

1  
00:00:06,789 --> 00:00:03,470  
thank you for hearing me coming to the

2  
00:00:10,040 --> 00:00:06,799  
meeting my name is Courtney Brown I'm a

3  
00:00:11,810 --> 00:00:10,050  
social scientist and mathematician I'm a

4  
00:00:15,950 --> 00:00:11,820  
mathematician who works in a social

5  
00:00:17,859 --> 00:00:15,960  
science program at Emory University what

6  
00:00:21,920 --> 00:00:17,869  
I do there is my day job

7  
00:00:24,470 --> 00:00:21,930  
mathematics is what I teach the stuff I

8  
00:00:26,630 --> 00:00:24,480  
do outside of my day job is done at the

9  
00:00:28,400 --> 00:00:26,640  
Farsight Institute and that's not

10  
00:00:29,919 --> 00:00:28,410  
affiliated with Emory University and

11  
00:00:32,870 --> 00:00:29,929  
what I'm about to present to you today

12  
00:00:36,470 --> 00:00:32,880  
was not done at Emory University but was

13  
00:00:38,780 --> 00:00:36,480

done it the Farsight Institute I have

14

00:00:41,180 --> 00:00:38,790

two websites that would be useful for

15

00:00:45,049 --> 00:00:41,190

background information one is the far

16

00:00:45,979 --> 00:00:45,059

side Institute's website WWF our site

17

00:00:50,650 --> 00:00:45,989

org

18

00:00:52,850 --> 00:00:50,660

and Courtney brown com today's talk

19

00:00:57,170 --> 00:00:52,860

quantum mechanics remote viewing and

20

00:01:00,040 --> 00:00:57,180

time is related to an experiment by John

21

00:01:02,510 --> 00:01:00,050

Wheeler that called the delayed choice

22

00:01:07,789 --> 00:01:02,520

experiment but done in a macro

23

00:01:11,570 --> 00:01:07,799

environment using remote viewing the

24

00:01:14,480 --> 00:01:11,580

theory behind this is much more broad

25

00:01:17,270 --> 00:01:14,490

than I can present in 15 minutes but it

26  
00:01:19,399 --> 00:01:17,280  
is available in this book remote viewing

27  
00:01:23,060 --> 00:01:19,409  
the science and theory of non-physical

28  
00:01:28,940 --> 00:01:23,070  
perception that was a result of about 10

29  
00:01:34,190 --> 00:01:28,950  
years work the book covers a great deal

30  
00:01:37,819 --> 00:01:34,200  
of theory that is not in this AI

31  
00:01:40,280 --> 00:01:37,829  
literature it was an attempt to try to

32  
00:01:42,950 --> 00:01:40,290  
explain certain types of phenomena that

33  
00:01:45,370 --> 00:01:42,960  
we were seeing when we used remote

34  
00:01:48,609 --> 00:01:45,380  
viewing in certain experimental designs

35  
00:01:52,310 --> 00:01:48,619  
these experiments led us to an

36  
00:01:55,429 --> 00:01:52,320  
understanding that consciousness quantum

37  
00:01:57,920 --> 00:01:55,439  
mechanics physics physical reality was

38  
00:02:00,440 --> 00:01:57,930

different than either classical or

39

00:02:02,600 --> 00:02:00,450

strictly quantum theories that were

40

00:02:07,160 --> 00:02:02,610

current in the paradigms allowed to

41

00:02:10,190 --> 00:02:07,170

happen so we investigated we started

42

00:02:12,650 --> 00:02:10,200

recently in January something called a

43

00:02:13,430 --> 00:02:12,660

climate project this is a new project

44

00:02:15,740 --> 00:02:13,440

and nukes

45

00:02:17,090 --> 00:02:15,750

experiments different from the ones that

46

00:02:20,690 --> 00:02:17,100

are talked about in the book but the

47

00:02:22,580 --> 00:02:20,700

book lays the basis for the climate

48

00:02:27,650 --> 00:02:22,590

project we wanted to see if remote

49

00:02:29,720 --> 00:02:27,660

viewing could be done to detect things

50

00:02:34,400 --> 00:02:29,730

as different as climate change over a

51  
00:02:42,100 --> 00:02:34,410  
five-year period for this we used two

52  
00:02:44,930 --> 00:02:42,110  
time points June 1st 2008 June 1st 2013

53  
00:02:47,840 --> 00:02:44,940  
three methodologies of remote viewing

54  
00:02:52,220 --> 00:02:47,850  
were used CRV controlled remote viewing

55  
00:02:54,470 --> 00:02:52,230  
under the guidance of Lynn Buchanan HR

56  
00:02:57,410 --> 00:02:54,480  
VG Hawaiian remote viewing guild under

57  
00:02:59,360 --> 00:02:57,420  
the guidance of Glenn Wheaton NS RV

58  
00:03:02,000 --> 00:02:59,370  
scientific remote viewing which is what

59  
00:03:04,550 --> 00:03:02,010  
