

So, Caleb actually grabbed him and drove him to the emergency room to have more testing.

29

00:01:57,000 --> 00:01:59,000

This is really troubling.

30

00:01:59,000 --> 00:02:04,000

All I know is that people are getting hurt and we've got to figure out why the hell that is happening.

31

00:02:04,000 --> 00:02:08,000

I need to get out there immediately. Let's pull everyone together.

32

00:02:08,000 --> 00:02:09,000

I think that's a good idea.

33

00:02:09,000 --> 00:02:10,000

Keep me posted.

34

00:02:10,000 --> 00:02:11,000

I will.

35

00:02:11,000 --> 00:02:12,000

Thank you.

36

00:02:12,000 --> 00:02:13,000

See you.

37

00:02:21,000 --> 00:02:22,000

Morning, guys.

38

00:02:22,000 --> 00:02:23,000

How are you?

39

00:02:23,000 --> 00:02:26,000

Well, I'm sure I got a little more sleep than you guys.

40

00:02:26,000 --> 00:02:27,000

If you got any, you got more than that.

41

00:02:27,000 --> 00:02:28,000

Yeah, exactly.

42

00:02:28,000 --> 00:02:29,000

We haven't slept any.

43

00:02:29,000 --> 00:02:30,000

Oh, my gosh.

44

00:02:32,000 --> 00:02:36,000

How about Thomas? Where's our good friend Thomas?

45

00:02:39,000 --> 00:02:43,000

After what happened during last night's stakeout at the Mesa, all of us are a bit freaked out.

46

00:02:43,000 --> 00:02:46,000

I mean, what we saw was strange enough.

47

00:02:46,000 --> 00:02:52,000

But then, Tom Winerton started getting the same symptoms he had had before where his scalp started separating from his skull.

48

00:02:52,000 --> 00:03:00,000

Right near daylight, Thomas started having recurring symptoms from his previous injury.

49

00:03:00,000 --> 00:03:04,000

And we had him go to the emergency room.

50

00:03:06,000 --> 00:03:10,000

We got some crazy readings on the RF scale and things like that.

51

00:03:10,000 --> 00:03:13,000

And immediately, he's like, ah, and my head hurts.

52

00:03:17,000 --> 00:03:24,000

We got him off of the property as quickly as possible.

53

00:03:24,000 --> 00:03:26,000

How bad is it?

54

00:03:26,000 --> 00:03:29,000

You know, it was a, it happened so suddenly.

55

00:03:29,000 --> 00:03:31,000

But we don't know.

56

00:03:33,000 --> 00:03:39,000

Let me tell you, what we measured tonight wasn't a spook.

57

00:03:39,000 --> 00:03:41,000

It was a real thing.

58

00:03:41,000 --> 00:03:42,000

Yeah.

59

00:03:42,000 --> 00:03:43,000

We all saw it.

60

00:03:43,000 --> 00:03:44,000

It was real.

61

00:03:44,000 --> 00:03:46,000

I completely agree.

62

00:03:46,000 --> 00:03:53,000

For some reason, this phenomenon attaches like a hitchhiker to Tom.

63

00:03:53,000 --> 00:03:54,000

Yeah, I know, I know.

64

00:03:54,000 --> 00:03:59,000

And that's one of my biggest fears is this happening to collectively any one of you.

65

00:03:59,000 --> 00:04:04,000

This is the second injury of this type that Tom has suffered.

66

00:04:04,000 --> 00:04:08,000

And I don't know if he's going to be able to come back.

67

00:04:08,000 --> 00:04:13,000

So let's do this. Let's go get some rest and then come back to this and figure out next steps.

68

00:04:13,000 --> 00:04:14,000

I think that's a good plan.

69

00:04:14,000 --> 00:04:15,000

Yeah, I'm wiped out.

70

00:04:15,000 --> 00:04:17,000

I don't even know what my name is.

71

00:04:17,000 --> 00:04:19,000

Yes, and keep me posted on Tom, right?

72

00:04:19,000 --> 00:04:21,000

Oh yeah, absolutely.

73

00:04:21,000 --> 00:04:22,000

Thanks so much.

74

00:04:22,000 --> 00:04:23,000

Yeah man.

75

00:04:33,000 --> 00:04:34,000

That's good.

76

00:04:34,000 --> 00:04:35,000

All right, yep.

77

00:04:35,000 --> 00:04:36,000

Yep, good.

78

00:04:39,000 --> 00:04:40,000

What scale are you doing?

79

00:04:43,000 --> 00:04:44,000

Hey!

80

00:04:44,000 --> 00:04:46,000

You're up and about.

81

00:04:46,000 --> 00:04:47,000

Hey guys.

82

00:04:47,000 --> 00:04:50,000

Well, it's good to see you in an upright position, my friend.

83

00:04:50,000 --> 00:04:51,000

How you feeling?

84

00:04:51,000 --> 00:04:52,000

I'm fine.

85

00:04:52,000 --> 00:04:53,000

Welcome back, buddy.

86

00:04:53,000 --> 00:04:55,000

How you feeling, man?

87

00:04:55,000 --> 00:04:56,000

I'm good.

88

00:04:56,000 --> 00:04:57,000

Good.

89

00:04:57,000 --> 00:04:58,000

Glad to see that, man.

90

00:04:58,000 --> 00:05:00,000

It was good to come back and see the guys.

91

00:05:00,000 --> 00:05:10,000

You know, when I drove up and the guys are standing there, their concern was definitely

92

00:05:10,000 --> 00:05:12,000

humbling and appreciated.

93

00:05:12,000 --> 00:05:13,000

Hey!

94

00:05:13,000 --> 00:05:14,000

Good to see you, brother.

95

00:05:14,000 --> 00:05:15,000

Good to see you, brother.

96

00:05:15,000 --> 00:05:18,000

It is really good to see you up and about, man.

97

00:05:18,000 --> 00:05:20,000

What did they say at the hospital?

98

00:05:20,000 --> 00:05:23,000

They took me in for a CT scan and it didn't pick up much.

99

00:05:23,000 --> 00:05:25,000

How long did the pain last?

100

00:05:25,000 --> 00:05:27,000

More than the pain was where it was located.

101

00:05:27,000 --> 00:05:33,000

And the thing that really caused me alarm is that that exact spot where that lump first

102

00:05:33,000 --> 00:05:37,000

appeared on my first injury, that's where the pain started.

103

00:05:37,000 --> 00:05:39,000

And it started throbbing there.

104

00:05:39,000 --> 00:05:41,000

Well, and it swelled up a little bit.

105

00:05:41,000 --> 00:05:45,000

When we first brought you in, you could feel that there was a little bit of it raised up.

106

00:05:45,000 --> 00:05:49,000

Yeah, and the doctor could even feel, you know, when he was looking at it and examining

107

00:05:49,000 --> 00:05:50,000

me, he could feel a difference there.

108

00:05:50,000 --> 00:05:54,000

He said, yeah, there is a little bit of swelling there.

109

00:05:54,000 --> 00:05:58,000

Even when they took the first scans in my previous injury, they didn't notice anything

110

00:05:58,000 --> 00:05:59,000

right off the bat.

111

00:05:59,000 --> 00:06:05,000

It wasn't until they started looking closer that they started to see similar cases.

112

00:06:05,000 --> 00:06:08,000

That they started to see similar characteristics.

113

00:06:08,000 --> 00:06:13,000

The injuries that Tom Winterton experienced two years ago were of the nature that he had

114

00:06:13,000 --> 00:06:18,000

a neurological episode and he had a big swelling in the back of his head.

115

00:06:18,000 --> 00:06:24,000

He was admitted to the hospital and the attending physicians really were not able to determine

116

00:06:24,000 --> 00:06:26,000

what was wrong with him.

117

00:06:26,000 --> 00:06:30,000

I was called in as a consultant to try to figure out what happened.

118

00:06:30,000 --> 00:06:35,000

And one of the things that struck me about Thomas' case, his injuries were consistent

119

00:06:35,000 --> 00:06:40,000

with a radiation beam that entered his body from a specific angle, angle of attack, back

120

00:06:40,000 --> 00:06:42,000

behind his head.

121

00:06:42,000 --> 00:06:43,000

We got a lot to do.

122

00:06:43,000 --> 00:06:45,000

Let's get back to it, man.

123

00:06:45,000 --> 00:06:47,000

All right, let's get back to work.

124

00:06:47,000 --> 00:06:51,000

It was certainly relieved to see Tom up and about and learn that he wasn't suffering any

125

00:06:51,000 --> 00:06:56,000

long-term effects, but we're still pretty spooked out by what caused his injury in the first place.

126

00:07:00,000 --> 00:07:02,000

Welcome, sir.

127

00:07:02,000 --> 00:07:07,000

I've got the team assembled inside.

