

1
00:00:00,600 --> 00:00:09,420

[Music]

2
00:00:21,030 --> 00:00:16,440
when I develop this theory that was 2001

3
00:00:23,380 --> 00:00:21,040
the first electronic publishing and I

4
00:00:26,980 --> 00:00:23,390
decided to publish in peer reviewed

5
00:00:29,769 --> 00:00:26,990
journals I found that it is very

6
00:00:34,750 --> 00:00:29,779
difficult to publish issue that

7
00:00:39,250 --> 00:00:34,760
contradicts through some adopted

8
00:00:42,759 --> 00:00:39,260
postulates in the mainstream science so

9
00:00:46,649 --> 00:00:42,769
I began publishing a man in my shorter

10
00:00:52,149 --> 00:00:46,659
name my real name is Stan sir culture I

11
00:00:54,610 --> 00:00:52,159
am Bulgarian born Canadian and but when

12
00:01:00,100 --> 00:00:54,620
I started published about this theory

13
00:01:04,780 --> 00:01:00,110

and related output results I published

14

00:01:08,680 --> 00:01:04,790

on the names Torrence arc and in that

15

00:01:14,260 --> 00:01:08,690

time in 2002 I try to publish first in

16

00:01:18,359 --> 00:01:14,270

the physical our cube that is moderated

17

00:01:22,170 --> 00:01:18,369

by I think by Cornell University and

18

00:01:24,690 --> 00:01:22,180

just after the first publication passed

19

00:01:29,469 --> 00:01:24,700

trying to publish the second one

20

00:01:38,529 --> 00:01:29,479

abandoned my name was put there that is

21

00:01:41,590 --> 00:01:38,539

still still enforced so but I have

22

00:01:45,039 --> 00:01:41,600

another way to publishing but

23

00:01:48,550 --> 00:01:45,049

interesting things is just I could

24

00:01:51,639 --> 00:01:48,560

publish easier under my real name stone

25

00:01:55,319 --> 00:01:51,649

circle Jeff but more difficult under

26
00:01:58,330 --> 00:01:55,329
this shorter name and I have published

27
00:02:03,389 --> 00:01:58,340
articles usually the I think the people

28
00:02:05,770 --> 00:02:03,399
think that I am two persons but it is a

29
00:02:08,139 --> 00:02:05,780
otherwise it is a good thing because I

30
00:02:12,160 --> 00:02:08,149
am still working at university

31
00:02:23,199 --> 00:02:20,230
so my my focus one of the what was the

32
00:02:26,500 --> 00:02:23,209
purpose of this unified theory the

33
00:02:29,380 --> 00:02:26,510
purpose was to find the physical model

34
00:02:36,630 --> 00:02:29,390
in the very bottom level of the

35
00:02:41,440 --> 00:02:36,640
microscopic range thereby that could be

36
00:02:47,440 --> 00:02:41,450
could make more complicated models by

37
00:02:50,380 --> 00:02:47,450
pure geometrical configurations in this

38
00:02:54,130 --> 00:02:50,390

way to build models that could that

39

00:02:59,860 --> 00:02:54,140

could work starting from the elementary

40

00:03:04,979 --> 00:02:59,870

particles quantum mechanics explaining

41

00:03:08,920 --> 00:03:04,989

also the features of the physical vacuum

42

00:03:14,229 --> 00:03:08,930

explaining the why the velocity of light

43

00:03:16,720 --> 00:03:14,239

is so accurate then quantum mechanical

44

00:03:18,280 --> 00:03:16,730

interactions between the elementary

45

00:03:21,100 --> 00:03:18,290

particles the structure of the

46

00:03:24,190 --> 00:03:21,110

elementary particles the structure of

47

00:03:30,699 --> 00:03:24,200

the physical vacuum that we call it is

48

00:03:36,069 --> 00:03:30,709

like a known as either then atoms

49

00:03:40,720 --> 00:03:36,079

molecules chemical compositions more

50

00:03:44,020 --> 00:03:40,730

complex compositions like biomolecule

51
00:03:51,340 --> 00:03:44,030
that I found they have option to storage

52
00:03:58,660 --> 00:03:51,350
energy also to explain the effects of

53
00:04:02,830 --> 00:03:58,670
special and general relativity inertia

