

1

00:00:00,000 --> 00:00:02,000

It's hitting something really hard.

2

00:00:02,000 --> 00:00:05,000

What could be hard enough to be pushing back on that?

3

00:00:05,000 --> 00:00:08,000

There is something in the mesa right there.

4

00:00:08,000 --> 00:00:11,000

Whatever this is, is as tall as the mesa.

5

00:00:11,000 --> 00:00:14,000

Whoa, what was that purple light over there?

6

00:00:14,000 --> 00:00:16,000

Looks like a deer.

7

00:00:16,000 --> 00:00:19,000

Look at this. What the heck would have burned this post?

8

00:00:19,000 --> 00:00:23,000

You've got the five lines to virgin to a point down by the tree behind Homestead,

9

00:00:23,000 --> 00:00:27,000

and then the mesa is right there where that GPR anomaly is.

10

00:00:27,000 --> 00:00:30,000

We need to see what's underneath the entire ranch.

11

00:00:31,000 --> 00:00:35,000

There is a ranch in northern Utah.

12

00:00:35,000 --> 00:00:42,000

It is considered the epicenter of the strangest and most disturbing phenomena on Earth.

13

00:00:42,000 --> 00:00:47,000

Animal mutilations, bizarre UFO sightings,

14

00:00:47,000 --> 00:00:52,000

and unusual energies that have proven harmful to humans.

15

00:00:52,000 --> 00:00:58,000

For 20 years, the federal government tried to find answers and failed.

16

00:00:58,000 --> 00:01:06,000

Now, a new team of dedicated scientists, researchers, and experts has taken over.

17

00:01:06,000 --> 00:01:16,000

They are determined to solve the mystery and reveal the secret of Skinwalker Ranch.

18

00:01:22,000 --> 00:01:27,000

I think we're just about past the second rock.

19

00:01:34,000 --> 00:01:36,000

Hey, Thomas.

20

00:01:36,000 --> 00:01:38,000

Yeah, go ahead.

21

00:01:38,000 --> 00:01:40,000

I'm about 20 feet in with the drill.

22

00:01:40,000 --> 00:01:43,000

It's going to take a lot more time to reach the anomaly.

23

00:01:43,000 --> 00:01:45,000

Copy that.

24

00:01:45,000 --> 00:01:51,000

For two weeks now, our drill operator, Joe Loeb, has been trying to reach the 120-foot tall,

25

00:01:51,000 --> 00:01:56,000

possibly metallic anomaly, that we detected about 40 feet below the top of the mesa.

26

00:01:56,000 --> 00:02:02,000

And since it's right next to the massive dome-shaped anomaly that a much larger drill rig couldn't penetrate,

27

00:02:02,000 --> 00:02:05,000

we're hoping that Joe can help us determine just what's inside there.

28

00:02:05,000 --> 00:02:07,000

Keep it running.

29

00:02:07,000 --> 00:02:09,000

We'll check in with you a little bit later.

30

00:02:09,000 --> 00:02:10,000

Sounds good.

31

00:02:10,000 --> 00:02:14,000

While Joe Loeb continued the drilling operation on top of the mesa,

32

00:02:14,000 --> 00:02:17,000

your guests are here, Eric.

33

00:02:17,000 --> 00:02:24,000

Eric Barton and the other guys from the team were meeting with physicist Jeremiah Paite and his colleagues from Luna Sun.

34

00:02:24,000 --> 00:02:27,000

Well, Jeremiah, it's been a long time in the making.

35

00:02:27,000 --> 00:02:30,000

Yeah, great to finally be here in person.

36

00:02:30,000 --> 00:02:36,000

With all the anomalies that we've detected inside the mesa, under Homestead 2, and in the air above the triangle,

37

00:02:36,000 --> 00:02:42,000

Eric hoped that the specialized aerial technology that Jeremiah invented could scan those areas

38

00:02:42,000 --> 00:02:49,000

and reveal some answers above and below ground about all the UAPs, the energy spikes,

39

00:02:49,000 --> 00:02:54,000

and the other phenomena that we keep experiencing here on Skinwalker Ranch.

40

00:02:54,000 --> 00:02:56,000

So tell me how this is going to work.

41

00:02:56,000 --> 00:03:00,000

It's a very versatile technology, but essentially it's a low-frequency radar.

42

00:03:00,000 --> 00:03:03,000

Today we'll be flying on a weather balloon.

43

00:03:03,000 --> 00:03:10,000

It's actually going to take it up to about twice as high as a jetliner, over 70,000 feet above the ranch,

44

00:03:10,000 --> 00:03:16,000

and actually let us see potentially kilometers beneath the surface.

45

00:03:16,000 --> 00:03:19,000

Did you say kilometers under the earth?

46

00:03:19,000 --> 00:03:20,000

Absolutely.

47

00:03:20,000 --> 00:03:22,000

It's a long ways down.

48

00:03:22,000 --> 00:03:26,000

All of our sensors are attached to a large meteorological balloon.

49

00:03:26,000 --> 00:03:29,000

This takes a long time to get to the surface.

50

00:03:29,000 --> 00:03:33,000

Our sensors are attached to a large meteorological balloon.

51

00:03:33,000 --> 00:03:37,000

This takes it up to its final altitude of around 70,000 feet.

52

00:03:37,000 --> 00:03:45,000

Our technology works by using low-frequency radio waves to actually see deeper into the planet than anyone ever has before.

53

00:03:45,000 --> 00:03:50,000

Ultimately what we'll see is actually what's known as a tomographic image.

54

00:03:50,000 --> 00:03:54,000

This is a true 3D map of the subsurface.

55

00:03:54,000 --> 00:03:56,000

This is incredible.

56

00:03:56,000 --> 00:04:04,000

In the last years, decades, there's been rumors on this property of underground bases, tunnel systems.

57

00:04:04,000 --> 00:04:09,000

Maybe we can put some of these rumors to bed, or maybe validate them. Who knows?

58

00:04:09,000 --> 00:04:13,000

Exactly. We want to peel back just a little bit of the mystery today.

59

00:04:13,000 --> 00:04:17,000

I think the triangle will be a good dry, flat area that we can stage from.

60

00:04:17,000 --> 00:04:21,000

Plus, you know, this is an area that's been of great interest to us.

61

00:04:21,000 --> 00:04:22,000

Definitely.

62

00:04:22,000 --> 00:04:31,000

At the triangle, it seems as though there is something in the air at varying heights that we can't see with our eyes,

63

00:04:31,000 --> 00:04:33,000

but seems to show up on equipment.

64

00:04:33,000 --> 00:04:36,000

So I know that you're looking to see what's underground here.

65

00:04:36,000 --> 00:04:39,000

Would it be able to pick something up, say, in the air as well?

66

00:04:39,000 --> 00:04:45,000

Definitely. So the way these sensors work is they measure both the far field and the near field.

67

00:04:45,000 --> 00:04:50,000

We'll actually be able to measure the air column directly above the triangle as we ascend.

68

00:04:50,000 --> 00:04:52,000

Well, there's our reason for putting it in the triangle.

69

00:04:52,000 --> 00:04:57,000

Absolutely. We've had some strange things happen in that particular area.

70

00:04:57,000 --> 00:05:02,000

This area above the triangle has high strangeness to it.

71

00:05:02,000 --> 00:05:06,000

We've seen rockets try to go through this area and explode.

72

00:05:06,000 --> 00:05:10,000

Three, two, one.

73

00:05:10,000 --> 00:05:13,000

Uh-oh. That motor blew.

74

00:05:13,000 --> 00:05:16,000

It exploded. Oh, no.

75

00:05:16,000 --> 00:05:23,000

There is something in the air above the triangle on Skinwalker Ranch that's causing all sorts of strangeness to happen.

76

00:05:23,000 --> 00:05:29,000

Oh, we got him out of function. Everybody watch out.

77

00:05:29,000 --> 00:05:34,000

But why? We're trying to find answers to what's going on here.