we examined take apart and do things

60  
00:03:06,860 --> 00:03:04,560  
with it the Farsight Institute nine

61  
00:03:09,710 --> 00:03:06,870  
remote viewers in total were used across

62  
00:03:11,720 --> 00:03:09,720  
all of the methodologies scientific

63  
00:03:13,910 --> 00:03:11,730

controls were done that were different

64

00:03:17,540 --> 00:03:13,920

than that which you see often in other

65

00:03:22,120 --> 00:03:17,550

side experiments for our experiments we

66

00:03:25,970 --> 00:03:22,130

use encryption 256 bit encryption and

67

00:03:28,460 --> 00:03:25,980

this encryption is used to do the remote

68

00:03:30,620 --> 00:03:28,470

viewing sessions encrypt them take the

69

00:03:32,690 --> 00:03:30,630

targets encrypt them and other important

70

00:03:35,660 --> 00:03:32,700

documents encrypt them put them up on

71

00:03:37,100 --> 00:03:35,670

the web for literally tens of thousands

72

00:03:39,890 --> 00:03:37,110

of people around the world to download

73

00:03:42,620 --> 00:03:39,900

and so that we can control the

74

00:03:46,220 --> 00:03:42,630

experiment in that way we also used

75

00:03:48,979 --> 00:03:46,230

eight geographical locations across the

76  
00:03:52,940 --> 00:03:48,989  
planet that were accessible with Google

77  
00:03:56,060 --> 00:03:52,950  
or Google Earth in 2013 we have two

78  
00:03:57,680 --> 00:03:56,070  
timelines I am NOT going to be talking

79  
00:03:59,570 --> 00:03:57,690  
about the two timelines it was an

80  
00:04:02,120 --> 00:03:59,580  
experiment in time that will come

81  
00:04:03,560 --> 00:04:02,130  
perhaps it next year's conference what

82  
00:04:06,860 --> 00:04:03,570  
I'm going to be talking about is what

83  
00:04:10,280 --> 00:04:06,870  
happened with our results for 2008 June

84  
00:04:11,660 --> 00:04:10,290  
first we have eight geographical

85  
00:04:16,150 --> 00:04:11,670  
locations let me just quickly go over

86  
00:04:18,860 --> 00:04:16,160  
what they are by to putt vaalu is

87  
00:04:21,529 --> 00:04:18,870  
actually right there next to this

88  
00:04:23,120 --> 00:04:21,539

concentrated population center was the

89

00:04:27,050 --> 00:04:23,130

center these are all Google Earth

90

00:04:31,310 --> 00:04:27,060

pictures for Jesus in Mombasa Kenya

91

00:04:33,560 --> 00:04:31,320

a ruins surrounded by old town Mombasa

92

00:04:36,530 --> 00:04:33,570

lots of shacks and over to the farther

93

00:04:38,150 --> 00:04:36,540

left here West is big skyscrapers a

94

00:04:41,330 --> 00:04:38,160

mixture of all types of buildings are

95

00:04:42,340 --> 00:04:41,340

there you all know that the Sydney Opera

96

00:04:47,420 --> 00:04:42,350

House

97

00:04:50,180 --> 00:04:47,430

Mount Kilimanjaro Congress the US

98

00:04:52,550 --> 00:04:50,190

Congress building the mullah

99

00:04:57,230 --> 00:04:52,560

International Airport in the maldives

100

00:04:58,909 --> 00:04:57,240

I couldn't resist this one this is KITV

101  
00:05:02,720 --> 00:04:58,919  
one of the remote viewers in the project

102  
00:05:05,270 --> 00:05:02,730  
was dick Algar the Walter Cronkite of

103  
00:05:07,760 --> 00:05:05,280  
Hawaii and that's where he works

104  
00:05:11,600 --> 00:05:07,770  
the KITV building he's a TV news

105  
00:05:14,150 --> 00:05:11,610  
announcer in Honolulu you all know that

106  
00:05:17,540 --> 00:05:14,160  
the Vehicle Assembly Building complex 39

107  
00:05:20,090 --> 00:05:17,550  
Kennedy Space Center there are three

108  
00:05:22,219 --> 00:05:20,100  
ways that tasking is done tasking is

109  
00:05:24,290 --> 00:05:22,229  
when you say I've got a target I'm

110  
00:05:26,270 --> 00:05:24,300  
tasking you you're the remote viewer you

111  
00:05:30,050 --> 00:05:26,280  
go out and do it find out what I have is

112  
00:05:32,600 --> 00:05:30,060  
a target scenario one is that the target

113  
00:05:34,040 --> 00:05:32,610

time is in the past I want you to remote

114

00:05:36,290 --> 00:05:34,050

view something and I'm not going to tell

115

00:05:38,180 --> 00:05:36,300

you what it is but it's the Mona Lisa

116

00:05:41,360 --> 00:05:38,190

when I'm sorry the Eiffel Tower the

117

00:05:42,409 --> 00:05:41,370