54
00:04:08,080 --> 00:04:02,840
of the mass and some cosmological events

55
00:04:10,930 --> 00:04:08,090
even behind the big bang interpreted

56
00:04:15,569 --> 00:04:10,940
differently however than in the

57
00:04:19,990 --> 00:04:15,579
mainstream sense and then to close this

58
00:04:24,790 --> 00:04:20,000
range and to explain how the micro

59
00:04:33,200 --> 00:04:31,490
the one of so to focus now about one of

60
00:04:37,059 --> 00:04:33,210
the outcome of death clear it is that

61
00:04:39,950 --> 00:04:37,069
the cold fusion we know the enormous

62
00:04:42,830 --> 00:04:39,960
progress in cold fusion demonstrated

63
00:04:46,120 --> 00:04:42,840

last year in Italy that in fact is a

64

00:04:51,140 --> 00:04:46,130

result of 15 years research and

65

00:04:54,290 --> 00:04:51,150

premiered by P&L P and le Africa for

66

00:04:57,830 --> 00:04:54,300

cardi and Rossi and they demonstrated in

67

00:05:02,120 --> 00:04:57,840

September last year output power about

68

00:05:06,560 --> 00:05:02,130

half of mega watt whether mainstream

69

00:05:09,830 --> 00:05:06,570

science is silent about this because

70

00:05:13,939 --> 00:05:09,840

there is no explanation about the

71

00:05:18,790 --> 00:05:13,949

possibility of cold fusion but the

72

00:05:22,040 --> 00:05:18,800

problem is deeper the problem is here is

73

00:05:25,760 --> 00:05:22,050

the concept of the physical vacuum that

74

00:05:28,430 --> 00:05:25,770

is wrong and from this wrong concept

75

00:05:32,140 --> 00:05:28,440

starting to build like a foundation of

76

00:05:36,680 --> 00:05:32,150

the building in the contemporary physics

77

00:05:40,100 --> 00:05:36,690

we don't get full reality we just

78

00:05:42,800 --> 00:05:40,110

develop complicated mathematical models

79

00:05:45,980 --> 00:05:42,810

but they don't show everything one of

80

00:05:50,659 --> 00:05:45,990

these models is quantum mechanical

81

00:05:54,409 --> 00:05:50,669

models of atoms it is based on Bohr

82

00:05:57,409 --> 00:05:54,419

atomic planetary model that this model

83

00:05:59,390 --> 00:05:57,419

has problems from beginning of his

84

00:06:04,270 --> 00:05:59,400

establishment that they are not solved

85

00:06:07,490 --> 00:06:04,280

and this model was it is so white

86

00:06:11,320 --> 00:06:07,500

accepted everybody when he gets about

87

00:06:16,270 --> 00:06:11,330

the atoms they he imagined this models

88

00:06:18,760 --> 00:06:16,280

but there is not these models is Jazmine

89

00:06:25,550 --> 00:06:18,770

mathematical it is not the real physical

90

00:06:28,850 --> 00:06:25,560

model it is not that the Maxwell bill

91

00:06:32,060 --> 00:06:28,860

his famous did I some related to

92

00:06:34,610 --> 00:06:32,070

magnetic magnetism on the assumption of

93

00:06:36,270 --> 00:06:34,620

a resistant the existence of material

94

00:06:41,100 --> 00:06:36,280

heater

95

00:06:44,520 --> 00:06:41,110

in 1920 when instant developed general

96

00:06:48,060 --> 00:06:44,530

reality he realized that he needs either

97

00:06:54,680 --> 00:06:48,070

in order to explain the the space

98

00:07:00,990 --> 00:06:54,690

curvature so in his book he writes that

99

00:07:03,960 --> 00:07:01,000

without heater the general revelatory

100

00:07:07,650 --> 00:07:03,970

theory is unthinkable but in the same

101

00:07:13,230 --> 00:07:07,660

time he reject the assumption of

102

00:07:16,590 --> 00:07:13,240

material either favoured by Maxwell why

103

00:07:20,100 --> 00:07:16,600

because in this case the equation e

104

00:07:24,090 --> 00:07:20,110

equals MC square could not work because

105

00:07:27,630 --> 00:07:24,100

