

1

00:00:00,000 --> 00:00:02,000

That upper area right there.

2

00:00:02,000 --> 00:00:03,000

Up in there.

3

00:00:03,000 --> 00:00:06,000

We could see in the distance what looked like a shadow figure

4

00:00:06,000 --> 00:00:10,000

or, you know, a person standing on the second floor.

5

00:00:10,000 --> 00:00:13,000

I'm wondering what's setting off the cameras.

6

00:00:13,000 --> 00:00:17,000

If it's back at the tree line, that thing's pretty big.

7

00:00:17,000 --> 00:00:19,000

Whoa, whoa, whoa, whoa, whoa, whoa, whoa, whoa.

8

00:00:19,000 --> 00:00:23,000

Middle of the day in a world like that, that's crazy.

9

00:00:23,000 --> 00:00:25,000

There's something about those two spots

10

00:00:25,000 --> 00:00:29,000

and the point where it dips into the ground 1,000 feet.

11

00:00:29,000 --> 00:00:31,000

That's amazing.

12

00:00:31,000 --> 00:00:33,000

Wow.

13

00:00:33,000 --> 00:00:37,000

There is a ranch in northern Utah.

14

00:00:37,000 --> 00:00:41,000

It is considered the epicenter of the strangest

15

00:00:41,000 --> 00:00:44,000

and most disturbing phenomena on Earth.

16

00:00:44,000 --> 00:00:49,000

Animal mutilations, bizarre UFO sightings,

17

00:00:49,000 --> 00:00:54,000

and unusual energies that have proven harmful to humans.

18

00:00:54,000 --> 00:00:58,000

For 20 years, the federal government tried to find answers

19

00:00:58,000 --> 00:01:00,000

and fail.

20

00:01:00,000 --> 00:01:05,000

Now, a new team of dedicated scientists, researchers,

21

00:01:05,000 --> 00:01:08,000

and experts has taken over.

22

00:01:08,000 --> 00:01:14,000

They are determined to solve the mystery and reveal

23

00:01:14,000 --> 00:01:18,000

the secret of Skinwalker Ranch.

24

00:01:18,000 --> 00:01:20,000

Lisa, here we go.

25

00:01:20,000 --> 00:01:23,000

Come on over, Pete.

26

00:01:23,000 --> 00:01:25,000

What you got for me?

27

00:01:25,000 --> 00:01:28,000

I'm glad you're here because Eric was telling us

28

00:01:28,000 --> 00:01:30,000

that you got some new equipment that can help us

29

00:01:30,000 --> 00:01:33,000

maybe better identify what lies below the ground here.

30

00:01:33,000 --> 00:01:36,000

With a particular interest in spots that have been disturbed,

31

00:01:36,000 --> 00:01:37,000

perhaps in the past?

32

00:01:37,000 --> 00:01:38,000

Uh-huh.

33

00:01:38,000 --> 00:01:40,000

Last time, we were able to find a spot

34

00:01:40,000 --> 00:01:42,000

that was not in the ground.

35

00:01:42,000 --> 00:01:45,000

We found a spot that was not in the ground.

36

00:01:45,000 --> 00:01:48,000

We found a spot that had been disturbed perhaps in the past.

37

00:01:48,000 --> 00:01:53,000

Last week, we're going to use you today as part of an experiment.

38

00:01:53,000 --> 00:01:56,000

We conducted an experiment with former Skinwalker Ranch

39

00:01:56,000 --> 00:02:00,000

investigator Jay Stratton to see if the property would respond

40

00:02:00,000 --> 00:02:03,000

in some way to his presence.

41

00:02:03,000 --> 00:02:04,000

Y'all in?

42

00:02:04,000 --> 00:02:05,000

You are cleared for takeoff.

43

00:02:05,000 --> 00:02:08,000

We took him on a tour where he had experienced phenomena

44

00:02:08,000 --> 00:02:10,000

when he was here over a decade ago,

45

00:02:10,000 --> 00:02:14,000

and we were shocked by the results.

46

00:02:14,000 --> 00:02:18,000

I'm going to bring up the data generated during your visit.

47

00:02:18,000 --> 00:02:20,000

The GPS data we recorded during the tour

48

00:02:20,000 --> 00:02:22,000

went several hundred feet underground

49

00:02:22,000 --> 00:02:26,000

between Homestead 2 and the drill site at the Mesa.

50

00:02:26,000 --> 00:02:27,000

Wow.

51

00:02:27,000 --> 00:02:31,000

So now, Eric Bard arranged for technologist Pete Kelsey

52

00:02:31,000 --> 00:02:33,000

to come back out to help us search for anything

53

00:02:33,000 --> 00:02:36,000

strange or unnatural beneath that location.

54

00:02:36,000 --> 00:02:39,000

Pete, fill us in on what you've got.

55

00:02:39,000 --> 00:02:40,000

Yeah.

56

00:02:40,000 --> 00:02:42,000

Multi-spectral.

57

00:02:42,000 --> 00:02:44,000

What does it do?

58

00:02:44,000 --> 00:02:48,000

Well, it's designed really to work in agriculture.

59

00:02:48,000 --> 00:02:51,000

If the soil under plants has been disturbed,

60

00:02:51,000 --> 00:02:55,000

they will show up differently in a multi-spectral imagery.

61

00:02:55,000 --> 00:02:57,000

Hm.

62

00:02:57,000 --> 00:03:00,000

A drone-based multi-spectral camera is designed

63

00:03:00,000 --> 00:03:02,000

to image different wavelengths of light.

64

00:03:02,000 --> 00:03:06,000

By scanning the ground, it can build a geophysical model

65

00:03:06,000 --> 00:03:09,000

of the surface that could help us identify any evidence

66

00:03:09,000 --> 00:03:12,000

of past excavations or even underground structures

67

00:03:12,000 --> 00:03:14,000

like tunnels.

68

00:03:14,000 --> 00:03:18,000

The multi-spectral camera, it's typically used on farms

69

00:03:18,000 --> 00:03:22,000

and for agriculture to determine the health,

70

00:03:22,000 --> 00:03:24,000

if you will, of the crops.

71

00:03:24,000 --> 00:03:28,000

But because plants grow differently over soil

72

00:03:28,000 --> 00:03:31,000

that's been disturbed at some point in time,

73

00:03:31,000 --> 00:03:34,000

it's an amazing tool for archaeology.

74

00:03:34,000 --> 00:03:37,000

I've got colleagues who have found Roman ruins

75

00:03:37,000 --> 00:03:39,000

under wheat fields in England.

76

00:03:39,000 --> 00:03:40,000

Wow.

77

00:03:40,000 --> 00:03:43,000

If we're lucky, things will jump out in this field

78

00:03:43,000 --> 00:03:45,000

that we'd never see otherwise.

79

00:03:45,000 --> 00:03:46,000

That's what we're after.

80

00:03:46,000 --> 00:03:48,000

I'm excited to get you to work and get that scan.

81

00:03:48,000 --> 00:03:50,000

I'd love to see what you find.

82

00:03:50,000 --> 00:03:54,000

It's very interesting to me to see the GPS data

83

00:03:54,000 --> 00:03:56,000

from the experiment that we did with Jay Stratton.

84

00:03:56,000 --> 00:03:57,000

That'll work.

85

00:03:57,000 --> 00:04:00,000

And it's at this very point that we see the GPS

86

00:04:00,000 --> 00:04:02,000

start diving underground.

87

00:04:02,000 --> 00:04:04,000

You can slide them in the back if you want.

88

00:04:04,000 --> 00:04:06,000

I'm really curious to see Pete Kelsey's data.

89

00:04:06,000 --> 00:04:09,000

What would make the GPS go below the surface here?

90

00:04:09,000 --> 00:04:12,000

That is a multi-spectral camera.

91

00:04:12,000 --> 00:04:13,000

That's it, huh?

92

00:04:13,000 --> 00:04:14,000

Wow.

93

00:04:14,000 --> 00:04:16,000

The stories that have been shared with us

94

00:04:16,000 --> 00:04:18,000

about this region of the property

95

00:04:18,000 --> 00:04:20,000

suggest that there is, in fact,

96

00:04:20,000 --> 00:04:23,000

a concentration of unusual phenomenology

97

00:04:23,000 --> 00:04:25,000

that begins at the MESO

98

00:04:25,000 --> 00:04:27,000

and extends all the way out to the homesteads.

99

00:04:27,000 --> 00:04:29,000

Is there some kind of a connection

100

00:04:29,000 --> 00:04:31,000

between these two locations?

101

00:04:31,000 --> 00:04:35,000

Hopefully, this exercise will help us to sort that out.

102

00:04:35,000 --> 00:04:37,000

I'm going to power up.

103

00:04:41,000 --> 00:04:43,000

Pete's multi-spectral scan

104

00:04:43,000 --> 00:04:45,000

was going to take a couple of hours to complete,

105

00:04:45,000 --> 00:04:48,000

so while Eric supervised that process...

