The upshot can only be, I am now understanding, that we are meant to go out with a bang, not a whimper. We'll have to admit that the Millennium is more than a bit wimpy. It is certainly anti-climactic. We were meant to go out with our boots on, not wearing ballet slippers, with no offense to George Balanchine.

If this is correct, then we just might have to rethink our Millennium Initiative. Are we now the [Apokatastatists](#) (5,100 hits) or maybe Apokatastasians, which are like the ecstasies, but a bit more rational? Apokatastasis is the restitution (salvation?) of all things in God. This is clearly Universalist and BPW-ish. Is this the position of Greek Orthodoxy, or only of its founders? It was widely taught in that Church until it was condemned in 543.

It is not surprising that the doctrine of restitution or restoration should be associated with eternal return, in which case it becomes a natural, rather than supernatural, process. This argues against divine grace. I have no desire to do that. This is not easy stuff: [Origen of Alexandria and apokatastasis ...](#) -- Edward Moore.

[7/10]

In the doctrine of eternal return there is usually a repeated decline from an original state of perfection, somewhat as in the case of biological reproduction. The repetition can continue indefinitely or until it is brought to a final conclusion or cosmic restitution. It is the doctrine of Creation that this cycle need occur only once. Redundancy may be natural, but also pointless. God does not sanction meaninglessness.

Is the doctrine of eternal damnation necessary to prevent repetition? Is it the logically necessary complement to eternal grace? It is curious that the idea of cyclic time is tantamount to the sanctioning of a background of linear time. There is in this a disregard for the mystery of time. This from the mystics!

Linear time is a Godsend. It has value, however, only in its finitude. God is the timekeeper. There is a pervasive feeling that we have been using up our allotted time. The time draws nigh for a wrapping up. The reconciling of our accounts is what some have taken as judgment, but it is only a reconciliation, a balancing and a closing of the books. The finality of it is just the seal of its blessedness.

How much 'time' will the wrapping up require? Would it not have to fall within the lifetimes of most of those participating? This would mean that the linearity of its time could not span more than a couple of decades of normal time. The end cycle might be viewed as a Millennium, but this would be a stretch.

More pertinent are the questions of apocalypse, Armageddon, tribulation and cleansing or purification. I would suggest that all of these are mainly the psychological concomitants of the *metanoia* of reconciliation. They will be onerous for those who have much to reconcile. Apocalypse does mean only to uncover, not to destroy. The only destruction is of our ignorance, our agnosis.

Is it to be surmised that biological reproduction will cease in the end? 'Woe be unto them that are with child in those days.' Is celibacy to be enforced in these days? I would suggest that it will become self-evidently discouraged. Might there be an increase in abortion? Certainly of the spontaneous variety.

What then are to be the signs of the times? Can 9/11 not be one? Can flying saucers and crop circles not be another? An epidemic of mental aberration and discontinuity? Anomalous phenomena? Culture clashes of the mainly non-violent sort, etc., etc.? I.e. more of the same? Yes, a lot more!

And, yes, my precious Millennium is being subsumed and overtaken by more dramatic events. It will be there for those in dire need of a respite. It will be the convalescent ward.

Please note that from the purview of eternity, the Fall is nothing too unnatural. It is rather its non-repetition that is unnatural. The fall is the act of Creation, of quasi-spontaneous, but ultimately optimizable symmetry breaking. It is reconciled and finalized in this End. There is only one salvation. Creation was no accident, but it does subsume all accidents that may be reconciled and rationalized. Anything not so meliorated need not exist -- it is only apparitional in the end.

Without a Millennium there can be no Earthly kingdom and no messiah. There can only be a Reconciler. I had been using messianics and the second coming synonymously, but that may no longer be technically accurate. The Satan being loosed at the end is materialism and the many versions nihilism, disbelief and agnosis. It is not too big a stretch to see that transhumanism, Marx and Hitler take the roles of antichrist. Have we not already had sufficient tribulation of the physical sort? From here on there will be the more psychic forms. A constant threat of terror falls into this category.

A major mundane concern will be the global economy. How will it respond to a more definite perception of the Apokatastasis? Will the Reconciler also have to keep the trains running up to the End? There are so many things that can go wrong, what is it that can go right? Relative moderation in all things will be the word for the latter days. Let us not be breaking rank. Let there not be a stampede.

Will there be too much temptation to finally settle scores? Justice is not finally a mundane matter. Justice is one thing, reconciliation is another.

What I am saying here is that the Millennium is to be overtaken by the Apokatastasis. The big M becomes only a niche in the larger picture. It will not be in the flow of the cosmic mainstream. It is a matter of historical interest to see how the Millennium gained its notoriety in these latter days. If there was a deliberate obfuscation, to what end? Does this all go back to Cyrus Scofield? The conspiracy buffs are quick to pass judgment: [The Greatest Hoax!](#) Is it all about the NWO, WTO and WTC? I suspect we may have to parse through a bit of this stuff, speaking of the global economy. Speculation abounds: see the [Historicist](#) website.

[7/11]

What was the Millennium all about? Every other cosmology had put the pristine golden age at the beginning of the cycle, following the biological cycle of birth leading to death.

This organic, animistic, polytheistic, pagan view of the world was decisively interrupted, rather late in human history, by monotheism. The Jews, by about 1,000 BC are credited with this crucial invention, followed by Zoroaster, Jesus and Mohammed. The monotheist impulse inserted a moral and creative

element into the cosmos. There was still the pristine primal state, the original golden age, followed by a degeneration, but no longer could there be a cosmic life-cycle. Creation had to be deliberate, and redemption had to be final.

Clearly there was a decisive abrogation, arrogation of nature. The natural order was seemingly disbanded by fiat. This arrogation has always been a tough sell, then and now. It seems so obviously contrived. The contrivance looms even larger as science delves further into the natural order, up to the point, at least, that anthropics rears its head. Creationists, however, continue having to fight what seems like a rear-guard battle relative to the scientific Juggernaut.

Nonetheless, given monotheism, what are we to do with nature? Where does nature fit into the salvational scheme? This depends somewhat on Armageddon. Is there a battle to be fought? As a universalist/apokatastasist I would think not. The apocalypse is simply the final revelation of Creation. The battle is over before it can be joined. With the finish line in sight, who is going to throw themselves down in front of the glory train? Who is going to play Ahriman?

Is there a last minute battle for the control of Creation? If we are the co-creators, there can only be a breakaway sprint to the finish. Will this disrupt the *peloton*? There may, at best be a tussle for Reconciler. If so, where is it? Has the breakaway succeeded? Where is the yellow jersey?

Creation has a plan. We are already the BPW. No Ahriman is going to take that away. Not now, not ever. Don't fight the system, don't fight city hall, not when we're doing cosmology. There is no *deus ex machina*. There is no larger pond.

There can be no stasis with apokatastasis. Creation is wrapped up, tighter than a gravity-string. The best and the brightest were well distracted by the many trees in this forest, but then the forest is pulled out from under us. The curtain is lifted, the veil is parted. The Millennium was supposed to be the final act, but the set is about to be disassembled. The Millennium becomes redundant.

To the victor go the spoils. Bring on the wine and the seventy-two virgins. Bring on the Elysian fields. Where is the Millennium for us to celebrate our Conquest over Ahriman? Don't miss Paradise 2, the sequel. What is God good for if we don't get our just deserts?

One day with God or a thousand years for humankind? It seems that we are being given a choice here, but is it really? We have to choose between paradise and heaven. Paradise has three dimensions, and heaven has rather more. God has had a hard time squeezing into these three dimensions. Isn't it about time we gave her a break? And I dare say, the same goes for nature. We are about to experience a deep ecology. The Matrix awaits us. Are we not her prodigal sons? Do we not have much to offer?

Whose conspiracy was the Millennium? Is it not a hold-over from paganism? Is it not our security blanket, the last buffer between ourselves and the Matrix? Paradise was to have been our training training ground for heaven. But then what have we been doing for the last ten thousand years? Will sitting on our butts for another thousand years get us in better shape?

Can't we at least get a respite? Sure. Limbo is not to be sneezed upon. Any time things get too hectic, any time you want to stop the world and get off, this is the place for you. Ramstein holds nothing over Limbo, when it comes to R&R. Be sure to check out the spas, water courtesy of Lethe.

Can we not just go home? Well, I think you came to the right place.

All of this does make the present situation a bit more fraught. We are at a real jumping off point. False signals are frowned upon. Our take-off roll must be as smooth as possible. Let's hope it can be a roll-off and not a blast-off. Our check-list has to be thorough.

Now we will have to contend with the survivalists. For how long will the electricity and water keep flowing? What do we do when the lights go out? Does **FEMA** have an eschaton contingency? This is the reason I have to worry about Ron & Co. Why Ron has to worry about Ocelot & Ferret. Where are the EBEs when we need them? Who's got a plan?

In the end, we're just going to have to go with the flow. The Millennium was to be a staging area for the eschaton. The elect would be able to get their ducks in a row. Guess what? We are the elect. This is our stage. As with the *peloton*, try to stay in the draft. The Fundies will be screaming about false messiahs. There will be disturbances in the ranks.

We need a breakaway team on the Internet. That will require external input of the phenomenological kind. We are back to the witness problem. The breakaway team will not have much time to worry about the infrastructure. We chart the metaphysical course, the physics has to take care of itself.

At one or more points there will be panics, economic and otherwise. They will have to play themselves out. If the infrastructure begins to unravel, the process may have to accelerate. It could get messy. There may be blood in the streets. What is the least mayhem we might reasonably hope for, without a *deus ex machina*? Won't we have to assume there will be such at an early juncture? But it cannot come too early without becoming an agent *provocateur*. There will have to be a metaphysical docking maneuver at the appropriate time. I doubt that we can or should try to predict the time and place. There will have to be some practice dockings along the way, however. Are we talking UFOs and portals, etc.? Perhaps. We shouldn't expect anything either too clichéd or too exotic.

[7/12] [[a](#)]

Another strategy is just to keep the eschaton card in our back pocket until a rainy day. There are also objections. There will come a point at which conditions on Earth will begin to deteriorate if we fail to adhere to the cosmic plan. By waiting for a rainy day, we are likely to be extending our sojourn here beyond its allotted time. On the other hand, we also do not want to cut our time short. The timing question will be handled in a nearly spontaneous fashion, and that may be another reason why we can expect minimal input. It is too bad that we cannot use the eschaton as a threat to hold over the high and mighty.

However, if I am correct about the Jack Anderson column, there must be some political awareness. At the time this was the most widely circulated column, subscribed to by upwards of 400 newspapers. I circulated this item to a few people on the Sarfatti list last month.

CUFF LINKS AND TRADE DEAL COME UNDONE
Author: JACK ANDERSON
MICHAEL BINSTEIN

Article Text:

The balance of trade between Japan and the United States occasionally rests on something as inconsequential as a pair of cheap cuff links.

These particular cuff links were a gift from President Bush to his good friend Charles Leighton of Acton, Mass. Leighton treasured them just long enough to use them as a bargaining chip in a multimillion-dollar deal with Toyota -- dangling them as evidence that he had entree to the White House. It was a good try, but the cuff links broke while in the possession of the president of Toyota. He was embarrassed. The contract later fell through, and Leighton learned that name-dropping is not enough to seal a deal.

Leighton is chairman of CML Group, which used to own SyberVision, the maker of pricey motivational tapes marketed to business people. Toyota was considering buying some of Leighton's tapes, 1 million copies of a Bobby Jones golf video to be used as part of a promotion for the sale of Lexus cars. The deal was worth \$20 million to Leighton, so he pulled out the big artillery -- his friendship with George and Barbara Bush.

Sources close to Leighton say he occasionally boasted about the friendship. Then he put those boasts in writing in a letter to Dennis Yamamoto, executive vice president of International Consulting and Marketing Group Inc., Toyota's agent in the United States. The letter implied that Leighton could use his connections in the White House to make some points for Toyota.

In the letter, Leighton asked Yamamoto to pass on some items Leighton had received from Bush, to the "appropriate people at Toyota." According to the letter, Leighton said the items were a "way of letting {Toyota} know I will communicate to the Bush administration Toyota's purchase of SyberVision tapes and its importance to the balance of trade between Japan and the United States."

The items included pictures of the Leightons and the Bushes together, and the pair of presidential cuff links. The letter assured Toyota that these were not your run-of-the-mill White House souvenirs. Bush personally handed them over, Leighton said.

The cuff links were passed to the president of Toyota, in whose possession they broke, as did the deal.

The White House acknowledged that the Bushes and the Leightons are "good friends." Leighton and his wife, Debra, also contributed to Bush's 1988 presidential campaign, and our sources believe the friendship is really between Barbara and Debra.

We'll never know how Leighton planned to slip the good news to Bush that Toyota was buying American. Leighton refused to talk to us when he learned that our reporter Allison Hawes had obtained a copy of his letter. His spokeswoman said the cuff links were "inexpensive tokens" given out by Bush when he was campaigning, and Leighton merely thought someone at Toyota would find them interesting.

Leighton's spokeswoman said her boss wasn't serious about letting the president know personally that Toyota was buying American. She said the cuff links were a three-dimensional reminder to Toyota of the SyberVision deal, and more of a personal joke between Leighton and Yamamoto. That's a joke Yamamoto may have missed. He wasn't laughing when we contacted him about the letter, and he refused to talk to us on advice from his lawyers.

Sources close to the deal say the letter was no joke, and that Leighton was eager to see that the lucrative deal went through, even if it took a little name-dropping.

Since the cuff link caper, CML has sold SyberVision, and is no longer trading in presidential memorabilia either.

One might wonder what the naive reader might have made of this story? It would seem that this is much

to do about nothing. One might scratch one's head and pass on. If these events actually transpired, would they be newsworthy? Of all the items concerning international trade and the President, one might imagine that this would be about the least significant. It appears that someone is intent upon embarrassing Mr. Leighton. Perhaps someone is attempting to manipulate the price of CML stock. Would a reporter of Mr. Anderson's reputation likely be willing to participate in such a petty scheme, much less dragging the President into it? Questions were posed to the White House, but would not the folks there be curious as to the reason that Jack saw fit to have this item placed on the breakfast tables of millions of his readers? Are we to imagine that the politically savvy folks at the White House might not smell something fishy? What would be Jack's explanation?

Jack turns a broken cuff-link into an international incident. I turn it into a cosmic incident.

'Debra' happens to be my older sister. Does that make this any of my concern? Perhaps.

Here is my theory, along with some further information. I would never have known about this column if Deborah had not told me about it, and then sent me a copy of it. She was more angry with me about it she than she has ever been about anything else. She said that the President was 'furious' and that she suspected that I had leaked the story to Anderson. I was frankly baffled. Even though I was already communicating with Ron, I had no specific reason to suspect a connection. It was not until maybe a couple of years ago that I recalled this incident and began to suspect that it may well have been part of a bigger picture. It was only a few weeks ago that I got this copy off the Internet.

Let me cut to the chase. Suppose there was a secret operation that had international implications. You then wished to inform select segments of the international intelligence community as to the seriousness of this operation, but do so in a manner that other parties could not readily exploit or subvert. We have here a very informal, 'analog' version of 'public key encryption'.

But wait, why take this roundabout route? Why not just send a cable to the relevant agencies? There is the problem of 'false flagging'. How is the information to be validated? Someone with the relevant authority would need to personally vouch for the information. There would have to be a direct communication between the intended recipient and the person with the authority. The cable could be sent with the electronic signature of the author. But then an individual recipient would have no way to verify directly that the information was not being targeted or tailored. A more public venue is required, but this subverts the need for secrecy. Thus the 'public key encryption'.

There then has to be a second key, which together with the first one will open the particular box. As I was struggling though this scenario just a few weeks ago, it occurred to me that I was the one who had sent out the second key. I had sent it about four months prior to the Anderson column.

It was in about my second telephone conversation with Ron in Sept. '91, that contact having been initiated by me, that he reported his intention to visit Los Alamos to 'hunt for Aliens'. Quite naturally, I found this statement provocative. I reciprocated with my own provocation. I was, at that time, participating in the UFO Forum on CompuServe. I put out my own little 'press release' to the effect that 'Ron at the CIA' was planning to talk to the Aliens. I averred that this might not be necessary since I was the Holy Ghost and I could tell him what he needed to know about the end of the world. Furthermore, 'If Ron lets the air out of my tires, I will have my big sister tell Nancy Ellis on him.'

I had thought that this might put a crimp in Ron's MO, but it did not seem to. When I ventured to call him back in two weeks, he said that his phone had been quite busy. Even Whitley Strieber had wanted to know what was going on. I did not think I needed to ask him if he knew who Nancy was. She is the now former President's sister. He did ask me, in the future, to not refer to him as in the previous paragraph. Well, there has been much water under that bridge. In effect, I had blown his cover. None of his previous correspondents had done so, not to that considerable extent. You understand that George W. faces a possible jail term for possibly having committed a similar offense. Well, he is an officer of the government. I am not.

At the time of this incident, Ron was the head of the official interagency Phenomenology Group. As such he would need to be in contact with many of his co-'phenomenologists' around the world. There would have to be one or more global phenomenology networks among the mutually concerned parties. In fact it was my interest in the Crop Circle phenomenon in Britain that provided my entrée to Ron. It turns out that he was in close contact with a US citizen over there, in that 'field', who appears to be now, at least, a colleague. Ron might not have been willing to be completely reliant on his colleagues in British Intel, not for something that sensitive.

These are the bare circumstances of the transmission of my quasi-public 'key'. What did Ron tell his correspondents? My understanding is that the message was simple, 'Dan is crazy.' But if Whitley had heard about my outburst, what about Ron's global network? What were they told? Move forward four months and substitute Barbara for Nancy. Don't we then get a contrasting picture? There are now two dots that could be connected.

The next question is who might connect these dots. Frankly, I am the only person I know to have done so. Jack Anderson, based on some previous columns, would have been known to be in the 'phenomenology loop'. His column would have been followed by others in that loop. If something 'strange' like the above showed up, it would likely have been flagged for possible future analysis. My previous transmission that caught the attention of Whitley and several others, would have also been noted by those in the loop, if for nothing else than instancing a then unprecedented level of exposure for Ron. Two items flagged, one possible connection: Nancy Ellis.

If you enter that name in Google, the fiftieth entry provides the correct middle name. That is a stretch. Only a major intelligence organization would have been able back then to connect these dots spontaneously. However, anyone given a heads up, could do so, easily. And that would be all that would be necessary for the above stated purpose of verification. The President or someone near to the President would very likely be aware of the Ron&Dan 'show'. It would have been a very small loop then, but very easily expandable to include others outside that loop, as you now may be witnessing. Does that not mean the information could have been transmitted to people who might be motivated to act in contravention to the R&D 'operation'. I am now contradicting my previous assertion that this 'encryption' would be relatively secure. It would only take one bad apple to compromise it.

Two points: the show goes on, and it was bound to be compromised sooner rather than later. I was making a lot of noise about things, then as now. The aviary/aquarium protocol is well dispersed. My eschatological proclivities would not be assigned to mere lunacy by anyone who would take a few moments to consider the possible protocols along with Ron's ostensible continuing associations. If there were any doubt then that this was a serious contingency, can there be any now, now that the Anderson column has been nailed to this door? My sister will vehemently deny any connection. She does not remember having spoken to me about it. How then did I find out? I had previously asked her to have someone at the White House check out Ron's *bone fides*. She says that she never did so. Is she also forgetful about that? (I eventually had to go to Chris Straub, ranking staff member for the SSCI.) Why else might she have connected me with the column? I understand now that the article was delivered personally to her in Boston by a Presidential assistant. With her lawyer she wrote a response to the President. Did no one ask, 'What is this tempest in a teapot?'

I continue to twist in these winds. Reality is a precious commodity in these precincts. Do I grasp at straws? This is one instance where anyone, now, may judge for themselves. Should I now start to watch my backside? Ron made a big point of introducing me to his 'bodyguard' last month. Hmmm. And so it goes.

There may well exist an eschaton contingency, sufficiently serious to be deemed appropriate for briefings to heads of state. How does my reputation fare as a designated source, when a major component of my scenario, touted for the last five years, is unceremoniously dumped after an argument with my sister? This

is hardly conducive to engendering confidence in the source. Surely there must be a better source. Could this visible component have been carried this far if there did not exist a reliable, covert reference source? What purpose then could possibly be served by the R&D amateur hour? Is this someone's idea of comic relief? Where is the E Team? Where is the Big Kahuna?

If this is not a joke, then this is eschatology of the people, by the people and for the people. Minimalism and spontaneity are for now and forever, if I have anything to say about it. If I am to be a stand in, then the real actor is beginning to look a bit bashful. Perhaps she has stage fright. It can happen to the best of us. If there ever were to be a paradigm case of WYSIWYG, would this not be a contender?

[7/13]

If George H. W. was briefed, has he behaved appropriately, with or without the Millennium factor? That would depend upon with whom the President would be advised that he could discuss the matter. This number would be limited, much smaller than the circle of policy makers. In that case, the ramifications would likely be minimal. There would be a lack of opportunity to integrate the information into the daily political grind, which would continue to progress with its own logic. A single point of reference would not constitute actionable intelligence for the President. There would be no encouragement for premature deviation or intervention on his part. Just keep on holding things together. The biggest departure from this line has been the invasion of Iraq. Perhaps W. does have a better source, and I'm not necessarily referring to Wolfowitz or Condi. There is the larger consideration of engagement, which is being played out in that arena. I personally do not feel motivated to second guess all of those considerations. I would not look forward to ever possibly having to do so. Well, given that 9/11 was part of the run up to the larger drama, something like the Afghan/Iraq engagements must have been factored in to this picture. That would have been a no-brainer. Should any of this factor into the next election. That would be pretty academic at this point. The eschaton will most assuredly not be a political event. The whole point of the clandestine preparation would have been to keep the politics out of the larger scenario. Any high level briefings would be directed mainly to that end. The political considerations are to be minimized. The bigger the stick, the softer the walk. Any political briefing would be mainly for the benefit of this effort, not for the enlightenment of the politician.

Perhaps we can now better appreciate the nuances of the Anderson column. Among other things, it acts as a tripwire relative to my general level of awareness, and also as a 'timed' release tablet. I daresay this would have been pushing the envelope of human ratiocination. One might wonder what Dennis or Charlie ever made of this incident. I'm not likely to find out. Curiosity can kill the cat.

Next up, and on this topic, I need to discuss the meetings with Chris Straub. This may shed more light on who knows what and why.

Why am I now, for the first time here, delving into the details of past events? It may have to do with the recent change in my perception of these events relative to the Millennium or lack thereof.. Under the aegis of my former premillennial paradigm I did not fully appreciate the sensitivity of these events. I would let bygones be bygones. I had been turned loose. We were going to let nature take its course. No big deal. But the recent interactions with Ron seemed to be geared to jogging my memory. In that process I began to realize that there was unfinished business, and the nature of this business did not fit well with my more recent turn toward *laissez faire* millennialism. I don't recall when I got onto the Millennium track, it may have been more recently than five years ago, as stated above. It was something I slid into. This may have been my subconscious reaction to the apparent deactivation of the Aquarium. That has been for about about five years.

The abortive reactivation of the Aquarium around 9/11 seemed like a fluke, suspicious though it was. It was a single data point. Last month constitutes another data point. When I draw a line through these latter two points, it seems to connect mainly back to the frenetic, more eschatological, early days of the R&D

business, rather than forward to a Millennium scenario.

I adjust my thinking accordingly. This puts me back in something of a holding pattern, waiting for a third data point. If that point fails to materialize, I will again slide forward into a millenarian posture, probably over a period of some months. In the meantime there is an opportunity for recapitulation.

[7/14]

While I'm at it, and for the record, permit me to put down a cursory time line.

I was a Sputnik baby. Well, I was a very impressionable freshman in high school when Sputnik was launched. But that was not quite my introduction to things scientific. Perhaps I was more accurately a Menzel baby. But then this takes us back to 1943 and the rocket baby or moonchild. My father and I share a birthday, Nov. 20. JPL and I share a birth date, 11/20/43, according to their [website](#). And we share the patronage of Amos Throop, as in Throop Polytechnic Institute, now Caltech. JPL co-founder, Jack Parsons, had more than rockets on his mind. He and L. Ron Hubbard were intent upon producing the Moonchild under the personal tutelage of Aleister Crowley.

My father taught at the Harvard Business School, which during the War became the Air Force's Statistical School, which in turn gave rise to the Whiz Kids. Dan, Sr. became involved in the planning for D-day, and served on the Academic Steering Committee opposite the Astronomer, Donald Menzel. In 1943, Dr. Menzel raised the prospect of preparing the University for its return to peacetime. My father knowing that VE day was still at least two years off, felt that this would be premature, but, of course, he could not apprise Donald of his proprietary logistical knowledge. Nor, as it turned out later, could Donald apprise the committee of his knowledge of the Manhattan project which was scheduled to cut short the war in the Pacific. My father was duly impressed by the ascendancy of astrophysics.

My bedtime stories c. 1950 became the Harvard Astronomy Book Series, edited by Donald. One of the first of which was Donald's slim leather-bound volume on Flying Saucers. I remember being impressed by the juxtaposition of two photos: lights in the sky, and stick appearing bent in a glass of water due to refraction. Clearly the great scientist had outsmarted the LGMs. Is it an accident that Donald is the one scientist listed in the MJ-12 documents, brought forward probably through Rick Doty? It is known that he participated in the tracking of UFOs for Navy Intelligence in the Pacific. His laughably crude debunking of flying saucers would send two very different messages, depending on the state of one's knowledge of phenomenology. The subtext is that phenomenology is taboo for science. Phenomenology was to be pursued on another track. That may be the track that has now devolved into the R&D business. Another long-time associate of my Dad's was Laurance Rockefeller, who was briefed at the White House in 1993 by Ron concerning his long standing interest in these matters. Laurance died this past Sunday.

Back to Sputnik. My interest in science accelerates. In the summer of 1960 I participate in the NSF's regional institute for budding talent. I charge through Stanford physics and on to Princeton, but there I run into what felt like a wall. Burnout? Yes, but possibly something more: a 'dark night of the soul'? For most of three days I lay on my bed, virtually paralyzed. Eleven years latter came tears of relief, also for about three days, right after the encounter with 'Sophia'.

I migrate into metaphysics via the Anthropic Principle and the Quantum. For several years I am a quantum dualist. But then, by dint of coherence, and curiously under the spell of the magical drawings of Kit Williams' [Masquerade](#) (1983), I drop the dualism. I quickly slide into immaterialism and then eschatology. That is where I am by about 1984. With this now more radical outlook, I give up on my previous attempts to network the metaphysics back into the academic and religious communities. I do not attempt to resume the networking until under the aegis of Ron, which then comes to include the offices of Senators.

It occurs to me, perhaps late in '93, that I could follow up on my failed attempt, though my sister, to check out my interlocutor's credentials. Eventually I end up talking to Chris Straub, ranking staffer for the SSCI, and we have three meetings. As we sit down at our first meeting I mention my concerns with eschatology and he states his familiarity with the topic. He cannot go into specifics about Ron, but he states that I can be assured that I am dealing with some very competent people.

Ron tells me later that Chris had to get a special briefing prior to that meeting. It was a briefing that allegedly had already been given to some of Chris's colleagues on the Republican side of the committee, a briefing that he had not learned about until he attempted to check who Ron was. Another, rather murky data point?

But, now, fast forward to:

NATIONAL DESK | December 7, 1998, Monday

Old Concerns Over Data Transfer to China Get New Attention

By JEFF GERTH (NYT) words

Late Edition - Final , Section A , Page 20 , Column 1

DISPLAYING FIRST 50 OF WORDS - When a Central Intelligence Agency scientist visited the Hughes Electronics Corporation in Los Angeles in 1995 to learn more about China's missile capabilities, he became concerned that the satellite manufacturer might have helped improve Chinese military ... The worries of the scientist, **Ronald** Pandolfi, were not warmly received back at... [the CIA.....] [I have to pay for the rest]

Hmmm..... Ron had warned on the weekend that he would be in the papers. It does seem that there are some politics going down with Ron. But what are they? Is this just hawks vs. doves, Republicans vs. Democrats? Through an 'acquaintance' of Ron's I learn that he is to attend a meeting later that week, a meeting that would seem to contradict the hawkish posture given above. I query Ron about this meeting on my analog cell phone, heading back to Baltimore. Ron is apoplectic. The meeting is cancelled. I get a digital phone, at his insistence.

How might one connect these additional dots? And let us not forget the 9/11 dot. We have two news articles. One involving trade with Japan, another involving a transfer to China. Oh, yes, a Senator had called the above acquaintance to say that she should not be concerned about Ron's being outed, there was more to the story than could be published, the abortive meeting being a part of that, we might suspect. Was it just by accident that I am being told these things. Ron did remonstrate about this second 'leak' within a leak, as if to underscore its importance for me.

Was Ron being deliberately outed to the Times by hostile colleagues? I don't think that holds water. Since when does the CIA spontaneously air its dirty linen in public. There is here a major breach of protocol. Is that an accident or is it possibly semiotic? Does this not connect back to my outing of him on CompuServe? The international signal is that another level of activation has been achieved. The loop now is much bigger than the phenomenology network. Every intelligence organization in the world could simply run his name against the Internet and immediately come up with the Aviary and Aquarium. Might they not easily conclude that this otherwise inexplicable breach in protocol would likely be a signal relative to these other strange links? Every intelligence agency in the world has now been put on notice.

And then comes 9/11. Ouch! This is a tough one. Or is it? By now, should it not be a no-brainer? On 9/1/01 Ron calls for an urgent meeting of the Aquarium to be held at the zoo on 9/16. And it comes off, right on schedule. And then there is Deborah on the tarmac at Logan at 8am on the day in question. It does seem that someone is dabbling in more than just politics. At what point does mere conspiracy morph into choreography? How may they overlap? And who is the Choreographer?

Last month we are back again at the zoo, this time with a bodyguard, and I'm being told that my remarks on the previous occasion had been recorded via the security cameras and underground mikes. It does give one pause.

Does this feel like a run-up to the Millennium? These bits of choreography do not seem to jibe with mere millenarianism. It would seem that something more dramatic is afoot. Was 9/11 just the whiff of grapeshot meant to sober us up? Should we not be getting cold feet? Where is Chicken Little when we need her? Where is Sophia, for that matter? Where are Ocelot and Ferret, and 'Charlene'? Where is the next data point?

How many Deborahs are out there, and how can they manage to maintain a state of total denial, even at the eye of the gathering storm? What will become of them? Where are the Unitarians when we need them?

Is there any point in my trying to speed things up, or slow them down? Is there any call for me to do more than what I'm doing right now? Is my networking not deliberately dependent on the participation my interlocutor? Or has it been left up to me to break the glass ceiling? If so, could I not just create a disturbance as suggested elsewhere? I am not presently motivated in that direction. Will 'nature' not take its own sweet time?

But what about all those other folks out there, who, as I speculate, have been put on notice? Would not some of them be tempted to manipulate or disrupt these proceedings? The apparent lack of such activity may constitute the strongest evidence against my speculation. But what could they do? Any disturbance would most likely just call attention to these speculations. It is Ron's job to be keeping the pulse of the insiders, while I watch the outside.

But it would also be easy for an insider to masquerade as an outsider, and act to prime the networking pump. Does anything prevent this? There could be thousands of people with just a smattering of inside information who could independently connect these same dots. Who is to run herd on them?

And what about the religious activists? I know that Ron has connections in those circles, certainly on the Catholic side. Would not some of them smell a rat, to put it mildly? Would there not be more than a few raised eyebrows? What about our Muslim brothers? Do they not have vested interests in these matters? What are they to make of these carryings on? How anxious am I to find out?

If you had asked me how to run the R&D show, I would not have come up with this strategy, not in a million years. If it is working, I could not say how. On the other hand, I see no other way to extend the run-up for this many years, i.e. thirteen and counting. I can only see the tip of what must be an iceberg, if it is anything at all. This is why I remain comfortable in this mainly spectator role, still the ingénue.

[7/15]

Extraordinary claims demand extraordinary evidence, or so say the skeptics. Let us consider this statement.

This seemingly simple aphorism glosses over many deep issues of epistemology, issues which I have never seen addressed by those who are won't to employ it. In defense of the skeptics, it should be noted that the targeted claimants very seldom challenge the premise of the statement. And generally speaking, the claimants are in no position to do so.

Almost by default, science has been accepted as the arbiter of reality. Those people wishing to proclaim the reality of anomalous phenomena seldom question the arbiter status of science, and so they lay their claims at its doorstep. They come as supplicants to the alter. The fact that their entreaties are invariably

rejected, never seems to deter the next supplicant in this endless parade. One might suppose that after centuries of repeating the ritual beating of the head against the wall, the head beaters would, just for once, step back to examine the wall that confronts them.

It has been a simple but profoundly effective game that science has played against nature and against its rivals: divide and conquer. That is the game of reductionism, of deconstruction. Once that strategy is fully engaged, there will be no stopping it, not until it has played itself out. There is little to be gained by throwing your body in front of that Juggernaut. The non-reductionists can only bide their time.

Well, we can do a bit more than that. We can begin to lay the groundwork for our eventual, inevitable return engagement. That is what you see me doing here.

What I believe that I can see more clearly than anyone else on the Google radar screen, is that when this table finally turns, it will be a 180 degree turn. Yes, there are ample signs that science is slowly losing its grip on reality, but this game is not science's to lose. If we have to wait for science to completely lose its grip, we could be waiting for another century or two. Long before that eventuality, there will be an end game. The new arbiter of reality will arise in direct contention with science. The end game will be decided, not on the preponderance of the evidence but on the nature of the evidence. At some point, the reality rug will be pulled out from under science. Science will continue to toil in its own garden, but then it will become evident that the garden was just a floating garden all along. It is not atoms that are the bedrock of reality. The ground of being is being, itself. As the strategy of reductionism begins to falter, it can only be replaced by coherence.

Just as there was an inexorable logic to reduction and analysis, there is also an inexorability with regard to coherence. Once the table has been turned, coherence will quickly be pressed to its cosmic limit. Yes, that limit may turn out to be illusory, but it will be tested with full determination.

All that I have been asking on these pages is, if there is a cosmic coherence, what will be its nature. Leibniz answered this question centuries ago. This logical limit of cosmic coherence is simply defined by the concept of the Best Possible World. There can be no other limit for coherence. This will automatically be the prime contender for all possible schemes of coherence. I have here a uniquely modern, postmodern grip on this simple truth.

This is my one thesis that I nail to the door of science. It presents us with a whole new ballgame concerning ontology, epistemology and the relation between them. It will be the turn of science to twist in the wind.

In the scheme of the BPW, eschatology is nothing extraordinary. It is simply what comes 'naturally' as a logical component of the bigger picture. It is only in this metaphysical context that the issue of choreography arises. Any direct overlap between the generation of these metaphysical insights and the governmental monitoring of phenomenology could easily hold extraordinary implications for the future. If there is any eschatological fire, it is certainly being entertained here in an unprecedented fashion. Should we then be surprised by the strong indications given above, that a diverse collection of such folk has been made aware of this activity? Would not these individuals simply be doing what we should expect of them: keeping an eye on the contingencies, without being unduly influenced by contemporary metaphysical fashions? As for *el Presidentes*? Well, you never know what they might think they have a need to know.

[7/16]

The points we need to keep in mind were addressed on [7/5](#) and 7/6, as we consider the shift from a premillennial to an amillennial footing. With the greater overall time pressure, there will be more emphasis on the team work and coordination between the parallel tracks: inside and outside, organized and

spontaneous. There is some proprietary information on the inside. There is the more spontaneous effort on the outside. At some crucial point in the run-up the tracks may need to intersect so that we can be playing off the same sheet of music. Then the orchestration begins in earnest. The crucial question for me is, if this is going to happen, will it be in my lifetime, and will I be there? However, for the purposes here, I have to continue assuming so.

For an amillennial scenario, a real-time cosmic input must come early and strong. How much more priming must there be for that to occur? Where do I need to be for that to happen? There is some suggestion to continue working on the Sarfatti list. I was thinking that I had about done what I could there, with minimal results. Those physicists can be tough nuts. In order to move ahead I would at least need to resume the conversation with the other interlocutor.

Speaking of Jack, we may need to reconsider the [*deus ex machina*](#) problem. It doesn't hurt to keep our eyes on the skies, but there are other places to look as well. Thinking of Donald Menzel, astronomer in the Navy, we might consider Davy Jones' locker. Thinking of the Pied Piper and the wee folk, we might also want to look underground. In other words, Jack's propulsion problem may turn out to be a portal problem. Our docking maneuver may already have begun, as per Rick and the EBE's. If there is a sustained dock, it may be ensconced. If I recall the whereabouts of Hal's 'UFO', was it not under Frog Mountain? A strange place for a hangar.

This is pure speculation, but it might provide a useful thought experiment. We face a major logistical headache, given our tentative amillennial scenario. We have an exodus problem. In one sense, there is no exodus problem if we just continue to rely on natural attrition, all we have is a population problem. But that is no insignificant problem. We need to prime the exodus pump in a non-traumatic fashion. We send people packing to Frog Mountain. The rumors of disappearing folk begin to get around. There are more volunteers. My understanding of the EBE story is that this has already occurred in a very limited and usually temporary fashion. We would just need to step up the pace and rumor mill. Then what? What happens when '60 Minutes' or Larry King picks up the scent? That's when the rubber meets the road. That is when the two tracks intersect.

Would there not be a concurrent breakdown of the social order? Would there not be a significant panic? There would have to have been a very considerable and rapid run-up in our networking effort prior to this Disclosure Day. It would take a virtually miraculous networking effort to mitigate the effects of D-day. I would be skeptical about the success. If we could possibly get over that hump, then the birthrate might begin to fall, and, by duplicating portals, we could begin to make a dent in the logistics.

Of course there would have to be considerable two-way traffic at first. There would need to be considerable tourism and day-tripping. What might we expect to see in the brochures? Will the eventual migration operate more by benefit of carrot or stick? Right now, your guesses are as good as mine.

[7/17]

For the most part, and once we overcome our initial trepidations, we will want to move on to complete our extended journey through time, and reintegrate ourselves into the cosmic infrastructure. I doubt that many of us could presently imagine how this reintegration will come about. We will just be going with the flow.

There will be stragglers. They will not be able to return to the JPC/Eden. A timeless Eden is one of the many mansions. It is not meant for stragglers. They will likely end up in a refugee camp of some kind, not something to look forward to. Just the scene that is becoming so familiar. Will those who are now in the camps be staying there? I would hope that the bulk of them can make the transition on their own. The camps will be expanded, however, to include those who balk at the end.

At some point the present infrastructure will be breaking down. This will provide a major impetus to move on. This infrastructure will be supplanted, but only for those who do not try to hang on to the fading present. The infrastructure of the camps will just be temporary and makeshift.

None of this will be particularly easy. Heaven is not going to be wine and virgins.

The next issue will be the manner of our bodily existence. At best, what we now consider our bodies will become optional. They will become decreasingly significant. Bodily concerns are for those in the camps. Moving beyond the physical is a major part of the transition.

This is a very rough outline. We will come know these things as the need arises. Our main task is to be focused on the Presence, i.e. that which is beyond the mere present.

[7/18]

We have all heard of Doomsday and Judgment Day. Do we wonder where these ideas came from? Logically they derive from our attempt to model cosmology with biology. The world is born and then it dies, presumably to be reborn.

In nature, we see few signs of an aging world. However, in social systems a biological model is more relevant. Personal regimes tend to follow the biology of the leader. Dynasties would follow the life cycle of the ruling clan, usually starting in a state of vigor, but then declining as the power of the clan gradually becomes corrupted and dissipated, until there would be a violent regime change. The old regime may be held accountable for its failings. Election cycles follow a similar pattern.

Virtually all mythic world systems are cyclic. None are static or evolving. With a static system there is no story. With an evolving system there is the problem of an ending.

We might wonder at the concept of eternity. The cyclic systems have endless time, but that is not eternity. With the Hindu system one can escape the wheel of time to nirvana and Brahman. In Einstein's general relativity, time is local to a given universe. There is the implication of a timeless background manifold, an implication which is partially realized in the inflation scheme.

Then comes the notion of a Creator. The Creator must break the cycle, or she becomes absorbed into it. The Creator is the author of history. She must exist outside of history. An unnatural element supervenes nature.

Once again I have the opportunity to correct myself. Norse mythology is not cyclic. Time begins spontaneously, as with Einstein, but then ends in a paradisiacal eternity, as in the theistic systems, but only after most of the gods succumb in Ragnarok, a free-for-all or Doomsday version of Armageddon. Odin is neither the first nor the last of the genealogical pantheon. With Einstein, the Big Crunch is optional.

If the world is to have meaning, it must be the locus of a project, a project that is realizable. In the theistic systems, there is no project. There is a fall and then a further decline, with a final battle against the forces of evil producing a small saved remnant. There is in Judaism and Christianity an earthly messianic kingdom and Millennium, respectively. These act as mere appendages to history. They do not ascribe any meaning to it.

There is finally the notion of progress, an idea that emerges surprisingly late in history, and only in a secular context. This idea goes back only to the European Renaissance, contradicting the cyclic name of its origin. Only when science was brought on board, did the idea of progress become robust. We still struggle to find a logical connection between evolution and progress. It is the postmodern view that there is no such connection. Only the transhumanists and ufologists look to a universal progress. Very few

people are able to see a connection between technological and moral progress.

It is a central thesis of the BPWH that progress, to be part of a meaningful world, must be a realizable project. It is a project that must end in an apokatastatic eschatology. This means, however, a decisive and final transformation from a material to a spiritual understanding of the overall project. There is a final change in the gestalt of progress, from the technical conquest of nature, to the mental or spiritual conquest over matter. This eschatology outstrips the the mythic and traditional worldviews. Such an outcome would have been incomprehensible, and is prefigured only in the pantheistic system of Hegel.

History is witness to our sojourn into the heart of the matter. Only at the end of that journey, as presaged in the discovery of the quantum and anthropics, do we begin to realize that it is just our own footprints, along with the thumbprint of God, that we see in those metaphysical innards. Thus do technology and science become our springboard to apokatastasis.

Our errand into the wilderness has been accomplished. We return with the pearl of great price. We come to know ourselves, and God through us, in the mirror of Creation. This is an eternal knowledge. It need not be repeated. There is no judgment, only gnosis. More accurately, judgment is subsumed in gnosis.

Can we ask for anything more? Should we expect anything less? Is God's kingdom not in heaven? When our mission has been accomplished, what need have we to tarry down here? If there is a further mission, it would be for a clean-up crew: rather anti-climactic. For you and me, it is onward through the looking-glass.

The idea of a portal may seem intimidating. There will be the opportunity for day trips, but I suspect there will be remarkably few of those. The lines will quickly become too long for that logistic. The way back will seem increasingly onerous. We waiting upon our designated Pied Piper. A few single men go first, soon to be followed by single women, then first come first serve. Meanwhile the portals proliferate and expand. Finally, the mothers with young children and the most elderly would bring up the rear, except for the closeout crew. If you want to leave in a flying saucer, that would require a special arrangement, like an ambulance service.

Gosh, I nearly forgot about our furry and feathered friends. Somehow, I just don't see any real problem there. Won't they be able to look out for themselves? Will we need a latter-day Noah? That will be more just a matter of quality. Only with us humans, and our pets, of course, do the quantities really matter. There will be 'ecosystems' on the other side, but not the metabolism. Our bodies, such as they may be, will be morphing into those of avatars. The 'economy' will not be based on production. Time will quickly become passé.

We might want to consider how our entrance into the other world will differ from our initial entrance here.

First though is a minor technical difficulty. How are our Stargaters going to breathe on the other side?

The answer is fairly simple. If angels can pretend to have bodies, then we can pretend to breathe. It is the same idea, but working backwards. It is the same way that anthropics works. On the other side of the portal, reality is more fluid, the way things used to be here, back in the mythic dream-time, in the JPC/Eden.

Our reality is a collective state of mind, or a very stable and compelling lucid dream. The emphasis is on the collectivity of it. On the other side of the portal is a collectivity of hyper-dimensional intelligences or angels concentrating hard on making their reality compatible with ours. The portal may have existed since the beginning of time, and remained in more or less continuous use. There is a resultant cross-socialization of the reality on each side, so that there is as little discontinuity as possible. Everytime we go to sleep we get to practice with alternate realities. Dream connections could become as important as the portals. They allow for more practice, and could serve as an emergency escape hatch if necessary. We

will have to socialize our dream state into a more effective conduit of communication. The portals may just act as primers to that larger reality pump. BYOB, bringing your own body, is optional at this party. And we can hookup with our dear departed, at least temporarily, in an Earthly form.

As we increasingly frequent other realities and states of mind, this reality will gradually revert to its original, more fluid state. As our dreams become more lucid, our waking becomes less so. Perhaps that is why the EBEs made solitary visits, so that they would not de-socialize our reality prematurely. The interrogators would have to be frequently rotated, so as not to be entrained to the other side. Next up is the Pied Piper.

Don't get me wrong. This is not going to be an easy or casual transition. There will be foul-ups, and some people will get seriously discombobulated in the process. We will have to act with deliberate speed, once the situation begins to get fluid.

[7/19]

What should be surprising to us is that there are not more holes in our world. There would have been a deliberate effort to keep these to a minimum so as not to destabilize our world. Instead there are angels, ghosts, flying saucers, etc., which act as mobile portals. Since the dimensions on the other side are more fluid, one may use these portals as devices for, in effect, warping space and time. You can walk into one portal and then walk out in another time or place. Portals may also be accessed by various forms of psychic projection. They may tend to be located in the vicinity of 'energy vortex' sites. Associated with every type of portal are mutual, collective psycho-social protocols that are established over long periods of time. These archetypes are tapped into when the portal is in use. In as much as our psyches all tap into the cosmic psyche, every being is a virtual portal. In some sense, all anomalous phenomena manifest a thinning or permeability of our normal reality boundaries. Physics operates undisturbed away from the soft spots. Keep in mind, however, that the starry sky serves as both a portal and a filter of cosmic phenomena. It is the semi-permeable membrane of our reality.

Portal phenomena are minimized through systems of taboos. It was the responsibility of shamans and religions to maintain these taboos. The scientific establishment takes upon itself the maintenance of a worldview that is antithetical to these phenomena. In modern times, there is an effective double cover relative to the other worlds. We have to exercise caution in the deconstruction of that worldview. We don't want to let the air out too quickly, lest we all have trouble breathing. The general bourgeois conservatism has become a significant part of the taboo structure. The sometimes not so benign neglect of phenomena can be striking in academic and professional venues. The social fabric and the fabric of reality are ultimately synonymous. The omnipresence of technology reinforces this fabric; however, technology may also provide the leverage for its eventual deconstruction and unraveling.

[7/20]

Here is a follow-up concerning the article posted above:

Steve,

Thank you very much for this information.

This has become a big issue for me. It may even have a bearing on my worldview. It certainly has a bearing on my seriously deteriorated relationship with my sister, Deborah, aka 'Debra'.

Conceivably this is an issue pertaining to national security. This may seem like a very major stretch, but consider the circumstances.

I beg your patience while I attempt to explain the context.

First of all, I would like to know how you came across my concerns about the Anderson article. I certainly did not expect to get a response from such a knowledgeable source as yourself.

I have posted this article to my website: [see above]

I am assuming, however, that an enterprising person on the Sarfatti email list looked you up and sent you a copy of my correspondence, in an attempt to verify it. You needn't be ad hominem, but do, please, give me the generality of the contact, if you can.

If you peruse the material on my website on the above page, and some of the material on the previous page, you should get a fair idea of the context I am talking about.

Ron Pandolfi is my CIA contact person. He is well aware of the significance that I attach to this article, and he has not yet seen fit to disabuse my interpretation. Is this merely an oversight on his part?

I see no gaps in the chain of events that you present. Do you have any reason to suppose that Deborah might or might not be aware of this sequence? I have to wonder why she failed to apprise me of it. Soon after the article was published she accused me of having been Jack Anderson's source.

Unless I can come up with an alternative interpretation of the events you present, I will need to add a retraction on the website, and then apologize to Deborah. I will need to ask Ron why he did not offer a denial of my original interpretation.

FYI: Deborah had already divorced Charlie by this time. He was also then being sued by one of his daughters on the allegation of abuse. The suit was settled out of court. A very sad story.

I can still wonder why Jack failed to mention the primary significance of this sequence of events: that both the Prime Minister of Japan and the high-level trade negotiations were involved. The article only implies such.

And I remain impressed by the fact that someone took the time to track you down.

Might you 'allow' me to entertain the notion that there could have been just a bit of 'cosmic' intervention in this rather impressive display of swift 'cosmic' justice?

In any event, may I please post your comments to the website? Would you want to edit them for that purpose?

I gather that you have managed to survive your unfortunate encounter with my former brother-in-law. So has my niece.

Thank you and best wishes,

Dan

Subject: Jack Anderson/SyberVision/ President Bush

Dan:

I read with interest your thoughts about the Jack Anderson column about Charlie Leighton, Mr. Toyota,

and President Bush.

There was no conspiracy. Here are the facts:

Back in 1989 CML was under a hostile takeover bid by Irwin Jacobs. He wanted Boston Whaler and was going to sell off the other CML companies, including SyberVision, to pay for the stock purchase.

Charlie panicked after Reader's Digest backed out as a "white knight" to provide funds to fend off Jacobs.

As the founder of SyberVision, I was in negotiations with Toyota to sell them 1 million Bobby Jones tapes. This would have meant a \$20 million profit to CML. As you may know, the Japanese work very slowly in business deals. Charlie asked me how we could expedite the order since he needed the money, he claimed, quickly. Jokingly, I told him nothing short of a presidential order could speed up the transaction. This was on a Friday afternoon when we had the discussion. On Monday, Charlie had sent off a packet to Mr. Toyota with the letters promising presidential intervention in the current difficult trade sanction talks going on at the White House concerning Japanese auto imports (Toyota in particular). He also sent along pictures of the Bushes with Charlie and Deborah as proof of his association, as well as the cuff links.

Apparently, Mr. Toyota was greatly impressed. So much so that on the following Friday he gathered with his peers (including the Prime Minister of Japan) for a saki get-together at his country club. Sitting around the table, he showed the presidential cuff links he was wearing to his friends. He took one off and passed it around the table. Each of his guests rubbed the presidential logo on the link until one man rubbed and a decal of the logo came off in his hands. The cuff links were plastic. Mr. Toyota was greatly embarrassed and lost "face" among his peers. Needless to say, the deal was dead.

After our contract with Charlie was over, he didn't pay what he owed us (\$20 million) so we had to resort to a lawsuit. The Wall Street Journal learned of the suit and ran a front page article with Charlie's caricature. The article detailed how CML had ripped off many of its business partners (entrepreneurs who sold their companies to Charlie and Bob Tod)—SyberVision being the most recent one.

This led to an interest by CBS "60 Minutes" who contacted me to do an expose about CML featuring what happened to us and the other entrepreneurs. I directed the producer, at the direction of my attorney, to the court documents that were public record. From those documents, the producer found a copy of Charlie's letter to Toyota. They contacted Charlie and he denied even writing the letter. He didn't know they already had a copy of it. This infuriated the producer and doubled her resolve to expose CML.

Throughout this process, my attorneys told me not to communicate directly with 60 Minutes but to direct all questions from 60 Minutes to them. For some reason, 60 Minutes opted out of the show but the producer sent the letters over to Jack Anderson.

I was contacted by Anderson's office, refused to talk to them. They spoke to my attorneys who verified the veracity of the letter.

That's how it happened. As to Anderson's motive in writing the article I can only think it was for the sake of trivial humor—without thinking about the consequences of how it might hurt innocent people. Unfortunately, Deborah was hurt. I can imagine her embarrassment. I remember her as a nice and honorable person. I really liked her. She had no idea what Charlie did, I am sure of that. Charlie was desperate, didn't think about potential consequences (who could have known) and tried to use Deborah's friendship with Barbara Bush to save his hide. At one point Charlie told me he would do "anything" to defend, protect, and save CML.

Hopefully, this has enlightened you.

What has become of Charlie and Deborah. Last time I saw Charlie (1992) he appeared to have early on-set of Parkinsons. [The first I have heard about this] I hope they are well and happy.

Give them my regards.

Steve DeVore

SyberVision

On further thought, I am not convinced that the conspiracy issue has been resolved. I don't know who is Steve's source concerning the crucial meeting. It is curious that I do recall hearing that the Minister of Trade was involved, but no such official was referenced in the column, and I don't think Deborah went into any such detail, with me.

Now I'm beginning to feel badly for Charlie, in this one instance. For once in his life he would have been the victim! He was clearly in a tight spot. How many of us in his position might not have seriously considered doing what he did? Think of all the employees and stockholders he had to protect. That his previous business practices were not above reproach is not relevant to this incident. When the President allows his picture to be taken with you, he wants you to hang it on your wall and brag about it to other people. That is the whole point. This is politics, my friends! Ditto for any other memorabilia. If you get into a jam, should the President be offended if you use his gift to help solve the problem? What are gifts for?

Who are the three people here who should actually be embarrassed? The President, the Prime Minister and Mr. Toyota. Why? The President for giving shoddy gifts to deserving supporters. The Prime Minister and Mr. Toyota should be embarrassed for having embarrassed the President of the United States, a person with whom they were in the midst of a very delicate trade negotiation. Deborah, indeed, reported to me that the President was [alleged to be?] 'furious' about this incident. Would he have been mad at Charlie? I don't think so. He would have been mad at the Japanese for turning a trivial incident into an international incident.

The Japanese are reputed to be astute negotiators. Would they be so stupid as to go out of their way to antagonize their negotiating partner?

I'm sorry, there is still something fishy here. If I were the President, the first thing I would do is fire the person responsible for the shoddy cufflinks. Might this person not have gotten a big kick-back? Who wears cuff-links? Wealthy businessmen, people likely to contribute big bucks to the campaign. Do you want to embarrass your biggest supporters? Think of your supporters reading the Jack Anderson column and then throwing their personal mementos into the waste basket!

But wait a minute. Would the Toyota CEO and Prime Minister actually interrupt their party to ogle campaign trinkets? Could they possibly be so naive? Would they then go around advertising their naiveté?

Have I said enough? Too much? Can the fate of the world hang in this balance? I intend to find out.

Cufflinks there, eschatology here.

Might Steve not be in a situation similar to Deborah? It is hard to believe that a major event in your life was simply not at all what it seemed. It might cause one to start questioning the rest of 'reality'. This is not easy to do, but we all have to start somewhere.

Wait another minute. Who at Toyota would send Charlie's letter to Steve, and why? [OK, that might have just been Charlie, before the fact with a cc.] And then who at Toyota would want to tell the world about their boss's subsequent embarrassment, and why? And how did these details ('Each of his guests rubbed the presidential logo on the link until one man rubbed and a decal of the logo came off in his hands.') get back to Steve? Is the devil in the details?

I'm sorry to belabor this, but ultimately it is the 'reality' of the world that is up for grabs.

[7/22]

There has, at my behest, been some preliminary discussion about networking the eschaton. In the next few days I will be meeting with two of the principals in this proposed effort.

In my last meeting with Chris Straub several years ago, which Ron also attended, the conversation was mainly about saving the tigers. As we were about to leave, I said that I had been wanting to also discuss eschatology. Christ turned to me and said, 'Well, Dan, I guess you'll just have to surprise us.' I now hope that we can do better than this. I would like for there to be a serious, non-sectarian, open discussion of eschatology. This is what I will be attempting to arrange for with the help of these other two individuals. One of these is Ron, and the other shall remain nameless, per his request.

The first effort will be directed toward the Sarfatti list. I have attempted to introduce this topic there on several previous occasions in the last few years. The general level of skepticism has prevented that from happening. We'll be making this attempt once again, now in a more concerted fashion. There will be a team effort, at least to a limited degree.

The frame for this discussion will be to construct a possible scenario based on a 'what if' proposition. What if the world is a supernatural construct. It was created, say, to serve in the self-discovery of God through the participation of us creatures. Furthermore, this purpose, in the context of this world, is intended to be achievable. That is to say that our task as creatures in this three-dimensional setting is intended to be completed at some point. This is the meaning of our 'physical' existence.

The question that is to be posed is simply, what would be the best way for us then, or now, to move on to whatever is to be the next phase of our existence, beyond the present space-time context, our purpose here having been carried out to its fullest possible extent, or at least to the point where additional costs can be expected to exceed the possible future benefits. In other words, we need an exit strategy, and I need a focus group to hash this over, at least in a preliminary fashion. The intention is to persuade Jack and his discussion group to temporarily take up this challenge. In that process, there may emerge a subset of folks who would be open to a continuing and more in depth study of this issue.

It may be that this is not actually just a hypothetical contingency. This may not just be a test. It could be leading up to an actual eschatological event. We cannot know that now, but, until such time, we want this discussion to remain contained and containable. We don't want or expect it to get out of hand. If, in the future, new information emerges, then we would have to proceed on another track.

What I think we can assume for now is that there is an actual 'phenomenology' problem. There are known to exist phenomena that are sufficiently anomalous so that if they were to be publicly disclosed, our modern worldview might well be subverted or deconstructed.

But the problem goes beyond just the question of epistemology. Ultimately there is an ontological issue. Reality may not be as solid or impermeable as we have come to expect. The universe may be more like a great idea than a great machine. It may be more of mental than a physical or mathematical construct. The world is not a machine, it is rather a dream machine.

Jack, of course, objects to any such characterization. He is a physicalist. Everything can be explained by physics, even anomalous phenomena. You just have to be willing bend your formulas to whatever is the necessary extent. But does he have a model for psychokinesis? Is there any conceivable physical model for PK? Consider spoon bending as an example. Would there not have to be visualization and targeting? Materialization would be another unphysical anomaly, and so would be remote viewing.

I am saying that the ultimate issue is the relative ontic priority of mind vs. matter. Anomalous phenomena are always directly associated with intelligence. They are manifestations of the power that mind ultimately holds over matter. Further, I'm claiming that these phenomena portend the primordial and final ascendancy of mind over matter. There is simply no formula for Creation as there is none for the Omega. Physics may be the means to an end, but it cannot be an end unto itself. We have had materialization, now we need to arrange for our dematerialization. How do we minimize the trauma?

I speak of our participating in the self-realization of God. This has been accomplished using the mirror of Nature. Our related sub-task has been our sojourn into the heart of matter. We have gone as far as we can in that direction. With the quantum and anthropics, we begin to see ourselves reflected in Nature. We now undergo the reversal of that sojourn. The return journey is likely to be very much shorter in duration. We come back home, bearing the pearl of great price: our wisdom and self-knowledge.

Perhaps more accurately I should speak of the de-physicalization of matter. The way to do this is to weaken the contextual relations that ordinarily keep the physical processes on track. Transiting through a portal would be an example of this. PK gets stronger on the other side. It is not clear how it would be possible to reverse this process. It is analogous to the notion of unraveling, with the quantum and mathematics acting as warp and woof. We might wonder if there would be any distinction in this context between natural and artificial systems. Imagine making the transit with a pacemaker and then returning.

[7/23]

Of course, I continue to have trouble explaining matter. Something that might be related is the psychology of eating and drinking, etc. What I need to ascertain are the psychic precursors of metabolism. Is the primal circulation of the zodiacal energies not related to metabolism? What is the metabolism of the mind?

Does food not have psychic properties? There must be a psychic ecology, or an ecology of the psyche. This would have to do with relationalism and functionalism. The same questions apply to numbers and words. Where does the dynamics arise for these abstractions? We're looking for the mainsprings.

But wasn't Freud attempting to grapple with the metabolism of the psyche? Are the appetites of the mind any less than those of the stomach? The dynamics of reproduction come to mind. Where is there a greater overlap of mind and matter? Mate selection must reenact the primal dialectic. I don't yet sufficiently appreciate the dialectic. We have the imperative of symmetry breaking relative to the Matrix. We are looking at the dialectic between heaven and earth, or mind and matter. What aspect of the mind is dual to the atom? What is the dialectic when projected onto matter? Surely the quantum figures in here.

I also wonder about the accounts of ghosts and ETs walking through walls. At what point do they go bump? Saucers are seen going into the water, but not into the ground. The bumping into walls has to do with super-symmetry, which is an aspect of space. Ghosts may bring their own space with them. There is also the repulsion of energy levels and of the Riemannian zeros. There is also the problem of particle identities and their coupling to the various force fields. Identity is a very abstract concept, but it is crucial to physicality of physics.

There may be two logical kinds of solidity: static and dynamic, or volumetric and ballistic. How much do both of these depend on atomic stability? To what extent is that stability a brute fact, or is it a manifestation of an eco-logic? As a relationalist, there can be no brute facts. What then is the stability of the ecologic, and how does it relate to physical stability? It must be something about the quantum that brings these together. Is it simply the projection postulate, or something more complex? How does a wall switch from being permeable to impermeable? How do two particles switch from being identical to non-identical? Where do the logics of heaven and earth come into contact, other than at a portal? Should we go back to the pokatok court? Is there a quasi-physics for heaven? What is happening when we see a

ghost? How much is internal, and how would the internal overlap with the external? As an idealist, though, I have to be careful about any such distinction. One person may see the ghost, while another does not.

[7/24]

He is another way to approach the portal problem. In transit, one enters into a lucid dreamlike state. This does not present a problem until one attempts to return back to this world. Only then would the state of one's body come into question. If, for instance, a camera or other recording device were taken along, its state upon return would also be questionable. There are various possible answers to these questions, few of which could be excluded *a priori*. Such questions could only be answered experimentally. The answers need not be the same in every case.

A physicist would want to know whether mass would or could be conserved in this process. The portal could not be treated as a black hole. The mass would disappear from this world. So it would not necessarily or obviously be conserved. The portal would be seen as violating the laws of physics. A gravimeter placed near the entrance would logically record a decrease in the gravitational mass of a transiting object. Too bad. Anomalous phenomena, almost by definition, violate the accepted laws of physics, if they are not simply hallucinatory. The portal process would simply cover a wide class of anomalous phenomena, or many such phenomena could be explained in terms of portal processes.

Psychic survival of death is the most widely acclaimed of all anomalous phenomena. Death then is a one-way, immaterial portal. There is a violation of physics in the posit of the psyche as a non-physical phenomenon. There is thereby suggested a metaphysical dualism between mind and matter. A portal that permits the transit of material bodies would, however, point very strongly toward an immaterialist, idealist metaphysic.

Although theism, is generally conceived in dualistic terms, the concept of Creation, in as much as it deviates from physical cosmogony, implicitly entails idealism. The Alpha and Omega, Eden and resurrection may both be seen as 'physical' portals between the temporal and atemporal realms. Our pokatok scenario, is just an attempt to set up a portal to transit from the outside, to make the transition from the non-physical into a 'physical' realm. Ultimately, both realms must be viewed as dreamlike, but a portal between them allows for a minimally discontinuous connection or transition between them. The BPWH strongly suggests that mini-portals would play a crucial role in minimizing the trauma that might otherwise be associated with an amillennial eschatology, i.e. our imminent confrontation with the Omega portal. A portal may be understood as a review of Creation and a preview of Omega.

[7/26]

There has been some barely perceptible progress. My prime interlocutor will tell select individuals that I may not be crazy after all. This pertains to the prospective Eschaton Focus Group. He will privately tell select participants that he is favorably disposed to the existence of such a body. To everyone else, the previous, long-standing protocol will continue to apply.

I requested that he explain this new protocol as being motivated by the phenomenology problem. He countered that any such admission would leave him open to too many follow-on questions. Instead, he will be telling Jack that this part of a counter-intelligence operation. He tried to explain this rationale to me, but I was unable to see any connections to eschatology. I don't know that Jack will swallow this either. Mr. P. may be best advised to revert to 'no comment' when questioned as to motivation.

I'm not sure how Jack will countenance this new initiative. He is certainly welcome to try his hand at

portal physics, but beyond the green door, the physics gives way to metaphysics. It is where heaven begins, it is hyperspace with a vengeance. It is the lucid dream-world. Jack is no fan of heaven, but what about the Matrix and virtual reality. How can we agree to disagree on these matters?

Jack may only countenance a portal as leading to a parallel physical universe, but this does not then count as being eschatological. It could be billed as an evacuation to escape from a vacuum phase shift in this universe. That may be about as close as he would be willing to approach to a full-bore eschaton. There is also the God problem. Is the putative phase shift simply a natural phenomenon, or could it be tied to a cosmic plan? This would need to be sorted out before we try to get more people involved. The others need not be exposed to a pissing match.

We could just say that this other universe will be less physical. It will be more susceptible to anomalous and psychic phenomena. The dear departed may already have transited, by other means. Maybe what is next door is an artificial universe. The best that money and unlimited energy can produce.

There is a meeting tomorrow with the secondary interlocutor. There will need to be a discussion of the present state of the aviary. Who can be reactivated and how, and for what purpose? There may also be a discussion of the Illuminati, per his request.

[7/27]

Where I can be helpful to Ron and, hopefully, to others is in my temerity in grappling with the biggest issues. The biggest of all is the God question. I am not aware that this question has ever been addressed in its fullest generality at any time in recorded history. On previous attempts there has always been an array of presuppositions which has sharply limited the scope of the assertions or discussion.

Theology would be the logical venue for entertaining the God question. That profession, however, has come to be polarized into either sectarian or secular denominated institutions. The ball has been dropped. If you asked me to name an author who has come closest to matching the above ideal, I would have to reference Augustine or Aquinas, but only with considerable reservation. Here I attempt to pick up the ball for, perhaps, the very first time.

There is now just one presupposition. God is a semi-rational actor, and we are semi-rational beings, both to the extent that entails an overlap of rationality sufficient for a substantive discussion. Without this assumption, we can go back to staring at the walls of our cave. That is the starting point for these web pages.

Rather early in any such deliberation, one encounters the issue of eschatology. Here has been no exception. This issue, if it cannot be properly set aside, will naturally acquire a high priority. That is where this discussion presently resides.

According to my theological reasoning, the best possible God will be self-limiting in favor of the creatures. This is particularly the case in regard to any eschatological issues. Creation is participatory to the optimal extent, and this includes the Eschaton. What does this imply?

The clear implication is that we creatures should be expecting to step up to the plate in a major way, come eschaton time. How could this be arranged? And what about the timing? We examine the possibilities.

I have not proven that there will be an eschaton. I have not proven there is a God, nor that this is the best possible world. Science, however, has demonstrated that the world is comprehensible, but that same science has no explanation for this paramount fact, and neither does pantheism. Thus does science, very expeditiously, lead us right back to the God question. Given an unnaturally coherent world, it is my reasoned contention that an (unnatural) eschaton is very probably entailed. The timing then becomes the

main issue.

The simplest answer is that the Eschaton could come at any time. It is our responsibility to be reasonably prepared for that eventuality. There has never been any discussion outside of strictly sectarian confines on the issue of preparation. What might such preparation reasonably entail? That bring us to the proposed eschaton focus group. That is our logical starting point. The first step is to set an agenda for this group.

[7/28]

The networking with the former avians seems to be moving ahead. There are now three of us in this new initiative. There are three more critical players to get connected with. There is much old business to rehash and attempt to resolve. I will soon be away from the computer on a two week vacation. By the time I return there should be a good indication as to the future of this initiative. If the results are negative with regard to the phenomenological problem, there will still be significant information to be placed in the public domain, as a guide to any future investigation.

If the results are positive, then there would be justification for briefing someone like Jim Woolsey, and others as well, including a legislator or two. And then, of course, there would have to be a journalist or two.

Now there is the matter of counterintelligence. Sophia didn't tell me this was part of my job description. I'm an idealist in every sense of the word. I have no doubt that this is the best possible world, not just for today, not just for tomorrow, but forever. We live here on the margin of forever, but there is nothing marginal about the meaning of every life.

There is talk of Armageddon. There is talk of division and dominion. But whose plan is this? Is this God's plan? We hear a lot about scripture, but who has the script? Certainly I do not. I have just what everyone has, a mustard seed of faith. And I have the sure knowledge that this faith is the cornerstone of our reality.

[7/29]

In other words, there are people who lack faith in God's infinite love. I have been there and lacked that, too. Only by God's grace does the mustard seed flower. And so there are folks who take these matter into their own hands. We all do, from time to time. This is part of our participation in Creation, but it is supposed to be a partnership. Sharing in faith, hope and charity is as far as the partnership is supposed to go. Crusading and jihad have always been viewed as questionable forms of participation, at the best.

The eschaton focus group might serve as a way to smoke out other groups who have more nefarious designs concerning the eschaton. The introduction of Aliens or ultra-terrestrials contributes additional uncertainty to the mix, and might well give pause to some potential bad actors. At the least, we could serve as a stalking horse.

In order to create smoke, one does have to play with fire. If the intent were to use the EFG as a kind of backfire, the plan could backfire. The preventive measure could trigger the disease rather than inoculate against it. This particular EFG initiative might be considered to be the least virulent form of the virus that could be constructed. Better then to do a calibrated release than to wait for some more random event. This is the minimal preemption of the eschatological force.

How might Jack & Co. view this operation? It will help to emphasize the physical aspects of it. Jack already has a physical model for a portal. The recent publicity given to the skepticism regarding the wormhole version of the portal might provide Jack's alternative with some extra visibility. What is less obvious is the political angle. Using Alien technology to put the kybosh on the Mossad's and the neo-cons' NWO would be a starter. The EFG, if properly presented, could become a distraction to the Christian right-wingers, further undermining the neo-con designs. We go back to the idea that the seeds of modern Millennialism might have been planted, in part, by the early Zionists, as a way of diverting attention from our ultra-terrestrial imperative. Our job is to break the chains that bind us to the mundane. Jack & I ought to be able to collaborate on this basis.