the heater could not be annihilated this

106

00:07:30,600 --> 00:07:27,640

has a bit of persecution and our vision

107

00:07:34,110 --> 00:07:30,610

of the universe of the cosmology of the

108

00:07:37,940 --> 00:07:34,120

Big Bang the Big Bang from this even

109

00:07:42,350 --> 00:07:37,950

from this the big bank appeared is not

110

00:07:45,030 --> 00:07:42,360

valid because in this case there is not

111

00:07:49,080 --> 00:07:45,040

there is not a pure energy

112

00:07:53,130 --> 00:07:49,090

separated by the matter and even the

113

00:07:56,550 --> 00:07:53,140

s-10 equation is equal to MC square m is

114

00:08:00,350 --> 00:07:56,560

not equal to matter that is accepted

115

00:08:03,270 --> 00:08:00,360

neither the mainstream stands but it is

116

00:08:05,880 --> 00:08:03,280

when you start from the inner core

117

00:08:15,290 --> 00:08:05,890

certain from the model that I developed

118

00:08:18,450 --> 00:08:15,300

I see that this mass mass depends on the

119

00:08:27,850 --> 00:08:18,460

state of the physical background in the

120

00:08:34,399 --> 00:08:31,939

so in shortly the framework of the basic

121

00:08:37,130 --> 00:08:34,409

structure of matter in the very bottom

122

00:08:39,769 --> 00:08:37,140

level that I straight with the Planck

123

00:08:45,620 --> 00:08:39,779

scale that it is tremely in the micro

124

00:08:47,900 --> 00:08:45,630

cosmos we need just two particles that

125

00:08:51,290 --> 00:08:47,910

is very cool but with the ratio of two

126

00:08:54,620 --> 00:08:51,300

to three in the diameter and one

127

00:08:56,660 --> 00:08:54,630

universal law I call super gravitation

128

00:09:00,560 --> 00:08:56,670

because it is distinguished by the

129

00:09:03,769 --> 00:09:00,570

Newtonian law that the forces inverse

130

00:09:07,010 --> 00:09:03,779

proportional to the cupid distance this

131

00:09:10,540 --> 00:09:07,020

means this means that in very close

132

00:09:19,550 --> 00:09:10,550

distances in macro cosmos the forces are

133

00:09:23,810 --> 00:09:19,560

extremely large by these particles by

134

00:09:26,240 --> 00:09:23,820

pure geometrical configurations I don't

135

00:09:29,210 --> 00:09:26,250

show here because I show another toss

136

00:09:30,890 --> 00:09:29,220

but here I don't have time for this by

137

00:09:33,230 --> 00:09:30,900

this configuration I build

138

00:09:37,310 --> 00:09:33,240

three-dimensional structures like

139

00:09:40,490 --> 00:09:37,320

fractal structures and some point these

140

00:09:43,720 --> 00:09:40,500

fractal structures becomes like a prism

141

00:09:47,720 --> 00:09:43,730

extended objects with internal twisted

142

00:09:50,420 --> 00:09:47,730

structures and this they preserve that

143

00:09:53,269 --> 00:09:50,430

that they address only two on one is

144

00:09:58,910 --> 00:09:53,279

right side twisting another is her

145

00:10:02,180 --> 00:09:58,920

website regime this may call sub-element

146

00:10:06,650 --> 00:10:02,190

Airy particles in fact appear that they

147

00:10:10,490 --> 00:10:06,660

could build the cosmic structure I call

148

00:10:14,560 --> 00:10:10,500

cosmic lattice that has all the property

149

00:10:18,410 --> 00:10:14,570

of the physical vehicle including the

150

00:10:21,440 --> 00:10:18,420

propagation of velocity of light with

151
00:10:24,769 --> 00:10:21,450
the known velocity and also propagation

152
00:10:27,920 --> 00:10:24,779
of Newtonian gravity but Newtonian

153
00:10:31,460 --> 00:10:27,930
gravity that is advanced proportional to

154
00:10:34,090 --> 00:10:31,470
the squared distance becomes different

155
00:10:38,329 --> 00:10:34,100
than the super gravity because it is

156
00:10:40,430 --> 00:10:38,339