78

00:05:34,000 --> 00:05:38,000

If you want to follow me out, I'll lead you out to the area where we can get you set up.

79

00:05:38,000 --> 00:05:40,000

Sounds great.

80

00:05:41,000 --> 00:05:50,000

I have high expectations about what we may be able to detect with this lunason technology.

81

00:05:50,000 --> 00:05:58,000

Well, antenna one is the B field antenna, which is that guy there.

82

00:05:58,000 --> 00:06:04,000

I'm hoping that we'll be able to see if in fact we have any interesting structures beneath Skinwalker Ranch,

83

00:06:04,000 --> 00:06:09,000

or even metal deposits in the Mesa, and perhaps an answer to the anomaly just above the triangle.

84

00:06:09,000 --> 00:06:12,000

I really don't know what to expect.

85

00:06:12,000 --> 00:06:15,000

Okay, balloons ready for the fill.

86

00:06:15,000 --> 00:06:17,000

Beginning fill.

87

00:06:20,000 --> 00:06:24,000

So each of these payloads you see here, they each have a very particular function.

88

00:06:24,000 --> 00:06:25,000

Okay.

89

00:06:25,000 --> 00:06:30,000

So up here we have a couple payloads that are involved in the actual tracking of the overall balloon setup.

90

00:06:30,000 --> 00:06:37,000

Down here, this is another setup. So this actually is a camera setup as well as some other tracking equipment.

91

00:06:37,000 --> 00:06:38,000

Wow.

92

00:06:38,000 --> 00:06:44,000

Each payload has a specified function, and so our actual experimental sensors,

93

00:06:44,000 --> 00:06:47,000

each of them measures a different part of the electromagnetic field.

94

00:06:47,000 --> 00:06:52,000

We have several cameras on board that actually will record the flight.

95

00:06:54,000 --> 00:06:56,000

Wow, look at that.

96

00:06:58,000 --> 00:07:00,000

Are we getting close to launch?

97

00:07:00,000 --> 00:07:02,000

Yep, balloon's almost ready to go.

98

00:07:02,000 --> 00:07:03,000

Perfect.

99

00:07:03,000 --> 00:07:05,000

I need to get back to the control room.

100

00:07:05,000 --> 00:07:08,000

I want to keep our assets trained on your payloads.

101

00:07:08,000 --> 00:07:09,000

Absolutely.

102

00:07:11,000 --> 00:07:17,000

As we near launch, I'm heading back to the command center so I can train some of our surveillance

cameras on the sky

103

00:07:17,000 --> 00:07:23,000

and watch that balloon as it ascends, and observe whether there is any strange interference on the way up.

104

00:07:23,000 --> 00:07:26,000

Okay, we're releasing the balloon.

105

00:07:26,000 --> 00:07:27,000

Very careful.

106

00:07:27,000 --> 00:07:28,000

Hey, Eric.

107

00:07:28,000 --> 00:07:30,000

Just giving you a heads up.

108

00:07:30,000 --> 00:07:35,000

We've started to deploy the balloon and slowly letting up all the payloads.

109

00:07:35,000 --> 00:07:37,000

Copy you, I can see it ascending.

110

00:07:38,000 --> 00:07:40,000

Fantastic.

111

00:07:40,000 --> 00:07:42,000

Okay, I think we're good.

112

00:07:42,000 --> 00:07:43,000

Go for launch.

113

00:07:47,000 --> 00:07:48,000

Off it goes.

114

00:07:49,000 --> 00:07:51,000

That is a heck of a payload.

115

00:07:52,000 --> 00:07:53,000

Wow.

116

00:07:54,000 --> 00:07:59,000

Now those payloads are recording, and we'll start the tracking effort.

117

00:08:00,000 --> 00:08:06,000

The Lunasan team will remotely control the balloon as it ascends to about 70,000 feet high

118

00:08:06,000 --> 00:08:14,000

and scans the skies and the grounds of the entire ranch, with a specific focus on the triangle, the mesa, and homestead 2.

119

00:08:14,000 --> 00:08:15,000

Fantastic.

120

00:08:16,000 --> 00:08:22,000

Once the survey is complete, Jeremiah will remotely deflate the balloon and retrieve it along with his devices.

121

00:08:22,000 --> 00:08:29,000

It could take days or even weeks to get the aerial and underground data fully processed,

122

00:08:29,000 --> 00:08:35,000

but hopefully this will get us the best data yet of not only what could be causing anomalies above the ranch,

123

00:08:35,000 --> 00:08:39,000

but also underground and in the mesa as well.

124

00:08:40,000 --> 00:08:41,000

I'm impressed.

125

00:08:42,000 --> 00:08:46,000

Hopefully the data that comes back is as impressive as getting that thing in the air.

126

00:08:55,000 --> 00:08:56,000

Hey, Brent.

127

00:08:56,000 --> 00:08:57,000

Hey, man.

128

00:08:57,000 --> 00:08:58,000

Hey, guys.

129

00:08:58,000 --> 00:09:01,000

Did you just see how the Lunasan conducted the aerial survey of the entire ranch?

130

00:09:01,000 --> 00:09:03,000

This is a really good friend of mine, Corey Reed.

131

00:09:03,000 --> 00:09:04,000

Hey, Corey.

132

00:09:04,000 --> 00:09:05,000

How you doing?

133

00:09:05,000 --> 00:09:13,000

Tom Lewis and Candace Lindy met outside the command center with Dragon, along with Caleb Bench and his colleague, local deputy sheriff Corey Reed.

134

00:09:13,000 --> 00:09:19,000

I worked with Corey through law enforcement, and he actually investigated some things over here on the west side of the ranch.

135

00:09:19,000 --> 00:09:21,000

And this happened how long ago this happened.

136

00:09:21,000 --> 00:09:24,000

It was in the early 2000s when this happened.

137

00:09:24,000 --> 00:09:25,000

Okay.

138

00:09:25,000 --> 00:09:27,000

I was with the Tribal Fish and Game at the time.

139

00:09:27,000 --> 00:09:30,000

It's on the neighbor's property, but you can see it from your property.

140

00:09:30,000 --> 00:09:35,000

Okay, so it's on the west side Tribal property, but we can see it through the fence on from our side.

141

00:09:35,000 --> 00:09:36,000

Correct.

142

00:09:36,000 --> 00:09:39,000

Corey also happens to be a member of the indigenous youth nation.

143

00:09:39,000 --> 00:09:44,000

So given their well-known aversion to speaking about Skinwalker Ranch or even coming near the place,

144

00:09:44,000 --> 00:09:50,000

we were really eager to hear what he investigated and found in this area as an officer of the law.

145

00:09:50,000 --> 00:09:52,000

Yeah, well, let's get out there.

146

00:09:52,000 --> 00:09:53,000

All right.

147

00:09:53,000 --> 00:09:54,000

Yeah, we'll follow you down.

148

00:09:57,000 --> 00:10:01,000

I worked for the tribe as a conservation officer for 13 years,

149

00:10:01,000 --> 00:10:05,000

and that's when I had the experiences out here around on the west side of the Skinwalker Ranch.

150

00:10:10,000 --> 00:10:12,000

It's looking familiar to you, Corey?

151

00:10:12,000 --> 00:10:13,000

Yep.

152

00:10:13,000 --> 00:10:15,000

That's the spot right there.

153

00:10:16,000 --> 00:10:17,000

Okay.

154

00:10:20,000 --> 00:10:24,000

The owner of the property reported they had two horses that were dead.

155

00:10:24,000 --> 00:10:25,000

They were dead for about a couple of days.

156

00:10:25,000 --> 00:10:26,000

Okay.

157

00:10:26,000 --> 00:10:28,000

And then they were in this spot by the posts.

158

00:10:28,000 --> 00:10:30,000

Were they mature horses?

159

00:10:30,000 --> 00:10:32,000

They were.

160

00:10:32,000 --> 00:10:35,000

One horse was kind of right in the center of all three posts.

