

1

00:00:00,000 --> 00:00:09,280

H. G. Wells had the time machine. Sherman and Mr. Peabody had the way back machine. And Michael J.

2

00:00:09,280 --> 00:00:15,440

Fox had a DeLorean. The fantasy of time travel is one of the most popular themes in science fiction.

3

00:00:15,440 --> 00:00:22,480

And now a tantalizing new theory suggests that time travel could someday be science fact.

4

00:00:22,480 --> 00:00:28,640

When time travel becomes possible, it will not be the kind of vehicle that's important,

5

00:00:28,800 --> 00:00:33,920

but rather the discovery of an interdimensional shortcut. In these scenes from Star Trek,

6

00:00:33,920 --> 00:00:39,040

the shortcut is a cosmic anomaly called a wormhole. We might have just discovered the

7

00:00:39,040 --> 00:00:44,960

first stable wormhole known to exist. Bring us about, Lieutenant. In science fiction,

8

00:00:44,960 --> 00:00:51,920

time travel is possible because cosmic anomalies not only warp space, they also warp time. But does

9

00:00:51,920 --> 00:00:57,440

science support the existence of these interstellar superhighways? The average scientist says that

10

00:00:57,520 --> 00:01:03,840

the distances between stars is so great, four light years to the nearest star, that star travel

11

00:01:03,840 --> 00:01:08,640

is simply impractical. It would take them hundreds of years to go between nearby star systems.

12

00:01:08,640 --> 00:01:13,120

Therefore, they are skeptical that we have been visited by aliens from out of space.

13

00:01:13,120 --> 00:01:17,920

Michio Kaku is a professor of theoretical physics at the City University of New York.

14

00:01:18,480 --> 00:01:24,560

In his book, *Hyperspace*, Kaku suggests that there is a mechanism capable of warping time.

15

00:01:24,640 --> 00:01:29,600

And Kaku does not rule out the possibility that another, more advanced civilization

16

00:01:29,600 --> 00:01:34,560

may have already found that mechanism, the unified field that Einstein dreamt about.

17

00:01:35,360 --> 00:01:39,920

The new wrinkle, which has caused quite a bit of excitement among theoretical physicists,

18

00:01:39,920 --> 00:01:47,360

is that perhaps this river of time can have eddy currents, whirlpools, and perhaps may even fork

19

00:01:47,920 --> 00:01:53,920

at a crucial juncture in history. But where those forks and eddies are, no one knows.

20

00:01:53,920 --> 00:02:00,240

The cosmic highway isn't marked with signs saying wormhole next right, or this way to ancient Egypt.

21

00:02:00,240 --> 00:02:05,200

At this point, just finding holes in space is more of a stumbling block than traveling through them.

22

00:02:05,920 --> 00:02:11,920

Perhaps an outer space extraterrestrials may have the capability with the technology thousands

23

00:02:11,920 --> 00:02:17,520

of years beyond our own to open a hole in space and to begin to manipulate the fabric of space and time.

24

00:02:18,160 --> 00:02:25,120

And that is precisely how Mark Davenport explains his belief that many UFO sightings are, in fact,

25

00:02:25,120 --> 00:02:31,920

extraterrestrial spacecraft. In *Visitors From Time*, Davenport describes hundreds of reported

26

00:02:31,920 --> 00:02:37,760

UFO sightings and alien abduction cases that he believes support his time travel theories.

27

00:02:38,720 --> 00:02:46,560

So my hypothesis is that these people who operate these ships, their technology is so

28

00:02:47,200 --> 00:02:52,720

advanced that they've actually figured out a way to artificially warp space time, the way a black hole

29

00:02:52,720 --> 00:02:58,160

does naturally. And if that's true, it could mean they could be coming here not only from other

30

00:02:58,160 --> 00:03:02,800

planets, but from other star systems, other galaxies, other dimensions that coexist with

31

00:03:02,800 --> 00:03:09,600

ours, parallel universes, even our own future or our own past. By collating and cross-referencing

32

00:03:09,600 --> 00:03:15,520

specifics from eyewitnesses, Davenport believes he has compelling evidence that many UFOs are

33

00:03:15,520 --> 00:03:21,680

actually time machines. We have the occupants of these craft are continually telling people,

34

00:03:22,560 --> 00:03:27,440

they ask them questions like what time is it, what is time, what is your time, what is age,

35

00:03:27,440 --> 00:03:33,840

what is a year, and they say you are caught in time and we're not, our time is different from yours.

36

00:03:34,640 --> 00:03:40,480

Time is distorted in the vicinity of these craft and inside these craft. A lot of times people's

37

00:03:40,480 --> 00:03:46,640

watches will stop. We have people who say that their voices are distorted when they're near

38

00:03:46,640 --> 00:03:52,800

this craft, like when they breathe helium or something. So we have all sorts of indication

39

00:03:52,800 --> 00:03:58,880

that these things are in some kind of a field that warps space and time. And one day, according to

40

00:03:58,880 --> 00:04:05,360

Mijiyo Kaku, science will catch up with science fiction and we will create a time machine of our

41

00:04:05,760 --> 00:04:10,560

most of my friends watch science fiction because they want to dream about what may be possible in

42

00:04:10,560 --> 00:04:16,000

the future. Real scientists at the cutting edge, working on the unified field theory, working on

43

00:04:16,000 --> 00:04:20,640

higher dimensions, working on time travel, these are the ones who are playful. These are the ones

44

00:04:20,640 --> 00:04:32,320

who let their imagination soar into hyperspace. Not all scientists agree with Mijiyo Kaku's
hyperspace

45

00:04:32,320 --> 00:04:37,760

theory. Eminent physicist Stephen Hawking has stated that time travel is impossible because

46

00:04:37,760 --> 00:04:43,760

we've never been visited by any tourists from the future. Or have we?
