

A comparison image (big) of the Ramsey/Dubose debris and the tech drawing of the ML-307 radar reflector and an image of the "MOGUL" balloon with ML-307's in place. The balloon image is from a later date than Roswell as the balloon being used looks like a single polythene envelope of the "Skyhook" type that only started to be used late in 47 (Sept/Oct). The pointer and insets indicate some of the "anomalies" that shouldn't be there. The insets are: a) The Lion Head and Plug/cable to the Glyph Panel b) Damaged "Hollow" Beam c) another hollow beam end on and an "T" beam with angled end. d) The Emblem.