161

00:10:35,000 --> 00:10:38,000

The other one was on the southeast corner.

162

00:10:40,000 --> 00:10:42,000

They were cleaned out from the inside.

163

00:10:44,000 --> 00:10:47,000

There was no tissue, no organs or nothing like that on them.

164

00:10:47,000 --> 00:10:48,000

Crazy.

165

00:10:48,000 --> 00:10:49,000

Mmm.

166

00:10:49,000 --> 00:10:51,000

It's interesting.

167

00:10:51,000 --> 00:10:55,000

There was just some strange footprints in the ground that were around it.

168

00:10:55,000 --> 00:10:57,000

What kind of footprints?

169

00:10:57,000 --> 00:11:00,000

We found some that had three toes on them.

170

00:11:01,000 --> 00:11:03,000

And they were big.

171

00:11:03,000 --> 00:11:05,000

They're about six inches.

172

00:11:07,000 --> 00:11:10,000

Whatever it is, nothing that we know of that can make prints like that.

173

00:11:10,000 --> 00:11:11,000

Right.

174

00:11:13,000 --> 00:11:15,000

That's creepy.

175

00:11:25,000 --> 00:11:27,000

I'm just gonna put my hands right there, just putting it down.

176

00:11:27,000 --> 00:11:29,000

But they were all equal sized toes.

177

00:11:30,000 --> 00:11:32,000

So there were like three digits off of one foot?

178

00:11:32,000 --> 00:11:33,000

Off of one foot.

179

00:11:33,000 --> 00:11:35,000

And they were big?

180

00:11:35,000 --> 00:11:36,000

They were about six inches.

181

00:11:36,000 --> 00:11:37,000

Wow.

182

00:11:37,000 --> 00:11:42,000

Bizarre animal mutilations have been reported on Skinwalker Ranch for decades.

183

00:11:42,000 --> 00:11:45,000

We've seen cows mysteriously die out here ourselves.

184

00:11:45,000 --> 00:11:47,000

What in the world?

185

00:11:47,000 --> 00:11:52,000

And just in the last couple of weeks, we've found two mutilated deer carcasses in the south field

186

00:11:52,000 --> 00:11:55,000

next to a strangely burned fence post.

187

00:11:55,000 --> 00:11:57,000

What the heck would have burned this post?

188

00:11:58,000 --> 00:12:03,000

And that was also where we recently documented two UAPs during nighttime experiments.

189

00:12:04,000 --> 00:12:07,000

And then another one in broad daylight.

190

00:12:07,000 --> 00:12:08,000

What?

191

00:12:08,000 --> 00:12:12,000

I don't know what to think about the strange footprints that Deputy Sheriff Reed reported,

192

00:12:12,000 --> 00:12:17,000

but given what other investigators and our own team have seen out here,

193

00:12:17,000 --> 00:12:21,000

we need to keep investigating everywhere, from the Mesa to the south field,

194

00:12:21,000 --> 00:12:25,000

in order to find out the truth of what's causing all these phenomena to happen.

195

00:12:26,000 --> 00:12:29,000

We're both shaking our heads when we laugh because we didn't know what happened.

196

00:12:29,000 --> 00:12:32,000

Do you have photos or the report or anything like that?

197

00:12:32,000 --> 00:12:35,000

So I did the report, printed off all the pictures.

198

00:12:36,000 --> 00:12:40,000

Went back a few months later, I could not find my report or the pictures.

199

00:12:40,000 --> 00:12:42,000

Someone didn't want anyone to know about this.

200

00:12:42,000 --> 00:12:43,000

Could be.

201

00:12:44,000 --> 00:12:49,000

I've heard stories like that where someone has pictures or they haven't experienced like that

202

00:12:49,000 --> 00:12:54,000

and they get video or something and they talk to someone above them

203

00:12:54,000 --> 00:12:56,000

and they're told to get rid of it.

204

00:12:56,000 --> 00:12:58,000

I've heard the exact same thing.

205

00:12:59,000 --> 00:13:01,000

I could tell it was uncomfortable for Cory to tell these stories,

206

00:13:01,000 --> 00:13:05,000

but we really appreciate these individuals coming forward with these,

207

00:13:05,000 --> 00:13:10,000

what seem like outlandish tales, but I can tell he believes it and he experienced it.

208

00:13:10,000 --> 00:13:13,000

We appreciate so much. You're willing to just come out and talk about this different kind of stuff,

209

00:13:13,000 --> 00:13:16,000

because I know it's not comfortable and it's not easy.

210

00:13:16,000 --> 00:13:17,000

It's not.

211

00:13:17,000 --> 00:13:19,000

So thank you a lot. Appreciate it very much.

212

00:13:19,000 --> 00:13:21,000

You're welcome. Thanks for having me.

213

00:13:21,000 --> 00:13:22,000

Cool.

214

00:13:32,000 --> 00:13:33,000

How's it going guys?

215

00:13:33,000 --> 00:13:34,000

There's a lot of equipment.

216

00:13:34,000 --> 00:13:37,000

He's ready to roll. He's got some really cool stuff here.

217

00:13:37,000 --> 00:13:42,000

A couple of nights later, while we were waiting for the data results from the Lunisan Ranch Survey,

218

00:13:42,000 --> 00:13:47,000

we invited technologist David Mason and local fire management officer Don Mitchell

219

00:13:47,000 --> 00:13:51,000

back out to help us with a pretty ambitious experiment we wanted to conduct

220

00:13:51,000 --> 00:13:54,000

between the Triangle and the South Field.

221

00:13:54,000 --> 00:13:58,000

Because we've documented so many phenomena this year between the Triangle,

222

00:13:58,000 --> 00:14:02,000

where we saw the blob-like anomaly, Homestead 2,

223

00:14:02,000 --> 00:14:06,000

where we uncovered lines of strange materials similar to what we found in the Mesa,

224

00:14:06,000 --> 00:14:12,000

and the South Field, where we've seen numerous UAPs and found mutilated deer carcasses.

225

00:14:12,000 --> 00:14:16,000

We're hoping we can stimulate more strange things to appear,

226

00:14:16,000 --> 00:14:19,000

but this time, identify just what they are.

227

00:14:19,000 --> 00:14:25,000

So what I've done is I've brought eight thermal imaging cameras and two of them are high resolution.

228

00:14:25,000 --> 00:14:30,000

So if anything anomalous appears, just a slight temperature change, we'll be able to see it.

229

00:14:30,000 --> 00:14:34,000

Much more clearly than just using conventional thermal camera technology.

230

00:14:34,000 --> 00:14:35,000

That is cool.

231

00:14:35,000 --> 00:14:39,000

Awesome. So if it's got a thermal signature, we're going to get it.

232

00:14:39,000 --> 00:14:42,000

Well, we've got the truck loaded up, the rockets are ready to go,

233

00:14:42,000 --> 00:14:45,000

we're going to head out to the Triangle and get ready for the first launch,

234

00:14:45,000 --> 00:14:47,000

and we'll give you a call when we get out there.

235

00:14:47,000 --> 00:14:50,000

Okay, great. Sounds good. Good luck. Good hunting.

236

00:14:50,000 --> 00:14:54,000

Caleb and I have converted a truck into a mobile rocket and mortar launcher.

237

00:14:54,000 --> 00:14:59,000

We're going to fire off payloads reaching more than 100 feet in the air starting at the Triangle.

238

00:14:59,000 --> 00:15:06,000

Meanwhile, David, Mason, Eric and the guys will observe everything using eight thermal cameras.

239

00:15:06,000 --> 00:15:12,000

They'll be able to detect anything that might suddenly change in temperature and that we can't see with the naked eye.

240

00:15:12,000 --> 00:15:18,000

Depending on what happens after our launch is at the Triangle, we'll move to the south field and repeat the experiment there.

241

00:15:18,000 --> 00:15:20,000

I'm there pretty good.

242

00:15:20,000 --> 00:15:22,000

Oh, it's ratchets trapped in it. It ain't going nowhere.