128

00:07:07,000 --> 00:07:08,000

Very good.

129

00:07:08,000 --> 00:07:09,000

I have the devices.

130

00:07:09,000 --> 00:07:11,000

Dave, let's head on in.

131

00:07:11,000 --> 00:07:12,000

Hey, guys.

132

00:07:12,000 --> 00:07:13,000

How are you?

133

00:07:13,000 --> 00:07:14,000

So good to see you.

134

00:07:14,000 --> 00:07:16,000

Tom, hey, good to see you.

135

00:07:16,000 --> 00:07:18,000

It's so good to see you.

136

00:07:18,000 --> 00:07:20,000

I've been so worried about you.

137

00:07:20,000 --> 00:07:22,000

There's a seat right here for you, man.

138

00:07:22,000 --> 00:07:23,000

Great.

139

00:07:23,000 --> 00:07:30,000

Well, it's good to be with you, and as soon as I heard the report of Tom being run to

140

00:07:30,000 --> 00:07:33,000

the hospital, I've been very, very concerned.

141

00:07:33,000 --> 00:07:34,000

Yeah.

142

00:07:34,000 --> 00:07:36,000

It's one thing to see lights on the mesa.

143

00:07:36,000 --> 00:07:43,000

It's another thing to see the tri-field meters going off, but it's a whole other situation

144

00:07:43,000 --> 00:07:46,000

when one of our team members ends up going to the hospital.

145

00:07:46,000 --> 00:07:47,000

Right.

146

00:07:47,000 --> 00:07:54,000

Given all of the incidents that have occurred recently and Tom's injuries and so many strange

147

00:07:54,000 --> 00:08:05,000

anomalies, should we go ahead with the investigation further, or is this really a point where we

148

00:08:05,000 --> 00:08:09,000

need to take a deep breath and maybe a step back?

149

00:08:09,000 --> 00:08:11,000

What's your thoughts on that, Tom?

150

00:08:11,000 --> 00:08:16,000

I appreciate all of the concern and love that's been showing towards me.

151

00:08:16,000 --> 00:08:20,000

This is like the ranch family, as we call it.

152

00:08:20,000 --> 00:08:27,000

If this is about us, we quit, but this shouldn't be about us.

153

00:08:27,000 --> 00:08:32,000

I think we're seeing that the ranch could potentially be a very dangerous place.

154

00:08:32,000 --> 00:08:37,000

But to me, the question is, is it the UN of Basin that could be a potentially dangerous

155

00:08:37,000 --> 00:08:38,000

place?

156

00:08:38,000 --> 00:08:41,000

What are my neighbors and my friends being exposed to?

157

00:08:41,000 --> 00:08:46,000

Now, whatever's happening on this ranch, I highly doubt is confined to the barbed wire

158

00:08:46,000 --> 00:08:48,000

fence of the 512 acres.

159

00:08:48,000 --> 00:08:51,000

They're good people that live in this valley.

160

00:08:51,000 --> 00:08:53,000

These people are my people.

161

00:08:53,000 --> 00:08:55,000

So you feel a responsibility?

162

00:08:55,000 --> 00:08:57,000

I feel a responsibility.

163

00:08:57,000 --> 00:09:04,000

If we're truly seeking for answers, then I think the answer is we stay because I want

164

00:09:04,000 --> 00:09:09,000

to know if there's something here that's affecting not just us, but the good people

165

00:09:09,000 --> 00:09:12,000

that live around in this valley.

166

00:09:12,000 --> 00:09:17,000

My injury really made this quest for the science discovery personal.

167

00:09:17,000 --> 00:09:19,000

There's something dangerous.

168

00:09:19,000 --> 00:09:21,000

We need to identify what it is.

169

00:09:21,000 --> 00:09:22,000

We can't cut and run.

170

00:09:22,000 --> 00:09:24,000

It would be irresponsible.

171

00:09:24,000 --> 00:09:31,000

Well, Thomas, if that's how you feel, Eric and I have taken immediate steps regarding

172

00:09:31,000 --> 00:09:33,000

how we move forward.

173

00:09:42,000 --> 00:09:45,000

Lights on the mesa, Tom's injuries.

174

00:09:45,000 --> 00:09:47,000

These things are real.

175

00:09:47,000 --> 00:09:50,000

It's one thing to see the tri-field meters going off.

176

00:09:50,000 --> 00:09:57,000

But it's a whole other situation when one of our team members ends up going to the hospital.

177

00:09:57,000 --> 00:10:03,000

Well, with that urgency, I've recently reached out with Eric to a company called BioBeat.

178

00:10:03,000 --> 00:10:09,000

They have armed us with some devices that I wanted to fly out today.

179

00:10:09,000 --> 00:10:13,000

These are wearable sensor devices.

180

00:10:13,000 --> 00:10:19,000

Medical grade will give us the ability to better monitor the device.

181

00:10:19,000 --> 00:10:23,000

We want to better monitor the health and safety of our team.

182

00:10:23,000 --> 00:10:29,000

What we have here are basic vital sign measurements like our body temperature, our heart rate, and

183

00:10:29,000 --> 00:10:31,000

our perspiration, respiration.

184

00:10:31,000 --> 00:10:36,000

But we also have the stress indicators that tell us if we are under some kind of stress,

185

00:10:36,000 --> 00:10:41,000

if something's happening with us, we will immediately be able to see that right in here.

186

00:10:41,000 --> 00:10:45,000

So the idea is, yes, we're keeping people safe.

187

00:10:45,000 --> 00:10:49,000

We are also serving as biosensors.

188

00:10:49,000 --> 00:10:52,000

So now we have these watches that we're all going to wear.

189

00:10:52,000 --> 00:10:54,000

We're going to be monitored 24-7.

190

00:10:54,000 --> 00:10:58,000

If something does happen, then we're alerted and brought off the ranch immediately.

191

00:10:58,000 --> 00:11:05,000

So actually if we had that that night and it was set up to alarm, we might have known this before even Tomas knew this.

192

00:11:05,000 --> 00:11:08,000

Well, gentlemen, I need to get back.

193

00:11:08,000 --> 00:11:13,000

Please know that I'm available real time and let me know how things progress.

194

00:11:13,000 --> 00:11:14,000

Thank you. Appreciate you.

195

00:11:14,000 --> 00:11:15,000

Good to see you.

196

00:11:15,000 --> 00:11:18,000

Thank you so much.

197

00:11:18,000 --> 00:11:22,000

We'll continue to keep you monitored on everything. We'll be in touch soon.

198

00:11:22,000 --> 00:11:24,000

Okay, all right, take care.

199

00:11:40,000 --> 00:11:42,000

Hey, there they are.

200

00:11:42,000 --> 00:11:50,000

After the other night, we all agreed that we should continue our non-invasive search efforts to see if the strange radiation spikes we've been getting are coming from underground.

201

00:11:50,000 --> 00:11:56,000

What concerns me is that even though we hadn't been digging, Tomas still got sick near the Mesa.

202

00:11:56,000 --> 00:11:58,000

So far, it just doesn't add up.

203

00:11:58,000 --> 00:11:59,000

Hey, guys.

204

00:11:59,000 --> 00:12:00,000

Good morning, Eric.

205

00:12:00,000 --> 00:12:04,000

I'd like to introduce you guys to Derek. He's from Hot Shots.

206

00:12:04,000 --> 00:12:05,000

Derek and Eric.

207

00:12:05,000 --> 00:12:06,000

Okay, I can remember that.

208

00:12:06,000 --> 00:12:08,000

Nice to meet you, man.

209

00:12:08,000 --> 00:12:13,000

So I brought Derek out to do a thermographic imaging of the entire property.

210

00:12:13,000 --> 00:12:20,000

He's a drone expert, and I think he can show us some things that may be just beneath the surface of the soil here.

211

00:12:20,000 --> 00:12:26,000

The results of Robert Bigelow's investigation have never been fully released.

212

00:12:26,000 --> 00:12:34,000

There are rumors about some kind of base or perhaps an alien artifact beneath the property.

213

00:12:34,000 --> 00:12:40,000

Using drone thermography, perhaps there is, in fact, something under the ground that will show up in our imagery.

214

00:12:40,000 --> 00:12:44,000

Really looking forward to seeing what comes out of our work today.

215

00:12:44,000 --> 00:12:47,000

Yeah, yeah. We've got some of the best technology out there right now.

216

00:12:47,000 --> 00:12:52,000

Drone itself is about \$35,000 in every image and every pixel of that image.

217

00:12:52,000 --> 00:12:53,000

You're able to capture the temperatures.

218

00:12:53,000 --> 00:12:54,000

Wow.

219

00:12:54,000 --> 00:12:55,000

It's crazy technology.