106

00:04:56,000 --> 00:04:57,000

Hey, Joe.

107

00:04:57,000 --> 00:04:58,000

How you doing?

108

00:04:58,000 --> 00:05:02,000

Thomas Winerton, Dragan, and Caleb Bench

109

00:05:02,000 --> 00:05:05,000

let our colleague Joe Loeb out to the MESO drill site.

110

00:05:05,000 --> 00:05:07,000

So you got the drill?

111

00:05:07,000 --> 00:05:09,000

Got in the back of the truck already.

112

00:05:09,000 --> 00:05:11,000

Over the past couple of years,

113

00:05:11,000 --> 00:05:14,000

Joe has been helping Dragan and Caleb with RAN Security,

114

00:05:14,000 --> 00:05:17,000

but he's also a professional drill operator.

115

00:05:17,000 --> 00:05:19,000

So Thomas and Eric asked him to try to help us

116

00:05:19,000 --> 00:05:21,000

with our new strategy

117

00:05:21,000 --> 00:05:24,000

to figure out what could be buried inside the MESO.

118

00:05:24,000 --> 00:05:28,000

We've got a water truck or two coming here in a little bit,

119

00:05:28,000 --> 00:05:30,000

so really, we'll get the drill up there.

120

00:05:30,000 --> 00:05:33,000

We'll find a place that you feel like you can get it set up.

121

00:05:33,000 --> 00:05:35,000

It's right over top of the anomaly,

122

00:05:35,000 --> 00:05:37,000

so if we can get right in that area

123

00:05:37,000 --> 00:05:40,000

and then drill down on top of it, that's our hope.

124

00:05:40,000 --> 00:05:41,000

Okay.

125

00:05:41,000 --> 00:05:44,000

How fast do you think you can drill 40 feet?

126

00:05:44,000 --> 00:05:46,000

We're working with sandstone,

127

00:05:46,000 --> 00:05:50,000

and who knows what else through this area right here in the MESO,

128

00:05:50,000 --> 00:05:54,000

so it could take one foot an hour.

129

00:05:54,000 --> 00:05:55,000

Okay.

130

00:05:55,000 --> 00:05:56,000

So the rocks aren't going to be an issue,

131

00:05:56,000 --> 00:05:57,000

it'll just slow it down?

132

00:05:57,000 --> 00:05:58,000

Yeah.

133

00:05:58,000 --> 00:06:00,000

Using ground penetrating radar,

134

00:06:00,000 --> 00:06:03,000

we've identified two possibly metallic anomalies

135

00:06:03,000 --> 00:06:05,000

buried in the MESO.

136

00:06:05,000 --> 00:06:08,000

One is about 400 feet long,

137

00:06:08,000 --> 00:06:11,000

and we believe that it's shaped like a dome.

138

00:06:11,000 --> 00:06:13,000

Yeah, I'm up against something pretty hard right now.

139

00:06:13,000 --> 00:06:16,000

It could even be maybe a dome.

140

00:06:16,000 --> 00:06:20,000

We've conducted two drilling operations trying to penetrate it,

141

00:06:20,000 --> 00:06:22,000

and we've failed both times.

142

00:06:22,000 --> 00:06:25,000

But we did collect small fragments

143

00:06:25,000 --> 00:06:27,000

that are made of the same kind of materials

144

00:06:27,000 --> 00:06:30,000

that NASA uses to protect the space shuttles

145

00:06:30,000 --> 00:06:33,000

from the extreme heat of reentry from outer space.

146

00:06:33,000 --> 00:06:34,000

Oh, my.

147

00:06:34,000 --> 00:06:37,000

And behind that, we've identified something

148

00:06:37,000 --> 00:06:40,000

in a vertical position that's over 100 feet tall

149

00:06:40,000 --> 00:06:43,000

and about 40 feet below the surface of the MESO.

150

00:06:43,000 --> 00:06:46,000

Look at that.

151

00:06:46,000 --> 00:06:49,000

Since we couldn't penetrate the dome-shaped object,

152

00:06:49,000 --> 00:06:51,000

Joe has brought out a manually operated drill

153

00:06:51,000 --> 00:06:54,000

that we hope can reach the vertical anomaly from the top

154

00:06:54,000 --> 00:06:57,000

and help us identify just what it is.

155

00:06:57,000 --> 00:07:00,000

We've got 1,000-plus pounds of stuff to get up there.

156

00:07:00,000 --> 00:07:02,000

I guess we should get it unloaded and get started.

157

00:07:02,000 --> 00:07:04,000

Let's do it.

158

00:07:04,000 --> 00:07:06,000

So is this the heaviest part?

159

00:07:06,000 --> 00:07:07,000

Yes.

160

00:07:07,000 --> 00:07:10,000

Oh, jeez.

161

00:07:10,000 --> 00:07:12,000

It's not gonna be fun.

162

00:07:12,000 --> 00:07:15,000

Six years, I've heard all kinds of crazy stories

163

00:07:15,000 --> 00:07:17,000

about this MESO.

164

00:07:17,000 --> 00:07:19,000

Spacecraft going in it.

165

00:07:19,000 --> 00:07:21,000

Tunnels, caverns, underground bases.

166

00:07:21,000 --> 00:07:23,000

We've seen the MESO light up.

167

00:07:23,000 --> 00:07:28,000

Definitely makes me wonder what's going on inside the MESO.

168

00:07:28,000 --> 00:07:31,000

Dude, where's Cameron's helicopter?

169

00:07:36,000 --> 00:07:39,000

Well, we've got to pump water to the top of the hill here.

170

00:07:39,000 --> 00:07:41,000

You think you can pump it?

171

00:07:41,000 --> 00:07:44,000

Well, we're crazy enough to try it, so.

172

00:07:44,000 --> 00:07:45,000

OK.

173

00:07:49,000 --> 00:07:50,000

Let it go up.

174

00:07:50,000 --> 00:07:51,000

Yeah.

175

00:07:51,000 --> 00:07:54,000

Here it comes.

176

00:07:54,000 --> 00:07:57,000

The way that this drill works is they pump water,

177

00:07:57,000 --> 00:08:01,000

which makes a lubrication for this thing to be able to drill through

178

00:08:01,000 --> 00:08:03,000

and keep the bit cool.

179

00:08:03,000 --> 00:08:05,000

I'm not gonna lie.

180

00:08:05,000 --> 00:08:10,000

It's been a lot of work getting this pump and this drill rig up on top of the MESO.

181

00:08:10,000 --> 00:08:14,000

I'm really hopeful that all the sweat and effort that's gone into it

182

00:08:14,000 --> 00:08:16,000

pays off with results.

183

00:08:16,000 --> 00:08:18,000

We'll fire this up.

184

00:08:21,000 --> 00:08:24,000

There it goes. OK.

185

00:08:26,000 --> 00:08:29,000

Given the nature of the dirt and the sandstone here,

186

00:08:29,000 --> 00:08:33,000

it's proving again on Skinwalker Ranch that nothing is easy.

187

00:08:33,000 --> 00:08:38,000

I've asked Joe if he would stay up here on top of the MESO and keep working this drill.

188

00:08:38,000 --> 00:08:41,000

We're not making a lot of headway right now,

189

00:08:41,000 --> 00:08:45,000

but if anyone can do it, he can, and we're hopeful that we'll get some results.

190

00:08:45,000 --> 00:08:47,000

Let's keep dragging on this right now.

191

00:08:47,000 --> 00:08:51,000

So Caleb and I are gonna do a patrol on the south side of the property.

192

00:08:51,000 --> 00:08:54,000

OK. Well, we'll get out of your way and let you start punching home.

193

00:09:02,000 --> 00:09:06,000

I'll be curious to see if we see anything on our trailcams,

194

00:09:06,000 --> 00:09:09,000

especially given that weird silver orb thing, whatever that was.

195

00:09:09,000 --> 00:09:11,000

Yeah. I agree.

196

00:09:11,000 --> 00:09:17,000

Over the last several weeks, the south field of the ranch has become a hotbed of strange activity.

197

00:09:17,000 --> 00:09:20,000

Whoa, what was that purple light over there?

198

00:09:20,000 --> 00:09:26,000

First, Thomas saw a flashing purple light during a nighttime experiment just a few feet off the ground.

199

00:09:26,000 --> 00:09:28,000

Oh, we got it again.

200

00:09:28,000 --> 00:09:30,000

And when he went to investigate it...

201

00:09:30,000 --> 00:09:32,000

That is flashing whatever that is.

202

00:09:32,000 --> 00:09:39,000

Caleb and I saw a UAP in the sky right above him that seemed to track his movements.

203

00:09:39,000 --> 00:09:44,000

Several days later, Thomas and Caleb found the remains of a dead deer

204

00:09:44,000 --> 00:09:49,000

and noticed a fence post that had been burned by something that had to be as hot as lightning,

205

00:09:49,000 --> 00:09:52,000

but inexplicably didn't burn anything else around it.