243

00:15:22,000 --> 00:15:28,000

Since we're still waiting for the aerial and underground data results from Lunason's balloon experiment,

244

00:15:28,000 --> 00:15:34,000

we're really hoping that tonight we can get the blob, more UAPs, or who knows what to appear

245

00:15:34,000 --> 00:15:40,000

and help us identify what these phenomena are and why they keep occurring on Skinwalker Ranch.

246

00:15:40,000 --> 00:15:49,000

All right. This will be right dead center of the Triangle, right under where the rocket blew up.

247

00:15:49,000 --> 00:15:50,000

Right where the big one blew up.

248

00:15:50,000 --> 00:15:52,000

Yeah, right where the big rocket blew up last year.

249

00:15:53,000 --> 00:15:57,000

All right. This is good to go here.

250

00:15:57,000 --> 00:16:00,000

All right. We're going to do both launch and mortar.

251

00:16:00,000 --> 00:16:01,000

Yeah.

252

00:16:01,000 --> 00:16:05,000

So I'll get on this side and launch. If you get on that side and fire off the mortars.

253

00:16:05,000 --> 00:16:06,000

Yeah.

254

00:16:06,000 --> 00:16:07,000

That make sense?

255

00:16:07,000 --> 00:16:08,000

Complete.

256

00:16:08,000 --> 00:16:09,000

Eric, copy.

257

00:16:09,000 --> 00:16:10,000

Yeah, go ahead, Travis.

258

00:16:10,000 --> 00:16:16,000

Yeah, man, we're ready to launch and knock it and we're going to fire mortars at the same time.

259

00:16:16,000 --> 00:16:23,000

Okay. Stand by. I'm going to turn on the 1.6 gigahertz sweep and I'll give you the word.

260

00:16:23,000 --> 00:16:34,000

Over the years we've encountered this signal near 1.6 gigahertz, I'm still trying to sort out how that signal is related to the ranch phenomenon.

261

00:16:34,000 --> 00:16:38,000

As if the rockets that we're going to be launching are not stimulus enough.

262

00:16:38,000 --> 00:16:47,000

We will be broadcasting a sweep of signals around that 1.6 gigahertz range that has drawn our interest in the past.

263

00:16:47,000 --> 00:16:51,000

All right, Travis, we are broadcasting the 1.6 gigahertz sweep.

264

00:16:51,000 --> 00:16:56,000

We've got eyes in every direction and at every available wavelength.

265

00:16:56,000 --> 00:16:58,000

All right, then we're good to go.

266

00:16:58,000 --> 00:16:59,000

You ready to go, Dave?

267

00:16:59,000 --> 00:17:00,000

I'm ready to go.

268

00:17:00,000 --> 00:17:01,000

Okay.

269

00:17:01,000 --> 00:17:02,000

Go ahead and launch.

270

00:17:03,000 --> 00:17:06,000

Rocket is hot. Mortars are ready.

271

00:17:06,000 --> 00:17:13,000

In five, four, three, two, one.

272

00:17:16,000 --> 00:17:18,000

Yeah, they're going to run into each other.

273

00:17:18,000 --> 00:17:19,000

Well, that one just hit.

274

00:17:19,000 --> 00:17:20,000

Yeah.

275

00:17:21,000 --> 00:17:23,000

That rocket flew right into that mortar.

276

00:17:23,000 --> 00:17:25,000

How did that happen?

277

00:17:25,000 --> 00:17:26,000

Oh, wow.

278

00:17:27,000 --> 00:17:28,000

That's crazy.

279

00:17:28,000 --> 00:17:30,000

I don't know how to explain that.

280

00:17:30,000 --> 00:17:32,000

Well, it's falling pretty fast.

281

00:17:32,000 --> 00:17:33,000

That's not good.

282

00:17:33,000 --> 00:17:34,000

Oh, wow.

283

00:17:37,000 --> 00:17:39,000

Did you guys see that, too?

284

00:17:39,000 --> 00:17:40,000

I got it on camera.

285

00:17:40,000 --> 00:17:42,000

Yeah, Thomas had eyes on that.

286

00:17:42,000 --> 00:17:46,000

The mortar went off right about that 31 foot mark.

287

00:17:46,000 --> 00:17:51,000

It looked like the mortar went off as the rocket was flying through it.

288

00:17:51,000 --> 00:17:55,000

Right after we launched, we saw a rocket that was flying through it.

289

00:17:55,000 --> 00:17:59,000

Right after we launched a rocket and a mortar to stimulate the blob anomaly,

290

00:17:59,000 --> 00:18:01,000

31 feet above the triangle,

291

00:18:01,000 --> 00:18:07,000

something clearly made the mortar explode prematurely and the rocket break into pieces.

292

00:18:07,000 --> 00:18:11,000

And it looked like it happened exactly at that 31 foot level.

293

00:18:11,000 --> 00:18:13,000

The odds of that happening are crazy.

294

00:18:13,000 --> 00:18:15,000

We couldn't be sure what it was,

295

00:18:15,000 --> 00:18:20,000

so I wanted to immediately launch a series of mortars directly through that 31 foot zone

296

00:18:20,000 --> 00:18:25,000

to see if they would hit something or make something clearly appear for David's thermal cameras.

297

00:18:25,000 --> 00:18:27,000

Hey, Eric, you copy?

298

00:18:27,000 --> 00:18:28,000

Yeah, go ahead.

299

00:18:28,000 --> 00:18:31,000

We've got a, uh, in-sign here.

300

00:18:31,000 --> 00:18:36,000

We've got mounted on top of the launch tower, and we're gonna fire it.

301

00:18:36,000 --> 00:18:38,000

And we're ready if you guys are.

302

00:18:38,000 --> 00:18:40,000

Ready to go ahead with the launch.

303

00:18:40,000 --> 00:18:42,000

All right, here we go.

304

00:18:43,000 --> 00:18:45,000

That's the best, right height.

305

00:18:50,000 --> 00:18:52,000

Yeah, that's gotta be the right height.

306

00:18:54,000 --> 00:18:56,000

There's something right there.

307

00:18:59,000 --> 00:19:03,000

Travis, we're examining a feature in Dave's differential FLIR camera.

308

00:19:03,000 --> 00:19:08,000

This remarkable differential thermal camera forms an image.

309

00:19:08,000 --> 00:19:11,000

We get a color that corresponds to the temperature.

310

00:19:11,000 --> 00:19:16,000

If anything should come out as warmer, it will become bright, yellow, or even white.

311

00:19:16,000 --> 00:19:22,000

What we're seeing here in the thermal is an anomaly that shows up warmer than the surrounding area.

312

00:19:22,000 --> 00:19:24,000

This is very interesting to me.

313

00:19:24,000 --> 00:19:26,000

Where's the feature?

314

00:19:26,000 --> 00:19:29,000

This would be to the southwest of your position.

315

00:19:29,000 --> 00:19:32,000

So it'd be over that way.

316

00:19:32,000 --> 00:19:35,000

We've been watching this thing evolve for a while.

317

00:19:35,000 --> 00:19:37,000

But it just doesn't make a lot of sense to us.

318

00:19:37,000 --> 00:19:41,000

When Eric and Thomas said they could actually see some kind of anomaly

319

00:19:41,000 --> 00:19:44,000

between the south field and the triangle through David's thermal camera,

320

00:19:44,000 --> 00:19:48,000

I immediately looked through a night vision scope to see if I could spot it too.

321

00:19:48,000 --> 00:19:52,000

Yeah, I'm not seeing it right now. Keep looking.

322

00:19:52,000 --> 00:19:55,000

Yeah, it's kind of a hard shape too.

323

00:19:55,000 --> 00:20:01,000

Since I couldn't see through my night vision camera what David's thermal camera was imaging,

324

00:20:01,000 --> 00:20:05,000

I thought it might be something out of the ordinary.

325

00:20:05,000 --> 00:20:07,000

Hey Eric, you guys copy?