220

00:12:55,000 --> 00:13:03,000

So for example, if there were something, say, a stone structure beneath the surface of the soil, let's say maybe two, three feet down.

221

00:13:03,000 --> 00:13:06,000

It's right below, and it's actually hotter than everything else.

222

00:13:06,000 --> 00:13:07,000

It's creating a signature.

223

00:13:07,000 --> 00:13:09,000

Then we will go find that and see that.

224

00:13:09,000 --> 00:13:10,000

Right. That's cool stuff, man.

225

00:13:10,000 --> 00:13:11,000

I'm excited to see what you got.

226

00:13:11,000 --> 00:13:12,000

So let's get going.

227

00:13:12,000 --> 00:13:13,000

Yeah.

228

00:13:13,000 --> 00:13:22,000

Because of any large metal objects or structures located underground are likely to have a higher temperature, it should appear on Derek's camera as a darker color.

229

00:13:22,000 --> 00:13:31,000

So if we see anything out of the ordinary, we can pinpoint it as a place where we can come back later and maybe dig.

230

00:13:31,000 --> 00:13:42,000

Okay, all clear.

231

00:13:42,000 --> 00:13:45,000

I think they're so cool.

232

00:13:45,000 --> 00:13:46,000

Now watch carefully what happens.

233

00:13:46,000 --> 00:13:49,000

I'll give you guys an example of the capability here.

234

00:13:49,000 --> 00:13:50,000

So we got a thermal camera.

235

00:13:50,000 --> 00:13:54,000

We see something and we're not sure what it is in the thermal image.

236

00:13:54,000 --> 00:13:58,000

We can immediately switch over to the regular image and get a closer look.

237

00:13:58,000 --> 00:14:01,000

Watch the zoom here when I do this.

238

00:14:01,000 --> 00:14:02,000

It's amazing.

239

00:14:02,000 --> 00:14:04,000

You can get a leaf.

240

00:14:04,000 --> 00:14:07,000

So if there's a mountain line up in there, you probably see that.

241

00:14:07,000 --> 00:14:09,000

Oh, yeah.

242

00:14:09,000 --> 00:14:14,000

So right in here, there's a whole bunch of caves that we get a lot of radiation out of.

243

00:14:14,000 --> 00:14:16,000

We got some black stuff right there.

244

00:14:16,000 --> 00:14:17,000

See all the side of there?

245

00:14:17,000 --> 00:14:19,000

Is that a shadow or is that a cool spot?

246

00:14:19,000 --> 00:14:21,000

Well, let's find out.

247

00:14:21,000 --> 00:14:23,000

I think you're looking at shadow.

248

00:14:23,000 --> 00:14:25,000

Yeah, that's all shadows.

249

00:14:25,000 --> 00:14:31,000

So Eric, what are you mostly curious about checking out with all this thermo imagery?

250

00:14:31,000 --> 00:14:37,000

What I'd like to do is I'd like to put that drone as high in the sky as I can and look straight down and fly over the field.

251

00:14:37,000 --> 00:14:41,000

We'll go up and get that for you.

252

00:14:41,000 --> 00:14:48,000

Let's suppose we have some really big structure under the property, like circular thing, something rectangular.

253

00:14:48,000 --> 00:14:58,000

If we see shapes like that in the thermal profile, then that may be a hint as to where something unusual is located under the ground.

254

00:14:58,000 --> 00:15:03,000

So what would account for this boundary here between this area and this area?

255

00:15:03,000 --> 00:15:09,000

Just the way things are hitting the sun, the vegetation of it, is longer in one area than the other than it's creating shade somewhere.

256

00:15:09,000 --> 00:15:11,000

I like the striations there. That's interesting.

257

00:15:11,000 --> 00:15:13,000

That's the big pet.

258

00:15:13,000 --> 00:15:14,000

What's that?

259

00:15:14,000 --> 00:15:21,000

The previous ownership put cattle or dogs or whatever in that area as an early warning or detection system.

260

00:15:21,000 --> 00:15:23,000

That it wasn't us?

261

00:15:23,000 --> 00:15:25,000

Yeah, not at all.

262

00:15:28,000 --> 00:15:35,000

Immediately upon Robert Bigelow's occupation of the property and bringing the scientific team on Skinwalker Ranch,

263

00:15:35,000 --> 00:15:41,000

they installed observation towers with razor wire and enclosures around them.

264

00:15:42,000 --> 00:15:47,000

With the constant daylight cattle mutilations that were occurring on the property,

265

00:15:47,000 --> 00:15:54,000

the idea was to actually place livestock in these enclosures to see the phenomenon at work.

266

00:15:57,000 --> 00:16:04,000

That study and a lot of the findings that came out of those years remain under lock and key.

267

00:16:05,000 --> 00:16:10,000

So far, what you've seen, have you seen any hard edges, corners, anything?

268

00:16:10,000 --> 00:16:13,000

I haven't seen anything that just seems abnormal.

269

00:16:14,000 --> 00:16:19,000

Even though everything from UFO sightings to cattle mutilations have happened on this part of the ranch,

270

00:16:19,000 --> 00:16:22,000

we didn't see anything unusual underground.

271

00:16:22,000 --> 00:16:25,000

Yeah, well this is all data that we've got.

272

00:16:25,000 --> 00:16:28,000

I think we can bring it in and then let's head on to the western end of the property.

273

00:16:28,000 --> 00:16:30,000

Alright, that works.

274

00:16:32,000 --> 00:16:35,000

We decided to head over to what's known as Homestead 2.

275

00:16:35,000 --> 00:16:39,000

It's right by the area of the Mesa where we've been getting all these radiation spikes.

276

00:16:39,000 --> 00:16:43,000

It's also where there's been a concentration of strange phenomena,

277

00:16:43,000 --> 00:16:47,000

like glowing lights at night and even some reported paranormal activity.

278

00:16:48,000 --> 00:16:54,000

Homestead 2 was built in 1905 by John and Emma Myers, who lived there and raised cattle.

279

00:16:54,000 --> 00:17:00,000

It's been abandoned since the 1930s and a lot of the locals think it's haunted.

280

00:17:01,000 --> 00:17:05,000

So we go out just around the point of the Mesa here.

281

00:17:05,000 --> 00:17:06,000

Okay.

282

00:17:07,000 --> 00:17:14,000

It seems to be that a lot of the activity or strangeness that we encounter is centered around those homesteads.

283

00:17:14,000 --> 00:17:16,000

You can see the old homestead right there.

284

00:17:16,000 --> 00:17:17,000

Right.

285

00:17:17,000 --> 00:17:22,000

We have things from batteries on equipment going from 100% to zero in a matter of seconds,

286

00:17:22,000 --> 00:17:27,000

people feeling vertigo or not being able to hear sound.

287

00:17:28,000 --> 00:17:29,000

All set.

288

00:17:29,000 --> 00:17:30,000

Ready to go.

289

00:17:30,000 --> 00:17:38,000

Well, so our hotspots right here on top of the Mesa and right over in this area is the cave that

we've been observing.

290

00:17:38,000 --> 00:17:42,000

And then these houses here, we want to make sure we get good views of them, right?

291

00:17:42,000 --> 00:17:43,000

Okay.

292

00:17:43,000 --> 00:17:44,000

Alright, let's do this.

293

00:17:44,000 --> 00:17:45,000

Alright.

294

00:17:57,000 --> 00:17:58,000

No connection.

295

00:18:00,000 --> 00:18:01,000

Huh.

296

00:18:01,000 --> 00:18:02,000

That's weird.

297

00:18:02,000 --> 00:18:03,000

It makes no sense.

298

00:18:04,000 --> 00:18:05,000

We're not connecting.

299

00:18:05,000 --> 00:18:06,000

I'm not connecting to the remote.

300

00:18:06,000 --> 00:18:08,000

I don't know what's happening with it.

301

00:18:08,000 --> 00:18:12,000

The reason why we wanted them to check this area because of stuff like this.

302

00:18:12,000 --> 00:18:29,000

Near the old homestead number two is an area where we're always having issues with electronic equipment and malfunctions.

303

00:18:29,000 --> 00:18:33,000

Well, we went to the sinkhole that we have up above homestead two.

304

00:18:33,000 --> 00:18:35,000

Another similar thing happened.

305

00:18:35,000 --> 00:18:37,000

Dude, I would tell you my phone battery just went.

306

00:18:37,000 --> 00:18:39,000

Your battery is dead on your phone?

307

00:18:39,000 --> 00:18:40,000

Yeah.

308

00:18:40,000 --> 00:18:41,000

Huh.

309

00:18:41,000 --> 00:18:42,000

Your phone is dead too, ain't it?

310

00:18:42,000 --> 00:18:43,000

It shut off.