Eiffel Tower a long time ago okay it

118

00:05:44,750 --> 00:05:42,419

already happened or the Battle of

119

00:05:45,980 --> 00:05:44,760

Gettysburg or the launching of a space

120

00:05:48,350 --> 00:05:45,990

shuttle something that happened in the

121

00:05:50,420 --> 00:05:48,360

past he sees in the past but now is when

122

00:05:53,420 --> 00:05:50,430

I'm tasking it and that remote viewer is

123

00:05:56,540 --> 00:05:53,430

gonna then go somewhere and later do the

124

00:05:58,850 --> 00:05:56,550

session that's the normal sequence now

125

00:06:00,650 --> 00:05:58,860

when I say I'm talking to the remote

126

00:06:03,560 --> 00:06:00,660

viewer that doesn't happen what we

127

00:06:05,029 --> 00:06:03,570

actually do is an email or a fax get

128

00:06:07,490 --> 00:06:05,039

sent to the remote viewer so they can't

129

00:06:10,130 --> 00:06:07,500

hear your voice or see you and they say

130

00:06:12,409 --> 00:06:10,140

a target exists go Revo remove it that's

131

00:06:16,909 --> 00:06:12,419

normal we don't do that at the Farsight

132

00:06:19,400 --> 00:06:16,919

Institute very much it's just boring the

133

00:06:23,900 --> 00:06:19,410

other one is where the tasking time is

134

00:06:26,960 --> 00:06:23,910

now and the remote viewing time and the

135

00:06:28,760 --> 00:06:26,970

target timer in the future that says the

136

00:06:31,700 --> 00:06:28,770

person the person who's tasking says I

137

00:06:33,950 --> 00:06:31,710

want them to Remote View hmm what

138

00:06:37,010 --> 00:06:33,960

Vladimir Putin is going to be where he's

139

00:06:38,029 --> 00:06:37,020

going to be let's see tomorrow so they

140

00:06:40,460 --> 00:06:38,039

wait till tomorrow and the remote

141

00:06:42,890 --> 00:06:40,470

viewers do it at the same time that

142

00:06:44,930 --> 00:06:42,900

like they say where the task is

143

00:06:46,730 --> 00:06:44,940

basically to find out where Vladimir

144

00:06:48,830 --> 00:06:46,740

Putin is that very moment that the

145

00:06:50,689 --> 00:06:48,840

sessions going on we don't do that

146

00:06:53,030 --> 00:06:50,699

either although I have been told that

147

00:06:55,219 --> 00:06:53,040

some people in the military do that type

148

00:06:57,080 --> 00:06:55,229

of things for tasking what we like to do

149

00:07:01,810 --> 00:06:57,090

at the first idea to do this scenario 3

150

00:07:04,790 --> 00:07:01,820

the target time is often in the past

151  
00:07:07,580 --> 00:07:04,800  
although for the current experiment it's

152  
00:07:10,450 --> 00:07:07,590  
in the future the viewing time is now

153  
00:07:14,180 --> 00:07:10,460  
but the tasking time is in the future

154  
00:07:18,379 --> 00:07:14,190  
meaning the target may be the eiffel

155  
00:07:19,040 --> 00:07:18,389  
tower a long time ago the viewing time

156  
00:07:20,570 --> 00:07:19,050  
is now

157  
00:07:23,870 --> 00:07:20,580  
but the eiffel tower has not yet been

158  
00:07:26,240 --> 00:07:23,880  
chosen as a target you actually wait two

159  
00:07:27,530 --> 00:07:26,250  
or three weeks after the viewing time is

160  
00:07:29,390 --> 00:07:27,540  
over meaning after the session is

161  
00:07:33,140 --> 00:07:29,400  
already complete and then the target is

162  
00:07:35,690 --> 00:07:33,150  
disarmed by some manner works great

163  
00:07:38,750 --> 00:07:35,700

having the target chosen after the

164

00:07:40,730 --> 00:07:38,760

sessions already done now we lose

165

00:07:43,909 --> 00:07:40,740

delayed choice experiment is basically

166

00:07:45,890 --> 00:07:43,919

this multiple quantum timelines are

167

00:07:47,960 --> 00:07:45,900

possible since it can be shown that two

168

00:07:49,790 --> 00:07:47,970

separate timelines can interfere with

169

00:07:51,860 --> 00:07:49,800

one of them with one another the

170

00:07:54,409 --> 00:07:51,870

interference disappears if one of the

171

00:07:57,830 --> 00:07:54,419

timelines is observed or registered in

172

00:07:59,690 --> 00:07:57,840

some way this is true even if the

173

00:08:02,779 --> 00:07:59,700

decision to observe the timeline is

174

00:08:05,029 --> 00:08:02,789

begun is made after both timelines have

175

00:08:08,390 --> 00:08:05,039