326

00:20:07,000 --> 00:20:09,000

Yes, we do Travis. Go ahead.

327

00:20:09,000 --> 00:20:14,000

I think we're going to drive down to the southeast corner of the ranch

328

00:20:14,000 --> 00:20:18,000

and launch this last rocket almost due north toward the helicopter pad.

329

00:20:18,000 --> 00:20:22,000

See if we can bring it down somewhere in the east field here.

330

00:20:22,000 --> 00:20:24,000

Copy that.

331

00:20:24,000 --> 00:20:26,000

We'll reposition cameras.

332

00:20:26,000 --> 00:20:29,000

All right, talking a bit.

333

00:20:29,000 --> 00:20:34,000

I really wanted to know if we may have stimulated another blob anomaly in the sky

334

00:20:34,000 --> 00:20:37,000

between the triangle and the south field.

335

00:20:37,000 --> 00:20:40,000

So we needed to head closer to that location and conduct more launches

336

00:20:40,000 --> 00:20:45,000

to see if we could get it to reappear and verify what it was.

337

00:20:45,000 --> 00:20:49,000

Whoa. What was that?

338

00:20:49,000 --> 00:20:52,000

It's a big plane that just flew over us.

339

00:20:52,000 --> 00:20:55,000

Yep, there it is. You got one.

340

00:20:55,000 --> 00:20:58,000

Hey Eric, what flight was that that just went over us?

341

00:20:58,000 --> 00:21:02,000

Well, you know I don't have anything directly over us.

342

00:21:02,000 --> 00:21:05,000

I can still see it. It's right there.

343

00:21:05,000 --> 00:21:07,000

But it didn't have normal aviation lights.

344

00:21:07,000 --> 00:21:09,000

No, it didn't.

345

00:21:09,000 --> 00:21:13,000

Okay. So I do have a couple of aircraft off to the east.

346

00:21:13,000 --> 00:21:16,000

I mean it was over top of the ranch.

347

00:21:16,000 --> 00:21:18,000

Okay, well I didn't have that.

348

00:21:18,000 --> 00:21:20,000

Did you hear anything?

349

00:21:20,000 --> 00:21:23,000

A little bit, but it was mostly silent.

350

00:21:23,000 --> 00:21:26,000

As the plane is flying across the ranch, it's very low

351

00:21:26,000 --> 00:21:30,000

and it's not blinking like an aircraft usually does.

352

00:21:30,000 --> 00:21:33,000

And it's not showing up on any of our ADS-B receivers.

353

00:21:33,000 --> 00:21:37,000

It definitely makes it feel like we're being surveilled.

354

00:21:37,000 --> 00:21:38,000

Hey Travis.

355

00:21:38,000 --> 00:21:40,000

Do you have eyes on an aircraft?

356

00:21:40,000 --> 00:21:44,000

We had a plane go over top of us and it's not on the flight tracker.

357

00:21:44,000 --> 00:21:47,000

Uh, there is something.

358

00:21:47,000 --> 00:21:52,000

Travis, this aircraft is not transponding.

359

00:21:52,000 --> 00:21:55,000

There's so many bugs I can't tell what I'm looking at.

360

00:21:55,000 --> 00:21:57,000

But it's something right there.

361

00:21:57,000 --> 00:22:00,000

What made this mysterious plane incident even more eerie?

362

00:22:03,000 --> 00:22:05,000

Oh, we got a malfunction. Everybody watch out.

363

00:22:05,000 --> 00:22:08,000

The last time something like that happened was when the blob anomaly

364

00:22:08,000 --> 00:22:13,000

first appeared above the triangle and the rocket exploded.

365

00:22:13,000 --> 00:22:17,000

We have a helicopter right over the triangle right now.

366

00:22:17,000 --> 00:22:22,000

I am getting no helicopter above the ranch on the ADS-B receiver here.

367

00:22:22,000 --> 00:22:27,000

Then later we found out through Utah Attorney General Sean Reyes

368

00:22:27,000 --> 00:22:31,000

that it was actually a military Black Hawk helicopter.

369

00:22:31,000 --> 00:22:35,000

It's yet another experiment where we have aircraft in the air

370

00:22:35,000 --> 00:22:39,000

that's not accounted for on the ADS-B.

371

00:22:39,000 --> 00:22:42,000

It's starting to become a habit.

372

00:22:42,000 --> 00:22:45,000

Hey guys, we're in place down here.

373

00:22:45,000 --> 00:22:48,000

We're about to shoot some mortars.

374

00:22:48,000 --> 00:22:52,000

Just kind of get an idea of the windage on how to launch the rocket from here.

375

00:22:52,000 --> 00:22:54,000

I'll be there.

376

00:22:54,000 --> 00:22:55,000

You ready?

377

00:22:55,000 --> 00:22:56,000

Ready.

378

00:22:56,000 --> 00:22:57,000

David, are you set?

379

00:22:57,000 --> 00:22:59,000

Yes, we are ready.

380

00:22:59,000 --> 00:23:01,000

All right, we're gonna light the mortars in...

381

00:23:01,000 --> 00:23:06,000

Five, four, three, two, one.

382

00:23:06,000 --> 00:23:08,000

There you go.

383

00:23:08,000 --> 00:23:10,000

Holy cow.

384

00:23:10,000 --> 00:23:12,000

Got it.

385

00:23:12,000 --> 00:23:15,000

You see that right there?

386

00:23:15,000 --> 00:23:16,000

Thomas?

387

00:23:16,000 --> 00:23:17,000

Yeah.

388

00:23:17,000 --> 00:23:19,000

I'd love to get your eyes on this.

389

00:23:19,000 --> 00:23:21,000

This one here.

390

00:23:21,000 --> 00:23:24,000

We have been tracking this light.

391

00:23:24,000 --> 00:23:25,000

Travis?

392

00:23:25,000 --> 00:23:29,000

Uh, we're trying to identify an object down on the south side.

393

00:23:29,000 --> 00:23:31,000

Barb, the trees?

394

00:23:31,000 --> 00:23:34,000

Uh, we're not quite sure what we're looking at.

395

00:23:34,000 --> 00:23:37,000

I think I'm picking it up on the differential, uh, clear.

396

00:23:37,000 --> 00:23:39,000

You're picking it up too?

397

00:23:39,000 --> 00:23:40,000

Yeah.

398

00:23:40,000 --> 00:23:45,000

That was where Eric was seeing something in his camera.

399

00:23:45,000 --> 00:23:47,000

I want to see this.

400

00:23:47,000 --> 00:23:51,000

So, Travis, we're also picking up something on the thermal.

401

00:23:51,000 --> 00:23:57,000

It was right here, and that's where you saw the luminous object in one of your cameras.

402

00:23:57,000 --> 00:23:59,000

That's where I aimed it.

403

00:23:59,000 --> 00:24:02,000

So we have something that's got a heat signature.

404

00:24:05,000 --> 00:24:08,000

What could be down there?

405

00:24:08,000 --> 00:24:12,000

Hey, Travis, we're not quite sure what we're looking at.

406

00:24:14,000 --> 00:24:17,000

So there's something somewhere...

407

00:24:19,000 --> 00:24:22,000

I ain't seeing nothing. I don't know.

408

00:24:22,000 --> 00:24:27,000

Right after Caleb and I fired a mortar from the southeast corner of Skinwalker Ranch...

409

00:24:27,000 --> 00:24:29,000

There it is again.

410

00:24:29,000 --> 00:24:33,000

David Mason's thermal cameras picked up something strange above the south field.

411

00:24:33,000 --> 00:24:39,000

In the same area, Eric started seeing a light on his infrared surveillance camera.

412

00:24:39,000 --> 00:24:43,000

And this is near the spot where we've recently seen a number of UAPs...

413

00:24:43,000 --> 00:24:48,000

and discovered the burnt post and two mysterious deer carcasses.

414

00:24:48,000 --> 00:24:52,000

This is where you were seeing that light source, and I got it aimed.

415

00:24:52,000 --> 00:24:54,000

This is a vehicle.