311

00:18:44,000 --> 00:18:51,000

If there's one place on the property where cell phones and electronic equipment won't work or our meter readings would go haywire, it's here.

312

00:18:51,000 --> 00:18:54,000

The real problem is we can't figure out why.

313

00:18:54,000 --> 00:18:57,000

Do you think it's interference from something?

314

00:18:57,000 --> 00:19:02,000

Well, it is, but what's caught, I mean, I could walk five feet and see if it changes.

315

00:19:02,000 --> 00:19:05,000

So let me do that first and see what happens.

316

00:19:05,000 --> 00:19:11,000

Is it connecting to you over there, Derek?

317

00:19:11,000 --> 00:19:12,000

No.

318

00:19:12,000 --> 00:19:13,000

Huh.

319

00:19:13,000 --> 00:19:16,000

Yeah, we've seen that batteries act squarely around here anyway.

320

00:19:16,000 --> 00:19:19,000

And it's sapped the battery of my phone like almost instantly.

321

00:19:19,000 --> 00:19:24,000

So it could be something weird about this little area here.

322

00:19:26,000 --> 00:19:28,000

I do have some prominent signal here.

323

00:19:28,000 --> 00:19:29,000

What frequency, Dan?

324

00:19:29,000 --> 00:19:31,000

Well, 5480.

325

00:19:31,000 --> 00:19:33,000

So at five gigahertz.

326

00:19:36,000 --> 00:19:37,000

5.2.

327

00:19:37,000 --> 00:19:41,000

So we're getting a five gigahertz signal.

328

00:19:41,000 --> 00:19:42,000

That's weird.

329

00:19:42,000 --> 00:19:44,000

That's not just weird, it's concerning.

330

00:19:46,000 --> 00:19:51,000

There have been times when I've been out by the old homestead and got a really creepy feeling.

331

00:19:51,000 --> 00:19:55,000

So whatever it is, you know, I'll leave it to the scientists to try and decipher it.

332

00:19:55,000 --> 00:20:03,000

All I know is that something strange happened that caused so much interference that a \$35,000 drone couldn't get up in the air.

333

00:20:03,000 --> 00:20:09,000

You know, we may be done here for the day because this, we certainly don't put your drone at risk.

334

00:20:09,000 --> 00:20:10,000

Yeah.

335

00:20:10,000 --> 00:20:11,000

Just call this a wrap.

336

00:20:13,000 --> 00:20:15,000

Derek, man, I appreciate you coming out.

337

00:20:15,000 --> 00:20:16,000

We really appreciate you coming out.

338

00:20:16,000 --> 00:20:17,000

I'm more than happy to do it.

339

00:20:17,000 --> 00:20:18,000

Thank you.

340

00:20:18,000 --> 00:20:19,000

Hey, we'll figure this out.

341

00:20:19,000 --> 00:20:20,000

Thank you.

342

00:20:20,000 --> 00:20:33,000

There is electromagnetic radiation that spike all around the ranch.

343

00:20:33,000 --> 00:20:34,000

You know what?

344

00:20:34,000 --> 00:20:37,000

We should get those tri-field meters out here.

345

00:20:37,000 --> 00:20:44,000

So after the drone stopped working, I figured out a way that we could modify our meters so that they could help us pinpoint the source of this interference.

346

00:20:44,000 --> 00:20:47,000

So real quick, I'll show y'all what we're going to do.

347

00:20:47,000 --> 00:20:55,000

Right now, I'm not sure when we're holding these meters any particular way which direction the signal's coming from.

348

00:20:55,000 --> 00:20:56,000

That's what these are for.

349

00:20:56,000 --> 00:20:59,000

We put this in the can, turn it on.

350

00:20:59,000 --> 00:21:00,000

Right.

351

00:21:00,000 --> 00:21:06,000

That's going to allow us to do directional measurements, and that'll tell us which direction the signal's coming from.

352

00:21:09,000 --> 00:21:11,000

Oh, my God, that's huge.

353

00:21:11,000 --> 00:21:12,000

That's a 900.

354

00:21:12,000 --> 00:21:13,000

900?

355

00:21:13,000 --> 00:21:14,000

There's a blip there.

356

00:21:14,000 --> 00:21:16,000

There's a huge peak right now at 900 megahertz.

357

00:21:16,000 --> 00:21:19,000

It is totally pegged out right now.

358

00:21:19,000 --> 00:21:23,000

As I turn it away, and as I turn it that way, it picks back up.

359

00:21:23,000 --> 00:21:28,000

This is strange because the coffee cans block out any extraneous RF signals.

360

00:21:28,000 --> 00:21:34,000

It seems that the radiation might be coming from above the ground and not below like we all suspected.

361

00:21:34,000 --> 00:21:38,000

Now to prove it, we need to get measurements from three random locations on the ranch.

362

00:21:38,000 --> 00:21:43,000

And by pointing our meters in the direction toward where we get the strongest reading and see where they intersect,

363

00:21:43,000 --> 00:21:47,000

we can then use triangulation to pinpoint exactly where this radiation's coming from.

364

00:21:47,000 --> 00:21:50,000

Okay, so here's what we need to do, guys.

365

00:21:50,000 --> 00:21:56,000

While we know there's a signal there, let's run some distance from here, like maybe over to the corner of the helipad area.

366

00:21:58,000 --> 00:22:01,000

We are pegged out, pointed in this direction.

367

00:22:01,000 --> 00:22:02,000

Where's my phone?

368

00:22:02,000 --> 00:22:04,000

Let's get a reading from both phones, right?

369

00:22:04,000 --> 00:22:05,000

Yep.

370

00:22:05,000 --> 00:22:10,000

Then we can draw a line from here, straight that way, straight in the direction,

371

00:22:10,000 --> 00:22:13,000

and then from over there draw a line, and wherever those lines cross,

372

00:22:13,000 --> 00:22:15,000

is that it should be where the signal's coming from.

373

00:22:15,000 --> 00:22:17,000

Here, let me hold that.

374

00:22:17,000 --> 00:22:21,000

If I go like this, I'm picking up horizontal stuff, if I go like this, I'm picking up vertical.

375

00:22:21,000 --> 00:22:24,000

So I get my biggest readings when I'm like this, looking up.

376

00:22:24,000 --> 00:22:26,000

Yeah, it's straight, it's coming straight up.

377

00:22:26,000 --> 00:22:27,000

That is perfectly plumb.

378

00:22:27,000 --> 00:22:29,000

It's coming from up there.

379

00:22:32,000 --> 00:22:34,000

Look at it, it's going nuts.

380

00:22:34,000 --> 00:22:36,000

Look at it jumping, like crazy.

381

00:22:36,000 --> 00:22:42,000

All right, right now we need to get in a vehicle and drive to the far corners of the ranch

382

00:22:42,000 --> 00:22:45,000

and make this measurement and mark where we were, where we made it,

383

00:22:45,000 --> 00:22:47,000

so then we can map it on a map.

384

00:22:51,000 --> 00:22:54,000

So we just need to find the spot that we can use as a marker.

385

00:22:54,000 --> 00:22:56,000

What about right there?

386

00:22:56,000 --> 00:22:58,000

So this flower will be our spot.

387

00:23:00,000 --> 00:23:01,000

All right.

388

00:23:02,000 --> 00:23:05,000

It's pegging out right now.

389

00:23:05,000 --> 00:23:07,000

It's pegging out on yours.

390

00:23:07,000 --> 00:23:08,000

Pect.

391

00:23:08,000 --> 00:23:10,000

What's the pitch angle of these right now?

392

00:23:10,000 --> 00:23:11,000

We're right around 38.

393

00:23:11,000 --> 00:23:12,000

Close to 40.

394

00:23:12,000 --> 00:23:18,000

Well, I think we got what we need from here, so we need to go either as far east or as far west

395

00:23:18,000 --> 00:23:20,000

and get one more point.

396

00:23:21,000 --> 00:23:25,000

We got to find a point down here and make the same measurements that we made up there.

397

00:23:32,000 --> 00:23:37,000

All right, so what we got to do is get some reference points where we took the measurements.

398

00:23:37,000 --> 00:23:41,000

Now that Jim and Tom and I recorded three different points across the ranch

399

00:23:41,000 --> 00:23:43,000

where these radiation spikes keep occurring,

400

00:23:43,000 --> 00:23:47,000

we're going to go plot them out on a map and see exactly where they intersect.

401

00:23:47,000 --> 00:23:50,000

Right here is a spot, right?

402

00:23:50,000 --> 00:23:52,000

We had right next to the helipad right there.

403

00:23:52,000 --> 00:23:56,000

Right there, okay, and then we were right here by a power pole.

404

00:23:56,000 --> 00:23:58,000

Right there is the shadow of the power pole.

405

00:23:58,000 --> 00:23:59,000

Yeah, good, good.