206

00:09:52,000 --> 00:09:55,000

What the heck would have burned this post?

207

00:09:55,000 --> 00:10:01,000

And just last week, while checking the footage of the new cameras that we set up in the area...

208

00:10:01,000 --> 00:10:04,000

Whoa. Oh, back down.

209

00:10:04,000 --> 00:10:11,000

...Dragon and Caleb saw a silver-colored object near the ground right near where Thomas saw the purple light.

210

00:10:11,000 --> 00:10:13,000

What?

211

00:10:14,000 --> 00:10:17,000

And I don't think it's a bad thing for us to get out on foot and go cruise around here

212

00:10:17,000 --> 00:10:19,000

and see if there's anything that looks out of place.

213

00:10:19,000 --> 00:10:21,000

I completely agree.

214

00:10:28,000 --> 00:10:32,000

Well, there's a lot of area through here you can only cover on foot though.

215

00:10:32,000 --> 00:10:34,000

Right.

216

00:10:35,000 --> 00:10:40,000

Well, as long as the only thing we're finding is signs of natural wildlife that's supposed to be here,

217

00:10:40,000 --> 00:10:41,000

I'm okay with that, right?

218

00:10:41,000 --> 00:10:43,000

It's the other kind that I'm worried about.

219

00:10:47,000 --> 00:10:49,000

Property line's not too much farther.

220

00:10:52,000 --> 00:10:54,000

Hey, Caleb.

221

00:10:54,000 --> 00:10:56,000

What the heck?

222

00:11:01,000 --> 00:11:03,000

It looks fresh to me.

223

00:11:03,000 --> 00:11:06,000

Holy crap, that just happened.

224

00:11:15,000 --> 00:11:18,000

That's strange. Like, holy crap, that just happened.

225

00:11:18,000 --> 00:11:20,000

It's the second young one that's dead, right?

226

00:11:20,000 --> 00:11:24,000

It's not too far from the last one that was strange by the burnt post.

227

00:11:24,000 --> 00:11:26,000

You know what, Caleb?

228

00:11:26,000 --> 00:11:30,000

I'm just going to take a few shots with my camera so we can show the vet.

229

00:11:30,000 --> 00:11:32,000

Yeah.

230

00:11:32,000 --> 00:11:35,000

Makes me wonder about the coloration on some of these bones too.

231

00:11:35,000 --> 00:11:37,000

Flipping them over in their pink like that or reddish.

232

00:11:37,000 --> 00:11:39,000

Yep.

233

00:11:39,000 --> 00:11:42,000

With all the activity we've seen in the South Fields recently,

234

00:11:42,000 --> 00:11:45,000

given the fact we found this mysterious burnt post,

235

00:11:45,000 --> 00:11:48,000

this dead deer, this strange red deer,

236

00:11:48,000 --> 00:11:51,000

this dead deer, this strange silver object,

237

00:11:51,000 --> 00:11:53,000

looks like an orb, and that purple light,

238

00:11:53,000 --> 00:11:55,000

it's all starting to connect a little bit.

239

00:11:55,000 --> 00:11:59,000

So I'll be curious to hear what the vet thinks of it all.

240

00:11:59,000 --> 00:12:00,000

Should we head back?

241

00:12:00,000 --> 00:12:01,000

Yeah.

242

00:12:01,000 --> 00:12:02,000

Okay.

243

00:12:02,000 --> 00:12:04,000

We get back to it.

244

00:12:11,000 --> 00:12:12,000

Hey, Brad.

245

00:12:12,000 --> 00:12:13,000

Hey, man.

246

00:12:13,000 --> 00:12:15,000

You get those photos sent off to Haley?

247

00:12:15,000 --> 00:12:17,000

Is that...

248

00:12:17,000 --> 00:12:19,000

I got those sent over.

249

00:12:19,000 --> 00:12:21,000

I'll see if I can get her on Zoom.

250

00:12:24,000 --> 00:12:25,000

Hi, Haley.

251

00:12:25,000 --> 00:12:26,000

How are you?

252

00:12:26,000 --> 00:12:27,000

Good.

253

00:12:27,000 --> 00:12:30,000

I know you're probably tired of sending you pictures of dead deer,

254

00:12:30,000 --> 00:12:32,000

but on this side of the property,

255

00:12:32,000 --> 00:12:36,000

we've got two that don't seem to be your typical,

256

00:12:36,000 --> 00:12:39,000

you know, at least from our estimation, predator kills.

257

00:12:39,000 --> 00:12:42,000

So what do you think of the latest pictures we sent you?

258

00:12:42,000 --> 00:12:44,000

It's hard to say from just pictures,

259

00:12:44,000 --> 00:12:46,000

but it looks like a similar size

260

00:12:46,000 --> 00:12:49,000

as far as the actual deer is,

261

00:12:49,000 --> 00:12:53,000

but I feel like the story is fairly different overall.

262

00:12:53,000 --> 00:12:54,000

Okay.

263

00:12:54,000 --> 00:12:57,000

These bones have a lot more trauma to them.

264

00:12:57,000 --> 00:13:02,000

I would say there's more signs that either predation happened

265

00:13:02,000 --> 00:13:05,000

or there were bigger animals attacking this animal.

266

00:13:05,000 --> 00:13:06,000

Interesting.

267

00:13:06,000 --> 00:13:08,000

I think the scapula is really interesting.

268

00:13:08,000 --> 00:13:11,000

So the scapula is the shoulder blade.

269

00:13:11,000 --> 00:13:16,000

There are two large holes towards the top of that scapula.

270

00:13:16,000 --> 00:13:18,000

And so when I look at that, I go,

271

00:13:18,000 --> 00:13:21,000

well, are those canine holes or teeth holes?

272

00:13:21,000 --> 00:13:23,000

You know, that would be a very strong animal

273

00:13:23,000 --> 00:13:25,000

if that were the case.

274

00:13:25,000 --> 00:13:28,000

Are coyotes, do they get big enough

275

00:13:28,000 --> 00:13:30,000

where they could possibly do this,

276

00:13:30,000 --> 00:13:32,000

or were we talking about something bigger than that?

277

00:13:32,000 --> 00:13:36,000

I would suspect that it would be something bigger than that.

278

00:13:36,000 --> 00:13:38,000

Wow.

279

00:13:38,000 --> 00:13:42,000

We definitely have also heard stories of big wolves

280

00:13:42,000 --> 00:13:44,000

and things of that nature.

281

00:13:44,000 --> 00:13:46,000

You know, if you're talking about that type of an animal,

282

00:13:46,000 --> 00:13:48,000

that opens up a whole different type of discussion.

283

00:13:48,000 --> 00:13:50,000

Yeah.

284

00:13:50,000 --> 00:13:53,000

I mean, we've heard so many stories about things that happened in the past

285

00:13:53,000 --> 00:13:56,000

from the Sherman family that lived here on the ranch

286

00:13:56,000 --> 00:13:59,000

when all sorts of strange things were really happening.

287

00:14:02,000 --> 00:14:05,000

So the way the story goes is Mr. Sherman and his son,

288

00:14:05,000 --> 00:14:09,000

they had just had some of their prized cattle that had calves.

289

00:14:09,000 --> 00:14:14,000

Across the field, they saw what looked like a great big wolf.

290

00:14:14,000 --> 00:14:19,000

And we're talking its head standing four or five feet off the ground.

291

00:14:19,000 --> 00:14:22,000

People equated to a dire wolf.

292

00:14:22,000 --> 00:14:27,000

And then one of their prized calves got near the rails of the corral,

293

00:14:27,000 --> 00:14:31,000

and the wolf reached in and grabbed it by its snout.

294

00:14:31,000 --> 00:14:35,000

So Mr. Sherman pulled out a .357 revolver,

295

00:14:35,000 --> 00:14:40,000

shot it, the full six rounds,

296

00:14:40,000 --> 00:14:44,000

and the wolf still did not drop the calf.

297

00:14:44,000 --> 00:14:49,000

So he had his son run in the house and get his .30-06 hunting rifle.

298

00:14:49,000 --> 00:14:52,000

Finally, after the second shot,

299

00:14:52,000 --> 00:14:56,000

the wolf dropped the calf,

300

00:14:56,000 --> 00:14:59,000

went trotting off,

301

00:14:59,000 --> 00:15:02,000

and then basically disappearing into nothing

302

00:15:02,000 --> 00:15:05,000

as if the thing had just kind of vaporized.

303

00:15:05,000 --> 00:15:09,000

The other issue is when, if these are bigger predators,

304

00:15:09,000 --> 00:15:11,000

cats, wolves, or otherwise,

305

00:15:11,000 --> 00:15:14,000

then they're not afraid to go after humans as well.

306

00:15:14,000 --> 00:15:18,000

So you definitely have to make sure you guys are safe.