propagated by this structure this

157
00:10:48,010 --> 00:10:40,440
structure in fact

158
00:10:55,970 --> 00:10:53,600
here is the individual who I call this

159
00:10:58,280 --> 00:10:55,980
captured cosmic lattice individual knows

160
00:11:00,590 --> 00:10:58,290
this is from the four prism one two

161
00:11:02,750 --> 00:11:00,600
three four but they held by this

162
00:11:07,570 --> 00:11:02,760
supervillain mutation of houses so they

163
00:11:11,240 --> 00:11:07,580

are flexible when investigated their

164

00:11:22,340 --> 00:11:11,250

dynamics they have two two axis of

165

00:11:27,020 --> 00:11:22,350

symmetry one axis along this other axis

166

00:11:32,200 --> 00:11:27,030

X Y Z that's orthogonal and if you

167

00:11:36,770 --> 00:11:32,210

arrange this cosmic lattice not together

168

00:11:40,910 --> 00:11:36,780

in fact you see how the the propagations

169

00:11:43,360 --> 00:11:40,920

of two kinds of forces one can the

170

00:11:47,260 --> 00:11:43,370

forces super gravitational forces

171

00:11:50,780 --> 00:11:47,270

propagated by this axis other forces

172

00:11:55,660 --> 00:11:50,790

electromagnetic propagated by this axis

173

00:11:58,970 --> 00:11:55,670

and why we need into investigating the

174

00:12:01,640 --> 00:11:58,980

oscillations along two axes it is simply

175

00:12:05,210 --> 00:12:01,650

just debating from the central point we

176

00:12:08,600 --> 00:12:05,220

see along the orthogonal axis it is in

177

00:12:11,000 --> 00:12:08,610

this along under this axis it is this we

178

00:12:13,760 --> 00:12:11,010

have two dips here one dip saw as well

179

00:12:16,580 --> 00:12:13,770

as a result of this it makes a complex

180

00:12:20,180 --> 00:12:16,590

exhalations I call spatial position

181

00:12:22,910 --> 00:12:20,190

momentum that when starting from this

182

00:12:25,880 --> 00:12:22,920

point make this curve go to the point B

183

00:12:28,640 --> 00:12:25,890

that is not concern today but after many

184

00:12:33,170 --> 00:12:28,650

oscillations it closed something like I

185

00:12:37,550 --> 00:12:33,180

call quasi sphere with six bumps six

186

00:12:40,570 --> 00:12:37,560

dimples and this causes fear them become

187

00:12:44,600 --> 00:12:40,580

when they arranged in the cosmic lattice

188

00:12:46,910 --> 00:12:44,610

it divides the magnetic line but when it

189

00:12:49,870 --> 00:12:46,920

is elongated that it appears when there

190

00:12:57,870 --> 00:12:49,880

is electrical field it becomes elongated

191

00:13:05,040 --> 00:13:01,200

this super elementary particles that I

192

00:13:07,530 --> 00:13:05,050

call twisted Prem's is located in the

193

00:13:10,200 --> 00:13:07,540

initial phase of the galaxy development

194

00:13:13,080 --> 00:13:10,210

they combine it in more complex

195

00:13:15,390 --> 00:13:13,090

structure I call helical structures you

196

00:13:18,200 --> 00:13:15,400

see here here from the two particles and

197

00:13:21,870 --> 00:13:18,210

they're with ratio two to three so they

198

00:13:24,360 --> 00:13:21,880

enter each other I called first order

199

00:13:30,420 --> 00:13:24,370

this is the second order to be also

200

00:13:36,120 --> 00:13:30,430

third order and this structure appears

201
00:13:40,230 --> 00:13:36,130
to be the structure of the electron it

202
00:13:43,230 --> 00:13:40,240
is the smallest stable particle but with

203
00:13:47,370 --> 00:13:43,240
the rich oscillations and you see here

204
00:13:49,920 --> 00:13:47,380
with these structures that is outside

205
00:13:54,180 --> 00:13:49,930
and here there is another structure

206
00:13:56,670 --> 00:13:54,190
inside they oscillate there is also one

