Implant Removals:

Five Abductees Discuss Before and After Effects
by Eve Frances Lorgen, M. A.

Several years after the surgical removal of their alleged alien implants, five individuals courageously accepted to take part in an interview to discuss their "before and after effects". All persons, one male and four females, shared one thing in common: UFO encounters and contact with non-human alien beings.

Dr. Roger Leir, a podiatrist from Thousand Oaks, California, founder of FIRST (Fund for Interactive Research and Space Technology) and Derrel Sims, C.Ht., R.H.A., a certified hypnotherapist, co-founder of FIRST and experienced UFO Investigator of over 27 year, orchestrated the successful surgeries with a team of competent medical professionals and volunteers. The first set of "implant" surgeries took place on August 19, 1995 at Dr. Roger Leir's podiatry clinic in Thousand Oaks, California.

Pat Parrinello, a 47 year old male from Houston, Texas, and Mary Jones (a pseudonym) 52, also from Texas, had the anomalous objects appear in X- rays, although both UFO experiencers had no record of previous surgeries. Both individuals were investigated by Derrel Sims of HUFON (Chief Investigator for Houston UFO Network) and referred to Dr. Roger Leir for surgery, based on their past UFO encounters and X-rays which confirmed the anomalous objects. Pat's object was removed from the back of his left hand, and Mary's objects excised from her left big toe. All services were performed free of charge.

The alleged implants removed from the first set of surgeries were studied by two different pathologists, and then sent to various independent laboratories for extensive scientific analysis. The tests performed on these alleged alien implants were: a pathology/tissue evaluation, laser induced breakdown spectroscopy (LIBS), extensive metallurgical testing involving a density immersion test, X-ray energy dispersive spectroscopy, scanning electron microscopy, X-ray diffraction pattern analysis and electron/magnetic and fluorescence property analysis. Isotopic range tests are also in progress. Tests were conducted by the National Institute of Discovery of Science (NIDS), New Mexico Tech, and other independent sources.

But that is not all. While these unusual objects were being evaluated for scientific study, another set of implant surgeries took place on May 18, 1996. Two women from this second set of surgeries came forward for this interview and follow up study. Dorothy O'Hara, a 61 year old female from Palm Springs, California, and Alice Leavy , 40, from Newberry Park, California, each had similar objects removed from their left lower leg. Another woman, Licia Davidson, 37, who has had numerous UFO and alien encounters, had a rare, crystalline-like object removed from her foot in January of 1997.

Findings

"The findings of these implant surgeries are highly unusual," reported Dr. Leir. "In all these cases, there was virtually no inflammatory response." This is not the usual finding in foreign tissue reactions. Normally, foreign bodies embedded in tissues result in some type of acute or chronic inflammatory response, and may include fibrosis and cyst formation. Such was not the case here. The pathology reports of the first two surgeries revealed that the metallic objects were encased in a very dense, tough, grey membrane consisting of proteinaceous coagulum, hemoserin and pure keratin. More simply, blood protein and skin cells that are usually found in the superficial layer of the skin. The tough, biological "cocoon" encasing the implants were also found to contain nerve proprioceptors - nerve and pressure cells of the wrong tissue type for that part of the body. These implant cocoons also fluoresced a bright green color in the presence of an ultraviolet light source.

The implants from the two women from the second set of surgeries did not exhibit metallic properties like the implants from the first set of surgeries. In fact, the spheroid, whitish objects did not contain the tough, biological outer jackets, or fluoresce from a UV light source. These types of implants (possibly biological) also lacked the expected inflammatory response, according to the pathology reports. The crystalline-like object excised from the foot in the most recent surgery, also lacked the tough, grey, outer membrane and had virtually no inflammatory response, as in the other implant surgeries. Test results from the first set of implants revealed that the lammelar, needle shaped metallic objects in question are basically meteoric in origin, containing at least eleven different elements.

In an interview with Alien Encounters Magazine, (July 1997 issue, United Kingdom) Derrel Sims commented on the uncommon, non-rejecting human response to the implants: "It seems that the dense fibrous membrane may have been the person's own surface skin. If this is the case, it appears that the metallic objects are wrapped in a sheath of keratinaceous material (surface skin). Nerve fibers then surround the tissue and appear to be attached to larger nerves. The fact that both persons (from the first set of surgeries) objected verbally and physically could

be an indication of this (nervous system) connection." Mr. Sims believes the indications are very strong that these implants are extraterrestrial in origin. "But", Mr. Sims concedes, "Whatever the scientists say who have examined the objects say, is what we will say." Derrel Sims has stated that a scientific peer review of all tests must be done before more specifics can be released. This is the standard course of action taken in any scientific endeavor.