The conspiracy theorists see the Global Cabal as collaborating with the bad ET's to keep us chained to the Earth. This is similar to the Gnostic view that the Church was in cahoots with the demiurge, i.e. Satan, to that same end. Their quest was to find the magic formula that would break the bonds of the planetary *logoi*. Alchemy was just one spin-off of this effort. Their quest was to overcome the symmetry breaking to return to the Monad or Godhead.

The EFG appeals to the Visitors as our potential liberators. Their portal technology is just the ticket we need to ride. The *Hieros Gamos* need only be a step away.

[7/30]

I need to redirect attention from the sky to the ground. This is more of a hollow earth notion. Physicists will object. If the portals are already in place, it becomes more a matter of politics than physics. As Bill has pointed out, Jack has unfinished business and stuff to prove relative to his colleagues in physics. It will be hard to redirect his territorial instincts.

A counterintelligence angle comes with all those attempting to manipulate the eschaton and any associated messianics. The EFG is an attempt to false flag any such 'competing' groups. I'm not sure how Jack would view his own participation. I would need to work with Hal in the same fashion, but Jack may not allow that. Perhaps I need to go to Hal first, but neither Ron or BJ seem to be amenable. That leaves me with Gordon.

Will Jack buy into the eschaton as a way to evangelize his physics? That is possible. He has come close before. He won't want to miss the action. I need a road trip to Austin & SF. Ron will have to help me with BJ. Maybe Bill can help.

If Ron is doing this stuff, then there must be other intels doing the same, whether or not they subscribe to the premise. It's just another intel watering hole where every agenda gets its thumb in the pie. It's a game that no one can afford to ignore. With Ron, we can help to set a few of the agendas.

Jack and I have to agree how to divide the work and divvy the 'spoils'. If he won't give up anything, I'll be forced to take up with Hal and Gordon. He works the physics while I work the politics and theology. He seems to recognize the franchise I have with Ron, although he is wont to challenge even that. Jack will have to make some choices and commitments.

As for the eschaton itself, J & I can agree that there will be a general desire to leave the earth when it is possible to do so. Then we will get into the problem of our destination, i.e. will the desire be prompted by material or non-material remuneration? Does our destiny lie beyond space & time or not?

JS would agree that our ultimate destiny is at least in a virtual reality, but could that be distinguished from a metaphysical domain? And why not place that domain on the other side of the portal? Would another sojourn in space-time, a repetition of our need to leave here be any positive inducement? Is mere multiplication sufficient inducement? John Leslie would argue against our being at the start of an

exponential process.

Jack's scenario just doesn't make sense. If we're not the first ones, then where are we in the process? What is our special story? Have we not been left behind already? But how can I bring these physics types around to the metaphysics? How does their physics fit into the picture? Is Hal part of the problem or part of the solution? I'm going to have to cut them out of the physics herd, but that is the locus of too much of their identity. They have no other means of self-expression. We cannot just ignore the scientific enterprise. It must have a deeper meaning. There are some critical points that remain unconnected.

[7/31]

We may need to work parallel tracks through Jack and Gordon to other members of the aviary. There must be someone besides Ron who suspects an eschatological angle. At least they would suspect a social or religious angle that remains to be covered. It is not all just a conspiracy to keep us away from free energy. It is not just a technical issue. This makes it imperative to get back to Rick.

But how do we work the social side of this issue? If there is no deadline for 'transmigration', how can we expect to expedite it? There is no urgency. It is not clear where BJ fits into this picture. In this case I might just as well join a disclosure initiative. That would be the only positive alternative.

If Jack is given to believe that the EFG is only for counterintel proposes, he will not be able to treat it effectively.

[8/25]

Long time no blog.

We were on vacation, and then were getting our son off to college. Besides that I have been fairly busy in the Sarfatti email group. If anyone perusing these pages wishes to join that discussion, you may contact Jack directly, or just drop me a line.

A continuing issue for the EFG is to obtain the cooperation of the avians. I regret that resistance on that front continues, but I have not given up yet.

Without their cooperation, it will not be easy to maintain an effective eschatological discussion with Jack's folks who are mainly physics types. They have been patient so far. I would generally prefer to operate in dialog mode, and that will be my first priority, probably to the temporary detriment of this site. Jack has archived some of those exchanges in the past. There is a person who does that. I may not get around to doing that here; it can be tedious.

[8/29]

Dear Diary,

Bill says it's OK to blab here, because no one will read this, no one, that is, who would or could do anything public about what is written here.

You may refer back to the 5/1 entry, when the current initiative began. Yesterday there may have been the first break. One of the principals claimed to have received a classified briefing relative to ufos. I know of only one other person who has ever made that claim. This has made a big impression on me. I'm writing

here to collect my thoughts. Also doing it here because Jack expresses disinterest, and because Bill advises not to dribble this out in public.

Is this going to be sufficient to set the world on fire? I consulted with Gus Russo, the local author/investigator. He says there would be very little he could do short of getting his own briefing. The person who told me is certainly not willing to go public in the foreseeable future. The next test will be to see what Mr. P. says about this development. He has always maintained a posture of ignorance. This will now be more difficult, which is not to say that he won't keep trying. But will he admit that this is a possibly serious development, requiring follow up.

I was beginning to get tired of once again being caught up in the usual aviary runaround. P had gotten me back on the core story, which is mainly the Doty story which has been recounted on these pages, and in many places on the internet. What I was trying to do was get Rick to recount to me the reason he was given for the withholding of the info. I recall his saying something about potential damage to our cherished beliefs, but after centuries of the scientific deconstruction of our former beliefs, it's hard to imagine what beliefs might still be vulnerable.

For what other reason might the non-hostile visitors and their human interlocutors be holding back on the rest of us. About the only explanation that would make sense to me would be something of an eschatological nature. This was the only angle on the Doty story that was of potentially great interest to me. I got Rick on the line along with two other avians and started asking about this and he kept putting me off. In exasperation I asked him to confirm what he had told me of his story on the phone several years back. Still evasion. Then I started after one of the others, just to confirm the barest outline of the story. He in turn became very evasive, and this evasion began to register as peculiar and unnecessary. So I kept pressing, and that was when the above claim was made, by way of excusing the reticence about information that ostensibly is in the public domain.

Now what? I need to get a feel from P as to whether this claim was intended to be a deliberate part of this new EFG initiative. Or was it a fluke that everyone will now deny?

If we move forward, I will have to begin shifting from dealing with these matters as something hypothetical, into another mindset, another m.o. I'm not quite sure how easy that shift may or may not be. Death is an abstraction up to the point of a terminal diagnosis. It takes on a whole new meaning. That's where I am. It is not just my death that is at issue. Sobering. Perhaps I will not wish to venture further. After all the years of impatience, I now may drag a foot. Or not.

How many folks have reached this juncture, knowing the eschaton was likely in the balance? Who besides P and me? Even all the members of the 'putative' MJ12 might not have had a need to know this. They would know it by now, however. P claims not to have known until after my arrival.

[8/30]

When did P know about the book? My informant would have been briefed in the time frame of the **Hennessey**/Weaver meeting, i.e. c. 1990 [6/26/06 -- actually in 1988]. P would have been informed about then. They had both managed to penetrate. This would still have been fresh when I made the scene. It would have given some urgency to the crop circle phenomenon. This would have been when P disbanded the Phenomenology Group.

P's early comment about going to visit the visitors, could have been relatively serious. What about the other avians? What about the Red Book and Dale. That may have been what tipped off P. He learned that Dale had been visited after the Ft. Huachuca incident. But then why would Dale have been loose lipped, if Anthony was an MJ12 member? The gossip would have been contained? Dale and Rick probably would have seen the yellow book at about the same time, by c. 1985. There was an upswing in

activity about when Carter was finally briefed c. 1978. There might have been thought of going public then, c. Rick's 1987 TV show. Then again after the wall came down. Then eschatology became a factor, at least by 1991, and that quieted things down for awhile. Has John not been briefed? Yes, but not on the eschaton. Then we waited for the millennium and 9/11?! This does make my 9/11 speculation more likely.

How much have the avians compared notes? Surely Bill and George W have been briefed. About the eschaton? Would they not find it on the internet? Would they not have found out about Ron's special role? Not about 9/11. What about Straub? He must have been briefed also, before we met. He would have sussed the eschaton. The republicans on the ssci would have been briefed possibly because of W. Does this put Iraq in a new light? Would Straub not have been briefed relative to Bill? Maybe only his boss. What about Dick D'Amato? Ron would have been the youngest in the circle. Ron could have briefed the Chinese in the time-frame of the Hughes 'incident'. How do all these folks go on with their lives? They don't need to take it personally. Would Schnable not have suspected this?

If visitors could not have come up with a better excuse for reticence, the eschaton would have come up in the early days. When did it become more than a hypothesis? P was reported to have said he knew stuff that the pres was not allowed to know. This was by '98. Something besides the time-line and 9/11? Not the eschaton, however? Recall that Billy Graham was in this loop, so was Nixon. Surely Billy had a handle on the big e. That could not have been withheld from any President since Ike. There could hardly be a briefing that did not reference the big e, unless there were a major effort to spoof a bad alien presence. But you could not maintain those compartments. Leakage would be major. The bad alien story was mainly for external consumption, for those who knew something but were not briefed.

Still, a president would have to personally request a briefing. Maybe W forgot to ask. What about the VP? What about Gorbachev? Could the yellow book be transported overseas? How would foreign officials have their information validated? They would need a piece of the rock. Former presidents would play a role. Rick plays a crucial role in spoofing the story. How about the Hollywood types?

About now I will be attempting to track down Ron. I may try to meet with Dale, in this area, before going out to see Rick. If Ron is still on the boat, it will be difficult. I'll call BJ, but he does seem a bit on edge.

[8/31]

XXX, et al.,

There is more to be said about our situation:

In almost any persistent pattern of social interaction, there will arise issues of authority. Usually these issues are fairly well defined, and can be easily resolved. If not, then disputes will arise and there will exist various mechanisms that may be employed determine the legal or extra-legal authority.

We are here dealing with a very special problem of authority. Part of it is summed up in the clichéd cartoon of the space alien saying, 'Take me to your leader.'

In our case with the visitors, we may presume, that in some appropriate fashion, that request has been granted. If there have occurred any such interactions on US territory, then there would legally have to be some minimum of Presidential oversight. The protocols for those interactions would understandably have, at least, the tacit approval of whomever is the current President.

When someone tells me that they have not been authorized to divulge information related to the visitors, we may both assume that the authorization ultimately rests with the President. It should all be very straightforward.

Where do I fit into this picture? Well, consider the case of Susan Lindauer, as reported in this week's New York Times Magazine. Susan felt that our communications with Iraq had broken down. She took it

upon herself to be a back channel of communication between Baghdad and DC. She did this over a period of several years with the partial knowledge of Andy Card at the White House, and also in partial consultation with a former CIA agent.

Sound familiar? Needless to say, Susan has been charged by the FBI with operating as an unregistered foreign agent. She is free on bail, facing a sentence of up to 10 years in jail.

Is there not here an object lesson? Perhaps.

I too feel that there has been a breakdown in communications, cosmic in this case, and I too am taking it upon myself to make amends, apparently in contravention of a duly constituted authority. That is the way that xxx presently views my efforts.

There is a major caveat here: the putative cosmic message may address matters that would generally, and even legally, be viewed as religious in nature. This would be the case if the message were eschatological.

If this caveat actually did apply, the President would be in a legal bind: constitutional separation of church and state. What's a Pres to do? Hand the matter over to the duly constituted religious authority? Unfortunately there is no such thing. I am willing to speculate, however, that, at the very least, Billy Graham and the Pope would have been apprised of, and consulted on this matter. I am aware that John and Victoria have made several trips to the Vatican, for instance. If the visitors had wanted one of these gentlemen to handle this matter, I don't doubt that they could have arranged for a copy of the Yellow Book to be delivered directly to the Vatican. And quite possibly, that has already been arranged.

Am I now not digging myself deeper into the authority hole? Am I not only questioning the implied authority of the President, but now also that of the Pope?

My only direct knowledge concerning authority in this matter stems from my brief encounter with 'Sophia' c. 1977. After that encounter I was left with the distinct impression that I was being invited to operate under the authority of the 'Spirit of Truth', concerning whatever information was going to have to be revealed. BTW, I was not then an eschatologist. In 1991 this was the proposition that I put to Ron. It was several years later that Ron came back to me, in reference to the 'Aquarium', saying that 'everyone knew' that he was Catfish and that I was Sunfish. Do I need to review here the manner in which I have chosen to publicly interpret that remark?

These are the parameters under which I have chosen to operate. My only effective access to any duly constituted authority is Ron. Is this not also the case for each of us? It is only Ron who is clearly lodged in the secular chain of command.

I have argued and presented evidence to the effect that my interactions with Ron and my eschatological/spiritual proclivities have very likely come to the attention of the highest levels of not only our government, but of other governments as well. It may well behoove us to review the evidence and inference.

What I am suggesting is the likelihood that I am, through, Ron, operating as a contingent authority, i.e. we'll give the poor chap some rope and see if he can hang himself. I am just a part of a larger eschaton contingency plan and process.

Is it presumptive to suppose that if either the President or the Pope took serious offense to any of my actions, that the Ron & Dan show could not be very easily recalled and recanted? I think not.

Until such time as some better authority intervenes in this little soap opera, I contend that there is a strongly implied obligation for those already involved in this process to stay this course. Just by being where we are and when we are, we are the designated guinea pigs in this cosmic 'experiment'.

If you choose not to participate, my only recourse is a moral one. If you think I will not exercise that recourse to my utmost ability, and if you think my ability in that regard is lacking, well, shall we give it a try??

Dan

Bill and I are having trouble believing that the avians would never have gossiped about who did and did not get a briefing. Ron has had to give his own (skeptical?) briefings. How could he do that in good faith if he had not pressed this question upon his colleagues. How could they suppose he did not have a need to know? Should he not have been the first among them, after Rick to be briefed.

I would be very reluctant to enter into a contract to no longer discuss these matters with most other folks. I would have to be given a very good reason not to do that.

I now recall a point in time that the person in question told me that he had to submit a list of people he would normally talk to (about these matters?), and that he had to cross off many of the names. Ron and I were two of the remaining names, allegedly. But then I heard very little after that. I'm guessing this would have been around 1993. Perhaps Ron and I were not actually on the list. He was quite specific saying that he had not talked to Ron about it for the last 13 years. But would that mean that Ron has still not been briefed? Or, say, not until this past April? Perhaps Ron held out on purpose, as I probably would. Someone would have to brief the unbriefable, like me.

The security ground rules would have to be spelled out before being required to sign anything. That might give away a lot. How many turn it down? Ron would quickly surmise he had been left out. He must have had a back channel source that would pertain to me and the eschaton. He would actually have been in deeper.

This person said that 'we don't say we believe stuff on one level that we would deny on the classified level'. Thus they are not allowed to give out disinformation. It might have been convenient for Ron and the other to have gotten their different briefings at about the same time. But that would not quite square with his Los Alamos comment to me in '91. It might explain why in our final meeting with Chris, that we could only talk about tiger protection. Dick d'Amato would have been briefed relative to D, so why was I supposed to pester him?

Now it seems that Linda Howe may have been Rick's primary outlet for the core story. That would have been a decade before my time. Rick has always claimed that he was authorized to release this info.

But Rick is now claiming that he was not the source for some of what Linda allegedly attributed to him. Are we back to the Doty clones??

Rick has said that Ron was hanging around with a couple of MJ12 types. I doubt that BJ was.

[9/1]

OK, here is a synopsis of the briefing schedule or structure.

Witness briefing -- You are a government employee and an inadvertent witness or perhaps a celebrity, and your talking too much could cause problems. You are told that the situation is being handled, and that if you cause more problems you will have to be given the Bennewitz briefing. You will be told more than you want to know, and your mental stability will be put in jeopardy. 10,000.

AA briefing -- Alien Artifacts/Alien Autopsy. You have a need to know something. This is the lowest level. The emphasis is on physical evidence. You may be shown artifacts and/or films -- such as the Alien Autopsy film, which may have been a staged training film, with some degree of accuracy.

Techie briefing -- You will be told about programs to reverse engineer artifacts. You may be pointed to the work of Hal Puthoff. This briefing may just be an extension of the previous one. In both cases we learn that the aliens are non-cooperative. They are withholding technology until we are prepared for it.

5,000.

Yellow Book briefing -- You are given a synopsis of the history of visitor/human interactions. There is more emphasis on the 'religious' content. You are told that there is a message that we don't want to hear. About one thousand people have reached this level.

PE/Chicken Little briefing -- This is the Presidential Eschaton briefing, only for cabinet/senatorial level and up, but only very few of those, like the DCI and heads of intel committees. Billy Graham often presided. They may be warned about the R & D show, which they could also easily discover on their own. 100 at this level, not counting whomever has transited the portal. This level likely connected with the Red Book. BJ was not told about this book. Some foreign heads of state and DCIs have access. Straub got this just before our meeting.

TX11 briefing -- Too sensitive for the Pres. Ron got this briefing c. 1998 when he told Susan that he knew stuff that the Pres could not hear. TX11 was the 'eschaton code' I fed to Ron c. 1996. Ostensibly it referred to the 1999 eclipse, but in retrospect it also referred to IX11, get it?? This level has to do with specifics of the time-line. 10 at this level, mainly coordinated by the visitors. This may even be above MJ12.

There you have it. This is subject to emendation, of course.

To go beyond the witness briefing you need a religious base or support group, or your own spiritual resources. Otherwise, paranoia is the result.

My guess is that BJ may have, for those 13 years, thought that he was above Ron's level. Only now is he guessing otherwise. From what Bill said at the time, I can now deduce that Hal may have figured out this structure when I met him at the SSE meeting in Charlotte, c. 1993.

Security is maintained by graduated releases, such as with Rick and the AA film, not to mention the R & D show, and the rest of Hollywood. Now the end game comes into play.

The above is a grossly oversimplified schematic. Every level of briefing is tailored to the situation. There may always be gossip and speculation that blurs the levels.

Is the Pres told there is another level? Does the Iraq business fit into this other level? How much input from this level goes into the White House, and in what manner?

[9/13]

In preparation for the first EFG meeting on Wednesday, I posed a counterintelligence problem: consider the possibility that the Aviary might be a pro-active, preemptive move against attempts at the hostile exploitation of phenomenology. It could function as a backfire to contain and control the larger conflagration.

Would this make sense even if there were no phenomena, or no visitors? There are two problems. Such an entity could quickly come to know the truth of the matter: if there were any core to the phenomena or to the exploitation of them. Would it not then be able to stand down? Has it done so?

This leads us to the second problem: my own participation relative to the Aviary. Up until last May, I could have said that 'we' had stood down. Since then there has been an upswing in our activity. Was there simply another outbreak that needed re-containment? With my involvement, is there anticipated another outbreak of eschatological fever? How then would the backfire strategy work? Would it not backfire?

The EFG simply does not fit into this counterintelligence rationale. Is it preemptive messianism? Preempted by whom and for whom? We'll just have to find out. Little doubt remains, however, as to the fact of oversight at the highest levels. For instance, the message that the President was 'furious' had only one intended recipient. Was the Anderson article a spoof? I'd say it was too subtle to be that, yet, too obvious to be other than a signal. The eschaton is not a toy. I cannot imagine who might toy with it. The Ron & Dan show is much too unlikely to be a mere plot. It is more like a surprise that is still unfolding.

Then there is the problem of the wire service. There will have to be an artifact or a signed statement by someone in the chain of command. We could arrange for an editor to have a visitation, and then print a background article that would include hints of eschatology. This sounds about right. It might already be in the works. The editor would talk to GHW and then have an interview with Charlene. Only the background story would be published. There would be a stringer's name who would handle the follow-up questions. This would get the internet heated up. There is not much more that I have a need to know at this point. Is there anything else to happen first? After thirteen years, it wasn't going to take much to get me back up to speed. Who else must be brought up to speed? Who if not a journalist? Possibly someone like Steve Bassett, but he is stuck with the ET scenario. He could not extricate himself from that, politically. Nor is there too much more that Jack could do at this point without sounding flaky, relatively speaking. I could ask to bring a journalist to the next BJ&R meeting. There may just be a built-in hold as in the Shuttle launches. If so, they ought to be able to tell me. The article would allude to phenomenology and the eschaton. That would be sufficient to provide me with leverage on the internet. It would contain some of my phraseology. I would tell folks that it was coming. That would be a big deal. I could do a draft of it here. I'll have to think about that.

The article would have to include an interview with a former government official, possibly Woolsey. There is a serious problem with phenomenology, which could impact our scientific worldview. This would be sufficient for my purposes, especially if I were given advance notice. This would also justify my consultation with philosophers and scientists. That could be done as part of the EFG initiative.

Would or could this article avoid any mention of ufos? It would have to refer to a specific phenomenon. Would the mere granting of the interview be a sufficient news hook?

[9/14]

I don't see how any mention of phenomenology can avoid the topic of ufos. This would apply to any interview of Woolsey on the putative phenomenology problem. Could that be limited to crop circles, for example? What about dredging up remote viewing again, and say the case is not closed? Just consider the Phenomenology Network. Would it have to mention Ron? Could Jim deal with it? All we have to say is that the door cannot be closed on phenomenology. And this would be apropos of what? Some recent example? Perhaps it could be given a postmodern slant.

[9/21]

It looks like the EFG is back on hold until the next meeting, which would not be before the middle of next month. Presumably, with each visible step that I take, other less visible steps are required. I shake the tree, and then others wait to see what falls out. It can get tedious.

In the interim I would like to get back to my perennial problem with atoms. The problem is whether and how to ascribe upward causation to atoms. Phenomenal cycles can carry much or most of the causal burden of atoms, but perhaps not all of it, at least not with the present understanding of such cycles. I'll need to consider special cases individually. One such is to explain the functionality of medicines. To explain penicillin, one would first need to explain bacteria, which in its turn entails the explanation of

cells in general. This brings us back to the basic metabolic cycles. If cells did not exist, we would have to invent, which we have.

Given the hydro-cycle, atoms and cells fall into place. One could say the same of germination.. That brings up the issue of evolutionary coherence. This may also be a basic need which brings us back to Jurassic Parc and even Pokatok. This brings us back to Aristotle & Plato. By the way, there is a good article by Max Tegmark on [parallel universes](#) that contains a brief but significant discussion of A & P and the nature of reality, toward the end of the essay. The question posed is whether reality is patterned more on words or formulas.

Jurassic Parc could be greatly facilitated by implementing a goodly measure of Lamarckism, but it would be difficult to control or limit. There is also genetic engineering, begging the question of materialism. One would need an exit strategy for any experimental process. How difficult is it too turn teleology on, and then turn it off? Then consider the teleology of medicine, getting back to the original problem.

[9/22]

We have a division of labor between internal and external teleology. To what extent may the Telos avail itself of human cognition, after the fact? This would just leave us with a bootstrap problem to solve, but we already have that with the ouroboros. This would also entail upward causation at the human level. Could that process not be translated to the atomic level? From whence would the atoms derive their substantiality, and would it not require consciousness? This might tell us something about the aviary/MJ12 phenomenon that does seem to be critical in the in the interface between cosmic and terrestrial intelligence and counterintelligence. It could be that mathematics is playing the role of Cs (actually more like instinct) on the atomic level. In that case the Av/MJ might be the MGrp, the fearful symmetry.

What then can be said of medicine? Think of the shaman and his potions, a special dietician, using interspecies communication. Certainly there are formulas. Is the bomb just another potion coming out of the anthropic MG? The physicists were the midwives, using formulas instead of forceps, to bring down the solar bambino, which is also CL and the Islam flag.

If logic did not exist, could we have invented it? Ditto for the electron. It is how the chain of being becomes the ouroboros. That brings us back to pi. A tiger named Pi? In many of these cases there is a potential chain reaction which can be eschatological. We get to pick our potion?

It is not clear how to apply teleology or the observer principle to math. How do we bring Aristotle to bear on this subject? Is not the BPW akin to the fixed Platonic Good? What is the basic difference between instinct and logic? If math didn't exist, either we or the electrons would have invented it. Could there be any virtual sporadic groups, like Regge resonances? The sporadic groups involve finite projective geometries and lattice packings. There is an organic quality of math, for which Plato cannot account. This quality may be perceived only by an organic being. Relationalism abounds.

[9/23]

Today I meet with CF and a sometimes reliable source to see about connecting some aviary dots. What did they know and when did they know it? How many sources? Why do some talk, and some don't? Is anyone in charge? Is Charlie? Or is this a Matrix operation? Just some basic issues. I have to be careful about 9/11 with this chap. Not sure how that might wash. I don't think he sees a plan. He sees us as being subjects of ET. What about the Yellow Book? How does he account for that? He says they are here mainly to create more ETs out of us. That 'hybridization' stuff can fit into an 'evacuation' preparation

scenario. Is there any other rationale? Apokatastasis is not big on his list. It's not clear whether GN wants to fight the ETs by stealing their technology, as with Jack.

7/9/04

More of the Same

My poor neglected diary, but the more things change, the more they stay the same.

The meeting with Gordon N. did not go well, in my estimation. This guy is a great actor or entirely clueless in Las Vegas. This is the Forrest Gump of assassinations and tape erasures. He could stumble into MJ12 and stumble right out again.

I demanded a meeting with CF on Friday. He says I am too impatient with Gordon. Be that as it may. I'm not working for Central Casting.

I did have three questions for CF. With regard to the Woolsey briefing of GHWB, he tells me not to waste my time. The presidents cannot be players. You tell them what you have to tell them, and then hope you don't have to put them down. Democracy and capitalism are not the be all and end all of human existence. Was JFK dumb enough to get himself and his brothers sidelined? Did they mean well, or were they trying to upstage Charlie and Sophia? Headstrong, I think they call it. They never knew what they were going up against until it was too late. Now there are better safeguards in place.

As for BJ's briefing in the desert, it had to do with reverse engineering. There is some truth to that idea, but it ain't about saucers, Hon, it's about Creation, if you get my drift. BJ is still POed at me and still on his code of silence. Each to their own. CF is bringing BJ back to the company in three weeks, but evidently he forgot to tell him, so I had to.

Finally I asked him about the Anderson article. What article, he asks? Well, then, you've answered my question, says I. Long pause..... Oh, that article, says he! Typical.

It does turn out that CF is buddies with Porter. That could be interesting. He may get a Bigelow on his floor, instead of the usual newspapers. He did wonder about Bill doing a write-up on Gordon. Bill has been thinking more about a reprise of the AAE article done with REG, but placing it with Tina Brown in a few months. Do you think that we or she are ready for that? That would really be humping the ol' timeline. I'll have to ask 'Dr. Felini' about that. Hey, that's a good one, Bill!

Dr. F did manage to throw a curve, he always does. This was an old curve, but with new spit. It's about the missing source. Seems like we did really have a 'five martini' source back in the 70s with Grillflame. But it weren't Pat Price, and maybe not even Charlie. Might it have been Sophia/Graff, without the Graff?

My response is that the source probably never went away, but just shape-shifted, as usual. Witness TX11.

I'll have to ask him next time about the missing money that Dick D'amato went chasing out in the desert. How much is missing? Is it just billions, or could it be trillions? There aren't that many grains of sand out there. How much would it cost to buy a doormat for the Green door?

What next? Who knows?

There is still the question of how Gordon got hooked up with Hal. This appears to have happened under the aegis of the LA Scientology chapter referenced on the previous page in connection with Parsons. Dr. F. is not innocent of such a connection, either. It is a small world.

[9/29]

It may well be that the timing of the activation of the EFG was partially geared to the election cycle,

simply to remove that additional variable. Related to this timing is the change of DCI. That would indicate that the agency would be the focus of governmental shifting, rather than the administration proper.

The Iraq business is just an extension of the cold war: a focusing distraction that also provides some cover, particularly on the intelligence side. This would be adequate justification for a minimal loss of life. The heightened clash of cultures and religions does provide a suitable backdrop for the EFG/Y2C.

There is a second meeting today with BJ. He has been the most vocal opponent of the EFG. I would like to see some movement, but past experience argues against rising expectations. How can he stand up to the JackA91 and John16? Is the handwriting not on the wall? Is it not a *fait accompli*?

CF has pointed to the missing Source as being of greater intelligence significance than the visitation, per se. Is this simply another pointer to the EFG, and its linkage to 9/11? There were also the exchanges with BobbyK, NancyE and ChrisS that point to the 'take charge' phrase used on CompUServe, and underscored by JackA.

BJ must understand that the sequestration had a sunset provision from the beginning. It makes no sense and could not have worked otherwise. It was an acclimation project from the beginning. The EFG is the logical denouement of that project. It was never just an addendum.

Also there is the likelihood that Osama is at the PE/CL level. Iraq leaves him undercover. He would have a role to play in the EFG. This would also relate to the 9/16 Zoo meeting. Everything happens at the Zoo. Does this mean there might be ~10K folks at this level? Is that a stretch? What can we expect, leading up to the election? Any more 'surprises'?

My next step might be to get cranked into the Arlington Institute. I'll have to ask about that.

OK, so the meeting turned into a phone call. It went perfectly well. He remains open to most ideas, and as long as we can communicate, that is the main thing. Whatever reservations he has, can probably be worked around, and may be useful as points of discussion.

CF had stated that the reverse engineering program is a fiction, useful or official though it may be. I stated that I had never supposed that visitation and engineering had to be connected, but BJ stated that in his briefings they always were connected. If CF had wanted to deny the visitation, which is my thing, he would have done so, but, no, he singled out just the engineering component for his skepticism.

Also BJ had heard about the prospective promotion several months ago from someone he considered nutty. This is in accord with my conclusion that this has been in the works for some time. It is part of the main timeline.

At this point I should switch back to email mode, but don't go away.

XXX,

Permit me please to burden you with some additional speculation. You are encouraged to play the Devil's advocate here, if that role continues to suit you.

The major item on my plate is the putative promotion. As you know, I have been waiting for the breaking of the 'glass ceiling' vis a vis the EFG. This would be tantamount to that. If CF becomes more visible, then so surely will the eschaton, and I'll wager that is the whole point of it, with all due respect to CF himself.

The fact that you may have heard about this several months ago does tend to confirm this view: that it is part of the main timeline and not just something fortuitous and *ad hominem*. That would have been about the same time that Ron moved to reactivate the EFG, strong correlation. All this goes back at

least to the Anderson 1992 article, and probably much further.

This then raises the main issue between the two of us concerning my proactive stance relative to the alleged eschaton. You are not discounting my eschatological speculations. BTW, what are your independent sources on the eschaton?

My views of it are heterodox in the extreme, by way of anticipating your questions. I see us as the co-creators of this world, and, in fact, our participation in cosmogenesis, reaches a crescendo in the frame of the eschaton. It will be a very deliberate and extended participation on our part, very different from the usual Rapture scenario.

It will largely be orchestrated by us and for us, speaking as a Universalist. The whole visitation process has just been a run-up to this eventuality. The eschaton baton was being passed to us from on-high. The ball is now almost completely in our court.

[For the sake of argument, and to distinguish this from the Rapture, I like the Green Door hypothesis. Charlie and Charlene came here by way of the GD/portal/stargate underground in area 51, say. That is also meant to be our 'evacuation' route. You may take it from here.]

The EFG has been groomed, rather carefully, to put a public face on this previously sequestered preparation. That is just a continuation of what I have been doing from day one in 1991. The Anderson article was a very significant early endorsement of this process. But now it will have to become more visible. I don't see the possibility of many more baby steps here. At some point it will have to be like jumping into the cold shower, but it will be more like a hot stove.

If the CF and Dan show was ever going anywhere, then this is it. He is riding shotgun, almost literally. I get the fun part. If I were God, this is how I would have planned it. This is the best possible rapture in the best possible world. I would be happy to argue this point with you and anyone else. That's my job!

Let us converse about this. But you do understand that this conversation will have to be expandable, sooner rather than later. The conversation starts with you and me, but it cannot end here, certainly not in my estimation. We will have to establish an expansion protocol ASAP. No?

Dan

[10/05]

I will be meeting with Steve Bassett this evening. My advice will be to caution about fighting against city hall. Among ufologists there is the presumption of connivance between the establishment and the bad aliens. There is the further presumption that the good guys will prevail.

This implies a very considerable myopia on the part of the bad guys. It implies that they are deliberately picking a fight with cosmic intelligence. Would this not be a very dumb move? How many people in the world, if given a clear choice, would side with the devil? This would be tantamount to nihilism. If there are nihilists in the world, you would not find them ensconced in the establishment. True, the establishment might attempt to resist an NWO, but not if it was a *fait accompli*. More likely, the smart money would out in front on any NWO. Capitalists are not genetically disposed to going down with the ship. They would not be where they are if they were. The visitors have the contrary problem of keeping their potential suitors at bay for as long as possible.

How do the visitors manage to remain incognito for an indefinite period? They can manage this only with an excellent rationale. It would be hard to imagine a more adequate rationale than that of preparation for an eschaton.

[10/7]

Permit me to use this space to compose a message to Jack.

Jack,

I have to wonder, then, whether there are any limits that can be placed on the power of the mind.

Is there anything that could prevent intelligent beings (IBs) from manipulating the laws of physics. For instance, are there any reasons why an IB could not create a universe with an arbitrary set of physical principles and parameters?

Are there any limits on the robustness of a simulated world that an IB could create?

Is there any good reason to suppose that our world is not one of these created or simulated worlds?

Is there any a priori reason to suppose that Platonic worlds would be favored over Aristotelian worlds, using Max Tegmark's terminology. Physicists like to assume that we inhabit a Platonic world with Aristotelian appearances, but we do not know that it is not actually just the reverse.

One problem here is that we do not know what is the ground or source of existence.

On Tegmark's view, all of the above are possible and, therefore, probable, and equally so.

We would have then complete ontological neutrality: there is no distinction between possibility and actuality.

If there is no distinction between possibility and actuality, then there is no source of being. If there is only actuality, there is no possibility or potency, and so no source. This is not in accord with the inflationary model of cosmogenesis. It is in accord, though, if we take an trans-temporal perspective.

If there is, however, an actual source of being, that totipotency is susceptible to being co-opted by a principle of vitality. I suspect that is the case. It would be like the thermophiles living as close to the vent as possible, and thus potentially regulating that source.

Another avenue to the same conclusion is to adopt an observer principle: no unobservable worlds. There is then a vital selection principle attendant upon the Source.

Jack,

Clearly your powers of imagination exceed those of Scott.

But the situation of Alien contact is a challenge that ought to truly stretch our powers of imagination to the utmost, assuming there are even any limits in that regard.

If there is ever going to be a motivation for us to think outside the box, then Alien contact ought surely to provide it.

This will certainly be the case if we are dealing with UTs rather than mere ETs. And we surely do not know yet which situation pertains. Are our visitors from Planet X or from Dimension X, or both or none of the above?

How do we know that they do not bring their own reality with them? How do we know that they are subject to our laws of physics, or to any laws at all?

Why is it that this situation, after all these years, is still being handled by intelligence officers and not by scientists?

Do you really suppose that the best minds in the world have not already been recruited to examining these data, probably being given more data than you or I have access to?

Do you suppose that Ron has not had to give briefings at the highest levels? Do you suppose that the possibility of a scientific explanation is not frequently raised?

I submit that the real data have a degree of strangeness that places them outside the physics box. As a physicalist, you may have difficulty countenancing that possibility. Can you not imagine a phenomenon sufficiently strange or anomalous to place it outside the physics box? It would only take one such event to blow your reality out of the water. Do really you want us to bet the future of our civilization on the possibility that not such event has or will occur?

MJ12 cannot afford to bring their biases and prejudices to their work. They cannot afford to be constrained by metaphysical prejudices such as your notion of physicalism. We pay them to consider all the possibilities, do we not? You are singularly unwilling to do that.

Is there no scientist in the world to whom you would be willing to submit your ideas and formulas? Is there no physicist in the world who could peer review your work?

If not, then what are the rest of us supposed to do? Are we supposed to turn over the control of MJ12 to you, just on your word. Imagine how much faith in you that would require of us. And I thought you said there was no place for faith!

What is left for us to do?

[10/12]

I am currently reading [The Twilight of Atheism](#) by Alister McGrath (2004). It is given only 17 mostly unenthusiastic reviews (sales rank 9,255). You may compare this with [The End of Faith: Religion, Terror, and the Future of Reason](#) by Sam Harris ('04). This has 123 mostly enthusiastic reviews (sales rank 33). The reviewer for [Salon](#), Laura Miller, writes:

There's something inadvertently eloquent about the fact that Alister McGrath's "The Twilight of Atheism" and Sam Harris' "The End of Faith" have been published within a month of each other, as they so perfectly illustrate the triumph of heat over light in this debate. The first book is a semi-disguised crowing session about the subsiding of godlessness in the Western world, the second is a 336-page fulmination on the evils of religion and the urgent need to crush it before it kills us all. [...] It's enough to make you suspect that it's no longer possible to have a real conversation about religion.

From the reader response one may gather that Atheism is not riding quietly into the sunset. There is a tone of stridency in the latter reviews, quite lacking in the former.

My quarrel with McGrath is in his disavowal of any evidentiary basis for either view. It then is a matter of taste. The problem is that the scientific understanding of facts is incommensurate with that of a metaphysical understanding. There are two types of evidence. Is the choice between these two paths also a matter of taste. I think not, simply because the metaphysical view can embrace the physical in a way that is not and cannot be reciprocated. The metaphysical or spiritual view is capable of much greater comprehension and coherence, than is the scientific. Science may be universal, but metaphysics is cosmic. Science works within a state of denial of anything metaphysical. That denial is the basis of its methodology. Spirit is all encompassing. Science presumes only efficient causes. Metaphysics accepts all causes. Immaterialism can comprehend materialism to a degree that cannot be reciprocated or even countenanced by materialism.

It is true, however, that I do still struggle to find a comfortable repose for efficient causes in the scheme of final causes. Jaegwon Kim suggests that final and efficient causes are incompatible in dealing with mental phenomena. I have yet to formulate an adequate response. I continue to nibble around the problem. I am not entirely confident that the elevation or reification of cyclical phenomena can measure up to the task.

Physics does not recognize causes, nor even the directionality of time except in the phenomenology of

thermodynamics. In, general, science does not pinpoint causes except when dynamic equilibria are disturbed as in the phenomenology of disease, or in other catastrophic incidents. Storms are not given specific causes, but are seen as components of a complex dynamic system. In ecology, predators and prey are two components of a system and of an extended food chain.

Previously I have equated materialism with reductionism and so with atomism. Presumably atoms do not countenance final causes. Neither do the laws of physics. You may only ask if a sequence of events is lawful or not.

Atoms don't strictly exist for physics. They are hardly even theoretical entities. What exists practically are the mathematical methods for making predictions. The methodology only speaks directly to observables or measurements. Particles and fields are labels that, at best, may be attached to some symbols. The predictions are only probabilistic.

Where atoms figure more directly is in the phenomenon of evaporation. How is an immaterialist meant to cope with this? Do we merely need to point to the hydro cycle? Elsewhere I have fallen back on the archetypes in the scheme of AZO/X/QRP. Given the hydro cycle and this scheme, something resembling water molecules ought to fall out or emerge without too much difficulty. Does this credibly spell the end of materialism? Optimistically, sure. Without a backup team, this ought to pass first muster. It should be suggestive of further research. Presently I feel no pressure to extend this scheme by myself.

It is one thing to have atoms emerge archotypically, it may be another thing to have them behave properly in all their multiplicity. Do we need to confer upon them a substantial individuality? Particles in physics actually have no individual identity. They are perfectly exchangeable. Identity, then, is something metaphysical. It is this (and only this?) something extra that seems to cause the conceptual difficulty with immaterialism.

From whence comes identity? Does it not come from introspection? Can that, or must that introspection be applied to pebbles and grains of sand? Do they have any self-identity, or is it only conferred by sentience and memory? When does a rock become a 'pet rock'? A point to keep in mind here is that all identity is only ever probable, it is never absolute. No identity is immune from loss or theft. As something purely relational, actual identity cannot underwrite the necessarily absolute and metaphysical claims of materialism.

My further claim is that physicalism, without the metaphysics of materialism, has no metaphysical basis of its own. It is just a useful methodology as noted above. Without its assumed objective materiality or physicality it is merely a mental construct that would be appropriately susceptible to a teleological override. Need we argue this? The least action premise of physicalism is well situated within our best possible world.

[10/13]

The Creator, X, conspires to break the symmetry of Z. Alpha becomes the primordial game of [Pokatok](#), and the Omega goes back to X again in an ouroboric manner. The A to O is spanned by the QRP archetypes, the metabolic cycles, R, being the principal of these. The ball court is part of a [Jurassic Parc](#). The primordial physical object is the ball itself. I'm not sure what would be the most effective way to introduce the reproductive cycle, but it could be patterned after the ouroboros. The Zodiacal cycle is the seed that grows into the A/O ouroboric cosmic circuit, as part of the dialectic bootstrap. Seed production is a key step that remains obscure to me. The archetype of Pi may come into play here in the form of $e^i \pi$. Here we have a logic circuit, of sorts.

Is there any way to rationalize the origin of the DNA code? Science does not accept such a challenge. It can show us a sequence of steps and say this is how it happened. We are left to wonder about other

possibilities.

To introduce teleology is easier said than done. Can a DNA code be worked out after the fact of reproduction, or must it be plugged into the process at the start? How can we relieve the creator of the burden of complexity? In some sense I am attempting to naturalize Creation with a reasonable use of teleology. The Telos is in the details.

[10/14]

We may wonder as to the limits of complexity. Perhaps these limits are to be realized only in the Eschaton. That seems to be the way we are headed. This complexity will be tantamount to organicity. Speaking of which, we may wonder how biological complexity relates to social complexity. The biological is likely a reflection of the social.

Is there an optimal complexity? Is complexity good? Is it a case that everything that can go wrong will go wrong? The greater the complexity the more we must rely upon the invisible hand to maintain the organic functionality.

We might also wonder if the Monster Group will define the limits of mathematical complexity. The Riemann Hypothesis may go beyond that limit. But the RH also speaks to mathematical organicity, whose source still eludes us.

We have also noted the physical complexity to be found in the static limit of the infrared catastrophe. Every particle in every galaxy must contribute to the local fields. Does this not place too great a burden on the ontology of physicalism, pointing us back toward teleology? May we anticipate the complexity of a GUT?

We might also wonder about the role of computers in augmenting or alleviating social complexity. Could computers ever contribute to our organicity, to our *Gemeinschaft*? Consider also the role of capitalism in that regard. The two problems may be closely related. Whither economics in these end times?

Will there have to be any phase changes in the above systems in order to clear the way to the Eschaton? Would we be able to view such phase changes as other than catastrophic, except in retrospect? For instance, it might require a breakdown in the external infrastructure in order to jump-start its internal analog, such as from telephony to telepathy. Any such sudden transition would likely entail enormous loss of life, and so be unlikely in my estimation, as not compatible with the BPWH. We may anticipate the terrorist threat to remain mainly a threat, where it may well contribute to cohesion. The nihilists contribute to social cohesion, the way a vaccine contributes to the immune system.

Let me refer you to Andy Denis' ['The Invisible Hand of God in Adam Smith'](#) (2005):

Adam Smith is revered as the father of modern economics. Analysis of his writings, however, reveals a profoundly medieval outlook. Smith is preoccupied with the need to preserve order in society. His scientific methodology emphasises reconciliation with the world we live in rather than investigation of it. He invokes a version of natural law in which the universe is a harmonious machine administered by a providential deity. Nobody is uncared for and, in real happiness, we are all substantially equal. No action is without its appropriate reward – in this life or the next. The social desirability of individual self-seeking activity is ensured by the 'invisible hand', that is, the hand of a god who has moulded us so to behave, that the quantity of happiness in the world is always maximised.

Shades of the BPWH! Also note Andy's thesis wherein he treats holism vs. reductionism in economics, [Collective and Individual Rationality](#).

There are a number of remarkable passages and quotations in these works.

At the level of appearances, Smith says, the world throws up phenomena which appear incoherent and therefore inflame the imagination. This inflammation is to be regarded as a disagreeable sensation. 'When we first encounter anything that is not familiar or expected, Smith argues, we are struck by the feelings we call Surprise and Wonder. These are not welcome feelings.' (Heilbroner, 1986: 15) The job of a science is to soothe the imagination by suggesting connections between things, and by tracing the unknown back to the familiar, so that the observer may regain his tranquillity....

[...]Or, more pithily, 'it is the end of Philosophy, to allay that wonder, which either the unusual or seemingly disjointed appearances of nature excite' (Astronomy IV.34). We do not understand what we seek to explain by science, 'but by categorizing things we come to be at peace with them ... We draw the venom of Wonder by applying the poultice of familiarity' (Heilbroner, 1986: 16).

For Smith, therefore, it is just irrelevant to talk about the truth or otherwise of the findings of a science – what matters is its success or otherwise in 'smoothing the passage of the imagination betwixt ... seemingly disjointed objects' (ibid), it is this criterion alone which we should bear in mind when considering the sequence of schools of thought in a science such as astronomy:

Modernists would deny all such allegations. Postmodernists would likely nod in agreement.

(As an aside: it may be that my cycles and Descartes vortices are not unrelated.)

A challenge is pointed to here: finding a way to reconcile Panglossian or Stoic conservatism with interventionist liberalism. I suppose they may only be reconciled in the eschatological context. Our participatory eschaton will be an enlightened intervention based on holism. Wanting to take charge is ingrained in human nature. That is a necessary ingredient of our apokatastasis. Of course, it is the conservative entrepreneurs who are the most interventionist of all.

I would like to get back to dealing with the origin of complexity *per se*. Certainly diversity has intrinsic value, and there is a strong correlation between diversity and complexity. The principles of relationalism and coherence render the complexity organic.

But there are limits to diversity, particularly within species. Evidently there is also a value to group identity. This is particularly true for self-propagation and mutual protection. This is the case for both organisms and cells.

One explanation for the invisible hand that can operate on multiple levels is 'morphic resonance' as introduced by Rupert Sheldrake in [A New Science of Life](#) (1981). It is similar to Waddington's notion of the chreode, a canalized pathway in epigenetic space. His morphic fields entail only a cosmic memory and limited teleology or downward causation, but not intelligence. They would operate in conjunction with evolutionary forces in the biological and psychological realms. It is a frankly dualistic model on the biological level, the morphic fields being non-physical.

To the extent possible, I wish to off-load the details of Creation onto the creatures. The complexity uncovered by science may be attributable in part to the scientific enterprise itself, using a robust form of teleology. I attempt to provide a plausible narrative for this process. Molecular biology presents a major challenge. The evolutionary appearances must be saved by all means available. Evolution is the rationale for biological coherence. Lamarckian processes could certainly be employed under the aegis of teleology. I'm skeptical about using Lamarck on the cellular scale. This would require a robust cellular intentionality, but this may ultimately be what the doctor orders. The fact that I cannot imagine such a consciousness, should not be a real obstacle. Are there suitable metaphors for molecular systems? Could there not be molecular elementals? We would end up with a molecular version of pokatok. The elementals would represent the collective intentionality of the scientists as projected onto each component. We are lacking a relational matrix. Elementals may be a version of Leibniz' monads or Descartes vortices. With or without windows?

[10/15]

I would like to be able to ascribe an elemental intentionality to the biological proto-cycles, as a way to jump start the biological details. Anything to avoid material atoms and aeons of evolutionary time.

With molecular biology, we have a problem similar to that posed by Berkeley's 'tree on the quad'. What prevents the tree from walking away in the middle of the night? The problem is exacerbated in the case of a person attempting to return from a sojourn through a portal.

With immaterialism, is there not the constant threat of dematerialization? I am disposed to employ the Principle of Sufficient Reason. Once the tree has been conjured, there is no good reason for it not to stay conjured. If the tree is imaginary, then why would it not be fleeting like our imaginal images usually are?

Or are they. We can commit images to a long term memory, where they may always be recalled in context, and it is not even possible to remove them from a given context. There is an inherent stability.

I would like to push the PSR into a more proactive role, as in the filling of our blind spots. In case in question, our blind spot is microbiology. The blind spot is filled in gradually and logically or reasonably in the course of our researches. The logical process of this particular filling in is context dependent to an elaborate degree, in particular it carries us back to the logic of Greek atomism and the necessities of metabolism.

A counter case might be drawn with regard to Mars, and the observations of Percival Lowell. Where did his canals come from and where did they go? Certainly the Moon played a mediating role here. Were there not similar episodes in the case of our microscopic 'discoveries'? There may have been, but they cannot ultimately withstand the pervasive logic of naturalism. The alchemists certainly had a fun time with alchemy, until the logic of chemistry gradually prevailed. Eventually all of the dots have to connect. But, with the Green Door, we are invited to step into another, presumably less natural, scheme of logic. My question entails the problem of stepping back through the door. How does the inter-logic function? Those two dots are not easy to connect. There must, however, be a path of minimal disturbance of the two logics. Separation between realms is unnatural, it requires artifice.

Another meeting is in the offing. My concern now is with the reticence. Do we understand the reason for it? Is it permanent or is there a sunset provision? Where did Jimmy Carter sit with this? What about Dick D'Amato? Is there no money trail? Yellow book? Eschaton? Appointment? Help or hinder? Are we waiting for additional information or confirmation? And my correspondent, where does he sit? Who is responsible for reticence, or is it universal consent? Can we dismiss BJ info, unless we have a better source? That's what RD thinks. Why are we concerned with Davenport? Anything about which we are not skeptical? I can only see two justifications for reticence. The common one and mine, and they are not completely unrelated. Am I missing a possibility? Is it just embarrassment? We think that is why the AF covered for RD? Covering misdeeds and/or incompetence. That would not explain universality. Bill thinks that AID was involved. Funny stuff in Brazil. Even if it was all disinfo, there still have to be reasons. Is there no problem with materialism? Could it not become a crisis? Might it not relate to other crises? Has everyone done due diligence on all these matters? Why did we change our mind about RD & GN? How can I help? What about Israel & Iran? Oil reserves? Any trend in popular sentiment? Popular desire to let this dog sleep? Just the occasional titillation? Will this remain a political issue? Do we decide it?

[10/16]

With all the reticence, one might suppose that we are waiting for something. Do we know what for? Is our crystal ball sufficiently clear that we can afford to play a waiting game? Are we waiting for something good or bad? Are we simply putting off 'til tomorrow? What came between Jimmy (1977-

81) and his promise of disclosure? It must have been something specific. No? Should we not have a handle on this? It does seem bizarre that Peter has not made an attempt to report. Should we not know who is posing as having an official interest? I don't see a rationale for our level of apparent inaction. Any trend in inquiries from either in or outside the government?

What did Jimmy do wrong? Whom should he have asked? BJ? If not, would he not delegate someone to investigate? Would he not pursue the phenomenology angle. Where would Graff have fit into that picture? Is the privatization an issue here? Have we ever said that it was? Perhaps in reference to Hughes and the Yellow Book. We also have to consider the Anderson and Straub business, not forgetting Woolsey, D'Amato, Goss, or Billy Graham. We also have the Rockefeller & Clinton initiative. Even Bill L. got into that act. And 9/11? Have we not been able to connect these dots? Over the years, has there been developed no methodology for dealing with these high level inquiries? But we have already tacitly admitted to knowledge of these issues. But that only brings the issue of reticence to the fore. We are not denying that we have done due diligence w.r.t. the counterintelligence problem, which would cover most of the above, anyway. We must assume that the presidents have some reasonable overview w.r.t. reticence. We would have to know if this were a big or small issue. Are we trying to make a big distinction between what is official and what is not? That is just a continuing nuisance. The public will not buy into that.

What we have here mainly is the sleeping dog scenario. Nobody wants to kick the dog. Whoever does is sure to get bitten. Even the presidents have seen this dog, and are quite willing to give it a wide berth. Who are we to second judge or second guess? Or is it also partly a sleeping beauty story, and we are waiting for prince charming? We are waiting for the kicker/kisser, depending on your point of view. The compromise in the sleeping frog. Who is going to kiss the frog and into what will it turn? Will it be a junkyard dog or a princess? Who really wants to find out? How may this issue be pressed? Would an appointment not push this over the top? Can Goss not have been informed?

We are dealing with a sleeper issue. The timeline is critical and it must have something to do with the nuclear and cultural issues. Both of these latter issues are often seen in apocalyptic terms, anyway. Some see the nuclear card as a way to draw out the joker. I'm not sure we want to continue to play that game.

There is pretty clearly a linkage between the visitors and the bomb. There is a serious message in that fact. We continue to ignore it at what peril? Who is deciding? Ocelot and Ferret? The Ruskies were not playing the eschaton game. With the Arabs and Israelis, not to mention the terrorists, it seems a different matter.

Even if we don't know it, should we not treat the prospective appointment as related to the timeline, even though the eschaton may be presumed to be bipartisan? How many people who are aware of phenomenology are not aware of its connection to the eschaton? I doubt there could be many. How many who know of CF are unaware of phenomenology?

[10/19]

xx,

I met with CF on Friday. Our principal topic was that of briefings.

Another instance of this had come up in regards to Peter Davenport, a private ufologist with a previous security clearance, who had been invited to DC where he was told by some folks who claimed to be representing the government that his UFO Hotline was a valuable tool, and that the problem was taken seriously by the government.

I asked CF about attempting to follow up on this information. His response was that he was already aware of dozens of such 'briefings', and that his previous attempts at follow-up, had been uniformly

negative. In particular, his attempt to find connections between the known briefers failed. The leads were dead ends. Typically there would be a single, low echelon staff person at a given facility. The supervisor would claim to be unaware of the incident.

CF also mentioned that you had anecdotal knowledge of a number of ufo-type 'briefings', besides your own. I am not sure to what extent you may have previously shared this information with Ron, or to what extent you may have attempted your own follow-ups or informal analysis of these reports.

CF has raised the possibility that the uncorrelated nature of these briefing reports may be similar to the uncorrelated nature of the ufo reports themselves. His suggestion to me was that the sightings and the briefings might well be understood collectively as a kind of smokescreen or decoy operation. It is a screen that may be deliberately generated, and not necessarily or ultimately just by a human agency. We then have to wonder about the nature of the activity that is supposedly being concealed thereby. CF averred that an eschatological connection could not and has not been ruled out.

CF did say that your interpretation of this type of data might well differ from his own. Could you possibly help us out here?

Dan

This was sent yesterday, and there has been no response so far. CF has suggested another meeting before the election, and he also suggested inviting Joe S. Joe said he could be down here on short notice. Bill L. is not happy with this information about the briefings. He suspects that there have been more substantial briefings, particularly in the early years. Also this does not reference what might happen at a higher level. Would a president be given the 'smokescreen' theory? I would not want to suggest that abduction reports, for instance, are merely a smokescreen. They reference a substantive interaction of some kind. Is all this just about the UTs disguising themselves as ETs, to the point of arranging briefings about an alleged reverse engineering program?

My correspondent also said that he has already done his own bi-static radar tests, similar to what Peter has proposed. At whatever phase space he examined he would see uncorrelated targets. He and Peter have both corresponded with a John Sars at U of W in Seattle concerning the techniques. Thus the notion of a smokescreen. Defense systems are typically designed to filter out anomalous targets.

An agenda item for the next meeting would be the future of phenomenology, inside and outside of government. Can we ignore the smokescreen, going forward? Is there any reason to be looking for developments in that arena? Has the smokescreen theory been discussed or disseminated? Have BJ or Hal explained their reticence? Let's suppose that eschatology cannot be ruled out, then what can we do about it? Should we not be pushing harder on the EFG? Networking? Or do we this dog sleep? Can we anticipate a trigger?

I'm expecting a phone call from Steve. Invite him to a meeting along with Ron & Joe? He will also not be happy with the smokescreen rationale. Will he see it as a copout? Reference bi-statics. What positive spin may be put on the rationale?

There is typically a lot of noise in the atmospheric sigint, but not all of it is just noise. It is target noise. There is a related type of noise on the humint side, i.e. the briefings. Neither of these correlate sufficiently to provide any actionable intelligence. This is a specification of the phenomenology problem. It does not provide a briefing rationale for the pres. (for a DCI?), unless you add the eschaton, which is probably too speculative. This problem, by itself, does not explain the Anderson article or the Straub briefing. Has the eschaton contingency been discussed in connection with this phenomenology problem. CF states that there was correlation with nuclear programs, early on.

Suppose the visitors did want to facilitate an eschaton. What would be their leverage? Threats would work better than actions. There would need to be a special source such as discussed above.

We could go back to the portal problem. It seems to encapsulate several phenomenology problems. This

is the problem of rematerialization. What is the path of least disturbance? We have to worry about the physiology going in either direction. How does this relate to the problem of atoms? Can there be partial metabolism?

[10/20]

I sent this out today:

What we know so far:

- 1.) There are dozens of semi-formal 'briefings', most of which could not have been arranged by any known source. They occur outside of any scheme of official secrecy.
- 2.) There is a reasonable degree of consistency in the content, which includes the 'core story' and some information about a non-USG technological R.E.P. [reverse engineering program].

Instant analysis:

- 3.) There exists a briefing coordinator. This coordinator would be very well networked with regard to collecting information on the targets and in the ability to task independent briefers.

- 4.) However, from past experience, the coordinator is skilled at avoiding detection.

Points 3 & 4 seem contradictory. How does one do networking and avoid detection at the same time?

- 5.) No obvious motive may be assigned to the coordinator.

- 6.) Several possibilities present themselves:

- a.) Disinformation program.
- b.) Psychological testing.
- c.) Recruiting & induction into a secret group.

This list of possible motives is not exhaustive nor are the items mutually exclusive.

We may then juxtapose the 'briefing phenomenon' against other anomalous phenomena often associated with the visitors. In doing so, a possible message presents itself:

"We are here. We have excellent stealth and penetration skills. We can, in a coordinated manner, manipulate your political infrastructure, to say nothing of your popular culture. Stay tuned for further information."

If the REP story can be dismissed, but the core store cannot be, then the metaphysical/ eschatological scenario does become an obvious alternative interpretation. To this end we have formed an EFG. The question then arises as to what role might reasonably be assigned to an EFG going forward. Has there been an assessment of the level of activity that would be commensurate with the perceived challenge? [Lacking an REP] does the EFG presently constitute the primary mode of our response? Should the EFG view itself as an integral part of, or as an alternative to, the putative agenda of the visitors?

I am not quite sure where this briefing business is going. It is not an actionable item. I am not being encouraged to press for further information. I have the feeling that this base has already been covered. What is the point of inserting the false REP message into the briefing. It would serve simply to forestall questions about our response to the visitor presence. It would deflect the metaphysical issue.

xxx,

It does seem that CF has been predisposed to an eschatological interpretation, at least from the time of my arrival on the scene.

I wonder how easy it is to discount the REP story? If it is as easy as CF indicates, then perhaps that element of the briefings is intended to raise doubts, but at the same time it forestalls immediate questions that might track toward the metaphysical and eschatological view.

In other words the briefings present the picture of a rational response to a 'conventional' ET visit. But this picture is time sensitive. It has a built-in obsolescence. The longer that the REP fails to surface or to deliver, the greater will be our suspicion as to what is really going on.

Early on we would wonder about a possible lack of cooperation between the ETs and the USG, pointing to conflicting agendas, or we could envision an evil conspiracy. But each of these scenarios is also time sensitive. Maintaining security could only be a temporary expedient. The onset of the Internet should already have doomed such measures. This leaves us with the alternative of a cooperative regime, not about technology, but still concerning a matter that is time critical. At this point our thoughts begin to turn toward matters religious.

For the most part, ufologists are still behind this curve. Is there a plan to bring them around? If I were running this informational initiative, I would see the ufologists as the prime targets for the next stage. They constitute a carefully prepared interest group that can act as a buffer between the visitors and the population at large. They represent a back channel of acclimation that allows 'us' to delay the very thorny problem of confronting the already highly conflicted sectarian interests.

'We' will have to single out a few key players in the ufo arena for a special briefing of our own device. This, I believe, is beyond the present capacity of the three of us. We would need more data and more credibility. For instance, CF has spoken about bringing Jack to a meeting, soon, i.e. the one referenced below. Jack will not sit still for anything less than the full monty, i.e. rather more than anything you or I have seen. Do you not agree?

In fact, I could ask Jack what it would take for him to change his tune. He has shown some flexibility in the past, but too quickly reverts to his formulaic business as usual. I would pick Jack out of the crowd as an optimal test subject for the next stage: a difficult but not impossible customer. But I would need more backing from CF, even just to test the water effectively. Do we need to wait and see how the political cookie will crumble?

Dan

And so it goes. Can we get back to the Green Door?

[10/21]

xxx,

CF's principle statement was an objection to the idea that there might exist a trillion dollar REP.

We might want to pin him down a bit more on the upper limits of what might be able to slip under his radar. When they say the program is private, that does not exclude USG contracts or grants being involved. It would be beg, borrow or steal. Correct?

They speculate that many of us would kill ourselves if the truth were to come out. It is hard for me to imagine what piece of information might have such a drastic effect, short of something eschatological. Others have suggested that the 'truth' might include any or all of the following: they created us, they enslave us, they created our religions, etc.

I don't see any of these possibilities as leading to something as devastating as they suggest. Am I missing some other possibility, or do I underestimate the impact of those given?

They use the word "panic". That suggests to me only an eschatological scenario. Again, am I missing something?

They say that the persons in control are scientists and engineers. No theologians, psychologists, philosophers, sociologists, ordinary folk, etc., etc.? This seems to be a very narrow spectrum of controllers.

If this were to be put up, secretly, to the Supreme Court, I seriously doubt that they would or could condone the constitutionality of whatever privatization process led to the present situation. Comments? Somehow, the word 'arrogance' springs to mind. Technically speaking, all authority here has been arrogated.

It does seem that you continue here to strongly favor the ETH over the UTH. The ETH is the premise of the REP. The UTH would only entail a comparatively very modest engineering response.

My involvement here is premised almost entirely upon the UTH. No?

This discussion now needs some input from CF concerning his view of the relative merits of these two hypotheses. There would be no point of bringing anyone else into the picture without this issue being better outlined or contained.

You and I could discuss these merits, but that would probably require a greater commitment of time on your part than what you have previously indicated.

With regard to CF, there seems to me to be a very substantial problem of due diligence. The issues that we seem to face could well be earth shattering. I think we agree that CF does not seem to be acting accordingly. This leaves just two possibilities: either CF is in gross dereliction of 'duty', or he has much better sources of information on this subject than he has ever let on to us.

This is another issue that is pressing for clarification as we attempt to move forward, if, indeed, that is what we are attempting to do.

Dan

xxx,

The trillion dollar figure came from CF's extrapolating on the dozens of briefings at dozens of facilities, each focused in part on what was supposed to be happening at the location in question. After awhile, the various billions added up to a rather more substantial figure.

CF stated that you had also been informed about briefings other than your own. Is that not correct? It would be helpful if we could get our signals straight on this matter.

But, for just now, let us set aside the money and engineering problem, and focus on the core story: three guests in a sequence, a yellow book and a 'crashed' saucer.

Evidently they came here in a very deliberate fashion, and did so in order to impart some fairly specific knowledge. I would like to know if their mission was a success. Would you not also want to know this, xxx?

It seems that there is now no effort to disseminate this knowledge. It is quite unclear if there has been or is expected to be any technological benefit to us.

Could we agree then that, on the face of it, their mission failed?

If these guests were friendly, as the core story implies, then they were trying to help us, but evidently they failed in this effort. Should this failure not be a cause for our concern, or even alarm? Did you never even think to pose this question to your briefers?

In this event, you are very much like Jack and most of the ufologists. You show no concern for the deeper issues. Your only concern over the years has been to collect physical specimens. You show interest only in the 'how' question. You show no interest in the 'why' of it all.

What's it all about, xxx?

Just on your own interpretation, these entities have been around for millions and maybe billions of years longer than we have. Thus they would be expected to know orders of magnitude more about survival than do we. Is our species not now facing an unprecedented challenge to our very survival?

Did you not ask if the 'yellow book' contained any information pertinent to our survival problem? Did their custodians never raise this question to the visitors? Would this not very obviously be the number one question on the mind of any reasonable person in such a situation?

Am I to believe that in the many dozens of briefings, that this number one priority question never once came up?

Do you gather, xxx, that I am getting more than a little exasperated by what appears to be the utter and egregious lack of perspicuity on the part of everyone involved in or previously knowledgeable about the briefing process.

Are you going to tell me that I am the first person ever to have raised the survival issue, relative to our visitation?

I'm still waiting for someone to even pretend to be serious.

Dan

[10/22]

xxx,

You are reconfirming my initial suspicion that this considerable quantity of data on the 'briefing phenomenon' has apparently been treated in a cavalier fashion.

Last Friday I suggested to CF that we ought to make a serious analysis of this mass of data. His response was that there now exist network analysis tools that could be brought to bear on this data, tools that were not previously available.

Fine. But before we plunge into a time consuming analysis effort, we should seriously consider CF's own off-the-cuff(?) analysis of this data: it is simply a decoy operation and/or a smokescreen.

My first point would be that it has been a very successful decoy operation, based on its considerable impact upon various segments of our population.

We then have a glaring discordance in the data: we have a enviably successful decoy operation ostensibly pointing to a wretchedly failed mission.

Should that cognitive dissonance (failure/success) not make the hair stand up on the neck of even the most plodding of analysts?

The very next step in the chain of analytic logic would be to surmise that the enviably successful decoy operation pointing to a wretchedly failed mission, is in fact serving as a decoy for a (so far?) successful mission of a rather different nature.

xxx, are you still with me here? Are you keeping up with the bouncing ball?

Should we suppose that the Junior Analyst of our mutual acquaintance has previously been unable to master this 'sophisticated' chain of logic? Might not such an analysis, plus another source or two, much better explain his cavalier attitude toward this data, rather than our having to posit a dereliction of duty on his part?

Dan

I would hope that my correspondent is not too far away from seeing the light, if light there is to be seen. You can lead a horse to the eschaton, but you can't make them drink. It would be helpful to have a third

member of the focus group. There are a lot of people sitting on the sidelines waiting for some sort of signal. They are not making themselves useful. If BJ came around, the three of us could put on a show, even without much additional input from CF. We still have to see what will happen with Goss. BJ remains in correspondence with at least one of the briefers. Could not questions be posed? I'm not clear about what sort of meeting CF may have in mind. Jack always seems to be hyperventilating over the latest piece of physics trivia. He will not settle for anything less than a Nobel prize. That is the only tree up which he is constitutionally fit to bark. In one of his expansive moods, he will allow me a paragraph in his latest book. His forum can only be of limited use while he is in this terminal state of mind. I don't see any potential evangelists on the horizon. That is a serious deficit. Even if CF tried to bring Jack around, he would interpret it in a paranoid fashion. This would leave only Hal. If BJ could bring around a segment of the [aviary](#), that might be of some use. That would cause some ripples. Otherwise, CF is going to have to turn over a new leaf. He will have to change his stripes.

Then there is always the green door. Easy to say, hard to figure. It is virtually self contradictory, even though, on the surface it should not be such a big deal. It does mess up the local relationalism. We have to appeal to a more general level, but I don't know how. There would be immediate problems with metabolism.

As a test case we should transition from a physical to a non-physical regime, although physicality can only ever be a matter of degree. We could take on a new body, but then have to dispose of the old one, leaving no way back. We can't go home again if we burn the bridge. It is true, however, that relationalism has to function non-locally. Strings will be attached, entanglement will occur.

Will there be air on the other side? There will not be a vacuum. There will also be a time problem, if time is less linear on the other side. It might be a problem like deep sea diving. If one comes back too quickly, one gets the bends. There would have to be a point of no return. After that point, any return would only be partial and temporary. The original body would no longer be serviceable. Or it would be too difficult to recondition it. Is there not a tendency for one regime to leak or spill into the other, depending on the amount of traffic? There would be a coattails effect. In general relativity, this is referred to as frame dragging. Not sure how this would effect inter-entity contacts. We might wonder if a pregnant person went over. 'Woe unto them that is with child'?

There would have to be a lot of yoga practice on the part of the tourists. Very likely we would be visited by the dear departed. There would be some bodily aspect of that, but it would be a shifting aspect. Our mutual eidetic memories would come into play. Another thing that might happen over there would be an age regression. It would also be a remedy for those with weight problems. On passing over we might be presented with alternative regimens. The problem of getting reincarnated is another aspect of this interchange. There must be considerable personal variation and subjectivity in all of these processes. When it comes to eschatology, where there's a will, there's a way.

Aren't the materialists lucky? They have none of these problems to contend with!

It is likely that the Earth will gradually lose its physicality in the process of the hundred year exodus. The last thing to go will be the pokatok court at Xcaret. Just a hint for any of you holdouts. There could still be a remnant Jurassic Parc place. Metabolism could persist there, and perhaps even reproduction, but all this would be rudimentary and provisional. There are plenty of rough edges in all of this transitional metaphysics, and it will take time, and perhaps even experimentation, to smooth them out. Please, bear with us. The transition process will smooth out over time. We will need volunteers to be the early adapters.

Then we return to the problem of jumpstarting metabolism at the beginning. When we did this before, I believe that I invoked variations on the theme of the vital ouroboric/zodiac/psychic cycle. The phenomenology is gradually habituated into biology. As we keep alternating between the alpha and

omega, we gradually bring them into alignment.