307

00:15:18,000 --> 00:15:21,000

Dr. Lundgren, thank you so much for taking the time.

308

00:15:21,000 --> 00:15:24,000

We really value and appreciate your opinion on this stuff,

309

00:15:24,000 --> 00:15:28,000

and I'm sure that we'll be reaching out again if you'll allow us to.

310

00:15:28,000 --> 00:15:30,000

Yeah, well, I'm happy to do it.

311

00:15:30,000 --> 00:15:32,000

Thank you so much.

312

00:15:42,000 --> 00:15:44,000

Add a lot.

313

00:15:44,000 --> 00:15:46,000

Little bit.

314

00:15:46,000 --> 00:15:49,000

The next day, while we were waiting for Pete Kelsey

315

00:15:49,000 --> 00:15:52,000

to present the data from his multi-spectral scans,

316

00:15:52,000 --> 00:15:55,000

Kayla Bench, Dragon, and Thomas Winerton

317

00:15:55,000 --> 00:15:58,000

hiked up to the top of the mesa to check in with Joe Loeb

318

00:15:58,000 --> 00:16:01,000

on the progress of his drilling operation.

319

00:16:01,000 --> 00:16:05,000

We're sitting right on top of that GPR anomaly that Yon showed us.

320

00:16:05,000 --> 00:16:08,000

So is it drilling then?

321

00:16:08,000 --> 00:16:10,000

A little bit.

322

00:16:10,000 --> 00:16:12,000

A little bit.

323

00:16:12,000 --> 00:16:13,000

It's doing that three inches an hour.

324

00:16:13,000 --> 00:16:15,000

All right.

325

00:16:15,000 --> 00:16:17,000

It might just be a heavy rock right up here.

326

00:16:17,000 --> 00:16:19,000

Since we catch that bite, we're holding tight.

327

00:16:19,000 --> 00:16:22,000

It's going to take a while. Slow but steady.

328

00:16:22,000 --> 00:16:25,000

We're just grinding through this rock right now.

329

00:16:25,000 --> 00:16:28,000

We're going to bust through that crust to get it stabilized.

330

00:16:41,000 --> 00:16:45,000

Well, you're ready to have a conversation with Pete Kelsey

331

00:16:45,000 --> 00:16:46,000

and review some data with us?

332

00:16:46,000 --> 00:16:47,000

Always ready.

333

00:16:47,000 --> 00:16:51,000

Later that afternoon, Eric gathered us all in the command center

334

00:16:51,000 --> 00:16:54,000

after Pete Kelsey told him he had fully processed the data

335

00:16:54,000 --> 00:16:59,000

from the scans between the Mesa Drill site and Homestead 2.

336

00:16:59,000 --> 00:17:03,000

Hey, Pete. Hey, guys.

337

00:17:03,000 --> 00:17:05,000

Well, as usual, we're in suspense.

338

00:17:05,000 --> 00:17:12,000

So this is one look at the data, the multi-spectral data we flew.

339

00:17:12,000 --> 00:17:15,000

Hey, Pete, what's the color scale mean?

340

00:17:15,000 --> 00:17:19,000

Essentially, where it's bright is where, frankly,

341

00:17:19,000 --> 00:17:23,000

the grass or the hay is doing really well.

342

00:17:23,000 --> 00:17:26,000

Where it's bright, the grass is doing well.

343

00:17:26,000 --> 00:17:29,000

Where it's dark, it's really dry,

344

00:17:29,000 --> 00:17:32,000

and the grass or hay isn't doing so well.

345

00:17:32,000 --> 00:17:36,000

So to cut to the chase after looking at this for a while,

346

00:17:36,000 --> 00:17:41,000

what stands out is a perfect circle.

347

00:17:42,000 --> 00:17:45,000

Look right there by the bait pin.

348

00:17:45,000 --> 00:17:49,000

There are three circles that are just absolutely circle.

349

00:17:49,000 --> 00:17:51,000

Look to the left of the bait pin.

350

00:17:51,000 --> 00:17:52,000

Yep.

351

00:17:52,000 --> 00:17:53,000

Just to the west.

352

00:17:53,000 --> 00:17:54,000

Yep.

353

00:17:54,000 --> 00:17:58,000

I can play with the spectrum to make this more obvious.

354

00:17:58,000 --> 00:18:00,000

Yeah, right there.

355

00:18:00,000 --> 00:18:02,000

They look unnatural.

356

00:18:02,000 --> 00:18:06,000

What's interesting about this, although my other thing is where it is,

357

00:18:06,000 --> 00:18:09,000

it's right across from the drill site.

358

00:18:09,000 --> 00:18:12,000

Wow.

359

00:18:12,000 --> 00:18:15,000

That's pretty crazy.

360

00:18:15,000 --> 00:18:17,000

Look right there by the bait pin.

361

00:18:17,000 --> 00:18:19,000

There are three circles.

362

00:18:19,000 --> 00:18:21,000

Yeah, right there.

363

00:18:21,000 --> 00:18:24,000

If I play with the colorization a little bit,

364

00:18:24,000 --> 00:18:27,000

you can see how I can make this look like this.

365

00:18:27,000 --> 00:18:28,000

Okay.

366

00:18:28,000 --> 00:18:32,000

The three circular formations in Pete Kelsey's multi-spectral scans

367

00:18:32,000 --> 00:18:36,000

between the Mesa drill site and Homestead 2 were really odd,

368

00:18:36,000 --> 00:18:39,000

especially because they were in the same area

369

00:18:39,000 --> 00:18:44,000

where we got all the bizarre GPS data during our tour with Jay Stratton.

370

00:18:46,000 --> 00:18:48,000

We're talking about these circular...

371

00:18:48,000 --> 00:18:50,000

Yeah, those are the ones that really stand out.

372

00:18:50,000 --> 00:18:53,000

Yeah, they really do. They do look out of place.

373

00:18:53,000 --> 00:18:55,000

And that's right across from the drill site.

374

00:18:55,000 --> 00:19:01,000

I mean, I'm not a botanist, but how's that going to happen naturally?

375

00:19:01,000 --> 00:19:04,000

And at this spot right here, if you recall,

376

00:19:04,000 --> 00:19:08,000

that's where Jay's GPS data went way underground,

377

00:19:08,000 --> 00:19:11,000

maybe as much as a quarter of a mile.

378

00:19:11,000 --> 00:19:13,000

That's really interesting.

379

00:19:13,000 --> 00:19:16,000

It's clear that someone or something has disturbed the ground

380

00:19:16,000 --> 00:19:19,000

where these circles were identified.

381

00:19:19,000 --> 00:19:22,000

Now, it could be that they were simply left by old grain silos

382

00:19:22,000 --> 00:19:25,000

that previous ranchers had used there.

383

00:19:25,000 --> 00:19:28,000

Right over there by that tree.

384

00:19:28,000 --> 00:19:32,000

But it also reminded me of when retired local sheriff Chris Porit

385

00:19:32,000 --> 00:19:34,000

visited the ranch two years ago.

386

00:19:34,000 --> 00:19:38,000

He shared an incredible story about something he saw back in the 1980s,

387

00:19:38,000 --> 00:19:42,000

not far from the South Field where we found the deer carcasses,

388

00:19:42,000 --> 00:19:47,000

saw the purple light near the ground, and the UAP in the sky above Thomas.

389

00:19:47,000 --> 00:19:49,000

So this is the spot.

390

00:19:49,000 --> 00:19:54,000

There was matted grass where something heavy is set in these weeds

391

00:19:54,000 --> 00:19:56,000

and made an impression in the dirt.

392

00:19:56,000 --> 00:19:59,000

23 feet tip to tip.

393

00:19:59,000 --> 00:20:04,000

I presume it was spaceship.

394

00:20:07,000 --> 00:20:09,000

I've said it, didn't I?

395

00:20:12,000 --> 00:20:16,000

Pete, are there any other circular features that stand out

396

00:20:16,000 --> 00:20:19,000

so clearly as these beside the bait pin?

397

00:20:19,000 --> 00:20:25,000

Not as clearly as well defined as these.

398

00:20:25,000 --> 00:20:27,000

Who knows?

399

00:20:27,000 --> 00:20:30,000

Maybe these circles have a mundane explanation.

400

00:20:30,000 --> 00:20:34,000

But since they appeared in the same area where the GPS data

401

00:20:34,000 --> 00:20:38,000

from our ranch tour with Jay Stratton inexplicably went underground,

402

00:20:38,000 --> 00:20:42,000

we need to investigate them and look for any other anomalies in the data.

403

00:20:42,000 --> 00:20:45,000

You got any other cool spots?

404

00:20:45,000 --> 00:20:47,000

I do.

405

00:20:47,000 --> 00:20:51,000

So the next bit is right here.

406

00:20:51,000 --> 00:20:53,000

Just to the west.

407

00:20:53,000 --> 00:20:55,000

This is Homestead 2 right here.