begun look at the following let's say a

176

00:08:11,690 --> 00:08:08,400

military remote viewer use a terrorist

177

00:08:13,490 --> 00:08:11,700

event happening a bomb blowing up the

178

00:08:15,680 --> 00:08:13,500

session is given to an analyst the

179

00:08:17,540 --> 00:08:15,690

analyst looks at it Intel is sent out

180

00:08:22,640 --> 00:08:17,550

they captured the terrorists and prevent

181

00:08:24,379 --> 00:08:22,650

the bomb well whose bomb blew up it was

182

00:08:25,940 --> 00:08:24,389

remote viewed you have different

183

00:08:29,270 --> 00:08:25,950

timelines so that's what we're

184

00:08:32,170 --> 00:08:29,280

experimenting with the experimental

185

00:08:34,909 --> 00:08:32,180

design in our study does the following

186

00:08:40,790 --> 00:08:34,919

the sessions were done between January

187

00:08:44,810 --> 00:08:40,800

and May on June 4th

188

00:08:47,780 --> 00:08:44,820

that was the Dow Jones you see that 390

189

00:08:49,190 --> 00:08:47,790

the last three integer digits the last

190

00:08:52,000 --> 00:08:49,200

three integer digits of the Dow Jones

191

00:08:53,110 --> 00:08:52,010

closing average for Wednesday June 4th

192

00:08:55,989 --> 00:08:53,120

determined

193

00:08:59,590 --> 00:08:55,999

which targets were going to be assigned

194

00:09:03,610 --> 00:08:59,600

to which sessions you see we had a pool

195

00:09:06,189 --> 00:09:03,620

of 24 targets of eight geographical

196

00:09:12,030 --> 00:09:06,199

locations three different time points -

197

00:09:14,829 --> 00:09:12,040

four - 2013 and one for 2008 we had 999

198

00:09:18,059 --> 00:09:14,839

possible jumbled random combinations of

199

00:09:20,590 --> 00:09:18,069

which target would go with which session

200

00:09:22,569 --> 00:09:20,600

this is one example there were nine

201  
00:09:24,999 --> 00:09:22,579  
hundred and ninety nine of them which

202  
00:09:27,699 --> 00:09:25,009  
one of those jumbled associations we

203  
00:09:29,499 --> 00:09:27,709  
used was determined by this three-digit

204  
00:09:30,910 --> 00:09:29,509  
number it turned out to be three hundred

205  
00:09:32,170 --> 00:09:30,920  
and ninety so we went to the three

206  
00:09:34,449 --> 00:09:32,180  
hundred and ninety a--the one we found

207  
00:09:37,780 --> 00:09:34,459  
out that what target was associated with

208  
00:09:39,460 --> 00:09:37,790  
which session that was done after the

209  
00:09:40,869 --> 00:09:39,470  
sessions were already done and all of

210  
00:09:42,400 --> 00:09:40,879  
this was put up on the web and

211  
00:09:44,439 --> 00:09:42,410  
downloaded by tens of thousands of

212  
00:09:44,739 --> 00:09:44,449  
people all encrypted so no one could see

213  
00:09:48,759 --> 00:09:44,749

it

214

00:09:50,710 --> 00:09:48,769

are done first targets are assigned to

215

00:09:52,569 --> 00:09:50,720

the sessions by a truly random process

216

00:09:54,460 --> 00:09:52,579

after the sessions are completed and

217

00:09:56,860 --> 00:09:54,470

made available for the public download

218

00:09:59,860 --> 00:09:56,870

results are then posted with passwords

219

00:10:04,689 --> 00:09:59,870

to decrypt all the files after the fact

220

00:10:07,949 --> 00:10:04,699

like in late June the RV results for

221

00:10:12,040 --> 00:10:07,959

2008 are now available at far side org

222

00:10:15,069 --> 00:10:12,050

they are fully verifiable because - that

223

00:10:17,799 --> 00:10:15,079

goes to target times for June first here

224

00:10:19,749 --> 00:10:17,809

are the remote viewers session clarity

225

00:10:22,509 --> 00:10:19,759

scores show how well they did a three is

226

00:10:24,970 --> 00:10:22,519

a really great session that means very

227

00:10:26,650 --> 00:10:24,980

profound target contact - is good but

228

00:10:28,419 --> 00:10:26,660

some decoding error is more one means

229

00:10:31,090 --> 00:10:28,429

more decoding errors more problems than

230

00:10:33,639 --> 00:10:31,100

zero is a miss you can see that a lot of

231

00:10:36,040 --> 00:10:33,649

these targets were very well described

232

00:10:38,650 --> 00:10:36,050

by the viewers they're all up for you to

233

00:10:40,720 --> 00:10:38,660