[10/27]

Yesterday I met with my source guy. We seem to be making progress. I've always wondered about dealing with the presidents. Since Lyndon there have been seven presidents with only Jimmy and Ronald being briefed. In a similar time frame only Richard H. of the DCIs has been briefed.

This is fewer than I would have suspected. According to my take on the Anderson article, big George would have been told something about the eschaton, as would Straub and some other folks on the SSCI. But it might not have been a full briefing.

The point is that you don't brief a president unless there is a darn good reason. Always try to let every sleeping dog be.

My source was at the YB level, but I think he is coming around to accept PE/CL as the next level. People at that level tell you something only once. There is no discussion, and no question about about disclosure. My source never heard from them or his briefers about eschatology. There are three categories of people above his level: sincere, officious and whiners. It was Richard who contacted him to say he took Rick's story seriously. Richard died a couple of years ago. My guy had been hopeful of learning more before that.

We discussed the issue of money. All of his briefings and the ones he heard about pointed to a relatively minor and unsuccessful REP, located at Los Alamos, and maybe a couple of private facilities. This is where he disagrees with CF, who says that the briefings he knows of implicate a rather larger number of facilities and dollars. CF uses this larger dollar amount, upwards of a trillion, do discount all such briefings. I need to get this contradiction ironed out.

We discussed some more of my philosophy and eschatology in very broad strokes. We also discussed about moving forward. We agree that Jack is a major obstacle to my networking on the Internet. We doubt that CF can straighten that out. Otherwise, I need to network with some science types with the help of CF. These would be on the NAS or Jasons. Nothing specific was mentioned. Jacques Vallee was mentioned. It was stated that he among the cognoscenti might be the most sympathetic with my views.

That was about it. I was mainly surprised by the low number of DCIs in the loop. I may want to recalibrate my briefing logistic. I did not ask about foreign folks. They may pick up much of this by osmosis. My guy was talking about detailed information. A lot more people could get just the generalities, about like what you have here.

Next I'll have to get back to CF, and see if the three of us should meet. I can write a brief to him on the meeting with a copy to the source. The election continues to loom. Today I meet with paranormalist, SF.

[10/28]

No word back from CF on a prospective meeting. It may have to wait 'til after the election.

I did not mention that Richard identified himself to my source as being the Raven. Will we now have to revise the history of the Aviary? RH was the DCI from from '66 to '73, hired by Johnson, fired by Nixon. He had worked for the Agency and OSS since '43.

According to '[The Presidents UFO Website](http://www.bestpossibleworld.com/nexu53.htm)':

Todd Zechel, then the Director of Ground Saucer Watch, a group formed to fight classification of UFO documents by the government, was also interested in the *U.S. News* story of a possible UFO disclosure by the Carter White House. He headed to Washington for a visit with his telephone conversation acquaintance, Arthur Lundahl, a former high ranking official with the CIA, and a person who reportedly had been a UFO briefer to at least three presidents.

Zechel had discussed the *U.S. News* report on the phone with Lundahl, and Lundahl had promised to check with "the boys." (Zechel assumed the boys to be former CIA Directors William Colby and Richard Helms, both close friends of Lundahl's).

[10/29 - Don't let me forget that CF has pointed to a Mr. Anderson, the elderly UFO library guy, and friend of Gordon's as being a significant player. I'm not sure what to make of this. He lives in DC.]

[10/29]

Back to Creation. We start with a bare Matrix, pure potentiality. I see only one such. There is no means of separation. The potency is channeled, by a dialectic set of selves. This is the primordial, semi-stable zodiacal group of cosmic observers. All phenomenology must be channeled through this group. Each self exists relative to the others. There is a predominant circular structure. Thus arises the archetype of Pi. With 'e' representing the Matrix and 'i' the vital dialectic, we have the primordial 'trinity' of $e^i \pi$. Pi is one of the Z.

I then take Pi to represent the Creator figure, X. This is the major step in analyzing and rationalizing Creation. Pi leads to the anthropocentric symmetry breaking that is Creation.

How so? Pi, in its 'trinitarian' context, i.e. mother, spirit and son, points to the quantum atom, and thus to a metabolic homo-faber-erectus: five digits with opposable thumb. Mammalian? Yes, that goes with the neocortex. Teleology is used liberally, but not excessively.

The primordial symmetry breaking is a [patricide](#). This is the Oedipal story with Freya as Jocasta. I equate Freya with the X-factor. This apparent gender switch need not pose a problem. The conspiring Jocasta begat history, and is finally the scapegoat of history, then in the role of Eve. Thus we see the dynamics of AZO/X/QRP. The apple Pi/X is the multidimensional pi-vot. It is also *Hamlet's Mill*. It is the squaring or rationalizing of the circle that gives rise to the numerical coincidences and the Monster Group of Anthropic fame.

This symbolic nexus is dense, indeed. The Creation plot may be underdetermined. There may be converging paths. X remains the focal point or transformational identity, and we may still hope to use this scheme as an investigative tool.

[10/30]

The previous synopsis of Creation does not include the Pokatok scheme. The sacrifice of the losing team could have stimulated the reproductive cycle. The solar connotation of the game ball may have simulated/stimulated the heavens. The game was played at night. The passing of the ball through the hoop is reminiscent of an eclipse, which may also have entailed sacrifice. Once again there is a suspicious convergence of symbolism.

[10/31]

Now I'm being caught in a shooting match between two sources, the more and less credulous. This is an old story, but now I get to see it up close. I would think it should have been resolved back when. Is it only about the money: using rumors of phenomenology to pull in the bucks? We are back to the problem of due diligence.

The theory is that the briefings and the para-scientific 'shakedown' are all being coordinated. That is a grand conspiracy. What more might it be capable of? How might it tie in with other counterintelligence problems? It seems to argue against my PE/CL level. This racket would muddy those waters. The higher level ought to be able to restrain this exploitation, unless it is a deliberate part of the cover. CF does not act that way. That could mean that he is stuck between the two levels, YB vs. PE, and is not sure which is the real one. It is also the ETH vs. the UTH. CF is also dealing with the null hypothesis, NH. [11/4 - For simplicity, we may refer to this as the terrestrial hypothesis, TH.] What is the symbiosis between these three hypotheses?

Is the shakedown the primary motive, or is it parasitic? Jack and I are being used to probe this issue. Am I being naive to suppose that the monetary incentive is insufficient here? Only Hal might know for sure. Will I be afforded the opportunity to ask, or must I assume the answer and move on? SF describes a similar situation with crop circles. There is human involvement in all of them, but how is it coordinated? Or is it? What do I do in this case? Am I only an observer? We need to break this circle. Does this relate to the primordial cycle? How was that broken? Was it pokatok or the X factor? There is the temple and there are the money changers, etc.

[11/1]

The problem is imagining the scenario for breaking through the ambiguity. How early in the process will that occur? How much can be accomplished without CF being convinced? That would require access to unambiguous evidence. Would it help for the three of us to meet? I doubt that it could have much impact at this late date. Sources are no longer the issue. There may also be the case of deliberate exclusion. There would be a bias against skepticism. Presently we are attempting to track down who attended the NRC meeting last week with the source. If it was mainly just Murad, then we are back to square one. What then? I will need another source or correspondent. The motivation for the reactivation may remain moot. CF is not constituted to be proactive wrt phenomenology. I doubt that any job change would effect that. The next question is why this matter cannot be put to rest. Is the C/I problem worth pursuing?

CF is of the view that the 'soap opera' is not going away in the foreseeable future. It will just continue to transform. It can be reasonably monitored with minimal resources to avoid surprises.

[11/2]

I am inclined to suggest that we undergo a semi-formal debriefing concerning the briefing phenomenon and its impact. I would submit a public report. I could start writing the report now, and then solicit further information in an incremental fashion until some resolution is achieved. It would be important to include Hal in this process.

Joe Firmage has reappeared on the scene. In an email today Joe speaks of the coming socio-economic crises culminating in a singularity of consciousness. He refers us to [Integral Naked](#). At his own [website](#) I see no reference to this singularity.

As of yesterday I have obtained free access to the [EBSCO](#) database through my public [library](#) where Debby works. This enables access to the popular periodical literature, an important complement to web browsing. These archives have been available for free for some time, I was not keeping up to date.

What I presently find most surprising about the 'briefing phenomenon' is the lack of public discussion about it. My source says that most of what he learned has been distributed in a semi-public fashion, but there has been no definitive statement as to the nature or extent of the dissemination (briefing) process. CF may be trying too hard to minimize the significance of this process. What has been the impact of it? Does it speak to the UTH? What do we surmise as to the lack of explanation for the process? Does this not just compound the ufo mystery? Perhaps what we see now is the residue of some earlier process. Is there any visible trend? These briefings should now be in considerable decline if they are only repeating stuff that has been made public, but that is not what the source indicates. What did the source think that CF should do with this info? If the government does not come clean on this, then will it not be culpable?

[11/4]

Off the top, I would think that intelligence types would naturally want to pursue and analyze the briefing phenomenon. It might easily be deemed to represent a systemic vulnerability that would need to be monitored, if not neutralized. Could it not be construed as a potential threat? The fact that none of this has been done, or apparently even seriously considered, is, in itself, worthy of explanation. Any serious ufo briefing would have to address this phenomenon. One would need to estimate the degree to which this phenomenon contributes to the ufo ambience. This would also come under the umbrella of phenomenology collections. At best, it would constitute a benign form of socio-pathology.

The phenomenon itself is not as significant as is the apparent lack of reaction to it. The phenomenon represents an unprecedented potential for the subversion of this country's constituted authority. The EFG, for instance, seems constituted to exploit that potential. The seriousness rests entirely on the validity of the phenomenon. Without that validity it is a soap opera. The lack of reaction may be excused only by a known invalidity. But then we are in a vicious circle: the validity can be known only by taking the phenomenon seriously. How difficult can it be to penetrate the phenomenon? Does CF understand this? I think he is understandably reluctant to admit it. What about in his work group? What would he tell the new boss? It is hard for me to picture the exchanges. Again we encounter the Anderson article, and then the Hughes incident, etc. 9/11 would be very tricky. I don't see how any of this could be avoided. CF becomes the finger in the dike, it would appear. It would require political shielding to an unreasonable degree. There must be a significant logistic beyond my ken. There would have to be more than meets the eye.

[11/5]

Is it possible that the new boss is unaware of phenomenology, eschatology? CF maintains the posture of skepticism. Has no one seen through that? There is still the issue of the Straub briefing. To what did that point? There must be serious discussion of the c/I problem of phenomenology. And what about the eschatology of religious extremism. Religion and phenomenology are two primary targets for c/Intel, and eschatology covers both. I'm not sure if there is any synergy between the hard and soft science tasks of CF. Bi-statics and RE provide only a limited overlap. Don't forget the IG investigation. That would stand out in the file. Then there is all the aviary/bigelow stuff and ufoguy@Masint. There are several red flags waving. Then how do I stay off the screen, or do I? We come back to the visibility to other agencies and the public-key aspect. Therein lies a reflective equilibrium concerning EFG status. There is a fairly large context or a large arena in which the EFG is a small but significant player. The ET v. UT hypothesis still has to be sorted out, but before that we must confront some real data. The changing of the guard at the agency will cover the shifting of phenomenology. If this timeline is correct it does seem to favor the PE/CL view: nukes, C/W, aviary, aquarium, 9/11, new guy. The ETH would be relevant mainly to cold war secrecy, then we start the shift to the aquarium, with EFG coming after 9/11, then the politics. It's all over, but the shouting. I doubt that things could have gone this far without access to sufficient data. Lack

of data does not explain the soap opera. That is better explained by c/I (non-mundane).

[11/6]

If there were a major uncertainty as to the validity of the core story, I doubt that **CF** would expend effort on the peripheral matters. A serious investigator would be working the inside track, unless this were known to have been done already. At some point in the past half century, a definitive investigation would have been commissioned. The results would have to be available to a phenomenology group. The extent of the briefing phenomenon underscores the necessity of such an investigation. A knowledgeable person would not then stir the ufo pot unless there were a continuing c/Intel initiative. However, keeping both the ET and UT stories alive would muddy any mundane c/I/disinfo effort. This latter fact indicates a cover operation rather than pure disinformation. There was a mission. The issue is whether or not it failed. The cover is that it failed.

Only now with the Internet is the extent of the smoke coming into the public domain. The smoke is steady over a period of vastly changing political and military conditions. This constancy argues against any *ad hoc* screen. The hoax hypothesis also does not hold up in this context.

It is useful to compare ufos and crop circles. Does the juxtaposition increase or decrease their legitimacy?

It is easier to see the CCs as mundane. Is it just a copycat phenomenon? It is a fact that no one has been exposed. The phenomenon invites participation, but that does not negate it. Its quantity and quality argue for a supra-mundane explanation.

CF has stated that the briefing phenomenon is not traceable. If so, it would represent a vulnerability that one might not wish to publicize. When queried as to the methodology of the tracing, there is an insubstantial or even casual response. This is part of the primary posture of skepticism, rather than additional information.

In short, the phenomenology remains viable.

[11/7]

When it comes to Creation, I rely heavily on the archetypes to jump-start it. Among these, Z & Pi are primary. Z points to the proto-selves in their dialectical bootstrap. X/Pi emerges out of these.

[11/8]

The adjoining of pi to X is controversial if not controvertible. It is meant as only *ad hoc* and for the sake of argument. It could be seen as a *reductio ad absurdum* of Pythagoras, but I intend it in the spirit of relationalism. It is how I bring the observer principle to mathematics. It is how I attempt to tame the Monster Group. I am suggesting that pi is anthropocentric, X being the anthropos/christos.

When it comes to numbers, I am not a (postmodern?) constructivist, but rather a conceivabilist. There are no inconceivable mathematical objects, just as there are no unobservable universes. There is no Creator without a Creation and no Creation without Pi. It would be inconceivable. X is the rationale of the cosmos. Pi is the rationalizer. Creation is the transcendental squaring of the zodiacal circle. The necessary transcendental impulse is simply love. The MG is involved in the dialectical/elliptical polarizing of the circle. The quantum comes out of this, partly in the trinitarian form of $e^{\sqrt{-1}} \cdot \pi$, or MDX, i.e. mother, spirit, son. The trinity is the teleologically realizing vision or observation, all bootstrapped on faith.

Therein lies the vital stability of the microcosmic atom and all the attendant bio-cycles.

The Alpha and Omega are mutually reflective. We may ascertain the one in the other, and so we have the [AZO/X/QRP](#) based on the MDX with Freya/X providing the transcendental impulse that breaks/squares the circle, in a triangle with Chronos and Zeus. X is the pi-vot or sacrificial omphalos.

[11/9]

MDZ/X are the crucial components. I need to determine the connection between Z and X. Both exploit the vital dialectic force. Z relates to ouroboric circularity and X to linearity. X emerges out of Z using Creation as its bootstrap. The dialectic force of creation includes love and faith. I suspect that numbers also emerge mainly out of Z. Z becomes the prototype of physical and biological systems; however, the X factor is involved in the stability of the atom. This is due to the strength of the teleology that is required. The atom is integral to Creation. It must be fine tuned anthropically. The same goes for gravity.

It is still a long way from here to the atom. The thing about the atom is its apparent independent existence, like the tree on the quad, except worse. The atom is a place holder in space and time. It holds the identity of substances. This brings us back to the biological cycles. It may not be sufficiently clear why we need metabolism.

Without metabolism there would be nothing like nature, but I'm not sure what that means. There would be no ecosystem. There would be no materialism, technology or history. No entropy. Could there still be space and time?

[11/10]

The early Greeks sensed that atoms were a concomitant of space. We may not sufficiently appreciate the logic of their 'speculation'. It is very difficult to imagine a robust creation without the entailment of a spatial frame. Our imaginative faculties seem quite adept at producing and manipulating spatial configurations without benefit of same. At the same time, I'm not sure what to make of the relational view of space. At some point the pokatok scheme will be brought into play, as a way to habituate spatial figuration.

Which relations predominate in a relational view of space, and where does the quantum come into play? I would suspect that the quantum is a necessary part of spatial relations. This is what we and the Greeks have failed to grasp. It is difficult to imagine mathematics without a space-time context. The quantum has become the primary point of entry for most of mathematical physics.

We wonder if number theory is spatial? It is certainly sequential. Time and space are not independent concepts. We will then have to worry about the deconstruction of space-time at the Alpha and Omega. We, too, must avoid naked singularities. We then resort to a more digital and combinatorial point of view. Pokatok brings us from digital to analog. We anticipate a final reverse match.

There cannot be space without exclusion. Exclusion relies on exchange anti-symmetry. Leibniz' Identity of Indiscernibles casts identical particles into space. There could be zodiacal duplicates if they are relationally segregated. I have not considered the problem of multiplicity at the zodiacal level. If there is one Chronos, why not two? Multiplicity may require an external observer. There can only be one proto-self, which then divides dialectically.

A robust combinatorics would require Galilean or translational invariance, and so we bring on the Poincaré space groups. We are hereby broaching the subject of [pregeometry](#) (700 hits). Spin networks are one

solution to this problem.

We cannot get far into the problem of pregeometry without a theory of relations. My theory of relations is a form of relationalism, which is a species of idealism: relations exist only in the mind. Relations are purely subjective: they entail a perspective. On the other hand, to be is to be related: there is no isolated or atomic existence. There is no acosmic existence. The primordial existence is zodiacal existence relative to the Matrix of potentiality. The Zodiac is our essential pre-geometric frame. All its relations are internal. Those relations are externalized in some scheme of pokatok.

A perversion of relationalism is associationism: complex ideas are formed from simples by association. This theory dates back at least to David Hume (1711-1776). This has been a prime component of the analytic tradition, suffering its same fate. It does, however, presuppose some kind of mental space, and it does point up the fact that the mind is nothing if not a relational engine.

The atom remains a stumbling block in our traverse from mind to matter. It's complexity is daunting. We must wonder as to its source. It does not strike one as fundamental, but nothing simpler could fit the bill, and it is a lengthy bill. Interchangeability is the operative word of atomic alchemy. The Monster Group lurks just beyond the atomic horizon. All of mathematics is realized in the confines of a single atom. Here, certainly, is a microcosm. Have we not been amply warned about microcosms, but who'd a' think it? We may look for remnants of the zodiac in the atom. It is a micro pantheon, being somehow projected by X/π . We see the 'monstrous moonshine', but where is the still? There is a projective function we have not yet grasped.

Atom, cell and brain/mind are each likely to be reflective of the primordial zodiac/pantheon. Each is a microcosm for a different aspect of the cosmos. This would give Z a greater role in Creation, along with X. The pantheon becomes us. It does so by projecting itself through the structure of the atom, cell, brain, and perhaps even the MG itself.

[11/11]

Yes, I think we may need to ascribe a greater role to the pantheon/Z. This is in line with allowing the christos/ X/π to be more of a coordinator, leading up to the X-event. Z must project itself through the eye of the needle, which is π . That is how the Anthropic Principle comes into play, along with the UEM, unreasonable effectiveness of math. In that process the circular symmetry is broken in the fashion of the elliptical functions, which distill the [Monstrous Moonshine](#) (800 hits). That is what is happening with [Pokatok](#). In that game the object is to pass the ball/Sun through the circular hoop in ecliptic/elliptic fashion. Ceremonial death and fertility are the result. Is there a Lamarckian fine-tuning on the playing fields of **Xcaret**/J-Parc? The trajectory of the ball is elliptical with a focus conformally projected to infinity. Astronomers later use this errant focus to bring down the heavens in the fashion of Chicken Little, thereby deconstructing the Rube Goldberg materialist cosmos with their dark energy, in a reprise of Copernicus who was oblivious to our postmodern moonshine.

π is the pinhole of the magic lantern that produces our anthropocentric world. There is a projective geometry at work. There is also a seeding. π is pinhole & seed. Golgotha somehow encompassed both. That must have been the eye of the cosmic needle. It was the sacrificial symmetry breaker and the rebirthing via Freya. Multiplicity comes via the trinitarian $e^{i\pi}$, MDX $\rightarrow$ R/Z. The atom is the π -vot. Golgotha is the Omphalos. The event breaks the precessional symmetry of Hamlet's Mill. This is done in conjunction the multiplicative DNA crystallization. There may be something here of the aperiodic pentagonal (Penrose) tiling, bringing ϕ into the picture. Somehow there is a crystallization of the Matrix, in the manner of a fractal. There is now the Aqua Regia of the spirit that dissolves the crystal leading to apokatastasis. I should point out that language is another kind of crystal. The zodiacal pantheon is the first crystal. In three dimensions we would have the five Platonic solids. In order to ensure three spatial dimensions we might need the equivalent of a Penrose spin network, but I don't see a source. We might

also wonder how space-time emerges from an infinite dimensional Hilbert space. It has to do with the projection or measurement operators. Ecological networking in more than 3+1D may just be infeasible.

Presently I am reading [Hyper-science](#) (F & L Hatem, 1994). It is partly relevant to the BPW, but for the most part it manages to be exasperating. What can I say? It is all too French. It is *Being and Nothingness* on steroids. It is more Buddhist than Buddha. It is more Taoist than the Tao. It is the *reductio ad absurdum* of the principal alternatives to the BPW. If $1 = 0$ then everything is true and untrue, but don't take my word for it. (BTW, I notice that the BPW is first on the new MSN search, while it has fallen to 16 on Google. What does that mean?)

[11/12]

A problem to be considered is the introduction of size scales. In the Matrix proper there are none such. There is only zodiacal coherence shading off to incoherence. We may suppose that quantity emerges before dimension. Quantity implies a single dimension. The problem is to obtain the second. A network analysis of relations could produce multiple dimensions, but these would be *ad hoc*. There ought to be a step or two before J-Parc. Sizes, however, are only relative. What could be the standards? How do philosophers manage to avoid these foundational issues? Mathematicians and physicists avoid them as well. We might ask how we manage dimensions in the mind. Our neurons do not have much problem. There is probably a proprioceptive basis for mental dimensioning, which is a throwback to cell function. The idea of containment might be prior to space. Can the gods sequester their thoughts? This is related to perception. What is the basis of privacy and possession? This goes back to identity. Immaterial identity is a problem.

Similar problems arise in trying to make sense of **direct perception**: visual experience may not be abstracted from total experience. May we say that size is an abstraction? Perception is based on functionality. Then we need a non-biological source of function. It is interaction between selves, plus internal actions or exercise of the will. There is the issue of externality as with dreams and visions. It is not clear if there is originally only one self. I suspect so. The primal self may be without awareness, which comes only in a social context. It seems likely that infants dream. If one self emerges, why not two? But how would they find each other? We could designate X to be the primal self. The Matrix must include X. But what is experience without time or coherence? Do the blind have visual dreams? msn: blind-people dreams? I'm not satisfied with the standard answers, which assume indirect perception.

[11/13]

We have yet to embrace direct perception. It then becomes a challenge to explain our apparent faculties of indirect perception, e.g. representational artifacts, and communications. Truth comes natural, everything else has to be rationalized, e.g. when I shut my eyes, the world disappears.

Indirect perception has to do with perspective. It is the price we pay for the realization of space and time, for the cloning of God and the outsourcing of Creation. This tells us that space and time begin with the dialectic and the zodiac.

The Matrix then must be our proto-self, dialectically striving for coherence. That striving is outsourced to the zodiac, and the rest is history. Realization is a social enterprise. Is it surprising that we forget our roots? X maintains a special tie to the Matrix: apron strings. The Mater blows a smoke ring: Z. Omniscience is compartmentalized and condenses into matter. Symmetry is broken. A concentric set of Platonic solids are formed. This is our spin net.

We might wonder what happens at apokatastasis. Are we back to scratch? I doubt it. Now we have to

embrace eternity.

Omniscience is something to be avoided. Attention is to be focused, or there can be no action. Omniscience is the disease of direct perception. Barriers to the mind are made to be broken. The unobstructed universe is omnipresent. What are we to make of imagination? When do unicorns become real?

[11/14]

At another extreme we could take the the Matrix to be an omniscient being. This would be closer to canonical theism. What prevents this view? There still needs to be a source. Could God not have an subconscious? Can God have attention and imagination? How can mind come to be limited or segmented? This has to do with the function of the dialectic.

Perhaps a self is simply a center of ignorance. It is a hole in the mind field. Where does the BPW begin and the matrix leave off? There is a filtering process. This brings us back to time and memory. This is also the problem of the microcosm: presentation without representation. Omniscience and self-hood may be contradictory. Where is the river Lethe, and what is it? We can consider the problem of an eidetic memory. This would conflict with a coherent memory which would be more teleologically oriented.

[11/15]

We need a science of nescience. Dialectics may provide a starting point. There could be logical barriers to knowledge. It is a contest of coherences.

Direct perception must take into account the relational nature of knowledge. The episteme and the ontos must both be weighted toward the relational. The selves are seeds for the relational crystallization of the Matrix. This is preparation for the *aqua regia* of apokatastasis. This logistic is a bit like the game of free-cell.

Materialism and sectarianism are two sub-optimal forms of coherence. They are about to be overtaken by something larger. There is the apparent conflict and orthogonality of systems that is a barrier to the larger knowledge.

Perception is filtered by coherence. Most of the coherence is presently absent to us, it is subconscious. Coherence is ordered by functionality and teleology.

There is then the issue of emergence. The selves must be able to draw new things out of the Matrix. Things do not arise from the matrix unbidden. There is no true chaos. The imagination is our portal to the matrix. Artifacts are our fishing tackle. From whence did the self emerge, if not from the matrix? It is the only thing that could bootstrap itself out of the matrix. It has a logical priority. Its imagination is not distinct from perception. Does that first self know everything? No, because multiple selves may spontaneously emerge. They will emerge more easily if they are related to other selves. How might they become so? Would there not be innumerable selves? Is there no filter on this? Atoms may derive from these. That may be correct. Then what about the UEM? That speaks to the relationality and rationality of atoms. This also speaks to the construct of numbers and the MG. Did I not get any of this before? This is a restatement of personalism.

The self is just a crystallized matrix, and so is the atom. What is a number? How do they relate to selves and atoms? Is there a society of mind? Numbers and atoms fill in our blind spots. They are an extension of our collective memory, and a functional extension, at that. An MG out of numbers is as likely as a

living cell out of atoms. There must be a telos in both cases. The same one? The telos of atoms and numbers are inextricable, viz. $e^{\sqrt{-1}} \cdot \pi$. How do the other coincidences come into play?

But then we come back to the problem of not having any definite number of atoms. How do we get the oceans to evaporate? Is there a Jurassic Parc for atoms? Gaia and the matrix may be similar. Which came first, numbers or the MG?

A review of [Mandelbrot Mystery](#) may be in order. The Mandelbrot appears as a selfless, impersonal link into the Matrix, seemingly contradicting my statement three paragraphs above. It resides on the boundary between coherence and incoherence.

(I just got a new toy: Google's [desktop search](#) function. It will help to facilitate the internal linking, over using site-search on all of comcast.net. In the process of using it, I realize that the primordial dialectic and the zim-zum are very similar.)

[Zim-zum](#) (and [here](#)):

A term from Lurianic Kabbalah meaning the contraction of the Ain Sof to form a "space" into which all of creation would manifest. God still fills this space, like the fragrance of a rose lingers after it leaves the room. This is the first appearance of the "separation" between God and the Universe necessary for manifestation. In order for anything to become distinct and visible, something else must become invisible. A foreground is not visible unless there is a background. This is the first appearance of the Abyss and also of Knowledge (Daath). By the very act of separation God imposes ignorance or latency on Himself in order to create. This ignorance is simultaneously the birth of Knowledge.

Perhaps this is what F & L Hatem are referring to above in their Hyper-science.

The Abyss is filled with numbers and atoms, etc. The Mandelbrot is a model for the filling that becomes Creation. We have come a long way from the pokatok court, and I wonder how we will get back to it. With the Mandelbrot, there are no atoms, unless we arbitrarily limit the resolution. If we switch models from math to language, we have letters, words and grammar in the place of organic chemistry.

[11/16]

We need to arrange for atoms to be present when we need them for the physics, but otherwise we don't want them to get in the way of the phenomenology or the teleology. I don't want the atoms to take on an independent, objective, material existence. The same is true for the stars and numbers. Selves and atoms cannot exist apart from a telos. Their function is to reify the virtual telos. How many hydrogens and how many threes do we need to maintain the world? One of each may be enough for the formalities. How many Monster Groups does it take to run the world? Its influence is as widespread as the particles it guides. Must the MG be attached, as we often suppose our minds are, to a material substrate to be effective?

How does a substance maintain its identity without the benefit of objective atoms? Can we ask the same of π or the MG? For an emergent entity, the whole transcends its parts, rendering it less dependent on its atomic constituents. The parts are there for our analysis.

[11/17]

It has finally occurred to me that the immaterialists should turn the tables on the materialists, relative to emergence. It is atoms, numbers, words, etc., that are the emergent entities. This thought stems from the zim-zum and the [thunderwords](#) of James Joyce. The operative concept is articulation/distinction.

Language is the articulation of the logos. Individual/ego consciousness is the articulation of tribal consciousness. 'Developing' societies continue to struggle with this articulation. Their egos evaporate to emigrate to the developed countries wherein they recondense into our articulated socioeconomic structures. (BTW, art-, *ars* derive from 'arm' of Sanskrit origin.)

This thought has been dormant for some time. It has been a struggle to articulate it. I wonder where it has been previously articulated, beyond the crib notes I used for *Finnegan*. Atoms are latent in matter until we articulate them with quantum measurement. I have always figured that the spontaneous quantum collapses of the statisticians was just an artifact or a fudge to avoid the obvious teleology.

This is truly about the deconstruction of atoms, again and, hopefully, finally. The Matrix is the cosmic white hole, *Ain Soph*, Brahman, and the primordial selves are the prismatic articulators of it. The X factor is the archeonic Coherantor. Its dialectic co-focus is the Analyzer. This is the engine of creation and we are the micro-engines. This is the primal duality conspiring in creation. Are we needing a name for the Y factor? The christos incarnates a bit of the latter. Y2X may have more of the Y. I'm not sure how that works in the Z phase. And where is the Pokatok? The ball/sun is the precursor of the atom. It is articulated by the team to place it through the ecliptic hoop.

There is gradually constructed an analytic infrastructure which is guaranteed to produce atoms when it is employed. This infrastructure is itself not necessarily analyzable. It is non-local. It consists of hardware and software, and it is cultural. Instances of it are like a quantum measurement. This does not quite tell us how the oceans evaporate. Can evaporation be subsumed under metabolism and [heliotropism](#)? The R of AZO/X/QRP brings a dialectical re/Creation into space-time via our newly appreciated atoms. It is about the culturing of our Gaian crystal/**chrysalis**, a pearl of great price. A seed is a microcosmic precursor of the atom. Pi is the seminal seed of $e^{i\pi}$.

It is not clear how we knew how much diversity we could wring from the atom before the fact of it. This has to do with the preordained atomic limits of the BPW, but that may be a moot point. These teleologically derived atoms can hardly stand in the way of the Telos. We could also ask about the telic priority of the MG vs. pi. I suspect that coincidences of pi are presaged in the complexity of the MG. This information is also encoded in the Riemann Zeta. The organicity of math and the world are written into carbon, as in a charcoal sketch. The BPW is not contingent upon carbon. It is *vice versa*. There would be no carbon and no nothing without the BPW. Even the Matrix is dependent upon us, in no small measure. The felicitous zodiac sat around the ol' fishing hole, and now see what the feline dragged home, still dripping. Are the atoms now tamed? Surely *el Telos Taurus* is cracking a bit closer to their ears. The properties of carbon are vastly overdetermined, but the quantum gap can more than accommodate all those analytic sins. Do we have to worry that the ouroboros will not be sufficiently long and supple to grab its own tail? Fear not! That's like worrying that the Centurions might have run out of nails. It's not the atoms that account for the stability of the world. It's the other way around. Nonetheless, the structure of all the atoms are accounted for with a very few parameters. The fudging does remain well concealed. There is a superficial simplicity.

Back to the MG. Was it pulled out of the ol' fishing hole fully formed? I doubt it. Like a pretzel, it had to be twisted into shape. There was a logical vacuum that needed filling. The relative simplicity of the atom is balanced by the complexity of the MG. But aren't the genealogies of the elementary particles gratuitous? Are they not just meant to keep the mathematical physicists off the streets for another few years? The neutrino is not needed outside of astrophysics. Why go to all the trouble just to save the celestial appearances? The intricacies of stellar dynamics are quite gratuitous to a pre-Copernican cosmos. Perhaps the MG has all the functionality of a gargoyle, not that that is to be underestimated. Perhaps the Sun, though, is not as gratuitous. Saving its appearance is more than academic. Cosmic rays help to save the appearance of genetic mutation, no small savings. And let us not forget the political significance of nuclear weapons in this age of culture clash. Still, we could have gotten by with a few exceptional groups, without having to go full-bore for the sporadics. It is our attempt to quantize gravity that puts us under the sporadic spell.

We might also attribute the MG to the organicity of math. This is no small matter, either. This organicity may indirectly reflect upon physics. The MG might also serve as a proxy for the organicity and complexity of the world. That has been my generally unstated assumption. I need to work out the significance of proxy-hood in this context. It may just go with relationalism. Math, like most things, exists as a microcosm. It 'represents' the extremity of articulation in an organic world. Complexity substitutes for organicity. Numerical coincidences, however, point to the organic. If human understanding is part of the teleology, and we have now discovered the most complex mathematical object, then this fact may have eschatological portent. Only the Riemann Zeta may still stand between us and the Omega.

[11/18]

An outstanding problem for the BPW is the placement of the Alpha. Most idealist philosophies are simply acosmic and atemporal. The BPW was born out of a theistic and eschatological concern. It is unabashedly cosmological, and is necessarily theo/anthropocentric. Linear, historical time is commensurate with human consciousness. The primary departure of human from animal consciousness came with the development of language, which I speculate was contemporaneous with the appearance of eidetic memory, some fifty thousand years ago. Prior to that time, there will be a marked divergence between materialist and idealist conceptions of the phenomenal world. Materialists suppose that we can extrapolate the present phenomenology of linear time back to the big-bang, long before observation or memory. Idealists may not be so casual in their extrapolations. The Alpha is the point at which the biological creatures become the primary custodians of Creation. I seem now to be contradicting the Pokatok scenario that has been useful up to this point. Permit me to bracket that for the time being. Since we cannot rely on atoms and physics prior to Alpha, we must remain circumspect in our use of them afterwards.

There is a 'cheat' at this point. To complement the use of 'physics' after Alpha, we can substitute physicists to fill in the record that appears to antedate Alpha. This is admittedly a heavy reliance on creaturely mediated teleology. But this epochal contrast is overstated. What I mean to say is that memory and the historical record coincide in the latter but not the former epoch. This too is misstated. I do not appeal to memory, but to direct perception. This is the case for the historical epoch. What happens before is a matter of projection rather than perception. In its turn, this duality between projection and perception is also being overstated. It is true that language is very often a force for analytic rather than holistic thought. The struggle for holism is an uphill battle with the conventions of language. This fact points up the difficulty of this pedagogy.

With idealism there need not be a clear distinction between interpolation and extrapolation, or between foreground and background. It all originates with the same vision of the BPW. I do need, however, to revamp my understanding of nature. What I have so far is mainly just an excuse for nature. This is a negative explanation. I need a positive explanation. Previously I have attempted to outsource nature to [Jurassic Parc](#). That is simply a restatement of the problem. Can we incorporate the appearance of nature into a rational process or creation? Can we have nature without naturalism? Can we get by with an ersatz big-bang, or do we have to go all the way? We have made some progress with the emergence of ersatz atoms. Cannot the big-bang emerge in a similar fashion, and then we can ditch the Parc?

A big-bang would be the only 'natural' source of atoms. The two are logically co-dependent, along with evolution. What is the cost of all this 'naturalness'? Need it be more costly than an *ad hoc* Creation? One may be sorely tempted at this point just to posit an actual big-bang, but this leaves us with a very tricky exit strategy, plus an excessive degree of *ad hoc* intervention along the way.

When we go digging, go stargazing, go microbe hunting, go atom smashing, we are going to have to find something. We cannot just fall off the edge of reality. Phenomenology, just like nature, abhors a vacuum. All blind spots are filled. I suggest that the 'natural' filling in may be the path of least psychic

resistance. This is the path of greatest coherence and of the least cognitive dissonance. It may seem that God has allowed the phenomenology to go too far in this direction, making it harder to extricate ourselves from the path of materialism. If there were more dissonance, my life would be easier. That's alright. I do my job, and God does her job.

The big-bang and evolution provide a 'false summit' of sub-coherence. As soon as we reach that summit, the true summit will loom into view. It will look a lot like an eschaton. The false summit is the scientific telos, or the unified theory of everything. That unification of phenomena is the path of least action for the Creator. We seem only to figure out the scheme of unification after the fact. But, from the perspective of cosmic intelligence, facts are always theory laden. It is the condition of relational existence. From the bias of temporal existence we discover the theory after the facts, but that bias is just our illusion.

We 'discover' the Earth to be round, after failing to fall off the edge. We suppose the Earth to be objectively round. But if the Earth were flat, someone would have to shape an *ad hoc* set of edge effects. Lacking that special someone, the Earth cannot fail to be round. The world is that much simpler. Bill Occam is glad. The same goes for evolution. Without that principle of coherence, biological phenomena would have to be jerry-rigged. The phenomenal pieces would all be gratuitous. The whole point of phenomenology is that it abhors a vacuum, and that entails that there can be no rough edges. This should tell us something about the eschaton. It is not an edge for us to fall off of. It is rather an apokatastasis, a restitution.

May we revisit the Monster Group? What would Bill think about it?

[11/19]

Off of what edge does the Monster prevent us from falling? On the early maps of the world, in the blank areas, *terra incognita*, it was customary to depict a monster or two. It kept the explorers guessing.

In explaining the MG we can hardly appeal to simplicity. The MG seems the archetype of extravagance. What we seem to be missing is a phenomenology of math. There seems to be nothing natural about the MG.

It is math that keeps us from falling off the edge when we come to the quantum. It is only with the quantum that mathematical physics comes into its own. This has to do with the greater level of abstraction introduced by the probability wave functions and the concomitant projection operators. With the quantum we fall into the infinite dimensional Hilbert space. At the same time we are forced to take onboard the theory of complex numbers. These abstract spaces open us up to issues of symmetry. It is the MG that connects for us the discrete and non-discrete symmetries, having to do with the 'moonshine' conjecture and string theory.

It is these symmetries which hold the atoms and particles together. They cannot be smashed, they can only be transformed from one symmetry state to another. There is a process of self-containment and closure that can be expressed only with mathematics. This logical closure is the basis of our ontic stability and identity. This same closure is responsible for the melding of the ontic and epistemic in physics.

If we project back in time or out in space, it is the big-bang that saves our appearances. If we project down in scale it is math that saves the appearances. It is the MG, in its coverage of the discrete and non-discrete, that melds these disparate projections. The smoothing out of the rough edges of reality is of more than academic concern. It has to do with the ouroboric/bootstrap nature of reality. Coherence cannot be a local phenomenon. It is cosmic or nothing. Tying together all the loose ends requires a knot of Gordian proportions. The Langlands and Erlangen programs of mathematics speak to this coherence. It is about the rationalization of math, the squaring of the circle.

The discreteness of the atom allows us to combinatorially fill every ecological niche. This metabolic combinatorics accounts for the continuity of nature. The logical closure of nature is what grounds and redirects our transcendental impulse leading to the eschaton. The MG is the Anthropos in mathematical dress. It is our jumping-off point to eternity. It is our Cartesian pineal gland. The UEM is just a manifestation of the ouroboric principle. The MG expresses the finitude of the Anthropos and Gaia, and so it ensures and may even codify the eschaton.

It does appear, to me at least, that the BPWH has been significantly consolidated this time around, by bringing closer together the principal loose ends. Outstanding from above is the conflict in the placements of Alpha. The acquisition of language is spread out over time and space, whereas the introduction of certain ceremonial sports is more easily specified. It could be two stages of a single process. We allow Alpha to be segmented or articulated. And so may be the Omega.

The aesthetics of mathematics ([beauty & mathematics](#) - 950,000 hits) provides another handle on the organicity of mathematics. Combine this with the UEM and the Ramanujan phenomenon and we see the ouroboric principle operating on all levels of reality. My point is that a world without a robust mathematics is inconceivable. The most direct line of progression here is metabolism -> chemistry -> quantum -> math. Another similar progression is ecology -> evolution -> big-bang -> math. Leaving out any one of these steps would result in a logical hole in the world. Its coherence would be radically reduced. To be is to relate. Without the relational power of mathematics, being would be impoverished. Without this mathematical extension nature would be at loose ends. The Grand Unified Theory may be a false summit of coherence, but that does not negate its contribution thereto. Dualistic thinking about mind and matter has spilled over into a perceived dualism of math and matter. That duality is artificial. There is then nothing unreasonable about the effectiveness of mathematics.

[11/20]

Stars and fossils remain challenging for the idealist. We have to arrange for filling in the background of deep time and deep space.

Stars could fairly easily fall under the aegis of Sol. Sol is then the main challenge, and we can subsume that in the metabolic frame heliotropism. Given a round Earth and gravity, it is not a big step to placing a primary energy source. The physical details of the Sun are emergent properties along with atoms. The Sun is a spin-off of the big-bang.

The fossils are a different challenge, but it would be strange if there were no 'record' of the evolutionary phenomenology. The Earth needs to be antiqued. This need not, however, require any very special provisions beyond what we have for atoms and the big-bang. This is following the path of least intervention.

Given a spatial frame, the logic of atoms is inescapable, just ask the Greeks. We invoke an anthropic Telos as our final cause, which then elicits a chain of being out from the background of atomic logic. The big-bang is the logical anchor that is projected out from the Alpha end of the chain. All the rest of the chain, including stars and fossils, is just a path of least phenomenological resistance.

Need this be implausible? We underestimate the degree to which plausibility is socially conditioned. In short, we will very easily get used to it, if we have the slightest motivation to do so. The scientists will cry crocodile tears. Poor dears!

Yes, Virginia, there is a Chain of Being. That it appears as natural as it does is a matter of an aesthetics which may best be ascribed to cosmic convenience. The X-factor can be as Zen-like as the best in that tradition. No unnecessary action or disturbance in the cosmic flow. The cosmic Santa relies mainly on us elves to keep the phenomena on the designated track. It's only as we approach the Omega that we

experience trepidation. Up to now it has mainly been combinatorics. That's what space is for.

Let me summarize the logical sequence:

Forms/zodiac -> diversity/separation -> combinatorics -> space/atoms -> eco-metabolics -> chain-of-being -> big-bang -> sun-stars-fossils. And the rest is history.

These are the logical organizing principles that guide the phenomenology. This logical guidance of the phenomenology works in a manner similar to what we suppose is the mathematical guidance of physics in the quantum realm. Collectively, we mediate the logical guidance, and we often do so in a teleological fashion.

May we now discard Jurassic Parc? Well, the challenge we have now is to turn the logical sequence into a temporal sequence focused on Alpha. This is the articulated creation. I am prone to discard the fifty-thousand year mark, and head back toward the pokatok/megalithic frame. Prior to that would have been a timeless or time-optional J-Pc. This would have been a test-bed for the basic cycles and functions, with pokatok as an occasional sideshow.

[11/21]

In worrying about J-Pc, we can go back to [here](#). We are looking for the 3-D seed crystal that will include the R archetype in a significant fashion. It is not easy to jump-start the reproductive cycle. Which came first, chicken little or the Omega? To what extent can R be related to the dynamics of Z? What are the metaphors/analogies for R? From whence came the idea of the seed? Bring on the dialectic.

[11/22]

[Earlier](#) on this page it was suggested that there might be a link between the ouroboros and the reproductive cycle. Another point to recall is the normativity of biological cycles.

[11/30]

I realize that I don't yet have an explanation for fire. My thoughts turn to [Gaston Bachelard](#) and his *Psychoanalysis of Fire*. Notice also his *Poetics of Space*, etc. Have I been neglecting Gaston in my phenomenological efforts? Where and how does fire fit into the BPW? Is it mainly logic or aesthetics that explains fire? Gaston points to the Promethean and social aspects of fire. I would sooner point to the technology of fire, being the smith that I am, but that is implied by Prometheus. The sun empowers vegetation. We bring the sun down from the sky and empower ourselves. The domestication of fire is lost in pre-history, a history to which I ascribe a derivative reality. Still we may wonder as to the relation between fire and language in our domestication and socialization, and how these features relate to, or might be included in, the J-Pc/creation scenario. As Gaston points out, the concept of the hearth is crucial in many ways that we can barely appreciate in the age of microwaves. The hearth is the heart of our domiciles. In cooking, we are all alchemists. He further points out that fire is seen as a link between matter and spirit, as in the case of ceremonial sacrifice. Imagine the role of fire in bringing us down from the trees. Consider the role of 'fire water'. Fire is another kind of evaporation and portent of atomicity. Oxidation distinguishes animals from plants. We are the two sides of the carbon cycle. Consider the role of CO2 emissions in our eschatological sensibility. The consideration of fire could cast a more psychological light upon the J-Pc. There remains, however, a phenomenal and logical gap between metabolism and pyrolysis.

[12/1]

With fire, the demands on atomicity are greater than before. It may help to put more emphasis on the numerical ground of atoms. With evaporation we may invoke aqua/heliotropism, but with fire there is no relevant tropism, beyond our own fascination. Forest fires, lightning and volcanoes are a mixed bag. They do seem to have a mind of their own, and they are atomic mainly in theory.

[12/2]

Psychologically, we may not speak of fire without also speaking of ice. That combo has had an enormous impact on the human diaspora. Was that combo a positive creation, or was it a logical spin-off of the main show? The peculiar negative thermal expansion of water near freezing indicates the former case. This observation puts us well beyond Gaston's analysis. It is not clear to me what were the self-imposed limits of his analysis.

In this context I am looking at John Fraim's [website](#). It provides a useful contemporary compendium of symbolism. My contention with Gaston is his embrace of the claustrophobic going back to the womb(/matrix?). Cosmology is not in his lexicon.

We must not forget that the polar thermocline is the Carnot engine of meteorology. Ice limits the organic stress imposed by the thermocline. Atomic substances must have at least two phases. The middle phase is ruled by water.

Cartographic diversity -> meteorology -> thermocline -> ice -> fire.

Does this sequence gives us a better handle on atomism?

Don't forget that CO₂ is necessary for plants. What was its supposed primordial source? The primordial atmosphere was nitrogen and methane?

Then we come back to lightning and volcanoes. Were these deliberate? And consider the role of cosmic rays in triggering lightning. Plate tectonics is a rationalizing of cartography. Volcanoes are a residue of this rationalization. That brings up earthquakes. It is hard to find something positive there, but they are a lot less deadly than the mosquito or virus. The virus is a residue of genetics. The game of ecology is serious, and not totally anthropocentric. Nature should not be kept on too short of a leash. No shorter than our leash.

What is the role of the fear of God in the above? Is that a legitimate component of the BPW? We must be reminded that we are on a leash.

How closely related are lightning and electricity in the telos? Is there a psychology of lightning, or is it just its role in the carbon/nitrogen cycles. Is there an overdetermination here? The exact mechanism of charge separation remains obscure. Does it depend on ice? The lightning bolt is the preeminent phenomenon of nature, beyond the eclipse. Did it spark our fascination with fire?

I need to reconsider the four elements: air, earth, fire and water. How do they relate? Then I need to get back to the eschaton, and how that fits into the BPW scheme.

Air and water are essential to transport, particularly of the atomic variety. The combinatorics of metabolism is essential to the combinatorics of space. Space is the way to avoid the limits of Leibniz' II. What becomes of that combinatorics in the eschaton or beyond the portal? In short, what becomes of us.

Will there be stages of recombination? Can space gradually become more relational? Cyberspace will be a part of that. Virtual pokatok is a step beyond and back. Halo is of that ilk. RPGs may be truer to form. Metabolism enables self-maintenance. This goes with our territorial/homing instinct. The RPG moves us toward a more functional and group perspective. We have reached the apogee of ego development, and we are reluctant to move beyond that point, despite the pressures and inducements of modern society. Society has learned how to harness the egos to its own, more organic, ends. This is the hidden hand of economics. Forced collectivization is a vision of the past.

[12/3]

Atoms maximize the self-organizing combinatorial possibilities allowed by spatial symmetry. The R cycles are the means of realizing those possibilities.

MDX -> Z -> AO -> QRP.

DX is the Dia/logos. It breaks the Z symmetry into AO. Space/time is formed with QRP. Q expresses the normativity of R and P, and re-expresses the Dia/logos with $e^{i\pi}$. The J-Pc corrals the cloning Rs. The J-Pc may also be the primordial gap between A&O. It is a timeless Xcaret, a Camelot. History then encircles that Mt. Meru or *axis mundi*. The J-Pc leaks out and gradually the core removes itself from the mainstream. It goes off the mass-shell like a virtual particle. It is the mother of all seeds. That's one speculation, anyway.

[12/4]

The digestive and reproductive cycles may be viewed as tandem challenges in the combinatoric scheme. Fire, especially in the guise of internal combustion, is digestion *in extremis*. Plants operate on external combustion. Ideas don't burn, do they? How will we ever get people to believe that ideas burn? If people can believe that, they will believe just about anything. And isn't that the whole point?!

[12/5]

The conservation of energy in locomotion is a burning issue. This is a space-time symmetry. Why not telekinesis? That symmetry is necessary for combinatorics. In order for ideas to move, they must also be combustible. What is the downside of telekinesis? It would be abused? Or we can't ordinarily break the symmetry? Are continuity and causality separate issues? I have not looked at these. Atoms must be related to both. They are centers of causality and manifest the limits of continuity. That is how Q is kept small. Combustion manifests both. Does combinatorics require these? Atoms are a distributed intelligence. But does that bind mind too tightly to matter? No, it is just the minimal localization of same. We cannot attend to atoms, and so they attend to themselves, when necessary. They are foci of habituation. Some of this is true of numbers. When it comes to continuity we have to think globally and act locally. It's difficult not to take space-time for 'granite'. The jump-starting of atoms and chemistry remains a challenge. How much of a jump-start is Creation? This is the problem of the J-Pc. The problem of cosmogony is genealogical. That is what all the biblical 'begats' are alerting us to. The photons are the stretch marks of space. Does this sound too much like the big bang? They are our communion. UFOs may function in a similar, coordinating fashion. There was no first baby. We are all still babies struggling for the first breath. There is the symbolism of 2001.

[12/6]

Atoms are the logical foci of habituation and physicality. Q is the fudge factor that mediates the conflicting teleological/functional demands that we place on atoms. Do the atoms determine the cycles, or is it the other way? There are trade-offs and conflicts between atomism and teleology. How is the balance maintained? The relation between atoms and numbers remains tenuous.

[12/7]

Optimizing the combinatoric possibilities in time and space is the primary thrust of Creation. How important is Nature for this? Is it merely the logical backdrop for the human drama? Is there not a more positive role? I raise this question back [here](#). In other instances I have stated that God uses nature to hide behind, but that is nothing positive. It was a major deal to go with nature. It was an all or nothing decision. To what degree is nature just an obstacle to be overcome by us? Or is it just to balance the carbon cycle? Could there be an Earth without Gaia? It would simply be incoherent. There could not be flora without fauna.

Ecology is an all or nothing game, and it cannot be played without giving much autonomy to the atoms. This is why materialism has such a hold on us. The space-time combinatorics must begin at the atomic level, but then the atoms must be kept on a short ontological leash. That requirement remains to be fleshed out. This must relate to Q, but Q is not something that is added to atoms. Atoms emerge from it. That misunderstanding may explain the quantum enigmas. The dialectics of $e^{i\pi}$ must come into this. Fleshing out Q may be the next priority. It is the least determinate of the archetypes.

[12/8]

That matter emerges from Q, whatever it may be, has not yet been appreciated. $e^{i\pi}$ is only a small aspect of Q and P. (Physics students must understand that these are not the anti-commuting quantum variables of the same names.) A point to consider is the relation between matter and memory. Also consider that this problem is a bitch, along with the Nature that it is. We are just trying to see what makes matter substantial. Certainly the physicists have not a clue. Substance is just something that metaphysicians used to worry about. The relationality of it is hard to compute. How can there be a virtual substance? Substantiality is largely qualitative and normative. QRP are also of this stripe. Yes, even P/π is grounded in normativity, I would claim. It is not just another number. It is a very special number, and its singularity is ultimately a matter of judgment and perspective, embedded in the depth and coherence of mathematics. Atoms are the manifestation of QRP when projected onto space and time, which in their turn may also be seen as projections. The normativity of space and time has been widely noted, particularly with regard to time.

[12/9]

Our concern for the reality of atoms could be extended to the reality of bytes, letters, etc. There is a similar contextuality and normativity. Misplaced bytes and atoms are of dubious ontic status. Consider the rise and fall of 'sense data', or the status of a stray neural firing. Can signal noise be parsed with any effect? Substance is holistic or nothing. It is relational. We don't have a good handle on the glue. We can't put a finger on it. All substance is ultimately subjective. There is a genealogy of substance that is entangled with that of the self. Analysis requires effort and infrastructure. It is not natural. There is a story of atoms. We live that story, and their substance is entangled with it and us. Does this explain solar neutrinos and the other exotica of science? All of that is a spin-off of the functional core of

phenomenology and QRP. Does any of this help us to reconstruct the Creation scenario?

[12/10]

One does find seashells by the seashore. Are they misplaced? What is their ontic status? Some are valuable and wind up in collections. They may become currency, wampum, having a social metabolic function. Otherwise, like fallen leaves, they are cycled back into the earth where we all end up, more or less. Each one of us can become a stray sheep, without a shepherd. But can we? Can anything? Truly? Consider the fractal and apokatastasis. Can there be any leftovers? Between cycles there is a no-man's land. Or is it? There are typos and there are spell-checkers. There are culture clashes. Terrorists get caught in the middle. In ecology, the carcasses pile up. Detritus. If oxygen gets too high, fires bring it back down.

Is it not possible that we are having experiences that will not be apotheosized or restituted? Some experiences take on greater portent than others. There is repetition. Will we be able to point to waste? I am skeptical that it will be a lasting issue. By creating new contexts, we create new experiences, be they social or technical in nature. The Internet is a case in point.

How did the starry sky get filled? Partly by fractal, partly by coherence. Did it ever have a different look? Who shaped the Andromeda galaxy, or Orion? There may have been various final causes that were over-determining the shape of the heavens, not the least of which were zodiacal. Z could have been a component of a Lamarckian J-Pc.

The Alpha need not be jumpstarted. It is lost in the mists of time. At some point history merges into the J-Pc, and J-Pc has an eternal component as discusses on [12/3](#). It is a nexus and highest common denominator of our consensual imagination. It may be fleshed out with our dreams.

We have to keep looking for gaps in the BPW, and hope that in filling them we don't have to make gross adjustments. At some point there will be sufficient confidence in the model to enable a divestiture. The least integrated facet at this point is the numerical. This is surprising for an immaterial model. Their provenance remains obscure. Their appearance in mathematical physics is exotic. With computers, they become more functional. Perhaps, though, it is in combinatorics that numbers and symmetries find their most natural home. It is on the atomic level that these symmetries become the most robust. Numbers and atoms are mutually reified, and somehow our minds partake of same. We don't yet have an observer principle for math. Our minds are combinatoric machines relative to thoughts. Our intuitions of the MG and the Ramanujan phenomenon go far beyond the basics. An *axis mundi* must be involved. If there were to be a breakthrough, this would be a likely venue. There must be a strong connection between the observer and anthropic principles. That connection may be the basis of substance. It is the Q that comes in here. It is the connection between micro and macro. Music and aesthetics may be involved here.

[12/11]

The organicity of the numerical coincidences is our best pointer, but to what end? Where would we be without numbers, or without their coincidences? Where would we be without Mozart, or without the [Golay code](#) and the Monster? The geometry of all the sporadic groups is based on that of the Leech lattice, or optimal packing in 24 dimensions. We might link mathematics to aesthetics, but then what is the function of aesthetics in the BPW? Why music? It has an abstract coherence like math. Why abstractions? Why words? They have to do with the combinatorics. This is where music comes in: combinatorial coherence and aesthetics. Aesthetics must be an aspect of love and of normativity. Consider synaesthesia, poetry, abstract vs. representational art, color vision, rhetoric. Why then does this have to show up in the quantum domain in the form of math. What is the linkage between the several

aspects of math?

[12/12]

It would seem that between aesthetics and anthropics, the math structures would be overdetermined. How can we arrange for both to be fulfilled? Somehow there has to be a link. Where could that be? And how does the epistemology work? The episteme comes from the same place that our spatial perception comes. This may speak to the proprioceptive construct that is space. Aesthetics must be closely related to coherence, which is alignment between micro and macro cosms. Science provides a sub-alignment. This may be a spinorial/relational view of space. This may be where the virtual pokatok model runs into trouble. It assumes a perceptible space. The zodiac then is a kind of pre-space, or a projective pre-geometry, which then gets cloned according to some proto-symmetries. What is the primal spinor? What is its psychic basis? It must have to do with the dyadic dialectic. The dialectic must be multidimensional. That is a trick. The zodiac is an expanding spin-net that becomes space. What is the basis of orientation, the primordial dimension or polarity? Then we need a pokatok for spinors. It sounds like foosball! Yin-yang could be a primal dyad, but how do we get from the qualitative to quantitative dimensions. By way of numerology? Hasn't this been worked out somewhere?

[12/13]

Permit me to set aside aesthetics momentarily, to deal with the construct of space. I need a link between the anthropic and aesthetic aspects of math. It has something to do with combinatorics. The combinatorial view of space has long been championed by [Roger Penrose](#), in a solitary battle. His views were motivated by Mach and Leibniz. According to Mach, the conventional view of space depends on an infinite background of particles. What if we start off with a finite number, wondered Roger? Then you have to consider Leibniz, and employ a quantum spin network. Space is constructed in a purely combinatorial and relational fashion.

Yesterday I had been watching Brian Green's *Elegant Universe*. The hero of the movie is Ed Witten, the fellow who in 1994 rescued string theory with his M (monster) theory. It seems that Ed has now [taken up](#) the cause of Roger's twistors. I haven't yet seen whether Ed's interest is also Leibnizian. My cohomology theory is regrettably weak. Ed follows the diagrammatic path of Andrew Hodges.

I'm now looking at John Baez' [discussion](#) of how Euler's discovery that $1 + 2 + 3 + \dots = -1/12$ has led to modern string theory. I'm not sure I buy this, Leonhard, that is. This is also the formula that launched Srinivasa's career. What is the sense of this, we might wonder? John shows that the 26 dimensions of bosonic string theory is directly related to this result of $-1/12$. What is the aesthetic of obtaining the finite from the infinite? Is it not the aesthetic of the microcosm? This may be where the microcosm impinges upon the cosmos, or where the mutual alignment is realized. And now looking at [Conformal Infinity](#), another of Roger's ideas. A good discussion of the philosophy of divergence is [here](#). Euler's discovery hinges on the unappreciated strangeness of negative numbers.

[12/14]

I refer you to [A note on divergent geometric series](#) by Kevin Carmody. He points out that if

- $x = 1 + a + a^2 + a^3 + \dots$ then $x/a = 1/a + 1 + a + a^2 + \dots = 1/a + x$.
- Thus $x = 1/(1-a)$, except for $a = 0, 1$.
- Then for $a = 2$: $1 + 2 + 4 + 8 + \dots = -1$.

This fact is used to store negative numbers in computers by using their two's complement. You can see why the ancients were so wary of these negatives.

Having studied mathematics for many years, I am surprised to be surprised by this so late in the game. It is turning out, however, that the substantiality of the world is based precisely on similar renormalizations of divergences. The deeper we get into mathematical physics, the more sophisticated become our renormalization schemes. The entire quantum apparatus might be viewed as just one such scheme. Now I'm reading John's [Renormalization Made Easy](#). Also take a look at [Pierre Cartier's](#), *A mad day's work: from Grothendieck to Connes and Kontsevich - the evolution of concepts of space and symmetry*, Bulletin of the AMS, 38 (2001). Alexander Grothendieck draws parallels between semantic and physical spaces. He pioneered the constructive view of spaces. Epistemology replaces ontology, in the limit. Perhaps he can help us to understand how space emerged or was projected from the Matrix, as an alternative to the pokatok scheme.

Somehow, atoms must serve as proxies for our episteme. Must we anthropomorphize atoms and numbers? This is merely an extension of animism or vitalism. It is pantheism, and so we see why the theists are wary. Atoms, like us are chips off the old block, but this can also lead us into materialism. Materialism is pantheism without the 'theo', and without the possibility of apokatastasis. The restitution of numbers seems more logistically feasible than that of atoms. Mathematical physics ought to help level the playing field. It ought to expedite the relativization or deconstruction of atoms and space. We do this using the music of the spheres. Atoms and numbers are a medium for the telos. There is the not so spontaneous symmetry breaking of the Matrix by the dialectic. There is the sundering of synaesthesia.

Then there is Dennis E. Hesselning's *Gnomes in the fog: The reception of Brouwer's intuitionism in the 1920s*, as [reviewed](#) by Edward Nelson. Edward speaks of the formalist 'enlightenment', soon to follow, in which all semantics is superseded by syntax, pure syntax being the requisite of axiomatics. This prescription underscores the degree to which real mathematics, especially as practiced by physicists, departs from the ideal of formalism. By that much it must be animated, if you catch my drift.

Mathematics consists of reasoning and computation, and of the two, computation is the more fundamental. Aristotle, Leibniz, Boole, and Hilbert each took a big step towards realizing the vision of reducing reasoning to computation.

Thanks, but no thanks! I wonder how many formalist 'gnomes' are still around. Does the analytic vision still survive on the margins of mathematics? The mainstream shies away from philosophy. Does computationalism still survive in the philosophy of mind? Haven't we gotten over that? Did we forget to tell the formalists? If you want to know about computationalism, just talk to Srimi. He'll give you an earful! Long live semantics!

[12/15]

I'm still lacking the proper metaphor for mathematical physics. What is the attraction of pure math, and why does it spill over into physics? How does the math migrate from atoms to brains? Is it all built into our construction of space? It may have to do with [Rene Thom](#) and his 'catastrophes'. Atoms and organisms are just 'defects' of space, or, rather, space is the sum of all its defects. This is scant support for combinatorics. Must there not be multiple dialectics operating on the Matrix to produce a stable weave? Or is Z the only stability? What was the precursor to the atom? The primordial catastrophe might be the atomic knot, then the alchemy.

I am just learning about [clathrates and warming](#) (3,300 hits) from an op-ed piece in the *Baltimore Sun* by John Acheson. The global extent of these methane trapping hydrates only began to be appreciated in the early 90's. They range from the arctic tundra to the deep ocean sediments, and contain at least double the

known coal and oil reserves. A prior rapid release of these unstable methane deposits may have contributed to a sudden warming episode 55 million years ago: [*Methane hydrates stir tales of hope and hazard*](#) (Science News 11/9/96). We may have to double the magnitude and halve the time scale of the expected global warming. Even with the Internet, news can travel slowly.

[12/16]

Usually it is the space lattice that gives rise to the defects, but we may need to reverse that sequence. Space may be a crystallization or sublimation of defects arising from the Matrix. Could the ego be such a one? What can twistors tell us about this? Do we wish to have space-time emerge independently of the creator? That might be putting the cart before the horse, almost literally. Should we look at Z as some kind of knot?

For more on twistors see [M Theory Visionists](#) and [R. Penrose, F. Hadrovich](#).

[12/19]

What we don't know is whether the Matrix is primarily analog or digital, i.e. continuous or combinatorial and discrete, in terms of whatever potentialities may emerge from it. In my thinking so far, Z and D are some of both. The answer to this has a bearing on the types of pre-geometry that may be anticipated. Might any of the tools of field theory, e.g. symmetry operations, be usefully applied to Z or D? We could ask the same questions of mental states. How far removed is the Matrix from the symmetry of space and atoms? Will the answer be mainly epistemic or ontic? How big a role will logic play? It favors discrete entities. How heavily does relationalism favor continuity? Cognitive science deals mainly with discrete functions. This may be true even for perceptual systems. Which do we prefer, digital or analog? We'll take both, if we can. This issue also touches upon free will. Do we want to give numbers a foothold in the mind? We deal with the cause and effect of thoughts. Are numbers going to help or hinder the teleology of the mind? From person to atom may be too big of a step. The single cell is a logical intermediary. That makes it harder to trace any mathematical continuity. The best we can do at this point is to check back with Rene Thom and his topological singularities in biological phase space.

[12/26]

Presently I am reading Temple Grandin's [*Animals in Translation: Using the Mysteries of Autism to Decode Animal Behavior*](#) (2004). Ms. Grandin invites us to use her autism as a bridge from human to animal consciousness. Now all we need are bridges to atomic and zodiacal consciousness. Horse whispering is a natural talent for the autistic.

A problem we face is that if atoms do not partake of selfhood, we will not be able to relate to them. Every cognizable entity must do so, and there are none other. This should tell us something about universal function, telos and apokatastasis.

[12/27]

What then is the relation between the selves and the ideas they entertain? Episteme always implies mutuality. This is the essence of animism. This is Srini's secret. He has intercourse with numbers. He is a number whisperer. There are no numbers, only number. Egos are the atoms of God. Atoms are God's

alter egos. There are only states, be they mental or atomic. Sam's stone is a degenerate, unformed self. Politics is alchemy. Primality (of numbers) is something functional and ultimately only probable. I am my ideas and my ideas are my facets. There is no other context. Scheherazade must die when her story runs out. That is our fate. Every moth has its flame. The autistic flies too near the flame, and is touched. Would we, would we, all. Hiroshima was touched. It brought down the gauntlet. The skids are greased. Prometheus and Siva, meet Pandora. This is a restatement of the chain of being and its ouroboric character.

[12/30]

If the self didn't already exist we would say it was impossible, but nothing else can exist without it. However, there must be relative degrees of selfhood, but can any partial self exist without an ultimate self? Is it then incorrect to suppose that a primal self emerged from the Matrix? The Matrix and primal self may have to be identified, which would force a reinterpretation of MDX&Z. Can there be a difference between the primal and ultimate selves? The A&O are already seen as just two facets of one being.

[12/31]

If God is eternal, and if Creation is an essential aspect of God, then Creation is eternal, but then calling it a 'creation' would be a misnomer. No? One might then suppose that Creation and the MG have the same provenance. It is the eternal Telos. Then we have to deal with the flow of time in relation to the eternal Presence. We may already be beyond the point of the maximum linearity of time. If Creation were not essentially eternal, it could not relate to the rest of the cosmos, or to the MG. If physics were not logically necessary, there could be no mathematical physics. How then may we restore creatorship to God? Much of this has to do with the puzzle of presence, which is also about direct perception. Is Mozart a creator? The value of a creation is related to its endurance thru time. Mozart then is a transcriber of the eternal. His composition is not unlike the discovery of the MG. The idea is not to appreciate God by deprecating Mozart. God is the realizer of eternity. Her presence underwrites Presence.

[1/1/05]

Perhaps God is simply a virtual attractor, which is also the Telos. This is the God of the eternal future, who is finally present. It is our temporal egos that struggle to relate to the eternal self. It is the prophetic tradition which attempts to bridge the gap. What is our equivalent of the MG? There are the genetic generators and the resultant structures.

[1/2]

Creation is a collective process of which God is the coordinator. But is not everything pre-coordinated? Nonetheless, our struggles are real, and are essential to the process. It is the tension of the suspension (bridge). Ours is the optimal tension. God is the glue. The tension and the dialectic are related. They are both involved with symmetry breaking. We need to determine how God, egos, cells and atoms participate in the tension/dialectic. And what about numbers? How do these various beings rise to their many varied occasions? How do we manage to exist all at about the same time and share in the same mutual presence? Or is that strictly illusional? Time must be derivative of presence. Time and space are simply the mediators of presence. They often override direct perception. The problem of the mutuality of the present

arises only when we treat time quantitatively or as derivative, or view being as non-relational. Do numbers share in this problem? Lack of simultaneity is a problem for relativity theory. There is the related problem of the directionality of time that enters into entropy and into the collapse of the quantum wave functions.

[1/3]

The great preponderance of what we think of as reality is based only on our counterfactual expectations. How are these expectations constructed and maintained, presumably in the collective subliminal mind? Is this the ground of materialism, the source of mathematical physics? Or do atoms have a distinct subliminal realm? To what extent might our expectations be able to steer events, and when do they fail to do so? Find the telos of the tsunami that can override so many expectations. There are cycles and then there are 'relaxation oscillations.' Some things bend and some don't. There must always be fault lines.

[1/4]

By and large, reality manages to abide by our expectations. Where it does not, scientists work to revise our expectations. Falling stars are an example. The timing of aperiodic events is left open. One might wonder how our varied expectations are mediated. How is the global coherence maintained? We suppose that it is the atoms that do so. Or are the atoms merely proxies? It may be the decoherence that is harder to explain. Atoms could also be the foci of decoherence. There are very few free atoms. They come in bulk, with standard bulk properties, be it a gas, liquid or solid. Consider storms and volcanoes. They all manage to be idiosyncratic. Are atoms to blame? Do they have minds of their own? A storm ravages a beach. Are the grains of sand to blame? Grains of sand seem to qualify as neither bulk nor atomic. There are many instances of such interstitial phenomena, i.e. the interaction of otherwise categorical phenomena. With a purely atomic metaphysic there would be none such. Can we deploy proxy atoms without falling into dualism? What might be the logistical distinction between atoms and dust? Consider Brownian motion. From dust to dust. And what happens in between?

