1/9/2018

1
00:00:04,760 --> 00:00:01,550
as you know there's been this ongoing

2
00:00:06,380 --> 00:00:04,770
debate well you it's it's not scientific

3
00:00:09,160 --> 00:00:06,390
they're just these anecdotal accounts

4
00:00:10,850 --> 00:00:09,170
and besides you could never study this

5
00:00:13,039 --> 00:00:10,860
scientifically and I always like to

6
00:00:17,680 --> 00:00:13,049
point people to your research and I say

7
00:00:21,349 --> 00:00:17,690
no here's really a wonderfully simple

8
00:00:24,429 --> 00:00:21,359
experiment that was done okay so what I

9
00:00:26,570 --> 00:00:24,439
did was over the period of five years I

10
00:00:29,060 --> 00:00:26,580
interviewed for the first year I

11
00:00:30,769 --> 00:00:29,070
interviewed every single patient who

12
00:00:33,860 --> 00:00:30,779
survived their admission to the

13
00:00:36,290 --> 00:00:33,870

intensive care unit and I wanted to make

14

00:00:37,819 --> 00:00:36,300

sure that I didn't miss any patients and

15

00:00:39,770 --> 00:00:37,829

what I found at the end of the first do

16

00:00:41,750 --> 00:00:39,780

it was that I was actually spending

17

00:00:43,790 --> 00:00:41,760

longer in the hospital than I was at

18

00:00:47,060 --> 00:00:43,800

home so I couldn't sustain that for the

19

00:00:49,310 --> 00:00:47,070

following five four years though what I

20

00:00:51,350 --> 00:00:49,320

thought what I did then is I narrowed

21

00:00:53,600 --> 00:00:51,360

down the kind of the group I was

22

00:00:56,090 --> 00:00:53,610

interviewing so I only approached

23

00:00:57,410 --> 00:00:56,100

patients who had undergone cardiac

24

00:01:00,410 --> 00:00:57,420

arrest and survived

25

00:01:03,319 --> 00:01:00,420

and although the sample was a little

26
00:01:06,410 --> 00:01:03,329
smaller than the first year what I found

27
00:01:09,620 --> 00:01:06,420
is that in 30 out of 39 patients who had

28
00:01:11,660 --> 00:01:09,630
been successfully resuscitated seven of

29
00:01:14,750 --> 00:01:11,670
them recalled a near-death experience

30
00:01:16,969 --> 00:01:14,760
and that's you know it's nearly 18

31
00:01:19,219 --> 00:01:16,979
percent of patients who survived cardiac

32
00:01:21,950 --> 00:01:19,229
arrest had this kind of experience and

33
00:01:24,230 --> 00:01:21,960
what I also did is I documented their

34
00:01:26,240 --> 00:01:24,240
blood results at the time I looked at

35
00:01:29,300 --> 00:01:26,250
the drugs that were given and I also

36
00:01:31,310 --> 00:01:29,310
interviewed the staff members who were

37
00:01:34,460 --> 00:01:31,320
looking after the patient so the nurses

38
00:01:36,410 --> 00:01:34,470

and the doctors I asked them if one of

39

00:01:38,929 --> 00:01:36,420

the patient if the patient reported the

40

00:01:41,539 --> 00:01:38,939

out-of-body component I would then try

41

00:01:45,230 --> 00:01:41,549

and verify what it was they were what

42

00:01:46,969 --> 00:01:45,240

they described I would I verified that

43

00:01:48,920 --> 00:01:46,979

within the nurses and the doctors who

44

00:01:51,530 --> 00:01:48,930

were looking after them tell people

45

00:01:53,749 --> 00:01:51,540

about the control group who is the

46

00:01:55,700 --> 00:01:53,759

people who didn't remember right yes

47

00:01:57,920 --> 00:01:55,710

that's right so what I did with the

48

00:02:00,980 --> 00:01:57,930

control group I had then patients who'd

49

00:02:03,499 --> 00:02:00,990

been successfully resuscitated but they

50

00:02:05,240 --> 00:02:03,509

didn't have a near-death experience or

51
00:02:07,639 --> 00:02:05,250
they didn't have the antibody component

52
00:02:09,830 --> 00:02:07,649
and I asked them if they could describe

53
00:02:13,130 --> 00:02:09,840
what they thought that we had done to

54
00:02:14,270 --> 00:02:13,140
them and they were like what do you mean

55
00:02:17,150 --> 00:02:14,280
I don't I was

56
00:02:18,650 --> 00:02:17,160
I don't remember anything right exactly

57
00:02:21,050 --> 00:02:18,660
that's right they were saying why are

58
00:02:23,830 --> 00:02:21,060
you asking me this I have no idea what

59
00:02:26,300 --> 00:02:23,840
you did to me at all like and the

60
00:02:28,640 --> 00:02:26,310
majority of them couldn't even guess

61
00:02:31,070 --> 00:02:28,650
they couldn't make a guess as to what

62
00:02:33,800 --> 00:02:31,080
we've done and then a few of them then

63
00:02:36,230 --> 00:02:33,810

did make a guess and it was based on T V

64

00:02:38,360 --> 00:02:36,240

Hospital dramas that they've been

65

00:02:40,550 --> 00:02:38,370

watching and what I found was that there

66

00:02:42,860 --> 00:02:40,560

were errors and misconceptions in what

67

00:02:45,050 --> 00:02:42,870

they thought we had done to them and so

68

00:02:47,870 --> 00:02:45,060

some of them thought that they had been

69

00:02:49,670 --> 00:02:47,880

BC shocked with the paddles and they

70

00:02:52,850 --> 00:02:49,680

hadn't those people had just had the

71

00:02:55,100 --> 00:02:52,860

resuscitation the CPR and drugs

72

00:02:58,220 --> 00:02:55,110

administered such as adrenaline or

73

00:03:01,520 --> 00:02:58,230

noradrenaline and then some of them made

74

00:03:03,770 --> 00:03:01,530

educated guesses but the police where

75

00:03:06,260 --> 00:03:03,780

they thought that we put the paddles on