see at Farsight org you don't have to

234

00:10:42,460 --> 00:10:40,730

believe me my coatings you can look at

235

00:10:51,519 --> 00:10:42,470

them yourself and see how those viewers

236

00:10:55,030 --> 00:10:51,529

did in the process we wanted to look at

237

00:10:57,790 --> 00:10:55,040

our 2013 results but we said when we

238

00:10:59,439 --> 00:10:57,800

started to get the results in it looks

239

00:11:03,069 --> 00:10:59,449

like there was actually some climate

240

00:11:06,580 --> 00:11:03,079

change in 2013 let us get a target on

241

00:11:08,530 --> 00:11:06,590

the west coast near the coast

242

00:11:11,770 --> 00:11:08,540

that's easily an easy target lots of

243

00:11:15,220 --> 00:11:11,780

clear features LAX let's just get that

244

00:11:18,280 --> 00:11:15,230

and try ask it for December 1st 2008

245

00:11:20,260 --> 00:11:18,290

just six months or eight - it a few

246

00:11:22,960 --> 00:11:20,270

months in the in the future so we can

247

00:11:25,030 --> 00:11:22,970

have sort of a calibration type of

248

00:11:26,830 --> 00:11:25,040

experience we can base a baseline

249

00:11:30,640 --> 00:11:26,840

experience that we can judge our future

250

00:11:32,920 --> 00:11:30,650

stuff on so we decided LAX and the

251  
00:11:36,820 --> 00:11:32,930  
viewers were all sent out to look at LAX

252  
00:11:41,380 --> 00:11:36,830  
on December 1st 2008 produced a very

253  
00:11:43,150 --> 00:11:41,390  
interesting experiment for us I'm not

254  
00:11:45,130 --> 00:11:43,160  
saying this is going to happen don't go

255  
00:11:47,650 --> 00:11:45,140  
out and saying Kourtney's predicting

256  
00:11:48,850 --> 00:11:47,660  
anything like a disaster or anything I'm

257  
00:11:52,480 --> 00:11:48,860  
just telling you what the remote viewing

258  
00:11:53,950 --> 00:11:52,490  
results came in the annal the analysis

259  
00:11:56,920 --> 00:11:53,960  
is up on the web you can see it more

260  
00:11:58,210 --> 00:11:56,930  
clearly and how we did the analysis it

261  
00:12:02,020 --> 00:11:58,220  
wasn't just a simple look at the

262  
00:12:08,280 --> 00:12:02,030  
sessions and go oh ah but the 90 the

263  
00:12:10,840 --> 00:12:08,290

2008 December first sessions for LAX

264

00:12:13,710 --> 00:12:10,850  
using the same viewers that did

265

00:12:17,320 --> 00:12:13,720  
extremely well with the June first

266

00:12:20,200 --> 00:12:17,330  
targets that were all verifiable and you

267

00:12:25,840 --> 00:12:20,210  
can see the results as well found no

268

00:12:29,440 --> 00:12:25,850  
airport in December 1st 2008 we use

269

00:12:31,300 --> 00:12:29,450  
Daryl Smith as the best example of all

270

00:12:34,150 --> 00:12:31,310  
the viewers he happened to have all of

271

00:12:37,270 --> 00:12:34,160  
his targets were really good really done

272

00:12:39,270 --> 00:12:37,280  
really perfect jobs so we used his as an

273

00:12:42,610 --> 00:12:39,280  
example this is an example from his and

274

00:12:45,460 --> 00:12:42,620  
then we looked for remote viewing

275

00:12:47,290 --> 00:12:45,470  
evidence that suggested that it was

276

00:12:48,670 --> 00:12:47,300

supportive but what we found was a lot

277

00:12:51,340 --> 00:12:48,680

of supportive evidence coming through

278

00:12:53,950 --> 00:12:51,350

all viewers this may be wrong folks

279

00:12:57,370 --> 00:12:53,960

there may be nothing that happens to LAX

280

00:13:00,250 --> 00:12:57,380

this is part of another experiment we're

281

00:13:02,470 --> 00:13:00,260

a scientist scientific organization this

282

00:13:04,120 --> 00:13:02,480

is just to see we think we understand

283

00:13:06,100 --> 00:13:04,130

the remote billing process do we

284

00:13:07,810 --> 00:13:06,110

understand it well enough to see that to

285

00:13:09,610 --> 00:13:07,820

understand these results so I'm just

286

00:13:11,530 --> 00:13:09,620

explaining what the results are

287

00:13:13,960 --> 00:13:11,540

I'm not a government official who you

288

00:13:16,930 --> 00:13:13,970

can then hang because I sent troops into

289

00:13:18,250 --> 00:13:16,940

Iraq and the war was not right this is a

290

00:13:20,450 --> 00:13:18,260

scientist and scientists can make