In her book on autism, Ms. Grandin points out that 'animals and autistic people don't have to be paying attention to something in order to see it.' Things just pop out at them. Humans are more likely to see only what they are expecting to see. Her conclusion is that despite all the appearances, our normal consciousness is mainly verbal in orientation. Vision is brought under the control of the 'left brain' (pp. 51ff). On pp. 55ff Ms. Grandin points to the neo- or associational cortex. Autistics and animals have much less of, or have less functionality in their associational areas. We end up seeing mainly our own generalities. Also, as a result, normal adults are much more subject to ambivalence than are animals, autistics and children (pp. 88ff) whose emotions tend to be more compartmentalized. We might wonder whether atoms and dust can be conflicted. Does this have something to do with the quantum? Atoms are Nature's way of resolving her conflicts, as are we with respect to God.

The Heart of the Matter

Indulge my infrequent optimism concerning the imminent resolution of the metaphysical problems of immaterialism and the [BPW](#). Taking our cue from Ms. Grandin, let us suppose that matter is the means to the resolution of cosmic conflict.

Before venturing further, however, allow me to acknowledge another member of the idealism club. This is an excerpt from the NYTimes 1/4/05, "[God \(or Not\), Physics and, of Course, Love: Scientists Take a Leap](#): Fourteen scientists ponder everything from string theory to true love:"

[Donald Hoffman](#)

Cognitive scientist, University of California, Irvine; author, [Visual Intelligence](#).

I believe that consciousness and its contents are all that exists. Space-time, matter and fields never were the fundamental denizens of the universe but have always been, from their beginning, among the humbler contents of consciousness, dependent on it for their very being.

The world of our daily experience - the world of tables, chairs, stars and people, with their attendant shapes, smells, feels and sounds - is a species-specific user interface to a realm far more complex, a realm whose essential character is conscious. It is unlikely that the contents of our interface in any way resemble that realm.

Indeed the usefulness of an interface requires, in general, that they do not. For the point of an interface, such as the Windows interface on a computer, is simplification and ease of use. We click icons because this is quicker and less prone to error than editing megabytes of software or toggling voltages in circuits.

Evolutionary pressures dictate that our species-specific interface, this world of our daily experience, should itself be a radical simplification, selected not for the exhaustive depiction of truth but for the mutable pragmatics of survival.

If this is right, if consciousness is fundamental, then we should not be surprised that, despite centuries of effort by the most brilliant of minds, there is as yet no physicalist theory of consciousness, no theory that explains how mindless matter or energy or fields could be, or cause, conscious experience.

Now from the first chapter of his book:

But wait. If you construct all you see, then since you see this book, you construct it as well. And if that's so, then why should you buy it and why should I get royalties? What right have I to copyright your construction?

This question has more than passing interest to me as an author, and I shall have to raise a distinction to rescue my royalties. [...]

The excerpt from Amazon leaves us hanging, and I could not get the search function working to retrieve more pages. I would like to hear more.

Ms. Grandin points out that 'normal' humans are uniquely prone to ambivalence, apparently in the furtherance of our quest for coherence. I happily construct a cosmology on this simple observation. The doctrine of apokatastasis posits restitution in the future. Various fundamentalist eschatologies rather posit Armageddon and division at the Omega. Let me suggest that they have made the common mistake of

transposing the Alpha and the Omega. The paradisiacal zodiacal circuit is broken. It requires atomic metabolism and the human proclivity toward concrescence and coherence to make restitution. We finally internalize the predator/prey dynamic.

There is the primordial rupture: *felix culpa*. It has something to do with the primal sacrifice and subsequent theophagy as reenacted in the X-event. Sexual dimorphism is one small part of this cosmogonic event. We have had to eat and, yes, fornicate our way out of our predicament. We have grown so acclimated to our *via metabolis* that we can scarcely contemplate its abeyance, not quite the same as abstinence. Are not our own cells quite beyond copulation? Now we partake as if there would be no tomorrow: not an unreasonable posture under the circumstances.

Does this help in our understanding of atoms? Where would we be in our miscegenation without our recombinant DNA? Please note that organicity does not imply homogeneity. It is about the rainbow coalition. DNA, for all it's worth, need be little more than the logical detritus or our morphogenetic proclivity. Logic and love are our only glue. We come to the point where pure imagination can bridge the remaining gap in our cosmic circuit. Behold the spark gap.

Logic begins with the primal 'mark of distinction'. We can come home again, but only via the Riemann Hypothesis. It has been a struggle. Nothing will be wasted, not even our squeals.

A critical mass was exceeded. We are the fallout from the chain reaction. Atoms are the retarded cores of the primal circuit.

[1/6]

Keeping with the spirit of the quantum, it could have been a 'measurement' event which precipitated the rupture. We may still be in the throes of realizing that event, of reifying the possibilities.

[1/8]

Another way to look at cosmogenesis is in terms of a phase change within the matrix being precipitated at some critical juncture. That precipitous phase change is Alpha, involving a separation. From Alpha up to Omega, the cosmic partition is internalized within the microcosmic egos. This gradual historic process of internalization leads up to the final restitution that is completed within a couple of generations. I doubt that we have yet entered this final stage, but I would expect that the Internet will play a significant role in the initial phase of the apokatastasis. The Y2X event will signal its commencement. This website is intended to facilitate that event.

Does this sound too mechanistic? Well, no point in having God do busy work.

[1/9]

Suppose we switch from beach to forest. Fallen leaves replace sand. The trees are each teleological, and so are the blades of grass in the lawn. How do these differ from the sandy beach? Only in the associated teleology.

[1/11]

With the forest we can still tell the trees, if not the leaves. On the new mown lawn, there are only blades and grains, very similar to the beach. How may we move seamlessly between the two?

But we can tell the forest for the trees. It and the lawn are essentially systems. But then there is the petrified forest turning into a beach. Whose system is that in our young earth scenario?

We need not inherit the hobgoblin of Plato and Descartes: that true ideas must be clear and distinct. This shibboleth is a procrustean bed for relational, systemic thought. However, we must not belittle the individuality of each and every blade of grass. Each is a microcosm like ourselves.

What of the individuality of the archaeopteryx? Did her heart never beat? I have said that it is we who personify nature. I may have to stick with that. It is we who individuate. We do that because we are individuated chips off the cosmic block. We do this to numbers, as none others can. Numerology is not something gratuitous, juxtaposed against mathematics. It is the heart of the matter.

How do personification and abstraction coexist for us? Are they not antinomies? There must be combinatorics involved, but there is also integrity. Integrity is no abstraction, it is our soul. This may be where we come back to Temple Grandin. She points to the links between animal and human consciousness that are adumbrated by autism. Is Ms. Grandin lacking in integrity? Certainly not in honesty. Her refreshing honesty shines through every sentence. Is she lacking in humanity or personality?

Perhaps she is correct in her self-diagnosis of lacking in cosmic ambivalence or multi-valence? The personal and cosmic are two poles of the chain of being. The world is suspended betwixt them. They are the Alpha and Omega in a slightly shifted perspective. Music is a link. It ties into both our emotions and abstractions. This is something lacking in animals. Temple has little to say on this score. Pythagoras had more to say. Temple says that we and the whales are latecomers to the musical scene (p. 278).

Is there nothing abstract about emotions? Is there nothing emotional about numbers. What would Srinivas say? Is there not a music of the spheres? How great can be the difference between the mental lives of Wolfgang and Srinivas? How far can either be removed from God? Did not Jesus have perfect pitch when it came to the Golden Rule, and how far is that removed from the Golden Section? Abstraction, microcosm and our social nature come intact. These come together in our linguistic skills.

There was nothing clear and distinct about atoms until we came along. Now we know the limits of distinction. There are phenomenal regularities that seem to require atomic action. No, we did not invent the atom, but someone conceived it. We partake and amplify that conception in a crucial way. We are a cog in the wheel. We internalize the wheel. The petrified jungle grows in our dreams. We and it are the essence of the Creator. The graininess of the beach, the atomicity of the ocean are equally essential.

[1/12]

Organic teleology is limited by individuality. Does that individuality require atoms, or can it be subsumed under the dialectic? Persons are more than combinations.

[1/13]

We have here a reprise of the Newton incident. What happens when the apple falls from the tree? Yes, gravity, but what else? Can we make the teleology seamless? How do we survive so well on our pseudo distinctions? From whence do they come? Even the symmetry breaking must have a telos. At what point does the apple detach from the telos of the tree to become a statistic, and what does that mean?

What kind of phenomenology is this? How does it differ from that of Husserl and Heidegger? Theirs is a

species of psychology. This is cosmology. The emphasis is on the system.

Perhaps the first phenomenologist was:

OETINGER, FRIEDRICH CHRISTOPH (1702-1782), German divine and theosophist, was born at Goppingen on the 6th of May 1702. He studied theology at Tübingen (1722-1728), and was much impressed by the works of Jakob Böhme. On the completion of his university course, Oetinger spent some years in travel. In 1730 he visited Count Zinzendorf at Herrnhut, remaining there some months as teacher of Hebrew and Greek. During his travels, in his eager search for knowledge, he made the acquaintance of mystics and separatists, Christians and learned Jews, theologians and physicians alike. At Halle he studied medicine. After some delay he was ordained to the ministry, and held several pastorates. While pastor (from 1746) at Waldorf near Berlin, he studied alchemy and made many experiments, his idea being to use his knowledge for symbolic purposes. These practices exposed him to the attacks of persons who misunderstood him. "My religion," he once said, "is the parallelism of Nature and Grace."

Fred was a student of the 'divine system of relations'. I couldn't have put it any better.

What is the phenomenology of death, be it of you, me, apple or mountain? Plato's ideas are eternal. That is the burden of distinct ideas. Ours are purely relational and nodal, always dynamic, and nothing if not. Can numbers die? Where do they go when they fall out of use? No wonder that mathematicians are Platonists to the core. No wonder that I fear the Monster! The mountain goes down to the beach, but the beach goes back to Shell Mountain, all in the eternal divine system of relations. Sand is the spawn of mountains. Binary digits and neural pulses are the spawn of meaning. All things are one at the atomic level and in the Telos. Plato could never tolerate shells on his mountains, nor craters on his moon.

Deadly and Yet Necessary. Quakes Renew the Planet, By WILLIAM J. BROAD, January 11, 2005:

But despite such staggering losses of life, said Robert S. Detrick Jr., a geophysicist at the Woods Hole Oceanographic Institution, "there's no question that plate tectonics rejuvenates the planet."

Moreover, geologists say, it demonstrates the earth's uniqueness. In the decades after the discovery of plate tectonics, space probes among the 70 or so planets and moons that make up the solar system found that the process existed only on earth - as revealed by its unique mountain ranges.

In the book "Rare Earth" (Copernicus, 2000), which explored the likelihood that advanced civilizations dot the cosmos, Dr. Peter D. Ward and Dr. Donald Brownlee of the University of Washington argued in a long chapter on plate tectonics that the slow recycling of planetary crust was uncommon in the universe yet essential for the evolution of complex life.

"It maintains not just habitability but high habitability," said Dr. Ward, a paleontologist. (Dr. Brownlee is an astronomer.) Most geologists believe that the process yielded the earth's primordial ocean and atmosphere, as volcanoes spewed vast amounts of water vapor, nitrogen, carbon dioxide and other gases. Plants eventually added oxygen. Meanwhile, many biologists say, the earth's first organisms probably arose in the deep sea, along the volcanic gashes.

"On balance, it's possible that life on earth would not have originated without plate tectonics, or the atmosphere, or the oceans," said Dr. Frank Press, the lead author of "Understanding Earth" (Freeman, 2004) and a past president of the National Academy of Sciences.

The Lord giveth, and the Lord taketh away, but who can take back the MG?

We are God going to seed. Our Creation is her recreation. We are God's spawn. Atoms are a necessary part of the recombinatoric ouroboric circuit. In some essential way, God must be both mortal and immortal, and so must we. No individual tree is immortal. A given tree does not have an individual soul, the Wye Oak being a possible exception. Souls are not Democritian atoms. They, like everything else, have only a relative existence.

And will the Monster be restored to God? I have little doubt that it can be unraveled into the fabric of love, into the synaesthesia of God. What we know of it now is a pale shadow, a merest skeleton. It will be subsumed into the cosmic system in a far more robust manner than we could presently imagine. A world without the Monster and without the Wye would be flawed. The only possible and the best possible are not the same here. They came through a sacrifice that we also cannot imagine. It was not the only possible sacrifice. That datum is about as sure as any can be. It is like asking if I am the only possible Dan Smith. That question takes us well beyond our depth. Possible worlds exist only to the degree necessary, keeping in mind that necessity is nobody's mother. We think of the MG as something fixed. Only in God will it come to life. We are seeing a projection of it: a shadow on the wall. Its apparent fixture is another measure of our ignorance. We could say the same of the petrified forest. It comes to life not in the eon, but in the Aion. Don't be confused. We don't trifle with the cosmic semantics.

[1/15]

In the divine system of relations, what is the relation of the atom to the Monster, and how do they both relate to us and God?

Permit me to explore a cellular analog of the matrix. In this analog the [microtubular](#) cytoskeleton, along with the genetic material, plays the role of mathematical logic. We must understand that the role of math may be changed between the Alpha and Omega. We might also wonder about the structuring of our ideas that leads to coherence. Are ideas transported the way organelles are, on tubular networks.

[1/16]

Coherence is something rooted in biology and teleology. The cytoskeletal matrix that supports biological coherence, generally remains out of sight. I wonder what supports coherence in the psyche. The neural net may point to something more metaphysical. Certainly logic and symmetry are part of the skeleton. If logic is the hardware, then ideas and feelings are the software, and ultimately this distinction is transcended. There are atoms in the phonemes, sense data and letters, but these are not generally attended to. It is the functionality that counts, and functions are strictly relational. The data bits aid in the communicative metabolism of thoughts. Atoms exist no more definitely than do sense data, and the latter have fallen out of favor. Neural pulses and atoms may not be the bedrock of reality. Analysis does not come naturally. It is something that we impose on the world. Something that comes with its own costs and benefits. There is a logic of atoms. Those two constructs are mutually supportive. They cannot be separated, as the quantum demonstrates. It is less clear how atoms are necessary for logic. It might have to do with reversibility and other symmetries.

[1/17]

Space, time and atoms are mutually dependent. Numbers are not conceivable without space and time. Numbers and atoms are equally dependent upon the concepts of space and time, and this puts them into a logical proximity. Atoms, number, space and time play a major role in the coherence of the world. The idealist will want to turn this dependency around so that the former emerge from the latter. Should this direction of emergence be problematic? I would think not. Causality, entropy and evolution can emerge in a very similar fashion out of the primal coherence. This is to say then that the Zodiac is numerically indefinite outside of this support. Z may be the nexus of the emergence. The dialectic is instrumental here.

The Matrix may be supposed to harbor a primal state of virtual coherence from whence the world is

realized, under the guidance and instigation of a Creative intelligence. Our dreams may be the stuff of which the world is made. Our dreaming may constitute the making of it. The world emerges as our collective dream. The source of the real world is the dream world. That realm is the connecting link between us and the Matrix, between the real and the virtual.

The main strategy for the creation was to foster a self-sustaining process, i.e. biological reproduction, and various other cycles. Coherence is translated into networks of mutual dependency.

[1/18]

It is not clear whether the phenomenology of bodies should be taken as logically prior to the existence of atoms. The relations between atoms and bodies is likely to be complex. Consider the phase changes between ice, water and vapor. This phenomenon could well be regulative of the properties of atoms. What is the metaphysics of ice? Ice, *per se*, has a diminishing climactic role. Life can get on without it, but not without the related peculiarities of water, such as its high surface tension, boiling point and heat capacity, and its role in the many organic hydrates and biological solutions, etc. Water is the basis and mediator of all biological systems. Bodies and atoms are mutually stabilizing, as in the manner of homeostasis. Biological bodies/systems necessarily maintain a state of dynamic (non-)equilibrium, e.g. see Ilya Prigogine and his 'dissipative structures'.

There is the mutual exclusion of solid bodies to explain. Is this necessarily mediated at an atomic level? It is an electro/quantum force, based on atomic rigidity. That same rigidity must give way to chemical reactions and recombination. Atoms are the sole carriers of properties, determining the genus of each physical substance.

There is no unalterable physical substance. This distinguishes the physical and abstract realms, and does promote a dualist metaphysics. But atoms have mainly abstract properties, that are open to recombination. The same may be said of our ideas. Atoms are the logical link between the two realms. Mental and physical substance find a common ground in the atom, as they must, despite the fact that atoms are not directly perceivable. Or it could even be because of their imperceptibility!

Then we have to deal with the corruptibility of the flesh, and the incorruptibility of the spirit. I can only refer back to the atom. This is part of our genetic immortality. That leaves the eschaton unaccounted for.

The atom mediates between the physio- and teleo- logics. As the physics presumably drops out in the restitutional phase, where does that leave the atom? We might suppose the observational effects to increase, without modifying the relative value of q . It may be a case of out of sight and out of mind, and we do not wish to disrupt the physio- or techno- logics prematurely or at all. It is no mean feat to arrange for the physics to quietly fade away. The ending of metabolism can hardly be painless. 'Woe be unto them that is with child'? This is where I have felt the need for a 'stargate' or 'portal' (see [7/16ff](#)) style of 'transmigration'. That was an attempt to localize the dislocations. 'Alien abduction' is a case in point, and so may be lucid dreaming. The question is narrowed to the mechanics of in- and out-of-body effects. The body becomes something of a phantom limb that we drag along for the ride. It is peculiar, however, that the abduction accounts often contain instances of perceived physical trauma. What's a body to do? We are then left to offer a rational account of 'survival'. What will full restitution look like, if, indeed, it will look *like* anything. Where is Dante Alighieri when we need him? Our guidance in this area is singularly lacking, but not for no good reason, we have to presume. The rationale for our ignorance might be as good a place to start as any.

Yes, we remain on a need to know basis. The need in this case is to simply argue in favor of the logical possibility of an alternate reality, which can stand beyond our historical reality, and, yet, remain an integral part of the BPW. For this purpose, we do not need clairvoyance, but simply an imaginative use of logic. A major challenge is to incorporate a non-linear time scheme. At least as important is the future

of the ego. The dependence of the ego on linear time will certainly relate these two issues. Clairvoyance concerning the eschaton would be tantamount to an eschatological event in itself. It might not be inductive to the gradualism espoused for the BPW. Clairvoyance is not something that should be dropped upon us. It is something for us to work up to in an organic fashion.

Allow me to note that the demands of the BPW may easily overdetermine the physics. How far can the rules of physics be bent to accommodate the telos? The bending of the rules is expected to be greatest in the proximity of the Alpha and Omega.

When we go to the other side we are reverting to the conditions of the [pokatok](#) court and [Jurassic Parc](#). These are simplified realities where that status of atoms is less relevant. That world is the lucid dream of the Zodiac. I don't recall if there was a scenario for bootstrapping [metabolism](#). How do we ensure that our Xcaret becomes a self-sustaining dream world? What is the big attraction. How much do the zodiacal angel investors have to put up for 'seed money', before we can go to the IPO?

[1/19]

The virtual 'Xcaret culture' does not become historical, in the sense of acquiring a linear time scale, until it goes megalithic and global. That would be c. 4-2,000 BC.

I may have hinted at it before, but let me say more explicitly that our metabolic bodies could be very effective homeostats for the properties and logic of atoms. This is a variation on our already reversed anthropic principle in which our proactive consciousness rides herd on reality. The feedback from our consciousness is a primary element in the bootstrapping and maintenance of the world. After all, the world is our [folie a deux](#). Now our bodies may be added into that loop. Catching a cold may also serve for debugging the universe. The makers of antibiotics are a partial addition to that loop, as are scientists and engineers in general, as well as we consumers thereof. The white knuckled airline passenger is holding up more than just the airplane. Much of our homeostatic exertions somehow become vested in the atomic logos. Where better to be vested? As such, we also become the usually unwitting conduits of the Telos. This is the atomic suspension bridge holding up history. As we approach the distant shore, the atomic logos gives up the ghost. Our autopilot is turned off. Reality becomes more fluid and lucid. All of these effects will be greatly magnified in the vicinity of portals, up until the Omega, at which point the entire world becomes our portal.

Consider our investment in language, and then the influence that language has on our world, particularly on our social reality. The focused attention of the alchemists shaped our eventual chemical reality. Note the explicitly spiritual telos in much of their opus.

[Direct perception](#) and [direct realism](#) (also [1](#), [2](#), [3](#), etc.) have not been considered for some time. These ideas are tied up with the notions of presence (see 2/12/04) and gnosis (1/12/04). We perceive things directly in terms of their functionality, i.e. the Telos supports all of our perceptions. With misperceptions there is always a reason, as per the PSR. With an autoimmune disease there is a biological misperception.

[1/20]

It seems that all we directly see are surfaces, but vision and perception need not be the same thing. Vision is optical, and it is hardly the end of perception. Also we do not ordinarily read minds, but we do make inferences. Inferences are corrigible and are frequently modified. It is a cumulative kind of perception. Inferences have duration and durability. They are highly functional.

Vision is essential to our spatial orientation, but we tend to overrate its epistemological significance. Our

perception of facial expressions is almost entirely inferential or intuitive. The autistic person does not generally have this ability, despite perfect vision. Directness has to do with presence, which is something more profound than temporal immediacy. Intuitions tend to be immediate and direct.

Our retinal images, if taken by themselves, present only a chaotic jumble of colors. The stability and functionality of our world 'image' is what points to our real powers of direct perception. This perception may well include metaphysical dimensions, although we need not always be conscious of them. Our ocular kaleidoscope is simply some frosting on the cake. We idealists need hardly begrudge it.

Next we take up the perception of atoms. We directly perceive the logic of atoms, the way that Srinivasa perceives the logic of numbers. The Greeks and other natural philosophers had an intuition for atoms, long before science came on the scene. The logic was there all along, whether or not we chose to consciously recognize it. I would now say the same for the logic of God and the BPW. We will kick ourselves afterwards for not having recognized it sooner. On the surface we are social/political animals. Deeper down we are gnostics, one and all. We keep our gnosis on a short leash.

So much for the epistemology, what about the ontology? That is if we are able to make the distinction. What I seem to be getting at here is a variation on the notion that to be is to relate. Our conscious knowledge covers mostly the periphery of the network of being. This is where knowledge seems more indirect. As we probe deeper in the ground and potency of being, we come into a more direct contact with the Ontos. It is as if Srinivasa were personally acquainted with the living organism that is vital substance that is know to the rest of us only by its shadows. This sounds like an Aristotelian coloring of Plato.

We used to have a more collective and functional or pragmatic understanding of the ontos, before we became individuated to the degree we are now. Now we can look forward to achieving a more consciously or deliberately integrated gnosis. Thus do we take on a more cosmic perspective. We thusly transcend our primordial street smarts.

[1/21]

The core of being remains beyond the reach of our ego consciousness. That is a stretch that we will be taking sooner rather than later. The ground or core of being is the cosmic self. In that case our factual or analytic knowledge resides at the base of a pyramid, with the cosmic 'I' at its peak. Our modern materialist picture of the world is about to undergo an inversion. Is the atom then a mini me? I would have to say it is a reflection of the cosmic self, reflected in the base of the pyramid, giving the impression of an inverted pyramid resting on the atom. This is the scientific view. Their confusion is understandable, and must be a major factor in the plan of history. The atom is God as reflected on the wall of our material cave. It is time for us to look and move toward the source. Mathematical physics is actually leading us part way back to God. The MG is God's skeleton. Srinivasa's muse was able to put some flesh on those bones. As God's resurrection, it is up to us to breath life back into that body. We shall be doing so in a nonce, with some help from our heavenly host. It remains to provide a better rationale for this ontological scheme. The scheme needs to be related particularly to the circumstances of the Alpha and Omega. The plane of reflection needs to be better specified. That mirror could be human consciousness itself. Which are the active and passive elements? Where does the math come in? And while we're at it, what does the sky reflect? And what about the Zodiac? How does this relate to JPC, or to biological cells? The notion of the microcosm is crucial, but it has not been developed. Can anyone imagine a world without atoms, i.e. one based solely on phenomenal cycles? What we strive for is atomic logic without physical atoms. The 'cloning' of God into egos, does not stop at that level.

[1/23]

I wonder if there might be some way to apply the above notion of metaphysical 'cloning' to a non-biological system such as atoms? Does the reproductive cycle of a cell make it any more or less real than an atom? Organisms participate in ecological systems. Their metabolic regimen ensures this outcome. This is their network of being. I am attempting to construct a network for atoms, without benefit of metabolism. But can we not just subsume the ontology of atoms into the existing metabolic framework. Maybe I'm making this problem too difficult. Metabolism makes no sense without them. Were physics and biology conceived of separately, or were they all of a piece? How do we avoid over-temporalizing this conceptual/creative process?

[1/26]

It is at about this point in my thinking that I have become stuck on previous occasions. It feels as though there is a particular idea that I am not quite able to grasp. Permit me to take a slight detour and come at this 'problem' from a different angle. I put 'problem' in quotes because I have not yet even been able to specify upon what it is that I become stuck, but whatever else it is, it feels like it is close to the heart of the matter.

My detour is to Peter van Inwagen and his book, [Material Beings](#) (1990 Cornell). Here is a [review](#). He admits that the philosophy he presents is a strange one. I gather that he is some kind of materialist. He takes persons seriously, but only as living systems, so he takes bacteria just as seriously. What he dismisses is the objectivity of all non-living objects, apart from atoms (actually he specifies quarks and electrons). His thesis is that only simples exist, and the only simples, i.e. irreducibles, are either (living) beings or atoms. Only in retrospect does he take up the problem of [relative identity](#), that is the view that (two?) things can be both the same and distinct, depending on one's perspective.

I am sympathetic with Peter, to a certain extent. His systemic view of existence goes only as far as his materialism allows. I push his systemics well beyond that point. We are both left with an atomic residue.

Atoms stick in my throat. They are hard to swallow, and harder to spit out.

I am intrigued with [Van Inwagen and the Possibility of Gunk](#) (Theodore Sider). Where do I stand on 'gunk'? In some sense, the BPW is an irreducible hunk of gunk. That is especially true of the Matrix. The partitioning of the BPW/Matrix is a very functional illusion. Atoms are the logical bedrock of that illusion. Necessity is the mother of all things atomic. Atoms are the tail-end of the network of being. We just don't want that tail to wag this dog.

Atoms conform to the Monster Group (MG), and the MG conforms to the BPW. More directly, atoms conform to vitalism. Atoms are pliable to the optimal degree. Atoms exist only to the necessary degree. Otherwise they are out of sight and out of (the cosmic) mind. It is the master phenomenological cycles that count. Atoms are merely their virtual counters or logical tokens. This goes back to my organic view of math. Numbers exist because of the telic property of the MG. The MG is not an accident of numbers. Numbers are the logical detritus, the tokens of the MG. I believe the the Riemann Hypothesis will have more to say about this. We could play poker without the chips, but who wants to bother? Atomic being devolves from our laziness. Scientists suppose that the atoms have mutinied, that they have turned anarchic and nihilistic.

But we should not look down our noses at the atoms, for we too are the mere tokens of God. It is all smoke and mirrors, but, by that same token, it is the only show in town. Did God have to conjure the atoms? Did she have to conjure us? When it comes to Creation, God is the 'chairman of the board', and we are all the vice presidents. She was not stingy with the vice.

Is this the heart of the matter? The point seems to be that the BPW is not a slam dunk. It will grow on us as we have grown on it. However, from a more popular perspective, there will come the straw that breaks

the back of materialism and dualism, and all their ilk. I can only hope to live to see that day.

What stands in our way are all the absolutes to which we feel compelled to cling. The foremost amongst these is our own absolute identity. We have trouble discerning God in the briar patch of relativity. Rather than follow Brer' Rabbit, we sit on our log and get tarred.

[1/27]

The quantum paradoxes should be weaning us away from our compulsive absolutism. They have, but only to a barely perceptible degree.

Yes, we are trapped in our own language games. Our verbally dominated, left hemispheric brains, are much too susceptible to artificial categorization. Words, we can't live with them, nor without them. They are our stepladder to the higher reality. At some point we will have to transform or transcend them. That is a feat almost impossible for us to imagine. We can use words to point to, but not to grasp, a larger reality.

What remains problematic is our ability to recruit our virtual atoms to do our own heavy lifting when it comes to maintaining the natural order. There is still much to be explained or rationalized.

It could be said that the atoms are not doing any work. Their work has been done in logically coordinating the initialization of the phenomenological cycles, which then proceed on their own mimetic inertia. This same rationale could be applied to the artifactual cycles introduced through technology. Again, I have in mind the MG. The numbers had to do their work only once, but not at any definite time. It is our own, mostly subconscious, monitoring of the phenomenology that keeps the world on track. The scientific enterprise has extended the range of the phenomenology to which we attend. But this extension does not differ in kind from the continuing discoveries of mathematicians. I suspect that we are, in this eschatological epoch, reaching the end of the discoverable mathematical and physical phenomena. As the novelty of math and physics wanes, our attention will inevitably turn toward the metaphysics. That is certainly what happened in my case. I had the available resources to strike out on my own. My less fortunate colleagues will have to contend with the political inertia that will continue to keep them on a shorter intellectual leash, until such time as comes the final straw.

The atomic logic helps to ensure that the vital, telic force acts as a very widely distributed intelligence. Sufficiently so as to remain off of our analytic radar screens. Our experience of it is only subjective. Subtle are the ways of God, and that subtlety is ensured by the atomic logic. No matter how closely we inspect the atoms, we will not see a living cell. No matter how closely we inspect the individual numbers, we will not see the MG. The MG is pulled out of our mathematical intuition, rather like Athena from the head of Zeus, and its demonstration comes then through deduction, not induction. This is the trick we must perform with God. We must allow her to spring from our forehead. She will not do so unless properly courted. That is all I can attempt here. A cattle prod will not suffice.

Another problem to consider is the interaction between the cycles. Materialists suppose that these interactions are all mediated at the atomic level, thus producing the observed unlimited variability of the resulting phenomena. One alternative is to make liberal use of fractal structures as a simulation of atomic chaos.

Considerable progress has been made in the use of meteorological models on a global scale. Adding a fractal dynamics at the fine scale could go a long way in verisimilitude. However, I do not want to advance the notion that we are living inside a cosmic computer. That would in no way ameliorate the problems of materialism. It does suggest that we do not need to rely on atoms in order to produce weather on an ongoing basis. The hydrological processes therein can simply be reproduced from the combination of medium grained cycles. We can operate on a purely phenomenological level.

Another place to distribute intelligence would be to the phenomena, on the generic level, but then we need a scheme to apply the generic intelligence to the specific cyclic interactions. This need not be a great problem if we consider the relative simplicity of the effective models now in use. They work well on a coarse grained three dimensional grid, each node with its specific set of rules and nearest neighbor interactions. This would not account, however, for the phenomena of specific clouds. I am tempted to treat clouds and storms as organisms. This tack runs afoul of the work of Peter van I. Next we would have to account for the babbling brook.

Perhaps there is not such a need to distribute the intelligence. Is that not acceding too much ascendancy to the space-time manifold? Here is an opportunity to apply direct realism. What Peter doesn't quite get is that the world behaves as a super-organism. Behind the phenomena there is an ecos. Our dialog with the ecos unfolds it into a global ecology within history. The intelligence only appears to be distributed. It is all a reflection of the one Telos. The Ecos is one part of the Telos and it is our job to unfold it in a seamless manner. The seamlessness is not fortuitous, however. It reflects the monism of the Matrix. The intelligence then resides in the dialectic between us and the Matrix. Thus must the final restitution occur through us. May we not suppose that the intersubjective consistency of our experience also owes itself to the monism?

[12/28]

With the Zodiac in mind we can think of the world as a *folie a douze*. The Zodiac is a dialectical reflection of the one intelligence. With the Matrix, unity is more natural than plurality. There is an effort to maintain a degree of separation. That effort is aided by the conception of space, along with its concomitant time. Unity remains in the overarching Presence/present, but they and we become **mesmerized** by the kaleidoscopic possibilities, which we pursue with abandon. We become ensnared in our own collective illusion and mind games.

Metabolism and the concomitant atoms seal the lid on our self-imposed cage. It keeps us off the cosmic streets and out of worse trouble while we pursue our individual and collective lessons. The atoms is the seal affixed to our box. We cannot break that seal without deconstructing the atom. That is what I have been attempting here. Our atom smashers have been of assistance in this regard. They have led us to the Monster Group which casts its shadow on the super-strings and M-branes. To expedite its deconstruction, I attempt here to recapitulate the construction of the atom.

The atom is primarily a logical construct. The exigencies of any spatial combinatorics and even a rudimentary anthropics, gives rise to it. Atoms do seem to come to us with their own paleological pedigree, i.e. an astrophysics complete with a starry sky, wherein there also resides the shadow of the Zodiac. We might think of the sky as something like an x-ray diffraction [pattern](#) of the primal zodiac.

In immaterialism, rationale replaces mechanism. This is difficult to get used to. We forever attempt to rationalize our lives and the world. Our failures in this regard are not an indictment of the world, rather they result from the incompleteness of our understanding. Atoms derive simply from the coherence of mind. They are its most significant manifestation. From whence derives coherence? That may not be answerable. What are its limits? Does the BPW represent that limit?

This is a relatively simplistic explanation of atoms. We must see how it will stand up.

Coherence becomes the most powerful force in the world. It plays the role of Atlas in holding up the world. God is its source. Hers is the face that is upon it.

[1/29]

Coherence is another expression of relationalism. Relationalism is a necessary property of mind. Relationalism expresses the necessary subjectivity of mind. By that I simply mean that there can be no experience without an experiencer, no thought without a thinker, no feeling without a feeler. This grounding of the mind is so pervasive and profound that we sometimes find ourselves overlooking it. Materialism provides numerous excuses for overlooking what ought to be excruciatingly obvious. Mystics are also intent upon the path of denial. This comes well after they deny the existence of atoms. My point is that atoms are not entirely optional or dispensable. The self is dispensable only *vis a vis* its grounding in the Matrix. The Matrix, however, is not the nirvana of the mystics. It is, rather, pure potency, something very different.

Atoms are indispensable to the coherence of life, and so to Creation and the BPW. Be very clear that what we need of atoms is not their objectivity, but rather their anthropic logic, particularly their manifestation of the MG. The MG and the RH may represent the limits of coherence as alluded to above. Am I placing a limit on the intelligence of God? No, this is a self-imposed limit, it is the best of all possible limits. By the same token it becomes virtually necessary. I am also saying that it is not possible for numbers to be hiding a complexity that is beyond the limit of comprehension. There cannot exist unobservable complexity. That is a basic aspect of relational existence, of which numbers constitute the purest example. This statement might be construed as implying the existence of a largest prime number, contrary to the 'plain facts'. But hold on. Beyond a point, primes become probabilistic, while their density decreases. Their existence becomes increasingly virtual. As individuals, they lose relationality. They become hypothetical tokens of the Riemann hypothesis. Their complexity is purely quantitative rather than qualitative as with the MG and RH. These are subtle points that need fleshing out.

Prime numbers provide another model to aid our understanding of the virtual, relational existence of atoms and distant stars. Primality becomes increasingly abstract and subjective, once we stop to think about it and are willing to set aside our Platonic compulsions. When I take a Bayer aspirin to alleviate my headache, it is not a gesture toward the objectivity of atoms, but a gesture toward their subjective relationality, as is ultimately the nature of the headache itself. Should we be good Christian Scientists and dispense with medical treatment? Like other potentially good ideas, it should be employed in moderation and with a firm grip on the pragmatic side of cosmology and eschatology. Is that a quibble? I say that we can celebrate the coherence of atomicity without idolizing atoms. The celebration will ultimately obviate the idolatry. I am suggesting that we are simply in the protracted process of thinking our way through materialism. We thought our way into it, we can think our way out of it. We need only allow ourselves to aspire to coherence. It is there for the asking. There is plenty to go around.

It is not so difficult to understand forests, or treeness, from an immaterial perspective, but how do we explain unique peculiarities of every individual tree, without resorting to objectivity? There are random internal processes which can be covered by generic fractal models. Otherwise there are systemic interactions, i.e. interactions between individual systems. Those interactions necessarily have specificity as between predator and prey. The fox eats a specific rabbit, the caterpillar a specific leaf. As with an individual organism or system, there are variable patterns of interaction. We get into the issue of cause and effect and the PSR. The creation of the pattern need not differ from the creations of a painting, representational or otherwise. Each stroke is accounted for, and once applied, need not be actively sustained.

Cause and effect and the PSR need not and should not be associated with materialism. In a dream state these principles are loosened considerably, if they weren't it wouldn't be a dream. In our social waking state, the principles become tighter. Is the relative tightness a warrant for materialism? I suggest it is simply a warrant for coherence.

Creation is the way of maximizing coherence up to the optimal point of the BPW. Coherence is finite, and our world defines that limit. It is our job to push that envelope. Let us hold in abeyance the issue of an

eschatological realm. There may be a tendency for us to overestimate its role in the cosmic scheme. It might be more of a vestigial organ: a safe house for us creatures.

[1/30]

In the formation phase, coherence acts something like gravity. The greater the relational charge the stronger the attraction. The cosmic self takes center stage. The total 'mass' increases up to the limit as the potentialities are realized and integrated into the expanding network of being. As the limit is approached, there occurs an eschatological phase change. This might be something like the formation of a black hole. The sky falls as the space-time manifold is finally dissolved or deconstructed. [Elsewhere](#) I have spoken of the space-time manifold as our cocoon, and then the eschaton is a metamorphosis. It has been some time since I have examined this latter model. It was never brought under the larger rubric of coherence. The separation of the stages does not lend itself immediately to the relationalist perspective. Our egos represent the individual cells as they redistribute themselves in the [chrysalis](#). The primal Zodiac is our larval (tribal?) stage. Linear history is the crystal/chrysalis/pupal stage. This is where atoms and biology predominate. It is a time of seeming anarchy and chaos. We have to integrate this seeming discontinuity into the cosmic coherence. How much weight can we give to the biological metaphor? Why do we have to endure this stage of cosmic decoherence.

The old explanation for the decoherence, which may have dated back to my first website, envisioned a more chaotic style of matrix, more like a quantum potential. I spoke of human consciousness as like a seine net cast upon those waters. That may not be in keeping with my more organic, or self-centered matrix.

[1/31]

I may be overdue for a reevaluation of my ouroboric/metamorphic/microcosmic model of cosmology. If there does exist a transcendental realm beyond space and time, why do we need to take this detour through materialism? Can we not short-circuit or bypass the present stage? What is the point of stages, if the temporal dimension is only an artifact in the first place? Is it from here to eternity? Then let's skip the 'here' part. If the measure of all things is coherence, why mess around with all the decoherence implied by the space-time manifold?

I have spoken often of the microcosm, without having bothered to justify it in the BPW scheme. An appeal to the microcosm seems to be an appeal to quantity over quality. Why bother with all the replication when we can go for the gold? If the Matrix is self-organizing, why does it need our help? Why does it need to mess with all this combinatorics, when it has all the potency? If we take mere diversity and sheer quantity as ends in themselves, does that not compromise the BPW rationale? Why do we need all these mean streets, why not just masterpiece theater? Recognize that another reason for this excursus is to develop a rationale for heaven, if such there be.

I'm inclined to simply point out that when it comes to heaven, half the fun is getting there, especially if the Telos is a 'do it ourselves' proposition. However, if there were not such an expansive Creation, we would not be around to have any preferences.

It is hard to imagine a creation without a material/physical aspect at all. Would that not be impoverished from almost any perspective? The only reasonable complaint concerns the quality and/or quantity of that aspect. Is it not possible that quality was sacrificed for quantity? But is this not an egregious case of Monday morning quarterbacking? Well, not if it is the very fact of Creation that is ultimately up for grabs.

If materiality is supposed to be so important, why then should so many of our fellow creatures be materially impoverished? If all this is just meant to impress upon us the relative merits of matter vs. spirit, then are we not entitled to say, 'Alright, already!?' There must be something more fundamental at stake, and I suspect that it does have to do with coherence. It is our perspective that is lacking.

What is being suggested here is that the BPW might more plausibly have consisted of a spiritual paradise with a more modest material appendage. When it came to creating the Earth, maybe God carried a good idea a bit too far. Or was it our fault? All 10^{10} of us were just dying to get in here, and God didn't have the heart to turn us away, as if God had no control over the length of the queue. Is there some qualitative aspect of 10^{10} that we don't appreciate? Perhaps 10^{10} is the limit of coherence. Coherence may not be fully realized if its limits are not tested, but is that not contrary to the notion of optimality, which rather suggests a golden mean? The human situation now has the aspect of extremity. Birth pangs may be essential to metamorphosis. God is not one for half measures. It is of its essence that Creation be an all out affair. If we, altogether, only go around once, we go with gusto, and this is one gutsy world. No one will deny that. What it lacks in creature comforts, it more than makes up for in many other ways, drama being a major component.

I think we may well suppose that there cannot be coherence without incoherence. There must be an optimal balance. If that is the case, then every bit of seeming incoherence that we experience here is a portent for the coherence that lies beyond space and time.

[2/1]

Yes, I am Chicken Little, but it is not often that I get to play the part, so here goes: the sky is falling! I even have a [picture](#) for you. There is a heliocentric anomaly in the cosmic microwave background (CMB). I am not aware of any more cosmologically deconstructive piece of evidence since Copernicus deconstructed the Ptolemaic cosmology. Is it time to head for the hills? I doubt it. Materialism will be a tough nut to crack. We may not hear more about the CMB until another WMAP is launched, but don't let anyone tell you that the hand is not writing on the wall.

And while we're at it, how about them [birdbrains](#)? Does the discovery of avian intelligence(/consciousness?) put a hole in our anthropocentrism? Is it no skin off our backs? It helps to underscore the universality of mind, and the ability of mind to find accommodations in many different forms. When will we realize that the brain is just a docking station, not to give it too dualistic a slant? There is more than enough mind to go around. It is not a zero sum game. The eschaton remains our baby.

I keep wanting to think of the microcosm, e.g. the human self, as a test-bed for cosmology, but that is detracting from the overarching potency of the Matrix. The BPW has an eternal potency within the Matrix. It could be, though, that it is the role of the microcosm to serve as and manifest the potency of the Matrix. Creation and the Matrix may be two sides of the same coin, but don't ask me what that coin is. OK, then, the Matrix is to Creation somewhat as Creation is to the microcosm. One relation is the inversion of the other. This ought to help explain the Ouroboros, but don't ask me how. Only when we realign our microcosms will the Matrix be rejoined, and only then can Creation be unraveled. Until then it is unrivaled. In such fashion does Creation dissolve back into the Matrix. The Matrix has turned itself inside out via the microcosm, and don't ask what that is good for, but it must be an aspect of the cosmic coherence. At that point we may revert to the zodiacal state, or to a kind of Adam Kadmon. The circle is unbroken. And will we not come this way again? Will we not revisit Creation? That may not be the right question to pose to the Matrix. Creation can at once be both temporal and eternal, without actually repeating itself. Dimensionality is not something that our egos may readily transcend. Eternity is with us always in the shining present/Presence.

I'd like to know what will happen to the 10^{10} of us when we revert back to the 'twelve'. Such numbers

can live on in the MG. There is coherence in the many scales of 10^{10} , such as the number of neurons in our brains. It is hard to know what to make of this circumstance. It likely has something to do with an optimal complexity. Given a finite world, it is very important to know how far to push the finitude. The MG probably has something to do with that, but otherwise it may be a rather subjective matter. There are likely to be functional considerations that would apply mainly to the eschatological regime, which would be very difficult for us to fathom.

If one were going to err with this crucial number, would one aim high or low? Would there be anything like right to life considerations? To what degree might we be willing to compromise on quality here in deference to quality there? We should suppose that there are many conflicting demands and constraints to be placed on this master quantity. The AIDS epidemic ought to tell us something about this issue, or at least about its complexity. That epidemic argues to the point that God is motivated by considerations other than political correctness concerning the meaning of human life. Does this imply a devaluation of life, human or otherwise? I hardly think so. It rather implies a cosmic perspective, which is not likely to correspond with our more parochial views.

[2/2]

Presently I am reading [Apology for the proof of the Riemann hypothesis](#) by Louis de Branges de Bourcia (6/10/2004), a paper which I found through the archives of [Science Daily](#), a source I commend to you. The proof is supposed to be contained in the companion paper: [Riemann zeta functions](#), but I have not found any discussion as to the merits of this 'proof', beyond the skepticism generated by his initial claim. [2/3 - [Here](#) is a prior critical comment on Louis' method of proof. Louis fails to mention this critique in his recent publications. See also [here](#). Refer to an [earlier](#) page concerning the possible significance of the RH.]

[2/3]

With regard to the network of being, there cannot be a major divide between the mundane and supra-mundane. There can be no unobserved phenomena. But what does that mean? There also can be no isolated observations. Our eidetic memories must be eternally stored, and not just passively. They must be coherently incorporated into the cosmic self or zodiac or whatever. That is the whole point of the network. Our notion of private experience is something oxymoronic.

Undoubtedly our personal memories contain much overlapping and redundant material, so that what is eternal is not just the sum of mundane experience. It is, at once, both more and less than that. It may be more like the interference pattern from all the individual experiences. As with a hologram, the individual experiences can be reconstructed from the whole pattern. We might then suppose that some lives are virtually redundant. I can only imagine that such a view implies a limitation of our mundane perspective.

These considerations must also speak to the source and being of atoms. There surely is a redundancy in our materialist perspective of them. We appeal to the higher powers to minimize that redundancy. There is finally one world and one self. The self is grounded in the world, and the world in the self. It is all in service to the Dialectic, [MDX/Z](#).

I can observe a unique pattern of cracks in the pavement. Must this pattern be registered for all eternity? What is the source of the pattern? Would it not be simplest just to blame it on the atoms. Can the atoms not just keep track of their own processes? All they have to do is act naturally. But things get more complicated when we introduce the quantum. Then we have a non-local accounting system to attend to. The non-locality includes the effects of countless virtual gravitons from the most distant galaxies. Can we not just make approximations? We can, but the whole point of materialism is that atoms don't

approximate. With them, reality is all or nothing.

With immaterialism, I am an observer in a functional loop of interacting processes, all of which have a timeless aspect. The combinatorics will have unique instances. I have a memory of that pattern which seems to be eidetic, but if I were to attempt to reproduce it, I doubt that it would be accurate. Or I could have taken a picture of the pattern and posted it to this website.

I am observing aging and an increasing entropy from the telic origin of the road as it reverts back to a chaotic state. This is another form of metabolism. But then suppose we are talking about the crack in the Liberty bell. The crack itself becomes the icon. It loses any semblance of being a generic property.

Processes that do not contribute to the coherence do not get recorded in the cosmic or *akashic* memory. The road will continue to crack and break up until it is repaved. That process has no reason to violate the PSR. Non-violation of the PSR is simply one aspect of the Telos. The anti-teleology of deconstruction is an essential part of a metabolic system. Still the road has to decide when and where to crack, without direct input from individual atoms. This is not a problem if the anti-telos is implicit in the telos. My own aging is equally essential to the larger scheme. A related issue is that of fire that was discussed on the previous page on 11/30/04 &f.

[1/4]

Progress here continues. It is a question of tying up the loose ends, and tightening up the arguments. It will be necessary to indicate how this progress may be continued in a systemic fashion, without the prospect of encountering insurmountable obstacles.

When one line of thought is temporarily exhausted, I pick up what seems to be the next loosest end and pursue that. What comes to mind now is photosynthesis. This phenomenon may be treated under several rubrics, e.g. cycles, metabolism, heliotropism, symmetry and atomism. Permit me to start over in attempting to locate the foundational issue. I will take a tack that may, in part, go back to the previous incarnation of this website.

A likely point of departure is [Ilya Prigogine](#), but keep in mind some [skepticism](#). He speaks of irreversible processes and dissipative structures far from equilibrium. This is what metabolism is about. What then is the role of energy conservation and dissipation?

But let us take a step back and have a look at metabolism. It is about the metamorphosis of matter and energy. This is just where immaterialism is likely to encounter its most serious challenge. Metabolism provides the basis of the interactions that make up ecosystems. Its processes determine the rules of the 'game' of life.

Why rules? Rules provide for coherence. The interactions become intelligible. Cycles can be maintained. Over on the other side, it is supposed that rules are less prevalent and rigid. They are more likely to be merely conventional. Coherence comes about more by consensus. There are fewer independent actors.

Down here we creatures are self-reproducing. Our interactions tend not to be morally constrained. Other constraints are required that will be conducive to cooperative behavior.

Given the natural symmetries of space and time, energy will be a conserved quantity that is a measure of matter in motion. There will then be ergonomics. There will be sources and sinks of energy. As in any economic system, sources tend to be monopolized to the extent possible. One way to restrain monopolistic behavior is to arrange for a remote source of energy. The sun fits that role quite nicely, thank you. Many ecological niches are made available for heliotropes, herbivores and carnivores. The

possibility of visual optics creates more opportunities. Empty space becomes the ultimate sink for the solar energy.

The point here is to provide a rationale for the given phenomenology. The next step is to minimize our reliance on the physics. I would just as soon have photosynthesis without the photons, as we have striven for matter without atoms. The atoms are there, but only in a virtual and logical sense.

I am partial to the logic of photons, but reluctant to commit to the mechanics of it, and thus become mired in dualism or materialism. The idea with atoms is to have atomic phenomenology available as needed.

It is not immediately apparent how we can maintain the rules without the mechanics. I appeal to logic, math, PSR, cycles, memory, habits, socialization, teleology, etc.

[2/5]

It might seem that the objective particularity of atoms and photons would be essential to the conservation of matter and energy. The classical theory of electromagnetic fields, however, does not require photons in order to conserve energy. Photons were invented only in order to account for the phenomenology of 'black-body' radiation. But what then of chemistry? How can we ensure the conservation of matter undergoing chemical transformations, without resorting to the objectivity of atoms? I appeal mainly to the metabolic cycles. The chemicals are recycled indefinitely without sources or sinks. The overall conservation need only be appropriate to the phenomenological situation, keeping in mind the PSR. Matter and its elemental constituents will not appear or disappear without sufficient reason. Atoms are the phenomenal tokens of the necessary logic of metabolism. Metabolism rests on the phenomenal continuity of its cycles. It is discontinuity that demands special circumstances and explanations.

Back to photosynthesis. Most plants are able to grow and reproduce by transforming solar energy into chemical processes. If the sunlight is removed, their metabolism will be interrupted, and they will eventually die. The same will occur if certain chemicals are depleted. Consider water. Cacti will hoard what little water they can get. That water is conserved with great biological assiduity. Otherwise we rely on a relatively constant sea level to provide our phenomenal determination of conservation.

Animals require food, air and water. A few minutes without oxygen and it is all over for us. Why does breathing have to be such a big deal for us? Why such a stringent chemical dependency? It is just an intrinsic part of metabolism. Oxidation is our source of energy, but oxygen is highly toxic to cells. Carbon is the primary food for plants. The habitat of plants would be greatly restricted if carbon, water (and sunlight) were not widely dispersible and available. Respiration and atmospheric is the simple solution to these metabolic constraints. Life is the phenomenal conservator of these materials: no conservation, no phenomena.

Instead of sunlight, we might imagine manna falling from heaven. Would not the resulting ecosystem be radically impoverished? I should think that this design would be a non-starter, but don't let me discourage anyone from ruminating on this possibility.

We often consider the constraints of metabolism to be a great hindrance. One of the big attractions of heaven has been the lack of such constraints, with death being high on that list. The science of ecology and the anthropic principle have given us a much greater appreciation for the many hidden virtues of metabolic systems, and impressed upon us the notion of [*Rare Earth*](#). Now our biggest concern might well be that Rare Earth is going to be a hard act to follow. How rare will heaven be? What will be the systematics that will keep heaven running on an even keel? Eternity is a long time for contending with a design failure. Once you get past the golden gates and the seventy-two virgins, the literature on this subject is very short on specifics. Perhaps the Creator put all her energy into Creation. Heaven might be an afterthought. I spend a lot of time touting relationalism, but I hardly have a clue on the relation

between heaven and earth. Am I in a state of avoidance?

My point on these many pages is that the cosmos can be self-organizing, and that mind is a more logical basis for that organization than is matter. Given a minimal starter system, on the order of the JPC, the remaining rules of Creation will naturally fall into place more on the basis of (teleo-) logic than mechanics. Mind provides an excellent feedback system for the maintenance of ecologic and metabolic order, better than atoms ever could, even as in the dreams of the materialists.

But so what, you are quick to ask. So, mind over matter. Yes, and then what? Then everything. There is something decidedly unnatural about the human mind. The same may be true for the minds of the other creatures, but we are not in as good a position to pass judgment. The upshot with humans is that we are increasingly, and mainly by choice, dependent upon unnatural environments. Most of us spend our time in places from which 'nature' is barely accessible. When we do venture into the wilderness, we are very well equipped. Very few of us aspire to the special skills of a [John Muir](#). We humans are *homo faber*, the great fabricators. We are also the great imaginers. Put together these two primary traits, and see how unnatural it would be for us not to aspire to heaven. Heaven is the Telos of mind and spirit over matter. The natural goal of immaterialism is that telos. John Muir speaks of the eternal beauty of a nature undisturbed by *homo faber*. Yes, it will be a hard act to follow. Imagine a wilderness without mosquitoes.

Are we then the primary link between heaven and earth? We bring with us a pot-load of unrealized ideas. They should keep us occupied for the first few days of eternity. Let me hasten to add that eternity is meant to be a qualitative state rather than a quantitative one. If I had to choose one descriptor it would be *gemeinschaft* or community. One might think of something tribal or clannish, but both of these have metabolic foundations. Perhaps the closest historical model would be the communalism of the early christian church, but one in which the lion lies down with the lamb. The anti-metabolic aspect of that picture points to our challenge.

Here is a caveat concerning that model. It was a decidedly eschatological community. Its coherence was based on a set of shared expectations and aspirations concerning the eschaton. It was forward leaning. How might this translate into a post-eschaton aeon?

[2/7]

I'm wondering whether in the best possible world, this website would be blocked from searches. Within the last month or two, all but one page, the one titled 'Crisis', have been removed from the Google data base. Every page has been removed from the MSN data base. Alta Vista seems to have been unaffected, but how many people do we know who still use that search engine? Am I supposed to imagine that this is all for the best, or am I being goaded into intervention? How long do I wait before calling **Ron** on this? [not long at all.] I cannot imagine that any self-respecting intelligence organization would not retain a preemptive ability to arbitrarily block certain types of sensitive information. Now, I am not claiming that as the reason in this case, but I would be very naive not to wonder about it. In any case, that same department would surely know how to remedy this little problem. Back to our little stairway to heaven. Who ever may have been assigned to monitor these scribblings, please take note! I have been told that there are folks who do pay attention, believe it or not.

OK, I have spoken with another individual about this problem. Here is an innocent explanation, which once pertained to the organization for which she works: the Google web crawler happens to hit your server when it is down, maybe if that is only for a few minutes, then the site (server?) is dropped. She said that this happened to them, and it happened with more than one search engine at the same time. I am having some problem with this explanation. Comcast is one of the biggest servers in the world, people would immediately start screaming from all over, the oversight would be easily corrected within hours. Am I to believe that Google and Microsoft are using the same crawler? That would be a virtual collusion.

So let me try another search on the Comcast site. I try 'site:home.comcast.net money' and get 16,000 hits. Well, does that shoot down that theory, or does the (universal?) crawler look for different websites on the same server at different times? I have gone ahead and resubmitted my URL to Google. It may take them 6-8 weeks before they can schedule another crawl. In the meantime, am I not to be vouchsafed a modicum of [paranoia](#)?

[2/8]

Growing and building things is not much of a problem for the immaterialist. There is plenty of direct and indirect teleology at work. It's when things fall apart that there may be more difficulty. To some degree the [thanatos](#) (anti-telos) is built into the telos, but in general this latter stage seems much more arbitrary and mechanistic. Is the mechanistic devil in the details of the thanatos? I would much rather take on the burden of explaining incoherence than having to explain coherence. I would much rather have an immaterial cosmology based on the telos, than a material one based on thanatos.

The materialist would have us suppose that the entropic 'heat death' is the most natural state of affairs. It is the final equilibrium for any closed system. Life is an embarrassment to the materialist. Death is an embarrassment to the immaterialist. That is one reason for heaven. If this is not the heart of the matter, then I don't know what is. Death is supposed to be the transition from a state of low probability to a state of higher probability.

I want to fall back on the PSR, but I'm not seeing how to do that. It needs to be expanded. If I drop a glass on the floor, the PSR tells me that it will break, but does not provide any details. In principle, materialism could provide an analysis of the breakage, but that is seldom realized. Destruction is mainly a random process. That randomness is supposed to be traceable back to its basis in atomic chaos. We are not afforded that fallback.

Even within physics, however, there is a problem of providing a fundamental explanation for irreversible processes or for the directionality of time. Irreversibility is strictly a macroscopic phenomenon. No microscopic explanation exists. Once again we see the 'benefit of the doubt' being afforded to materialism, but not to immaterialism. It is partly my job to turn that table, and provide a more level playing field, at least for anyone who is seeking the truth of the matter.

Our best explanation for irreversibility may simply be that it is an essential part of any metabolic process, now with the sense of metabolism extended beyond the merely organic realm to include cyclical processes in general. That is our extension to the PSR. This puts us ahead of the physicists in terms of providing a fundamental explanation for thanatos.

This high level explanation still leaves me feeling uneasy about those cracks in the pavement. It is probably these gut feelings, more than any intellectual problem, that stand between us and immaterialism, and it is those feelings that are the most difficult to address.

Water pipes break. They do so where the pipe is the weakest and the stress is the greatest. Wherein resides that particular information, and how is it applied to the phenomenon? Here we seem to be talking about cause and effect. Once again we are dealing with a macroscopic concept which has no place in the terminology of modern physics. The concept of cause and effect is certainly amenable to the PSR. Causes and effects never ceased, they just went over to immaterialism.

The breakage must reside in the concept of the pipe and its support structure. These items are 'designed' and prepared to meet certain limiting criteria. If the design limits are exceeded, the pipe will fail. This is true for both organic and inorganic systems. Who watches the limits? No phenomenon is real unless observed. But what counts as an observation? It need not be direct, and there's the rub. Reality is a

network of phenomena and observations, while not taking this distinction too seriously.

Are we dealing simply with planned obsolescence? That is a thought that could use some analysis, but hold on to it for now.

[2/9]

Part of the telos of paving is just the prevention of cracking. The design of the materials and structures keeps that in mind. Indeed, this is where a notion of planned obsolescence arises. As we study the biology of ageing, we see evidence of similar 'planning' or programming in organisms.

OK, we know its going to crack and we'll have a pretty good idea of when, but not where. That will depend on any structural faults and on the history of insults. An analysis of the pavement would indicate stresses and strains that portend fractures. This is all part of materials science. We are still dealing with a generalized teleology. With proper design, as in safety glass, the fractures will be jagged, and in as random a manner as possible. The pavement acts also as a primitive recording device, in that it retains a partial record of the incidents that impact it. It is not designed specifically to do this, but it comes as no surprise. The fracture patterns, when they finally do appear, will have no further intrinsic meaning. They will not be memorable, unless there are additional circumstances as with the Liberty bell or the 'Abraham Lincoln' french fry. Once the random pattern appears, the PSR tells us that it will tend to retain its shape while the process of ageing continues. The only surprise would be if the cracks did not appear.

We are delving here in to the realm of noise, while the PSR is concerned mainly with signal. When the noise takes over from the signal, as it does in ageing processes, we may then usefully employ the mathematics of fractals. This is the science of 'fractures'. It will provide for us a range of examples of fractures that we are likely to encounter in varying circumstances.

So here we have a nearly complete science of materials, without resorting to materialism. The test will be to see if this line of reasoning will suffice to ameliorate my uneasiness when I next go jogging on the 'payment'. I'll be sure to report back here.

Noise happens, but we want to make sure that it can live comfortably alongside the PSR and the Telos. How does noise fit into the big picture? Noise is logically integral to metabolism. Metabolism relies on fluidics, and that circumstance brings Brownian motion to the fore. Those motions are quintessentially fractal. The diminutive size of the atoms speeds up that thermal motion and leads to an efficient metabolic transport of molecules.

The cell serves as a microcosm for the combinatoric processes occurring on much larger scales. Many social and economic phenomena have the appearance of stochasticity. Stochastic interactions are the primary function of our three-dimensional world.

Then there is synchronicity and serendipity. One function of the stochasticity is to conceal the synchronicity. Why conceal? This is partly how we are able to maintain our exaggerated estimations of our free will. This is how the vital hidden hand is able to remain hidden on all phenomenological scales. The vital and divine forces are able to operate effectively below the noise level. The stochastic dice are loaded. Subtle are the ways of God. The noise is what gives us and God room to maneuver. The noise acts almost as a lubricant for (the reconstruction of) the signal. The stochasticity delivers to us the pieces of the puzzle which we reconstruct to form the Telos, which then becomes our own. The virtual Telos is thus realized.

Without its fractal patterns, nature would not be natural. These fractal patterns are very easy to program into virtually any system. What we see phenomenally are seldom the pure fractals, but fractals that have been modified or constrained by their interactions with other processes.

[2/11]

How does matter maintain its identity without atomic objectivity? Water vapor mixes in with the rest of the air, but at the condensation point the water is able to reaggregate itself. How do we explain this without appealing to individual molecular identities?

If matter were, in general, not conserved, life would certainly not be possible. It would not be possible to observe such an unruly world. Atomicity bears directly on this issue. The problem is highlighted by the quantum fluctuations. All of physics would collapse if such were the case. This is somewhat like asking why the prime numbers are conserved. Otherwise there would be a collapse of logic and math. It is just the relationality and rationality of being which holds this 'physical' world together.

[2/12]

Numericity and atomicity are of the same ilk. That's my story, and I'm sticking to it. I don't think this is the first time I've made this observation (see [above](#), at least); however, I do note that 'numericity' is new to my spell checker. This may be the crux of my story. We'll have to look into it.

Atoms are physical; numbers are abstract, or so we are told. This dichotomy has been greatly exaggerated in the course of our sojourn into materialism. The early Greeks certainly did not adhere to this dichotomy. It is just this artificial dichotomy that leaves us so puzzled by the 'unreasonable effectiveness of mathematics'. Why have we become so resistant to seeing this linkage? It is the supposed dualism of mind and matter, the very foundation of modernity, that leaves us so susceptible to every possible incoherence. And why have we fallen, so unwittingly, into the incoherence trap? Has science been the cause or the effect? Or did it have something to do with monotheism?

Why is it that we have come to regard God as an artisan rather than an artist? Monotheism has come to be antagonistic to monism, which has become the province of pantheism. This is not the first time I have raised this issue. Why are we so intent upon separating ourselves from God? Is this not the basis of all duality?

Without atoms, there could be no numbers. Without numbers, there could be no atoms. Does this imply that neither exist in heaven? Perhaps. Is this the heart of the matter?

How did we come to suppose that there could be a Creator without a Creation? Is not creatorhood an essential attribute of God? In the [MDZ](#) scheme, I have set M&D above Z, and the Zodiac is a far cry from being monotheistic. X is the basis of my claim to monotheism. I hold onto a Quaternity. Otherwise there is a slide into pantheism.

The greatest duality in the BPW scheme appears to be that between Earth and Heaven. To get into heaven, we have to forget the multiplication table. There may be more to this than meets the eye. Down here it's atomicity, up there it's organicity. Atoms, get 'em while they last! What then is the analog of metabolism?

It is something like D & Z and the ouroboric/psychic circuit. That is from whence we came and whither we shall go. We will have progressed from tail to head, from tribal to communal.

It is noteworthy the extent to which abstractions hold sway in this supposedly 'physical' realm. We may suppose that they will be less prevalent elsewhere. Our adherence to duality is a measure of our ignorance of metaphysics. It is part of the separation mandated by Creation itself. The duality is temporary and epistemic, rather than ontic.

I suggest the *Deus faber* came from *Homo faber*, which in turn came from the industrial revolution, or culminated therein. That economic reality, along with monotheism, was the main source of the dualistic impulse of modernism. It is only with postmodernism that we begin to overcome that dualistic worldview.

[2/13]

A question to consider: why is the complicated end of math, e.g. the MG, connected to the simple end of matter, i.e. the 'elementary' particles? Is there something ouroboric about this? Does this imply that simple math attaches to the complicated matter? In a sense, it does. Counting can be a very sophisticated feat. Something that animals decidedly do not engage in, nor would gods without access to atomic brains. Only the most complicated material structures can support simple numericity. Is there something passing odd in these juxtapositions of the simple and complex?

[2/14]

There seems to be something oddly ouroboric about these juxtapositions, but I'm having difficulty in providing any further specification of it. It is not making sense. The ouroboros does not make a whole lot of sense. It pushes rationality to the limit, something that is bound to happen when rationality attempts to chase its own tail.

It requires a great deal of abstraction to specify a simple logic. The simplest logic rests on the most complex of grammatical constructions. The very process of abstraction remains shrouded in mystery. OK, here is a possible analogy: mating act vs. mating ritual. Having the former without the latter is considered the most serious violation of the social order. This analogy might bring us back to the provenance of the Zodiac. There are involved here the profound issues of identity, along with the problem of the microcosm and of part vs. whole.

There is the simplicity of Fermat's last theorem vs. the complexity of its proof. It is in the self that the simple and complex are united to an unprecedented degree. This unification is the basis of all coherence, even of all being, with only the potency of being in the Matrix that is left unaccounted.

These juxtapositions are reminiscent of the self that is at the heart of the matter. Each of the other juxtapositions is a reflection of the self. If we understand one, we understand all. That would be something, indeed. The best understood conjunction is that of the FLT and its proof. First we might wonder if the proof is essential to the FLT. It might have been unprovable, and so could have been treated as an independent axiom, like the continuum hypothesis, which becomes a mere appendage to the mathematical corpus. This may well be the fate of the Riemann hypothesis, although the smart money says it won't be. This is certainly not how we envision the role of the cosmic self.

What is the 'proof' of the self? Well, the proof is in the pudding. The proof of anything is in the coherence that it brings to the world. The FLT, CH and RH combine to amplify the coherence of mathematics. The self is a concept of proven social utility. So too was the concept of the tribe, in its time, but has that construct not outlived its usefulness?

Creator and creation is another juxtaposition of this type. It is generally supposed that downward causation also flows from the simple to the complex, as teleology is translated into functionality. And then came love. What sort of juxtaposition have we there? It is a vital and creative force. All this seems far removed from the FLT: $a^n + b^n \neq c^n$ for $n > 2$. Evidently the FLT serves as an organizing principle. It is also telling us that sporadicity is a rare feature. The MG and its finite family may be the only examples. The powered triple has either infinitely many solutions or none. Having a finite number

would violate some version of the PSR. That the proof is so convoluted is pointing to the profundity of sporadicity. The BPW is sporadic. It is the organicity of the number system that ensures this. And there is a trinitarian component to this organicity as witnessed in the power of the elliptic functions. Between the quadratic and the cubic lies all of creation.

Then there is the self-referential quality of the construction used by Godel in his incompleteness theorem. I doubt that the meaning of the construction could be recognized by any mechanistic system: it does not compute. This construction has become a mainstay of logic. Embedded in math is a rudimentary concept of self.

There cannot be identity without identity, and there cannot be identity without a finite quantum basis with built-in space-time symmetries. Observation and self-reference are intimately involved, as we have seen. The numericity of identity will not be supported without sufficient metabolic complexity. The ouroboric circuit is closed with complexity of the MG matching the metabolic complexity. What qualifies this as the optimal degree of complexity remains undetermined. God's self-referential identity depends on this outworking or outsourcing, if you will.

[2/15]

The juxtaposition of the simple and complex may be a manifestation of the microcosmic construction of the world. Even the most simple items, e.g. numbers and particles, must reflect the complexity of the world. This is the basis of relational being.

The FLT may be interpreted as a statement of the fractal dimensionality of the world. This is a bit like [Bekenstein's](#) holographic bound for entropy, which also gives space a fractal dimension. Fractality does epitomize the juxtaposition of the simple and complex. Recall that the [Mandelbrot](#) set is generated by $z' = z^2 + C$. The notion of the microcosm is holographic in spirit. This is also the statement that the world is a projective construct. The particles generate the MG, and the MG projects the particles. The holograph provides a bootstrap. I'm not sure how the observer fits in.

The Creatures have to hold up their end of the Dialectic. Then how does the dialectic enter into the other juxtapositions? Can anyone see a dialectic component of the Mandelbrot? There is at least something very compelling about the Mandelbrot. There is an aesthetic component to it which resists mathematical analysis. Fractals have been very effective in lending a natural quality to virtual realities.

[2/16]

There is something organic about the Mandelbrot. There is a peculiar aesthetic unity to the beast. It seems to possess a kind of ecological or functional coherence, while every piece of it retains a unique identity. At the same time, each piece contains a microcosmic recapitulation of the whole. The natural and unnatural, the simple and complex reside together in a perfect harmony. Then there is the [mystery](#). From whence did this beast come? What is its provenance? But once we finally see it, we begin to recognize it everywhere. I claim that the mystery reigns. There is more than pantheism in the Mandelbrot. There is also coherence. Coherent pantheism = theism. The Mandelbrot is one very high resolution snapshot of God, caught in the act of creation. It is a vector to the higher intelligence. It is a cairn on the path of transcendence. Materialists claim our world is flat in some mechanistic sense, but with the Mandelbrot, we come to the end of mechanism and keep on sailing. Imagine finding this gem in the midst of a computer. Never discount the divine ubiquity.