416

00:24:54,000 --> 00:24:57,000

This is Travis. These are the cows.

417

00:24:57,000 --> 00:25:02,000

Now watch it again. You'll see it just start to manifest just in that spot.

418

00:25:02,000 --> 00:25:04,000

And then you can see it pulsing.

419

00:25:04,000 --> 00:25:07,000

It just blinks in and out as cold.

420

00:25:07,000 --> 00:25:10,000

And now it's hotter.

421

00:25:10,000 --> 00:25:14,000

It's changing temperature. It goes cold or warm, cold or warm.

422

00:25:14,000 --> 00:25:16,000

But why is it varying?

423

00:25:16,000 --> 00:25:18,000

Wow.

424

00:25:19,000 --> 00:25:23,000

We have something in the thermographic camera.

425

00:25:23,000 --> 00:25:27,000

In the same location, we saw a light in the near infrared.

426

00:25:27,000 --> 00:25:30,000

So what are we seeing here? What's causing this to happen?

427

00:25:30,000 --> 00:25:33,000

That's what makes this experiment so interesting to me personally.

428

00:25:33,000 --> 00:25:35,000

You see it?

429

00:25:35,000 --> 00:25:37,000

Yeah, I'm not seeing it.

430

00:25:37,000 --> 00:25:40,000

Hey, Thomas. Do you copy?

431

00:25:40,000 --> 00:25:42,000

Yeah, go ahead, Travis.

432

00:25:42,000 --> 00:25:46,000

Well, so we are trying to find the light, but we're not seeing it right now.

433

00:25:46,000 --> 00:25:50,000

Are you guys ready for us to lock the rocket? Maybe we're scared out.

434

00:25:50,000 --> 00:25:52,000

Yeah, go ahead.

435

00:25:53,000 --> 00:25:55,000

Alright, let me lock it down.

436

00:25:55,000 --> 00:26:00,000

None of us knew what to make of the thermal anomaly that David's camera detected.

437

00:26:00,000 --> 00:26:04,000

But we wondered if it was something that we had stimulated with the mortar.

438

00:26:04,000 --> 00:26:09,000

That just told me that we needed to launch another rocket and see what would happen next.

439

00:26:09,000 --> 00:26:12,000

Alright, we're getting ready to launch this rocket.

440

00:26:12,000 --> 00:26:14,000

Rocket is hot.

441

00:26:14,000 --> 00:26:20,000

Five, four, three, two, one.

442

00:26:21,000 --> 00:26:23,000

Oh.

443

00:26:25,000 --> 00:26:27,000

Got it.

444

00:26:28,000 --> 00:26:31,000

I see the rocket trail, but I don't see it right there it is.

445

00:26:33,000 --> 00:26:35,000

It's coming in hot.

446

00:26:36,000 --> 00:26:38,000

Well, I could hear it back.

447

00:26:38,000 --> 00:26:40,000

Oh, yeah.

448

00:26:40,000 --> 00:26:43,000

Do we still have it? Are you seeing it?

449

00:26:44,000 --> 00:26:46,000

It's faded out.

450

00:26:46,000 --> 00:26:48,000

I don't think it's there anymore.

451

00:26:49,000 --> 00:26:51,000

Did it fade out after the launch?

452

00:26:51,000 --> 00:26:53,000

Yeah.

453

00:26:54,000 --> 00:26:56,000

It disappeared.

454

00:26:56,000 --> 00:26:58,000

Where'd it go?

455

00:26:58,000 --> 00:27:04,000

Hey Travis, that object that we were looking at, it's completely gone.

456

00:27:05,000 --> 00:27:07,000

That's just so weird.

457

00:27:08,000 --> 00:27:12,000

I'll say we load up and head back that way and see what they've got.

458

00:27:12,000 --> 00:27:14,000

Sounds good to me.

459

00:27:14,000 --> 00:27:19,000

I think tonight was a success because the experiment appears to have triggered phenomena

460

00:27:19,000 --> 00:27:25,000

both at the 31-foot altitude above the triangle where we saw the blob-like anomaly earlier this year

461

00:27:25,000 --> 00:27:30,000

and over the South Field where so many other strange things have recently happened.

462

00:27:30,000 --> 00:27:33,000

Did you guys find whatever that was down there?

463

00:27:33,000 --> 00:27:34,000

No.

464

00:27:34,000 --> 00:27:36,000

We can't identify this thing.

465

00:27:36,000 --> 00:27:39,000

And so the thing that you're seeing in your instrument, David,

466

00:27:39,000 --> 00:27:41,000

you think it's either cold and getting fluctuating?

467

00:27:41,000 --> 00:27:42,000

It's fluctuating.

468

00:27:42,000 --> 00:27:43,000

Okay.

469

00:27:43,000 --> 00:27:44,000

Huh.

470

00:27:44,000 --> 00:27:45,000

I don't know why.

471

00:27:45,000 --> 00:27:49,000

We had several different things that were confusing to us.

472

00:27:49,000 --> 00:27:52,000

One was the first rocket launch we did.

473

00:27:52,000 --> 00:27:57,000

We believed that we heard the shoot deploy.

474

00:27:57,000 --> 00:27:58,000

We heard it.

475

00:27:58,000 --> 00:27:59,000

But here's the thing.

476

00:27:59,000 --> 00:28:09,000

It looked to me like the rocket right at about 30 feet above the launch pad hit the mortar shell.

477

00:28:10,000 --> 00:28:11,000

That's it.

478

00:28:11,000 --> 00:28:14,000

You know, the odds of us, we couldn't name and plan and do that.

479

00:28:14,000 --> 00:28:15,000

That's like shooting a bullet with a bullet.

480

00:28:15,000 --> 00:28:17,000

That's like shooting a bullet with a bullet.

481

00:28:17,000 --> 00:28:18,000

But think about that.

482

00:28:18,000 --> 00:28:29,000

What are the odds of that happening right there at 31, 30-ish feet right where we've had this other phenomena happening with other rockets in that same spot?

483

00:28:29,000 --> 00:28:30,000

That is weird.

484

00:28:30,000 --> 00:28:31,000

That's so weird.

485

00:28:31,000 --> 00:28:38,000

It's not what we're expecting to see, but again, we see something unexpected but weird, right?

486

00:28:38,000 --> 00:28:39,000

Right.

487

00:28:39,000 --> 00:28:41,000

Well, let's clean up.

488

00:28:41,000 --> 00:28:43,000

Were these anomalies connected?

489

00:28:43,000 --> 00:28:44,000

What were they?

490

00:28:44,000 --> 00:28:46,000

And where do they come from?

491

00:28:46,000 --> 00:28:50,000

Since moments after they appeared, they simply just vanished.

492

00:28:50,000 --> 00:28:57,000

Hopefully, once we see the data recorded earlier this week during the balloon radar scan, we'll start to get some more answers.

493

00:28:57,000 --> 00:29:00,000

Thanks for coming out and for your amazing equipment.

494

00:29:00,000 --> 00:29:01,000

This has been fantastic.

495

00:29:01,000 --> 00:29:02,000

Thank you.

496

00:29:12,000 --> 00:29:13,000

Hey, Jeremiah.

497

00:29:13,000 --> 00:29:15,000

Hi, everyone. Great to talk to you all.

498

00:29:15,000 --> 00:29:17,000

Hey, man. How you been?

499

00:29:17,000 --> 00:29:19,000

Good. So we're really excited.

500

00:29:19,000 --> 00:29:22,000

We've been working and number crunching.

501

00:29:22,000 --> 00:29:28,000

We haven't even finished processing the data and we're seeing all these strange things in the data that we can't readily explain.

502

00:29:28,000 --> 00:29:38,000

A few days after our incredible nighttime experiment between the Triangle and the South Field, we had a meeting with Jeremiah Peat from Loonison about the balloon radar scan.

503

00:29:38,000 --> 00:29:49,000

Although the underground data he and his team collected earlier this week wasn't ready yet, Jeremiah had already processed some of the data that they collected in the air above the Triangle and the Mesa.