406

00:23:59,000 --> 00:24:02,000

So right there, so there's one, two, three.

407

00:24:02,000 --> 00:24:07,000

Let's see, and we'll need the angles that we measured from each of the points.

408

00:24:07,000 --> 00:24:13,000

We figured out the angles that we were detecting energy from the sky at three different points,

409

00:24:13,000 --> 00:24:17,000

and these angles are going to cross at some point above the ranch.

410

00:24:17,000 --> 00:24:22,000

Using some basic high school trigonometry, we can calculate that height.

411

00:24:22,000 --> 00:24:25,000

This one was like that.

412

00:24:25,000 --> 00:24:28,000

Now look, they're going to cross up here somewhere.

413

00:24:28,000 --> 00:24:29,000

Yep.

414

00:24:29,000 --> 00:24:32,000

And this one was like that.

415

00:24:32,000 --> 00:24:34,000

So how high is that?

416

00:24:34,000 --> 00:24:37,000

Who's got that calculator?

417

00:24:37,000 --> 00:24:40,000

Yeah, it's just, it's 5,700 feet.

418

00:24:40,000 --> 00:24:44,000

One mile high.

419

00:24:44,000 --> 00:24:47,000

Do we ever see airplanes flying at a mile high over there?

420

00:24:47,000 --> 00:24:49,000

What does that mean, even?

421

00:24:49,000 --> 00:24:53,000

So one mile high is only about a sixth as high as jets fly.

422

00:24:53,000 --> 00:24:58,000

That means that whatever is doing this should be seen by the naked eye.

423

00:24:58,000 --> 00:24:59,000

So why can't we?

424

00:24:59,000 --> 00:25:01,000

This just doesn't add up.

425

00:25:01,000 --> 00:25:06,000

We took scientifically accurate measurements, and they lead us to a spot somewhere up here over the ranch.

426

00:25:06,000 --> 00:25:08,000

That is our next measurement.

427

00:25:08,000 --> 00:25:15,000

And the way we could do that is we tether a weather balloon and raise it up through that region that has equipment on it.

428

00:25:15,000 --> 00:25:18,000

We get it up there and see if we see something there.

429

00:25:18,000 --> 00:25:21,000

If we see something there, that's even more exciting.

430

00:25:21,000 --> 00:25:22,000

It sounds like fun.

431

00:25:22,000 --> 00:25:24,000

Hey, yeah, that's awesome.

432

00:25:24,000 --> 00:25:30,000

Yeah, every time we think we have an idea of a solution, the answer ends up being something weirder.

433

00:25:39,000 --> 00:25:40,000

Hey, Matt.

434

00:25:40,000 --> 00:25:41,000

Thanks, Travis.

435

00:25:41,000 --> 00:25:42,000

How you doing, man?

436

00:25:42,000 --> 00:25:43,000

I'm great. How are you?

437

00:25:43,000 --> 00:25:44,000

Good to see you.

438

00:25:44,000 --> 00:25:45,000

Good to see you too.

439

00:25:45,000 --> 00:25:46,000

This is Thomas.

440

00:25:46,000 --> 00:25:47,000

Matt Turner.

441

00:25:47,000 --> 00:25:50,000

The strange energy source was coming from about a mile above the ranch.

442

00:25:50,000 --> 00:25:52,000

I called up a friend of mine, Dr. Matt Turner.

443

00:25:52,000 --> 00:25:54,000

He's from the University of Alabama in Huntsville.

444

00:25:54,000 --> 00:26:00,000

He's got a PhD in mechanical and aerospace engineering, and he's an expert in the use of weather balloons.

445

00:26:00,000 --> 00:26:05,000

We've measured some really strong RF fields coming from the sky.

446

00:26:05,000 --> 00:26:11,000

And so we think there's a focus somewhere, and we're guessing that the focus may be as much as a mile high.

447

00:26:11,000 --> 00:26:15,000

So what I'd like to do is set up an experiment, and let's start measuring that.

448

00:26:15,000 --> 00:26:16,000

That sounds great.

449

00:26:16,000 --> 00:26:17,000

We've got balloons.

450

00:26:17,000 --> 00:26:18,000

We've got helium.

451

00:26:18,000 --> 00:26:22,000

We've got some payload platforms, and we just need your meters, and we're good to go.

452

00:26:22,000 --> 00:26:24,000

All right, let's get everything loaded up, and let's do that.

453

00:26:24,000 --> 00:26:25,000

Excellent.

454

00:26:28,000 --> 00:26:30,000

Just go down the road and hit it right over there.

455

00:26:34,000 --> 00:26:36,000

I think this is a good spot, guys.

456

00:26:36,000 --> 00:26:42,000

Based on the triangulation of where these strange microwave and radio signals are coming from,

457

00:26:42,000 --> 00:26:47,000

what we're going to do is use a weather balloon with instruments on it to fly it through the point on the ranch

458

00:26:47,000 --> 00:26:49,000

where we believe this stuff is coming from.

459

00:26:49,000 --> 00:26:53,000

All right, so with this balloon, with the tether especially, we should be able to pick an altitude

460

00:26:53,000 --> 00:26:59,000

and go to that altitude and measure with the tri-field meters and dial in the altitude that we want.

461

00:26:59,000 --> 00:27:00,000

Nice.

462

00:27:00,000 --> 00:27:06,000

So at the end of the day, if we could have a chart that says altitude, RF energy, and show the plot, that would be amazing.

463

00:27:06,000 --> 00:27:11,000

After attaching one of our RF meters to measure possible radio or microwave energy,

464

00:27:11,000 --> 00:27:16,000

we've also attached a camera so that we can photograph what happens when the balloon's up in the sky.

465

00:27:16,000 --> 00:27:17,000

All right, Caleb.

466

00:27:17,000 --> 00:27:18,000

I'm on the hole.

467

00:27:22,000 --> 00:27:29,000

What Travis is trying to measure, I've never heard of that occurring on Earth, but the physics behind it is sound,

468

00:27:29,000 --> 00:27:32,000

so it could exist, we just don't know it yet.

469

00:27:33,000 --> 00:27:34,000

Okay.

470

00:27:36,000 --> 00:27:38,000

So we're connected to the top of the chute.

471

00:27:39,000 --> 00:27:40,000

You guys ready?

472

00:27:40,000 --> 00:27:41,000

Yep, we're good.

473

00:27:41,000 --> 00:27:42,000

All right, here we go.

474

00:27:42,000 --> 00:27:43,000

Jim, watch your head.

475

00:27:44,000 --> 00:27:45,000

All right, cool.

476

00:27:47,000 --> 00:27:49,000

All right, slowly, let it up.

477

00:27:49,000 --> 00:27:51,000

All right, keep going, you're good.

478

00:27:51,000 --> 00:27:52,000

Okay, we're clear.

479

00:27:52,000 --> 00:27:53,000

All right.

480

00:27:57,000 --> 00:27:59,000

Man, that's a big balloon.

481

00:27:59,000 --> 00:28:02,000

I'm surprised there's not any wind blowing that stuff around right now.

482

00:28:02,000 --> 00:28:03,000

I'm extremely surprised.

483

00:28:04,000 --> 00:28:05,000

Yeah, ain't that cool?

484

00:28:06,000 --> 00:28:09,000

I can only imagine what the neighbors are saying right now.

485

00:28:09,000 --> 00:28:10,000

Oh, yeah, right?

486

00:28:11,000 --> 00:28:15,000

The balloon experiment for me is one of the most important experiments that we've done.

487

00:28:16,000 --> 00:28:25,000

Because of my injury and what's taken place, I'm very interested in these unseen frequencies and

signals that are going through the air.

488

00:28:26,000 --> 00:28:30,000

This is proving to be one of the more significant anomalies on Skinwalker Ranch.

489

00:28:31,000 --> 00:28:32,000

320 feet.

490

00:28:33,000 --> 00:28:34,000

That's not bad.

491

00:28:34,000 --> 00:28:35,000

Yeah.

492

00:28:35,000 --> 00:28:37,000

I want to see how high we can get it.

493

00:28:37,000 --> 00:28:39,000

So feed me the spool right through here.

494

00:28:39,000 --> 00:28:40,000

Through here?

495

00:28:40,000 --> 00:28:41,000

Yep.

496

00:28:43,000 --> 00:28:44,000

The wind's picking up.

497

00:28:44,000 --> 00:28:51,000

So what I'd like to do is pull this thing down and don't let it hit the grass because it goes pop.

498

00:28:53,000 --> 00:28:56,000

Oh, don't go too fast because the wind's blowing.

499

00:28:58,000 --> 00:28:59,000

The wind's really picking up now.

500

00:29:00,000 --> 00:29:02,000

We got to let it out now or it's going to crash.