But how is the Mandelbrot something other than merely self-generated (*sua sponte*! [Fenn](#))? How does it connect? How do we defend monotheism in light of the Mb? The Mb is born of God, as are we. Ergo,

we do not need to be baptized. Suggesting otherwise is the sin of the Christians. Has Jesus not saved us? I say that Jesus is the lynchpin of our salvational/eschatological economy. He does his job, we do ours. You may take that for what it is worth.

How then does God manage to intervene in the Mb generating formula: $z' = z^2 + C$? How does God manage to intervene in any conception? It is coherent vitalism. It is the dialectic in action. As I pointed out on the Mb page, using the term 'generator' is a misnomer. It is more like an aperture that is allowing the vital coherence to shine through. One could argue about whether there is a finite or infinite amount of information contained in the Mb, but no doubt it is vastly greater than the information in the 'generator'. What then are we to surmise concerning the provenance of that information? Perhaps I have misspoken. Could not the origin have been the Matrix? With minimal coherence in the Mb, only a minimal participation of God is required for the Mb. The MG is another matter. The anthropic principle requires more coherence on the part of the MG. Perhaps the generator is to the Mb as God is to the world. God places the optimal constraints on the natural effusions of the Matricial potency. One of God's tools in this process is the MG. We creatures are the other 'tool' of Creation. We are simply the co-Creators.

[2/17]

[Beatrix Murrell](#):

Benoit **Mandelbrot**, one of the world's mathematical giants on fractals, said that "fractal shapes of great complexity can be obtained merely by repeating a simple geometric transformation, and small changes in parameters of that transformation provokes global changes." In essence--through a predictable, orderly process the "simple iteration appears to liberate the complexity hidden within it, thus giving access to creative potential."

Thus, in that misnomer called chaos theory, mathematicians and physicists have discovered an *underlying order, a kind of memory operating in non-linear, evolving systems. Fractal geometry illustrates that shapes have self-similarity at descending scales. In other words, the form, the *information,* is enfolded--already present in the depths of the cosmos. So this is reminiscent of the **Implicate Order**. Iteration liberates the complexity hidden within it. It is not dissimilar to Bohm's law of holonomy: a "movement in which new wholes are emerging."

Ostensibly, our brains also provide an aperture into that 'implicate order', referred to here as the Matrix. This may be particularly the case if one is under the influence of an hallucinogen.

[2/18]

Speaking of apertures, there was a time when I subscribed to a 'quantum aperture'. This was back in the early days of my metaphysical sojourn, 1975-'84, when I initially adopted a Cartesian/quantum dualism of mind and matter. Lately, the idea of a quantum aperture has gone mainstream under the rubric of the [quantum mind](#) (19,800 hits) (and follow this link to other references to '[quantum mind](#)' herein). On this view, instead of Descartes' suggested pineal gland, it is the non-local strangeness of the quantum realm that provides a connecting link between our minds and bodies. Now that I have adopted the much greater coherence of monistic immaterialism, I see the quantum as just another symptom of immaterialism, rather than having any direct functional role. It is now ours and God's creative love and rationality which is the aperture between the Matrix and the rest of Creation. Under the influence of drugs, or in some other altered state, we individually confront an unfiltered Matrix.

Where does this place us with regard to the Mandelbrot? There is still the question of how there could be an external influence upon the seemingly closed system described by the Mb generator.

[2/19]

The Mandelbrot lies on the tenuous boundary between structure and chaos. This is the same borderline inhabited by living systems, and so the Mb exhibits its organic quality. Novelty reigns in its interacting patterns as one form mutates into the next. There is much replication, but it is never exact. It is themes and variations. A good symphony or poem has these qualities. One wonders if there is any conceivable pattern that could not be discovered in the MB or one of its cousins. I don't believe that anyone has discovered anything resembling a face. Prove me wrong! Invertebrates are represented almost to the exclusion of us vertebrates.

Here is a worthy attempt at rationalizing the [Mandelbrot](#). Significantly the site is maintained by an extropian, shades of transhumanism. (This is one of the best, aesthetic, [Mb Explorer](#). (This one computes externally, most of the others are applets.) Beware, though, that it rounds off the edges as compared with this [explorer](#), rendering it of dubious analytic value!)

[2/20]

It is noteworthy that there are many claims concerning the [infinite complexity](#) of the Mandelbrot (420 hits), and I see no attempts at refutation, beyond those implied by [Robert Munafo](#) noted above. There is no doubt that there is an (uncountable) infinity of patterns contained in the Mb, none of which is derivable from the others. And what are we to make of this? Here is [Robert Curry's](#) suggestion:

I do not know exactly how to convey the degree to which this entire harangue utterly fails to impress anyone who has ever taken time to explore a few portions of the Mandelbrot set, which is a mathematical model of infinite complexity derived from a simple (one might say "mindless") recursive process.

Mathematical proof is less disputable and far more reliable than the ravings of any creationist lunatic: complexity can and does derive from simplicity, just as simplicity can and does arise from complexity.

The issue is one of self-organization or autopoiesis vs. externality. There seems to be no way for there to be non-physical or non-mathematical influence upon objects of biological or mathematical provenance. The mere existence of the mind, however, ought to cause us to think twice about this issue.

[2/21]

Here is an excellent [Mandelbrot](#) show and tell. Be sure to see this analytic ([lemniscate](#)) approach to the Mb. The point is that ultimately the Mb, for all its depth of structure, is neither analyzable nor computable. Are we left to contemplate our navels? There is no mechanism to point to an explanation. There was no forewarning when we fell into this monster. There was this much warning: [Gaston Julia](#). (More [fractal art](#).) Here is an [applet](#) showing the iteration process for the Mb. A more erudite collection of pages may be found by searching on [Fatou & Julia & theorem](#) (4,300 hits). [THE MANDELBROT MONK](#) is a must see:

While Udo himself is little-known, one of his works is far more familiar. This 13th century German monk was the author of a poem called *Fortuna Imperatrix Mundi* (*Luck, Empress of the World*) in the collection of mediaeval underground verses now known as the *Carmina Burana*.

[...] In *Salus*, Udo describes how he used these numbers: "Each person's soul undergoes trials through each of the threescore years and ten of allotted life, [encompassing?] its own nature and diminished or elevated in stature by others [it] encounters, wavering between good and evil until [it is] either cast into

outer darkness or drawn forever to God."

When Schipke saw the translation, at once he saw it for what it was: an allegorical description of the iterative process for calculating the Mandelbrot. In mathematical terms, Udo's system was to start with a complex number z , then iterate it up to 70 times by the rule $z \rightarrow z^2 + c$, until z either diverged or was caught in an orbit. [*4]

Below the description was drawn the first crude plot of the Mandelbrot, which Udo called the "Divinitas" ("Godhead"). He set it out in a 120x120 frame he termed a "columbarium" (i.e. a dovecote, which has a similar grid of niches) and records that it took him nine years to calculate, even with the newly imported technique of 'algorithm', calculation with Arabic numerals rather than abacus.

"It tends to be taken for granted," Schipke says, "That the Mandelbrot is too calculation-intensive to be done without computers. What we have to remember is the sheer devotion of the monastic life. This was a labour of faith, and Udo was prepared to work for years. Some slowly-converging pixels must have taken weeks."

This anecdote ought to give us pause. [2-25: Yes, indeed! Although the story is still being [carried](#) by ABC News, it is [apparently](#) too good to be true.]

[2/22]

Here is a [further iteration](#) of the lemniscate approach to the Mb, taking N to 25. (Here is another [iteration scheme](#). On this one you can set the iterations from 5 to >500K.) Is this the closest we can get to an analytic version of the Mb? How much does it give away? To what degree is the Mb an artifact? How do nature's versions of it differ from the computer's in terms of the generators? Robert Munafo provides a [synopsis](#) of the computing algorithms. (Yet another [viewer](#), about the best general viewer.)

(Pardon me while I note an area w/o structure: -0.7528656865, -(+?)0.0418538316i from this last viewer. The size is 10^{-8} .) Usually it is possible to recognize even a minimal pattern. This seems to be a dead zone between patterns. There should have been a four-fold pattern with the usual minibot, but it was split in three parts. It took me about an hour to relocate this section. It's just on the other side of the lake, not quite one width east of the upside-down minibot. The bulb on the right points to it. There are at least two similar areas just to the north and east. Each non-pattern has a minibot near its center of gravity, and there is some repetition at smaller scales. Across each of the eight lakes surrounding the central minibot are similar areas of confusion. This area is repeated, along with the central minibot, on repeating unit of this large spiral deep in [seahorse valley](#). On a sister spiral, several clicks above, there are similar areas surrounding the central minibots.

[2/23]

What seems to be happening in these ill formed areas is that there is a prominent minibot nearby which is robbing these neighboring sites, where you would usually expect to find a minibot, of sufficient coherence or symmetry to produce one. Instead the area is split into three dissimilar areas, and there is a much smaller minibot in the central region. This three-fold non-pattern is repeated as you go to smaller scales.

The canonical pattern may be seen near the minibots out in front of the Mandelbrot along the negative real axis. Each one is found at an apparent cross-roads with a fourfold symmetry. It is not a real cross-road because the filaments cannot intersect, they can only branch out. This has to do with the fact that the Mandelbrot set is simply connected. This is related to the fact that we are dealing with a flow system in 'complex dynamics' (q.v.). Your arteries never intersect, they only branch out. If you look along the 'crossing' filaments, you will see 'S' curves, with two main branches on each side. This is what gives rise

to the threefold symmetry observed above. There is a confusion between the three and four-fold symmetry. The same confusion is seen in the threefold Mandelbrot, the cardioid portion having two halves, at the intersection of the real and imaginary axes. What I am coming to here is a rationalization for the Mb. Its generator, $z' = z^2 + C$ has a quasi-fourfold symmetry. The generator would like to twist the Cartesian axes into an 'S' curve, but that is not allowed, and the result is the Mandelbrot. The cardioid is performing the function of the heart in attaching the arterial to the veinal system. Also, recall what I said above about the ritualization of the intersection of the sexes. All of this is being recapitulated *chez* minibot. A critic would say that I am using the Mandelbrot as a Rorschach. Perhaps it is a cosmic or zodiacal Rorschach.

It is said that the Mb is a connected set. That is true, but only in a technical sense. A primary connecting 'link' is a non-link. It is the ubiquitous infinite inward double spiral. The two arms of the spiral never meet, yet there is no topological way to separate them. It then becomes a mathematical convention to suppose that the two parallel arms meet at infinity, like the two parallel lines. It would be more intuitive to say that the Mb is inseparable. The suggestion is that the Mb has a microcosmic aspect.

Here is a ubiquitous feature of the minibots. As you step down in scale each succeeding generation tends to dissolve into own lace work of veils. There is an apparent trend toward self-censorship of the successive generations. I was able only to go out to the fourth or fifth generation before reaching the 10^{14} th magnification limit of [Neal Ziring's](#) explorer. To see this effect, simply pick up the filamentary thread in any spiral or lattice structure. Because of the simple connectedness, there will be bottlenecks/bridges through which the single filament must pass. It is near the center of such structures that you will find a minibot. But then within each bottleneck, by self-similarity, there will be several smaller bottlenecks/bridges of perhaps one-tenth of the width; however, the central minibot in these substructures will be orders of magnitude smaller relative to that bottleneck. Is there any larger significance to this fact? Can it be rationalized?

[2/24]

There are significant trends to observe on venturing into seahorse and elephant valleys. The seahorse valley/canyon walls are studded with minibots. With each minibot is associated an increasingly dominant triplet structure consisting of two distinct objects. One of these is a spiral and the other is a circular lattice also decreasing inward, let's call it a 'millipede'. On one side of the canyon there is a millipede sandwiched between two spirals, with the reverse arrangement on the other side. In elephant valley there is, on both the floor and ceiling, a looser triplet structure consisting of a relatively large minibot with a spiral on one side and a millipede on the other.

With the disappearing minibots noted yesterday, they seem to be attempting to turn themselves into millipede, without a central structure. This trend is seen continuing down to a magnitude of 10^{25} in the series of snapshots taken by [Bengt Månsson](#). Please forgive me if I now give in to the temptation to try my hand at [deep zooming](#). The main issue is the degree to which novelty appears at the deeper levels. Or will it just be variations on the established themes. I suspect the latter.

Using [Fractint](#), the next smaller generation of minibots that I could locate was at a magnification of 10^{23} employing a 28 decimal floating point precision. This was the first minibot I could find in the vicinity of its much larger parent. This tend to confirm my suspicion about the disappearing minibot. Fractint runs mainly in DOS mode, with marginal graphics, but it can calculate up a storm. The final image took about half an hour to generate at 1.5 gig.

[2/25]

Yesterday I gave up on the DOS running of Fractint, and have since been using an evaluation copy of [Ultra Fractal](#), which is easily worth its sixty bucks. What a relief! So now I'm eyeball to eyeball with the Mandelbrot.

(Udo of Aachen may be a fiction, but I suspect the hoax will outlive its author. Do I then have to give credit to [Ray Girvan](#)?)

The Rorschach test continues. I am not the only one to be fascinated by the Mb. What is its psychological charm? Clearly it is something more than a mathematical tool. There is a game of hide and seek. The minibots are quite clever at hiding. In the process of looking for them in all the strangest places, it is hard not to get the impression that there is some kind of intelligence behind the game.

[2/26]

Yesterday my nephew, Toby, discovered a whole new class of bots. His first one was at the center of what looked like a spiral from a distance, but at high magnification the spiral split apart, with a bot between its two branches. For some spirals, then, the two arms are connected well short of infinity. Now we have more places to look. I'm calling these bots the 'missing links'. This class of bots evolves from a linear triplet of minispiral-bot-minispiral that gets sucked into a master spiral, and in that process, the two companions effectively rotate around the bot, swallowing it, while they in their turn are swallowed by the main spiral. Now I am using 'mini-spiral' to designate both the canonical spirals and its cousins that I have variously called amoebas or gopher holes.

What is there to be learned? Toby's discovery bolsters the cosmic interpretation of the Mandelbrot. The minibots' effectively being swallowed by the Mandelbrot is very much in keeping with our old acquaintance, the Ouroboros. The Mb is being both head and tail, Alpha and Omega. In the process, it is turning itself inside-out.

In parallel with the above action there is the more visible bot 'parade' out of elephant gulch and back into seahorse canyon, with considerable mutation and evolution along the way.

[3/1]

Here are some good Mandelbrot pedagogy sites: Mb vs. Julia Set [applet](#) using iterations, an [iteration](#) of the Mb boundary (the previous applet can also do iterations), [Julia star trip](#), [Math World](#), [Wikipedia](#). Be sure to see the [Julia star trip](#) on the [Ibiblio](#) site.

[3/3]

There is astonishing detail in the Mb. It is coordinated as far as the eye can see. From whence does the order come? Is the PSR at work? Can we speak of causation? Is it upward or downwardly acting? Is it just one darned iteration after another? What might the appearance of this order tell us about the world, keeping in mind the difficulties we have in explaining the spontaneous emergence of order.

Outside the Mb the Julia set is disconnected. It is at the points of disconnection of the JS where one finds the minibots in the Mb. As one progresses toward greater detail, the minibots grow more hair, while become smaller relative to their corona of filaments. The central ordering feature of the Mb is to be found in those minibot halos. The halos have either circular or polygonal shapes in powers of two, alternating without any obvious sequence. How these larger structures are formed out of the microscopic filaments is

the issue here.

Relative to the filaments, there are sources and sinks. If the minibots are the sources, then the spirals are the sinks. The filaments retain the option of spontaneously ending in thin air, this being their most common fate. Thus are the coiffures maintained. The spirals, however, will consume whatever comes their way, including even the most smartly tonsured minibots. Any measurable segment of filament includes an infinity of minibots.

A very significant source of order is the singly connected attribute of the Mb. There are no holes. The filaments can only branch outward, or die-off, but they can never reconnect with anything. This restriction ensures considerable regimentation. In other words, there are no puddles in Mandelbrot land. All the convoluted 'streams' must flow into the ocean.

The proof of single-connectedness relies on the over-arching principles of complex variables. Almost all mathematical proofs are deductive in nature. The four-color map theorem was a notable exception in that it relied on a computer to perform an exhaustive tabulation of all possible configurations. Such a negative requirement is a long way from providing a positive account of the complexity. In exploring the Mb, one finds clusters of minibots of similar size. There is no reason to limit the complexity of these clusters as one progresses to greater detail. The computing power limits Ultra Fractal to a magnification of about 10^{33} on present-day pc's. The dimension of the visible universe is about 10^{28} cm. If the Mb were the universe, our viewer could discern the period at the end of this sentence.

[3/4]

My interest in the Mb lies in its microcosmic aspect. Mb is the Creator. The minibots are the creatures, and the external portion represents the rest of the world. This demonstrates how the creatures act as the co-creators. What is outside represents what is inside. The world is elicited from the cooperative effluence of the creatures. It demonstrates how an overarching coordination could be obtained in a relatively democratic fashion. Is this the BPW? Well, it is the mother of all fractals. There is also the ouroboric quality, with the spirals serving as the tail of the cosmic serpent.

(Permit me to speculate that the [M-bulbs](#) represent the Zodiac, in which case the Cardioid is the Matrix, and the primary bulb is the X-factor. Each bulb is a perfect circle [12/18/06 - no, only the primary one], and this shows the place of Pi in [AZO/X/QRP](#). The Mandelbrot is then the archetype of archetypes. The unit circle and triune syzygy, $e^{i\pi} = -1$ (and [here](#) &ff), is implicit in the complex construction. It appears that the fictional 'Udo of Aachen' may have the last laugh.)

In an immaterial, holographic world, every part necessarily represents the whole. The generator, $z' = z^2 + C$, creates a blank space or vacuum that can only be filled by the cosmos, in accord with the PSR. This should be no more controversial than pointing out that every number is a microcosm of mathematics, with Pi holding the place of pride. This, in turn, is a recapitulation of [Quine's holism](#). We stir in the anthropic [Monster Group](#) (MG), and we have the primordial Matrix soup. We are left to wonder how the multiplication of two numbers can have cosmic significance. Is this not the same problem of how the mind can emerge from atoms swerving in the dark? Where is the hidden hand? We might even settle for a 'God of the Gaps' if there were any gaps. What could have fewer gaps than the multiplication table?

How then do we explain $e^{i\pi} = -1$? If we didn't know any better, we would never guess that the multiplication table could generate the Mb or the MG. Then again, the *Pieta* was carved out of a block of marble. The microcosm of numbers, syzygys and all, is laid bare by an indefatigable process of chipping away at the $|z| < 2$ block. What is left is the coherence of the syzygous numbers. These are the numbers that have stable orbits under the fundamental operation. So does the solar system carve itself out of the primordial dust cloud.

[3/5]

Mathematics, generally, is a testimonial to the complexity hidden in the multiplication table. As to the provenance of this complexity, we have no explanation. Mathematicians merely catalog it. Srinivasa had an unsurpassed numerical intuition, but asking him about the source of that intuition would be like asking a fish about the source of water. The Mandelbrot is one more demonstration of that hidden complexity.

Should we suppose that the source of mathematical beauty differs from that of truth and beauty generally? Is it an accident of nature? Did it evolve? Do we ascribe to a correspondence theory of truth or a coherence theory? The coherence of the Mb is evidence against the former. The anthropic principle and the role of mathematics in it, should already have settled this argument.

The skeptic would argue that it is we who have carved coherence out of the numbers, but this explanation falls far short of explaining the Mb or the MG and mathematical physics generally. In retrospect, we need not have been surprised by the Mb. We can see now that it fits the cosmic pattern. And is this not the heart of the matter? Platonism is inescapable. Theism is then just a fact of the living, shining Presence of the Forms. When it comes to incarnation there are only three historically viable choices. The first two are the Buddha and Mohammed, and neither of them claimed to be that. This is not rocket science or brain surgery. This is waking up and smelling the coffee.

How can even the simplest of integers not be integral to the cosmic coherence? Integers can only reflect the integrity of the world. This is not a play on words, it is integral to the cosmic play. Think about it, my friends. Think about one and zero and $e^{i\pi} = -1$. Is this the AZO/X/QRP, or what? Does the Mb not incarnate the AZO/X/QRP? Does anything else come so close? How could the cosmic coherence fail to fill that void?

We don't need to invoke a *deus ex machina*, or a God of the gaps to explain the Mb. It is rather the hidden hand of mathematical coherence. It is the same as the order of the seemingly random prime numbers that is exposed by the Riemann hypothesis. It is the hidden intricacy of Fermat's last theorem, exposed in Wiles' proof based on elliptic analysis. All of this intricacy had to be incarnated for the world to witness. That is an essential aspect of the observer principle. And what better place? What better *raison* for our computer technology? It is all wrapped up in the strangely familiar beauty of the Mandelbrot: Exhibit B!

That's my story, and I'm sticking to it. Is there a better explanation? The only alternative is for us to poke out our eyes like Oedipus. But we, unlike Oedipus, are able to know that we are forgiven. It goes with the territory of truth and beauty.

How does the observer principle work with the Mandelbrot? This seems now to be the biggest issue. Is there any way the observancy can be incarnated within the Mb? I would guess that it has something to do with the single connectedness of the mini-Bs. I suppose, also, that the notion of the microcosm is tied up with observancy. This, in turn, has to do with direct perception. We can perceive only that which is of us. We are God perceiving herself. And there is only one God, as there is only one Mandelbrot, and it is the best of all possible such.

The optimality is reflected in the simplicity of the generator. What would be the optimal such? Would it be simple or complicated? It would be the simplest non-linear generator, which is what we have. And there is nothing that is not contained herein. Anything more complicated would be our arbitrary imposition on God's, and on our own, freedom.

[3/7]

My experience with the MG and Mb leave me suspecting that there is something basic about numbers that we are missing. This something has to do with the problem of perception and anthropics. Counting is deeply imbedded in our observational and linguistic capacity. This capacity may most simply be described as labeling. Labeling brings to mind indirect perception and representationalism. This may be the point at which our epistemology has gone astray. The map becomes confused with the territory.

With mathematical physics and computers, we take numbers to be the the substratum of reality, with language and mind being epiphenomenal. The Platonic forms become divorced from our lived world, and the Cartesian dualism of matter and mind, quantity and quality raises its specter.

Yes, I am attempting to regress from quantity to quality, and, of course, this will take me uncomfortably close to the hazards of numerology. We have been there before. We are acquainted with numerical coincidences and sacred geometry. This is why the archetype of Pi figures prominently in the AZO/X/QRP(i). I am suggesting that the relational qualities of Pi are ontologically prior to its quantity. The irony is that we depend on the mechanism of the computer to demonstrate the organicity of the Mandelbrot.

Pi has an ouroboric quality, especially in the context of $e^{i\pi}$. The ouroboros has a lot to do with observancy. This quality of the ouroboros and the Mb is captured in the observance of the reflections of multiple mirrors and in paintings of paintings. It has to do with Godelian self-reference. We should not have been surprised by the Godelian construction. Is there evidence for any of this that can be found in the multiplication table? How is it imported into the Mb? How is the spark of life imported into the chaos of the primordial soup? An immaterialist does not have to play that game, but we do have to play the Mandelbrot game. How can the multiplication table be viewed as a microcosm, and not as a pure artifact? Perhaps we should be looking at the dialectic embedded in the imaginary $i = \sqrt{-1}$. Perhaps there is more to the iota than mere quantity. Can the iota sustain such an ontological burden? Perhaps only in its natural (sic) triune context. The Mandelbrot is the *imago dei*, especially in the triune form of the latter. Does this quasi explanation of the Mb smack of circularity? Well, welcome to the real ouroboric world! Mathematicians, for all their jadedness, have not quite outgrown the magic of the iota. And where would any of us be without Iona? They just neglect to stop and smell the flowers. The iota merely adumbrates the (observancy?) magic inherent in numbers. It is the salt in our primordial soup.

The iota is the magic mirror that we can hold up to the numbers to bring out their self-referential quality. The Godelian self-referential construct has a similar effect, but it is much more cumbersome. It should be no surprise that the iota is an essential ingredient for quantum physics, where it appears necessarily in the all-important commutation relations between complementary variables like position and momentum.

Our basic ontological dynamic is MDX(/Z), which is reminiscent of $e^{i\pi}$, also of the mother, spirit and son, if you are a reformed traditionalist. The iota here is something of the shape-shifting Trickster. It is the cosmic wild card. It mediates between mother and son, and this role captures its Dialectic quality. It is the basic mechanism of the bootstrap. The Zodiac, as a psychic circuit, bootstraps itself out of the Matrix. The X, with the help of the Trickster, sacrifices itself to break the circuit to form Creation between the Alpha and Omega. Thus the cardiacaal cleavage in the Matrix, with the Zodiacal procession emanating from and returning to the nearly cleaved Matrix. Pardon me while I free-associate on the *Imago Dei*.

[3/8]

The dialectic is our biggest mystery. It is the primal generator of form. If the iota can shed any light on it, then more power to the iota. The $\sqrt{-1}$ is not just imaginary, it is impossible. Yet, it is easily the most

powerful agent in mathematics. The iota provides an extra dimension to the real numbers, making visible their hidden structures, as in the Riemann Hypothesis relative to the distribution of the primes. The iota elicits hidden structure. The iota is to the reals as the dialectic is to the matrix. Is it fair to say that the functionality of the iota is dependent on the participation of an observer? It is an observational tool or operator or artifact, not unlike the projection operator in quantum physics.

Recall that the dialectic juxtaposes a thesis with its antithesis to produce a higher order synthesis. It is all about transcending the box. That juxtaposition implies an external agent. Pi bootstraps itself out of 'e' using the iota. The Mb recapitulates this process, somehow. $e^{i\pi}$ is the generator of the numerals, somewhat as the primary bulb in the Mb seems to generate the lesser ones. The same bulb also seems to generate the prime minibot on the negative real axial filament. That creature is the Adam Kadmon of Creation. Like the Mb, it is apparently hermaphroditic, being in the *Imago Dei*. The cleaving of the cardioid/female component of the Mb was aboriginal, as in the zim-zum. (BTW, the Mb should have reminded me of the polyandrous cosmic model that appeared on my first website. The Mb is more monotheistic.)

Another point needing clarification is the relation between the logos and the dia-logos. The latter seems to be a conflation of D & X. In $e^{i\pi}$, it is the iota that bends the inflating 'e' into something cyclical. The Pi is the measure of those cycles. It projects the cyclical onto the lineal. It is the iota that may be responsible for the cleaving of the cardioid and the emergence of the first bulb; however, that point is censored, even mathematically. It is lost in the cusp singularity at $(1/4, 0i)$. In general, the formula for a cardioid is $r = 1 - \cos(\theta)$, deriving directly from $e^{i\pi}$. The Mb cardioid is exact, as is the circularity of the primary bulb. The other bulbs depart slightly from circularity, with only a fractal [pattern](#) for those departures. And, yes, we are talking about the heart of the matter.

[3/10]

In the MG and the Mb, numbers seem play two very different roles: ontological and epistemological, respectively. Proper names speak to individuality. Nouns and numbers speak to commonality and identity. Individuation precedes categorization. Before that there is a shining present, and perhaps a stream of consciousness. Enumeration is founded upon the experience of space and time. Then come the Cartesian coordinates and the physics that flows therefrom. That physics turns out to be derivable mainly from symmetry, which is based on identity. The Mb is the most complex object in mathematics. The Monster Group is the most complex of all mathematical groups. We have complexity with a vengeance. Do we not see that complexity reflected in the world? The BPW puts a premium on that complexity. The implication is that what we have is the optimal complexity. Anything more or less would be suboptimal. Is it possible to have too much of a good thing? Yes, but not in the BPW.

On the other hand, I supposed the Mb to be infinitely complex. I was about to say that there could be no non-cognizable complexity. Do we now have to posit an infinitely intelligent deity? Is there no limit to the discoverable coherence in the Mb, using now a more specific definition of complexity? In this case, either the Mb cannot be a microcosm, or the world is infinitely complex. The Mb is part of the world, so its level of complexity becomes that of the world. We then need to consider the ontology of that complexity. Is it actual or merely potential? How might it figure in the eschatology. Might not this conundrum force us to separate ontology and epistemology in the usual Platonic fashion? That would push the theism back toward deism. Can we posit an objectivity for the Mb that is less than that of the MG? Can the role of one be less fundamental than the other?

Consider that there are vastly more genetic combinations than there will exist humans. Does this unrealized human potential create an ontological problem? We don't normally associate any object with that unrealized genetic pool. Perhaps the Mb has less claim to objectivity than the MG. There are also many poems that will never be written. We don't usually suppose that there is a Platonic heaven for

unwritten poems. That are mathematical hypotheses that will never be decided. Riemann's could be one of them. Are there hypotheses that will not be hypothesized? That need not be an idle question. Even in the BPW, the greatest symphony might never be composed or performed.

Does the Mb fail the microcosmic test? Or is its incompleteness essential to it and us? Will there be no undiscovered dinosaur fossils? Is that any more or less certain than the undiscovered minibot? The Mb forces us to wrestle with the immaterialist ontology. Is there life on other planets, other suns? Are there other planets? What actually constitutes discovery and existence? The existence of the Mb can only be relative, like all else. The reality of the Mb and its parts will finally be optimal. What coheres, lasts. The minibots are like everything else, you find them when you need them. If your presidential reprieve is lost in the mail, so be it. The celestial host are there when we need them, and they need not be from another planet.

Is the Mb infinitely complex? Potentially, yes, but actually it is optimally complex, the same as the cosmos. That optimality will be determined largely by us.

[3/11]

I was attempting to enlist the Mb into the BPW cause, but then it threatened to take over the cosmology by dint of its potentially infinite complexity. We had to beat it back with the stick of relativity. Where does that leave us? I have made a case for the microcosmic status of the Mandelbrot set, but the case remains open. The larger problem is the role of anthropics in mathematics. Such a role runs against our deeply ingrained Platonic view of numbers. It may be the additional role of the Mb to help disabuse us of that illusion. This may be why mathematicians are reluctant to fully engage this beast. It is just too obviously organic/holistic. On the other hand, mathematical Platonism runs up against the unreasonable effectiveness of mathematics in physics. This is especially true in regard to the MG and its kin. I have previously remarked that the more we discover about math, the more we have to appreciate its interconnectedness. This fact ought not to keep surprising us, but no one is keeping score. Platonists tread softly around the problem of relativity. We physicists had to learn these things the hard way. Mathematicians want to be the last of the Mohicans. They fail to appreciate that the BPW will be the eschatological hurrah of Ionia. Plato was just an Ionian backslider. He tried to put his cart of absolutism before the Ionian donkey. Ionian truth did not need a Platonic pedestal. Socrates knew that truth would have to be hashed out in the Agora. Cosmology would ultimately be consensual. The Mandelbrot smacks of the Agora. It is the Agora of the minibots -- too much democracy for the Philosopher King. The organicism is *sua sponte*. The Pythagorean harmony of numbers was subverted into a Platonic mausoleum. Plato had certainty. It will take a hundred Godels and a hundred Mandelbrots to wean us away from the comfortable lap of certainty. That, or perhaps one more Srinivasa Ramanujan.

Can we extend the minibots' democracy to their numerical cousins? Let the hidden hand have its way. How do we go about this? Will the minibots divulge their secret? What have they in common with numbers? The mini-b's wear their auras on their sleeves. The numerals are much more discrete: 'there ain't no moss on us'. The moss is hidden in the elliptics. There lie the filaments. The elliptic is the cardioid. The numerals are the nearly circular bulbs. We just can't quite see the deviations that portend the greater harmony. Harmony is seen in the syzygys. It is seen in the RH. [Recall](#) (and [here](#)) the nearly integral values of the elliptically generated Ramanujan constants of the form $e^{\pi\sqrt{n}}$. We suppose mathematical complexity is derived from simplicity, but that may not be the case. This is the analytic illusion. By the same token, we used to think that the perceived world was generated from sense data. [Quine](#) began the deconstruction of this illusion. Much deconstruction still lies ahead. Numbers, like atoms, must be emergent entities. The same goes for logic. We haven't quite understood the measurement problem for numbers. Physicists speculate about pre-geometry. We need to speculate about the pre-numerical. Pre-geometry is usually thought to be a logical network of discrete entities. This may be too analytical. According to [Leopold Kronecker](#) (1823-91), 'God created the integers, all else is the work of

man.' We have to turn that around. Let us recall [Watkins](#), in this regard.

[3/12]

What does the Mandelbrot teach us of holism? It tells us about the microcosmic and relational nature of existence. This is the logical foundation of holism. In contrast to holism, there is atomism. Holism comes naturally; it is grounded in the shining present. Atomism we have to strive for. It is the end product of our analytic skills. It is based on the making of distinctions.

The ultimate distinction is between nothing and everything, between the void and the plenum. Buddhism is the religion of non-distinction. Buddhists identify the void with the plenum. It is nirvana. All problems are solved, all distinctions are dissolved. One could do a lot worse. Could we possibly do any better? The answer is a definite 'maybe'.

I am a bigger fan of the plenum than of the void. I say, 'Give the plenum a chance.' If there is going to be a plenum, it ought to be the best possible one, and so we have the Best Possible World (BPW). Why settle for less?

I make the case for the BPW. How do we get from atoms to the plenum? We consider distinction. The primal distinction is between nothing and everything. In numerical terms, this is the distinction between the null and the infinite. They are reciprocals: $0 = 1/\text{infinity}$. $\text{Infinity} = 1/0$. That is the mathematical proof of Buddhism. To arrive at the BPW we have to look at this distinction more carefully. We can go step by step in a temporal sequence. The logical starting point is unity. From the previous construction we see that unity is the half way point or the mediator between the null and the infinite. Unity is the numerical emblem of monotheism and the prophetic tradition. It describes the ultimate state of grace or apokatastasis/restitution wherein creator and creation are reunified; the theistic nirvana.

There is a dualism implicit in the unity. Under the operation of multiplication, unity is the dividing line between the null and the infinite. If we start with, say 1.000...0001, repeated multiplication will eventually take that number to infinity, whereas its infinitely close neighbor, 0.999...999 will be sucked into the void. The numerical unit becomes the mark of distinction between the plenum and the void. In the next breath we will be speaking of heaven and hell, but let us not go there.

We continue with the mathematical foray. It is the operation of multiplication, $x' = x*x$, that leaves us with three distinct elements: 0, 1 and infinity. Yes, this could be one version of the Trinity. The Trinity is the simplest way to defeat the dualism inherent in monotheism. Recall from high school algebra the parabolic function $y = x*x$ or x^2 . Its general form is $y = a*x^2 + b*x + c$. What can we do with that? About the only thing we can do is to simplify it by finding its two roots: $y = (x - r_1)*(x - r_2)$. Recall then that $r_{1/2} = (-b \pm \sqrt{b^2 - 4*a*c})/2*a$. This notorious 'quadratic formula' confronts us at once with three earthshaking 'realities': negative, irrational and imaginary numbers. The capitalist system is based on our acquiescence to the notion of $(+/-)\$$. Greek rationalism was wrecked upon the irrationality of $\sqrt{-2}$. Quantum uncertainty is founded on the fact that the 'commutator' of [position, momentum] = $\sqrt{-1}*(\text{Planck's Constant})$, which simply tells us that position and momentum cannot be determined simultaneously.

But this is not all. A fourth shaking of the earth comes from the quadratic. We generalize it to $z' = z^2 + C$, where $z = x + i*y$, with $i = \sqrt{-1}$, is a 'complex' number made up of real and imaginary parts. The single unit no longer serves as the boundary, under multiplication, between the finite and the infinite. The complex values of C lying on the new boundary in the complex plane define the Mandelbrot set, the most complicated object in mathematics.

[3/13]

I have not yet run across an explanation of the most basic fact about the Mb: how it manages to replicate itself. [Mandelbrot & self-similarity](#) (22,600 hits). Self-similarity is a defining property of fractals, but this hardly constitutes an explanation for the case of the Mb. In this case we are dealing with quasi-self-similarity. I note that the minibots or 'mu-atoms' occur at places where the filaments appear to intersect orthogonally, as with the real and imaginary axes intersecting the main body. They never occur at the branch points of the filaments where there exists only an infinite regression. One can get a feel for this property by seeing how the Julia set becomes disconnected near the apparent junctions.

The Mandelbrot Revisited

[Please note that this discussion is a continuation from the [previous](#) page, and from an [earlier](#) page.]

The most obvious thing about the Mb is that it must be symmetric about the real axis. The next most obvious thing is that it is very asymmetric about the imaginary axis. It is intuitively obvious that there must be a filamentary process far enough out along the negative real axis, complemented by a channel on the positive side. One could then do worse than attempt to sketch the first few lemniscates.

One could note the connection between the Mandelbrot and Julia sets, and sketch a few of the Julia sets along the real axis. This would underscore the asymmetry along that axis. The general periodicity of the iterations could also be inferred with a minimum of calculation. (See [here](#) and [here](#).)

At some point our intuition about fractals would kick in. We could easily speculate that the fractality of the main body would involve replications of the bulb processes, and that each bulb, by simplicity, would be as close to circular as possible. We could next infer that there would be points of discontinuity, such as where bulb touches bulb or filament touches bulb. The only way to handle such points would be to resort to infinite regress.

Next would come the problem of connectedness. It would not be difficult to discover that there are just two basic kinds of Julia sets: connected and disconnected. We might then wonder if the Mb could be composed of both kinds of sets. We could also speculate as to how the Julia set undergoes its transition between these two very distinct phases, i.e. from solid to gas. The only possible places where this could occur would be at branching/connecting points, and so there would have to be infinitely many such points, or, more technically, the branching points would have to be 'dense' in the set.

The next inference is that the Mb would be on the borderline between being connected and disconnected. It is only regressively connected, i.e. you cannot define a disconnecting set, but that it is not 'pathwise' connected. This latter point has not been proven, but I suggest that it may readily be inferred by inspection and intuition.

If I'm correct in this line of speculation, the Mb presents us with a mathematical reality, most of whose truths are open to intuition, but not to analysis. Is this not a fundamental demonstration of Godel's theorem? I believe that this is a fundamental truth about our world in general. This is the whole point of emergent phenomena, downward causation, microcosms and Leibniz' Principle of Sufficient Reason. What analysis must leave incomplete, only God can complete. Each idea is very adequately represented here in what is at once both the most simply generated and the most complex acting of non-linear systems. How could the Mandelbrot be other than the *Imago Dei*, as posited by our beloved but fictional monk, Udo of Aachen? Here I gladly plant the flag of theism. Would anyone care to mount a challenge? If we can hold this beachhead on the motherland of analysis, to where can it retreat? Is this not the heart of materialism? Is it not the heart/cardioid of the matter?

At every juncture of reason we have only two choices: fall into an infinite regress of analysis, or look for the microcosmic mu-atom that is the Alpha and Omega of reason. We have dissolved the [Mandelbrot Mystery](#). We either analyze it to our death, or we crank it up a few notches, recognizing that there is ultimately only one Mystery.

What can we do for an encore? This could well mark the end of our sojourn into matter. Materialism goes out with hardly a whimper. It just gives up the ghost in its machine.

It would be nice to get some idea of how the Mb mug shot was taken. Alright, here we go.

The Matrix abhors a vacuum. The Matrix is strongly biased in favor of the plenum over the void. Given downward causation, the highest possible cause has priority. The vacuum in question here is the failure of analysis, even in principle, to grapple with the overwhelming complexity. That leaves an opening for emergence. Yes, this is an emergence in the gap of analysis.

Given the fact that analysis fails almost everywhere in nature, should not the *Imago Dei* be plastered almost everywhere? You know what they say about faces in public places? My answer is that it is and isn't. For instance, you, me and the dung beetle definitely partake of the *Imago*. On the other hand, seldom do we see recognizable BVM's in the clouds. Clouds are functional fractals. Their job is mainly to rain on the plain. Taking on the shape of a the *Pieta* would be far beyond their job description, and would very likely interfere therewith. Here we use the PSR for a null result. When it comes to clouds and the formation of raindrops, atomism does very well, thank you. This same functional reasoning covers virtually all of the fractals to be found in nature.

Why then is not the Mandelbrot just some version of [Cantorian Dust](#)? That is what the Julia set becomes outside of the Mb. The beauty of the Mb derives in no small measure from its borderline status between the connected and disconnected forms of fractality. This makes possible an extreme richness of texture. Upon this richness we need to impose the universal condition of quasi-self-similarity. We have your basic cardioid with its attendant infinite set of circles, each with a filamentary process making up its beaded necklace of mu-atoms. This is the least constrained of all fractal systems. It becomes the mother of all fractals. Its infinite collection of Julia sets is just a drop in that bucket.

The Mb is to mathematical fractals what the Matrix is to natural fractals. You, me and the dung beetle are the mu-atom [pearls](#) on Indra's necklace.

What stands out above all is the coherence of the Mb. It is a territorially based coherence, rather like an ecosystem. There are spheres of influence. Each mu-atom and each individual type of spiral has its sphere of influence. There is nothing that falls outside. Most every locus comes under the influence of multiple spheres. Every location may be uniquely identified. How are the potential conflicts and confusions mediated? Can we hope to reveal the hidden hand? Aren't there way too many cooks here? Is there a Darwinian survival of the fittest to fall back upon?

I submit that the Mandelbrot is forcing us to reexamine our conception of mathematical reality, just as the mind is forcing us to reexamine our conception of material reality. The results are bound to be related. In each case we must resurrect the notion of Pythagorean harmony, in partial contravention of the Platonic forms. To borrow political labels, the Pythagoreans are metaphysical populists, while the Platonists are the corresponding royalists. I come down on the side of hidden hand populism, with just a whiff of messianism.

In deference to the mind, I have railed against the idea of physical atomism. In deference to the Mandelbrot (Mb) and the Monster Group (MG), I rail against [logical atomism](#). Logical atomism cannot hope to explain these objects, any more than physical atoms can explain the mind.

Is it not true, however, that there exists an analytic proof for the existence of the MG, laid out in 15,000 pages of equations? We shall see.

The Mb may be likened to a language. No word of the language may be understood outside the context of the whole language, and no language may be understood outside of how it functions in the whole world. Logic and numbers can only be understood inside a linguistic context. The Mb may also be likened to a grammar. Despite everything we are taught in school, there are no rules of grammar. There are, for the most part, only uncodifiable guidelines. There are also uncodifiable universal generalizations which allow

every child potentially to become a fluent and intelligible speaker of every language, able to form intelligible constructions which she has never even heard before. I am sure to be guilty of more than a few such constructions, intelligible or not, on these pages. Intelligibility is not and cannot be idiosyncratic. *Pace* [Wittgenstein](#), there is no such beast as a private language.

How then did language evolve? The same way that the Mb evolved: in short, it didn't. The longer answer is that it evolved in [lemniscate](#) fashion through a process of the gradual refinement of its primal/cosmic core, i.e. the [Dialectic](#).

But wait, there is a perfectly analytic, finitely iterative procedure for separately calculating every point in the Mandelbrot. That is just the problem: how does this object of seemingly coherent beauty emerge from such a random process? Is the Mb a cosmic accident, or does it portend a deeper order? Fractals are supposed to be the exemplifiers of noise, disorder and chaos; and here we have the mother of all fractals, and yet it seems that its attributes are anything but. Is there not some explaining to do?

[3/15]

It is fair to say the Mb is only semi-connected or disconnected. There is no procedure, not even an infinite one, that would connect or disconnect it.

If the Mb were subject to downward determination, then it would be overdetermined, since it is also subject to an analytic determination. This is the same problem we have with mind & brain. At some point, the physics has to be overridden. Or is there a middle ground? There is if the downward factor could be built into the analytic process, as if there were something like the quantum/observer effect.

One problem is our modern proclivity to think of the integer 8 as synonymous with 8.0000.... On the other hand, the computers that carry out the calculations can scarcely attend to questions of ontology. An uncertain computation is not to be tolerated in computer land. There ought to be, however, some Godelian self-reference effect that requires an observer in the loop. Perhaps the Mb/mind is just that. The Mb could be a telos that is operating for the whole number system. In that role it would be complementary to Pi and MG. We have noted that Pi is embedded in the Mb. Is it not possible that the Mb is embedded in Pi? In addition to the canonical value of Pi, there would be an infinite number of small variations on that number occurring throughout the Mb. Could it be that the Mb records the emergence of Pi from within the Matrix. This appears to be the significance of the zodiacal procession of the quasi-circular bulbs leading from and returning to 'elephant gulch' in the cardioid, and culminating in the perfect circle on the negative real axis. The Mb is the primal context of Pi. Pi is its pearl of great price. It seems to be telling us that Pi should be [related](#) (also [here](#) and [here](#)) to Fibonacci's Golden Ratio, phi. This [page](#) describes how the dwell times of points in the cusps are related to pi. A simple explanation is given [here](#), relating the phenomenon to Euler's equation: $e^{i\pi} = -1$. Pi is the escape parameter for the Mb/Matrix.

[3/16]

If this is true about the escape parameter, this does shed a new light on the role of the Pi/X archetype. X leads us out of the Matrix into God's kingdom, which is what we approach now. Then the eschaton involves our return to the Matrix. This is hardly the orthodox view of the salvation economy. Does this then motivate us to reinstate the Millennium? We shall see. It is orthodox to suppose that Jesus was saving us from the world, but this Mb model suggests that he is saving us into the world. He then is our philosopher king. Pi indicates the perfection of the economy. It is a perfection, however, that is necessarily finite in time, being delimited by our eschatological return to the Matrix, cosmic womb or nirvana. That would tend to put our Srini2, Y2C, X2 event/factor more into the logical role of the anti-X within the cosmic dialectic. Or perhaps we should say that X is the anti-Matrix, while Y2C is the

synthesis. That might make more sense. This scenario is closer to Owen Barfield's three stages of [participation](#). It adumbrates the positive side of history, something that distinguishes theism from pantheism, but which the theists are usually quick to downplay.

The bootstrap and dialectic are ideas that we need to be reconsidering at every opportunity. And certainly more must be said about how the Mb comes under a teleological influence. It may go back to numerology, and the peculiar notion of the evolution of numbers. Just about now, the skeptics out there ought to be thinking that the Mb will be my tar baby, but I'm thinking 'briar patch'!

[3/28]

Pi could be the pre-spatial telos of the Mb, which, in turn, is the telos of the number system. However, none of the structure of the Mb is visible on just the real axis. We need to consider the holism of the Mb, and how that holism is reflected in numbers generally. We could look at the Mb as the primal numerical object: a zim-zum, etc.

[3/29]

It would be helpful to explain the branching process for the Mb. To what does it relate?

[3/30]

I may have missed something previously when I reported a dearth of professional interest in the Mb. The question of branching led me to the topic of Hubbard trees which play a significant role in the phenomenology and taxonomy of 'complex dynamics', and from there to 'experimental mathematics' ([here](#) and [here](#)). The Mb is a recurring structure in many types of 'complex' systems. 'Complex' here refers mainly to the presence of iota, but also to the sheer complexity. The Mb is the touchstone for an important and expanding branch of mathematics. No wonder and much wonder.

After Douady and Hubbard, [Robert Devaney](#) appears to be the primo professional focused on the Mandelbrot and its kin. There is some analysis mixed with much phenomenology, and most of the analysis comes directly from D & H. Let us not overlook [John Milnor](#). Then here it is that [Gregory Chaitin](#) makes his argument against Leibniz' PSR:

And here is where the concept of algorithmic information can make its surprising contribution to epistemology, to the philosophical discussion of the origins and limits of knowledge. What if we can find mathematical facts that are true for no reason, where would that leave our philosophy, what would it do to us?

Yes, what indeed?

[3/31]

I'm not sure what to make of these unreasonable or brute facts. How does this relate to the Mandelbrot? How might they be reconciled with holism? Are these atomic facts just swerving in the dark as some suppose of their physical counterparts?

Is this not just additional support for a constructivist view of math and physics? Are we not unnecessarily

falling victim to what Whitehead sees as our proclivity for misplaced concreteness? Are we not being frightened by our own shadow, i.e. by our own abstractions? Does not the Mb demonstrate the taming of randomness? There is ever only a pseudo-randomness, and it is ever only of our own making. The same may be said of the quantum when we factor in the observer principle.

Is not experimental math founded on construction and intuition? Gregory's use of absolutism is an ill-founded justification for construction. Kurt Godel's defeat of Hilbert's absolutist agenda was purely constructive. Now Gregory seems to be returning to absolutism via the back door. Our Platonist/absolutist proclivities die hard. It is our final idolatry.

The Mb exhibits aspects of the halting problem, relating to its bounded and unbounded orbits, given a finite cut-off.

We are still being thrown back on the question of how the vital/bootstrap/dialectic manages to infiltrate the computer logic, if that is what the Mb points to. There is here a stark contrast of mechanism and organicism. Computation cannot be an absolute. But neither are we looking for a god of the gaps. We can only settle for a holistic God. How do computation and mechanism take holism onboard? Where is the leverage?

I can only think that habituation trumps logic and idealization. The vital principle enters the system through this process. The only other consideration is numerology, and this probably amounts to the same thing. It is in the difference between 8 and 8.000.... Are we just talking ordinal vs. cardinal vs. nominal? Pi and the Mb become the *de facto* touchstones of computation. Without their tangibility and specificity, computation is mere abstraction.

The good news is that we evolve. The bad news is that so do numbers. The good news is that Pi and the Mb provide road maps for that mutual evolutionary path. This is how the world hangs together. It can do none other. This is the foundation of the BPW: ergo, the eschatological telos.

Yes, Gregory, Pi and the Mb are brute facts. They are the brute facts of existence and life. Any other facts are figments of our imaginations. We might just as well wonder that they can be computed at all. Small miracles in a bigger miracle, like $e^{i\pi} = -1$. If we can believe that tri-unity, we ought to be able to believe all the rest.

Teleology rules, in the depths of matter, and in the bowels of our machines, simply because it is the logical alpha and omega of all being. That is the most brute of all facts. We had best get used to it. We'll never get over or beyond it. Asking how teleology works is a bit like asking why $1 + 1 = 2$. It is the only way that being can be.

Does this make the job of Y2C any easier? Pi and the Mb can lead us to the water, but they cannot make us drink.

Facts: united they stand, divided they fall.

[4/1]

This is my day: a fool for God!

Looking back at the original [mention](#) of Mandelbrot on these pages, I notice there was a context of [functionalism](#). I take my [functionalism](#) in the spirit of Leibniz' PSR.

Functionalism is just relationalism from a teleological perspective. Things are functional because they are related, and they are related because they are functional. This could be the first law of holism. Numbers,

logic and computation are no exception. Functionality we take to be the epitome of mundane existence, in all its slimy, greasy glory. This seems just the opposite of Plato's supra-mundane habitat of numbers and forms. But in that exclusivity, Plato was abrogating the spirit of the Pythagorean harmony of being. Descartes followed Plato's *felix culpa*, but the mathematical physicists are trying to bring us back to Pythagoras.

Numbers exist to function, thus the UEM, the unreasonable effectiveness of mathematics. Numbers could not exist without the Telos. They cannot and do not exist in the splendid isolation of Plato's heaven.

Being the mother of fractals, the Mb is the logical venue for numbers to most freely display their functional organicity. And do they ever! Bless their little cardioids.

One glance at the Mandelbrot ought to cure the most cold hearted of us of our reductionist, deconstructionist, absolutist proclivities. That it has not yet done so, only indicates that the Mb lacks its proper champion. Can the Y2C/X2-event fail to fill that role? I've been looking high and low. Is there a better candidate for Exhibit A? Should it not suffice? [Mandelbrot & God](#) (36,900 hits). I'm not the only fool out here today! Imagine if we ever got our act together. Let the good times roll!

The Mb, how can it be? Nay! How could it fail to be? We must allow that explanatory burden to be shifted. The organicity of the Mb is the alpha and omega of numericity. We should be teaching our kids to appreciate the Mb before teaching them to add and subtract. What surer way to set our materialism on its head? It is the irreducible building block that has been sorely neglected by modernity. Where are those tie-dyed t-shirts of the '70's?

And how does the seemingly singular, solitary perfection of π/X emerge out of that Pandora's box? Somehow through the operation of the cardioid. What the X-bulb points to is the holistic perfection of the of the whole organic creation, without which, π/X would not exist. All is in harmony. Every hair is numbered. Why are we so slow to grasp this? When we use our analytic skill to calculate π to billions of digits, we are short-circuiting Creation. With the Mb, Creation bites back. Everything in its proper place and time. Our most strenuous efforts to thwart creation only play into its ever loving hands. Won't it be a marvel when we stop beating our heads against all fate? We realize that God's love can know no bounds.

The Mb is a hard act to follow....

Perfection and imperfection are all relative and all in the eye of the beholder. The perfect eye can only see perfection. All our eyes can and will be perfected in the Telos. They are already perfect in their context, it is the context that will shift.

God said to the Numbers, 'Be fruitful and multiply.' And Lo, the Mandelbrot! In point of fact, it was likely the Mb that taught the numbers their multiplication tables. It is the primordial/universal multiplication table.

Foreseeing the Second Coming

The Second Coming must be a touchstone for any spiritually inspired vision of the world and its history. It is unavoidable even for non-Christians.

A spiritual vision of the world must be coherent and comprehensive. It must be a theory of everything. As such, it would be an understatement to say that it would constitute a revelation of biblical proportions, because it would necessarily transcend the Bible and every other previous revelation. It would have to be the seal of the prophets. And even that is not quite enough. The vision would also have to encompass all previous knowledge: spiritual, philosophical and scientific.

Virtually every tradition has its prophets, messiahs and avatars, past, present and future. Every one of them is strongly associated with the revealing of knowledge. I believe that it is not at all unfair or improper to include science among these traditions.

The next issue is whether we might not rather anticipate a partial revelation, something that falls short of a theory of everything. All I can do is give you my thinking on this matter.

It has been a long time since there has been a world-class prophet. There is a threshold that must be passed. I am only suggesting that at this late date we are in a situation of all or nothing, with respect to prophecy. For instance, neither the bible nor the Koran lend themselves to partial revision. Any emendation to those instruments would have to be perceived to be taking place in a apocalyptic or eschatological context. Buddhism and Hinduism are more flexible in this regard since they do not have a tradition of a closed canon.

One might contemplate a vision that would bring the prophetic, theistic tradition around to a more pantheist and mystical viewpoint. This is partly true of the vision being put forward on these pages. I further suggest, however, that there is a reason for the less flexible posture of the prophetic tradition with regard to its various canons. The simple reason is that the prophetic, theistic tradition has always been and is necessarily eschatological. This fact is not so easily rationalized, but it is perfectly evident historically. For there to be a partial vision with a global impact, it would have to successfully deconstruct or radically immanentize or psychologize the eschaton. By doing so, however, the vision either renders itself acosmic, which effectively leaves cosmology in the hands of the scientific materialists. This is exactly what the pantheists have been doing. But this sets us back to the Cartesian and gnostic vision of world divided between spirit and matter. The pantheists' can maintain their monism only by declaring matter to be a negative illusion, i.e. something opposing spirit. The very idea of Creation and Incarnation then become an anathema. At that point, any hope for a dialog with the theists runs aground.

The vision presented here purports to surmount this barrier by taking onboard pantheism's monism, universalism and immaterialism, while, at the same time, discarding the notion of an absolute or omnipotent deity. Does that bring me too far in the direction of pantheism for the theists to be able to follow. I believe not, but that remains, perhaps, the single biggest issue for the BPW vision. Theists fear letting go of their absolutism, because all they can see is a slippery slope into pantheism. Much of the challenge here is to show how that fear can be overcome; that the slope is not as slippery as most people think.

If that challenge can be met, then the BPW vision is on its way to something beyond just biblical proportions. However, its place in the pantheon of prophecy is, I suggest, best seen as being associated with the Second Coming. The next most logical association would be with the advent of the spirit of the truth as briefly described in John 16:12ff. This latter view was my original stance, but I now see that as

being something of a spiritual cop-out!

Of course, it is not terribly unusual for people to have and harbor solitary cosmic visions. I submit, however, that a solitary prophetic vision borders on the oxymoronic. If the BPW vision wishes to avoid being an oxymoron, then it must have legs. In fact, it is my recently raised estimation of the suitability of the Mandelbrot set to serve as one of these 'legs' that brings me around to this recapitulation of the prophetic gambit. Indeed, I presently see the Mb as a necessary and sufficient pedagogical segue from matter to spirit. That puts the Mandelbrot out in front. Next would come the anthropic principle, and then I propose we take a leap to Srinivasa Ramanujan. As if that were not a big enough leap, our next and final touchstone may just be the Incarnation. Permit me now to outline this sequence of pedagogical steps, as a partial test of their suitability.

The Mandelbrot set has been covered extensively on the the last two pages. In the last couple of weeks, my informal demonstration of it to two small groups that had not been previously exposed to it indicate that, when presented in a suitable context, it can be a powerful visual stimulus toward rethinking the nature of mathematics, and, more importantly, about the possibility of emergence and holism in the physical world, from a non-Darwinian perspective.

The next logical step would be to raise the issue of anthropics, which has been frequently mentioned here, and which is extensively and cogently treated in a theistic context on other websites. With some additional work on linking the Mb with anthropics, there could be a significant pedagogical synergy.

If needed, there are plenty of other matters to raise, all which cast doubt on the enterprise of scientific reductionism. These could be readily added to suit the occasion. The primary issue to be raised, in this regard, is, of course, the mind-body problem, but, in the present context, I'm thinking that Srinivasa presents us with an excellent case study to this end. At the same time, Srini maybe our best segue to the ultimate issue of incarnation. I'm thinking very pragmatically here about future 'evangelical' possibilities. I have in mind informal presentations to small lay groups. The aim would be to achieve a maximum impact in a single sitting. That limits us to about two hours, which would only provide about half an hour to each of four major topics.

The point raised by Srinivasa is the issue of genius. It may well be that Srinivasa is the greatest known exemplar of this attribute. When taken in the context of the Mb and anthropics, his genius adds very significantly to the pedagogical synergy. These points have been already been treated here. If there is an intelligence behind anthropics, Srini demonstrates the astonishing degree to which the human psyche can attune itself to that cosmic, mathematical intelligence. This evidence favors theism over pantheism with regard to the cosmic intelligence. This also provides an opportunity to introduce the real possibility of immaterialism. I need to elaborate on this latter point. This will definitely be stretching our thirty minute window. The most difficult segment remains.

Is incarnation really necessary? Yes, and for many reasons. The main point is that all of us are incarnations, and by 'us', I am referring to creatures generally, but mainly to humans. Jesus may simply be seen as the primary exemplar. That there is divinity in all of us is not controversial except for a materialist. That Jesus could have a special and astonishing genius for performing his central role in a salvation economy is made more plausible by the special case of Srinivasa.

Besides the materialists, the main objections to the special divinity of Jesus come from Islam and Buddhism.

Many religionists and non-religionists object to the participation of divinity in what is ultimately such a violent act. Such folk would prefer a more remote, dignified, impassionate deity. How is this not a reversion to human sacrifice? Have we not transcended that need? I believe that this objection has been more than adequately answered by many very articulate theologians. We need only to outline these long standing arguments. The genius of Michelangelo's *Pieta* provides the best single response. I appreciate Mel Gibson's genius, but I give precedence to the greater universality of the *Pieta*.

Islam has a special objection to the issue of idolatry. It is not clear, however, that their objection is not mainly technical, and so is shared in the Protestant convention of the empty cross. I see only a matter of degree. Among Buddhists, only the purist practitioners of Zen Buddhism can object to the nearly universal notion of the Avatar. There are matters of degree here, but not of kind.

Here it is that I put forward the least orthodox aspect of my theology. This is simply a reworking of the Trinity: mother, son, spirit. In this context the son is the creative logos, and this brings us back to the Mandelbrot. The further point is that the creative logos maximally pours itself into the Incarnation. Thus does the notion of the Death of God, take on a real significance. In the apokatastasis, or universal resurrection, Jesus becomes the first of equals as we all participate in the body of Christ, and we complete our universal participation in the entire Creation, by maximally recreating God, keeping in mind that this temporal process, can occur only in the context of eternity. That sentence was a mouthful! Can we meet the two-hour deadline, without throwing out the *Bambino*?

The situation does not call for perfection. If we can simply enable folks to imagine an idealization of the generic presentation, we can reawaken the possibility and potency of a cosmic Evangel. That potential is our passion, not to coin a phrase. This process will certainly be a collective effort, BUT, if it is ever to take on a global dimension, the notion of a Second Coming is too thoroughly embedded in the prophetic tradition too allow for even the semblance of coyness. Ooops! Speaking of which, I have overlooked the eschaton! The idea of a Y2C/X2-event logically implies the eschaton. It should only take a very few minutes of additional hand-waving to bring the eschaton to the fore. Most of the groundwork will have been laid.

By putting it out in front, a large expository burden is placed on the Mandelbrot. If we put so many eggs in that one basket, we'll have to watch it carefully. Debunkers will likely see it as the weakest link. I can only hope that it will become their tar-baby. Come to think of it, the Mandelbrot looks like nothing if not a tar-baby!

What is left besides some embellishment and the location of a suitable flagpole? I was sufficiently lazy to hope to dispense with the pressing of the flesh, in lieu of pushing a few buttons. Road trip, anyone?

4:42 - Arrivederci, il Papa....

[4/3]

Have four legs, will travel: BPW with the Mandelbrot, Anthropics, Srini and Jesus. This is not the only viable configuration, but we can hope for the best, and know that the best will suffice. We are certainly not here to impose a Second Coming, but, gosh, what better vocation can there be? The view is that the earthly Christ is an office. Is that not the meaning of Anointment? The first was meant to be an easy act to follow. Let's not make it any more difficult on ourselves than necessary. One might then wonder how the returning Christ relates to the risen Christ. The biblical statement of the Second Coming is a coming down from heaven in glory. The popular view is to take that quite literally. That, however, is hardly in keeping with the divine minimalism in all things other than Creation itself. There is still the Prime Directive of non-interference, which, in this case, is minimal interference. God is not here to hit us over the head, no matter how much we might wish to see that bestowed on our brothers and sisters. The Eschaton is about the continuity of Spirit. We can let our ouroboric nature take care of itself. It might also be noted that the Jewish concept of the Messiah was always something much more mundane. Impatience is seldom a virtue.

The Second Coming is a process. But, it is a process that will be given a human face, ultimately because it is our process. It is of the people, by the people and for the people. If you know a better way, now is the time to speak up.

It just occurs to me that we might want to adjust the sequence. What about Mb:Srini::Anthropics:JC/X2? It might flow better. The Srini genius is a logical segue from the Mb to anthropics. That underscores the Pythagorean harmony of Creation, recapitulating the Mb, and the point that the anthro in anthropics is no accident. How could we have learned to count without our fingers?! Yes, this is a definite improvement. It points toward our implicit involvement in the UEM. It is we who are the link between spirit and matter, via the UEM. Therein lies much of our co-creative role. The Mb is mind from number. Srini is number from mind. How does matter come into the picture? We now have Ouroboros, MDX/Z, AZO/X/QRP & Mb:S::An:X. There is some mnemonical/archetypal integration ahead of us.

The two foci of matter in the above are R&J. We might then wonder about the role of elliptics, and, perhaps, dialectics. What is the deep and abiding dialog between matter and spirit? How does matter finally yield to spirit? Everything speaks to this issue, as does the Mb. With the Mb there are the mu-atoms whose proliferation is suggestive. There are the space time symmetries that make matter possible. There is the 2/3/4-fold symmetry of the mu-atoms. There is the ubiquitous paradox of the *iota*. We have a temporary covenant with matter. Matter is a frozen logic. Let us not forget $e^{i\pi}$. Do we need an analog of the big bang? The MG is also present, along with QED. On the other hand, in a truly monistic system, the specificity of matter might emerge gradually, right along with the psyches, memory, space and time. In dealing with the sun, I spoke of heliotropism. Might it have some special association with the matrix. Keep in mind that there is no such thing as bare or unqualified matter. The question in the previous paragraph needs to be reframed. The Mb might say something about the relation between Z and R in terms of their analogs of the bulbs and mu-atoms. Z/R should have something to say about mind/body. In going from Z to the mu-atoms, we go from the plenum to the space of the atoms and egos. That space is rather stringy, we might add. The bulbs on the positive cusp may relate to both Alpha and Omega. The apparent symmetry needs to be broken in the interpretation, with the X-bulb/spear serving as the pivot of the story. One is reminded of *Hamlet's Mill*. What is the meaning of the singularity of the cusp? Is that our big bang?

[4/4]

The Mb is a cosmic Rosetta stone or mathematical fossil that will stimulate us to reconsider our temporal interpretation of the physical fossils, and, hopefully, we will begin to see them in a supra-temporal light. It may also be that the Mb provides and/or indicates a link between mind and matter. It does demonstrate how an external pattern can supervene on an otherwise closed mechanical process. If the Mb cusp is meant to be an analog of the big bang, that would help to provide additional linkage between the physics and the metaphysics, but then we'll need to grasp its metaphysical import.

[4/5]

Please bear with me while I try this experiment in technology: [The Second Coming](#).

This is the bare beginning of a power-point presentation. Forgive me, Lord.

[4/6]

Jack Sarfatti tells me that, with his iMac, he is unable to access p-pt file in its present 'mht' format. We'll need something more compatible. [Here](#) is the 'ppt' version of the above presentation, and here is a [power point viewer](#) from Microsoft. I don't know if this will help for an iMac. I may have to convert this to Adobe 'pdf' format. [Here](#) finally, for now, is the 'rft' version, lacking the ouroboric [graphic](#). When the

presentation is actually presentable, it will be at least several dozen 'slides'.

But there is a larger problem looming, now that I'm confronted with the ouroboros in all its serpentine glory. How am I to reconcile this animistic beast to theism? Funny how I have managed to dodge this bullet up to now. Is it back to the drawing boards? It's time for some heavy-duty rationalization.

I doubt that this beast is avoidable. It is also clearly reminiscent of the Taoist yin-yang symbol. It speaks to the Alpha and Omega, but also seems to be sliding into a cyclical/reincarnational view. The serpent is the symbol of the Devil in the Bible. It is also the symbol of healing as in apokatastasis. I am told by my Sufi guru, Bob Clark, that the primary and unique role that Islam assigns to Jesus is that of world healer.

It is odd then that this primal archetype seems to refer more to Jesus than to the Matrix, particularly in its logos-like pi and circularity, which is where we find X in the Mb. And we are just scraping the surface of the ultimate mystery that must underlie even the most coherent possible system of being. X supersedes Matrix, X emerges from Matrix. This is the profound paradox of eternal origination. There is an ultra dimension 'beyond space and time' (thank you, Jack), that eludes the dimensionality of our more mundane minds. This warns us not to take too literally any particular set of archetypes, leading us only to idolatry. Forewarned is fore-armed. That is the best I can do for now, folks.

[4/7]

I'm still working on *The Second Coming: for all us dummies*: (formats: [PDE](#), [MHT](#), [PPT](#), [RTE](#)). I may be working on this for some time, yet. [\[a\]](#) The most up to date version will usually be the [PDE](#) version.

[4/11]

Memo for a talk to be given by H.:

It has been my privilege to witness first hand the triumph of the human spirit over many very significant challenges and adversities. I see many more challenges ahead and yet I have every reason to maintain my faith in human nature and our continued ability to prevail.

My own participation in the events of history is nearing its conclusion, and so I come before you today in what may be a last role on that stage. Admittedly, this is something of a departure from what you may have come to expect from me, but I do ask you to bear with me nonetheless.

Over many years, I have observed with interest two dimensions of our humanity. When freed from our most immediate needs, again and again through history we turn our attention on the one hand to our objective understanding of the world, and, on the other hand, to our more subjective understanding of our relation to this world. These pursuits are among our highest callings and both have directed our historical progress.

The challenges of poverty and limited resources will continue to mount in the foreseeable future. All of us here have an abiding concern with these challenges. These are our immediate needs. Without wishing to distract you from that urgent task, I urge you not to neglect our responsibility to remain faithful to the higher pursuits I mentioned earlier.

I have noticed a significant dwindling in our expectations concerning fundamental developments in our understanding of ourselves and the world. Could we really be facing diminishing returns in these pursuits? Do I have any reason to counsel you otherwise?

Over the years I have had opportunities to delve into this question.

[4/12]

Memo (2nd draft of the above):

It is not infrequent that people in positions like those I have held are privy to information that we are expected to take to the grave with us. I did not, until very recently, expect to be personally and partially exempted. It is then with some trepidation that I come before you today, near the end of my sojourn here, to impart just a few words to you.

I was made aware some decades ago that there were solid reasons to believe that my adopted country would have a special role to play on the world stage. This was something beyond the very high expectations that so many oppressed peoples have held for my country, from its inception, as a guiding light to freedom.

There are two parts to the freedom equation: freedom from and freedom for. The first part of that equation has always been manifest to those seeking shelter on those shores from tyranny abroad. And so, we have been blessed by an unprecedented spectrum of talent that has found a safe harbor in my country, over the centuries. Yet, it is all too seldom that we have a real opportunity to reflect upon why we may have been called together in this unique fashion.

As all of you know so well, we face unprecedented challenges regarding the environment and our wisest use of every resource. We can expect very significant developments on this score, but there is more.