291

00:13:24,530 --> 00:13:20,460

mistakes but these are what the results

292

00:13:27,530 --> 00:13:24,540

said very clear dropping this is just

293

00:13:31,250 --> 00:13:27,540

some pages picked out at random clear

294

00:13:35,900 --> 00:13:31,260

discussions of faulting grounds

295

00:13:37,250 --> 00:13:35,910

separating again faulting outcrops I'm

296

00:13:38,930 --> 00:13:37,260

going through this quickly because you

297

00:13:40,430 --> 00:13:38,940

know I have limited times I may run into

298

00:13:42,010 --> 00:13:40,440

the question-and-answer period a few

299

00:13:45,260 --> 00:13:42,020

minutes

300

00:13:48,260 --> 00:13:45,270

other examples Mountains in the back but

301  
00:13:52,730 --> 00:13:48,270  
again no LA in the sense of the airport

302  
00:13:55,550 --> 00:13:52,740  
we targeted the airport other stuffs

303  
00:13:58,310 --> 00:13:55,560  
compressed bracing faulting slipping

304  
00:14:00,050 --> 00:13:58,320  
destructive he didn't miss a single one

305  
00:14:03,670 --> 00:14:00,060  
of the other sessions they were really

306  
00:14:09,620 --> 00:14:07,520  
he said in his summary like land under

307  
00:14:11,360 --> 00:14:09,630  
stress under several forms of fast and

308  
00:14:13,580 --> 00:14:11,370  
violent movement land which is expansive

309  
00:14:16,100 --> 00:14:13,590  
the land feels like it's on the edge of

310  
00:14:18,350 --> 00:14:16,110  
something or coastal the land feels

311  
00:14:19,970 --> 00:14:18,360  
fairly flat and brown earthy the land is

312  
00:14:21,830 --> 00:14:19,980  
affected by a movement which is violent

313  
00:14:23,360 --> 00:14:21,840

abrupt and damaging this movement does

314

00:14:26,360 --> 00:14:23,370

not feel fluid in its movement like

315

00:14:31,100 --> 00:14:26,370

water and it goes on he talks also about

316

00:14:33,500 --> 00:14:31,110

a downwards direction now we go to dick

317

00:14:37,480 --> 00:14:33,510

Gallagher session well let's see a

318

00:14:42,860 --> 00:14:39,800

pretty good coastal line here

319

00:14:47,990 --> 00:14:42,870

garbage structures closely grouped

320

00:14:49,880 --> 00:14:48,000

structures all clumped together sense

321

00:14:52,490 --> 00:14:49,890

that land gives away crumbles fallen

322

00:14:54,740 --> 00:14:52,500

away worn away these folks should have

323

00:14:57,280 --> 00:14:54,750

picked up an airport where the Jets they

324

00:15:01,370 --> 00:14:57,290

did very well with their other sessions

325

00:15:03,860 --> 00:15:01,380

tense quickly arranged some buildings

326

00:15:08,480 --> 00:15:03,870

falling off perched on the edge sense of

327

00:15:10,070 --> 00:15:08,490

a police tape taped off people here they

328

00:15:12,080 --> 00:15:10,080

can walk here but they can't work here

329

00:15:14,990 --> 00:15:12,090

they can't walk their sections cut off

330

00:15:20,270 --> 00:15:15,000

police tapes do not enter areas you

331

00:15:23,690 --> 00:15:20,280

can't see this is clearly from these

332

00:15:26,750 --> 00:15:23,700

data as I see it the aftermath of a

333

00:15:29,420 --> 00:15:26,760

seismic event it didn't happen in

334

00:15:31,730 --> 00:15:29,430

November these people are very common if

335

00:15:33,970 --> 00:15:31,740

you remember a month after Katrina the

336

00:15:35,620 --> 00:15:33,980

police was still a panic

337

00:15:37,330 --> 00:15:35,630

these people are very calmly putting out

338

00:15:39,520 --> 00:15:37,340

things it looks like the thing happened

339

00:15:41,890 --> 00:15:39,530

a few months before based on these data

340

00:15:43,990 --> 00:15:41,900

and there's a more complete analysis not

341

00:15:48,160 --> 00:15:44,000

a complete analysis but a more complete

342

00:15:49,870 --> 00:15:48,170

analysis on the web I project that the

343

00:15:51,250 --> 00:15:49,880

earthquake doesn't really happen in the

344

00:15:53,950 --> 00:15:51,260

fall but it's more likely in the summer

345

00:15:57,940 --> 00:15:53,960

again I could be wrong there could be no

346

00:16:00,490 --> 00:15:57,950

earthquake let me ask one or two

347

00:16:04,090 --> 00:16:00,500

questions the point is though that this

348

00:16:08,200 --> 00:16:04,100

