

1

00:00:00,000 --> 00:00:06,000

Something scientists have never seen before, and so far, can't explain.

2

00:00:06,000 --> 00:00:09,000

Scientists are puzzled by the unidentified space growth,

3

00:00:09,000 --> 00:00:12,000

and excited at the prospect of what may be a new life form

4

00:00:12,000 --> 00:00:14,000

recovered from the exterior of a satellite.

5

00:00:14,000 --> 00:00:17,000

The growth is a very interesting phenomenon.

6

00:00:17,000 --> 00:00:23,000

It's not exactly identified yet, but it's still in preliminary stages at this point.

7

00:00:23,000 --> 00:00:29,000

The growth appeared on an L-death, the abbreviation for long duration exposure facility.

8

00:00:29,000 --> 00:00:34,000

Basically, a satellite designed to expose and test materials in outer space.

9

00:00:34,000 --> 00:00:43,000

It is a gradient growth that generates from an area in which the covered portion of the L-death was located at.

10

00:00:43,000 --> 00:00:49,000

And as you can see specifically right in this area, you get a very silvery looking area

11

00:00:49,000 --> 00:00:54,000

to a very dark brown into a brownish white kind of area.

12

00:00:55,000 --> 00:00:59,000

In that area, scientists found microscopic fibers.

13

00:00:59,000 --> 00:01:05,000

When they were magnified by a high powered scanning microscope, mysterious images were revealed.

14

00:01:05,000 --> 00:01:11,000

In some cases it looks somewhat like a fungus or a mold, at least to some of us.

15

00:01:11,000 --> 00:01:15,000

What came back on this satellite appears to be organic,

16

00:01:15,000 --> 00:01:20,000

but some researchers believe the growth is merely the result of a battery leak on board the craft.

17

00:01:20,000 --> 00:01:24,000

Others point to the fibers as proof that the growth is organic

18

00:01:24,000 --> 00:01:28,000

and that strange new life forms make existing outer space.