408

00:20:55,000 --> 00:21:02,000

What I see is that it doesn't quite fit is down here.

409

00:21:02,000 --> 00:21:04,000

There's a horizontal line right here.

410

00:21:04,000 --> 00:21:07,000

Pete, go to the grayscale view.

411

00:21:07,000 --> 00:21:09,000

Hold on a minute, Pete.

412

00:21:09,000 --> 00:21:11,000

It's actually four lines.

413

00:21:11,000 --> 00:21:14,000

If you look closely, you've got the top one and then the one right under

414

00:21:14,000 --> 00:21:17,000

is kind of broken in the dark spot there.

415

00:21:17,000 --> 00:21:20,000

And then there's the one under that and then the bottom one.

416

00:21:20,000 --> 00:21:22,000

It might even be five lines.

417

00:21:22,000 --> 00:21:24,000

It's just strange.

418

00:21:24,000 --> 00:21:29,000

So Pete, I'm just wondering, what do you think those lines are?

419

00:21:29,000 --> 00:21:32,000

Well, if that's some kind of a depression,

420

00:21:32,000 --> 00:21:36,000

that's going to pool water and the planets will grow differently.

421

00:21:36,000 --> 00:21:39,000

The lines Pete detected just west of the strange circles

422

00:21:39,000 --> 00:21:42,000

and to the south of our drill site in the Mesa

423

00:21:42,000 --> 00:21:45,000

also didn't look like anything that would have formed in nature.

424

00:21:45,000 --> 00:21:49,000

We couldn't tell from this data how deep they were from the surface,

425

00:21:49,000 --> 00:21:53,000

but it looked like somebody or something created them.

426

00:21:53,000 --> 00:21:57,000

The question was, could they be what made the GPS data

427

00:21:57,000 --> 00:22:00,000

from our tour with Jay Stratton go deep underground?

428

00:22:00,000 --> 00:22:05,000

Now, Thomas, when you walk in that area there where we see those lines

429

00:22:05,000 --> 00:22:07,000

from left to right, have you picked up on anything?

430

00:22:07,000 --> 00:22:10,000

Is there anything about the ground that stands out to you?

431

00:22:10,000 --> 00:22:13,000

I can't say that I've noticed anything out there.

432

00:22:13,000 --> 00:22:16,000

You look everywhere else where the water runs,

433

00:22:16,000 --> 00:22:19,000

it looks more natural and random,

434

00:22:19,000 --> 00:22:22,000

but you look at that spot, it looks like it was a cut channel.

435

00:22:22,000 --> 00:22:25,000

That suggests man made to me.

436

00:22:25,000 --> 00:22:29,000

Anything that linear, that orthogonal,

437

00:22:29,000 --> 00:22:33,000

that to me suggests somebody dug a trench.

438

00:22:33,000 --> 00:22:36,000

The other thing that maybe it's not so obvious

439

00:22:36,000 --> 00:22:41,000

is they're on a perfect east-west line.

440

00:22:41,000 --> 00:22:43,000

What are the odds of that?

441

00:22:43,000 --> 00:22:45,000

Could it be when Bigelow was here?

442

00:22:45,000 --> 00:22:47,000

Might be Bigelow dug there?

443

00:22:47,000 --> 00:22:48,000

Good question.

444

00:22:48,000 --> 00:22:51,000

So does that mean that this space has already been searched?

445

00:22:51,000 --> 00:22:54,000

It makes me think that maybe it has been.

446

00:22:54,000 --> 00:22:57,000

But guys, I mean this is in the area.

447

00:22:57,000 --> 00:22:59,000

We were told not to dig.

448

00:22:59,000 --> 00:23:00,000

Right.

449

00:23:00,000 --> 00:23:05,000

Two years ago, there is an actual location on the ranch

450

00:23:05,000 --> 00:23:08,000

where the Sherman said not to dig.

451

00:23:08,000 --> 00:23:10,000

The current ranch owner, Brandon Fugel,

452

00:23:10,000 --> 00:23:13,000

was warned that disturbing the ground in this same area

453

00:23:13,000 --> 00:23:17,000

near Homestead 2 would cause dangerous phenomena to occur.

454

00:23:17,000 --> 00:23:19,000

The Shermans worked the ranch before

455

00:23:19,000 --> 00:23:21,000

and during the Bigelow investigations

456

00:23:21,000 --> 00:23:24,000

from the late 1990s to the early 2000s.

457

00:23:24,000 --> 00:23:26,000

A lot of the details of that era

458

00:23:26,000 --> 00:23:29,000

have still never been released to the public.

459

00:23:29,000 --> 00:23:33,000

So could these anomalies in the field near Homestead 2

460

00:23:33,000 --> 00:23:37,000

be related to digging operations conducted by that team?

461

00:23:37,000 --> 00:23:40,000

And also explain why they said no one should ever dig there.

462

00:23:40,000 --> 00:23:43,000

There might be only one way to find out.

463

00:23:43,000 --> 00:23:45,000

After looking at this,

464

00:23:45,000 --> 00:23:49,000

I think that maybe Bigelow was out here doing some digging.

465

00:23:49,000 --> 00:23:52,000

So it's not hard for me to believe that they were out here

466

00:23:52,000 --> 00:23:54,000

searching for something as well.

467

00:23:54,000 --> 00:23:56,000

I think there's some excavation we could do there.

468

00:23:56,000 --> 00:23:58,000

But now since we know their lines went east and west,

469

00:23:58,000 --> 00:24:01,000

I think we ought to start and go north and south

470

00:24:01,000 --> 00:24:02,000

and dig some swipes.

471

00:24:02,000 --> 00:24:03,000

See if we can intersect it.

472

00:24:03,000 --> 00:24:04,000

Yeah.

473

00:24:04,000 --> 00:24:06,000

Yeah, you want to get down in that plane

474

00:24:06,000 --> 00:24:08,000

and see what those differences really are.

475

00:24:08,000 --> 00:24:10,000

They go deeper than the surface.

476

00:24:10,000 --> 00:24:12,000

Yeah, if it's compacted and then it's loose, right?

477

00:24:12,000 --> 00:24:14,000

And then we'd know they dug there before.

478

00:24:14,000 --> 00:24:16,000

So are we all in agreement then?

479

00:24:16,000 --> 00:24:18,000

We want to go out and dig those couple spots?

480

00:24:18,000 --> 00:24:19,000

Yeah.

481

00:24:19,000 --> 00:24:20,000

OK.

482

00:24:20,000 --> 00:24:23,000

So I'll make some arrangements and we'll get an excavator out here

483

00:24:23,000 --> 00:24:25,000

and we'll go out and dig.

484

00:24:25,000 --> 00:24:26,000

OK.

485

00:24:26,000 --> 00:24:27,000

Yeah, love it.

486

00:24:34,000 --> 00:24:36,000

We'll just keep running on this right now.

487

00:24:39,000 --> 00:24:40,000

Yeah, sending you guys water.

488

00:24:40,000 --> 00:24:43,000

Let me know if you get good pressure up there.

489

00:24:43,000 --> 00:24:45,000

We're good for a little bit.

490

00:24:45,000 --> 00:24:48,000

The following morning, while Joe Loeb continued drilling

491

00:24:48,000 --> 00:24:52,000

into the top of the mesa, the rest of us

492

00:24:52,000 --> 00:24:56,000

joined Thomas Winerton out in the field near Homestead 2

493

00:24:56,000 --> 00:24:59,000

where he was waiting with a three ton excavator.

494

00:24:59,000 --> 00:25:02,000

We were eager to start digging to see just what all these anomalies

495

00:25:02,000 --> 00:25:05,000

under the surface could be.

496

00:25:05,000 --> 00:25:08,000

Well, the lines are over there because that hole right at power

497

00:25:08,000 --> 00:25:12,000

there is between the bottom two, right?

498

00:25:12,000 --> 00:25:15,000

I think it's right here.

499

00:25:15,000 --> 00:25:17,000

I don't know, where you think about digging?

500

00:25:17,000 --> 00:25:20,000

Well, my thoughts would be to start about right here

501

00:25:20,000 --> 00:25:23,000

and do a trench probably back to where you're at, Travis.

502

00:25:23,000 --> 00:25:25,000

We'll get started, Thomas.

503

00:25:25,000 --> 00:25:26,000

You get yourself in place.

504

00:25:31,000 --> 00:25:33,000

Before we start disturbing the earth,

505

00:25:33,000 --> 00:25:36,000

we want to make sure that we have all the monitoring equipment

506

00:25:36,000 --> 00:25:38,000

in place to detect anything that we might stir up

507

00:25:38,000 --> 00:25:40,000

as a result of the digging.

508

00:25:40,000 --> 00:25:41,000

Are you monitoring 1.6 right now?

509

00:25:41,000 --> 00:25:42,000

I am right now.