207
00:14:00,000 --> 00:13:56,680
central structures and by their

208
00:14:03,240 --> 00:14:00,010
oscillations it has very specific

209
00:14:05,040 --> 00:14:03,250
features the proper frequency of the

210
00:14:07,320 --> 00:14:05,050
oscillations of this structure to this

211
00:14:10,800 --> 00:14:07,330
in fact appears to be equal to the

212
00:14:13,500 --> 00:14:10,810
Compton frequency at the same time the

213
00:14:15,990 --> 00:14:13,510

cosmic lattice knows not one of his

214

00:14:20,310 --> 00:14:16,000

frequency is also equal to the Compton

215

00:14:22,470 --> 00:14:20,320

frequency and what happens also it it

216

00:14:25,470 --> 00:14:22,480

has also some internal structure by the

217

00:14:28,170 --> 00:14:25,480

same prism but more dense so the

218

00:14:31,920 --> 00:14:28,180

internal structure here defined

219

00:14:33,600 --> 00:14:31,930

electrical lines so when there is

220

00:14:35,610 --> 00:14:33,610

electrical field and the structure is

221

00:14:39,090 --> 00:14:35,620

moving it is rotating like a like a

222

00:14:42,390 --> 00:14:39,100

screw and he'll all and it has all known

223

00:14:47,040 --> 00:14:42,400

features of the electron and the quantum

224

00:14:49,980 --> 00:14:47,050

mechanical features also by these

225

00:14:53,730 --> 00:14:49,990

structures I was able to derive the

226

00:14:56,160 --> 00:14:53,740

parameters of the cosmic lattice I call

227

00:15:02,730 --> 00:14:56,170

cosmic lattice that in fact respond to

228

00:15:06,510 --> 00:15:02,740

the ether and I found that in I derived

229

00:15:08,880 --> 00:15:06,520

the equations of them the mass equations

230

00:15:12,090 --> 00:15:08,890

and this is this the mass of the

231

00:15:15,810 --> 00:15:12,100

particle is equal to the pressure of the

232

00:15:19,130 --> 00:15:15,820

cosmic lattice over the volume of this

233

00:15:23,220 --> 00:15:19,140

particle divided by the C square

234

00:15:25,980 --> 00:15:23,230

the volume is impenetrable to the cosmic

235

00:15:34,290 --> 00:15:25,990

lattice because it has a denser internal

236

00:15:38,880 --> 00:15:34,300

lattice so in fact did defines what the

237

00:15:42,720 --> 00:15:38,890

periodic table is so strange dance is

238

00:15:45,030 --> 00:15:42,730

that it should have some 3d shapes of

239

00:15:48,480 --> 00:15:45,040

the structure so this is the structure

240

00:15:51,750 --> 00:15:48,490

of the of the proton I found this is the

241

00:15:55,410 --> 00:15:51,760

stretch of the neutron it is the same

242

00:15:57,420 --> 00:15:55,420

tooru it but but it is twisted here it

243

00:16:02,370 --> 00:15:57,430

is double folded this is internal

244

00:16:05,010 --> 00:16:02,380

structure so here the the the atoms

245

00:16:08,720 --> 00:16:05,020

protons hydrogen atoms this is

246

00:16:12,120 --> 00:16:08,730

electronic orbit deuterium helium and

247

00:16:13,530 --> 00:16:12,130

the more complex atoms so we just think

248

00:16:16,949 --> 00:16:13,540

is because this is the more dense

249

00:16:21,860 --> 00:16:16,959

structure it stays in the middle so in

250

00:16:27,449 --> 00:16:25,440

and here's interesting the explanation

251
00:16:30,210 --> 00:16:27,459
all the future of the periodic table

252
00:16:36,440 --> 00:16:30,220
for example I did I took the future of

253
00:16:40,319 --> 00:16:36,450
the lithium you have helium nuclei on

254
00:16:43,139 --> 00:16:40,329
this free n defined the balance so him

255
00:16:47,280 --> 00:16:43,149
the beryllium will have two valances in

256
00:16:53,069 --> 00:16:47,290
ball one two three in carbon one two

257
00:16:56,730 --> 00:16:53,079
three four but in in nitrogen because

258