501

00:29:02,000 --> 00:29:04,000

Let it go, let it go, let it go, let it go.

502

00:29:05,000 --> 00:29:06,000

Hurry, we're going to lose it.

503

00:29:06,000 --> 00:29:07,000

Got it?

504

00:29:07,000 --> 00:29:08,000

No, no, no, no, no, no.

505

00:29:08,000 --> 00:29:09,000

Let it fool out, let it fool out.

506

00:29:10,000 --> 00:29:14,000

Go up, go up, go up, go up, go up, go up.

507

00:29:14,000 --> 00:29:15,000

It's going down.

508

00:29:16,000 --> 00:29:17,000

Come on.

509

00:29:17,000 --> 00:29:18,000

Maybe we lost her.

510

00:29:22,000 --> 00:29:23,000

We lost it.

511

00:29:24,000 --> 00:29:25,000

I think it broke the line.

512

00:29:25,000 --> 00:29:26,000

It's all over there.

513

00:29:26,000 --> 00:29:27,000

There's that 50-pound test line.

514

00:29:27,000 --> 00:29:28,000

That's a lot of pressure.

515

00:29:28,000 --> 00:29:29,000

There's a lot of wind.

516

00:29:29,000 --> 00:29:30,000

Crap.

517

00:29:30,000 --> 00:29:31,000

Dead, gummit.

518

00:29:32,000 --> 00:29:33,000

So here's what we're going to do.

519

00:29:33,000 --> 00:29:35,000

We're going to go and try and recover the payload.

520

00:29:35,000 --> 00:29:37,000

And if the wind dies down enough,

521

00:29:37,000 --> 00:29:39,000

I said we're going to forget with the tether at this point.

522

00:29:40,000 --> 00:29:43,000

And let's just do a free fly, let one go with the payload on it.

523

00:29:44,000 --> 00:29:45,000

Okay.

524

00:29:45,000 --> 00:29:47,000

Once we find the balloon and get our gear off of it,

525

00:29:47,000 --> 00:29:49,000

we're just going to let the next one get as high as it can.

526

00:29:49,000 --> 00:29:52,000

Hopefully it'll help us figure out what could be above the ranch

527

00:29:52,000 --> 00:29:54,000

causing these radiation spikes.

528

00:29:54,000 --> 00:29:56,000

All right, then we'll meet you back at the jeep.

529

00:29:56,000 --> 00:29:57,000

Okay.

530

00:29:57,000 --> 00:29:59,000

Then we'll head back and start preparing for the next launch.

531

00:30:00,000 --> 00:30:04,000

This next balloon will not only have the trifillometer and a camera on it,

532

00:30:04,000 --> 00:30:07,000

but also an audio beacon and a GPS device.

533

00:30:07,000 --> 00:30:10,000

That way, we can track its location as it gathers data.

534

00:30:17,000 --> 00:30:18,000

Shut it off.

535

00:30:18,000 --> 00:30:19,000

Okay.

536

00:30:21,000 --> 00:30:22,000

Is that a lot of lift on it?

537

00:30:22,000 --> 00:30:23,000

Yeah.

538

00:30:26,000 --> 00:30:28,000

All right, we're good.

539

00:30:30,000 --> 00:30:31,000

Yep, yep, yep, we know.

540

00:30:31,000 --> 00:30:32,000

Audio beacon is on.

541

00:30:32,000 --> 00:30:34,000

We need to let it go, though.

542

00:30:34,000 --> 00:30:35,000

The wind's kind of dying down.

543

00:30:35,000 --> 00:30:36,000

It'll be a good time to let it rip.

544

00:30:36,000 --> 00:30:38,000

I mean, it's going to go like a rocket, right?

545

00:30:38,000 --> 00:30:40,000

Yeah, it's going to take off pretty quick.

546

00:30:40,000 --> 00:30:43,000

Well, so we hopefully get it to go through the, you know, mile-high mark

547

00:30:43,000 --> 00:30:45,000

that we were calculating.

548

00:30:45,000 --> 00:30:48,000

I'm just hoping that it hits that before it gets too far to the west.

549

00:30:48,000 --> 00:30:50,000

I hope so, too.

550

00:30:50,000 --> 00:30:51,000

You got it, Matt?

551

00:30:52,000 --> 00:30:53,000

All right, here we go.

552

00:30:53,000 --> 00:30:54,000

We're clear.

553

00:30:54,000 --> 00:30:55,000

Start easing it up.

554

00:30:56,000 --> 00:30:57,000

Start letting it go.

555

00:30:57,000 --> 00:30:58,000

Start letting it go.

556

00:31:00,000 --> 00:31:02,000

Three, two, one, let it launch.

557

00:31:09,000 --> 00:31:10,000

Look at how fast it's going.

558

00:31:10,000 --> 00:31:12,000

Hey, I love how it's going right towards the mesa.

559

00:31:12,000 --> 00:31:14,000

It's going right through the spot, too.

560

00:31:14,000 --> 00:31:16,000

That is awesome.

561

00:31:16,000 --> 00:31:19,000

Oh, that is perfect right where it needs to be.

562

00:31:21,000 --> 00:31:23,000

That couldn't have worked out better, I don't think.

563

00:31:23,000 --> 00:31:24,000

It's a good launch.

564

00:31:25,000 --> 00:31:28,000

I say we pack up and go back and try and track it on the Internet.

565

00:31:28,000 --> 00:31:29,000

Sounds good.

566

00:31:29,000 --> 00:31:30,000

Yep.

567

00:31:30,000 --> 00:31:31,000

All right.

568

00:31:41,000 --> 00:31:43,000

Now that we have a successful launch,

569

00:31:43,000 --> 00:31:46,000

we're going to go track the balloon from the command center.

570

00:31:46,000 --> 00:31:48,000

If this experiment is successful,

571

00:31:48,000 --> 00:31:51,000

it'll tell us exactly where these energy spikes are occurring

572

00:31:51,000 --> 00:31:53,000

and hopefully what's causing them.

573

00:31:53,000 --> 00:31:55,000

Are you tracking it already?

574

00:31:55,000 --> 00:31:56,000

Yeah.

575

00:31:56,000 --> 00:31:58,000

Come sit down and take a look.

576

00:31:58,000 --> 00:31:59,000

Is he okay?

577

00:31:59,000 --> 00:32:00,000

Yeah.

578

00:32:00,000 --> 00:32:01,000

I can see good.

579

00:32:01,000 --> 00:32:03,000

What does it look like so far?

580

00:32:03,000 --> 00:32:06,000

Yeah, so we've got a few good hits already.

581

00:32:06,000 --> 00:32:08,000

It looks like it's tracking off towards the east.

582

00:32:08,000 --> 00:32:10,000

How high is it right now?

583

00:32:10,000 --> 00:32:15,000

It's giving us an altitude, well, above sea level, 10,453.

584

00:32:15,000 --> 00:32:18,000

Now, Skinwalker Ranch is already 5,000 feet above sea level,

585

00:32:18,000 --> 00:32:20,000

and the balloon we're tracking right now

586

00:32:20,000 --> 00:32:23,000

is approximately 5,500 feet above the ranch.

587

00:32:23,000 --> 00:32:27,000

That means its total elevation is about 10,500 feet.

588

00:32:27,000 --> 00:32:29,000

Now, that's pretty much exactly where we believe

589

00:32:29,000 --> 00:32:33,000

the RF energy above the property is coming from.

590

00:32:33,000 --> 00:32:36,000

Well, that is odd, though, because you'd think it had gone

591

00:32:36,000 --> 00:32:39,000

more than that in the time it took us to get out there into here.

592

00:32:39,000 --> 00:32:40,000

Yeah.

593

00:32:40,000 --> 00:32:44,000

Well, it's not, this is not updating.

594

00:32:44,000 --> 00:32:46,000

That's strange to me.

595

00:32:46,000 --> 00:32:48,000

That's supposed to update every minute.

596

00:32:48,000 --> 00:32:52,000

It seems to have stopped after the 10,000 foot above sea level.

597

00:32:52,000 --> 00:32:56,000

So when was the last time that blip sent data?

598

00:32:56,000 --> 00:32:57,000

I mean, how long ago was that, Eric?

599

00:32:57,000 --> 00:32:58,000

A few minutes ago?

600

00:32:58,000 --> 00:33:00,000

Yeah, it's been a lot more than a minute.

601

00:33:00,000 --> 00:33:02,000

OK, and that's baffling to me.

602

00:33:02,000 --> 00:33:04,000

This sensor is rock solid.

603

00:33:04,000 --> 00:33:07,000

Do I've flown this thing 30 times, more than 30 times?

604

00:33:07,000 --> 00:33:12,000

It's never failed on me, so I don't understand why it went out.

605

00:33:12,000 --> 00:33:14,000

I'm kind of worried about this balloon.