particular example is a good example of

349

00:16:10,600 --> 00:16:08,210

a test that we can use with and with a

350

00:16:12,850 --> 00:16:10,610

particular event that cannot be

351  
00:16:14,230 --> 00:16:12,860  
influenced by humans when we have events

352  
00:16:15,880 --> 00:16:14,240  
that cannot be influenced by humans we

353  
00:16:18,220 --> 00:16:15,890  
have to usually manufacture them by

354  
00:16:21,250 --> 00:16:18,230  
encrypting everything that we know how

355  
00:16:24,100 --> 00:16:21,260  
to do well we just happen to drop into

356  
00:16:26,380 --> 00:16:24,110  
this one so this is a very interesting

357  
00:16:29,290 --> 00:16:26,390  
scientific experiment to see if there is

358  
00:16:30,910 --> 00:16:29,300  
no seismic event in LA even a small one

359  
00:16:33,550 --> 00:16:30,920  
and a lot of exaggeration in the remote

360  
00:16:35,260 --> 00:16:33,560  
viewing whatever then if there's no

361  
00:16:37,360 --> 00:16:35,270  
seismic event then we will simply learn

362  
00:16:40,060 --> 00:16:37,370  
more about the remote viewing process

363  
00:16:42,130 --> 00:16:40,070

but we think we've got it and so we're

364

00:16:52,690 --> 00:16:42,140

now waiting to see it's an interesting

365

00:16:55,240 --> 00:16:52,700

test go ahead Thank You Courtney that

366

00:16:58,090 --> 00:16:55,250

was fascinating and a bit alarming I

367

00:16:59,590 --> 00:16:58,100

live near LA myself I'm sorry you had to

368

00:17:02,410 --> 00:16:59,600

speak a little louder that was

369

00:17:06,070 --> 00:17:02,420

fascinating and bit alarming to me

370

00:17:08,440 --> 00:17:06,080

especially since I lived near LA it

371

00:17:10,170 --> 00:17:08,450

could be wrong yes I realized that I

372

00:17:14,890 --> 00:17:10,180

guess my

373

00:17:18,310 --> 00:17:14,900

my feeling about this is that the only

374

00:17:21,850 --> 00:17:18,320

other one potential explanation I can

375

00:17:23,830 --> 00:17:21,860

think of that wouldn't be the alarming

376

00:17:31,230 --> 00:17:23,840

possibility this is a real prediction

377

00:17:37,570 --> 00:17:34,720

suggestion to the remote viewers because

378

00:17:40,240 --> 00:17:37,580

of the fact we know as the experimenter

379

00:17:44,230 --> 00:17:40,250

picked up the I should say knew what the

380

00:17:47,740 --> 00:17:44,240

target was and your subconscious we

381

00:17:49,150 --> 00:17:47,750

control that effect that's such an early

382

00:17:53,440 --> 00:17:49,160

thing that had to be controlled we don't

383

00:17:55,210 --> 00:17:53,450

need you control it then the task the

384

00:17:58,660 --> 00:17:55,220

target is designed it was designed by me

385

00:18:00,340 --> 00:17:58,670

I told no one about it I sent out an

386

00:18:02,290 --> 00:18:00,350

email to the viewer saying there is

387

00:18:13,900 --> 00:18:02,300

another target please do it it's number

388

00:18:15,880 --> 00:18:13,910

25 I actually okay well now you're now

389

00:18:18,730 --> 00:18:15,890

you're using your using a psychic

390

00:18:21,100 --> 00:18:18,740

explanation to do it explain a psychic

391

00:18:23,680 --> 00:18:21,110

excellent what what I would suggest

392

00:18:24,370 --> 00:18:23,690

Richard is that the theory is developed

393

00:18:26,050 --> 00:18:24,380

in my book

394

00:18:28,360 --> 00:18:26,060

remote viewing the science and area of

395

00:18:31,120 --> 00:18:28,370

non-physical perception and then this is

396

00:18:33,400 --> 00:18:31,130

just one part of dinner I presented two

397

00:18:35,140 --> 00:18:33,410

experiments today one were experiments

398

00:18:37,950 --> 00:18:35,150

where sessions were we done we're done

399

00:18:41,200 --> 00:18:37,960

to predict targets that were chosen in

400

00:18:42,580 --> 00:18:41,210

June and that's verifiable already done

401  
00:18:44,890 --> 00:18:42,590  
signed sealed and delivered you can look

402  
00:18:48,130 --> 00:18:44,900  
at it and the question is if they did

403  
00:18:50,410 --> 00:18:48,140  
that well well what about a target

404  
00:18:52,960 --> 00:18:50,420  
that's six months into the future so you

405  
00:18:55,090 --> 00:18:52,970  
see there's two parts of this even if we