00:16:59,490 --> 00:16:56,740
this becomes closer from them both balls

259
00:17:01,650 --> 00:16:59,500
they connected with the one more piece

260
00:17:04,199 --> 00:17:01,660
they excluded from that so we have three

261
00:17:07,740 --> 00:17:04,209
balances two valances one valence and

262
00:17:12,390 --> 00:17:07,750
here a super relation of forces close

263
00:17:16,909 --> 00:17:12,400

pretty close this protons it becomes

264

00:17:23,009 --> 00:17:20,519

here another example of other elements I

265

00:17:26,549 --> 00:17:23,019

made for all elements for to the

266

00:17:28,680 --> 00:17:26,559

periodic tables table element here one

267

00:17:32,639 --> 00:17:28,690

mock-up that I make for the argon

268

00:17:35,580 --> 00:17:32,649

structure that so-called EMF so dis

269

00:17:37,320 --> 00:17:35,590

Ephrata structures you could say you

270

00:17:39,990 --> 00:17:37,330

could not have a freedom to put in

271

00:17:44,600 --> 00:17:40,000

different ways they just take their

272

00:17:53,220 --> 00:17:44,610

place that can respond to the more dense

273

00:17:56,700 --> 00:17:53,230

structure the example of electron

274

00:18:01,049 --> 00:17:56,710

microscope of the golden surface and

275

00:18:04,620 --> 00:18:01,059

this is by these structures here there

276

00:18:07,710 --> 00:18:04,630

is the H_2 molecule from this molecule I

277

00:18:10,440 --> 00:18:07,720

calculated one important parameter super

278

00:18:13,560 --> 00:18:10,450

gravitational and this is this parameter

279

00:18:18,180 --> 00:18:13,570

and using this parameter I calculated

280

00:18:21,930 --> 00:18:18,190

the bending energy between the the

281

00:18:23,759 --> 00:18:21,940

neutron and proton in deuterium by a

282

00:18:31,710 --> 00:18:23,769

simple method and I get pretty close

283

00:18:33,440 --> 00:18:31,720

value here is another proof that the

284

00:18:36,600 --> 00:18:33,450

arrangement of the protons and neutrons

285

00:18:39,870 --> 00:18:36,610

affect protons neutrons are arranged

286

00:18:42,930 --> 00:18:39,880

over the proton and they oscillate this

287

00:18:46,409 --> 00:18:42,940

in fact this oscillation is so this

288

00:18:49,310 --> 00:18:46,419

oscillation is found in this from this

289

00:18:53,899 --> 00:18:49,320

graph you can see that there is one

290

00:18:56,460 --> 00:18:53,909

another interesting effect there is a

291

00:18:59,159 --> 00:18:56,470

general relativistic effect in

292

00:19:03,690 --> 00:18:59,169

microscale and this general relativistic

293

00:19:06,419 --> 00:19:03,700

effect in fact cause the mass outside of

294

00:19:09,899 --> 00:19:06,429

this field to be to be detected smaller

295

00:19:14,919 --> 00:19:09,909

and this in fact explains the bending

296

00:19:25,850 --> 00:19:21,440

and here example of proximity field

297

00:19:31,039 --> 00:19:25,860

Glock Coulomb field of the proton and

298

00:19:33,950 --> 00:19:31,049

neutron here's a consideration for

299

00:19:37,130 --> 00:19:33,960

modification of columbaria leading to do

300

00:19:42,409 --> 00:19:37,140

de reactions here explanation by this

301
00:19:45,080 --> 00:19:42,419
model of some reactions here explanation

302
00:19:49,130 --> 00:19:45,090
of the dis reactions in Paulo Palladium

303
00:19:50,930 --> 00:19:49,140
+ G Oh Tyrone making a silver and here

304
00:19:53,930 --> 00:19:50,940
you see the Coulomb field make more

305
00:19:59,149 --> 00:19:53,940
complicated shape but it is not circular

306
00:20:01,690 --> 00:19:59,159
this is the explanation that the

307
00:20:09,470 --> 00:20:01,700
intelligent folk are DeRose method

308
00:20:13,279 --> 00:20:09,480
another method here here is another

309