We know that the very foundation of freedom is the freedom to communicate. It cannot be an accident then that the same country that has served as the primary source of freedom, should also be at the focus of a global communications revolution that continues to expand apace.

If we were then to permit ourselves to speculate, we should wonder that, if there were some higher purpose in play within history, there might not be a significant piece of information to be imparted to the world from those shores.

Or, so I have heard, and so I have come to believe.

Furthermore, along with the freedom to communicate there is a responsibility to use our minds to their best advantage in order to use our freedom most wisely. Certainly we have been the guiding force behind the scientific revolution that continues to shake the world. Perhaps less appreciated in these circles, is the evangelical zeal that has also been empowered in no small part by this new-found freedom and technology. And where does that leave us? What more is there to communicate?

It is with that question that I must leave you today. Be assured, however, that this gathering and this seemingly foreshortened message will not go unnoticed or be forgotten. The members of this forum have some very special responsibilities with regard to all of the above and to that which is here foreshadowed.

God be with you.

[4/13]

Now that things have settled down again, permit me to try to **recap** some recent events, here for the 'public' record. This might help to explain something about the above memo for H. [\[a\]](#)

On my side, there were two precipitating factors: the Mandelbrot, and the usual 'spring is in the air' bit. One more thing was that Sam decided to attempt once again to launch a small, open ended discussion group. First we met with Gus R. to discuss the reopening of his Kennedy/Oswald investigation with the help a German documentary group. Significant new leads had been uncovered into the Cuban intel links between Lee-Harvey and Bobby. There was one high-level agent in particular who had contemporaneous contacts with both up until Dallas. This ought to be sensational, but there has been a lot of water under that bridge.

The three of us met with Dennis R. who recapped for us his investigations into the claims of various polar explorers, and of Ptolemy, and how these efforts put him at odds with significant portions of the academic community. The following week Sam included a producer from WYPR-FM. It was then that I invited myself into a discussion with Dennis concerning the merits of his evident atheism, and the discussion was 'frank'. The subject of the Mb came up, and I did not hide my surprise that mathematician Dennis had not heard of that object. By this time I was already launched into the previous page. This incident helped me to conclude that the Mb might, indeed, help to put this BPW pedagogical project over the top. It is a strong visual aid that is conveniently located at the crux of many of the archetypes. The use to which I could put it would be novel. At our next meeting I tried it out and met with some success. This then got me thinking about using it as part of a power point presentation as noted [above](#). Sensing something of a pedagogical breakthrough, I decided to get back to CF, with whom I had barely spoken since last summer, and he readily agreed to a meeting. In the meantime I was getting a positive response from Jack S. and some of his group, which was unusual.

Then came the meeting with C just this last Sunday. After a quick review of the presentation we talked shop. It seemed that there might be an opportunity to get a message through to H, who could then convey it to a significant group of folks in a few weeks. I was to do this in collaboration with Jack and Gordon, the latter of who was owed a favor by Adnan K, a friend of H. I was not to mention the particulars to Jack. Jack did not seem to get the point, and so I concocted the above memos, that later of which was sent to C, J, G, S & A. It took Jack awhile to suss out the particulars. It turned out that C and G were not on the same wavelength. G thought he was simply requesting a meeting with H. When I went back to C with this confusion, he supported G's version. That left my participation up in the air.

The next topic with C was his changing job status. His career is now at a point where there is very little that can be discussed about it. Needless to say, one might think that, especially now, he would have better things to do than stir up the muck in these waters. I would like to conclude that it was for some higher purpose. Last year at about this time, C & I were getting together again for the first time since just before and after 9/11. Eventually, after a couple of months it became very important for Gordon and me to meet. It turned out that neither of us had the faintest idea of why we were meeting, and it was a real blowout. This agenda-free meeting scenario is not uncommon with C, but that and one other miss-cue, was the end of our communication.

This time around, at least G and I were meeting in the same ballpark, but I was in right field and he was in left. And mercifully, it only took us a couple of days to reach an impasse, rather than a couple of months. Last year there was never even a specific target. This year the target as described to me was emphatic, and definitely over the top, relative to jumpstarting the BPW/EFG business, sufficient to convince me that my work was virtually over. So here we are back at square three. It could be that a plan proceeds, with me now spared the details.

That other miscue might be revealing. It involved finding a job for a mutual acquaintance, B. On Sunday I was given the definite impression that B has had a job all along, and they were having a bit of fun at my expense. End of story? Not when you are dealing with C. The pretense(?) of joblessness had been so elaborate and unremitting, and seemingly almost entirely for my benefit, that I am still left wondering, which is apparently where I am supposed to be. [4/15 - B takes strong exception to C's information concerning a job.]

At this point, I am wondering about a possible encore. This is the first time in our thirteen years that C has taken our little story over the top. Where can the story go next? Are we then to assume that this is the logical end of the story time? Your guess is as good as mine.

And there you have it.

Oh, one last loose string. I am informed by an independent(?) source that Adnan has a personal interest in the paranormal, and has, like Bigelow, been into the funding of it. G has only ever displayed a mercenary interest in the mechanical side of it, even more so than Hal and Jack. Another point is that Jack does seem to be displacing Hal on the political side. Does this mean that Hal is being moved up or out? As to the first point, several parts of the H & G story do not make sense. Assuming that it was not out of whole cloth, I proceeded in the memo on the only version of it that might make sense. (BTW, C's reaction: 'I don't know what this is but it certainly is well done!' Now I ask you, is this our tax dollars at work?! C had better bone up on his signatures intelligence.) But when you compare the stories of G & B, are we not left wondering whether many of these same players are quite aware of the charade of the mechanics, etc., even including Gordon. If so, my hat goes off to them. It would be way beyond my ability. It is on my high school record that I failed at playing a dead person in *Our Town*. Was that part of my *bone fides*?!

So where were we? Something about 'The Way Forward?'

[4/14]

Here we go again!

Memo for a meeting (of ???) to address the future of energy:

There are dire projections concerning our energy future. Demand continues to grow, supplies continue to dwindle, prices continue to rise as a result. There is a growing body of opinion suggesting that within the next very few years, certainly less than ten, the global production of carbon based fuels will reach its peak, and then decline thereafter.

There are alternatives to carbon. These range from wind power to fusion power. We must push ahead with these, much more seriously than we have in the past.

Even under the most optimistic scenarios, however, there will be drastic dislocations to the global economy, starting any day now, as a critical mass of people wake up to our very uncertain energy future.

What we wish to bring to your attention are two related perspectives on this imminent crisis, which, while treated separately in the past, we feel can be combined into an effective strategy for the future.

We are not saying that this scenario is ready for public consumption, but we are suggesting that it now deserves more serious attention from policy level people than it has received so far.

The first part of this bi-perspective is fairly straight forward. It includes the field of free or zero-point energy. It is likely that this source of energy is already being observed in the so-called 'cold-fusion' experiments, which are being aggressively pursued by an international network of professional scientists. Other more radical approaches are being investigated theoretically and experimentally on an ongoing basis, and that includes scientists in our own smaller network.

Those of us on these further shores of the energy crisis, as we push on the envelope of physics, find that we can hardly ignore the cosmological ramifications of our equations.

An obvious consequence of nearly any form of breakthrough physics is that it will make possible radical changes in the modes of space-based transport and communication. At present, our perceptions of interstellar communication are based entirely on conventional physics. When it comes to SETI investigations, we may be looking for signs of cosmic life in all the wrong places. Very likely, we are much less lost in space than the conventional wisdom would have us believe. The handling of the energy crisis, ought to provide ample motivation for us to put more of our intellect into rethinking our place in the cosmos.

Since the inception of science, scientists and theologians have been searching for a common ground. We have early indications that out of the energy emergency, there will emerge a much broader field of thought that will afford science and religion much more room to realign themselves in common cause. Will this positively impact the global sectarian strife? It is hard to believe that could be poised here on this watershed of history if it were not part of a cosmic plan.

[4/19]

There have been some further twists and turns in this latest political initiative. It all tends to confirm my long held suspicion that ufology is being used by cosmic and central intelligence as a cover for eschatology. The need for such a cover in the early political phase ought to be abundantly clear. I'm waiting to see if Jack agrees with this assessment.

4/2/05

End Game?

(For background information look [here](#), etc.)

This page is going to be a departure from the past, at least in terms of its title. This is to signal what appears to be a new departure on the political front. There was certainly an intimation of this new departure at the end of the previous [blog page](#). This page appears to be a reversion back to the more politically explicit style of the original 'Aquarium' [website](#) which has just been reposted online here.

The only previous time that politics became a focus on this website was last spring and summer: starting on [5/1/04](#), picking up again on [5/23](#), [7/11](#), and finally fizzling out on [11/6](#). That was a longer run than I had remembered.

Was that a fire drill? In retrospect, yes. There has been significant water under the bridge since that short time ago.

In order to explain the present situation, and how it may be different, I will have to be more explicit about the names. I have already forgotten some of the pseudonyms that I used last year. This raises some protocol issues. I am deciding to revert back to the more explicit stance of the original website.

The information now is more sensitive. In the run-up last year, I believe it was, Ron instructed me to maintain established protocols at all costs, and I agree. Certainly he is!

Let's cut to the chase. Ron has informed me that he is 'in charge of' MASINT. Technically that would put him at the level of Deputy Secretary of the DNI. The other three sections are HUMINT, SIGINT and IMINT. That would put him at the level of a Presidential appointee. I would be skeptical about that. If I were he, as a career officer, I would want to stay below the level of political appointee. That would be for an outsider, like when my Dad took a leave from the HBS in 1952 to become eventually the Deputy to the Secretary of the Treasury in charge of tax policy, under Eisenhower. Keep in mind that in the intel business, inside knowledge is everything.

Already I might be causing a problem for Ron with his putative political boss, but, hey, I'm just following protocol. I don't think Ron would have told me that, if it were not quite deliberate. Ron is not given to casual bragging. That is not in his job description. His wife once told me that Ron had, perhaps in a fit of pique, told her that his job was more important than the President's. Recall in this context that W's aunt is a long-time friend of my older sister. If you have been attentive to my own ramblings, you will know that I can easily endorse that view of reality. Nay, I have to endorse it. Recall also that it was he who informed of my own place in the present scheme.

Here is a technical note. Recall the [incident](#) with Google and MSN. I complained to Ron about it. About a week later there was a partial, and only a partial, restoration of service. In the last few days the principals in the present initiative were experiencing significant disruptions of our email service. Very early on, I informed Ron that if I ever discovered that my communications were not being monitored, I would hold him in dereliction of duty. The point is that I am relying significantly on people who are better informed on such matters to monitor the traffic here to make sure that I am not speaking out of turn. Only if and when push came to shove would I be likely to be more proactive about protocols. The question before us is whether we have already come to that.

Another instigating factor here is an email purportedly from Ron that was forwarded to me yesterday:

Knights at large,

Normally I would not comment on an early draft so as not to dissuade others from offering independent contributions, but I think Jim captures the issues so well that additional contributions would be of little value. I think we all share Jim's view that Gordon is the only legitimate leader of the RAM. He served his time, independently derived the circuit, and developed a plan to build a technology, industry, and new world order. But Dr. K. will want to know why he has been singled out for the briefing, what evidence the Knights will provide, and what they will expect in return. These are issues that I think should be discussed only within the inner circle. Therefore I suggest the dialog terminate within this outer circle by 16:00 EST Saturday. Please forward any additional comments or suggestions to Jim and John before the deadline. Not discussed yet is how and where to bring this to fruition. I included on distribution those few individuals that I think have the intellectual and technical capacity to apply the circuit to make dumpsters fly. As the good Dr. Green pointed out, the demo may be key to acceptance by those outside the outer circle.

Lord of Oversight and Stewardship

I just about had Gordon convinced that this must be bogus, when Ron popped up on his other line to confirm his authorship! Well, knock me down and call me stupid! It's obviously high-time to look at the other side of this coin, before there commences the citizens' inquiry into the management of the DNI. Have I been provoked, or what?

The public principles this time around appear to be Gordon Novel, Jack Sarfatti and myself. Jack and I go back to around '97. His particulars are easily available on the [web](#) (9,000 hits). [I](#) (190,000 hits!) introduced Jack to Ron (only 232 hits!), early on. I also introduced Gordon Novel to Ron soon thereafter. But I had been hearing about Gordon from Ron, for several years before that.

[Gordon Novel](#) (1,680 hits): what more can we say? Gordon says that Jim Marrs is presently working on his biography. I hear that he grew up (presently 67 years) on the wrong side of the tracks in New Orleans, and fell in with an 'aryan' bunch. He is sometimes rumored to have been the 'umbrella man'. He says he heard about, but did not meet [Fred Lee Crisman](#) in N.O. He admits to having helped break up the Garrison investigation while under the purview of the White House. He was arrested by the FBI, not long thereafter, while installing an off-the-books electronic security system at the White House. His mentor for many years has been Ramsey Clark, for whom he was the principal investigator, particularly at Waco. Note that Ramsey is presently defending Saddam, another FOR. Speaking of which, Ron transferred to MASINT because he could find no WMD in Iraq up to thirty days before the invasion, according to his (unpublished?) NIE.

Anyway, Gordon has always been a speed freak, and that was how he fell in with DeLorean in Bonneville when Gordon was all of 15 and John 27. They pushed the speed mark above 400 by using nitro, early on. It was about 1989 that Gordon started investigating UFOs, another of his boyhood passions. Knowing Gordon, and knowing about the rest of the ufologists, it is no surprise that he left them all in his dust, literally.

That brings us right back to the above email.

Gordon says, and I think rightly so, that if the results of his investigations do not represent reality, then he has been the victim of the greatest hoax of all-time. According to one recent estimate, the UFO budget over the years approaches 100 billion: 10 for the 'research' and 90 for the cover & security.

For all his street smarts, doesn't Gordon see that the above email is way over the top? But who am I, 'Sonfish'(!), to point fingers? I ask you! We are all subject to the same FOR syndrome.

So here we are, three musketeer FORs: Gordon, Jack and Dan, I'll drink to that. We're all dressed up with no place to go now except possibly to visit Henry Kissinger who is due to make a presentation to a special meeting of the Bilderbergers. On Monday I was on a conference call with Gordon, Robert Shaheen(?),

and Leon Lespona(?). Robert, out of the four of us, sounded entirely sane. He was well known to the Agency, and now to Ron. He is also an associate of Adnan Kosiggi and Henry. He is the designated go-between. Ron has met Henry three times, but he did not say how recently.

Whassup?? Well, Henry has long been rumored to be MJ1. According to one story, it was he who turned the MJ national franchise over to the Bilderbergers.

How close does this put us to the point of no return? How do we know this isn't another fire drill? From Ron's perspective, it would have to be rather awkward to have to restart this operation, another year or two down the road. Here we are: new DNI, new MASINT, new four-year term of a tested administration, and, lest we forget, a new Pope. I remain convinced that 9/11 was a definite marker for this time line. Just now, that dust is beginning to settle. Can we afford to take our chances further down the road? None of us are getting younger, certainly not Henry.

If no one else, Ron has invested a lot of effort in this little project. I can surely attest to that. If he were going to blow this off, he certainly should have done it a year ago. You know what they say about carrying a joke too far.

Given that we have finally reached the jump-off point, here is my little prognostication.

But first, let us review the end game. There should be a bunch of internal links here, but I can't think of a good handle. The ufos portend the Millennium. Their appearance was triggered by the advent of nuclear weapons. This forced their hand, and brought on this minimalist abrogation of the Prime Directive. Ok, 'Herod' was the word I was looking for: [here](#), and don't ignore [here](#). I know I have said more than this, but maybe not here.

The ufos came to neutralize the bomb and the modern Herod. They needed a clandestine base on earth to work behind the scenes. The CIA was a likely spot. They would co-opt the agency into being their collaborator. The Millennium plot would be hatched there. Thus could the violation of the PD be minimized and hidden. All of this came at the inception of the new agency, as now comes this new phase with the DNI/MASINT.

The Cold War had to be resolved before the public phase could start in earnest. Note the '89-'91 time frame for Gordon and me. Then the Mideast had to be partially stabilized for this next phase.

The first assignment for MJ12 was to help obfuscate the origins of the visitors. An ultraterrestrial/metaphysical phenomena cloaked itself as an extraterrestrial/physical phenomenon. There are two levels to the 90B cover-up. First it is a psycho-social attack on witnesses until they have been marginalized to a fringe group. If you get beyond that level, you come to the physical level. Gordon was the first civilian allowed into that level, and he was fed a lot of info and disinfo. Jack is mainly working on that level, on the theoretical side. However, he also authored *Beyond Space and Time*, which got me started back in '75. He and I need to get our physical/metaphysical act together, as in a two-part book that is supposed to ready in a few months.

I can see a 2 1/2 stage disclosure. Henry's talk to the Bilderbergers comes in a few weeks. A few weeks after that, rumors get to the news media. Fingers will then point to Gordon as the culprit. He will not be able to produce physical evidence. The initial buzz quiets down, until Jack starts things up again, on a smaller scale, with his showmanship and fancy equations and inside stories. This will go on for awhile longer until Jack starts pointing at me. My 'man bites god' story starts a whole new round of speculation and rumors, leading here, among other places. Then something else, I'm not sure what, will blow the lid off of the bigger story, and the rest will be the end of history.

There you have it, rather highly abbreviated. The next couple of weeks should determine if the Henry initiative is really going forward. I am leaning toward attending the [Gaithersburg Expo](#) this weekend where, with a couple of drinks, I would be capable of spilling these guts. Big whoopee! Joe Stefula will

be my body-guard. Better watch out! He's an ex Air Force MP. Tomorrow I'll be escorting a visiting cousin whose mother is going to the hospital.

Have I left anything out? And what if this leakage gums up the works? Well, it's all about protocol. And, if this is real, nothing can get in its way now. It's all over, but the shouting.

[4/21]

Well, you'll have to admit, that was quite a mouthful yesterday. Meanwhile, of course, my sources have grown quiet. Can anything happen before the HK initiative is resolved? Jack and I may have to team up on Gordon and Ron. Jack will have to find room for God behind his equations. I may have to lecture him on the Mb. Those two have played their aces. If their plan A does not soon come to fruition, Jack and I need to be ready with a plan B. I will need some more assistance to bring Jack into alignment. Eschatology may be the key issue for Jack.

In the process, J & I need to smoke out G & R if their mission fails or goes quiet. What was Ron's motive? Why was he pushing these buttons? We will mainly go after Gordon. There is Al Kehs 27th annual Spring party on May 7. Ron and I have attended the last five of these. If he does not show up, it will not go over well.

Worst case scenario is that everyone just clams up. That would be difficult for Gordon. He would be our weak link. We might need to get Hal and Kit involved. That would not be easy with Jack in tow. I may need to take this little show on the road. We can press Gordon on whether he has a plan B.

The big issue would be if we can eventually press on Ron. He would have known that plan A was bogus. He must have another plan. Perhaps this faux HK deal was just intended to be his Avian swan song. Bye, bye Birdie! He'll then go hide behind John N. at DNI.

Here's another scenario. Ron has been working on Gordon's case ever since I first knew him in '91. He wanted to crack open that part of MJ12. He has already cracked open everything else. He wanted to go after Gordon's sources. It became a do or die thing. He may also need to smoke out HK. This may all be for internal reasons that the rest of us will never divine. We will not know the results. Ron will then take himself out of circulation, as above.

One problem here. What is to become of phenomenology? Will cracking MJ12 get rid of the phenomenology problem? Will all phenomena suddenly disappear? I would be very surprised. Will MASINT not still be responsible for phenomenology? Let's face it, Ron or his immediate subordinate will still be left with a big bag to hold. Phenomenology, as Ron has astutely recognized, has a very large public venue. It cannot be effectively monitored without maintaining a public presence. It was just the Aviary presence that would have enabled Ron to crack MJ12. Will there never be another MJ12-like entity? Ron is not in a position to dismantle the presence that will have to continue to feed MASINT. Believe it or not, phenomenology is bigger than Ron. In short, a swan song is the least likely bird song we might be hearing.

Heck, even if the phenomena went away, will God go away? Are Ron and MJ12 to render God's last judgment? Don't hold your breaths, all you junior aviators!

If I have learned anything about intel, this HK operation is not a serious inside job. It is pure performance. Ladies and gents, the Show will go on.

[4/22]

This will temporarily serve as a continuation of the discussion on *Synthesis of physics and metaphysics* from the last slide of [Dummies](#). [a] It is a fact that Ron has been pushing for a joint publication project since last year. Only since *Dummies*, do I feel ready to move on it.

There is the idea of the BPW as a Self-exciting circuit. Where can this fit into Jack's [picture](#)? Into his emergent gravity? How might this relate to the 'emergence' of the Mandelbrot, or to portals? The portals are like the Mb filaments. The vortexes are like the Mb critical points.

[5/2 -- This is now being taken up as the Physics-BPW [PDE](#) (0.2a).]

News flash: As of a couple of hours ago I am the proud owner of bestpossibleworld.com/.net/.org. So there, all you search engines, go stuff that in your algorithm! My cousin, Charles E. Hamilton, is the owner of chcs.com, my new webmasters, based in Seattle. By sometime tomorrow it should be accessible. My original Aquarium site was @clark.net, owned by Sam's cousin.

[4/24]

I have been at the X-conference for the last couple of days. It was confirmed that Ron is indeed reactivating the remote viewing program, as suggested in Jon Ronson's book. This is no small deal. Ron is widely reviled in the remote viewing community for having helped shut the government's program in the '90's, in which I played a small part. The rationale for this reactivation is stipulated as being related to the problems of loose nukes. If you are like me, you may not be totally reassured by this development.

It has been stipulated that the proper placement of one such item could wreak havoc on our economy, at the least. Every time I hear a distant rumble, this thought comes to mind.

There was an additional item. We are picking up signals out there. That is about all that I was told. So now we have three items, given in the same context: RV, nukes and signal. I asked Dick Farley to help connect these dots. I was unable to disambiguate his rambling response. We ended up discussing the distinctions between Kissinger's and Rice's versions of globalism, and to what degree this was similar to the socialist/capitalist distinction.

So it goes.

Perhaps I should pass this tidbit along to Jack and Gordon.

[4/27]

Jack, [\[a\]](#)

I certainly applaud your sincere efforts to save the soul of Steve Greer and his minions. However, when I last checked my horoscope, that was supposed to be my job. No?

The two highest priority souls on my list right now are yours and Gordon's. That is the list that was handed to me by Ron two weeks ago. No? We are supposed to be the three (public) horsemen of the eschaton. You have a better understanding of that function right now than does Gordon.

But Gordon does have a problem with you, and that is a significant part of why he is being our reluctant cowboy. In order to patch this up, you need to understand that physics is not in the driver's seat here. That might help Gordon to understand that technology is not in the driver's seat either.

It was Aristotle who put his 'Metaphysics' after his 'Physics'. I go last, I get the last laugh, I'm the fat lady

in this little horse opera. Gordon is slated to be the first out of the gate. You go second.

If I am missing any of my cues here, Ron will be sure to correct me in his own sweet time. Agreed?

If this rubber is not meant to be hitting the highway at this time, then, once again, knock me down and call me stupid. Until such time, it is my way and it is the highway.

The message I got yesterday from Joe Stefula, by way of Bill LaParl, was two-fold. MASINT has become so desperate about the loose nukes that we are making a major recall of the best and brightest psychics in the world, and doing so in the public light. Can you imagine what is the tolerance for error in that ball-game? Do you understand the meaning of ZERO?

At the very same time, and for the very first time, Ron is now admitting publicly, right here, that we are attending to uncorrelated signals from 'out there'. Jack, do you understand the meaning of cosmic trigger?

This is what the Eschaton Focus Group is about. Are you with us?

Dan

This was sent on Monday, and it did make a few waves in a small pond.

There have been some developments in the last few days coming out of the conferences that Jack and I attended over the weekend.

It now appears that it is Jack, rather than Gordon, who will be the first to meet with H.K., sometime in June.

I gave my little [presentation](#) to [Michael Heiser](#) at the X-conference. It seemed to fall well within his normal stride. The main issue between Michael and [Father Balducci](#) of Vatican/UFO fame, who also spoke at the conference, concerns good vs. bad ETs. This is a hot button, especially among abductees, as you might well imagine. The issue touches upon the nature of the pantheon, or what I would call the Zodiacal realm of the demigods.

Catholic orthodoxy tells us that the chief of the fallen angels was Satan, and that he and his minions all fell to Earth, and somehow, that was closely related to the subsequent fall of Adam and Eve. In fact, was it not Satan who appeared as the Serpent at the tree of knowledge. One point is that you can be bad, but if you don't eat the apple you are not being willfully bad, and so not evil, and so not in need of salvation. All the sinners in the cosmos are right here on Earth. This is the only planet of choice. It is only we humans who stand in need of salvation. I can go along with this, to a considerable extent.

Michael gave a public and private talk about this, but I'm still not sure what his take is.

My take brings us back to the apokatastasis. The fallen angels will be restored, and mainly by the Logos. Both Michael and Father B. get into trouble by falling under the anti-anthropic spell of Copernicus, Galileo and Bruno. Can it be possible there is no sin or satanic influence on Planet X? Exobiology is not a forte of the Vatican. It was only a few years ago that the Pope exonerated Galileo. With the BPW, Galileo is unceremoniously escorted back to the dog-house.

But now there is other pressing business. Madison Avenue meets the BestPossibleWorld.com via Google adWords. As of Monday, I am now the proud and nearly exclusive owner of **eschaton, eschatology, teleology, rationalism, cosmology, immaterialism, idealism, coherence, Leibniz, absolutism, relationalism**, and the list is growing as we speak. This could almost be fun! The intellectual establishment is about to experience a rude awakening. No? It may not take too long for some folks in academia to wonder what is going on.

I now need to create a '[landing page](#)' for those out there in Google land who pay attention to the right-hand column. Does academia have too many lefties?

Ok, we seem to have that part in hand. I'm looking forward to getting my first email from a click-through customer. How many weeks will I have to wait? As it is, I am busily clicking away on my own ads just to keep the Google mercenaries happy. There has got to be a better way to save the world! But this is almost as much fun as eight hours on the you know what. We aim to please!

The HK initiative is moving forward cautiously. I understand that a meeting is now set for June 16 in NYC. I do have a suit that I have only worn once. I wonder if I will get to wear it again? Perhaps Henry has already been saved.

What next? The main technical thing is for CHCS to bring up an onsite search function. On Friday there will be a meeting in DC with my webmaster, webartist, webshaman and webpsychologist. Don't you wish you could be there? There is a possible issue here about the word of God. I am no fundamentalist, but I do want to tread carefully in these waters.

Then what?

Maybe I need to do something about the cosmology diagrams on the old aquarium site. I thought I had already linked to them. [Here](#) is one link. You will see some diagrams mentioned down towards the bottom of the page. The Mandelbrot is our most recent cosmology diagram. Most convenient! Then there is [this](#), and [this](#).

[4/28]

I'm still struggling with father B. and Michael H. Yes, there are principalities, but Earth is the only planet that we could recognize as such. It would be more accurate to call it the only Principality of Choice. That would put us in Satan's principality, but I am not happy with that. I am reasonably confident that this is Jesus' Principality. We are the only BPW. The BPW necessarily includes free-will, and even free-willfulness! The other principalities are more or less deficient in that regard.

Now we have to deal with Satan. Am I correct in supposing that Satan is more of a Catholic, and perhaps fundamentalist, problem, than he is a protestant problem? I see nothing wrong with wanting to personify the miasma of banality that certainly does pollute the Earth's pneuma-sphere. However, it certainly does run against the grain of our newfound Mandelbrot cosmology. And does it not run smack into the spirit of Christianity? Deontology can seemingly benefit from the Devil, but the theology has always been a non-starter. You have to go back to Zoroaster to find a stark dualism.

Ultimately every creature is an agent of the Creator: humans, ETs and Hitler alike. There must and will be restitution. Jesus ministered to the Damned, and it weren't for nothing. Judgment day has not yet come. Let us not preempt the Creator.

Cousin Charles pointed out to me something interesting about the idea of the Only 'Planet' of Choice. Given the choice, would we choose to go anywhere other than to the BPW? Having made that first choice, would we then want to renounce that freedom to choose? So, BPW = OPC on several levels of meaning. What choice does the Creator have?? In what sense did Jesus choose to be crucified? Are we into S/M here? I doubt that the two perspectives are totally divorced. *Felix culpa*? We do approach the ultimate mystery of being. Even the very idea of 'best' is nonsensical outside the realm of subjective freedom, as is the idea of 'reason'. Subjectivity is nothing if not free. In its freedom comes its transcendent universality.

We are also struggling with potentiality and actuality. Could there have been no actuality, even no potentiality? Is there any reason to suppose that freedom, subjectivity, potentiality and actuality could ever be disentangled?

[4/29]

I met today with Judi, Eduardo, and Judi's student Thomas who hopefully will be the resident BPW artist. We plan to meet on a weekly basis to bring together the art and the concepts. He has already completed some preliminary sketches, including one sketch that is entitled *The Atomic Reincarnation of the Earth*. We'll post it here as soon as we can get to the internet.

Meanwhile back at the ranch, I have not heard back from Jack about his prospective meeting with HK. Coming up next weekend is a prospective meeting with Ron. I hope to get a better feeling from him as to whether there is a larger plan afoot, and whose plan is it anyway? Am I slated to attend the other meeting, or do I have to make my own path here, like 'gate crashing'?

Charles will be working on the navigation system here when he gets back to Seattle. And so far the Google AdWords campaign has been a dud, but still a useful experiment. I don't mind the free 'impressions', but Google is not happy. I may let it wither away for now. If Jack and HK get together, it would hit the internet rumor mill in a hurry, and I would hope to pick up some of the crumbs off that table. Now I'm attempting to return Gordon's call.

I have talked to Gordon. He will be sending some correspondence. I think Ron is trying to tell the three of us, including Jack, that no one of us has the crown jewels, but that if we can put our resources together, we'll come a lot closer. Why can't he just come out and say it? That allows me to be the mediator, which is significant in itself, and should be symptomatic. It might be tempting for two of us to gang up on the third, but that would not be productive.

So perhaps I should put this idea to J&G. Supposedly, G is under pressure from Kit about not being able to produce anything truly convincing, and so is J, probably. Neither one wants to admit it. Each is hoping that Ron or HK will pull their fat out of the fire. I doubt that will happen. That does not conform to the prime directive. There is a wall between them and us. We do need a *ménage a trois*.

At first Ron was pushing for this meeting, but now he and Kit seem to be backing off. I have no idea if this was a ploy or if something intervened. Why stir things up in the first place?

[4/30]

I have sent a message to Ron, Jack and Gordon. It is upbeat about moving quickly on the phenomenology front. I propose an early meeting of the four of us.

Here are the preliminary sketches of [Thomas J. Codrick](#). We'll meet again Wednesday.

Well, both of my correspondents are now up in the air about any meetings in NYC. I had to make some phone calls to track this down. The best bet then is to work on a book project with Jack. I might go out there week after next. In the meantime I need to work out where Ron is headed.

[5/1]

With the Henry initiative now in abeyance, the next step is to fall back to the book idea, with my going to SF week after next. I need to get back on that -- maybe work up some [slides](#) (see 0.2a &ff) for Jack.

[5/2]

I'm scheduled to visit Jack in SF on 5/25-28. Jack suggests sharing facing pages of a 120 pg book. On 5/22-24 I'll be with the family in Cleveland to see Orioles play and go to the Rock&Roll museum.

Try out this one: [The Just So Story of the Universe](#) (0.2b). Will Jack be able to live with this?

[5/5ff] See [Comments](#).

[5/9]

Jack,

The Omni is on California at Montgomery. It should be convenient.

Should we not be having dinner with your Dad at some point? Where would he like to go?

When Ron did not show up at Al Kehs' picnic, I made a house call. It was Erica's fifteenth birthday. Also Ron had slipped a disk while gardening and was laid up in bed.

He did point out that the Lone Ranger and Tonto never had a showdown.

I had my thinking cap on last night. Here are the gleanings:

It is pretty obvious that somebody was hunting for the Moon Child back there in the '50s. Jack Parsons and L Ron, as the story goes, were more proactive in their 'hunting'. Also, recall that the Dalai Lama was in this mix back about then, and he should be an expert in this regard.

Another point is that the Doty story emphasized three high level visitors. Does that not fit the supposedly apocryphal story of the three kings bearing gifts from afar? Way out, man!

This does steer our little story a bit away from the LR&T theme.

It appears that if you are not particularly anxious to do the passion bit, you are entitled to two stellar roles: Saul & John. Have you had experience playing two parts simultaneously?

Just a thought....

N.B., Ron cannot be blamed for any of this!

Dan

No harm in trying, right?

Should this be put into a story, or just played out as a California street drama? Kinda like the OC, but different. Who will get the copyrights and screen credits? What about the 3 Kings trademark? Is that already taken?

How do we soft-pedal the story? This genre has already been played out. The Grail Quests, too. Do it as a straight philosophical piece? That would not be Jack's style. He's the one who insists on jazzing up the story. What other way to go with this?

[5/10]

To: 'Jack Sarfatti'
Subject: KGB virgin takes Jack out behind the woodshed....

Yes, Jack, the 25th, and I'll be departing when my job is finished. And apparently you also missed another message. This little misplacement provides me with yet another opportunity to basically ask you, politely, to pull your head out.

The Lone Ranger idea was just a test, and you fell for it.

With excruciating obviousness, it does not suffice.

There is only one thing that has ever gone on between you and me. It is a reprise of the Passion Play with you playing the role of the Philistine.

I know that you wanted the part of Caesar, but that is not to be. That is Ron's part, you dummy.

More specifically, you have been assigned the role of Saul/Paul.

You have spent the ten years of our acquaintance in avoidance and denial of what really ought to be obvious, certainly by this very late date.

On the other hand, Jack, I have been listening very carefully, biding my time. I have you now right where I want you: out behind the woodshed.

You can go crying to Ron, but it will avail you of naught. Your jig is up. Your ship has come in, and guess what? I'm it.

I know that you wanted a flying saucer, rather like Gordon, but this is going to be Ron's best offer to you, until you learn how to listen properly.

This time I am bringing proof. It is my message in the bottle, straight from God. It is the Mandelbrot set. The building block that the scientists rejected becomes the cornerstone of a whole new world. That is what I will be waking you up with. That is what I will be waking you up to: your whole new world...the one that you rejected as so much pot smoke back in '75. Thank you. You cannot now say that you have not been afforded every opportunity.

I read with some amusement your little correspondence below. Both you and Jake have good advice for the other.

What you evidently fail to grasp, however, is that Jake is deliberately couching a spiritual message to you in scientific jargon. I think it must be deliberate on his part, because it is too good a job to be a mere coincidence. Here, and two weeks from now, I am not using jargon. I am speaking to you directly.

Jake, and I have no idea who he is -- it could as well be Ron, is prophesying to you about our imminent meeting.

Since Santa Fe, the universe has been slapping you around pretty good, just to open up your way too thick, Philistine-like skull.

This is not about the physics, stupid. This is about your rendezvous with God. For your sake, I get to represent God. And, as it appears increasingly evident, I will be doing so for everyone else as well.

Jack, this does put you in the cat-bird seat. It is not exactly the seat you had in mind, but, hey, it is not to be sneezed at, and ultimately it is not in your repertoire to refuse to be lead support in the greatest story ever told. Now is it?

Are you going to go crying to Ron, or are you going to take it like a man? Mano a Mano!

Capische?

And, yes, I am expecting to have dinner with your Dad.

Sincerely yours,

Dan

>>> ;-)

Gee, it does sound kinda like an end game. It's gonna be show time with Jack. And what do I have to show besides the Mandelbrot, Ron and the three kings? For Jack that might be enough, but what about for the other folks? All I need is for Jack to facilitate a chain reaction *cum* skull session, 'Listen up folks, we need to know this.' When the heavies weigh-in, I'll need some backstopping from Ron.

It's just about postmodernism vs. coherence. The message is that simple.

I am thinking about taking this back to Sam's 'oil group' again. It is time to get down to business and to practice what I preach, and preach what I practice. I finally have to place my bets. Will there be a better

time to save the world? Do we really want to wait and see? What else are we waiting for?

[6/20]

Dear Blog,

Gosh, it has been a while, and what have we to show for it? Are we any nearer to the end?

First I'll have to collect my thoughts. The main news yesterday was that Gordon is to meet Jack in S.F. in about a week. It's not quite clear whether or not I have an invite to this gala event. Jack may have just wanted some hand holding. Before that I was informed by Bill that Gordon's material may have derived from the channeling of a Yogi in London in the early 1920's relative to the Hindu *vimanas*. Gordon may now be regrouping his forces. If Jack and Gordon gang up on my metaphysics, I'll need more input from Ron and/or Kit. Ron suggested he might help Kit out with Julian Nall, formerly the NIO for Science and Technology, with whom Kit once had an 'interesting' interaction. His name is listed in my old notes without any context. Need I hold my breath? Jack met with the glitterati in NYC, but no HK. The mailbox now languishes.

I've been catching up on the *4400* with some prodding from my son. It has definite possibilities. In yesterday's NYTimes is a review of [Robert Laughlin's](#) new (first) book: *A Different Universe*. It is a rather good treatise on anti-reductionism from the perspective of the quantum theory of solids. There are no fundamentals in his world, rather there is the omni-presence and universality of various phases of quantum criticality. Are our egos made of such stuff, analogically speaking? With the Riemann Hypothesis, we might imagine that the integers are a critical phenomenon with the long range order of the Mandelbrot.

My latest argument with Jack and Gordon took up the premise that any breakthrough in propulsion would, from a physical perspective, be concomitant to a comparable breakthrough in military technology, and so would necessitate a meta-universal hegemonic control system (MUHCS) so as to avoid a mutually assured destruction (MAD). Such a cosmic power would hardly be distinguishable from that of a God, and that would presumably include the power of Creation. Thus it might behoove us to consider our options from a more creaturely perspective.

[6/21]

Gordon is trying to recruit Jack into his 'Kismet' meeting plan. I am urging a more broad based approach, i.e. one that would include metaphysics.

[6/27]

Let us reflect back upon the zodiac and its role in Creation. In accord with the Mandelbrot model, each member of the pantheon produces a 'sub-creation', in accord with polytheism. There is, however, a singular creation associated with the primary bulb. This circular bulb and its attendant cardioid and straight line are the only perfect figures in the set. This is what I refer to as the BPW, as taken in the context of the Mb.

[6/28]

Yesterday I was failing to recall the latest PDF file: [On Being Focused](#). Evidently I have not properly integrated it with my core operating vision. Here is the coda of that piece:

- It is just thus that the creative energy of the Matrix and pantheon is focused through love into the BPW.
- This is my hypothesis and the governing principle of whatever coherence I possess.

Well, I think that was a bit of a stretch. I have some more explaining to do here, but this is the core problem, after all.

One missing connection is that between geometric perfection in the Mb and this notion of love. Both notions allude to the transcendental or infinite. Love and perfection are our connections to eternity. The BPW is what mediates between the finite and infinite. The transcendental is uniquely inherent in this one locus of Creation. This perfection is the eternal soul of the creation and is the essence of our *imago dei*. This also is suggestive of the apokatastasis. The creative focus is also seen on the positive axis or 'elephant ravine'. The ouroboric connection between the positive and negative axis is strongly suggested.

However, every part of the Mb is holographic, but this is a given. It is the symmetry of the Mb that also suggests its creative focus onto the 'BPW'. It was a big step in our alleged evolution to go from radial to lateral symmetry. That was for locomotion which then produced a fore and aft asymmetry, as with the Mb. The ouroboric form is a restoration of symmetry.

This focus should be viewed relationally. There cannot be coherence without a focus. Without coherence, the world is incomprehensible and so is unobservable. The self is about focus. This is what distinguishes theism from pantheism. This logic can be further explicated.

There can be no reality without the cyclic aspect, and all of the above is implicated therein. Pantheism cannot contain cycles? Their use is strictly illicit.

I then need to add this to the PDF. This could also be the title of the next page.

Pantheism stresses the role of illusion, but there can be no illusion without selves. The Buddha is the fundamental self. The eternal cycle of illusion is centered on the Buddha. There is nothing else that is comprehensible. In some sense the Buddha must create or maintain the Cycle, but strictly they would be inseparable. Pantheism has always been a source of inspiration for idealism.

A pure zodiacal cycle cannot exist without an observational asymmetry, which may be identified with Creation. There is no such thing as a pure cycle, other than as an abstraction. It is like perpetual motion. Atoms are not observable unless they are disturbed by photons.

Numbers exist only through the act of counting, which is also cyclic in nature, but it cannot be a pure cycle because it would be perpetual. There must be something like an escapement on a pendulum clock.

The NY Times today has a [feature article](#) on the paradoxes of time and time-travel. Implicitly it is pointing to the meta-physicality of time? Why should time be more metaphysical than space?

The intensity of the focus must be proportional to the complexity of the network it supports. Creation must have a meta-focus. Otherwise it loses coherence. It becomes epiphenomenal. What is the limit on the intensity?

Coherence is to be found in functional and aesthetic diversity. Creation will be optimized when the cosmic intelligence is focused upon it, not when there is random conflict. Vulnerability would lead to coalition formation. The stable/eternal state would be a single coalition. This is what we see with the Mb. There is a diverse coherence.

Based on the primordial tradition of ultra-terrestrials, there is communication between distinct creations and realms. There is separation mainly at the phenomenal level. It follows that cosmic intelligence and coherence transcends these realms. Out of this coherence comes a personal focus of creative love, and this results in the BPW, of which we are the nexus. This is based in part on the notion that we are the only planet of choice, i.e. focused on free will. This is the densest planet and the great attractor. The other creatures will arrive here to share in the universal salvation or apokatastasis entrusted to us. They may arrive by incarnation and other means. This is one reason why we need not be overly exercised about the population problem. We don't want to be a bottleneck in the salvation economy.

The notion of a singular Matrix need hardly be speculative. Potentiality is one of the least differentiable ideas. This is just where the identity of indiscernibles should be most applicable.

[6/29]

The Newtonian-Cartesian absolutist view of space-time is abstract and deist in the extreme, but once planted in our brains it is very hard to extricate. It implies an omniscient Creator, with the creatures being epiphenomenal. It works great for aiming artillery, but what else is it really good for? Machines are dumb. They must have rules. The cosmos obliges our mechanical penchant with its Platonic seeming physics. But physics can only be epiphenomenal to the relational system of things. Modern physics is an endless revision of the Newtonian hubris. There is no way to sneak vitalism in the back door, try though we do.

[6/30]

Signed an NDA for Gordon's RAM, and saw War of the Worlds with son and nephew. I was told another new RAMer is also an eschatologist. I guess we'll see about that.

And here is an email composed this morning in response to an inquiry from Sam concerning Robert **Laughlin's** *A Different Universe: Remaking Physics from the Bottom Down*, noted on 6/20: [\[a\]](#)

Yes, I did notice this book, and then explored Laughlin's website.

A phrase that springs to mind about Robert's treatment of emergence is 'damning with faint praise'.

The other message is: OK folks, you needn't worry your pretty little heads about emergence, because we scientists have it under control. We'll tell you what you need to know about it, when you need to know it.

As Robert admits, scientists despise philosophy and philosophers, with a passion. The outstanding divisive issue between science and philosophy since the inception of science has been precisely the issue of reductionism. Now, Robert assures us, scientists are finally getting religion!

Pardon us, if we are more than a little skeptical.

Much too little, much too late! The hand of holism has been writing on science's reductionist wall for the last three centuries. Scientists of much greater stature than Laughlin have deliberately been ignoring this Ghost at their mechanical Banquet, because they had the wisdom of Louis XIV, 'après nous, la deluge!'

If Robert really believes that science has its thumb in the flood gates of emergence and teleology, well, he should have a little chat with the person who is in charge of phenomenology at the Dept. of National Intelligence. He would then be directed to their consulting eschatologist. He would then realize that his key phrase, Bottom Down, makes no sense whatsoever, unless you have already stood the world on its

head. Voila la Deluge!

I'm afraid that all of this will make the Oil Peak look rather like a molehill.

[7/2]

What's a Creator to do after Creation, I mean way after? Do you eventually just leave it go?

An obvious option would be to recycle it, but this would be counter to the BPW hypothesis.

The last option is redemption. That's apokatastasis. That's the eschaton.

The only question is when. The only answer is, at the best possible time. Which is?

Which is when we have done just about everything we can possibly do down here. When we are physically prepared to leave the planet. When we are able to destroy the world, but before we actually do. When the secret of Creation can no longer be kept. In other words, right about now, folks.

The next question is whether it is possible for there to be a creator. This would seem difficult to deny, especially if we take mind seriously. Instead of a primordial material stuff, why could there not be a primordial mental stuff, i.e. Matrix, with at least as much self-organizing potential as this alleged material stuff?

The next question is how many creations. In an immaterial, monist, relational world, there is no rational alternative to the BPW hypothesis. Any network of being would be self-centered. There would be an organic functionality. Chaos, to exist, would be parasitic upon that organic network. At most, there would be a functional network of realms, much as we see with the Mandelbrot, with everything in its place. There is every indication that our world is spiritually the densest world, i.e. the center of spiritual gravity.

(The above material has been appended to [Being Focused](#).)

The final chore is the reconstruction of the scientific cosmology. Given immaterialism, we rationalize the manifest material image in terms of its contribution to our spiritual gravity. The depth of creation is measured by the compelling depth of the image. We are **mesmerized** by an image, to which we have unwittingly contributed to a very substantial degree. In the depth of physics we see our own logic reflected back to us in mathematical structures that we can more or less intuit.

Even starting from a materialist premise, the various futurist scenarios point toward an ultimate hegemony of mind over matter, as if to defeat the original premise. Why should we suppose that we invented the mind? What else could reside beyond the bounds of space and time, nature being the natural buffer between Creator and creatures?

Yesterday, Sam asked how I would deal with the sectarianism of the second coming. My suggestion is that we see it as the completion of the first coming, which would simply be its universalization.

Christianity has long prided itself on its exclusivity, and deemed universalism to be a heresy. That is one reason why it hews so closely to mystagoguery. By rationalizing the X-event along with its content, we will have universalized it. Will this in any way detract from the notion of a personal Savior. Hardly! It turns out that the Savior is also our personal Creator.

Will non-Christians be offended? Probably no less than traditional Christians. Sectarianism, even what we think of as organized religion, will be no longer. The spirit is eternal, it is just the politics that

changes. We can get through the politics. We never get through with the spirit. Once reason has been liberated from its analytic/materialist cage, it will all be over but the shouting.

What next? I have been instructed to stand down for the next few weeks, pending Kit's meeting w/ Julian. I'm not holding my breath for BJ to be born again. BJ and Hal have circled their wagons against any metaphysical interpretation of our Visitation, and in particular against the biblical redaction of it as being the previously apocryphal Three Wise Men.

Mainly I still need an interlocutor/debriefer. I admit that would not be as easy to arrange as it might seem.

Subject: RE: Quantum mechanics and the time travel paradox

Jack: << The religious implications are profound of course.>>

Well, then, you and I, at least, should be doing a podcast with RU Sirius to announce the imminent messianic event.

The BPW version of the Y2C ought to be sufficiently anti-authoritarian even for the likes of Goffman.

All we need is a little script. I can still hop on a plane, although I do believe that the phone company has facilities to patch through hi-fi.

Yes, no, maybe?

It might, however, take a few days to iron out the script, and who would get top billing, etc.

Just a thought.....

To: Dan Smith
Subject: Re: Quantum mechanics and the time travel paradox

Dan, I already said that in 1973. Saul-Paul has it on tape with Hal Puthoff & Russell Targ near SRI. Saul-Paul Sirag wrote an opera based on it produced in Berkeley I think in 1974. The religious implications are profound of course. R. Gott has the idea in his Time Travel book ~30 years after I first suggested it.

On Jul 2, 2005, at 10:50 AM, Dan Smith wrote:

> According to the Best Possible World hypothesis, our whole world is just such a self-consistent, i.e. coherent, 'quantum' loop. This is just the least action principle extended to the cosmos.

- > The closed causal chains arising from backward time travel do not lead to paradoxes if they are self consistent. This raises the question as to how physics ensures that only self-consistent loops are possible. We show that, for one particular case at least, the condition of self consistency is ensured by the interference of quantum mechanical amplitudes associated with the loop. If this can be applied to all loops then we have a mechanism by which inconsistent loops eliminate themselves.

[7/10]

Last night I listened to Robert Merry on BookTalk: [Sands of Empire](#) (2005). Bob contrasts the optimistic and pessimistic views of history. On the one side are Hegel, Fukuyama and Freidman, on the other are Spengler, Huntington and now Merry. The one is the linear, globalist view, the other is the cyclical, cultural view.

From the POV of the BPW, they are both right and wrong. What they miss is the gnostic/prophetic/salvational view of history, the concealing and revealing Creator. Material 'progress' finally gives way to an eschatological spiritual rebirth or rapture.

[7/11]

On Saturday I met with a person contracting to review some related documents. In describing the BPWH, I was reminded that immaterialism is a particular sticking point. This affords an opportunity to review that subject.

There is still the jaw dropping reaction when I confess to a skepticism concerning stars. I have not learned how to soften that shock. How has the modern mind been so completely possessed by the idolatry of matter? That is a tough nut to crack. How came to western mind to be so contrary to the eastern mind on the matter of illusion? Ne'er the twain shall meet?

There must be a connection here with the dichotomy between theism and pantheism. How easily we forget that the nature of reality is a perennial metaphysical issue, but only, it seems, in the mind of the philosopher. There must also be a connection with egoism. Egoism demands a solid platform for the ego. Thus do share the dismay of the mariner stranded on the desert island, who wakes up one day to discover that his island is swimming away. There is the sense of disorientation bordering on the quality of a mental breakdown. The eastern mind, being more relational, is less susceptible to this manner of disorientation.

That egoism finds its justification in theism, should be perfectly logical. That theism is associated with absolutes and dichotomies of many varieties, is also perfectly natural. That we then, in modernism, proceed to manipulate these absolutes, while neglecting their origin, should be no surprise. The residual psychology of the absolute is our blind spot.

Mathematical Platonism is one of the last repositories of the modern absolute. The Mb and the MG have opposing implications in this regard, but perhaps less so when we include anthropics with the MG. It is hard for us to explain the teleology of either object, or how the two might relate. Then we need to find the logical connection to stars and dinosaurs. This is if the eyes of our interlocutors have not already become terminally glazed! Obviously we need an anti-glazing strategy.

We seem to be terminally committed to the mechanical manipulation of matter, as the basis of our reality, as well as to the great depth of time and space. The relativity and quantum theories, have only been like minor fender benders, in this larger context. Mounting a frontal assault on Newtonian absolutism, seems not to be effective. The self-coherence of science is impressive, superficially, at least. And we don't want to become ensnared in a 'god of the gaps' argument.

The mind-body problem is not something that troubles people outside of the philosophical arena. Anthropics is too readily countered with many-worlds. These anomalies resist concatenation in the imaginations of even the most thoughtful people. The problem of the Ptolemaic style complexification of modern cosmology does not weigh heavily on the modern mind. It does not count much against the more subjective sense of scientific coherence. Postmodernism has done very little to shake these foundations.

The problem of emergence and the non-reducibility of scientific knowledge counts for little against our collective commitment to the individual reality of atoms. Somehow, we must be equating atomic reality with egoic reality. The atoms are our bastion against all metaphysical assaults.

The interdependence of ontology and psychology is something we choose not to dwell upon.

The antipathy between theology and phenomenology, leaves the phenomenologists with nowhere to turn but to pantheism and paganism.

The ontological infrastructure of materialism has been most resilient to normal wear and tear. It is hard to imagine that it would be vulnerable to anything short of a major phenomenological shock. One might hope for a straw that would break its back, but there is very little evidence to support such a scenario. This observation counts against the possibility of a minimalist version of a messianic event.

The last option is to keep the R&D show on a steady advance. Perhaps this is the favored option. Gradually we get more folks on board, up until either the fundies and/or a reporter latch onto the game. Anything wrong with this picture? Might the ufologists catch the drift of it first? What about Jack and Gordon? That would depend on BJ and Owl. That sequence might turn this scenario into a domino scenario, which could be more dramatic.

I'm once again asking Jack to give his rationale for the cover-up of the alien presence, and his own role in the matter. This should be a major problem for him, despite his ability to deflect discussions.

[7/22]

There has been continuing correspondence with Sarfatti list, and new correspondence with the exopolitical list. I was introduced to this latter list by Ed Komarek, the same person who originally introduced me to Jack's list. It may have been Don Allen, a ufo BBS operator in Florida, who linked me with Ed in the early '90s.

The issue presently being pursued with four correspondents on these two lists is nature of our destiny. The fact of a destiny is undeniable to quite a range of folks, especially with those who are future oriented, of course.

With respect to the visitors the issue becomes how many destinies are there and how are they interlinked. Are they mutually supportive or mutually antagonistic? And how so? Would we not, at the least, expect there to be a cosmic ecosystem in this regard, i.e. a salvational economy on the cosmic scale?

[8/4]

There was on Monday a dinner meeting with BJ in DC. Here is an excerpt from a follow-up message I sent to him. There has been no reply:

Something I meant to ask you was whether anything was said to you concerning the alien agenda for coming here, and more specifically whether any non-technical information was delivered.

For instance, it is hard to imagine that they would give us advanced technology without any suggestion as to how we should use it. Or, perhaps, why it would be given to us and not to the Chinese, if that were the case.

It is also very hard to believe that the topic of God or life after death would not have been broached over the years of contact. If it had not been covered in the briefings, then, given your other interests, would it not have been your top priority question.

This is why I remain skeptical about a categorical statement portraying a purely 'nuts and bolts' exchange.

Rick Doty was adamant in speaking to me that the reason for the non-disclosure primarily had to do with the disturbing message that was conveyed to us in the contact. He refused to further characterize this message. You have held Rick's information in high regard, but now there is this singular discrepancy?

If no cogent answer is forthcoming, I will have to get back to Ron about it. Allegedly, this person has had conversations with several Presidents and DCIs on the topic of the visitation. It is hard to believe that the metaphysical issues never came up. His categorical statements concerning the purely 'nuts and bolts' aspect of the visitation just don't compute. Then he goes on to claim that everything to do with UFOs, other than this core story is simply delusional. Are we dealing with a deeply irrational individual, or is this story merely a construct, intentionally disinformational, or both? This will have to be straightened out before I can move forward. Or is this simply meant to be an obstacle to progress? I have sent a strongly worded note to Ron threatening to go outside with my questions and concerns about this particular matter. He is the one who 'owns' the clearances for the individual in question.

I'm supposed to meet with Ron tomorrow about BJ and his problem. BJ is alleged to be deeply disturbed about something to do with the visitation. It must have something to do with information that was

conveyed to us in some convincing fashion.

It is fair to say that an eschatological warning fits into the visitation scenario and its cover-up better than any other type of warning.

If this were the case, this would have been the primary purpose of the visit. There would have had to have been a reasonably imminent time-line, along with action items for us, including a suggested disclosure process. There would necessarily be a tie-in with the prophetic tradition, and so some messianic event would have been indicated for facilitation.

I would suggest that this scenario be the subject of the next Aquarium meeting. The meeting would be early in September. Who should be invited? Who not invited?

How many are aware of the eschatological version of the visit? Are there factions within this number? What is the politics?

What are the action items? Where are we on the time-line? What does the President know? How many Senators know? Chris Straub? How many other countries are involved? Where does this tie-in to 9/11?

[8/14]

It seems that there is more than one version of the bj/jn meeting. Naturally, one is a bit more provocative than the other. jb is probably not happy about being excluded from something. He may not realize that he is being diverted to something else having to do with cl. We might wonder about his being held in reserve up to this point. Did the meeting go as planned? Or was there a misstep by our guy? Is there a breakdown, as suggested. Perhaps there is a third version, even more provocative, that was disturbing. Early recovery may be optimistic, and then what? How critical is he? Why so anti-communicative? He is a major test subject. Difficult to replace. What is my input supposed to be? Something had been going on with s for a year prior. What about mp and dd?

Where is the action item in all of this? Who do I go after next? How many more prelims? Where is the chase? Who has the plan? I'd settle for a visible green light. Visible to whom? Message to jb? And to Jack. Then wait.

[8/26]

We have come to another impasse. BJ still refuses to cooperate, even after a direct request from P. This is a carryover from last summer. It is hard to see how this obstacle can be ignored going forward. It has become an major issue between us. One might wonder if this was the intention. The additional information about the meeting with JN that was indirectly relayed, was to the effect that he was in the loop. Still no clue as to what may come next, if anything. I don't see any advantage to pushing any more than I have already. This is nothing about individual control.

The bi-static radar or software defined radio, SDR, may provide an analogy as to how we receive cosmic signals. It is a collective effort with multiple inputs. The emphasis is on the coordination method. There must be various forms of triangulation. This is what we would do for the eschaton. There would be various checkpoints such as 9/11.

After talking to Joe, the plan is to go back to Bill and then to P with the second version of the meeting. If

they deny it, then I would be inclined to go to Jack for dissemination. That would be the most I could do. There would be as much detail as possible. Would this burn the bridge? That is possible. I can do this right here and now, just leaving out the names. All I need is A-F.

A is a high level intelligence officer. B is a former mid-level officer, who used to work for C. B asks A to arrange a meeting with C. A tells me that he will do so and expects that this favor will persuade B to be more forthcoming with me. B is chagrined when I pass this back to him.

The meeting takes place in July. Included are B, C and D who is a friend of A. In an email to A and me, B briefly describes the meeting. B does most of the talking, providing C with a recap of the information he has gathered, mainly over the last two decades, particularly in various briefings, with an emphasis on what he learned just in the last year. B also tells C that he has had face-to-face conversations on this topic with 5 DCI's, 3 Presidents and many General Officers. C then tells B to be more circumspect in the future. In a subsequent dinner with me, B reiterates his determination to provide me with no further information on this topic.

A then calls E and provides him with an additional piece of information about this meeting. The purpose of the meeting was for B to petition C that he be given greater access to inside information. C refused the request on the basis that his particular expertise was not presently needed. E passed this information to F, who, in turn, passed it to me. I then asked E if he had recently spoken with A, and he denied having done so. A did volunteer to me that B did not make a very good case to C about the visitation. B provided C only with his direct experience, without attempting to paint a broader picture. This approach would make sense, however, in the context of the subsequently revealed purpose of the meeting.

The above content has been sent privately to Jack and Bill. Wherein I state that, In my estimation, this is the most provocative, specific and possibly actionable piece of information that we presently possess concerning 'official' knowledge and involvement with UFOs.

In response, Jack evinces a conceptual grasp of the situation that may not be adequate to sustain his participation here. The bigger picture of the visitation continues to elude him, in part due to its failure to support his own scenario.

[8/27]

Jack was a bit more amenable on the phone last night. Now I need to check with Bill. People still want a meeting, but that depends on BJ, it would seem. He is holding out for a promotion, but what will he bring to that table? It is not the science or biology that is lacking. Why need he be such an ingrate? It is possible that he was partly read into the R&D show, and now is stalling for more time or info.

The core story is now being recirculated through Jack. We may have to strike while that iron is still warm. Ed is then a problem with good celestial humans and his bad grays. The CHs are the absentees. They left no infrastructure.

[9/4]

Ed K. has been keeping me posted on Bill Hamilton & Co. It claims, in effect, to be a second aviary. Their posting rate has ramped up considerably just in the last few weeks. The hypothesis is that there has been a split over disclosure on the inside. The story goes that there is a Committee of the Majority composed of some 32 international Masonic/illuminati types, of unknown ethnic persuasions. This is an umbrella group with some sway over various specialized subgroups, the first of these being MJ12 with scientific and technical expertise. Presumably there would be other subgroups in the political, economic

and religious areas. Where the Aviary might fit in is anyone's guess. Dan Burisch is supposed to be a conduit from the disclosure faction.

The story, allegedly from Dan, is that there are splitting timelines due to future trauma on Earth c. 2012. Denizens of the various timelines use time portals to come back and manipulate us according to a variety of agendas, including intervention in the genetic and prophetic areas. I still prefer the BPW, Mandelbrot parallel-worlds, Powers & Principalities cosmology with overlapping and non-linear timelines.

There are natural and artificial portals here. The artificial ones can be problematic. They could contribute to the 2012 debacle in which they suddenly expand to Earth dimension and there is the primary time split between the few lines leading to the Celestial Humans and the many lines leading to the 'underground' Deros/ETs that are dead ends. We have a potpourri of UFO legends, but this is much closer to the BPW scenario of geocentricity among parallel worlds, along with an eschatology, rather than to the original astronaut version of the ETs.

[9/11]

Jack states that by adding a non-linear term to QM, he will account for most paranormal phenomena. Those that cannot be so explained will be taken to be mental projections. That this can pass for physicalism ought to be an embarrassment.

The typical paranormal phenomenon exhibits intelligent control, i.e. mind over matter. That this single non-linear term can first account for mind and then for its control over matter is simply incredible.

In another area, the split remains between the old and new aviaries. Collins and Hamilton remain at each others throats. This does not bode well for progress on the disclosure front. Then BJ remains uncooperative. This lack of progress may spell the end of this year's initiative that began at the beginning of this page, back in April. The question then is what it might take to resume the process at a later date, and whether I should attempt a unilateral effort. Both Jack and BJ would need a concerted external push to produce any movement.

On the research front, I have not given much thought to reestablishing priorities. The marginal returns will be lower for the time being.

Atoms

I had three days of discussion with Jack in San Francisco, which were helpful. I have a better idea of the central role of the strong anthropic principle vis a vis science. This is where Jack has shown the greatest flexibility. It is a point of leverage.

In a few days there will be a meeting with CF and two others on the topic of the briefings. I will press the point that the fact of the briefings presents a major counterintelligence vulnerability, which must have already been resolved, and so let's move on to the discuss the most likely resolution, i.e. that there is an unresolved problem about the visitors, probably relating to the 'disturbing' message. CF will strongly resist this shortcut. I hope there is not a stalemate. I speak of 9/11/08 as a deadline for disclosure. D-day could come this winter if we put our minds to it. We just have to arrange that the eschaton cart is firmly harnessed to the disclosure horse before the barn door is opened. That should be fairly easy if CF & BJ are the prime sources. They just don't want to have there necks out too far.

If the CI vulnerability could not be closed, each side of the cold war would have been exploiting it. Probably they did. The paranormal exists as a black hole in any intel organization. What would be the covert function of a ufo hoax? It is just a game of bored people like dungeons and dragons. No one can obtain the authority to stop it. Someone would have to enforce the rules. And what about the lights in the sky? Why would we now be abetting the game by extension? This would not end it. How much money might it consume? Some serious people would have to be seriously involved. I would like to see the analysis of these scenarios. Would CF have permission to dabble without some real motive?

While in SF I discussed with some folks about getting professional assistance with this website. It is much needed, and will not be cheap.

Back to the atoms. How do we get from the zodiac to atoms? Atoms are the end point of a long process of objectification.

Atoms are a logical necessity given disparate substances that are able to interact in a logical fashion. They are particularly important in biological processes. The question arises as to the mutuality of substantiality and atomism. From a relational and functional perspective, there must be interactions of many kinds. Atoms render these interactions local and reduce the need for programming.

Substantiality comes from the habituation of cycles. There is a mutuality of cycles and time. Linear time comes from the breaking of cycles. Atoms and the zodiac are the limit cycles. The problem of normativity is inherent in cyclic phenomena. Does this prove that the phases of the moon are mental? There is the problem of identity in difference.

[10/23]

The identity problem is exacerbated by the fact that there are no exact cycles even in the physical realm due to the linearity of time and other peripheral changes. The cycle has to be distinguished from the background, and this calls for normativity. It is this collective normativity that is integral to the anthropic principle. Counterfactuality is another form of normativity. This relates to the functional directness of our perceptions. The perception of absence points to the pleromic quality of reality. Even absence is functional. The manifest image is not gratuitous. The perceived and the perceiver cannot be finally distinguished, and this is made clear in the quantum atom. Atoms may not be ontologically distinct from letters. Note that we can see a sentence without seeing each letter.

Is electronic equivalence normative? It may be when we consider its purely mathematical basis. Mathematics is unavoidably normative. The relation between spin and statistics is part of the Anthropic Principle. This goes along with the Monster and the Mandelbrot. These are the essence of atoms.

We have the network of being. Now we are asking a question about the internal structure of that network. How are some of its nodes connected? The AZO/X/QRP archetypes are supposed to provide the overall structure. X is the nexus and the atom and zodiac/ouroboros have to reflect each other. Not sure how the math and zodiac connect.

[10/24]

I recall that Monstrous Moonshine was related to the Golay code and the Leech lattice. Coding theory might provide another connection between mind and atoms. Perhaps Godel's coding comes in here. I may have to read up on combinatorics.

I'm looking at the stability of atoms and the world and how that might arise from anthropics. It is not apparent that coding theory has any special philosophical significance. There is also the distinction between discrete and continuous mathematics. The twentieth century saw the ascendancy of discreteness in math and physics. The discreteness of the mind is hardly a given.

Meanwhile the meeting is shaping up. Will there be an innocuous reason given for starting an investigation so late in the game? Is it not too little and too late to impact the mythos? If it were a Soviet or a money making plot, it would have caved long ago. All the initial plotters would be long dead. If it was anti-Soviet, same deal. There are many people still keeping oaths. Is it to protect the technology? That is weak. What will CF say? How much will BJ cooperate. This cannot just be a history exercise. It does not look like damage control. What does the Schnabel book tell us? His *Dark White* is recommended. This is a skeptical view of abductions. Same as BJ. Jim states it is not an ET phenomenon. I can agree with that.

[10/25]

Dark White focuses on Bud Hopkins and Linda Napolitano. Jim Schnabel's debunking technique for crop-circles and abductions, for whatever it was worth, would not be effective against the core story. The main issue is going to be BJ's cooperation. How could it be obtained? How forthcoming will be CF on his investigation of the other briefings? How was he tasked or motivated? Are we beating a dead horse? Response to Collins' book? How is that justified?

I would argue that this is the government's first official step toward disclosure. How would CF know that the story was a hoax? If there were not already certainty about this, the proposed investigation would be sufficiently risky to require a high level of sanction. What could account for that certainty, and why did it take this long to arrive? If not certainty, then the establishment would want to leave bad enough alone. There does not seem to be any new degree of public concern about this issue.

Recall that it was alleged that BJ did not make much of a case for UFOs in the earlier meeting. It was mainly a personal account. What could he have been his intent? A second version makes more sense, and a third makes even more. It would be very difficult to prove a negative at this late date, especially w/o the aviary being aware.

The first order of business would be for SG and MP to question me, but before that I should question P. We do not have our signals straight for this meeting. Should I make an issue of that? I'll go through the motions only if we have a definite plan. His naiveté will have to be challenged early on. We both knew

this day would come. Why pretend to fool each other? I don't think it is useful to spend time lending weight to the N&B version of the core story. How many times has P told me that satisfying curiosity has no place here? That is not in the job description of Intel. This can only be a public relations effort. To which end? Can I in good faith be a party to any such? The whole point of my being here is to cut through the fog. I cannot suddenly suspend that trait. Can I afford to opt out of this political process? Who then will hold my coat? Can I be cut loose this late? Perhaps this is a test. If I'm expendable here, then I'm in the wrong place. I should have put my foot down sooner, but better late than never.

He would have to have some educated guesses about my place in the larger scheme. I sat through too many tiger meetings to be able to carry on in that mode. Keep silent as a protest. This feels to me like another tiger meeting. I see too clearly that we are going through the motions. I am nothing without my candor and my insights. This hits too close to home, for me to sit still. He's got my number. He'll call if he needs me. I don't need any more tigers. My tiger is dead. If and when it become necessary to address the eschaton, I'll be available. Seek ye the message. That will not drop out unbidden.

[10/26]

A note was sent this am to two participants, and this may allow me a bit of an opening tomorrow, i.e. let's drop the charade.

I find Maldecena's article 'The Illusion of Gravity' in this month's Sci Am to be provocative. This is the first I have seen of this principle as an 'explanation' of gravity, how did I get so far out of this loop? These ideas are definitely evocative of some thing I am trying to say about the illusion of space and time coming from Stan Tennen's bounding singularity. I'll be giving it some thought.

[11/08]

I'm waiting now for the interlocutor to come up with a list of briefees. Not sure if SR will be available next week. There were protestations from TF who had surveillance at the meeting. He complained about noisy and nosey fish.

What I wish to say to Jack is that he is the poster boy for Aspergers. In the age where we can push a button to blow up the world, why can't we save it the same way, or at least save ourselves?

Jack wants to build an escape machine, a transcendence machine that will solve all our problems with the push of a button. The Magi tell us that it will involve the whole person. It will require total commitment. It will require a new level of interpersonal communication and trust.

So why am I preaching to the Aspergers? Initially they/we are the most vulnerable. The problem of modernism lies with the scientists. Does this mean that we turn against technology? I am against transhumanism where technology is transformed from a means to an end in itself. There is a place for technology, but for too many of us it has become an idol. Time is running out for the ascendancy of the technicians and technocrats. My background in physics is not incidental to my migration into metaphysics. There underlying discipline is similar.

In this still premillennial regime there is a tendency to revert to tribalism in the forms of fascism and fanaticism. The main shift will be from Gesellschaft to Gemeinschaft, or from society to community. These communities need not be geographic. Each community will have an organic function within the whole. The early Christian eschatological communities are a good model. Ours will now be apokatastatic communities, which would be more oriented to the universalism of the latter.