510

00:25:42,000 --> 00:25:45,000

This data we've received from Pete is really amazing stuff,

511

00:25:45,000 --> 00:25:49,000

and we're all anxious to see what in the world it could be about.

512

00:25:49,000 --> 00:25:52,000

But the fact that this is leading to another digging exercise

513

00:25:52,000 --> 00:25:57,000

on Skinwanker Ranch really kind of makes me a little bit nervous.

514

00:25:57,000 --> 00:25:59,000

I don't know what it is about digging,

515

00:25:59,000 --> 00:26:02,000

but we need to be very careful and tread lightly.

516

00:26:02,000 --> 00:26:04,000

Let's get digging.

517

00:26:04,000 --> 00:26:06,000

Let's get digging.

518

00:26:11,000 --> 00:26:14,000

Ever since the first day I was involved in the investigation

519

00:26:14,000 --> 00:26:16,000

of Skinwanker Ranch,

520

00:26:16,000 --> 00:26:19,000

I was told bad things happen when you dig here.

521

00:26:19,000 --> 00:26:23,000

But after seeing Pete Kelsey's multi-spectral data scans

522

00:26:23,000 --> 00:26:26,000

showing five mysterious lines in the field

523

00:26:26,000 --> 00:26:28,000

just east of Homestead 2,

524

00:26:28,000 --> 00:26:31,000

I was told that there was a lot of data

525

00:26:31,000 --> 00:26:35,000

on the mysterious lines in the field just east of Homestead 2.

526

00:26:35,000 --> 00:26:37,000

We knew we had to take a risk and dig.

527

00:26:37,000 --> 00:26:39,000

That's good top, Sol.

528

00:26:39,000 --> 00:26:40,000

Yeah.

529

00:26:40,000 --> 00:26:43,000

We need to know what these lines actually are

530

00:26:43,000 --> 00:26:46,000

and how they might be connected to all the strange phenomena

531

00:26:46,000 --> 00:26:49,000

that people have encountered in this section of the ranch

532

00:26:49,000 --> 00:26:51,000

over the years.

533

00:26:53,000 --> 00:26:56,000

Caleb, you want to see what's right there?

534

00:26:57,000 --> 00:27:00,000

Is that just rocks?

535

00:27:02,000 --> 00:27:05,000

I'm seeing some coloration in there.

536

00:27:05,000 --> 00:27:08,000

Yeah, it's like there's a layer of it or something.

537

00:27:08,000 --> 00:27:11,000

And you can see it especially right there.

538

00:27:11,000 --> 00:27:15,000

There was a consistent layer of some kind of material.

539

00:27:15,000 --> 00:27:18,000

I don't know what this material is,

540

00:27:18,000 --> 00:27:20,000

but we've done some digging on other areas of the ranch,

541

00:27:20,000 --> 00:27:24,000

and it is different than what we are seeing in other places.

542

00:27:25,000 --> 00:27:28,000

Okay, well, maybe another 20 feet.

543

00:27:28,000 --> 00:27:29,000

Yeah.

544

00:27:35,000 --> 00:27:37,000

Find something, Caleb?

545

00:27:37,000 --> 00:27:40,000

He's been getting some, like, striation.

546

00:27:40,000 --> 00:27:41,000

It starts about right there.

547

00:27:41,000 --> 00:27:43,000

Oh, yeah, right there.

548

00:27:45,000 --> 00:27:47,000

But does it stop?

549

00:27:48,000 --> 00:27:51,000

No, wait a minute.

550

00:27:51,000 --> 00:27:53,000

Did you find some?

551

00:27:53,000 --> 00:27:56,000

There's something different in the dirt right here.

552

00:27:56,000 --> 00:27:59,000

So look, Donald, the clay looking stuff stops right there.

553

00:27:59,000 --> 00:28:00,000

Yep.

554

00:28:00,000 --> 00:28:02,000

And it starts right here.

555

00:28:04,000 --> 00:28:06,000

And that would be where the line is.

556

00:28:06,000 --> 00:28:08,000

So the line would be like this, and that's the line.

557

00:28:08,000 --> 00:28:11,000

And it's about what those are with, too.

558

00:28:12,000 --> 00:28:14,000

Hey, guys, y'all, come look at this.

559

00:28:14,000 --> 00:28:16,000

What do you got?

560

00:28:16,000 --> 00:28:17,000

You find a discontinuity?

561

00:28:17,000 --> 00:28:19,000

Yeah.

562

00:28:19,000 --> 00:28:23,000

See this gray clay stuff, and it stops right there.

563

00:28:23,000 --> 00:28:25,000

Yeah.

564

00:28:25,000 --> 00:28:28,000

I'm looking through here, and I'm not seeing anything like...

565

00:28:28,000 --> 00:28:30,000

No, there's nothing like that through here.

566

00:28:30,000 --> 00:28:31,000

It's a layer.

567

00:28:31,000 --> 00:28:32,000

Definitely a layer.

568

00:28:32,000 --> 00:28:34,000

And it's about what those are with.

569

00:28:34,000 --> 00:28:35,000

Yeah.

570

00:28:35,000 --> 00:28:38,000

Well, I wasn't expecting that.

571

00:28:38,000 --> 00:28:44,000

We have some layer very near the anomaly that we got out of P. Kelsey's survey.

572

00:28:44,000 --> 00:28:46,000

That's pretty interesting.

573

00:28:46,000 --> 00:28:51,000

It's obvious that this is a spot that we really need to learn as much as we can about.

574

00:28:51,000 --> 00:28:52,000

There you go.

575

00:28:52,000 --> 00:28:54,000

Right there's a piece of it right there.

576

00:28:55,000 --> 00:28:58,000

It's got some really fine crystalline material in it.

577

00:28:58,000 --> 00:29:02,000

There's a crystal in there, absolutely, because it glistens in the sunlight.

578

00:29:02,000 --> 00:29:05,000

So what is that doing just in that spot?

579

00:29:05,000 --> 00:29:07,000

Yeah, why is there five stripes of it in the field?

580

00:29:07,000 --> 00:29:08,000

Yeah.

581

00:29:08,000 --> 00:29:10,000

What on earth is it?

582

00:29:10,000 --> 00:29:13,000

I mean, you wouldn't think that would make an effect on the vegetation.

583

00:29:13,000 --> 00:29:14,000

Yeah.

584

00:29:14,000 --> 00:29:15,000

But why is it here?

585

00:29:15,000 --> 00:29:16,000

Yeah, why is it here?

586

00:29:16,000 --> 00:29:17,000

That's interesting.

587

00:29:17,000 --> 00:29:18,000

Yeah, why isn't it everywhere?

588

00:29:18,000 --> 00:29:19,000

Right?

589

00:29:19,000 --> 00:29:20,000

Yeah.

590

00:29:20,000 --> 00:29:23,000

That's a telltale sign of something, but of what?

591

00:29:23,000 --> 00:29:25,000

I don't know.

592

00:29:25,000 --> 00:29:30,000

Neither Eric nor I had any idea what to make of the grayish material we uncovered in the

593

00:29:30,000 --> 00:29:33,000

field just east of Homestead 2.

594

00:29:33,000 --> 00:29:38,000

But it definitely corresponded with the lines we saw in Pete Kelsey's multi-spectral scans

595

00:29:38,000 --> 00:29:39,000

of the area.

596

00:29:39,000 --> 00:29:44,000

And if nothing else, it tells us how accurate that multi-spectral data is.

597

00:29:44,000 --> 00:29:45,000

That's pretty impressive.

598

00:29:45,000 --> 00:29:46,000

Yeah, that's amazing.

599

00:29:46,000 --> 00:29:50,000

Well, are you going to run another one on this side to see if it continues on?

600

00:29:50,000 --> 00:29:51,000

Probably should, huh?

601

00:29:51,000 --> 00:29:54,000

We could go over closer to the tree and dig that way.

602

00:29:54,000 --> 00:29:58,000

If you hit another stripe back there, Thomas, then we may have found these lines.

603

00:29:58,000 --> 00:30:03,000

Okay, well, I'll take the excavator over there and we'll dig a trench over there.

604

00:30:03,000 --> 00:30:08,000

We'll see you over there, man.

605

00:30:08,000 --> 00:30:12,000

Now that we've intersected the first line, we need to go to the other end of it and do

606

00:30:12,000 --> 00:30:14,000

another cross-section dig.

607

00:30:14,000 --> 00:30:20,000

That way, we can confirm that what we're finding here continues just as the data shows.

608

00:30:20,000 --> 00:30:26,000

As of now, we're all stumped as to what in the heck this stuff could be.

609

00:30:26,000 --> 00:30:31,000

This is as close as I want to get to this tree, so I'm not getting into some heavy roots.

610

00:30:31,000 --> 00:30:32,000

Yeah.

611

00:30:32,000 --> 00:30:35,000

We'll dig it back a ways and see if we can find those same layers.