00:20:14,600 --> 00:20:13,289
experiment explanation from in fact the

310
00:20:18,380 --> 00:20:14,610
beauty of this is just from the

311
00:20:21,799 --> 00:20:18,390
structure of Notley you could conceive

312
00:20:27,279 --> 00:20:21,809
another possibility for example here is

313
00:20:31,610 --> 00:20:27,289

the experimentally proved with nickel

314

00:20:34,130 --> 00:20:31,620

that goes to copper or zinc you here you

315

00:20:36,889 --> 00:20:34,140

see here the similarity of this of the

316

00:20:39,019 --> 00:20:36,899

nickel with this chrome so I make

317

00:20:41,779 --> 00:20:39,029

prediction that the chrome also could be

318

00:20:44,299 --> 00:20:41,789

involved in the cold fusion reaction the

319

00:20:46,600 --> 00:20:44,309

difference on it we have two radial

320

00:20:49,880 --> 00:20:46,610

pairs which we have for ideal pairs and

321

00:20:53,169 --> 00:20:49,890

this the prediction of my prediction is

322

00:20:56,990 --> 00:20:53,179

that these reactions are possible

323

00:21:01,550 --> 00:20:57,000

according to this structure so these are

324

00:21:06,980 --> 00:21:03,920

quantum mechanical model could not serve

325

00:21:13,460 --> 00:21:06,990

for understanding the cold fusion

326

00:21:16,430 --> 00:21:13,470

reaction and another things is that cold

327

00:21:20,050 --> 00:21:16,440

fusion reaction is not only feasible it

328

00:21:26,030 --> 00:21:20,060

is a good replacement for that and safe

329

00:21:28,490 --> 00:21:26,040

currently use nuclear energy and here

330

00:21:32,320 --> 00:21:28,500

the result of carelessness nor branch we

331

00:21:35,180 --> 00:21:32,330

have so much accumulated hazardous

332

00:21:37,850 --> 00:21:35,190

reactive divestment that there is not a

333

00:21:42,830 --> 00:21:37,860

anyway to be reader for this only the

334

00:21:46,940 --> 00:21:42,840

time but Dan is thousands of years thank

335

00:22:01,230 --> 00:21:46,950

you very much you very much and now

336

00:22:07,960 --> 00:22:04,870

thank you for interesting report as far

337

00:22:12,430 --> 00:22:07,970

as I understand your model actually is a

338

00:22:17,320 --> 00:22:12,440

model of superstring helical structure

339

00:22:19,930 --> 00:22:17,330

right no it doesn't there is not any

340

00:22:22,510 --> 00:22:19,940

association of souping string theory

341

00:22:24,160 --> 00:22:22,520

because the pen string theory they don't

342

00:22:26,320 --> 00:22:24,170

have a thickness they don't have a

343

00:22:29,850 --> 00:22:26,330

material thickness well the structures

344

00:22:33,310 --> 00:22:29,860

they have material structure that's

345

00:22:38,110 --> 00:22:33,320

indestructible there are some works

346

00:22:41,770 --> 00:22:38,120

which consider analogous to your theory

347

00:22:45,880 --> 00:22:41,780

that is helical structure lat - Roy dual

348

00:22:48,940 --> 00:22:45,890

helix helical structure and my question

349

00:22:51,570 --> 00:22:48,950

is how from your your theory comes

350

00:22:55,990 --> 00:22:51,580

electrical charge can you explain

351

00:23:08,130 --> 00:22:56,000

formation of electrical charge yeah

352

00:23:15,299 --> 00:23:10,710

in fact the electrical charge seconded

353

00:23:19,980 --> 00:23:15,309

to this theory appears features of the

354

00:23:24,000 --> 00:23:19,990

physical vacuum but in this physical

355

00:23:28,200 --> 00:23:24,010

vacuum has to be particle so the

356

00:23:30,710 --> 00:23:28,210

particle creates oscillations I show

357

00:23:35,009 --> 00:23:30,720

here for example the oscillations of

358

00:23:37,529 --> 00:23:35,019

this elementary node and if it is

359

00:23:42,509 --> 00:23:37,539