504

00:29:49,000 --> 00:29:51,000

We're excited to see what you've got.

505

00:29:51,000 --> 00:29:53,000

Yeah, absolutely. Share away.

506

00:29:53,000 --> 00:29:57,000

So the balloon launch itself was a textbook flight. The actual flight was really flawless.

507

00:29:57,000 --> 00:29:59,000

Well, that's good news.

508

00:29:59,000 --> 00:30:03,000

This gives you a sense of how the balloon rose and how it was made.

509

00:30:03,000 --> 00:30:13,000

Surprisingly, this was an extremely smooth ascent. So you would think nothing went wrong with this balloon, right? Everything looks completely perfect here.

510

00:30:13,000 --> 00:30:16,000

We should have had a flawless data capture.

511

00:30:16,000 --> 00:30:18,000

And that brings me to my next point.

512

00:30:18,000 --> 00:30:21,000

What you're looking at is actually the raw data output.

513

00:30:21,000 --> 00:30:26,000

If you look closely, you can see there are these strange jumps in the data set.

514

00:30:26,000 --> 00:30:35,000

It looks like you have jumps in the magnetic field while at the same time drops in the electric field. They seem to almost correlate with each other.

515

00:30:35,000 --> 00:30:36,000

Exactly.

516

00:30:36,000 --> 00:30:40,000

It's unbelievable. That's amazing.

517

00:30:40,000 --> 00:30:46,000

Jeremiah's data truly defies physics. We're seeing the magnetic field increase while the electric field decreased. That doesn't naturally happen.

518

00:30:46,000 --> 00:30:53,000

Typically, we would see both fields rising lower together and the levels would be nearly identical.

519

00:30:53,000 --> 00:31:02,000

But the data shows as the balloon ascended, it came in contact with an extreme level of magnetic energy that we have no conventional explanation for.

520

00:31:02,000 --> 00:31:07,000

This is something that Eric and I have also seen happen during other experiments.

521

00:31:07,000 --> 00:31:09,000

Ignition.

522

00:31:09,000 --> 00:31:17,000

Two years ago, we launched rockets over the triangle and watched as the entire spectrum jumped.

523

00:31:17,000 --> 00:31:19,000

That is unreal.

524

00:31:19,000 --> 00:31:25,000

Oh my God, during launch, the electromagnetic spectrum is going crazy, guys. I've never seen anything like it.

525

00:31:25,000 --> 00:31:31,000

So now that Lunar is in the middle of the field, we're going to have to go to the next level.

526

00:31:31,000 --> 00:31:36,000

In the last three years, we've been launching the electromagnetic spectrum as going crazy, guys. I've never seen anything like it.

527

00:31:36,000 --> 00:31:45,000

So now that Lunar has also measured this crazy magnetic and electromagnetic anomaly above the triangle, what kind of phenomena could it be?

528

00:31:45,000 --> 00:31:57,000

This is something that we really can't explain. And our team has spent hours upon hours looking over this data trying to come up with an explanation for what's causing this.

529

00:31:57,000 --> 00:32:03,000

So somewhere in the near field, there were these very strong transient electromagnetic fields.

530

00:32:03,000 --> 00:32:06,000

What altitude were you at when that happened?

531

00:32:06,000 --> 00:32:11,000

The bulk of this data was captured below 10,000 feet where we encountered these anomalies.

532

00:32:11,000 --> 00:32:16,000

The data even now started to make more sense above that.

533

00:32:16,000 --> 00:32:23,000

So this really puts in context the anomalies versus the altitude. So it gives you a sense of where we started to encounter those anomalies.

534

00:32:23,000 --> 00:32:31,000

You describe it as suddenly calming down beyond a certain altitude. What does that make you think?

535

00:32:31,000 --> 00:32:38,000

Well, it makes me think there's a phenomena that the instruments are passing through. There's boundary layers to the phenomenon.

536

00:32:38,000 --> 00:32:45,000

We wanted to know if it went through the anomaly, if it may pick something up, obviously something messed with it.

537

00:32:45,000 --> 00:32:49,000

We're looking at two of the most important plots we've seen since we began, guys.

538

00:32:49,000 --> 00:32:53,000

Ever. Ever. And this is right, you launched from the triangle, right?

539

00:32:53,000 --> 00:32:54,000

Yes.

540

00:32:54,000 --> 00:33:06,000

And so you went from zero up to 10,000 feet and while you're doing that, you're measuring huge increases in the magnetic field and huge decreases in the electric field.

541

00:33:06,000 --> 00:33:08,000

Exactly.

542

00:33:08,000 --> 00:33:10,000

Wow.

543

00:33:10,000 --> 00:33:21,000

It was unbelievable. Above the triangle where we've seen all kinds of strange things between 31 and 5,000 feet, like a blob, energy spikes, and UAPs,

544

00:33:21,000 --> 00:33:31,000

Jeremiah's balloon skin is showing something that may be even stranger at about 10,000 feet. Are these separate anomalies or are they all part of the same phenomenon?

545

00:33:31,000 --> 00:33:42,000

From a physics perspective, we do not know how you would change the entire electromagnetic spectrum at once across every frequency.

546

00:33:42,000 --> 00:33:50,000

The only thing that would do that would be something that affects everything, all colors of light, all radio dial, and the only thing that is is gravity.

547

00:33:50,000 --> 00:34:00,000

What could be there that we don't see with the naked eye that for some reason we see in light-R, radar, and in the electromagnetic field?

548

00:34:00,000 --> 00:34:02,000

That's not natural.

549

00:34:02,000 --> 00:34:03,000

No.

550

00:34:03,000 --> 00:34:04,000

It's not a natural phenomenon.

551

00:34:04,000 --> 00:34:06,000

Never heard of it ever.

552

00:34:06,000 --> 00:34:08,000

I mean, what the hell is up there?

553

00:34:30,000 --> 00:34:42,000

That can't be natural. And it could explain all the GPS anomalies we've experienced there. The questions now are, what is it? How might it be connected to the strange communication signals we've also detected?

554

00:34:42,000 --> 00:34:45,000

And why do we keep seeing UAPs there?

555

00:34:45,000 --> 00:34:54,000

I think it'd be interesting to correlate the flight path that you do have. If that could somehow be correlated with the data that's showing up in this location.

556

00:34:54,000 --> 00:34:56,000

Yeah, absolutely.

557

00:34:56,000 --> 00:35:11,000

As you see here, this is the approximate flight path that the balloon took. And we were able to fly over some of the really important features in the ranch, including the triangle, as well as the range itself.

558

00:35:11,000 --> 00:35:15,000

So we were able to collect some very personal data over these locations.

559

00:35:15,000 --> 00:35:17,000

Hey, hold it right there for a minute.

560

00:35:17,000 --> 00:35:25,000

Thomas, correct me if I'm understanding what I'm looking at. But is the drill site not about right here?

561

00:35:25,000 --> 00:35:26,000

Yep.

562

00:35:26,000 --> 00:35:35,000

Right here where the balloon crossed over where the GPR data tells us there's an anomaly in the mesa. Right as it's over that, look what happened.

563

00:35:35,000 --> 00:35:37,000

The electric field jumped.

564

00:35:37,000 --> 00:35:39,000

Right over where the metal's at.

565

00:35:39,000 --> 00:35:45,000

Right over where we pulled the metal out of the mesa. When it's right there, boom, the electric field goes up. How about that?

566

00:35:45,000 --> 00:35:50,000

This is unbelievable. Oh, wow.

567

00:35:50,000 --> 00:35:51,000

Think about that.

568

00:35:51,000 --> 00:35:57,000

It's just the abruptness of these changes that has just got me so floored.

569

00:35:57,000 --> 00:36:04,000

And the changes are from like, you know, one to ten thousand, not like one to four.

570

00:36:04,000 --> 00:36:10,000

Sure enough, Jeremiah's data has now identified gigantic magnetic anomalies above the mesa.