606

00:33:14,000 --> 00:33:16,000

I don't think we've ever had anything that we could not

607

00:33:16,000 --> 00:33:18,000

explain in the atmosphere.

608

00:33:18,000 --> 00:33:20,000

We can usually figure most things out if we have enough data.

609

00:33:20,000 --> 00:33:23,000

Roughly a mile or, you know, a little bit above a mile high,

610

00:33:23,000 --> 00:33:26,000

and it's lost, which I never thought would happen.

611

00:33:26,000 --> 00:33:28,000

So what altitude did you say that was?

612

00:33:28,000 --> 00:33:32,000

Well, this is telling us 10,453 above sea level.

613

00:33:32,000 --> 00:33:33,000

What's the altitude of our?

614

00:33:33,000 --> 00:33:34,000

We're at about 5,000 here.

615

00:33:34,000 --> 00:33:35,000

OK.

616

00:33:35,000 --> 00:33:37,000

So it's about 5,500 feet, right?

617

00:33:37,000 --> 00:33:38,000

Yeah, sort of.

618

00:33:38,000 --> 00:33:39,000

Well, that's interesting.

619

00:33:39,000 --> 00:33:40,000

Yeah, it is.

620

00:33:40,000 --> 00:33:42,000

So somewhere the sensor stopped working.

621

00:33:42,000 --> 00:33:47,000

That's right, right where we figure those field lines across them.

622

00:33:47,000 --> 00:33:49,000

That's right where the triangulation put it.

623

00:33:49,000 --> 00:33:52,000

Oh, wow.

624

00:33:52,000 --> 00:33:55,000

We did get it to ping as the balloon was going up.

625

00:33:55,000 --> 00:34:00,000

So we know it was transponding and sending information.

626

00:34:00,000 --> 00:34:03,000

The last ping that we got showed the battery was good,

627

00:34:03,000 --> 00:34:07,000

the temperature was good, everything was functioning properly.

628

00:34:07,000 --> 00:34:12,000

And then magically it hits this 5,000 foot mark, and it's gone.

629

00:34:12,000 --> 00:34:14,000

I've flown 30 of these balloons.

630

00:34:14,000 --> 00:34:15,000

I've dropped them.

631

00:34:15,000 --> 00:34:16,000

I've stepped on them.

632

00:34:16,000 --> 00:34:17,000

I've gotten them wet.

633

00:34:17,000 --> 00:34:19,000

They've gone through, you know, thunderstorms.

634

00:34:19,000 --> 00:34:20,000

They go up to 100,000 feet, right?

635

00:34:20,000 --> 00:34:21,000

Yeah, they're rock solid.

636

00:34:21,000 --> 00:34:24,000

There must have been something at 5,000 feet that shut it off.

637

00:34:24,000 --> 00:34:26,000

Something happened.

638

00:34:26,000 --> 00:34:29,000

It's crazy that the point where we lost contact with the balloon

639

00:34:29,000 --> 00:34:34,000

is that the exact same altitude we calculated the RF energy to be coming from.

640

00:34:34,000 --> 00:34:36,000

But where the heck did the balloon go?

641

00:34:36,000 --> 00:34:38,000

It's like it just disappeared.

642

00:34:38,000 --> 00:34:42,000

When we look at the footage from the tether test.

643

00:34:42,000 --> 00:34:43,000

Sure.

644

00:34:43,000 --> 00:34:46,000

And what I'd like to see is the meter, so we can kind of see what it's doing.

645

00:34:46,000 --> 00:34:48,000

Easy enough.

646

00:34:50,000 --> 00:34:51,000

Whoa!

647

00:34:51,000 --> 00:34:52,000

Look at that.

648

00:34:52,000 --> 00:34:53,000

Oh, wow.

649

00:34:53,000 --> 00:34:54,000

Look at that.

650

00:34:54,000 --> 00:34:55,000

Wow.

651

00:34:55,000 --> 00:34:59,000

So we're getting about 0.3 milliwatts per meter squared.

652

00:34:59,000 --> 00:35:01,000

I thought I saw a spike at 5.

653

00:35:01,000 --> 00:35:02,000

I thought I did too.

654

00:35:02,000 --> 00:35:05,000

That's like standing by a microwave that's on.

655

00:35:05,000 --> 00:35:09,000

So this isn't someone just sending a Wi-Fi signal back and forth or anything like that?

656

00:35:09,000 --> 00:35:12,000

It can't be at that altitude with these types of spikes, right?

657

00:35:12,000 --> 00:35:13,000

Okay.

658

00:35:13,000 --> 00:35:18,000

So one of the things that really jumps out at me is that you can tell if a frequency

659

00:35:18,000 --> 00:35:25,000

or RF energy comes from the ground as most do because it'll actually fall off as you go up.

660

00:35:25,000 --> 00:35:30,000

So in order to create something up there, you have to have an antenna up there to create the energy.

661

00:35:30,000 --> 00:35:36,000

So what's disturbing is that it has to come from something off-planet.

662

00:35:36,000 --> 00:35:40,000

It's not something that humans have created on the face of the Earth.

663

00:35:41,000 --> 00:35:43,000

That's crazy.

664

00:35:43,000 --> 00:35:45,000

Yeah.

665

00:35:45,000 --> 00:35:50,000

So the interpretation of this is there's something above us sending signals down.

666

00:35:50,000 --> 00:35:52,000

It means, yeah, it's coming from above.

667

00:35:52,000 --> 00:35:54,000

It's coming from off-planet, right.

668

00:35:54,000 --> 00:35:57,000

That is what the data is suggesting.

669

00:35:59,000 --> 00:36:01,000

A lot of this is not adding up.

670

00:36:01,000 --> 00:36:02,000

Right.

671

00:36:02,000 --> 00:36:04,000

So I'm sitting in a room full of baffled scientists, then.

672

00:36:04,000 --> 00:36:06,000

That sounds about right.

673

00:36:06,000 --> 00:36:07,000

Yeah.

674

00:36:07,000 --> 00:36:11,000

There's no known asset that's just sitting right over the ranch.

675

00:36:11,000 --> 00:36:12,000

Yeah.

676

00:36:12,000 --> 00:36:16,000

So I'm thinking about us building a rocket because we could put sensors on the rocket,

677

00:36:16,000 --> 00:36:19,000

measure things as it passes through that spot.

678

00:36:19,000 --> 00:36:21,000

Maybe this will help us figure that out.

679

00:36:21,000 --> 00:36:22,000

Right.

680

00:36:22,000 --> 00:36:24,000

Yeah, appreciate you coming out, man.

681

00:36:24,000 --> 00:36:26,000

I'm glad that I could help.

682

00:36:33,000 --> 00:36:36,000

While the team and I are waiting for our rocket equipment to arrive,

683

00:36:36,000 --> 00:36:39,000

Thomas Winerton invited me to come with him over to Homestead One.

684

00:36:39,000 --> 00:36:41,000

Don't see what we can see, yeah?

685

00:36:41,000 --> 00:36:42,000

Let's grab the stuff out.

686

00:36:42,000 --> 00:36:45,000

Now, Homestead One is the homestead nearest the command center,

687

00:36:45,000 --> 00:36:49,000

and it's where the two caretakers, Candace and her boyfriend, Tom, live.

688

00:36:49,000 --> 00:36:51,000

They've only been staying here on the ranch for a few weeks,

689

00:36:51,000 --> 00:36:56,000

and, according to Thomas, have already been hearing strange sounds coming from the basement.

690

00:36:56,000 --> 00:36:59,000

So I'm really curious to see if what's happening in the house

691

00:36:59,000 --> 00:37:04,000

could have any connection to what we've been experiencing recently in other places on the ranch.

692

00:37:04,000 --> 00:37:05,000

Well, hello.

693

00:37:05,000 --> 00:37:06,000

Hey there.

694

00:37:06,000 --> 00:37:07,000

Come on in. What's going on?

695

00:37:07,000 --> 00:37:08,000

Hey, hey.

696

00:37:08,000 --> 00:37:10,000

We've got a look down in that thing in your basement.

697

00:37:10,000 --> 00:37:11,000

This is a special camera.

698

00:37:11,000 --> 00:37:12,000

Oh, you got a camera?

699

00:37:12,000 --> 00:37:13,000

Okay.

700

00:37:13,000 --> 00:37:14,000

Yeah.

701

00:37:14,000 --> 00:37:15,000

Nice.

702

00:37:16,000 --> 00:37:21,000

The ranch house has had three generations of ownership before Brandon took possession of it.

703

00:37:23,000 --> 00:37:28,000

Starting with the Myers who reported strange sounds, rumblings.

704

00:37:28,000 --> 00:37:32,000

And when the Shermans took possession of it from the Myers,

705

00:37:32,000 --> 00:37:37,000

there were locks on everything from the cabinet doors to the closets.