elongated in this way then the

360

00:23:48,200 --> 00:23:42,519

electrical if you arrange many of this

361

00:23:54,210 --> 00:23:52,110

then the electron internal structures

362

00:23:58,320 --> 00:23:54,220

that is very dense make such kind of

363

00:24:01,139 --> 00:23:58,330

arrangement and of the oscillation as

364

00:24:03,539 --> 00:24:01,149

the cosmic lattice so in fact the

365

00:24:08,159 --> 00:24:03,549

electron structure great electrical

366

00:24:11,070 --> 00:24:08,169

charge and it is a static charge okay

367

00:24:19,310 --> 00:24:11,080

and can you calculate according to this

368

00:24:26,519 --> 00:24:24,389

the charge sign depend of the twisting

369

00:24:29,009 --> 00:24:26,529

of the elementary build it means the

370

00:24:31,230 --> 00:24:29,019

bond that's a prisms if they are for

371

00:24:34,529 --> 00:24:31,240

example for left-side twisting they'd

372

00:24:37,860 --> 00:24:34,539

create negative charge if they are right

373

00:24:43,490 --> 00:24:37,870

side with the great positive charge but

374

00:24:46,200 --> 00:24:43,500

I don't I just explained the physical

375

00:24:50,370 --> 00:24:46,210

behind the charge not calculation of the

376

00:24:53,639 --> 00:24:50,380

value in other creation are you familiar

377

00:24:58,350 --> 00:24:53,649

with work of Stephen Phillips from

378

00:25:06,480 --> 00:24:58,360

England his book is ESP or quarks and

379

00:25:14,370 --> 00:25:12,370

he confirmed scientifically that what it

380

00:25:19,480 --> 00:25:14,380

better and Besant observed with their

381

00:25:21,580 --> 00:25:19,490

pea vision is real and that was much

382

00:25:24,130 --> 00:25:21,590

more complicated sweeper strings but it

383

00:25:29,950 --> 00:25:24,140

is even more much more complicated than

384

00:25:36,040 --> 00:25:29,960

helical structure yeah the theory of the

385

00:25:38,560 --> 00:25:36,050

helical structure doesn't use multi

386

00:25:40,450 --> 00:25:38,570

dimensional space

387

00:25:42,070 --> 00:25:40,460

string theory without multi dimensional

388

00:25:44,260 --> 00:25:42,080

space is impossible

389

00:25:47,080 --> 00:25:44,270

everything here he spent three

390

00:25:50,080 --> 00:25:47,090

dimensional space and in the directional

391

00:25:52,060 --> 00:25:50,090

time and this structure because envision

392

00:25:55,810 --> 00:25:52,070

they're real but they are much much

393

00:25:59,530 --> 00:25:55,820

below the most powerful microscopes

394

00:26:01,390 --> 00:25:59,540

they have all features explaining even

395

00:26:03,640 --> 00:26:01,400

the quarks antiquarks

396

00:26:06,850 --> 00:26:03,650

accordingly they are not real particles

397

00:26:10,570 --> 00:26:06,860

even the mainstream there is a questions

398

00:26:14,470 --> 00:26:10,580

are there real particles they say quartz

399

00:26:17,590 --> 00:26:14,480

they they measure some kind of forces

400

00:26:19,620 --> 00:26:17,600

from the showers from the energy and a

401
00:26:24,390 --> 00:26:19,630
state equation they say oh this

402
00:26:26,350 --> 00:26:24,400
correspond to quark but in the particle

403
00:26:28,900 --> 00:26:26,360
experiment for example this is the

404
00:26:31,660 --> 00:26:28,910
structure of the internal structure of

405
00:26:34,630 --> 00:26:31,670
the proton and neutron and you have here

406
00:26:39,130 --> 00:26:34,640
one negative PI on one positive path and

407
00:26:45,810 --> 00:26:39,140
this is the account when they create

408
00:26:51,430 --> 00:26:48,610
multiple possible they call resonances

409
00:26:53,800 --> 00:26:51,440
appears and they assign every it is nice

410
00:26:57,250 --> 00:26:53,810
to some string some particle that in
