

CLIPS

LUIS ELIZONDO

PAST, PRESENT & FUTURE

1
00:00:03,669 --> 00:00:01,429
would you

2
00:00:05,910 --> 00:00:03,679
behave the same way

3
00:00:07,829 --> 00:00:05,920
observing another intelligent species on

4
00:00:09,830 --> 00:00:07,839
their planet would you stay at a great

5
00:00:12,070 --> 00:00:09,840
height would you observe their navy from

6
00:00:13,749 --> 00:00:12,080
a distance you know

7
00:00:15,190 --> 00:00:13,759
do you appreciate how these objects

8
00:00:16,950 --> 00:00:15,200
appear to behave and do you think we

9
00:00:19,429 --> 00:00:16,960
would do exactly the same

10
00:00:21,990 --> 00:00:19,439
well we we do now don't we when we when

11
00:00:23,990 --> 00:00:22,000
we fly over the serengeti in africa with

12
00:00:26,470 --> 00:00:24,000
the helicopter looking at the the

13
00:00:28,950 --> 00:00:26,480

migratory patterns of wildebeest right

14

00:00:30,470 --> 00:00:28,960

we stay a safe distance we we fly over

15

00:00:32,549 --> 00:00:30,480

the herd probably scare the hell out of

16

00:00:34,950 --> 00:00:32,559

them when we're flying sometimes we may

17

00:00:36,950 --> 00:00:34,960

decide to dart one and pull some blood

18

00:00:39,910 --> 00:00:36,960

samples to to see you know the health of

19

00:00:43,670 --> 00:00:39,920

the herd and what not reproductive

20

00:00:45,590 --> 00:00:43,680

uh health and and then uh you know we we

21

00:00:47,430 --> 00:00:45,600

fly away and of course the wildebeest

22

00:00:48,869 --> 00:00:47,440

wakes up you know a couple hours later

23

00:00:50,950 --> 00:00:48,879

with you know a sore button like what

24

00:00:51,990 --> 00:00:50,960

the hell was that

25

00:00:54,630 --> 00:00:52,000

um

26

00:00:57,430 --> 00:00:54,640

we we do that now we do it in the deep

27

00:00:59,590 --> 00:00:57,440

oceans uh we that's that's kind of the

28

00:01:00,630 --> 00:00:59,600

what what science does isn't it we