612

00:30:35,000 --> 00:30:37,000

All right, well, we'll get out of your way, Thomas.

613

00:30:37,000 --> 00:30:38,000

Okay.

614

00:30:39,000 --> 00:30:45,000

They should be all coming in right in here.

615

00:30:45,000 --> 00:30:47,000

Can you see it?

616

00:30:47,000 --> 00:30:48,000

Uh-uh.

617

00:30:48,000 --> 00:30:50,000

Yeah, either.

618

00:30:56,000 --> 00:30:58,000

Yeah, look at that right there.

619

00:30:59,000 --> 00:31:01,000

Hey, Thomas, stop, stop, stop.

620

00:31:01,000 --> 00:31:03,000

You see something?

621

00:31:03,000 --> 00:31:06,000

Yeah, it's a big piece of something.

622

00:31:09,000 --> 00:31:12,000

It's hard for me to believe that's Mother Nature.

623

00:31:15,000 --> 00:31:18,000

It's hard for me to believe that's Mother Nature.

624

00:31:18,000 --> 00:31:20,000

Yeah, but is it that same material?

625

00:31:20,000 --> 00:31:22,000

It doesn't break like the other stuff.

626

00:31:24,000 --> 00:31:26,000

There's a metal post right behind you.

627

00:31:28,000 --> 00:31:29,000

Yep, it's the stuff.

628

00:31:29,000 --> 00:31:30,000

It's the same stuff.

629

00:31:30,000 --> 00:31:31,000

It looks just like it.

630

00:31:31,000 --> 00:31:33,000

That's a good sample.

631

00:31:33,000 --> 00:31:34,000

Real good sample.

632

00:31:34,000 --> 00:31:36,000

I'm going to make sure Eric gets this.

633

00:31:36,000 --> 00:31:40,000

We didn't know what to expect from Pete's multi-spectral data,

634

00:31:40,000 --> 00:31:41,000

but it's pretty amazing.

635

00:31:41,000 --> 00:31:45,000

What in the world are those lines and why are they here?

636

00:31:45,000 --> 00:31:47,000

Sounds like you guys got something.

637

00:31:47,000 --> 00:31:51,000

We can't think of a mundane explanation as why a farmer would dig

638

00:31:51,000 --> 00:31:55,000

five straight lines in a field and put this, you know,

639

00:31:55,000 --> 00:31:58,000

gray, silvery, shiny rock in there.

640

00:31:58,000 --> 00:32:01,000

And there's no, it makes no sense.

641

00:32:01,000 --> 00:32:04,000

That you can only see in the multi-spectrum.

642

00:32:04,000 --> 00:32:05,000

Right.

643

00:32:05,000 --> 00:32:06,000

We would, just think about it.

644

00:32:06,000 --> 00:32:08,000

We would have never even thought about this,

645

00:32:08,000 --> 00:32:12,000

but having that multi-spectral data and we look at it,

646

00:32:12,000 --> 00:32:15,000

we see these lines, we come look for it, we find it,

647

00:32:15,000 --> 00:32:17,000

why is it there?

648

00:32:17,000 --> 00:32:19,000

So I know your wheels are already turning.

649

00:32:19,000 --> 00:32:22,000

Maybe you've got some ideas about what's going on here.

650

00:32:22,000 --> 00:32:23,000

Eric was right.

651

00:32:23,000 --> 00:32:27,000

I was trying to come up with some reason for these straight lines

652

00:32:27,000 --> 00:32:32,000

of crystal-like materials that looked very clearly deposited.

653

00:32:32,000 --> 00:32:33,000

Two thoughts.

654

00:32:33,000 --> 00:32:34,000

Okay.

655

00:32:34,000 --> 00:32:35,000

And both of them are a little bit crazy.

656

00:32:35,000 --> 00:32:38,000

Imagine maybe during the Bigelow era,

657

00:32:38,000 --> 00:32:42,000

they were doing some classified program and they dug straight lines,

658

00:32:42,000 --> 00:32:45,000

put this reflective material in it, then covered it all up

659

00:32:45,000 --> 00:32:49,000

so they could look at it with a classified sensor from space

660

00:32:49,000 --> 00:32:50,000

or high altitude.

661

00:32:50,000 --> 00:32:51,000

Okay.

662

00:32:51,000 --> 00:32:54,000

But that's a stretch to what end, what purpose,

663

00:32:54,000 --> 00:32:56,000

how would you do that, why would you do that,

664

00:32:56,000 --> 00:32:58,000

and the technology wasn't there yet?

665

00:32:58,000 --> 00:33:02,000

The other one is if you were an advanced civilization

666

00:33:02,000 --> 00:33:05,000

and you were marking an area for some reason

667

00:33:05,000 --> 00:33:09,000

and you didn't want the indigenous population to know about it,

668

00:33:09,000 --> 00:33:13,000

you would put it in a way that is in plain sight.

669

00:33:13,000 --> 00:33:17,000

We would have never found it had we not had the multi-spectral technology

670

00:33:17,000 --> 00:33:18,000

to find it there.

671

00:33:18,000 --> 00:33:20,000

And that's how we found it.

672

00:33:20,000 --> 00:33:23,000

Who's to say it's not reflective in some other phenomenology

673

00:33:23,000 --> 00:33:25,000

that's more advanced than the multi-spectral thing?

674

00:33:25,000 --> 00:33:28,000

It might be a bright beacon of five lines out here in the field

675

00:33:28,000 --> 00:33:31,000

that you can see from way up above it.

676

00:33:31,000 --> 00:33:32,000

Yeah.

677

00:33:32,000 --> 00:33:33,000

Right?

678

00:33:33,000 --> 00:33:35,000

Why in this one spot, why convergent right here at this tree?

679

00:33:35,000 --> 00:33:36,000

I find that weird.

680

00:33:36,000 --> 00:33:39,000

These five perfect stripes in this field

681

00:33:39,000 --> 00:33:44,000

make about as much sense to me as that big dome object in the mesa.

682

00:33:44,000 --> 00:33:47,000

I came to Skinwalker Ranch as a skeptic four years ago,

683

00:33:47,000 --> 00:33:50,000

but after seeing more UAPs than I can count

684

00:33:50,000 --> 00:33:53,000

and detecting all kinds of mysterious frequencies,

685

00:33:53,000 --> 00:33:56,000

some of which may be communication signals,

686

00:33:56,000 --> 00:33:58,000

I don't know what to think anymore.

687

00:33:58,000 --> 00:34:00,000

I can't believe this is natural.

688

00:34:00,000 --> 00:34:03,000

If it were natural, it would be all over the ranch.

689

00:34:03,000 --> 00:34:04,000

Yeah, right?

690

00:34:04,000 --> 00:34:05,000

Yeah, yeah.

691

00:34:05,000 --> 00:34:09,000

So it seems fairly obvious that our first order of business here

692

00:34:09,000 --> 00:34:11,000

is to get that off to the university

693

00:34:11,000 --> 00:34:13,000

and have our contacts there do an analysis on it.

694

00:34:13,000 --> 00:34:14,000

All right.

695

00:34:14,000 --> 00:34:15,000

All right, let's go pack it up.

696

00:34:15,000 --> 00:34:16,000

All right.

697

00:34:24,000 --> 00:34:27,000

Hey, you guys.

698

00:34:27,000 --> 00:34:29,000

What are you looking at today?

699

00:34:29,000 --> 00:34:32,000

We're looking at the elemental analysis on some of the samples

700

00:34:32,000 --> 00:34:33,000

that we recently collected.

701

00:34:33,000 --> 00:34:38,000

We sent them off, had them analyzed at the University of Utah.

702

00:34:38,000 --> 00:34:40,000

This is University of Utah geophysics.

703

00:34:40,000 --> 00:34:42,000

After the dig near Homestead 2,

704

00:34:42,000 --> 00:34:46,000

we got the lab results back on the crystal-like samples we dug up there.

705

00:34:46,000 --> 00:34:49,000

So Eric and I couldn't wait to share them with the team.

706

00:34:49,000 --> 00:34:56,000

The interesting thing is, so if you scroll a little bit to the right there, Eric,

707

00:34:56,000 --> 00:35:00,000

so we can see what it's got in it, the abundant materials in it,

708

00:35:00,000 --> 00:35:04,000

are sodium, magnesium.

709

00:35:04,000 --> 00:35:07,000

There's a little bit of scandium, not a lot,

710

00:35:07,000 --> 00:35:10,000

but a lot of calcium and potassium,

711

00:35:10,000 --> 00:35:13,000

and there's a lot of aluminum and iron.

712

00:35:13,000 --> 00:35:16,000

Well, if you remember when we analyzed the drill mud,

713

00:35:16,000 --> 00:35:21,000

it was the same materials, almost to a T with the percentages.

714

00:35:21,000 --> 00:35:26,000

So what we're seeing here is that whatever is inside the mesa where we drilled

715

00:35:26,000 --> 00:35:32,000

is also what these white gray lines are that's out there at the multispectral sensor picked up.