[11/9]

I point out to Jack that his physics initiative does not make much sense against the background of the visitation.

Still need to see how the atom is linked to the ouroboros. How do we get from abstract logic to tangible atom? Is the only connection mediated by the cycles & logic? Atoms are the commonality of the various cycles. The logic of the atom is necessary for the mutual coherence of the different cycles. Can we hold this without completely reifying the atom? Can the atoms in our bodies have a different ontic degree from those in the stars? These are two very different and disjointed sets of appearances to be accounted. Sunburn does impact the body. Can we distinguish between photons and atoms?

[11/26]

On Monday will be the meeting with SR. It could be characterized as the first official disclosure event. In the meantime, there is no headway on the physics vs. metaphysics front. The few who favor immaterialism oppose theism. It is very hard to advocate a quasi-physical presence. It is neither here nor there. The story of an exchange program further obfuscates the issues. Focus on the briefing phenomenon, and hope to some bandwidth in that disclosure. Perhaps I can use that as leverage for the metaphysics. Will need to discuss that with the sources. That will meet with contention. Who am I to prevail against the strategy of the visitors? Patience will be the primary edge. This is all tied up with the handling of the eschaton. This might delay the public impact, but probably not change it. I'll need to find an inside source. But how could such a source be held up against the peripheral ones? What would the Y2C plan be?

The disposition of the physics and the technology may be critical here. The issue of mind and matter will then come to the fore. We need a quick determination of Jack's business. Will need access to briefed scientists. A successful technology would be much harder to conceal. What would be the global and longer range strategy? Any hegemony would be quickly squandered unless backed by massive force, incompatible with progress. It would mimic our problems in Iraq, and that might be a reason for that. It would be a quagmire for the visitors. What is their exit strategy, other than a quick conversion to the metaphysic? But how? A power shift is hard to implement without an application of power. Need instant access to media. Any power that survives the disclosure will take immediate steps to neutralize its potential opposition. Can there be a bully pulpit without a bully? Something like the Dalai Lama. Be a marginal figure. Testimonial. Indirect phenomena.

[12/14] [\[a\]](#)

The meeting with SR was last Thursday. It was mainly a theological discussion. The briefings issue did not come up. BJ was not even asked about this. CF stopped by to suggest a follow up meeting with RH. Yesterday that meeting was put on hold. BJ knows of eight people who have been briefed. There is a written message from CF stating that scientists, engineers, economists, etc. have been briefed. These names would be recipients of the 'hundred' briefings that he knows about. Either one of these lists could motivate a substantial question being put to Scott McClellan at the daily WHPB. Should we suppose that this eventuality is in the bag? We are just waiting for the right time.

Yesterday my interlocutor was asked about the linkage between disclosure and global politics. He pointed to the former Canadian Defense Minister as a possible example, but I was thinking about the Middle East and Far East. Online I suggested that the Middle East might be a collusion on the part of the theistic

interests to set up the Chinese Tongs, for example, in an international sting operation concerning what might be their special arrangement with the grays, as opposed to Ebens that presumably are more aligned with the former interests.

The [Serpo](#) story has been making a splash in UFO circles. It is said to be coordinated by people at the DIA. This could refer to MASINT. The orbital physics of the planet is said to be anomalous. The indigenous technology is also sketchy. This could point to a UTH over an ETH. Hopefully this story is part of the push for disclosure. Perhaps it would displace the R&D briefing show. That could be OK as long as it lends credence to the UTH.

What then would be the political development upon which we wait? Is it just a winding down of Iraq? Will the Tongs be allowed to save face with a private slapping of the wrist? That would be for the best. What about Israel and Iran? Will that subside before or after D-day? It would be a major event to see both Iran and N. Korea stand down. That could be arranged to coincide. It could also be used to provide some initial cover for the Scott scenario. I still think that one goes better with a briefing question. It is asked in a briefing, after all. Serpo is just over the top in the present context. It will come soon enough.

Another issue raised by this scenario of global politics is that many more people would have been informed. This would probably have occurred post-9/11. This does lend credence to including 9/11. This larger number would accelerate the time-line, making it less flexible. The Tongs could not fail to have found out. Are we concerned that they might fail to deliver NK at the appropriate time?

This way the Pow-t-Be can appear to be more pliable than they would really want to be on these issues. That gives them some extra bargaining power as we negotiate the NWO. The Bush apology might have been so timed. This might also relate to the imbalance in global trade. This is how the Tongs help.

But then how do folks know that the US will not try to steal the NWO? What sort of guarantee can be given. The trade deficit may also be used as leverage in that regard.

How likely that there could be another year's hiatus? That would put more pressure of the 2008 election. It would leave the escalated ME pot boiling for a long time.

It occurs that the Pakistan arms dealing was arranged as a guarantee of our good faith. That is why the Plame affair is so convoluted. Supposedly she stumbled on that operation. How would the neo-cons have put up with that? It was done mainly with Clinton. Iran and NK might wonder if the whole thing was a white elephant. Tomorrow's election may be the first solid piece of the new paradigm or the new conspiracy as the old dogs attempt to learn the new tricks, on the double.

If things are really going this well, and this many countries are already in the loop, then the longer we can postpone D-day, the better off we'll be. Perhaps this is the game plan. But then what about the X2-event?

How long can that be delayed? Then we come back to the impatience of the Islamist radicals. If they are in the loop, could they not blow the whistle? Perhaps not if they don't have the goods. It would then be up to the Visitors to enforce a deadline. What would be their criteria for the best time? What might they now be waiting for? Another terrorist act? No point in that. If in doubt, put it out. Also, the US would probably not want another country to take the initiative. Why not last year? What was the delay? Just waiting for the dust to settle in Iraq.

Also the environmental problems are another reason for being expeditious. Why did we have to mess with Iraq if Saddam was already in the loop? We needed to test our limits after 9/11. We are back in a more pliable state, and we are more fully engaged globally. We are tired of going it alone. We have discharged our 9/11 angst. Things are in better balance now that various issues have been addressed. Any other old business to be aired before D-day? All systems are go? Am I supposed to do something more constructive than jump the WH fence?

Why did the Anderson column come so early in this game? Was it premature? Was it meant to be a time

capsule? It marked the beginning of the final phase. When did 9/11 come on the radar? Was it always there? If the days of tribulation were not cut short, none would survive. But we are already out of the woods, politically. It would be hard to identify that period.

[12/15]

A logistic problem with a bigger loop is the provision of confirmatory evidence. However, as ufology demonstrates, personal experience can make up for much secondary evidence. So we would take a very pragmatic approach. As the network gets bigger it can become nearly self-sustaining. There develops an ad hoc secret society of world leaders.

The biggest development in this arrangement was the shift in focus to the US after 1947. Prior to that time there may not have been such a focus. The cold war provided the means for the US branch to consolidate its position on the global stage. The collapse of the Soviet system was then a mere formality. Prior to '47, there probably was a European focus, mainly between Britain and France.

How did Japan break in? That would have been part of the shift west that would ultimately include China. And before Europe? That would have been the various religious centers. This is where the grays would have been most effective. They would have a lot of leverage. The mythic entities may have mostly been just the shape shifting grays. Or perhaps they are just the latest hegemony for the end game with the Ebens. The hominid from would likely be the most prevalent in the other Mb worlds.

What was the role of HK in internationalizing MJ12? Was this part of his China initiative? That would have been in 1979.

We might wonder how much of the present dysfunction of the WH might be attributable to the problem of insiders vs. outsiders within the WH and the top echelons of the government.

I did ask about Rick's confusion as to whether the interview with the ET he saw was in person or on film. Why did he have so much trouble keeping the story straight? I was told that he had two stories, one for insiders and another for outsiders, but that partly as a result of the blogging effort here, there was increasing confusion as to which was which.

I had been pointing out that I could not believe that I would be the first person to investigate the briefing phenomenon. That pretext for the meeting with Stingray was summarily dropped. The consequence is that CF can no longer plead ignorance concerning the validity of the core story. And that does appear to be the case. The meeting was billed as a turning point, and it was, but the point turned wasn't the one expected. It was more than expected, but also it required an increase in credulity on my part, in order to read it as a semi-official endorsement of the R&D show. Perhaps the meeting with RH will now be seen as redundant, something I usually resist.

Would we be ready for a statement in the State of the Union? What things are left to do on this end? The networking here is in poor shape, but that is not likely to change short of an announcement. Would the SU be a better initial venue than the WHPB? That is debatable. An SU remark would have to be cryptic, and might only cause confusion. There would be no opportunity for second guessing on the response. There is an informal meeting this weekend for us to talk to TM concerning his activity as 'program manager'. Has any one seen a program to be managed? Where is Proxmire when we need him? Why does TM not return calls?

What about the two Georges not talking? Is it possible that GHW 41 is not cleared? Too gregarious? Or is this just a cover for a secret confab? Why do we need to know that he only talks to mom? Or is he angry about not being forewarned? Not a pleasant trap. As Clinton used to say, it is the crown jewel of the federal prison system. How will GW get along after D-day? Will that be worse? Worse than for Dan

Quayle? A lot of pols will not be happy. Dog catching looms large.

Would it not make things easier just to have me go into the closet? There's a thought! Maybe that's where I am. Why couldn't that work. That the X2 event could be posthumous is not a new idea. Why the website, anyway? I'm already in full stealth mode, without even trying. Could Rick not just pick up his marbles and go home? Would the ufologists go on strike? The main problem would be the Islamist activists. Can they not be bought off? What then about the larger loop? Relegate that to fiction? This is contrary to the whole networking of being. We would be back to square one. Too much water under this bridge. *Les jeux sont fait.*

We would be operating in UN mode. This would an interesting reform scenario. But how do we avoid a Vatican syndrome? How will the churches continue to function? There has to be some structure. We are not waving the black flag.

We could migrate to the alternate worlds, or will they be dissolved also? The barriers will be broken down. 3-D living will be increasingly optional, along with its accessories. Diversity and options will continue to be enhanced. Biology will be a big issue. We already see the glimmers of that. And where will all the atoms go?

I've just added a [concatenation](#) of all the pages on the website up through 12/3/05, donated by an anonymous volunteer. It is a 3 meg rtf file. It is strictly WYSIWYG. I'm sure you'll want to carry it around on your Ipod. Don't leave home without it!

I see no way to avoid a significant drama in the near term, nor how R&D will not be caught up in it almost from the start. Do I stick by the large loop theory. These folks would consider it very unfriendly not to have been given a heads up. The gains outweigh the possibility of premature disclosure, which did not happen. Why would not an Arabic newspaper pick up on this story? What would it have to lose? But what would they do with the X2 stuff? If just the technical side, it would only build up the US. There is a miraculous degree of self-containment. This is part of the teleology. There are Thom 'catastrophes' in the phase changes of the paradigm. Those are the X-events.

[12/16]

It should be high time for some resolution. We can't keep Charlie waiting forever, apropos of an R&D confab tomorrow.

We have a big choice. We can have a little chit-chat with Scott McClellan and/or a chit-chat with the Prez. And, honest Injun, I won't tell a soul, only my diary. In other words, we don't have to wait until March. That was meant only as the drop dead date.

We and the Prez need to talk a little Filawsofasi. It won't have to hurt too much. It's just that Rene Descartes made a little booboo. He tried to put asunder that which God has always kept joined together: mind and matter. Now the three Magi have come to set that aright, making the way straight for our little apocastatic rendezvous in the happy hunting ground. Any questions?

See how easy that was! No sweat, no broken heads. We could ask Scott and Gus's friend to sit in with us and then we'd all be prepared for the next day's WHPB. Q: Scott, you and I were both privileged to attended an informal briefing for the President yesterday. It had to do with some philosophical issues and with our so called 'Visitors'. Is it correct that the President will be addressing these issues in a public forum in the near future? A: There will be more information about that, soon; and that is all I can tell you for now.

A small step for a man, a big step for humankind.

Will my interlocutor resist taking this step? Yes, but who are we to stand in the way of progress? We are just the messengers. They don't shoot messengers any more, do they?

A few years ago it might have been possible for us to work through the chain of command. But perhaps even then, you were already too much the goldfish to be able to work the back channels. The R&D show was already untouchable back then. Now there is no other door, but the front door. But perhaps we could meet with John and your friend Porter first. We certainly don't want to leave them out. Anyone else at this late hour? George and I might both be more comfortable if his Auntie Nancy were there.

The WHPB Q&A should come ASAP after the SotU message.

I don't see any less obtrusive way to discharge our all too evident phenomenological responsibilities. Do you, Mr. Phenomenology?

How about them apples? Then more resistance. Do we have to go back and play briefing, briefing, who got the briefing with everybody? That could take a month of Sundays, and who's got that kind of time? No one will tell me that rock has not been turned over more than a few times already. Who are we waiting for? Godot? Known to be tardy, that one. So it's been 2K years. Is another one going to kill us? No, maybe just NYC. If those days had not been cut short, none would have survived. We could wait for the price of sweet crude to hit a hundred bucks, then no one would give a f*** about the end of the world.

Suppose there is another plan already in place. Perhaps the talk about the briefings was only meant to keep me on my toes, prepared for this other eventuality. Is this the only reasonable alternative explanation? How long could that bluff be maintained? Why not just say, look, it's going to be another couple of years? The Serpo stuff seems to be a 'get ready' signal. I wouldn't keep my mouth shut, and nobody would stand for it.

If, as RD says, the Serpo stuff has already been noted at the big house, there may be another plan not overseen by CF. They may want to avoid my shtick entirely. That would have to come out well down the pike. The jockeying would be getting rather intense. What can I do to help our team. Where is the aviary in all of this? Can the aviary be avoided? Not really. It's still the core story. They'll still have to start with that. But if Serpo is gratis the DIA, as it probably must be, then our team has a big foot in that door, anyway. All roads lead to Rome. It is difficult to avoid the obvious. All we have to do now is step up to the plate.

Suppose we do get the go ahead. Can there not be some last minute consultations with various folks in various fields? Would this go against administration protocol? Are they going to black-ball this?

Louise mentioned that [Peter Gersten](#) was on [CtoC](#) a couple of days ago. He seems rather into immaterialism, but not much theism. Most of his material is outsourced.

I don't see how the WH could maintain significant control in the disclosure process. Even MJ12 would have trouble. Where will people turn once they are sure that there is a problem? Unless the media have been carefully briefed, it will be very hard to establish authority in the absence of visitors. And even they would have their own difficulties. Has the path ahead been surveyed? How will the Telos kick in? People are waiting to be pulled, not pushed. Easy does it. This will be the most critical phase. If we're not ready by now, we never will be.

RC's Monzano escapade and my WH gambit were both on the pushy side, and they are both part of the historic protocol. What protocol was 9/11?

How big an issue can TM be? What is the tasking? More likely to be a distraction. Not returning calls. How could this relate to getting to the big house?

How many months till our next meeting? Briefing business has been dangling since September before last. It can't still be an issue since the meeting with SR. What about DIA, Serpo and WH? If it is all RD, then give us the info to smoke it out. He says he knows who the principals are. If this is a rogue op, what better time to confront it? The briefings have not gone away, but they are no longer just our problem. If more investigation is needed, who needs to authorize a priority tasking? Tom and I could finish that off in a few days, but now we need the names up front, and we need BJ to show good faith. If getting this issue resolved is not the program, then what is? But now I have to surmise that it must only be a formality at this point. If there are no major problems with the briefing data, then it is time to make it a public issue. Has he been instructed not to? Why was I deliberately misled about the SR meeting? Is he now trying to cover for a change of heart higher up? When this is so unresolved, why bring in Tom? That is my only real point of leverage tomorrow. So what if there is a problem between TM and MP? Why should that be my problem? They can get over it! This year's initiative has to get a commit or not. What exactly remains unresolved? Is it the Prez? Are we going to get another four years? Says who? What can be assumed about the depth of CF's data? Has he put his cards down? Am I going to hang around another four years? If these issues were unresolved for him, would we be talking to Tom? Tom surely is not going to resolve them. Is CF the only one who cares about this stuff? The Serpo stuff is only going to make the mess bigger. I need to know why the other meeting was a switcheroo. Do I bring that to Tom? Is he starting from scratch? When do I brief him? He would have a very steep learning curve. I got the impression that he knew nothing. I can harp on that. Should TW come by with all this up in the air? It might only get CF off the hook. Naively it would appear that we are now back on hold. Any reason to think differently? When was that meeting plan decided? How am I to interpret the result? What does it imply about the briefing issue? Is it dead or resolved?

The briefing problem has been taken off my plate. Should I not wonder about that? Will something replace it?

[12/17]

If RD's got his guy at the WH, then it looks like it's time for R&D to pay another call over there.

[1/11/06]

Tomorrow I meet Jack and AC in SF, and possible others.

People have stayed away allegedly because of my so-called religious agenda. This will be nothing compared to those who will be upset by the anti-religious agenda. The BPW hypothesis should be a no-brainer. Who would not want to live in the best possible world? There cannot be a BPW without a minimal cosmic coordinating creative intelligence (MCCCI). Who would want to live anywhere else?

I see this meeting as a final preparation for a disclosure event, which I still suppose will be a Q&A at the DWHPB sometime before the end of March. This will depend simply on CF releasing the names of the briefees, preferably into my custody.

While in SF, I want to go over the various scenarios for the events subsequent to disclosure. There will be two main tracks, the physical and the metaphysical tracks.

Most of the emphasis at first will be on the evidentiary problem related to the core story that was outlined in the briefings. In as much as significant evidence is not immediately forthcoming, attention will turn to the politics of the disclosure and non-disclosure. This politics will be seen to hinge upon the how and why of the visitation. The existence of the Yellow Book will be the focus of much speculation. Within that book, the focus will be on its alleged depiction of the x-event.

On the question of how a visitation was possible, attention will focus on Jack's, Hal's and various other physical explanations. These are likely to remain inconclusive. There will soon arise the ET/UT question, and so the Serpo material will come to the fore.

Much attention will be paid to the Aviary phenomenon. That focus will gradually shift toward CF and also to R&D. That is when the fur will really begin to fly. That is when everyone's crystal ball begins to get cloudy.

In SF I'll be rehearsing my lines for the R&D showtime. There will be some last minute networking opportunities to consider and discuss.

An issue that frequently arises concerns the negative encounters with ET/UT entities. These would especially include abductions and animal mutilations and also hostile interactions with the military. My response can only be multifaceted.

1. There may be rogue/demonic elements.
2. There may be competitive factors.
3. There may be survival issues involved.
4. There may be a psy-op aspect.
5. There may be psychological testing.

Whether some alien entities actually have a biological need for animal products, I don't know. I would suppose that there are hybridization issues, but that the biological aspects reported are likely to represent metaphysical processes primarily.

The BPWH is an optimally coherent distillation of many old and new ideas. I challenge anyone to find something better. On the theological side it emphasizes minimalism. On the messianic issue it posits an anti-savior, not in the sense of an 'anti-christ', but in the sense of an anti-hero. A Millennial regime is strongly indicated, and will be anticipated by many as an autocratic NWO, but that is not what is envisioned herein. The Millennium will likely be significantly less the apocryphal thousand years, but its duration will be largely be tailored to our needs and desires.

An issue that needs clarification is that of my motivation concerning the minimal messianism indicated herein. My basic claim is that I have acted responsibly in accord with the inputs and resources provided to me. To be less forthcoming would have been a dereliction. Here I stand. I can do none other. The thesis is pinned to this door.

Upon returning from SF, I go to CF and request some names. A protocol would be agreed upon as well as a way to release the initial data. If delays become significant, I would request that some public pressure be applied, particularly from people on the mailing lists. There would then be more discussion about arranging for the DWHPB. There would also be discussion about obtaining the cooperation of other members of the aviary. If not cooperation, why not?

Also there is some question as to why it was not until this late hour that anyone took seriously the messianic implications of the BPWH. Whose fault was that? Who was not doing their due diligence? Whoever said, 'surely thou jest'!

Will there finally be a messianic support group? What might be its rationale, if not simple agreement? There could be varying degrees of sympathy and plain old curiosity. There could be overlapping agendas and personal connections.

Two conceptual issues of great importance are the strong anthropic principle and non-reductionism. Both of these relate to the priority of the mental with respect to the physical.

[1/12/06]

Even just a SETI style of contact would easily constitute the most significant event in human history. It would reveal to us our place in the cosmic order and it would shed much light on our future prospects. Additionally, if there were any significant metaphysical implications in this contact, they would have to be viewed in the context of the spiritual traditions.

On the other hand, the pantheistic tradition posits an ongoing saga of intercourse with ultra-terrestrial entities. Further consideration would be needed to assess the significance of a given contact within that context. However, the physical presence of a UT would probably be rivaled only by that of the Buddha within the historical record.

If we add the anthropic and teleological aspects of contact, there would be theistic and eschatological implications that would require that a messianic scenario be considered.

Jack and the Nuts&Bolts contingent of ufology are very much opposed to any religious muddying of these waters. Thus are they specifically opposed to the prospect of an R&D style of disclosure. If the R&D process does move forward, the N&B folk will do what they can to overshadow that interpretation of any data that is forthcoming.

Any concession on their part to a purely physicalist interpretation is seen by the scientific folk as a capitulation to the reactionary forces. This puts the debunkers into a very tight corner. They cannot let a single anomalous phenomena slip through their net. By contrast, Jack takes nearly the opposite tack. He wishes to use dark energy and non-locality to explain virtually everything under the sun.

What Jack cannot explain is survival. Belief in the continuity of an aspect of the person is basic to every tradition. The only workaround is to appeal to the technology of a virtual reality. There will be pressure on the N&B folk to move in that direction to accommodate this universal impulse. A VR world is a big step toward the BPWH. People will find it quite strange that Jack can explain everything except survival.

It is quite amazing that it took Jack & Co. nearly a decade to realize that R&D was no joke. He did not understand that the BPW was a package deal. Is he now not willing to play an ancillary role?

[2/17]

"Dan's crazy file"

Once again I feel that I must appeal to your boundless patience while I indulge in my next favorite pastime, next that is to trying your patience. I'm sure you'll understand.

To quote Jack Anderson, 'Global affairs can sometimes hinge upon small items.' It is fair to say that we have judiciously put ourselves forward as such a hinge.

This week another small item has hogged the news over here: Dick Cheney shoots hunting partner.

Well, guess what I'm going to do with these two dots!

You do recall that prior to going to SF I did pen a 'threatening' email to Dick, somewhat under provocation from RD. Jack got upset about it.

Several things happened last week. On Wednesday I got an email from 'Zep T...':

<< I have a question for you if I may; Will you be updating the blog on your website? I note that the last

entry was the eleventh of January. I am looking forward to 'seeing' your thoughts on the site. Also, I find your opinion on the 'Serpo' saga very enlightening.>>

This is an unusually specific unsolicited request. The only previous such request came directly from CF a few months ago. Zep makes reference to the Serpo file, about which I mention on the site RD's information that it was being circulated in Dick's office.

On Thursday I call CF to see about our meeting him. I mentioned to you that he sounded quite negative. On Friday I purchase your ticket to DC. On Saturday Dick shoots his friend Harry. On Monday CF calls, sounding positively enthusiastic about meeting you.

I'm sorry, but do you see my problem here? It is a small world, is it not?

I have mentioned to you about how all six women in my life have been adversely affected by the forces that must be in play here, while directly with me it has been like water off the back of a duck. You are a sensitive. You have more or less volunteered to be the battle ground here. There is a struggle for your allegiance. You have allowed me the upper hand, but I know that I must hold on for dear life.

[3/27]

There is supposed to be a dinner meeting with CF this evening. It is billed as nothing more than a social event. Let's recap and pick up from a previous such meeting a few weeks ago. Recap: yes, Virginia, there is a phenomenology problem. Pickup: the core of the problem includes anomalous interactions with anomalous intelligences. Most scientists would agree that such phenomena, if taken seriously, would warrant a radical restructuring of our worldview. We are afforded the opportunity of rethinking, if not recreating, our world while adhering to certain boundary conditions. This recreation will probably include ample reevaluation of the past.

In order to initiate such a broad discussion one needs a triggering scenario, which optimally would include a prototype package solution. In this particular context, there seems to be little challenge for the BPW package at this time. Given the package, we need to road test it, and then create a triggering event. This latter, might be accomplished on the Sarfatti website with a minimal level of new input. The road testing might best be accomplished on a short notice and an ad hoc basis through personal connections. Such is my possible input for this evening. As I recall the last meeting, there was only a general expression of support, without any specifics offered.

Theism & Pantheism

If we are going to take metaphysics seriously, there have ever only been two main flavors: theism and pantheism. The BPWH (Best Possible World hypothesis) is an attempt to combine these two incoherent systems into a single coherent worldview. It does this by adopting a minimalist and monist version of theism. Some precedence for this departure may be found in the theistic contingent (transplanted to Oxford) of the Cambridge idealists, with [C. S. Lewis](#) being a prominent one amongst these philosopher theologians. Another branch of theistic idealism is to be found in [Personalism](#). (see also [Theistic Idealism](#))

Speculative philosophy of all kinds has died out under the onslaught of the scientific worldview. Philosophers are relegated to discussing the crumbs that fall off the table of science. We are left with the spectacle of a handful of physicists trying to explain why modern physics is not entirely incompatible with pantheism. This is a reverse apologetics. What little remains of speculative philosophy is pursued under the cover of the history of philosophy, which allows very little room for innovation. It falls upon us amateurs to attempt to carry on a once great tradition. We labor in the neglected recesses of the Internet, waiting for God knows what.

The BPWH is an optimistic metaphysic, the most optimistic possible. Such optimism is the necessary basis for any rational, coherent system of thought. Reason may only be grounded in the Creation of a benign Creator, and only if that Creation is fully participatory on the part of all rational creatures. Thus is our Creator necessarily self-minimizing in deference to the optimal participation of the creatures. This is one aspect of the pantheism inherent in the BPW.

The essential optimism of the BPW creates a conundrum for its would-be evangelist. The struggle of ideas loses its sense of urgency, simply because the truth of the BPW is fated to prevail at its appointed time, seemingly regardless of any moral exercise of free will.

[4/5]

Previously on these pages I have only mentioned **personalism** in passing: [here](#), [here](#), [here](#), [here](#), [here](#), [here](#), [here](#) and [here](#). Also I often use 'self' interchangeably with 'person'. Let us also note that personalism and existentialism share many features. With respect to metaphysical theism, there is a broad and narrow path, or a Mahayana and Hinayana, to borrow and redefine these terms coming from Buddhism. The BPWH has both of these aspects, depending on how strictly one wishes to take the precepts. Where lies the truth? Somewhere between. Note also that the Z and X of the AZO/X/QRP archetypes are essentially personal constructs. Christianity, historically, is the repository of the personal aspect of theism. Note further, that this personalism is a logical extension of the tribal covenant of Yahweh. The universal personalism of the x-event could not have had any other historical launching pad.

A major problem confronting the BPWH is the borrowing of the historical lexicon of theism. Many of these words take on new and broader meanings in the context of the BPW, and this may cause confusion in the mind of the neophyte. We need to take steps to minimize this confusion.

Let me now return to the important conundrum of yesterday. Therein is used the term 'evangelist'. This conjures the image of the Bible pounding preacher, in the minds of most non-Christians. We could simply drop the term as being too loaded with provocative and divisive connotations. OK for now, but there are higher meanings contained in these words that are not captured by their substitutes. It will be a long process to be able to recover those original essences out of all the crud that has become attached to them.

In any case, why bother to proselytize, ooops, advocate the BPWH, when, by its own lights, it is fated to prevail regardless of any deliberate individual effort? We could ask the same thing about the Creator and Creation. If the BPW is a logical necessity, does not the Creator become superfluous? In general, personalism seems to come into direct conflict with the overwhelming nature of the cosmology. The personalism of the BPW is simply to be found in the definition of 'Best'. 'Best' is ineluctably normative. Norms entail perspectives, perspectives entail persons. The BPW of necessity assigns logical priority to the personal. The personal is an irreducible combination of reason and emotion. Both aspects are required to shape any given norm. The logical telos of reason and emotion is simply a cosmic agape or just plain love. Thus do we avoid the absolutism that has dogged theism from the git-go. Any person is essentially a social being, and this applies particularly to God. The separation of Creator and Creation is embedded in the primary illusion of historical time. The archetypal polytheistic Zodiac (see [AZO/X/QRP](#)) [a] expresses the society of the Godhead, as, of course, does the (dialectic) Trinity. We are simply extensions of the primal zodiac. We are the projections of God onto history, the logical focus of which was the incarnational x-event.

We are the aesthetic agents reifying the Norm that is the BPW. Collectively, statistically we have very little free will. In the middle reaches of social activity, there is much jockeying for position which is not subject to cosmic necessity in its individual details. In as much as one becomes an historical figure, that is tantamount to surrendering to the necessity of the Norm. Freedom is to be found more in our imagination and in some of our dream states.

We can envision a dialectic of pantheism and theism that will prevail upon the global discourse concerning our creaturely fate. The networking will need a social nexus of some kind, and here is that prototype, in as much as others may wish to avail themselves of such a touchstone.

[4/6]

A correspondent writes:

How does one advocate personalism from a pantheistic perspective?

In fact I acknowledge pantheism only to the extent of agreeing that everything which exists constitutes an all-inclusive unity. In other words, nothing exists outside of the Consciousness Continuum.

The fundamental principle of personalism is, in itself, **the experience of being**.

Kevin Schmiesing writes: 'It has been said of many schools of philosophy, from pragmatism to phenomenology, that it is impossible to arrive at a rigid definition of the school. Instead, the term pragmatist or phenomenologist represents an "approach," a "perspective," an "emphasis." The philosophical school of personalism is most exemplary of this problem. Personalism is not a philosophical system at all, insists André Ligneul, "it is more an attitude that branches out into nuanced perspectives, bound together by one central idea." On that one central idea, perhaps, all personalists might agree: personalism is, as one historian of the subject puts it, an "**affirmation of the absolute value of the human person**." A History of Personalism By Kevin Schmiesing:

http://www.acton.org/research/pubs/papers/history_personalism.html

And in all of history, nowhere is that point more strongly underscored than in the incarnational x-event.

But then we do have the caveat of the [apokatastasis](#), where there appears to be a subsumption of the individual identity. This is perhaps the most significant bone of contention between theism and pantheism. This is where the issue of romance arises.

We romance God. God romances us. What is unique to Christendom is chivalric or courtly love. Here we see the direct consequence of Platonism and incarnation. The lady is the savior of the knight. The

lady is just quasi accessible. The cult of Mary is reputed to have been inaugurated in part to serve as an antidote to the excesses of chivalry. But is there not actually a synergy between the two cults?

The present global impact of the Hollywood ethos is just the trickle down theory of Mariology. 9/11 was an obviously futile attempt to unseat Mary. Mary rules. Capitalism is only the temporary servant of Mary. Capitalists be forewarned. Know your territory. Know your limits! Understand the cultural significance of the public unveiling of the bride. Has any other symbol had a greater cultural impact, excepting the cross? Are not these two symbols synergistic? Two sides of the same coin?

There would be loose nukes to worry about, were it not for the cosmic protection afforded us Marianists. That protection has a time limit. Armageddon competes with Revelation. The powers-that-be are well aware of this fact. Herod was housebroken with a trick of the light. There are no obstructions to truth and justice. We have met the enemy and he is both us and ours. We have only now to talk Jack down from his beanstalk of paranoia. That may well be our final obstacle. Jack, meet Mary!

Oh yes, about that bone of contention. It's all about the **Hieros Gamos**, another feature unique to Christendom, and which I have frequently been misspelling herein as 'hierogamos'. To find the many references here to it, download [DanSmithBlog.rtf](#) and search on 'hiero'. [6/21 -- now it is possible to Google search on the BPW site.] Is that too onerous? Someday I'll have to correct the misspellings.

The Hieros Gamos or apokatastasis is our eschatological tender trap. Velvet hammer?? We lose ourselves to gain the Kingdom. How big is that loss? Just big enough to cause us to hesitate for the Millennium. We do want our Millennium, don't we? Back to romance.

A prime reference for romance may be found in the Dictionary of the History of Ideas (1973) under the heading of 'Love', an essay of c. 30pp by Denis de Rougemont.

Denis' first definition is, 'the generative principle of the Cosmos, hence the very being of God (creativity).' There is a mouthful. He goes on to posit love as the agent of the cosmic dialectic, and subsumes the problem of love into the problem of the one and the many, the perennial problem of all philosophies, see, e.g., [Are the souls different from God?](#)

Denis points out that Christianity is the one ethical system which can and does place no strictures on love, simply because its God is first and foremost, the God of love. Marriage was not a sacrament of the Church until well into the second millennium. In contrast, Greek ethics speaks frequently to the economics of marriage.

We have the oracular axis of [Delphi](#) and Jerusalem to contend with. Mary, the incarnatrix, is the key. The mother of God is no longer just a biological vessel. She is the ultimate Creatrix. She is the principle of reification, the vitalism of Creation. She is the Great Attractor. The Matrix is an end in herself. She is the primary pole in the dialectic with her divine Son. That is what gives life to the mere pedagogy of the Greek/Socratic dialectic. 'The generative principle is the very being of God.' The Delphic oracle was mere hot air, without the actuality of the word that was made flesh.

The second coming needs to recapitulate the dynamic of the Delphi/Jerusalem dialectic, in all its historical singularity. The Dome of the Rock is the Mother Church. The Delphic logos is the quickening seed. There are many dimensions to this dialog, mere words can hardly do it justice. We will soon all be living this dialog. That is our Hieros Gamos, our apokatastasis.

From Denis:

Finally, St. Paul's statement: "Husbands love your wives, even as Christ also loved the Church..." (Ephesians 5:25) raises marriage to the level of highest love (against the general opinion of the Greeks and of religious Asia) and makes matrimonial love in all its aspects - sexual, social and personal - a form of spiritual existence.

Is Paul anticipating chivalry and Mariology? And wherein does the Magdalene fit? In the hypostasis of love, Pandora's box had been opened in the most transcendental fashion. Not to be closed again.

The charism of love, however, remained dormant in Christendom until, quite abruptly and quite literally, it was given legs by the troubadours in the first part of the twelfth century. This was actually the outworking of a not so dormant gnostic heresy. The troubadours were merely its fifth column. The Church eventually tried to fight the fire of the gnostic passions with its own auto-da-fe. It lost the battle. Nay, it lost the war. Gnosis is simply the romancing of God. Science has done its very best to quench those same passions. Indeed, science was from its inception seen as the harnessing of the gnostic passion. Finally it failed to deliver, but it did produce the means of the final revelation: the unwired planet, the Ipod oracle.

Has romance been corrupted by the Capitalists, et al? It has simply found a convenient repository in which it bides its time. Wherein it eats away mainly at the patriarchal hypocrisy that has become Islam. They deny romance, and they get gigabytes of pornography piped in from the heavens. This fleshy revelation sets the stage for something more multi-dimensional and energizing. The visible crumbling of that culture is the opening in the global spiritual/intellectual gridlock. We chase that ambulance. Islam has its own Sufi gnosis. It will need to hang on to that thread for dear life. That thread is networked to the impending global gnosis. Denis points to strong historical links between the Sufis and Cathars.

Denis points to Manichaeism (Mani 210-276) as the progenitor of the later Gnosticism. His dualism bears much resemblance to that of the BPW. God was not omnipotent. The 'material' world is a mixture of the primal duality. The Manichaean duality tended toward good and evil, while that here is more like yin and yang. One sees traces of Zoroaster.

It is this same dialectic which prevents the apokatastasis from becoming a simple collapse or annihilation. With the dialectic there is a 'bounce' into other dimensions beyond space and time, but not beyond participatory perception. In those dimensions of eternity, temporal creation remains an ever present reality.

Correspondent:

Are the souls different from God?

Are our sensory organs different from us? Or are they essential components for the experience of being?

Broadly speaking, we might view the individual soul as a self-aware sense organ, feeding stimuli to the complete organism. As the individual is in fact part of the holistic Gestalt entity there is no separation of [God] and soul.

As I was saying to Gary, our bodies are accoutrements, cosmetic, dramatic accessories that we don for the duration.

There is ever only a network of being. All being is social being, from the Olympian Zodiac, on down.

We have eyes to see, but they are really just virtual windows on our souls, as the Sages understood.

Leibniz said that the monads have no windows. That is also true, because the relationalism of the network of optimal being is entirely internal, i.e. predicated on the holographic, bootstrapped essence of every being. Space and time are the primary illusions.

Those vibrating strings in your vision were an externalization of the pre-ordained internal harmonies. We are the orchestra tuning up before the Conductor arrives.

[4/20]

OK, here is another crazy file.

You have not been reading the paper. There is a major shuffle/purge going on at the White House.

This is also a reference back to RD and his insider information, which then connects to your light trick. That is why we are in the loop.

BJ refers to one tree, i.e. the Administration. CF refers to several old trees. He is relating the Admin. shakeup to an unraveling of the cover-up. This is not to say there is a direct causal relation, but that there could be some connections. This is what RD suggested when he said that Scooter Libby's replacement by Stephen Hadley in Cheney's office was chosen in part because of his UFO connections.

If a similar thing is going on now in the West Wing (Pres) in addition to the OEOB (VP), then it would seem that GWB is taking over the disclosure process, and that CF is involved in the selection/vetting process.

All of the above is based on the fact that we have a need to know. Knowing CF, this info is not gratuitous for us. BJ had obviously been primed by him.

We should have another chat about the political birds and bees, or is it the birds and fish?

We ought to sound RD out about this in some properly subtle fashion. Ideas??

It would probably be more accurate to say that the Pres was being better positioned relative to an anticipated disclosure.

This is against the background of an acquaintance of Jack's, UG(?), being invited to the WH. It was allegedly about Iran's nukes, but I suspect the consultation may have been broader. The above correspondent can confirm the identity. He was recently re-upped.

[5/4]

[Me:] In what ways are we influenced by VALIS?

[Jack:] <image of Michelangelo's 'Creation of Adam'>

Is VALIS capable of creating virtual realities?

Sure

Shant we assume that there is a meta-VALIS that exists across all amenable worlds?

Yes

What should we or can we know about the designs/plans that VALIS may have for the many worlds?

Do not seek VALIS, VALIS will find you.

In what sense do our minds/thoughts reflect the mind/thought of the meta-VALIS?

Man is in the Image of God.

And how will VALIS ensure that this technology is not abused?

It doesn't. If we do not get it then we all die in the kind of scenario attributed to Eric Pianka. Metric Engineering is our escape route to Other Virgin Worlds.

So VALIS is going to sit back while we go on a Universal Rampage?? It is often the case that people who are narrowly brilliant, are notably lacking in common sense.

It appears to me that Jack has finally got himself into a corner, after finally being cajoled into acknowledging the logical necessity of something like VALIS, given the presence of ETs.

There are only two ways to explain the ufo cover-up:

1. hostile ETs & conspiracy
2. disturbing message from otherwise benign ETs

The first option, held by most ufologists, simply does not stand up under scrutiny, once VALIS comes into the picture.

The second option & a little basic metaphysics => BPWH.

I almost got Jack into this corner about a year ago, but he had not volunteered VALIS back then. I don't think he or anyone else is going to now be able to deny the logic of VALIS, once it has been acknowledged.

Now the ET huggers are going to have to contend with the second option. They too have been playing the conspiracy card, and rather stupidly, at that.

What will Jack do now? That is difficult to predict, but we'll find out soon enough. I will not make it easy for him to slough this off. He must have sensed that this shoe was going to drop, sometime ago, and that he was building his castles in the sand.

In the meantime I have been reading [Colin Bennett's](#) 'Politics of the Imagination' (2002), a retrospective on the subversive life and times of Charles Fort.

The other read has been Roger Penrose's 'Road to Reality' (2004). It is a lengthy defense of traditional cosmology vis a vis the recent encroachments made therein by the string theorists, as outlined by Leonard Susskind's 'Cosmic Landscape' (2005). Therein, Lenny argues strenuously for the WAP.

Roger seems intent on a return to the Einsteinian vision of God not playing dice with the universe. He does this with concerted attacks on Copenhagen, Inflation, String Theory, and the 'many worlds' interpretation of QM.

Here is an earlier email [5/2] to Jack:

Jack,

Here are some preliminary suggestions for a foundation for a dialog.

As you have pointed out, the cosmologists are becoming a bit restive about having their subject dominated by the String Theorists.

This also means that the pendulum is likely to be swinging back from the extreme views of Susskind and Tegmark, to views more compatible with Penrose, Hawking, etc.

Speaking of Hawking, have you seen this?

http://www.worldnetdaily.com/news/article.asp?ARTICLE_ID=27721

<< God may play dice then, but only if the dice are loaded. If the universe depends on observables, it also depends on we the observers, so the dice had to somehow guarantee that we humans would emerge. Physicists call this idea the so-called "Weak Anthropic Principle" from the Greek "anthropos," which means "man" or "human." >>

He protests too much that this is based on the WAP. It sounds rather more like a FAP to me:

<< "The usual approach to the problem of initial conditions for inflation is to assume some initial configuration for the universe and evolve it forward in time," Hawking said. "This could be described as the 'bottom up' approach to cosmology."

The quantum nature of the cosmos, however, dictates the "top down" approach, Hawking claims, because the history of the universe depends on the mountain, the dice, the snowflakes and the snowballs. In other words, the universe "depends on the observables being measured.">>

Here is the original paper:

<http://arxiv.org/abs/hep-th?papernum=0602091>

This 'top-down' approach of Hawking may be compared with Laughlin's 'bottom-down' concerns with strong emergence.

Combining these two approaches with the VALIS idea provides a strongly teleological/FAP type of cosmology.

This presents an opportunity for you and me to get out in front of our more cautious academic brethren wrt to Cosmology, in addition to the physics component that you have already carried out.

There is then reason to consider the hidden variable, implicate, twistor space of Penrose and Bohm as being the medium for your VALIS/ODLRO ideas. That implicate order provides the basis for the 'invisible hand' of VALIS to operate on many levels in a robust fashion.

This raises the possibility that an 'MJ-12' type group may already be cooperating with such a cosmic intelligence in the process of mitigating the encroachment of hostile entities.

As I said, this is a rough and partial outline of some overlapping interests.

Dan

Jack summarily rejected this gambit:

No, Dan, you still don't get that all you really have in your BPW is WAP in disguise. Your argument is basically irrelevant and redundant. You are simply pointing out that we are here because we are here. That is, our pocket universe on Lenny's cosmic landscape permits a VALIS that we are part of. We also have time travel to the past that evades Penrose's Apocalyptic Collapse to singularity.

Rather than getting into a protracted discussion of WAP/SAP, I picked up on VALIS, leading to the latest

exchange. I don't yet have a direct route from VALIS back to SAP/FAP. One approach is the materialist one, simply to have VALIS interject itself into the universe creation process. What is needed is a path from VALIS to immaterialism. I can do this by appealing to VALIS' probable preference for virtual over physical worlds, but this is clumsy. Once VALIS gains control of the temporal dimension, the FAP is the default condition. The ouroboros is set up after the fact and history is rewritten, a la Hawking above.

The other way is to appeal to the Bohm/Wheeler/Penrose informationalist underpinning of space-time physics, a la [Gary Bekkum](#) (private communication). Informationalism is 'neutral monism' in modern garb. This is the preferable route, it being a stepping stone to immaterialism.

It would help if we could get VALIS implicated in strong emergence. This ought to be possible with the hidden variables, implicate order, invisible hand approach of David Bohm.

All of this pushes us more than half-way to an idealist, rational theism.

On another topic:

[xx:] Not yet. I imagine the R&D show will be addressed. 9/11 is the centerpiece of their remote viewing phenomenology topic. They have international contacts in all the right places.

[Me:] CF has a very significant and very ambiguous role in the ups and downs of psi-spy.

The R&D show sheds an unusual light on some of those issues and raises others, and it does point strongly to a connection with 9/11, and to a UFO/cosmic context, of course. He seems to have set up the game so that folks will not be able to finger him without opening up this Pandora's Box. I'm the visible proxy for Pandora.

If they want to do more than a rehash of already dated material, they cannot avoid these connections, IMO. It could be interesting. It would further complicate my already convoluted dealings with him.

A nibble from the media.

Gary,

Here is an analogy for you:

You and Jack are attempting to understand the cosmic computer by examining only the hardware and the machine code.

There is no harm in that, per se, but I am suggesting that we can also go up a few levels of abstraction and consider the source code, the flow chart and even the design specs for the Operating System. Is there any harm in this?

Why do you insist on approaching the problem from bottom, when you may much more easily work from the top down? Is that not how the programmer works? Is that not how our own thinking works? Should we not expect there to be significant structural similarities between our microcosmic computers and the cosmic computer?

I should add that, according to the principle of the Universal Computer, the actual hardware and coding schemes have no direct bearing on the input and output of the information of any given computer.

Dan

Jack,

<<Dan you can lay down and die in The Eschaton in your White Guilt with all the other Liberals with Mental Disorders if you wish. I just got off the phone with Michael Savage and we are going to FIGHT to the LAST MAN STANDING! We will not go willingly into The Ovens!>>

More power to you and Michael!

If you display in public the same mental processes that you present here, I think you will help to generate interest and concern about the source of your flagrant digressions.

This is similar to what happened when Bob C. 'jumped' the fence at the Monzano Weapons Facility. This 'little' incident is what brought the Aviary to the attention of some of the Big Shots inside the Beltway.

Be sure to name as many names as you can in regard to your sources. Especially be sure to mention Catfish/MASINT/Phenomenology.

I am well aware that many in this little audience may suppose that my own mental processes may have been similarly tampered with.

Apropos of which, we are receiving independent media interest reportedly vectored on the self-same target.

Might we suppose that this is a mere coinkydink? Or might we wonder if strings are being pulled?

Fight the good fight! Catch you on the flip-side, if I don't see you in the funny papers.

Your comrade in arms,

Dan

Ain't this fun?!

[5/5]

I'm reading Mark Bedau's '[Downward Causation and the Autonomy of Weak Emergence](#)'. It is a concerted attack on Strong Emergence. He employs some choice phraseology, which he won't let me copy over to here. Materialists are won't to distrust their fellows, for all the best materialist reasons.

Mark is a philosopher of science who is blithely ignorant of the observer problem, not to mention Quine, etc.

[5/7] [[a](#)]

The center piece is still RD. I think he will not fail to entertain. Obviously he entertained John and Mark.

A big issue for me is RD's connection to CF. CF, yesterday, declined to meet with RD. BJ has declined also to meet with CF, under CF's instructions.

With BJ's continued game playing, etc., he and CF are looking more connected. Either they are now hooking up, or they are now willing to be more visible about that.

I suspect there is a significant triangle of RKR. We are being given a view of that. This is as likely to be the public tip of the mj-12 iceberg as anything. These are the three main actors, and they cannot carry off the act in one place together, lest they be tripped up.

This is my working hypothesis. Also, I continue to suspect that we have RKR-Jack to a significant degree. Jack, at least, uses the J&D show as a way to insinuate himself into RKR. Finally we have the RKR&JCD show. This is where the action is, if it is anywhere.

I don't see any significant competition. This is the revived Aviary & Aquarium show, revived after many years and false starts.

MJ12<->RKR<->JCD is the complete formula. There is a two way street. We don't see the actual feedback, but it is there.

This is the picture that I take to the picnic. I don't intend to directly 'elicit' any info from CF, but I will try coming at this tripartite hypothesis indirectly from several angles and see how CF responds. This is hypothesis testing. Based on this results, it may be advisable for you to further test this hypothesis with RD.

If the [above] hypothesis seems to hold up this week, then what?

What are we supposed to do about it? If proactive, how so?

In the MRJ scheme, we can assume it also works as a triangle: mj12 <-> rkr <-> jcd -> mj12.

There is another triangle: you/contactees <-> 'magi' <-> mj12. This is what has shifted the dynamic and hopefully is forcing it to a new level.

RKR are not directly involved in the second triangle, and this is forcing them to be more forthcoming, lest they get left behind. But this has been part of the staging from the start.

The issue for us is, what is the next stage, and how do we expedite it.....

Ok, continuing this little monologue.....

What is the target for me to be aiming at in my various locutions?

Certainly my target is to get the BPWH to the threshold of public discussion.

With the proffered debriefing scheme, there was a definite path to the public through a Q&A @ the daily WHPB.

This offer was taken off the table at the point of the Frisco Fiasco.

On came CA, spearheading a contactee penetration of the Aviary/Aquarium.

<[CA:] It's not just the entities constantly morphing, the whole political arena morphs. You have to be a little free flowing Dan. You either sit firm like a rock in the ocean or you dive in and move with the water. And some of us have the ability to stir those waters from their deepest depths – unseen. I sometimes think I have a little more faith in the hand that moves us than you do. However, I'm happy to be your sounding board – that's my job isn't it? >

As I was saying, the game has been morphed, with the contactee element beginning to insert itself into

the Aviary/Aquarium dynamic.

Does this remove all initiative from the political A/A players?

What is the new direction for the A/A contingent? (12 step program??)

I guess we'll just have to stay tuned.

[5/20]

There was no meeting with RD last week. Ostensibly BJ was partially to blame. He expressed concerns about inadvertent disclosure. There was, at the same time, an intimation that RD's trip would have been covered by a cleared group. CF disputed this concern on the part of BJ, suggesting there might have been more personal issues. He noted that RD has been in nearly a full disclosure mode for some time, and furthermore he has no clearances. Note the apparent contradiction. [5/23: CF has since pointed out that the trip vouchers would probably have been from private, not USG sources.] I responded by suggesting that RD was being scripted, no doubt.

BJ had stated earlier that he was advised not to meet with us by CF. CF claimed that this was for 'security' reasons. By the same token, JS was given high marks for 'security'. This is a noteworthy remark. It suggests that the 'security' in question is something more along the lines of adhering to a script. JS and CF are the only players here with demonstrated performance skills. An informative set of non-meetings, it would seem. I was also told that the Cat had scratched out the eyes of Ocelot, q.v.

There is supposed to be a meet with CF soon. Issues: UG @ WH, plan approved by RH, clarification of the above. There is to be unspecified new business.

My perennial issue is revelation vs. disclosure and the timing thereof. If CF has taken on scheduling tasks (Ocelot), then it is mano a mano concerning the advisability of delaying a resolution of the R&D show, presuming that the theatrics with Iran, etc. are tied into this schedule. Where lies the greater risk, to delay or not to delay? Is the answer not obvious? How far are we to push the window of opportunity? Seems like we are still waiting on a signal. I hope we don't get our signals crossed.

Along these lines, it should be noted that besides a filming of RD, there was an inquiry about something closer to home, and even to 9/11. This is now on hold. JS reveals that he is to be featured in another media project. Will these be sufficient to tip the scales and break the glass ceiling? Based on past experience, there will need to be something to get us beyond the entertainment venue.

Serpo, in the meantime has gone quiet. It appears that this may have been due to the intervention of RD, although he appeared to be backing it. Probably the whole thing was scripted to begin with.

Bottom line, I have no visible lever, unless CA is in that equation, perhaps, semi-visibly.

I have recently finished reading three books, unusual of late.

Colin Bennett's *An American Demonology* and *Politics of the Imagination*. The first is a biography of Cpt. Ed J. Ruppelt's year in 1952 as the first and only USG ufologist. The second is a biography of Charles Fort. In both cases, Colin very nimbly takes us inside the psyche of the hero and of the times. Fort was the first of the postmoderns, Ruppelt was the last of the moderns. Between them they set the limits in which the R&D show struggles.

David Klinghoffer explains *Why the Jews Rejected Jesus*. An admirable job. If anything, he underrates

the messianic implications of his thesis: God's unfinished business. It certainly plays right into the BPWH. One might easily take offense at his characterization of Israel as the nation of priests, vis a vis the rest of us. A nation of God's witnesses might be more accurate. Curiously, David does not mention the vibrant Lubavitcher movement, bringing up only the sorry old case of Sabbatai Zevi. BTW, the Lubavitchers are a sect Hasidism which professes panentheism -> an apokatastatic eschaton?

Regarding the Lubavitchers, it is not clear how their messiah will convert the world. They follow the Kabbalah, but shy away from metaphysics and philosophy. The Sabbateans had very little impact outside of Judaism. The Hasidic movement developed in conjunction with the Sabbatean enthusiasm, both of these having roots in the mystical, kabalistic side of Judaism. Clearly there is a close connection between the mystical, gnostic, charismatic and messianic impulses. Panentheism embodies all of these to a degree. It also implies immaterialism, does it not?

A book I did not finish was Roger Penrose's *Road to Reality*. Roger delivers strong arguments against the various many-worlds and probabilistic views of physics that are used to support the Weak Anthropic Principle. It is notable that he has shied away from his previously strong support of a quantum explanation of consciousness.

[5/21]

Chez CF. Tentative invite. I go anyway. We have a chat on the back porch. Nice weather! Next step? Break the glass ceiling.

I need not assume any specific knowledge on his part, but play off his suspicions that R&D might not be a joke. Pleading ignorance is beside the point. If it is a joke, this might be an auspicious time to end it. Do we want a punch line?

Perhaps he can do nothing more without quitting the government. Can they put him away for threatening to leak classified material that could pertain to a Second Coming? I am prepared to offer a golden parachute. He will laugh, somewhat nervously.

Is there an alternative plan? Who has the script? What are we waiting for? What are the risks of action vs. inaction.

Does the world not need to be saved? Is he aware of a better plan or offer for its salvation?

He and I are the designated fall guys in this operation. When do we take the fall? If we go off on our own we don't get protection. Who could protect us anyway? Nutcase Oswalds would have already been programmed. But too late for them now. The cat is already out of the bag.

Is there anything else to be done at this point? What other unfinished business do we have? I'll bet that we have come a lot further with our end of the deal than anyone expected. Need we push our luck further? Are we not to the point of decreasing returns?

Back to [panentheism](#). (Hey, notice that site-search is now working on BPW. A few months ago it was not. I cannot give a direct link, because it works only within Google.)

The first declaration of my philosophy was at about age twelve when I claimed to be a transcendental pantheist. I note that this is just the definition of panentheism. I had not heard that term until I read Whitehead, which might not have been until after UMD in the late seventies.

According to Wiki, panentheism may be usefully associated with the Hellenistic/Christian Logos, herein also designated as AZO/X/QRP. In ancient cultures, panentheism was associated mainly with Goddess worship. (God is coming back, and She's pissed!)

Note the Wiki distinction between pan-entheism and panen-theism. BPWH leans toward the latter, IMO.

CF: unfinished business. (1) Debriefings: whither do they go? (2) RD still on the loose. Can we not do an expose? Who are his contacts in DC? Is there no gummint complicity implicit in the lack of exposure of him? Is the the entire UFO conspiracy case explained by the USAF wanting to save face over a petty thief?

Am I being backed into a corner by CF? Fifteen years in good faith and what is there to show for it? What has the R&D show contributed to the greater good?

It does not matter that CF has access to a smoking gun. He would have enough circumstantial evidence to more than justify a serious investigation into the source of the core story. Aside from that, he has admitted a "phenomenology problem".

If CF cannot blow the whistle on phenomenology, who ever will? Is this issue not worth the trouble? Why are we closing ranks on this? What about the religious people and the religious factors in all of this. Are there no tensions created thereby?

I'll have to choose my target carefully. Is it the core story or the phenomena? Just call it disclosure.

We seem to be back to a holding pattern, as in 2000. Who will be responsible for what comes next? Is nothing being done to confront the underlying dynamic?

The alternative to disclosure is revelation. That path goes through Jack. I have seen no movement there since day one. Jack is secure, amenable to scripting, and on the dole. If we can't leverage that, what will we ever do? Perhaps this has got to be the prime focus. I have requested assistance with Jack on numerous previous occasions. Nada!

CF tells Jack in no uncertain terms that there are aspects of my metaphysics that must be taken seriously, at least on a contingency basis. A corollary is that there may be no physical explanation for the phenomenology problem. Will this prevent Jack from shouting me down? CF will have to avow that due diligence has been taken on these issues. Or is there an appropriate venue from which Jack can be excluded, as suggested by BJ?

According to CF's best information there is no warrant for the exclusion of metaphysical speculations, such as mine, from the phenomenological arena. This is the simplest message for Jack.

[5/22]

Six hour **meeting** [a] yesterday. Mostly a rehash of old items, but with more innuendo. The mundane focus is to be an 'investigation' of RD, with several other affairs in play. Aviary involvement with Jupiter Technology, et alia, is still an issue and it may be linked with the RD investigation, if necessary. In its latest guise JT & Co. wish to emulate the 'success' of Blacklight Power. The latter was founded by four former CIA officers. The physics is alleged to be bogus. It might, however, be intended as a conduit for something non-physical. Neo-JT would like to re-present that image. To add to the confusion there is some overlap here with a resurrected version of a now defunct CIA venture capital front. This new venture is linked to the TIGER committee, which has several phenomenological aspects.

Then there is MD. He is beating the bushes in DC to launch a hunt for buried 'treasure' in a middle eastern location. The 'treasure' in question could range from WMDs to used stargates. The 'clues' come from a putatively transmundane source. In a couple of weeks, CF and I will meet with one of the participants, RH, previously referenced. Eschatological implications are expected.

As I attempt to put some sense into this 'information', another allegation surfaces, that CA attempted to obtain classified, off-topic info from CF at our earlier meeting. I was there, it didn't happen. I suspect that we are witnessing a calculated effort on the part of CF to make or break our still tentative inter-avian channels of communication. Communicate or perish, is the word.

A generic problem in this arena is that the participants often find themselves in situational performances where they do not understand the rationale, their own or of the others. Folks wonder as to the the puppet master of the soap opera. Mind bending is in force. Sounds like fun, but it can be disconcerting, and may easily implicate (trans)national security. Can chicken little ameliorate the confusion? I guess we'll try anything once. Or twice?

CF has agreed to lean on JS about our communication difficulties. This is supposed to be related to the above investigation. That connection remains a bit obscure, but I'll be happy to speculate if anyone is so inclined. To the best of CF's information there is no good reason to exclude metaphysical speculation from the phenomenological arena. This is meant to be a definitive statement on the subject.

Back to RD. Ever since Bob's EfD book last spring, RD has been more in the public eye. There is no indication that the public interest in him will diminish. The public now has a right to know the validity of his information. There is no way to fulfill that need without an independent, public and officially sanctioned investigation. I am not privy to the precise status of this alleged investigation at the present moment. It appears that I am being used as the stalking horse cum scapegoat for this nascent enterprise.

Any questions?

[5/25]

There has been little **fallout** [\[a\]](#) from the previous entry, nor have I pressed any of the points.

Thus do we have an apparently new disclosure front. This could be meant to either augment or replace the previous debriefing initiative that seems presently moribund. What does any of this have to do with the curtailment of Ocelot? Will this 'investigation' simply be dangled out in front for a few months, like the 'debriefings', only to disappear in its turn? This will depend on the ability of RD to remain in the public eye.

One point of the fallout hinges on the suggestion that these fringe tech firms are trafficking in alien technology:

And not always fringe technologies: but those that are known to be mainstream or nearly so, or moving in that sure and certain direction, and which share respect amongst thieves.

To my ear this sounds rather like 'honor amongst Promethean style thieves.' Thus would we have an additional and relatively benign rationale for nondisclosure: to wit, the insiders wish to maintain their private alien franchise for personal respect and gain. This is in addition to the apparent Christian wing of MJ-12 which wishes to sit upon the allegedly religiously disturbing message. These two interests effectively complement and compliment each other.

The suggestion on the part of BJ was that the new technology would lead to a further 'flattening' of the Earth, a la Tom Friedman who points to the flattening effect of the Internet. I don't see the connection

here unless it is along these lines:

I also personally give a very short shrift to claims that keys to a kingdom of the mind are granted by some sort of fiat to Grandiosity. I believe they are granted to us most often by Grace, and retained through discernment.

Now we're talking. Sounds like the 'mind-melding' of CA's instructors. This would definitely flatten things out, but in an organic and teleological fashion. This is where JS needs to tune-in. I need to tune into the possible role of fringe tech in the melding exercise. This is something that I have been attempting to discount. But one can see that there might be some benefit, even just on the placebo level, to using techno-alchemy in jump-starting the apokatastatic melding. Nothing like a high-tech magic carpet to help get our minds in alignment. If you can't fly the craft without the critters, then we will learn to mimic the mind-melding of the critters.

Disclosure of too dramatic a sort might serve to disrupt the nascent mind-melding that is already underway. That is one reason why we need to combine disclosure with revelation, each keeping the other in check as we progress on the BPW path.

[5/26]

If the above implications are correct, it may be that the privatization of disclosure is further along than previously suspected. This is a continuation of disclosure by rumor. It may also be that the organized religions are further along this path. Would these developments work to avoid the drama that has been expected in these quarters? This depends on the sophistication of the scientific establishment, i.e. can they finesse the messianic, paradigm shifting event? How far can mind-melding progress without disturbing the media? Can we fall far enough into postmodernism that we can avoid any global theatrics? How far can we go with RD before there is a demand for an investigation of his sources? As long as the back-channel disclosure is progressing apace, there will be less need for a public event. The RD gambit, however, is pushing the back-channel envelope. Perhaps it is necessary as a quasi-public, faux lightning rod. JL/MP do not seem to be aware of these machinations, or they are skeptical of them.

As it stands now, the scientific establishment is reduced to a merely pro-forma debunking of phenomena. They could easily pull back further in that regard, and this would send a signal to the community. In as much as they do not comply, they are increasing the risk of a public confrontation.

[5/28]

It may be necessary to have a technological component to the visitation in order to strengthen the cover and lengthen the preparation for disclosure. This would effectively siphon the drama from the revelation component. But there is still the problem of allowing the technical aspect get too far ahead of the spiritual and moral aspects.

The larger religious organization could use their inside knowledge to motivate the ecumenical movement, but the troublesome fundamentalist groups are much more fragmented, and they could not be involved short of a disclosure. That is where the drama will have to come.

What we don't know is the extent to which the gossip may have spread within the traditional organizations. What is more important is the rate of the spread, and to what degree it remains exponential, and how it plays off the role of aliens in the entertainment media. What impact does this have on the behavior of those involved? This would be very hard to measure.

In this context we need to understand the significance of the possible deactivation or replacement of the Ocelot. With the involvement of MD and RH (and possibly UG, although that was denied), there is the suggestion that the middle eastern politics is linked to disclosure. If this is the case, then there must be narrow set of contingencies. One way to interpret this is that the orchestration is being consolidated and managed by a human network. This later suggestion, however, does not fit with the allusion to off-world puppeteering. They are still looking for external input as to how things will or should progress. I have provided my fair share of that.

If Iraq, Iran and Korea can be resolved peaceably, and if the terrorists remain quiescent, can we then profitably invoke a further delay in disclosure? I would prefer not. The only thing to wait for would be the further connectedness of the world, but this must be considered in the light of the other measures that are deteriorating.

[6/18]

A week ago CF identified the Falcon as the custodian of the undisclosed Blue Book material. This individual is a retired military officer, now working at the Pentagon. A UFO investigator is presently attempting to reestablish communication with this person. Previously he has denied all involvement. One of the people who assisted Falcon in the relocation of the material is presently employed by CF. RD has also had access to this material.

An official acknowledgement of this repository might be slated in conjunction with the release of the filmed interview of RD. This release should be early next year. In the meantime more information is likely to be made available informally. An official announcement can hardly be avoided. It would be a major news event. If this information about Falcon is accurate, it would be very difficult to prevent this story from moving forward. Too many people have heard too many things about the Falcon. His identity can be inferred from information already published and circulated.

[6/26] [a]

Here is the skinny on the Falcon. Rick Doty has repeatedly told his fellow avians that [John Barry Hennessey](#) is the Falcon. When approached about this, Barry has made emphatic denials. There were rumors that there had been a falling out between Rick and Barry, so there was some thought that Rick was just yanking Barry's chain.

However, when CF mentioned Barry to me a couple of weeks ago, one could figure that there was more than just chain yanking going on here. A few years ago, CF had been very concerned about the identity of the Raven. I was even given the names of a couple of people to call, in the hopes of smoking out the Raven. That concern died down. Then Richard Helms died, and Rick started talking to Bob Collins in earnest, back in 2002. That material was put on Bob's website, and then in his book in 2005. Helms was identified as being Mr. R. The Falcon remained unnamed. That same year, Falcon also turned up in Greg Bishop's *Project Beta*, about the Bennewitz affair. This too was narrated mainly by Rick. It was stated at the end that Falcon was deceased. Well, maybe not quite!

Barry is a very serious actor. Early on, I had heard about the 1988 [meeting](#) when CF and BJ invited Colonels Hennessey and Weaver to the CIA to discuss Rick. There was discussion about why Rick had not been more severely reprimanded for allegedly filing false intelligence reports on his East German contacts. At one point Barry referred to Rick's failure to pass a polygraph test. BJ had the charts with him and confronted Barry with evidence that Rick had passed the test. At that point the Colonels stood up and left the meeting. [10/23/06 -- n.b. This version of the meeting has subsequently been rejected by CF, although I believe he was the original source. To be more precise. CF had gotten part of this from what

BJ claimed was a subsequent meeting between just himself and Barry. CF is of the opinion that this second meeting did not take place.] At other times Barry has referred to Rick as a petty thief. Also at that meeting Barry had denied any involvement with UFOs, but CF now reports that he was once the custodian of the still classified portions of the Blue Book material.

Barry is the head of security for all the Air Force's Special Access Programs. That is no mean responsibility. That such a person might ever have been involved with Rick's UFO rumor mongering, sheds new light on those rumors.

Part of the problem is that CF has determined that the fake MJ-12 documents circulated by Rick did actually contain some classified material. This classified material had previously been passed to the Russians. CF raised the possibility of having the FBI serve warrants on some of those involved.

Of course, there often is intense rivalry between competing intelligence organizations, but the serving of such a warrant would raise that to a unprecedented level. Hanging this dirty linen out in public has to be looked upon with some skepticism. Is this a clash of the Titans, or is this a choreographed dance step? I strongly suspect the latter. I am sure there have been intense ideological discussions on the merits of disclosure, but what I think we are seeing here is the outcome of those discussions.

Make no mistake, the outing of Barry as the Falcon may finally be the irreversible step in the disclosure process. If there is any truth to the allegation, it will send a strong signal to the other actors that the game is over. If there were not some significant truth to this, the outing would likely lead to considerable embarrassment and distraction from pressing problems. This step could not have been taken lightly. I certainly don't take it lightly, nor will others.

There will then be speculation about the purpose of the Barry & Rick operation. Was it strictly disinformational to deceive our enemies about conventional programs? If that were the case, the outing of Barry would be an act of treason, unless it could be construed as the mercy killing of an obsolete program. But CF is adamant that there is a real phenomenological problem of some kind. The outing of the B&R show will focus more attention on that problem, regardless of whether there had been any previous linkage between the problem and the show. The Blue Book connection is real. The manner of the outing seems designed to also focus more attention on the R&D show, eschaton and all. This is no way to phase out an obsolete CI program. It looks much more like a wakeup call on the disclosure front.

Joe Stefula has obtained additional alleged inside information in just the last few days. The metaphors that Joe picked up were 'sugar water' and 'fly-paper'. These metaphors refer not to disinformation *per se*, but rather to a security or containment operation. The focus here is not so much on deception, but upon the prevention of leaks. The primary security stratagem is to compartmentalize the project. The participants are not to make any attempts to look beyond their own cubicles, not even by surfing the web. The sugar water is planted on the web. The sites are closely monitored to determine if any of the participants come sniffing. The person of Rick Doty could serve as both the sugar water and the fly-paper. Naturally the sugar has to be recognizable and attractive. The more accurate the information, the sweeter the water. There are obvious trade-offs between containment and disclosure. In addition to the containment operation, there would need to be a backup acclimation program in the recognition that no containment system can be foolproof.

Some questions arise relative to Joe's information. Is the containment mainly to protect exotic technologies, or to prevent disturbing the social order? He was given the impression that the latter was the case. How can this outing be understood in this context? To what degree is it simply preemptive of imminent failure, or could it be something more forward leaning and forward thinking? That this information is being planted here, would hopefully be indicative more of the latter. In which case, most of the message would be in the medium. BPW, here we come, ready or not! Well, as ready as we can be under the circumstances.

[7/3]

It has been more than a [month](#) since CF noted an ongoing investigation of RD. It has been almost four weeks since CF pointed to JBH as a person of interest in connection with that investigation. The word today was to back off of JBH and focus more on RD and the Falcon. It is possible that JBH is the Falcon, in fact, it was noted that Phil Corso's Pentagon office was in close proximity to JBH's office. This could be indicative of their both having custodial responsibility for Blue Book related material. The point is, however, that CF, wisely, does not wish to traffic in opinions and rumors. That is my job!

At one point CF was extemporizing on what 'we' believe. I asked if he was expressing his opinion, and he said no, he was expressing my opinion! And so it goes.....

The *ad hominem* aspect of Falcon is not important in the larger scheme. The important thing is whether Falcon exists.

CF quoted BJ as saying he did not believe that RD could have produced the MJ-12 documents by himself. Nor is it reasonable to suppose that RD could have arranged for all of the 28 briefings related to the core story that CF & BJ know of. CF suggested that we could add the Corso and GN stories to that mix. Other Aviary stories also seem quite independent of RD, long predating his activity. It seems very likely then that something resembling Falcon exists. There can be more than one Falcon, and that could include the Raven, who also remains unidentified. RD was never more than a Master Sergeant. Even the most enterprising such individual could not account for what is known about the history of the story.