406  
00:18:59,470 --> 00:18:55,100  
got the L anything wrong we've still got

407  
00:19:01,840 --> 00:18:59,480  
the stuff for June 1st 2008 correct and

408  
00:19:03,580 --> 00:19:01,850  
that will turn your head a quick

409  
00:19:05,370 --> 00:19:03,590  
reminder that tonight we're having a

410  
00:19:07,810 --> 00:19:05,380  
panel on remote viewing so these

411  
00:19:09,460 --> 00:19:07,820  
questions should be kept short and

412  
00:19:12,010 --> 00:19:09,470  
they'll be follow-ups tonight the topic

413  
00:19:14,050 --> 00:19:12,020

is predicting the future also are those

414

00:19:16,420 --> 00:19:14,060

rust hard talking about the future it

415

00:19:19,960 --> 00:19:16,430

seems like you had a excellent protocol

416

00:19:23,080 --> 00:19:19,970

by putting your target choice after the

417

00:19:25,660 --> 00:19:23,090

description as a way of dispensing with

418

00:19:28,990 --> 00:19:25,670

displacement and displacement the person

419

00:19:31,870 --> 00:19:29,000

will often describe what the target is

420

00:19:32,800 --> 00:19:31,880

in the mind of the Tasker rather than

421

00:19:35,860 --> 00:19:32,810

the actual target

422

00:19:38,230 --> 00:19:35,870

why did you revert back to the system

423

00:19:40,270 --> 00:19:38,240

that doesn't work so well for this

424

00:19:42,580 --> 00:19:40,280

target that you had so much interest in

425

00:19:44,710 --> 00:19:42,590

I mean this is a case as the other

426  
00:19:46,570 --> 00:19:44,720  
person mentioned where your excellent

427  
00:19:50,080 --> 00:19:46,580  
viewers have no trouble at all

428  
00:19:52,930 --> 00:19:50,090  
describing your excitement over this

429  
00:19:55,300 --> 00:19:52,940  
particular target rather than using the

430  
00:19:57,250 --> 00:19:55,310  
excellent procedure that you just

431  
00:20:03,110 --> 00:19:57,260  
described previously

432  
00:20:06,980 --> 00:20:03,120  
this was a separate experiment and it

433  
00:20:09,470 --> 00:20:06,990  
was done after the other 24 sessions had

434  
00:20:12,500 --> 00:20:09,480  
already been initiated there was no

435  
00:20:14,120 --> 00:20:12,510  
communication verbally with the viewers

436  
00:20:16,970 --> 00:20:14,130  
there's no way they could have gotten

437  
00:20:20,900 --> 00:20:16,980  
any sense of excitement in fact it was a

438  
00:20:22,940 --> 00:20:20,910

rather boring tasking I wanted LAX and I

439

00:20:26,060 --> 00:20:22,950

wanted just to get some sessions of LAX

440

00:20:29,300 --> 00:20:26,070

for December first so that we could then

441

00:20:31,610 --> 00:20:29,310

compare the sessions for 2013 which were

442

00:20:33,740 --> 00:20:31,620

showing more dramatic change so I wanted

443

00:20:35,060 --> 00:20:33,750

to say you see if you go out six months

444

00:20:37,460 --> 00:20:35,070

in the future you're not getting so much

445

00:20:39,740 --> 00:20:37,470

change and you go out six I mean five

446

00:20:43,160 --> 00:20:39,750

years in the future you are and when the

447

00:20:46,220 --> 00:20:43,170

sessions came in it was a whoa this is

448

00:20:49,240 --> 00:20:46,230

different you see it's we have figured

449

00:20:51,860 --> 00:20:49,250

out how to predict targets in the future

450

00:20:54,290 --> 00:20:51,870

but to do that you must make sure that

451  
00:20:56,960 --> 00:20:54,300  
absolutely nothing can interfere with

452  
00:20:59,600 --> 00:20:56,970  
the timeline that's why we encrypt

453  
00:21:01,730 --> 00:20:59,610  
everything but a seismic event is just

454  
00:21:04,580 --> 00:21:01,740  
like that no human can mess with it I

455  
00:21:06,320 --> 00:21:04,590  
don't have to encrypt it so if I

456  
00:21:09,410 --> 00:21:06,330  
understand the remote viewing process

457  
00:21:11,480 --> 00:21:09,420  
well it should work but maybe it won't

458  
00:21:12,710 --> 00:21:11,490  
and if it doesn't I'm back to the

459  
00:21:14,360 --> 00:21:12,720  
drawing board and we try to figure out

460  
00:21:16,370 --> 00:21:14,370  
what happened but there was no

461  
00:21:19,300 --> 00:21:16,380  
communication other than email that went

462  
00:21:21,650 --> 00:21:19,310  
out we have another target target 25