716

00:35:32,000 --> 00:35:35,000

That's the same mud that's inside the mesa.

717

00:35:35,000 --> 00:35:36,000

Interesting.

718

00:35:36,000 --> 00:35:38,000

But in strips?

719

00:35:38,000 --> 00:35:39,000

Yeah.

720

00:35:39,000 --> 00:35:43,000

The mud that's inside the mesa, how did it get out there into the field

721

00:35:43,000 --> 00:35:46,000

in the same place in five lines?

722

00:35:46,000 --> 00:35:49,000

It almost sounds like they were put there.

723

00:35:49,000 --> 00:35:53,000

When we did previous excavation, I didn't notice any gray material,

724

00:35:53,000 --> 00:35:55,000

like in those big pits that we excavated.

725

00:35:55,000 --> 00:35:57,000

We've dug all over it.

726

00:35:57,000 --> 00:36:00,000

The triangle out in the east field, we've dug everywhere.

727

00:36:00,000 --> 00:36:01,000

I've never seen that before.

728

00:36:01,000 --> 00:36:06,000

I'm just thinking of those flat pieces of metal that we brought out of the mesa last year, right?

729

00:36:06,000 --> 00:36:07,000

Right.

730

00:36:07,000 --> 00:36:10,000

Some of those materials could be used for spacecraft.

731

00:36:10,000 --> 00:36:15,000

That is an interesting tie-in because two of the things that are very important

732

00:36:15,000 --> 00:36:21,000

and the materials that came out of the mesa last year, the metal, was aluminum and iron,

733

00:36:21,000 --> 00:36:27,000

which we see in these lines, we see aluminum and iron.

734

00:36:27,000 --> 00:36:33,000

So is this mud somehow a remnant of whatever these metal flakes are?

735

00:36:33,000 --> 00:36:39,000

Did something happen and then some reason or other they come and make lines out of whatever this was

736

00:36:39,000 --> 00:36:43,000

or were the lines there because of whatever it is that's in the mesa?

737

00:36:51,000 --> 00:36:57,000

We have scientifically verified that the strange lines of crystallite materials we uncovered

738

00:36:57,000 --> 00:37:01,000

near the circular anomalies in the field east of Homestead 2

739

00:37:01,000 --> 00:37:06,000

are composed of the same kinds of materials that we pulled out of the mesa.

740

00:37:06,000 --> 00:37:08,000

I don't know if I'm getting through this.

741

00:37:08,000 --> 00:37:14,000

After we ran into whatever this hard object was, that the drill couldn't break through deep inside.

742

00:37:14,000 --> 00:37:17,000

These teeth are all perfectly intact.

743

00:37:17,000 --> 00:37:21,000

It makes me think they have to be directly correlated to one another.

744

00:37:22,000 --> 00:37:25,000

The drill tip mud, there are these similarities.

745

00:37:25,000 --> 00:37:27,000

I mean, look at the highlighted ones.

746

00:37:27,000 --> 00:37:30,000

Look at the color code that Eric used.

747

00:37:30,000 --> 00:37:36,000

The interesting thing about it too is these are actually somewhat conductive materials.

748

00:37:36,000 --> 00:37:43,000

So what we're seeing here is you've got the sodium, the magnesium, the aluminum, the potassium, the calcium, the iron.

749

00:37:43,000 --> 00:37:46,000

All of those are very good at conducting electricity.

750

00:37:46,000 --> 00:37:52,000

But I guess that begs the question, what in the world are those lines for?

751

00:37:53,000 --> 00:38:00,000

From the multispectral data, you've got the five lines diverging on one end, converging to a point down by the tree behind Homestead.

752

00:38:00,000 --> 00:38:07,000

Then out here there's a circle, and then the mesa is right there where that GPR anomaly is, right?

753

00:38:07,000 --> 00:38:11,000

It almost looks, when you look at it from the top, like a circuit board.

754

00:38:11,000 --> 00:38:16,000

Like it's an electric circuit built in the surface of the ranch to do something.

755

00:38:16,000 --> 00:38:18,000

To what? I don't know.

756

00:38:19,000 --> 00:38:21,000

What the hell's a circuit doing out in the middle of the field?

757

00:38:21,000 --> 00:38:22,000

Yeah.

758

00:38:23,000 --> 00:38:25,000

Well, it makes you wonder to what end.

759

00:38:25,000 --> 00:38:32,000

If, say, it's like an electrical circuit of some sort, is this like electrical field lines that you can measure with other equipment?

760

00:38:32,000 --> 00:38:37,000

And the multispectral thing is just a side effect that it had on the vegetation and we're able to see it now?

761

00:38:37,000 --> 00:38:40,000

Or was it intended that way from the start?

762

00:38:41,000 --> 00:38:45,000

Walking out there, I wouldn't have known there's anything there. I wouldn't have suspected it.

763

00:38:45,000 --> 00:38:46,000

Perfectly hidden.

764

00:38:46,000 --> 00:38:54,000

Yeah. Only people with the advanced technology that we've discovered within the last handful of years could see those lines and even know that they're not there.

765

00:38:55,000 --> 00:39:01,000

Or they are ancient enough that maybe they were on top of the ground at some point, but that still begs the question.

766

00:39:01,000 --> 00:39:03,000

What were they leading to and what were they pointing out?

767

00:39:03,000 --> 00:39:09,000

So we've talked about two interpretations. One of them being that it's a marking, it's an indicator.

768

00:39:09,000 --> 00:39:13,000

And the other one that I find really interesting is that it is somehow functional.

769

00:39:13,000 --> 00:39:17,000

Yeah. Where would it be coming from and what's it going to? That's the question.

770

00:39:17,000 --> 00:39:26,000

And the discussion is not complete without reminding ourselves here that we are not far from the location where we were told not to dig.

771

00:39:26,000 --> 00:39:36,000

There may be something of exotic origin buried underneath the field. We know that it has an interesting elemental composition.

772

00:39:36,000 --> 00:39:43,000

Yes. Similar to only one other place we found it on the ranch and that's inside the mesa by a GPR enamel.

773

00:39:43,000 --> 00:39:47,000

I don't know what this thing is and how it got there. I think it's a mystery we need to get to the bottom of.

774

00:39:47,000 --> 00:39:52,000

At this point it makes sense to just leave it as it is, don't change anything.

775

00:39:52,000 --> 00:39:55,000

If we study it, do it noninvasively, we don't know what it is.

776

00:39:55,000 --> 00:39:58,000

Yeah. But we need to see what's underneath the entire ranch.

777

00:39:58,000 --> 00:39:59,000

I agree.

778

00:39:59,000 --> 00:40:01,000

Some more studies, uh, meritage here.

779

00:40:01,000 --> 00:40:04,000

Yeah. I agree. Measurements too. Yeah. Thanks, guys.

780

00:40:05,000 --> 00:40:09,000

I'm really surprised and curious as to what has created these lines.

781

00:40:09,000 --> 00:40:14,000

Could it be an old structure that's underground? Could it be an old pathway?

782

00:40:14,000 --> 00:40:20,000

I mean, we're right here close to Homestead 2 as well as the drill site. Are they connected somehow?

783

00:40:20,000 --> 00:40:24,000

But I hope it's something important and I'm anxious to find out.

784

00:40:24,000 --> 00:40:30,000

This is becoming an even more puzzling area of the ranch. I did not expect these results.

785

00:40:30,000 --> 00:40:36,000

Looking at the material composition, I'm beginning to think that there's something far more interesting here.

786

00:40:37,000 --> 00:40:42,000

I can't help but wonder whether we are in fact dealing with something technological.

787

00:40:42,000 --> 00:40:44,000

We have to continue searching.

788

00:40:44,000 --> 00:40:55,000

These lines are absolutely bizarre and we really need to dig into what they are and if it can help us with our investigation.

789

00:40:55,000 --> 00:41:02,000

We are dealing with forces that are powerful and yet to be explained or understood.

790

00:41:02,000 --> 00:41:18,000

It has been exciting to see this team pull together and expand the scope of the investigation to

include so many topics that really haven't been addressed at Skinwalker Ranch.

791

00:41:22,000 --> 00:41:26,000

We'll be flying a weather balloon with low frequency radar.

792

00:41:26,000 --> 00:41:29,000

We're seeing all these strange things going out of the way.

793

00:41:29,000 --> 00:41:34,000

There's a phenomena that the instruments are passing through. I mean, what the hell is up there?

794

00:41:34,000 --> 00:41:39,000

So we have something that's got a heat signature. What could be down there?

795

00:41:40,000 --> 00:41:42,000

There's a big plane that just flew over us.

796

00:41:42,000 --> 00:41:43,000

Traffic.

797

00:41:43,000 --> 00:41:45,000

This aircraft is not transponding.

798

00:41:46,000 --> 00:41:47,000

We're being surveilled.
