

1

00:00:00,000 --> 00:00:05,840

On a recent sightings episode, we brought you information about the possible destruction

2

00:00:05,840 --> 00:00:10,800

of a Soviet space probe called Phobos by a UFO.

3

00:00:10,800 --> 00:00:15,080

Now for the first time on American television, startling footage obtained from our Russian

4

00:00:15,080 --> 00:00:20,840

sources showing the undedicated craft that may have destroyed Phobos.

5

00:00:20,840 --> 00:00:26,680

In 1989, the sudden disappearance of Phobos 2 had ominous overtones.

6

00:00:26,680 --> 00:00:31,480

Now Russian officials close to the space program feel free to offer their own theories about

7

00:00:31,480 --> 00:00:34,600

the satellite's demise.

8

00:00:34,600 --> 00:00:41,360

Phobos 2 was supposed to enter the Martian sky and descend to an altitude of 15 meters.

9

00:00:41,360 --> 00:00:47,280

Phobos 2 was sending back pictures as usual when suddenly the last picture from Phobos

10

00:00:47,280 --> 00:00:49,040

arrived.

11

00:00:49,040 --> 00:00:56,080

And that picture you could see Phobos, the Martian moon, and an oblong-shaped object.

12

00:00:56,080 --> 00:01:03,160

The object cast a passing shadow on Mars and then Phobos 2 disappeared.

13

00:01:03,160 --> 00:01:07,960

Scientists from around the world have studied the last photograph transmitted by Phobos 2.

14

00:01:07,960 --> 00:01:13,880

The oblong image shown here has been estimated to be at least 25 kilometers in length, nearly

15

00:01:13,880 --> 00:01:15,800

13 miles long.

16

00:01:15,800 --> 00:01:19,560

Many believe that Phobos 2 photographed an immense alien craft.

17

00:01:19,560 --> 00:01:24,880

Now, nearly four years after the disappearance of Phobos 2, this footage, shot by a Japanese

18

00:01:24,880 --> 00:01:27,680

astronomer, may help explain the mystery.

19

00:01:27,680 --> 00:01:32,800

The footage shows a moving object, casting a shadow on our own moon's lunar surface.

20

00:01:32,800 --> 00:01:37,160

It appears here on American television for the first time.

21

00:01:37,160 --> 00:01:41,640

We have not rejected the possibility that a spacecraft took Phobos 2.

22

00:01:41,640 --> 00:01:47,480

There is footage of a craft of a great length that flew over the lunar surface at the speed

23

00:01:47,480 --> 00:01:50,360

of over 200 kilometers per second.

24

00:01:50,360 --> 00:01:51,640

Can you imagine that?

25

00:01:51,640 --> 00:01:54,680

A huge space station moving that fast?

26

00:01:54,680 --> 00:02:01,480

I believe this is an immense UFO mothership, which may have taken Phobos 2.

27

00:02:01,480 --> 00:02:03,160

It's frightening, in fact.

28

00:02:03,160 --> 00:02:08,440

The day before Phobos 2 was launched, the senior designer of the project received a

29

00:02:08,440 --> 00:02:09,440

phone call.

30

00:02:09,440 --> 00:02:15,440

A steeling male voice said, don't launch Phobos 2 or it will be destroyed by a large saucer.

31

00:02:15,440 --> 00:02:19,520

We all got a cold chill from this warning.

32

00:02:19,680 --> 00:02:25,400

Could there be an immense UFO traveling through our solar system, ready to destroy any and

33

00:02:25,400 --> 00:02:28,520

all satellites that get too close for comfort?

34

00:02:28,520 --> 00:02:30,120

It is indeed a very chilling thought.