571

00:36:10,000 --> 00:36:18,000

And this is right over the spot where we've been drilling because we detected two possibly metallic objects inside the mesa.

572

00:36:18,000 --> 00:36:26,000

One of which we believe is shaped like a dome and appears to contain materials similar to what NASA uses on the surface of the space shuttle.

573

00:36:26,000 --> 00:36:32,000

And the other is vertical and over a hundred feet tall. What are we dealing with here?

574

00:36:32,000 --> 00:36:39,000

These are huge discontinuities. And both the discontinuity and the scale of it is very surprising.

575

00:36:39,000 --> 00:36:48,000

At the same time, we did have some clock anomalies on the triangle. I've never seen anything in any other data center resemblances.

576

00:36:48,000 --> 00:36:51,000

Can you quantify it for us because that might be important?

577

00:36:51,000 --> 00:36:52,000

Yes.

578

00:36:52,000 --> 00:36:55,000

We lost a quarter second of time.

579

00:36:55,000 --> 00:36:56,000

Really?

580

00:36:56,000 --> 00:36:58,000

That doesn't sound like much.

581

00:36:58,000 --> 00:37:07,000

It does for data like this. It's huge. Yeah, if light travels, you know, a foot per nanosecond, a quarter of a second, think how much could happen there.

582

00:37:07,000 --> 00:37:11,000

Absolutely. It's an eternity for these electronics.

583

00:37:11,000 --> 00:37:16,000

Yeah. And think what it would do to your GPS signals, to all of your processing.

584

00:37:16,000 --> 00:37:19,000

Oh my goodness, a quarter of a second is huge.

585

00:37:19,000 --> 00:37:23,000

We've been trying to figure out how to measure that time anomaly.

586

00:37:23,000 --> 00:37:31,000

And you now have actual data telling us there's a quarter of a second time anomaly over the triangle.

587

00:37:31,000 --> 00:37:36,000

It's like there's wrinkles in space and time over the triangle.

588

00:37:36,000 --> 00:37:40,000

Nobody's ever measured any anomaly like that on the planet.

589

00:37:40,000 --> 00:37:41,000

Exactly.

590

00:37:41,000 --> 00:37:44,000

Are we seeing evidence of a portal?

591

00:37:44,000 --> 00:37:53,000

Well, you know, this may be the first time we've actually got evidence of there being something above the triangle, the object, whether it's a portal or whatever else.

592

00:37:53,000 --> 00:37:55,000

I don't know, but it's something.

593

00:37:55,000 --> 00:38:02,000

To have these kinds of electromagnetic anomalies coupled with a time shift of a quarter of a second is astronomical.

594

00:38:02,000 --> 00:38:11,000

Some scientists have suggested that these types of anomalies could be telltale signs of a traversable wormhole or what some people might call a portal.

595

00:38:11,000 --> 00:38:21,000

Could we have just discovered evidence of what the indigenous people of the area have claimed for centuries that interdimensional portals exist on Skinwalker Ranch?

596

00:38:21,000 --> 00:38:23,000

What are you seeing?

597

00:38:23,000 --> 00:38:24,000

A signal.

598

00:38:24,000 --> 00:38:30,000

Could that explain why Eric and I have detected energy levels that we don't know how human technology can produce?

599

00:38:30,000 --> 00:38:33,000

1.6000.

600

00:38:33,000 --> 00:38:35,000

Travis, you got to see this.

601

00:38:35,000 --> 00:38:42,000

Or why we've seen UAPs ascend from the direction of the Mesa up toward the triangle and then simply vanish into thin air.

602

00:38:42,000 --> 00:38:43,000

Oh my gosh.

603

00:38:43,000 --> 00:38:49,000

A bend in space time or a wormhole would theoretically explain these things.

604

00:38:49,000 --> 00:38:59,000

And now Jeremiah Pate has detected the best evidence I know of in human history that this phenomena could be a reality on Skinwalker Ranch.

605

00:38:59,000 --> 00:39:07,000

There is no part of our investigation, no part of the entire narrative that isn't touched by this.

606

00:39:07,000 --> 00:39:17,000

Everything, the lidar, the radar, the ground penetrating radar, the helicopters, the GPS, every measurement we have taken this summer.

607

00:39:17,000 --> 00:39:20,000

This is fascinating, Jeremiah.

608

00:39:20,000 --> 00:39:25,000

And I can't wait to see the more processed data and when you guys finish up.

609

00:39:25,000 --> 00:39:28,000

Thank you so much for doing this.

610

00:39:28,000 --> 00:39:37,000

Yeah, the team and I are going to continue to crunch the data and see what we can find and then we'll be in touch really soon with the results of our analysis.

611

00:39:37,000 --> 00:39:38,000

All right.

612

00:39:38,000 --> 00:39:46,000

Well, we'll follow up when you've got the rest of that data filtered and crunched and maybe we'll have some imagery of what's beneath the soil.

613

00:39:46,000 --> 00:39:47,000

Exactly.

614

00:39:47,000 --> 00:39:48,000

Thank you.

615

00:39:48,000 --> 00:39:49,000

Thanks, Jeremiah.

616

00:39:49,000 --> 00:39:50,000

Thank you.

617

00:39:50,000 --> 00:39:51,000

Thanks a lot.

618

00:39:52,000 --> 00:40:00,000

I think we've got more and more verification that there's an optical and a temporal anomaly taking place, which may be one in the same, over the ranch.

619

00:40:00,000 --> 00:40:02,000

And we need to continue with it.

620

00:40:02,000 --> 00:40:03,000

All right, man.

621

00:40:03,000 --> 00:40:04,000

Crazy.

622

00:40:04,000 --> 00:40:05,000

Thank you.

623

00:40:05,000 --> 00:40:06,000

Fantastic experiment.

624

00:40:06,000 --> 00:40:07,000

Unbelievable.

625

00:40:07,000 --> 00:40:08,000

Absolutely fantastic.

626

00:40:08,000 --> 00:40:14,000

A lot of our experiments done at Altitude have produced really strange results.

627

00:40:14,000 --> 00:40:19,000

What could be generating the strange effects that we repeatedly experience in the sky over the ranch?

628

00:40:19,000 --> 00:40:23,000

I'd like the answer to that above all else.

629

00:40:23,000 --> 00:40:34,000

Seeing this new data showing anomalies throughout the skies above the ranch really makes you wonder if all the stories about portals here over the property could actually be true.

630

00:40:34,000 --> 00:40:41,000

And moving forward in our investigation, we're not going to stop until we figure it out.

631

00:40:41,000 --> 00:40:46,000

Strange phenomena seems to be at a fever pitch at Skinwalker Ranch.

632

00:40:46,000 --> 00:40:58,000

What are we going to find above the ranch that will help us find the answers to really the nature of the strange phenomenon that has plagued this area for decades, if not millennia?

633

00:40:58,000 --> 00:41:05,000

And now, more than ever before, we are dedicated and focused on getting to the bottom of the truth.

634

00:41:10,000 --> 00:41:12,000

There's something screaming across there.

635

00:41:12,000 --> 00:41:13,000

Holy crap.

636

00:41:13,000 --> 00:41:14,000

Look at this thing.

637

00:41:14,000 --> 00:41:18,000

Guys, that's 3,600 miles per hour.

638

00:41:18,000 --> 00:41:20,000

That one up here is focused.

639

00:41:20,000 --> 00:41:22,000

Sound experiments.

640

00:41:22,000 --> 00:41:25,000

The stone circle is lit up like a Christmas tree.

641

00:41:25,000 --> 00:41:26,000

That is crazy.

642

00:41:26,000 --> 00:41:30,000

We keep seeing a figure that keeps going back and forth.

643

00:41:30,000 --> 00:41:31,000

Go, go, go, go, go.

644

00:41:31,000 --> 00:41:34,000

I'm going up on top because there's somebody up there.

645

00:41:34,000 --> 00:41:35,000

Alright, we're on our way.