706

00:37:37,000 --> 00:37:41,000

They started reporting groceries coming out of the cabinets,

707

00:37:41,000 --> 00:37:44,000

farm equipment ending up in the trees,

708

00:37:44,000 --> 00:37:49,000

all types of weird anomalies that were pretty scary.

709

00:37:50,000 --> 00:37:52,000

All right, if we just head down then.

710

00:37:52,000 --> 00:37:54,000

Yeah, you gotta go ahead.

711

00:37:55,000 --> 00:37:57,000

Yeah, watch your head there.

712

00:37:58,000 --> 00:38:02,000

Two weeks ago, Tom and Candace reported strange noises coming from the basement.

713

00:38:02,000 --> 00:38:05,000

I was able to punch a small hole through the wall,

714

00:38:05,000 --> 00:38:09,000

and we discovered that there was possibly a room there.

715

00:38:09,000 --> 00:38:10,000

So there's a room in there.

716

00:38:10,000 --> 00:38:12,000

There's a room in there.

717

00:38:12,000 --> 00:38:14,000

But it goes back quite a ways.

718

00:38:14,000 --> 00:38:16,000

Now, the interesting thing about it is as far as we can tell,

719

00:38:16,000 --> 00:38:18,000

we can't see any pipes coming in or out,

720

00:38:18,000 --> 00:38:20,000

and there's no access to it.

721

00:38:20,000 --> 00:38:23,000

That's the weird thing is I don't know why you'd have a concrete box.

722

00:38:23,000 --> 00:38:24,000

Completely walled up.

723

00:38:24,000 --> 00:38:26,000

With no access.

724

00:38:27,000 --> 00:38:28,000

It's weird, man.

725

00:38:28,000 --> 00:38:30,000

It's just out of place.

726

00:38:30,000 --> 00:38:31,000

Well, let's get in there.

727

00:38:31,000 --> 00:38:33,000

Let's get this thing hooked up and take a look.

728

00:38:33,000 --> 00:38:37,000

A room that's completely closed off in the basement

729

00:38:37,000 --> 00:38:40,000

with no doors and no doors being prepared to be built on it,

730

00:38:40,000 --> 00:38:43,000

or maybe there was never intent to put a door on it.

731

00:38:43,000 --> 00:38:45,000

It's horror movie stuff.

732

00:38:46,000 --> 00:38:48,000

Is this gonna fit through that hole?

733

00:38:48,000 --> 00:38:49,000

I'm pretty sure it will.

734

00:38:49,000 --> 00:38:51,000

If not, we'll make it bigger.

735

00:38:51,000 --> 00:38:55,000

Yeah, everything's connected the way it's supposed to be.

736

00:38:55,000 --> 00:38:57,000

All right, there we go.

737

00:38:57,000 --> 00:38:58,000

Got it.

738

00:38:58,000 --> 00:39:00,000

Does that seem like it's gonna stay?

739

00:39:00,000 --> 00:39:01,000

I think it will.

740

00:39:01,000 --> 00:39:02,000

Okay.

741

00:39:02,000 --> 00:39:03,000

All right.

742

00:39:09,000 --> 00:39:10,000

We're in.

743

00:39:10,000 --> 00:39:11,000

Oh, wow.

744

00:39:11,000 --> 00:39:12,000

Cool.

745

00:39:12,000 --> 00:39:14,000

It's bone dry in there.

746

00:39:14,000 --> 00:39:16,000

So, it means it's not leaking

747

00:39:16,000 --> 00:39:20,000

or there's no external entrances to it.

748

00:39:20,000 --> 00:39:22,000

So, it looks square, doesn't it?

749

00:39:22,000 --> 00:39:24,000

Yeah, definitely square.

750

00:39:25,000 --> 00:39:27,000

Well, look how thick that concrete is.

751

00:39:27,000 --> 00:39:29,000

I mean, that tells you just how strong this...

752

00:39:29,000 --> 00:39:31,000

That's heavy duty something.

753

00:39:31,000 --> 00:39:33,000

That's a foot thick on top.

754

00:39:33,000 --> 00:39:35,000

I'm gonna try to angle this down a little bit

755

00:39:35,000 --> 00:39:37,000

and just check along this wall.

756

00:39:37,000 --> 00:39:39,000

That's a good idea. That's a real good idea.

757

00:39:41,000 --> 00:39:43,000

Oh, what is that?

758

00:39:43,000 --> 00:39:44,000

Is that a drain?

759

00:39:44,000 --> 00:39:46,000

What is that?

760

00:39:48,000 --> 00:39:50,000

Go our way down to it if you can.

761

00:39:52,000 --> 00:39:53,000

What is that?

762

00:39:53,000 --> 00:39:54,000

It looks like rubble to me.

763

00:39:54,000 --> 00:39:57,000

Yeah, it's rubble, but where did it rubble from what?

764

00:39:57,000 --> 00:40:00,000

I wonder when I drilled this,

765

00:40:00,000 --> 00:40:03,000

if it didn't beat it in and it popped in there.

766

00:40:03,000 --> 00:40:05,000

That looks like way more material

767

00:40:05,000 --> 00:40:06,000

that would have...

768

00:40:06,000 --> 00:40:08,000

That's way more material than that hole.

769

00:40:09,000 --> 00:40:11,000

See, go a little bit lower if you can.

770

00:40:13,000 --> 00:40:15,000

Oh, slow down, slow down, slow down.

771

00:40:17,000 --> 00:40:19,000

That looks like kindling or something.

772

00:40:19,000 --> 00:40:22,000

I don't know what the black stuff is.

773

00:40:22,000 --> 00:40:23,000

That is really weird.

774

00:40:23,000 --> 00:40:25,000

It's like charcoal.

775

00:40:25,000 --> 00:40:26,000

It might be ash.

776

00:40:26,000 --> 00:40:29,000

It looks ashy and black flex, charcoal.

777

00:40:29,000 --> 00:40:31,000

It sure does.

778

00:40:31,000 --> 00:40:33,000

Looks like there's been a fire in there.

779

00:40:33,000 --> 00:40:34,000

It does.

780

00:40:36,000 --> 00:40:38,000

That's a little creepy right there.

781

00:40:42,000 --> 00:40:45,000

Right in the bottom, there's a pile about the size of, say,

782

00:40:45,000 --> 00:40:48,000

a volleyball, and it looked like ash.

783

00:40:49,000 --> 00:40:52,000

But how did it get in there and what's the purpose of it being there?

784

00:40:52,000 --> 00:40:55,000

It makes no sense what this is.

785

00:40:56,000 --> 00:40:59,000

How could you build a fire in there without suffocating?

786

00:40:59,000 --> 00:41:00,000

Why would you?

787

00:41:00,000 --> 00:41:01,000

I mean, is it an oven?

788

00:41:01,000 --> 00:41:03,000

Well, yeah, it looks like ash.

789

00:41:03,000 --> 00:41:04,000

It looks like ash.

790

00:41:07,000 --> 00:41:08,000

Hey, hold on a minute.

791

00:41:10,000 --> 00:41:12,000

What are those white pieces right there?

792

00:41:13,000 --> 00:41:14,000

I'm wondering if that's...

793

00:41:14,000 --> 00:41:16,000

It looks a lot like even bones.

794

00:41:17,000 --> 00:41:18,000

Bones?

795

00:41:18,000 --> 00:41:20,000

What in the world?

796

00:41:24,000 --> 00:41:26,000

We need to see what's really in there.

797

00:41:26,000 --> 00:41:27,000

What is that?

798

00:41:27,000 --> 00:41:28,000

Could be human remains.

799

00:41:28,000 --> 00:41:30,000

We have a couple of trucks bringing cattle.

800

00:41:30,000 --> 00:41:32,000

Each cow we bring on is another biosensor.

801

00:41:32,000 --> 00:41:34,000

There's some signal coming from space.

802

00:41:34,000 --> 00:41:35,000

Inserting safety key.

803

00:41:35,000 --> 00:41:36,000

Ignition.

804

00:41:36,000 --> 00:41:39,000

So we're going to use rockets and see what's going on up there.

805

00:41:39,000 --> 00:41:41,000

What the heck's up with the cows?

806

00:41:42,000 --> 00:41:43,000

Look, look, look, look.

807

00:41:43,000 --> 00:41:44,000

What is that?

808

00:41:44,000 --> 00:41:45,000

What is that?

809

00:41:45,000 --> 00:41:46,000

It's gone.

810

00:41:46,000 --> 00:41:47,000

It's gone?

811

00:41:47,000 --> 00:41:48,000

Yes, I saw it. It's gone.

812

00:41:48,000 --> 00:41:49,000

I think that's historic.