It could be that Falcon is just another rogue individual, as some suppose RD to be. It could be a military mole of some strange kind. If that were the case, there would have been a greater effort to root out that individual, greater than anything CF has suggested.

If Falcon is legitimate then the core story is a deliberate intelligence scheme, and CF is exposing an ongoing CI program. This is also unlikely to be the case.

Every day that this saga continues makes it more likely that what is hereby being exposed is an aspect of a larger truth, however slanted it may be.

I have lately been staying out of GN's movie initiative. CF suggested I take a more proactive stance, in that regard. He noted that GN's story would likely be a significant part of the core story. Is CF not thereby indicating his own complicity in its dissemination? I remain reluctant to reengage on that front, due to the personal politics. Even if there were a simple way to introduce important BPW elements into the core story, I would have to be more forceful in doing so than is comfortable for me.

Has there been any progress in a month and a half? Not much is visible. CF did encourage me to obtain input about Falcon from Bob Collins, RD and BJ.

We did not discuss the Bennewitz case. That case alone, argues strongly for the existence of a Falcon. RD could never have pulled that off on his own.

I asked about the previously mentioned espionage element of the MJ-12 documents. CF wanted to play that down. This would have been an excuse for investigating RD, but it does seem that such pretexts are no longer being touted. This is as good an indication as any that we are focusing in now on the phenomenological scenario.

If RD had been involved in a legitimate CI program that was now discontinued, there would not now be an excuse for the Air Force to withhold that information from the DNI. If it were a continuing effort of a conventional sort, CF would also have been alerted by now. No matter how you slice this saga, it increasingly evinces a phenomenological basis.

The recent SERPO story is another element of this saga that again pushes the lone hoaxer theory beyond its limits.

A useful comparison might be with the crop-circle phenomenon. It is hardly beyond reason to suggest that all the formations are hoaxed, and done so in a collective fashion. Could a similar explanation apply here?

The main point is that the circle making does not represent any obvious breach of or threat to national security. If that had been the case, I can hardly believe it would have been difficult for British Intelligence to have identified the hoaxers. In our case, by simply monitoring some of RD's frequent trips to DC, one would likely have discovered accomplices. CF has not suggested that even this simplest of stratagems has been pursued. This is a strange oversight, considering the potential for abuse in the case of the core story and its elaborations.

[7/4]

A possibly not so minor inconsistency in the information relayed by CF was his confidence that the still classified Blue Book material is not phenomenologically relevant. One might wonder at this certainty vs. the uncertainty of the custodianship of that material.

[8/3]

Jack,

The problem with you is that you have no respect for 'mere' words. You treat words with utter disrespect, all in deference to your Holy Grail, the mathematical formula for God.

One of my jobs here is to teach you to respect words, to curtail your trash-talking, garbage-mouth ways. No, I don't expect to teach old dogs new tricks, but I expect to use you as the blind foil that you are, all for the edification of a posterity that once again learns to respect the Logos.

I daresay, I do say, that the future of humanity hinges upon this lesson. The fate of humanity is written in the Logos. This fact has long been suspected by the phenomenologists at MASINT. You and I are their proxies in the Logos war, or didn't you know that? The manner and probability of our survival as a 'species' depends on whether or not we are accidental animals or are creatures of the Telos/Logos.

Between you and me, MASINT has every base covered. We are their two hounds in the hunt for the truth. That this hunt is being conducted in broad daylight on the Internet is all according to plan.

Be careful what you say, Jack, these walls have ears. Everything you say can and will be held against you for all eternity. If you are fated to be the eternal Clown/Trickster, then you have the right script.

This is rather like Doug's and Gordon's plot in 'Kingdoms Come'. You and I are the proxies for two conflicting visions for the future of humanity and for the world itself. The jury is Out There.

In belittling and mocking my singular theo/anthropo-centric vision, you belittle humanity. Finally you make a mockery only of yourself.

It all comes down to the nature and extent of the Logos. You wish to confine the Logos to mere formulas. I say that by doing so you are committing a crime against humanity, and you are riding roughshod over the obvious facts.

You don't understand the Logos because you don't even understand mathematics. To put it simply, Jack, you posture yourself as the anti-intellectual. You respect nothing except physical power. You

respect formulas only because you suppose that they are your magic key to unlocking the cosmic power.

If you are right about this, MASINT should have been the first to know, and possibly even take you seriously. But it does appear, Jack, that they are not taking you seriously. If they took you seriously, would they not have sworn you to secrecy and inducted you into a secret physics program that would be the 21st century's version of the Manhattan Project? Has that not been your publicly expressed desire from the beginning? Instead they leave you to twist slowly in the wind amongst all us Internet 'ignoramuses', preaching to the peanut gallery.

No, Jack, this game that you and I play, much at the continuing instigation of MASINT, makes sense only if the Logos transcends mere formulas. It makes sense only if the Logos has an anthropic focus. You are the proxy for the dumbed-down, anti-anthropic Logos; I am the proxy for the smart, anthropic Logos. The Logos is vastly smarter than you, Jack. It is even smarter than you can imagine. This battle is allowed to take place in public simply because you are known by the insiders to be nothing more than my foil. Thus am I Sunfish; thus are you no-fish. You want a billion dollars to prove that the Logos is stupid; all I need are my God-given wits to prove that the Logos is smart.

All of this is written in the Monster Group, which is the closest thing to the Holy Grail that mathematics has to offer. That is why I pay attention to the MG; that is why you continue to ignore it, even at the peril of your soul. The MG is the best token we have of the smartness of mathematics. How so? Primarily because the MG is the token of the holistic nature of mathematics. It is one of a growing number of objects that casts a very long shadow over the entire mathematical opus.

To see the holistic nature of reality, you must have peripheral vision. But no, Jack, you have the peripheral vision of a greyhound with blinders chasing the plastic bunny that is your dark-energy bazooka; the bazooka that MASINT apparently treats as a public joke.

The long-term trend in mathematics is toward the realization that all mathematical knowledge is interdependent. Every part of mathematics reflects the whole, in a perfectly holographic fashion. This is why mathematics requires genius, much more than it requires computation. The holistic nature of math cannot be codified in any kind of database, alien or otherwise. It is rather an aesthetic, rather like the aesthetic of music, which is why there is such a close connection between mathematical and musical genius. This connection has often been recognized in the search for extreme talents, even by the talent scouts in Redmond.

I am quite willing, Jack, to recognize this same combination of talents in you. That should make you wonder about imposing arbitrary limitations on the cosmic Logos. You are your own walking contradiction.

It should not surprise us one iota, that the holism found in mathematics, as exemplified in the Monster Group and its unlimited ramifications, even for physics, is also found in every other branch of knowledge, science and endeavor. One cannot truly appreciate the MG without understanding a very broad swath of mathematics. Nor can one begin to understand an electron without understanding almost every branch of physics and mathematics, and still the lowly electron remains a mystery wrapped in an enigma.

Holism is the signature of the smart Logos. Holism tells us that we cannot fly the craft just by formula, or just by wire. We can't fly the craft without the critter. There is a mind-machine meld that escapes even every mathematical description. The craft is a mere extension of the visitors' collective mindset. MASINT knows that we cannot play that game without becoming an integral part of the collective cosmic consciousness. This is the whole idea of the Federation. Jack wants to short-circuit this cosmic censorship against evil, amoral genius. MASINT knows better, Jack. They likely have already learned this lesson the hard way. I am merely showing you and others the smart way.

Dan

Follow-up on the **SERPO** [\[a\]](#) affair.

From the early stages of the transmission of this story last December, it was clear that two members of the Aviary were taking an active interest in it: namely, Rick Doty and Bob Collins. It has subsequently become known that the Aviary involvement was more extensive than first appeared.

I refer you to the exchange of emails between the members of the 'Team of 5' that has recently surfaced at [Reality Uncovered](#). The Team of 5 consisted of Victor Martinez, Bill Ryan, Rick Doty, Hal Puthoff and BJ. The emails are alleged to have been liberated from one of the team members, under the auspices of some folks at [ATS](#), some of whom subsequently migrated to RU.

Early after the dissemination of the first installments of the SERPO material, Rick Doty informed his teammates that he had been informed that the original Anonymous SERPO source was JG. Victor and Bill were not informed, however, that JG was already well known to the three other team members, all with the Aviary.

Rick Doty reported that the identity of Anonymous was ascertained by him in consultation with two DIA employees. CF informs me that Rick, Hal and BJ have had a long term connection with Paul Murad, JG, and another unnamed DIA employee, who might have been Rick's second consultee.

JG is well known inside the Beltway for his distinguished service at the CIA, SSCI, NRC, DIA, BAES, and now also including Homeland Security. A more solid-gold resume would be hard to come by in that town. What also shows up on his resume is his continuing tenure on the [TIGER](#) Committee. That committee provides the nexus for his interactions with Hal and BJ. There is also a close association between that committee and and CF's MASINT committee. It is a small world that we are dealing with here.

The latest word from CF is that he is confident that JG was not the Anonymous SERPO source. End of story? Well, perhaps not.

An intermediary (***) has passed along a somewhat different slant on these proceedings.

Let me be clear for *** that I am not implying any potential truth in the Serpo story. But behind any story there are motivations, players, facts, and fantasies. Those can all add up to just a nice entertaining story. But this story also has a rather dark side with a set of motivations, players, and possibly facts that are rather disturbing. As such some of us are forced to ask some questions and try to get some answers.

The deliberate and extended implication of JG in this story raises the political ante by a significant margin.

I have always been led to believe that there was something very disturbing going on behind the Aviary antics, but now, even after all these years, it is indeed sobering to see it stated so unambiguously.

(But here is the final irony. There is nothing more disturbing in this whole bag of tricks than Chicken Little's eschaton. It is then a bald fact that CF needs only look in his own backyard for a thousand pages of a potentially very disturbing set of Q&As. One might even surmise that this is indeed his implication.)

[9/2]

But let us proceed in a more linear fashion with the above expressed concern.

We have to wonder if it is not the case that the person who here refers to the disturbing, dark side of the visitation rumor mill has not previously raised these concerns with other government officials who would

have the investigative resources to expeditiously resolve the counterintelligence issues raised here.

But can we assume that this is a counterintelligence matter? What else might it be?

<<As such some of us are forced to ask some questions and try to get some answers.>>

Who are the 'some of us', and why are they 'forced' to ask questions? Notice that the concern expressed above is not focused on the content of the stories, per se. It is instead focused on the machinations associated with the dissemination of the stories.

It is hardly controvertible that the rumor mongering herein has extended to the highest levels of the government. Furthermore, is there any question that this general topic, i.e. the phenomenology of contact, is uniquely susceptible to every nightmare associated with the problem of false flagging? The entire history of human interest in the paranormal is rife with political intrigue of the darkest sorts. As a starter, just consider the history of cults. The history of UFOs can easily be seen as uniquely potent, modern extension to the history of cults. The cult phenomenon itself may be seen as a manifestation of the perennial fascination with eschatology. No historian of these matters would seriously contend that the present global concern with eschatology has ever been matched. This is simply an explosive brew of psycho-social concerns that can and are being exploited on all sides, at all levels.

And it so happens that our very own homeboy, Richard C. Doty, has, for the past thirty years, consistently been at the center of the most virulent, and 'best' connected of all these rumor mills. Are you telling me, then, that Rick has not been a person of great interest to the large number of people who either aim to exploit or inhibit these vulnerabilities?

What's a body to do? The answer ought to be excruciatingly obvious: GO TO THE SOURCE.

Everybody and their uncle on this global stage would naturally want to go to the source, for any number of legitimate and illegitimate reasons. If I were in charge of the counterintelligence aspects of phenomenology, that would certainly be my number one priority. If the US intelligence community cannot handle Rick, then I would be flabbergasted. I once told CF that I would hold him personally liable if I were ever to discover that he was not having all of my communications monitored. In response he asked how many agencies I would like to participate. I said, 'The more, the merrier'. If that has not been the case with Rick, then we all know whom to hold personally liable.

Rick, we may be confident, is a target of many opportunities. You have heard about the intrigue of the casbah. Rick is, uniquely in this global arena, a one-man casbah. Have I made this point sufficiently clear?

It has already been rumored elsewhere and stated to me personally, by a usually cautious source, that the dissemination of the SERPO material is/was a DIA operation.

What would be the motivation of the DIA? How might it possibly be viewed as a legitimate operation? Why would the operation be made quite so transparent?

Can there be any argument that this alleged DIA operation could be viewed as legitimate only if the information being purveyed bears some semblance to some very provocative truth? Admittedly, this is a loaded statement. It does bear scrutiny, and similar such statements have been scrutinized herein. Hold those questions in abeyance for the nonce.

Where does all of this leave us with respect to the alleged matter of some people being forced to address the disturbing dark side of the SERPO saga? I humbly submit we now require a more nuanced interpretation. Based on the above considerations, we can only surmise that the counterintelligence aspects of the rumored visitation phenomenon have long since been addressed by the appropriate specialists. The BPW blog is a very unlikely venue for such matters. On the other hand, this blog would

be a very likely place to address the issues of content, i.e. the possibly dark and disturbing motivation underlying the visitors' alleged foray into the inner sanctums of the global power structure. Thus my parenthetical remark of yesterday.

Any questions?

Well, there has been some additional input from a usually reliable source.

For the time being, I am being asked to focus on the ad hominem aspect of the above saga. In particular, let us bracket the entire issue of government involvement. And what is any government, other than an ad hoc assortment of individuals?

This latest caveat does put me in a personally awkward place between two principals, and between more than a few principles. But whoever said that the war in heaven would not get messy and personal? This story is going to be one-sided until such time as I am able to garner a response from the other side.

I am told that there are two ways to interpret the information that we have to-date, concerning the SERPO saga:

1. BJ has gone totally bonkers, or
2. There is a rogue operation that has garnered access to highly sensitive venues, and so constitutes a significant threat to national security.

Wonderful choice!

Just one bizarre piece of this story is that one of these principles recently received an email purportedly from Col Richard Weaver (of MOGUL interest) claiming to also be Gene Loscowski (of SERPO interest), who subsequently referred to himself as 'her'. That bit of confusion should be sufficient to warn away the feint of heart.

Then the story gets better.

There is the matter of the two alleged DIA employees consulted by Rick Doty. The ones who supposedly helped to identify JG as the original Anonymous. My source was given their names and made a concerted effort to track them down, as mentioned previously. There are simply no individuals, who may in any way be associated with those names, who have had any dealings with the DIA. Nonetheless, the other principal, P2, continues to elaborate upon the original story, claiming that those individuals have continuing access to such sites as Area 51. Thus does P1 come to the above two possible conclusions.

The political bottom line here is that Rick Doty is no longer the sole scapegoat for the entire SERPO/visitation saga. He is hereby joined by an officially acknowledged co-conspirator, P2.

So what? Rick Doty's only official employer is the New Mexico State Police. He could simply be the most notorious rent(subvert?)-a-cop of all time. The case with P2 is rather less sanguine. P1 readily admits that he is the sole proprietor for P2's complement of highly sensitive security clearances. I continue to question P1's rationale for aiding and abetting an individual who is either:

1. totally bonkers, or
2. a major threat to national security.

P1 has not, to my mind, provided an adequate excuse for his legal responsibility toward P2 that now could legally qualify himself as co-conspirator #3, CC3.

What should I do as this point, other than call 1-800-TIPS and turn them all in?

I ask you!!

Let me remind you, however, that I did feel compelled to make a house call at the FBI's Baltimore office to alert them to the suspicious activities of P1, on and about 9/11. Look where that has gotten us!

[9/3]

Yesterday the following exchange occurred:

Dan,

You must not have enjoyed your soup this afternoon. Again you have taken a mean and unfair approach. While I continue to impress upon you my full support for [P2]'s interests and actions, you continue to lump him in with Rick. [P2] has not fabricated any documents, sources, or visitors. He has asked question regarding Rick's stories and he has attempted to get answers. Occasionally he errs in his recollections of long past events. We all do.

One of my analytical methods is to form a complete set of hypotheses. Sometimes I share these with you. You need to keep in mind that they are not of equal probability. The 99% hypothesis is that Rick fabricated the entire story. By demonstrating interest in the story, [P2] may have inadvertently generated plausibility. I often appear to support a story that clearly is incorrect in order to gain additional information from which to derive a more definitive conclusion.

I really wish you would be more consistent in expressing support for [P2]'s efforts to gather information.

[P1]

Me:

Well, how can I do that in public without raising Rick's suspicion about yours and [P2]'s motives??

P1:

You can express support for [P2]'s efforts to gather information in a way that suggests you are open to the idea that Rick's story is real.

Wonderful!

I should also add to the above, by way of clarification, that BJ/P2 has consistently described the SERPO story as a hoax.

I am not quite so sure about that, but that is a longer story. The point is that I can continue to be open to aspects of SERPO without prompting from P1.

Enough about SERPO for the moment. It would be timely, however, to recap the BPW data and approach to the core/visitation story.

On my last visit, chez CF, I was told that he was in possession of one part of a three part letter in which BJ detailed his version of the core story. CF does not know the identity of the other two alleged recipients. CF stated that he helped BJ in compiling an earlier version of this story. I did not request and he did not offer to show me the letter. I asked him for his opinion of BJ's version. He said that he had independent verification of some of the phenomenological aspects of the story, as opposed to his

skepticism on the biological aspects upon which BJ had been briefed and which was the focus of his own summary version.

To this extent did CF contradict his many earlier statements about his lack of credence in any aspect of the core story.

In the interest completeness, I feel compelled to include the following email from one of the principals, admittedly removed from its already convoluted context: (I believe that this was sent just before the above meeting)

1. The term "CORE STORY" has three separate meanings: The first was, that which I told you...but which I never told CF, and you never told CF the details of what I told you...which was invented by three persons (I was one of them) in a Denny's Restaurant in San Jose, California on the 15 of July 1986, immediately after new and veridical data had been received directly by two of us from the Director of Security of Lawrence Livermore Laboratory. The second, is the hijacked term "Core Story" (which is the one CF is thinking about) which he got from Bob Collins shortly before you had the reported conversation. There is as much difference between the elements of the "Core Story" I told you, and the one Collins told CF as there is between ... well, night and day. I have serious problems believing Collin's Core Story too, as much as I do in believing SERPO...both of which are grounded in fantasy, are phantasmagorical to the extreme...and possess zero data or circumstantial testimony from credible government sources. The Core Story I told you is well supported in both. Hence, there is no relationship between the context CF was inside of looking out, and yours from the outside looking in. That is the problem with lack of detail: it must needs lead to lack of context. (I can't take the time to discuss the third "Core Story" which CF may have also been referring to...just ask him to define for you..."CF, what are the key elements of the "Core Story.?"

2. I know what CF means by "Phenomenology" in detail...having discussed that single term with him for many years and many hours, and I have a decent Idea of what you mean by the term, having discussed it with you for several years and several hours. They are not even close in context to each other: thus, you were each talking about different phenomenology.

3. "Opined." CF, as we both know, opines about many things, and well...changes his opinion as a function of each piece of new data. The half-life of his "opine" can be several milliseconds. Thus: the context itself of his "opine-ing" is meaningless.

I could go on and on...but in short: sound bites do not a rationale` make...when they contain words with self-referent meanings across many years, many people, changing contexts, and new information.

I stand behind every word and nuance of what I said.

No one is telling a lie. (at least...to the extent you are telling the truth with the phrase: "...those were his exact words.")

I disagree with several of the opinions and 'data' given here. But you see that it is no mean task to thread one's way through this thicket of contradictions. Should I not have thrown in the towel long ago? Easier said than done, in my case.

The political bottom line here is a continuing, very belated and rather public investigation of Rick Doty's involvement in the UFO arena, the latest aspect of which is his involvement in the SERPO saga.

Notice though that there is what seems to be a shell game on the side here. It seems that the consistent and emphatic denials about SERPO are being used as a cover for some belated and nuanced admissions relative to core story. Just a little slight of hand.

In public Rick is getting his wrist slapped over SERPO, but more privately, his much more significant core

story is being provided with some very convoluted but unmistakable admissions. When attempting a downfield tackle, watch the feet, not the shoulders. That is my homespun advice to any intrepid observers. SERPO is at least a smokescreen for some behind the scenes reshuffling of the deck.

[9/4]

Allow me to continue with a recap of the 'visitation' situation.

Here is what we know:

1. 28 government officials are known to have been given official-seeming briefings about the visitation. Those individuals are allegedly in the process of being debriefed. Their names are known to CF and BJ.
2. CF & BJ collaborated in a preliminary compilation of some of this data. A more complete version has been distributed in segmented fashion by BJ to CF and at least two other individuals.
3. CF is now on record here as not objecting to his being characterized as having independent validation for some aspects of the visitation story.
4. CF independently acknowledges a 'serious phenomenological problem' in this context.
5. Rick Doty has been investigated on numerous occasions by the FBI concerning his alleged trafficking in allegedly classified government documents.
6. Some of those ostensibly faked documents contained real information that had been illegally passed to Soviet agents, this per CF.
7. Col. JBH has been named repeatedly as being a potential material witness to the possibly subversive activities of Rick Doty.
8. JG is the highest level US official to have been implicated by other members of the Aviary as an information conduit. This only very recently and in the SERPO context.
9. James Woolsey is the highest level US official to be acknowledged as an Aviary confidant.
10. CF acknowledged a few months ago his participation in a renewed investigation of Rick Doty's activities and contacts.
11. CF admits here for the first time that he is duty bound to investigate a dark and disturbing side of the continuing SERPO/visitation saga.

Summing up:

1. The visitation story has been and is being exploited in a dark and disturbing manner that has implications for national security.
2. CF is not the only US government official to be aware of and concerned by this problem.
3. The BPW site continues to serve as the primary public outlet for the details of that concern.

Would it be merely self-serving on my part to point to this last item, #S3, as possibly being a significant fact amongst the others?

I believe that I can state without fear of contradiction that if the BPW medium is intended to be taken as an integral part of the message that is often alleged to be associated with the visitation, then that one fact is the most significant fact amongst all the others.

What else could the R&D show be about if it is not about the message? I ask you.

Is the R&D show just another accident of history? The whole point of the visitation is that human history has a cosmic context; that, indeed, it is an integral part of a universal teleology. This site remains the only attempt to explain the visitation that has even a semi-official sanction.

What may reasonably be inferred from the implied official sanction being afforded to the BPWH? This

sanction is either part of the problem or part of the solution.

Problem:

- The BPWH is intended as further disinformation in conjunction with all the other disinformation that may be associated with the alleged visitation.

Solution:

- The BPWH is the best known public explanation for the now officially acknowledged visitation phenomenon.

In either case, the many government officials who have been made aware over the years of the long continuing R&D show are privy to and complicit in the BPW problem/solution aspect of the alleged visitation phenomenon.

The degree and scope of that official complicity continues to be extended and acknowledged, through the auspices of this website, by CF on a frequent basis.

In either case, there ought to be more than a sufficient number of actionable items provided herein to easily justify at least one high-level, public inquiry into these matters.

Furthermore, it is my continuing suggestion that this site is a proper locus for such inquiry. It appears that this suggestion is being treated seriously.

I am sure that there have been and will be objections to the apparent complicity of government agents and representatives in the metaphysical agenda presented herein. It is doubtful that such complicity is undertaken lightly. Probably it is viewed as an ad hoc arrangement that is considered to be the lesser of many possible errors of commission that must be assessed in the very peculiar circumstances described at great length in these pages.

[9/5]

Acclimation.

It is widely considered that there has been a concerted process of acclimation to an alien presence underway probably at least since Orson Welles' War of the Worlds broadcast in 1938. There has not been a time in history when alien beings have not been featured in nearly all cultures. However, there is ample evidence that the Aviary has contributed, directly and otherwise, more than its fair share to the Hollywood portrayals of government complicity in that presence.

It is the contention here that the R&D show is where all that 'rubber' meets the road. This site continues to be the primary locus for the official acknowledgment of that complicity. This is the big 'ratchet'. Once this gear is turned, it does not get unturned.

Yes, this blog is the weather cock for government disclosure. It is sufficiently detailed to record even the smallest eddies in that current. Yes, there are the frequent partial retractions and amendments in the short term, but, on a monthly scale, I challenge you to find where this ratchet has ever slipped a gear. Hollywood and the rumor mills are all over the lot, ebbing and flowing, flowering and wilting. But not so here. When the water goes under the R&D/BPW disclosure bridge, it doesn't come back.

It is very important to maintain such a channel of information. It takes a long time to calibrate and stabilize it. It would not be easy to reinvent this conduit. There can only be one at time, for a time. Such

a channel is not established on a whim. Is it not credible to suppose that this medium is also intended to be part of the message? It would be incredible for it not to be so.

The Hollywood version of visitation is a great mish-mash of good and bad news. Here, too, there is good and bad news, but it is fit together in a nearly seamless, coherent fashion. The good and bad all depends on one's point of view. To stay on the positive side of these phenomena, we must move forward. We are the donkey. God holds the carrot and the stick. It behooves us to pay attention and follow the bouncing ball.

[9/8]

Here I am in Salt Lake City while my wife attends a meeting about the future of libraries. SLC [a] is home to one of the most highly acclaimed public libraries in the world. Distinguished speakers include Joe Firmage, a name familiar to ufologists. CF had been asking me to track down Joe in connection with our Hollywood initiative involving Gordon Novel, Jack Sarfatti and Doug Ivanovich. Joe and Doug had worked together a few years ago. I asked CF if he wanted my wife to convey any message to Joe, but I have not heard back.

CF is suggesting a second annual Aquarium meeting for next week. The entertainment will be some Richard Weaver/Gene Loscowski impersonators, following-up on the item from 9/2, above.

On Wednesday and Thursday there was some back and forth between some of us Aquanauts concerning the reliability of our memories. This topic arose in conjunction with the alleged involvement of JG in the SERPO saga. I excerpt two of those messages:

This from CF to BJ:

I really appreciate your response. Part of the problem is that Dan imposes a dimensional shift in his reporting of my conversations. Indeed I did raise the issue of you having some form of false memory syndrome and then did a superficial review with some of our mutual friends to reject this hypothesis. As you know, my analytical approach is to include as wide a range of initial hypotheses as possible, eliminate those that can be treated superficially or linearly, and then focus on those that require more complex parallel analyses. Dan shifted the focus from the complex possibilities to the superficial impossibilities. For example it is just as clear that you are not suffering from some sort of false memory syndrome as it is that a delegation of Americans did not visit a distant planet.

Then me responding:

[BJ] et alia,

Wonderful! If we combine [DF]'s point of a nearly universal memory glitch syndrome (UMGS) with [CF]'s statement about the probability of interdimensional travel, then we have a near certainty that some reasonable facsimile of SERPO is true. I agree.

[DF]: << Having said that, I still believe that you [BJ], [CF] and Dan hold all the answers to all cosmic secrets, however vehemently you deny it, and I don't own a dog ;-)>>

I second this with the caveat that we include [DF] in that mix.

This same statement could also be applied appropriately to virtually any combination of four people on this planet. The main difference is that we have callings, obligations and opportunities on the cosmic stage that are simply unsurpassed. That fact brings our universal potentials more to the surface.

No other functioning group is in such a position. That entails an additional collective responsibility.

Is this not true?

Am I holding my breath waiting for a cogent response? No.

In the meantime there has also been some back and forth between me, DF (Damselish) and some folks at RU concerning the FBI's possible involvement in the SERPO saga.

I am experiencing my own UMGS about this matter, but now that DF has administered some RMT (recovered memory treatment) it is slowly coming back to me.

Here is another thing that I may still be confused about:

Some months ago (a year ago?) Joe Stefula told me that he had alerted the FBI to some new and allegedly classified material that had surfaced. Actually, Joe had asked me to take up this matter with the Baltimore office of the FBI, to follow up on my two previous visits there. I had begged off of this task, and Joe went ahead with it himself. I'm thinking that this may have been in reference to some of the documents contained in Bob Collin's EfD book. These were documents allegedly provided by Rick Doty. I was told later that the FBI had contacted RMC and BJ about this matter. They knew better than to go after Rick for the umpteenth time. These may have been some of the same documents referred to by CF, as mentioned above. I don't recall now that any of this directly involved SERPO, beyond the indirect linkage stated by CF in the 9/1 entry. Also recall the 6/26 entry wherein CF was threatening to ask the FBI to serve warrants on people involved in the circulation of the MJ-12 documents, as being possible material witnesses to treasonable activity. I have not been further informed about the status of that threat. [10/23/06 -- n.b. CF has since stated that this info from BJ about the FBI is not accurate. **RMC** [\[a\]](#) confirms today that neither was he so visited.]

I hope that this helps to clarify some things that have been weighing on some people's mind's, or so I'm told.

Still not having exhausted the spare time that weighs so heavily upon me, I return to the topic of the Dick&Gene she-male impersonators promised for next week. I thought that I had mentioned on these pages about the last 'aquarium' meeting. I did mention it in several emails posted to several lists, I believe. There are a lot of emails out there that ought to be collected by someone who has even more spare time than myself, as if that were possible.

In anticipation of the meeting promised for next week, it would not hurt to recall the previous such affair. I was not happy with that meeting. It turned out to be another one of CF's signature bait and switch events. There have been more of these than I care to recall, especially not in semi-public. These may be partly to blame for my UMGS problem, them and a stroke brought on by them, at least in part, no doubt. Will I get medical care in the event of further job related debilitations? I believe that BJ has already offered free consultations. I don't know the full extent of that consultative coverage.

Joe Firmage gave a thirty minute talk this afternoon on his [Digital Universe](#). I suspect he is too much caught up in the management of that nascent enterprise to be able to become meaningfully re-involved in a cosmic Hollywood initiative.

So there we were at the [Clarendon Grill](#), sometime last fall, I believe it was. There had been an attempt to have a meeting that summer, but I had been run off the road on the way there. This time it was Tom Morgan who had the car problems. Present were CF, me, Mark Pesses, Bruce Maccabee, Stingray, Angelfish and nearly a dozen of CF's coworkers. Everyone was given a fish name label upon entering. It turned out later that at nearby tables happened to be at least two individuals who immediately reported

back to BJ. Shades of Banquo at the banquet! I had been told to have a short presentation prepared. I did not, but it hardly seemed to matter. None of the suits seemed have any idea why they were there. It may have been their normal lunch table. In my projected voice I did make known my disappointment with the lack of any visible agenda. I later apologized individually to the working stiffs who were unwittingly roped into the proceedings. CF told me that was a good move because some of them might subsequently be assigned to assist TM in unspecified aquarium duties. The observers reported to BJ that his name was brought up several times during the lunch. I'm trying to recall what the connection was, but there are too many for me to be able to keep them all separate.

You see that there is a sterling foundation on which to build for next week.

[9/9]

This from CF yesterday to us other three fish:

I just wanted to let you know that during the past few days I have been involved in several e-mail exchanges with Rick Doty. In those exchanges, Rick has claimed not to have accessed SANDIA, LLNL or sensitive military installations since his retirement from USAF. He also has claimed to have no involvement with UFOs since January 2006, no knowledge of the source of the names of DIA employees linked to SERPO or the identification of [JG] as Mr. Anonymous. These claims appear to conflict with what most of us generally perceive as reality. Nevertheless I have no strong evidence that counters his claims. I would appreciate photos or other evidence that I could share with Rick that might seem to counter his claims. I certainly want to extend to Rick an opportunity to demonstrate he is not involved with SERPO or UFO stories as he claims. But if true, then who was it that escorted [xxx] into sensitive military facilities? Since I first heard of Rick Doty there have been perplexing stories of multiple Doty's. Perhaps his dimensionally shifted twin is the culprit, but I would not know how to differentiate between such otherwise identical Dotys. Any suggestions?

DF and I believe that we do have access to such information.

One sticking point is that CF is subsequently demanding photos. I have pointed out to him that any unauthorized photos taken on a military base would subject the photographer to arrest.

I have stated that we ought to be able to obtain a sufficiently detailed description of the secure vault that was accessed by Rick to enable the interested parties to confirm that this did happen. This entails negotiation with a third party who was present. That may take a few more days.

[9/10]

Yesterday CF sent the following:

Please provide any photos that document Doty accessing secure military facilities and I will forward them to his supervisor for positive identification. I do not want photos of Doty attending UFO conferences, standing outside military facilities, or doing any of the activities common to UFO investigators.

I respond today:

I have returned from Salt Lake City, and [DF] and I have had a further discussion.

You are presenting us with a moving target. Rick told you that he has not been involved with UFO matters since January. We have direct access to hours of videotape that contradict Rick's testimony to you.

We all know then that Rick Doty is lying to you, the intelligence officer who is in charge of the counterintelligence aspects of phenomenology.

You do not dispute the fact that Rick Doty took the reporters onto Kirtland AFB. We have the word of those two reporters that Rick, at the very least, escorted them inside of what appeared to be a secure vault at that base. Does not the preponderance of the evidence favor the testimony of the reporters over that of Rick Doty to you?

This must tell you then that you have on your hands the distinct possibility of a major and politically very sensitive breach of national security.

You raised this issue to us. We have returned the ball to your court. What do you now propose to do about it?

With the following addenda:

The larger issue here is whether Rick is a lone actor in his promotion of government involvement in the UFO phenomenon.

In this regard, it is interesting that Gordon Novel has very recently weighed-in to support the SERPO story. He has claimed to be doing so to a significant degree under your aegis.

As you well know, I have a vast amount of evidence to support Gordon's claim that you have aided and abetted him on many occasions in his quest to demonstrate government involvement with UFOs.

My suggestion then, [CF], is that if you wish to get to the source of the rumors suggesting government involvement with UFOs an obvious starting point would be with your decade long involvement with Gordon Novel on this topic.

Since I was the one who introduced you to Gordon, c. 1994, I would be a material witness to this decade long saga. As you should well imagine, I am more than willing to offer my testimony with or without benefit of any subpoena.

Then DF responds to something earlier from BJ:

Hold up [BJ].....[CF] stated that Rick told him that he has had NO involvement in the UFO arena since January of this year. You and I both know that is not true. He also informed [CF] that he had not accessed Kirtland AFB since his retirement. He was showing visitors around that base this past March. Now, what exactly are you suggesting here? Either [CF] is lying or Rick is lying – which is it? There is precious little context discrepancy here [BJ].

[9/11]

That was yesterday.

This morning there was a lengthy and somewhat convoluted convo with CF.

It does appear that, once again, Rick is being let off the hook, at least partially. Even if Rick had escorted a reporter into a vault at a military base, it would be very difficult to prove that the vault in question was actually meant to be secure at the time of entry. Vaults are periodically made 'sterile', and it would be difficult to demonstrate that this was not the case in this instance.

Does this mean that Rick is off the hook again? Well, not exactly.

This is not the main issue here. I am being led to think that the main issue here is coming back to the alleged DIA contacts, which may or may not be mainly a Rick problem.

'Fishing' (phishing?) is the word of the day. The two names, that may never have been given except by Rick to BJ to CF, might have been part of someone else's fishing exercise, possibly unbeknownst to the named individuals. This is a very common intelligence trick: you shake the tree and see what falls out. This a very specific kind of shaking, i.e. fishing. The two names came up in connection with the alleged outing of JG. We were told by CF that the names were not showing in any of the obvious places. I had then ass/u/me/d that they were fictitious names.

Well, either they were fictitious or not. This would not be a continuing saga if they were, assuming furthermore that I am getting a straight story. So, following the bouncing ball, they are not. What then are they?

Now we enter Dan's crazy/spin zone. There must be something about those names that is raising eyebrows. What is that something, and, perhaps even more significantly, why do you and I have a need to know about it?

The names are not nothing. They are something sensitive. That sensitivity must relate to phenomenology, otherwise we would not be in this loop, or all of this is just more disinfo being piled higher and deeper.

At present, this is being presented as a possible fishing problem. Some third party wants to shake down more information about those two individuals. This other party at least knows that they are persons of (phenomenological?) interest.

If this were an actual CI exercise, we would not be here, now would we?? So what is going on? Something for sure is getting piled higher and deeper. This probably is about national security, but not in any conventional understanding of that phrase.

[9/15]

My understanding is that the reporter in question is now stating that Rick did not take him to a secure location within a military base this past year, as previously stated here.

Meanwhile CF has contacted Rick's supervisor in the NMSP concerning threats made to Shawwna. CF has made some of his correspondence with Rick available to someone at the RU forum asking him to withhold any posting of it for another couple of days while Rick is allegedly dealing with a personal matter. This correspondence indicates that Rick is refusing to cooperate, and instead is making threats against CF.

It is my understanding that Rick has been put on administrative leave for some weeks as a result of the earlier threats which are posted on RU. It is my further understanding that BJ remains supportive/defensive of Rick's role in the SERPO affair, while he personally supposes that SERPO is largely a piece of disinformation. TBMK, BJ also remains open to aspects of the core story, as does CF to somewhat different aspects. It remains unclear as to what if any is the overlap of the respective aspects. CF does discount the biological aspects presented by BJ.

Let us suppose that there are no major developments in this story over the weekend. Where will that leave us?

Will any new light have been shed on SERPO or the core story? It does appear that Rick's personal stability has effectively been called into question. This can only detract from whatever remaining credibility he may previously have had. At this late date, it would be very difficult to simply factor out Rick's very significant contributions to the core story. If Rick is permanently sidelined and BJ's and RC's credibilities are correspondingly impugned in the process, this then leaves the fate of that story largely in the hands of CF.

Might one speculate that this outcome was an intended consequence of the SERPO affair? That would be a stretch, but hardly beyond reason.

[9/16]

Ed Komarek called last night. Since his run-in with Michael S. at the Hawaii Exopolitics meeting last June he has been in contact with someone purporting to be a former NSA person who was allegedly involved in a continuation of the visitor phenomenon as outlined in Collin's EfD. This person turns out to be another hoaxer. Now Ed claims to be working with some folks at RU who are looking at the possible Hollywood connections of his case and the Serpo case.

There had been a long-term aviary involvement with Steven Segal. Both CF and John Alexander were directly involved in the writing and/or reviewing of scripts. Joe Firmage, et al. have been involved with Doug Ivanovich as mentioned above (9/8). Kerry Cassidy also has a script in the works, we understand.

It has long been contended that if there is a disclosure process, then clearly the entertainment media have been involved in it, rather to the exclusion of the news media. This would be a sensible stratagem.

It is possible to analyze the recent Aviary politics in the light of this process. It is possible, for me at least, to speculate that the recent Serpo initiative, was actually a counter-initiative to EfD. Rick & Co. were taken by surprise and attempted to horn in on it. Ultimately they were thwarted and exposed. Rick did not take this kindly, and ended up being suspended from his NMSP duties. This is a possible next-level interpretation of the confrontation between Rick and CF. One might further suppose that this public confrontation will bring CF's connection with SF under greater scrutiny. How will that be handled, one might wonder?

[9/18]

Rick has until Wednesday to respond positively to CF's request for cooperation before he lodges a formal complaint with the NMSP. He remains doubtful that Rick will respond. Rick is between a rock and a hard place. It is no small matter for an officer of the law to suborn testimony to a federal agent, i.e. BJ who is working under various federal code-name clearances, overseen by CF. On the other hand, if Rick has any real sources, these should have been reported immediately to the NMSP on the clear suspicion that they were trafficking in sensitive information. Rick is not a journalist. He is an officer of the law. He has none of the lenience usually granted to the former. CF avers that the local police are deputized to investigate matters pertaining to national security, in lieu of the FBI who have long-since tired of investigating officer Doty.

But then there was something else. CF expects that Rick will respond more forthrightly to an internal inquiry. How do we know that? Someone please tell me! Or has my memory failed again? Not so funny. Am I supposed to be making book? What exactly is my role and your role? Suppose Rick did come up with a real name? Or not. End of story?

[9/20]

Later today I'm expecting to receive from CF his correspondence with Rick, concerning Rick's involvement in the SERPO circus earlier this year. I will post that to a temporary page here, just to allow the interested parties time to transfer it to their own locations. I don't expect there to be any attempt to conceal the identity of CF in that correspondence.

There is no point for DF and me to involve ourselves in this controversy any more than we are already implicated through an association with CF. DF continues to be more the skeptic relative to the core story than am I.

Where we go from here is the question of the day. That depends in good measure upon the outcome of any further investigation involving Rick's alleged DIA sources. I understand that a third name has surfaced in that connection. CF has terminated his correspondence with Rick at this point. The only ongoing investigation would be internal to the NMSP, presumably with some feedback to us. If there were any actual involvement of the DIA beyond what is already known, I don't know if that information would be conveyed to us.

That Paul Murad of the DIA may have communicated with Rick about SERPO is quite possible, but whether he was the source of any possibly sensitive information about other DIA personnel is quite another matter. That issue could use some clarification.

It will probably take a few days for the dust to settle, before we can see the way forward, if there is such a way.

I was reminded yesterday of accusations that Rick and Victor had made against one of the RU people, highly improbable accusations involving national security. CF dismisses these out of hand. We can expect a sharp response.

[9/21]

We are being treated to the spectacle of an aviary meltdown, as CF goes after Rick in a rather public fashion. Given that there are (at least) two sides, which is which?

Ostensibly Rick has been on the side of disclosure these many years, he being the chirpiest of the birds. CF has his own methods of apparent disclosure, so which is which? It could be that Rick is actually on the cleanup-up crew for the inadvertent disclosure. This may have been the case with Serpo, where Rick may have shown up shortly after the fact. Even if he were the primary perpetrator of Serpo, it still could have been intended as further disinformation. In any case, we are now witnessing a clash of the Titans, after all these years of mutual neglect. The fact that this is being done in semi-public on the side of CF does argue for his being on the side of the angels, but let us not rush to judgment with such preliminary information about such a complex situation. But if this were the case it would signal a major changing of the guard or shift in policy.

Might it merely signal that the cleanup process is deemed complete? Possibly, but that is not the kind of vibration that I am picking up. That would leave me as the final mess in the operation. Had I been in charge of such, I think I might have picked some other fish to be the tail-end, i.e. eschaton/caboose, on this little choo-choo train. If there is a gas-leak, don't go hunting for it with a lighter. Plus, quite frankly, I don't think I would have left that 9/11 flag flapping in the breeze. Someone is surely thumbing their nose.

[9/27]

You were correct that my interest is not specifically in Doty. My interest in temporarily removing Doty from the plot is to test whether another actor will fill the role. Dan had commented several months back that the story might have created Doty rather than the other way around. Indeed your viral hypothesis may benefit from some refinement. Individuals that are infected do not simply become part of a larger sickness pool, but rather they fill specific and unique niches. But how unique are these roles and what

determines their specifics? With Doty temporarily removed, will someone fill in as simply another of the mythical and indistinguishable Dotys? Or will that someone fill in with unique characteristics clearly distinguishable from Doty? Will that someone move the story forward to the next chapter?

Yes, this is a question that may be of more than academic interest.

[10/5]

I am having difficulty making sense of some recent aviary/aquarium related **developments** [a]. I can keep my mouth shut or I can speculate. My rule of thumb these many years: if in doubt, put it out.

Coming to the fore in the last few weeks is a contention between CF and TF. I understand that they will be meeting today. The underlying issue appears to be CF's increasingly proactive role relative to the aviary. It would be difficult for me not to see this from an aquarium perspective, and thus the new (self-?) designation for a frequent fellow traveler.

I speculate that the underlying issue involves disclosure, but that can cover many possibilities. It would be very difficult to ascertain who is on which side. The complicating factor is the problem of containment. Apparent acts of disclosure, may simply be exercises in creative containment.

The two recent episodes of 'disclosure' on the part of the Aviary are RC's EfD book and the SERPO affair. Both of these very significantly involve a single actor, RD. RD is the spokesperson for the traditional aviary. The reactivation of the aquarium, i.e. the R&D show, in 2004 was coincidental with the publication of EfD, based on information from RD. Late in '05 came the the first SERPO installment. Late this spring came the (counter-?) revelations concerning RD's involvement in the dissemination of that material. These revelations led to escalating exchanges between between the pro and con sides resulting in RD's temporary suspension from his constabulary duties.

Over the last several months CF has demonstrated an increasingly proactive interest in this saga, particularly in the question of whether RD may have revealed or attempted to obtain any classified information, i.e. the alleged names of government officials. In the process of that investigation, which now seems to have been concluded negatively, CF raised a concern about TF's cooperation. Today's meeting ought to be an indication that this secondary issue is being favorably resolved.

While all of this has been going on, there has been some escalation in GN's activity relative to his RAM project, another matter in which CF is participating, and in which I have become involved to a degree. Interestingly, here again, there appears to be some contention between CF and TF, but with a reversal of their roles, to the effect that TF is being obstructive. Setting these two dramas side by side gives the impression of two experienced beltway warriors carrying on a battle by proxy, with GN and RD being their respective proxies. And me? Obviously I am struggling to stay above the fray.

In the thick of the battle, it does appear to be a conspiracy of dunces to bring about MAD. But I doubt that either side wants a MAD outcome. The A/A has had its uses over many decades, at the very least it is an instrument that should at least be kept in mothballs, if nothing else. Another more speculative treatment would suggest a shift in management relative to the CF/TF axis, with CF representing the new guard or Aq/Av, i.e. metaphys/phys. However, the GN/RD duality evinces very little of this latter polarity. The main contention between these two is the question of whether or not there exists a RAM, i.e. reverse-engineered alien machine, a detail that pales in significance relative to the alleged concerted visitation itself.

After meeting with TF, CF continues to push for continued disclosure of all information pertinent to the

intersection between RD and UFOs. CF urges that I meet with TF to further this cause. I have a call into TF requesting such a dialog, and hope to be able to report on it here if and when it transpires.

In the past, TF has refused to report directly on hearsay information relative to the alleged government involvement with the UFO phenomenon. This reticence is stated as a desire to protect sources. Now that RD has been singled out as a problematic source, there is an opportunity here to attempt to clarify the allegations concerning government involvement by attempting to segregate out, to a greater extent than was done in EfD, those allegations that have surfaced primarily through the auspices of RD. Since RD is the primary known source for all such allegations, this would be a significant step toward resolving this complex issue.

In the past, TF has confided that he is personally against disclosure. This may seem difficult to reconcile with his considerable history of activism in this arena. His personal position on this matter is due for clarification following the SERPO episode. His view has been that there was ample justification for the alleged policy of non-disclosure, though he has never specified what that is.

It would have to be considered a useful step to provide, for the first time, a semi-official channel for disclosure. TF and RD would be the first subjects to be volunteered for this process. The fact of two individuals who have previously collaborated setting the example for coming forward under the semi-official auspices of CF, would set a significant precedent. The alternative would be to set up a Congressional investigatory body. Any others who feel they might have something to contribute are invited to watch this process, and make their own decisions. In the meantime there would be an ad hoc panel of skeptics to vet the testimony as presented. I don't see that there is anything to lose in this attempt at candor.

Rather Good

<http://bak.spc.org/everything/e/hard/texts2/kaplan.html#top>

xxx,

Yes, rather good. It deserves to be circulated to these lists.

This is postmodernism at its best.

At its best, however, PM is unable, by its own internal logic, to effectively criticize the scientific worldview. The only way to criticize one construction is to offer another more inclusive construction.

If that other, more inclusive, construction is not essentially Leibnizian, then we have not the foggiest notion of what it could be.

Yes, the mind abhors a vacuum. And so does a mindful nature. Science attempts to fill that vacuum with atoms swerving in the dark. Was any more preposterous hypothesis ever put forward? Has any hypothesis ever been more slavishly idolized by every would-be master of this universe?

Dan

Then there is.....

Alexander Batthyany and Avshalom Elitzur (eds.), *Mind and Its Place in the World: Non-Reductionist Approaches to the Ontology of Consciousness*, Ontos, 2006, 323pp., \$94.00, ISBN 3937202986. [Reviewed by William Seager, University of Toronto at Scarborough](#)

[10/15]

Dan:

Might be a good idea for you to e-mail a brief CV of you[r] own to [...] They don't know who you are or how you fit into the meeting vetting process on RP's behalf.

Mr. **Smith** [\[a\]](#) goes to Washington:

1975. reads Jack Sarfatti's *Beyond Space and Time*, begins learning about anthropics, and going on to metaphysics.

1977. a Sophia encounter

1978. 2nd masters in physics, from Univ. of Md.

In between: freelance computer programmer in and around Baltimore.

1991. Phenomenological interlude seeming to result in connecting with CF/RP in DC. First time that CF

has heard of eschatology.

c. 1995. meets with Chris Straub of the SSCI. Introduces Gordon to CF.

1998. almost introduced to James Woolsey by CF. Glass ceiling effect?

In between: interesting interaction with CF on and about 9/11/01, as reported to FBI. Very little contact otherwise.

2004. resumption of R&D show.

2006. interactions focusing on RD, GN and one other avian.

To learn about the end of physics, Google on Peter Woit and Lee Smolin.

[10/16]

The end of physics hypothesis has gone mainstream, just in the past few months. The next intellectual shock will come when this fact is linked to another idea coming out of physics, this from Robert Laughlin of Stanford University: <http://large.stanford.edu/rbl/books/b01jan02/index.htm>. As stated in Wikipedia: this book is an argument against the overuse of [reductionism](#) in fields such as [string theory](#), and emphasizes that the future of physics research is in the study of [emergence](#). But I wouldn't hold my breath. This is where some sort of external political intervention will be required to jumpstart the necessary linkage of ideas.

'Consciousness Makes a Difference: A Reluctant Dualist's Confession' -- Avshalom C. Elitzur. In this [introduction](#) to his book, mentioned above Avshalom claims a to have an irrefutable argument for interactive dualism and against materialism.

[10/17]

Avshalom avers that the mind/body problem is real, otherwise it would not be so baffling. There is no other problem in the world that is anything like it, nor even approximating its conceptual impenetrability. If it can be argued to be a pseudo-problem, then there are no genuine problems in the world. If it is a real problem, then we can be reasonably assured that our understanding of the world will require an alternative to materialism/physicalism. Dualism being incoherent, this leaves idealism as our only path to coherence. Why is holism such a bugaboo to the modern mind? It has to do with all our compartments. What will we do without them? It is all about the tragedy of the commons.

[10/23]

The following was sent out on 10/19:

Chris,

The message? I recognize that the interpretation you give below has become the standard view/version of the message and its disturbing nature.

This version, however, only partially resembles the version to which I happen to subscribe. It is based upon the modern scientific worldview and states that the visitors are from 'Planet X'. In my (postmodern) version the visitors are from 'Dimension X'. The visitors do not come in space ships; they come through portals that may sometimes appear as flying saucers.

So, yes, I am a radical immaterialist or idealist. We are residing in a virtual reality, an actual (dream-like) creation in which all sentient creatures participate along with whatever additional cosmic intelligence there may be, which may be viewed as God-like. What we so blithely think of as reality is actually the construct of a cosmic conspiracy in which we are the unwitting, now about to become witting, co-conspirators.

In other words, the world is indeed a stage. Deep space and deep time are merely the phenomenological appendages of any sentient existence that is designed to function in a pseudo-independent fashion, i.e. independent of the Creator. This is merely a slight restatement of what is commonly referred to as the Strong Anthropic Principle (SAP). Phenomenal nature is the veil that necessarily conceals a self-revealing God.

So, yes, the Creationists are right about the origin of the world, but wrong about its substance, because they are dualistic (mind/spirit vs. matter). There are two great spiritual traditions: theism and pantheism. The theists are right about there being a Creator, but wrong about there being any real distinction between the Creator and Creation. That distinction is only an illusion (Matrix-like) meant for the temporary benefit of us creatures. The pantheists are right about their metaphysical monism, but then they mistakenly throw out God along with the dualistic bathwater. Wrong move. Panentheism (Whitehead) was a partially restorative effort.

All of these issues have sailed right over the heads of virtually every ufologist. The Buck Rogers mindset of the ufologists has greatly muddled these phenomenological waters, and so they have been the unwitting co-conspirators in this sixty-year cover-up. Not to say that their confusion hasn't been aided and abetted with strategically planted bits of disinformation. The Serpo story is a case in point. It was designed to partially disguise the actual interdimensional nature of our ongoing cosmic intercourse.

Disclosure, then, is actually our awakening to the illusory nature of our 'reality'. It is the parting of the veil of nature. It is simply the final revelation/apocalypse that is the historical basis of the theistic tradition, i.e. the self-revealing, self-concealing God.

That is, what I claim to be, the message behind the visitation. The three main visitors (EBE1,2,3) may be viewed then as the actual fulfillment of what used to be merely the apocryphal Biblical story of the Three Magi (as in Majestic, etc. and bearing gifts from afar). They were here to help prepare us for our inevitable awakening.

How do I know this? Mainly because of a very well-directed nudge from 'Sophia' about thirty years ago, and some help from Jack Sarfatti's 'Space-Time & Beyond' (1975), etc. How do I intend to prove it? Simply by continuing to provide an intellectually/spiritually coherent focus for an ongoing (accelerating?) process of disclosure.

Dan

On 10/18 the topic of **Korea** [a] was raised. This requires a little recap.

Let us recall the 'axis of evil'. In that case Iran and Korea were linked. UG has recently confirmed that he was called to DC last spring to brief GWB on Iran. Now we have the other end of that axis. We know that the Shiites are strong on their millennialism. Ahmadinejad is widely seen as a Y2X contender. On the other hand, China, whose proxy is NK, is extremely nervous about the millennial likes of the Falun Gong and the Moonies, while us Westerners simply yawn. Is it possible the the axis has two poles relative to Y2X. Who is Iran's sponsor? Is it the Y2X friendly faction of the 'Illuminati'/Sufis, putting the squeeze on GWB and CF?

If someone were to ask my opinion, that is certainly where my biases would lead me. Then what?

If there is a next step it is to Hollywood. I'm ready to fly there on a moment's notice. DI is the man on the spot. He seemed favorable to the BPWH on Friday. Has he since been read the riot act? Is he inside or outside the circle of aquarium untouchability? Will GN help or hinder the Y2X initiative?

Yes, it would seem that Hollywood would be the best place to play out this hostage crisis. It would be a remake of the 1980 hostage crisis. The [dailies](#) could be posted right here. This could be interesting. So maybe there could be at least a virtual drama.

All we need now is a serviceable treatment for this updated version of *Kingdoms Come*. And what will be the update on the 1/21/1981 political denouement?

[10/24]

Synchronicity [a] control: on 10/14 I mentioned a review of *Mind and Its Place in the World*. One of the contributors is Peter Lloyd. Peter sent two emails on 10/21 referencing this website. I don't recall who sent the reference to the book, but Peter had recently met with Jack in Paris. Peter currently resides in Malta. A collaborator of Peter's is Susan Waitt who has been contributing on Jack's list for some time. It was Susan who sent the BPW link to Peter.

Active idealists constitute a small world. That Peter and I had not run into each other earlier, indicates that our individual radars are not what they could be. Jack is our mutual radar man in this and many other respects.

Having said this and recognizing Peter's perspicuity in tracking me down, I will move on to an instant critique. But first the links:

[Peter B Lloyd home page](#).

[Consciousness and Berkeley's Metaphysics](#) (1999).

[Paranormal Phenomena and Berkeley's Metaphysics](#) (1999).

And next some politics. In his comment on the second book, Peter mentions Dale Graff as having been an inspiration for that book. Peter may not know that Dale is a member of the Aviary. If the Aviary were a positively functioning group, Peter and I might have been linked up long ago, but alack-alas. Dysfunction rules.

I regret to say that our own CF is the source of much of that dysfunction, and it is no surprise that other avians look cynically upon anyone so associated. I have to trust that there is a method in this madness. It is about the timing and the nature of disclosure. CF has been functioning apparently as an obstacle thereto. What I continue to suspect and hope is that CF is operating from the larger, shall we say 'cosmic' playbook, a playbook not accessible to the other birds. They do not realize the magnitude of this drama, and are being deliberately kept in the dark. If I'm wrong, at least I am making one big mistake, and not just a lot of little ones. The reason for the long and continuing 'delay' is simply because of the eschatological enormity of what is to be disclosed, a perspective that is lost upon the other avians.

And this also constitutes a critique of Peter and every other idealist out there. This is where the physics comes in. With that comes the anthropics. With the anthropics comes God, or some reasonable facsimile thereto. As noted previously, western idealists tend to follow their eastern colleagues into pantheism at the expense of theism, except for those who come to idealism through their religion. Recall that I came to the 'religion' at least in part through the metaphysics/anthropics, with a nudge from Sophia.

Idealists, pantheists and even theistically oriented idealists all suffer from an acosmic blind-spot. This can only be corrected with a strong dose of anthropics, a topic and body of evidence that they uniformly eschew.

To put it simply, disclosure now becomes a piece of cosmic Revelation/Apocalypse/Apokatastasis. Creation is nothing without the attendant veil of Nature. The rending of that veil on a cultural/global scale can only have an eschatological function. This is the cracking of our cosmic eggshell. It is utterly irreversible. The cover-up has simply been a piece of Creation. The Great Revealer has been the Great Concealer. Don't blame the CIA or the (anti-)Illuminati. They were just accessories to our enforced ignorance.

Y2X is the Great Party Pooper. Well, that does depend on one's view of Apokatastasis. Space and time are a piece of Creation. Infinite time and space would simply constitute another barrier between the Creator and the creation. The best possible world is necessarily finite in every quantitative sense, but not qualitatively. Quantitative infinities are simply our usually misguided projections of God's qualitative infinity. Infinite love militates against the former infinity. That we have such difficulty comprehending that seeming paradox is owed largely to our materialistic misapprehensions. If one piece of candy is good, then a infinite amount of candy would be the best. Sorry 'bout that! All good things must end. The only thing that does not end is goodness itself. The good too often obscures our vision of the Goodness. Goodness is truly beyond all space and time. Restoration of the cosmic ouroboros is the Telos. There is only one such, although it may have infinite 'dimensionality' as well as functionality. The Mandelbrot is the best quantitative metaphor that we have for the qualitative infinity that is God.

[10/25] [\[a\]](#)

If my speculation about a 9/11 conspiracy is correct, then there already exists a monotheist/eschaton conspiracy. RS and BJ right now appear to be working overtime to break up this conspiracy, while CF is backing off. But who is playing the China card? What dog does China have in the Messiah plot? NK? Is their only agenda now to become the new Amerika, after the Xians, Moslems and Jews have killed each other off in their mutual Armageddon. What does NK bring to that table? Does the Armageddon pot need any more stirring.? Any external, pagan intervention would be a pretext for the messianic plotters to pull together more.

It is more likely that the Xians would be using the China card to add further weight to their Y2X scenario vs. Islam's [Mahdi](#). But I don't think that is a real issue. Moslems already realize that the Mahdi is a piece of Y2X; it's in their scripture. China would certainly sense this. They simply don't want to be left out of the fun. NK is a useful bargaining chip to that end. Yes, China may only be playing for extra time. Just a few more years, perhaps. China might have actually engineered 9/11. That would have been the smart thing for them to do. But then we would have tried harder to stop it. No?

9/11 could have been to everyone's advantage as a surrogate for Armageddon, with Iraq as the main result. With the clash of cultures, we are seeing a brief reprise of the Cold War, for the purpose of last minute adjustments and realignments in the global Intel. By now, all the major players in the messiah plot have to be on board. There can be no major holdouts. Isn't everybody more than ready for a new bit of fun?

[10/26]

[Xxx,](#)

[I have to go with the only thing that makes sense to me, which is the BPWH.](#)

CF has been something extra. I would actually be able to survive without CF, but not without the BPWH.

I believe that we are created in the image of the Creator, and the primary result is that we will be able to reason about Creation when the time has come for us to do that.

You and I both know that the scientific-materialist paradigm is on its last legs. A new paradigm is about to be born that will include the paranormal. The paradigm will shift [actually be 'inverted'] in the nearly foreseeable future. As always in the past, there will be a personal paradigm shifter. This will be an historically unprecedented event that seems most likely to fulfill the most general expectations concerning the advent of the Mahdi, Maitreya, and Messiah.

Knowing what I know, having the connections and resources that I have, it would be extremely irresponsible for me not to remain open to this possibility, and indeed, not to actively pursue that possibility at every opportunity.

If you were to use your connections and resources to thwart such an obvious and cosmic opportunity, I would imagine that your future existence, in whatever form, would be even more unbearable than that of Adolph Hitler's. But, hey, I've been wrong before.

Dan

RS claims to have spoken with DI about these matters. It could be he who passed along a cease and desist order, or several others. All is fair in love, war and messianics. We are not expecting anyone to roll over and play dead. Que sera. It is only marginally in our hands. Obstructions can be transformed into facilitations in the blink of an eye. Where there is a cosmic will, there surely is a way.

We were reminded yesterday of an accusation made against DF of a very peculiar sort, from an equally unlikely source. 'Bizarre' might be more accurate. I happen to have been an observer on the alleged occasion as mentioned here previously, I believe. It goes to show the unlikely extent to which folks go in attempting to keep their options open in these environs. I would suggest that we are kidding ourselves in this regard. Les jeux sont fait.

And the walls do have ears, and opportunities are often coincidental. Whenever a bit of information is ejected from the black hole south of Baltimore, I do try to pay attention, hashing it out here. I was having difficulty rationalizing this last reported incident, and somebody took pity on my rapidly diminishing cranial capacity.

There might have been a drug deal in **El Paso** [a] that went sour/south. This was not a government operation, but it did impinge upon the consciousness of one of us. We don't need to know this, except as a cover story for a bigger drug deal, going down as we speak. The bigger drug deal is the Aquarium deal, of course. And, yes, there are concerns about foreign intervention in an allegedly domestic operation, as if our own put-upon DF did not have enough other things to contend with. The only domestic thing about the Aquarium is the vino that is sometimes imbibed in its pursuance.

So, yes, there was to have been a meeting with RD that was puthoff, allegedly due to indiscrete inquiries about a parking lot shootout, nearly south of the border. I'll believe anything, once. But this is now just a cover for a much bigger drug operation that we all know and love. We speak of the viral memes being disseminated by Typhoid Rick, and the 'antidote' being disseminated by.....whom?

I'm not making this up. This is what I was being told a few minutes ago, by you know who. Ok, so Rick is the particle and I am the antiparticle? I don't know how else to interpret what I was just told. Or is it the other way around? This was supposed to have been for the benefit of Gary, who was raising this old (drug inquiry??) incident for reasons better known only to himself. Can't you just see all of this being

explained in some official report? Not. Make of it what Gary will. The only way to kill off the rapidly spreading pandemic of conspiracy mongering is to point to an Uber-Conspiracy. This does seem to be the function of the Aquarium vs. the Aviary. And we are just being reminded that this is kosher and government inspected. If there are any complaints they may be taken to the FBI, which has been thoroughly inoculated against these shenanigans for many a decade already. And, yes, the SSCI was briefed on all of this, way back in c. 1995. So why the shootout? Well, that may have been for internal consumption only, to keep us all on our toes, even when things seem slack. It is only meant to add a bit of spice to what should be old news to the interested parties. Reminders can be useful.

Subject: Re: Check out Culture CampaignR

Mr Dan,

Before I reply to your last email, would you clarify these comments you made in our last phone conversation:

"I am A-48, I am RAM"

"xxx knew of the attack of 9/11 before it happened"

In addition

"If you were to use your connections and resources to thwart such an obvious and cosmic opportunity, I would imagine that your future existence, in what ever form, would be even more unbearable than that of Adolph Hitler's."

Thank you,

Xxx

Xxx,

You got me there. Since I don't know or have forgotten what A-48 is, I have no idea what I might have meant by such a statement.

As far as RAM-Star goes, there is a rumor that CF was chairman and that he abdicated and left me in charge. I doubt that you will be able to find a paper trail on that.

There is speculation on the BPW site about various of the Aviary/aquarium actors. I believe there may be some speculation that might be interpreted in the manner you suggest. If you would like me to speculate further about that, try giving me a call at: -----.

As to the final quote, how might we best unpack that statement?

Here is one suggestion for you:

Adolph Hitler is often cited as the best example of pure evil in human form. He bears personal responsibility for the tortured deaths of millions. It is my belief, however, that he did play out a necessary functional role within the context of our best possible world history. I am prepared to offer some speculation about the deeper meaning of that role. Nonetheless, it will remain a stain upon his soul, for as long as that soul may exist.

Something similar might be said for Pontius Pilate. The sin of the crucifixion, like the sin of eating the apple, may be referred to as a 'felicitous sin'. It could be argued that Pilate facilitated our salvation by expediting Jesus' death. Nonetheless, I don't know of anybody who would want to trade places with Pontius or Judas. How would one go about removing such an albatross from around one's neck? Only with a lot of help in high places.

That brings us back to the present. Many agree that humankind has never been more in need of salvation than now. There is a great deal of uncertainty as to what form that salvation could take. Many people pray for the imminence of that eventuality. Many people also act in creative ways toward expediting that eventuality. I place myself amongst the latter souls.

You, however, suggest that I am pushing this line of endeavor beyond the pale, that I am storming Heaven's Gate. The worst case scenario is that such an endeavor could land one in the boots of the Anti-Christ. That is a risk that I am willing to take on behalf of a possible greater good. Nothing ventured, nothing gained.

You claim to be certain that I am misguided in this effort. I find such certainty about such complex matters to be problematic to the point of possibly constituting an evil in itself. Do you claim to know enough about God's plan of salvation to be able to rule out the possibility that angels and/or aliens might have been enlisted in expediting such an Advent relative to the Powers-that-Be? The idea would be to enlist an advance party to neutralize the potential opposition. That, at least, is a significant part of the BPWH.

I understand that you have significant contacts with significant players on the world stage. You might end up playing a critical role on one side or the other of this issue. One could say that you have spent much of your life in the pursuit of being in just such a place at just such a time. I doubt that it is an accident.

I am simply pointing out to you that you have for better or worse been put on the spot. Whatever decision you now make, could be decisive on an historical scale. It is not inconceivable that this scale is absolutely unprecedented; that is how I choose to conceive it.

Dan

Gary [Bekkum](#) [a] passed along two links:

- <http://sentientdevelopments.blogspot.com/>
- <http://ieet.org/index.php/IEET/more/dvorsky20061024/>

Here is George Dvorsky:

" Relatedly, Buddhist atomists like Dharmakirti argued that the only thing that exists are Buddhist atoms (described as being point-sized, durationless, and made of energy) and states of consciousness. Similarly, Gottfried Leibniz and A. N. Whitehead believed that systems ordinarily considered to be physical were constructed in some sense from more basic mental entities - what are now referred to in process philosophy as 'Whitehead occasions.' "

Yes, Leibniz referred to his atoms of consciousness as monads. Nowadays we can simply speak of information. Such is neutral monism. This is also postmodern pantheism. Must it be Godless?

There is the problem of [associationism](#):

This theory posits that all consciousness is the result of the combination, in accordance with the law of association, of certain simple and ultimate elements derived from sense experiences.

But then from <https://tspace.library.utoronto.ca/citd/holtorf/3.7.html>:

If this is right, every part of this study would be perceived at first in the context of the totality of the personality and all recollections of the reader. Single parts would on subsequent conscious reflection become dissociated from this totality. However, associative connections such as those expressed through the hypertext-links on every page would then recreate an 'undivided unity of perception'. Seen in this light, the complexity of my work could not be reduced to a few elementary ideas, but would best be appreciated by linking it to an even greater complexity of ideas and recollections in the mind of the reader—which is, as Bergson argued, what happens automatically.

Ergo, God must exist as the ultimate Ideator of all irreducible ideas, this by including the principle of *esse est percipi*, and then *voila* you have the basis of the BPWH.

How do pantheists and informationlists manage to avoid their reckoning with the God concept? It beats the heck out of me? Let's get real, boys and girls!

[10/28]

I am now reading [Informationalism](#) (2004) by Damon Woolsey. Damon casts this as a version of 'neutral monism', a moniker coined by Bertrand Russell, later providing a logical basis for Whitehead's 'process philosophy'. The modern reemergence of informationalism is attributed to John Wheeler. It was given a special impetus in its application to black holes by Hawking, Bekenstein, etc.

Physical objects need not consist of actual substance, only mathematical descriptions. Indeed, I hardly find it necessary to argue against materialism at all; physicists have done all the hard work for me. There is still the matter of why there seems to be real concrete physical stuff, consisting of what philosophers call substance, but as we shall soon see, appearances can be deceiving.

Yes, indeedy.

[10/30]

Informationalism [a], in its ontological sense, remains the most prevalent alternative to physicalism among the intellectually and technically inclined, even probably unwittingly amongst many who have never actually encountered the term. A good place to start is with the Wikipedia's [information](#).

Claude Shannon provided the only quantitative measure of information: for a binary message of length N , it is simply 2^N . However,

It is important to recognise the limitations of Shannon's work from the perspective of human meaning. When referring to the meaning content of a message Shannon noted "*Frequently the messages have meaning... these semantic aspects of communication are irrelevant to the engineering problem.*"

Here is the rub. We blithely think that information is something scientific and quantitative. Claude cautions us. The only actual definition of information is so narrowly construed as to be irrelevant to any ordinary, especially philosophical, discourse.

In ordinary discourse we are concerned only with the semantic aspect of [information](#). When we say that we live in the Information Age, we confuse that with the Digital Age and so, very naively, we think we know what we are talking about, when in point of fact we know virtually nothing of the kind. A very brief perusal of this last article will easily demonstrate what a muddle is this topic, from any formal or philosophical sense. In short, 'information science' is simply an oxymoron from the git-go:

Information is notoriously a polymorphic phenomenon and a polysemantic concept so, as an explicandum, it can be associated with several explanations, depending on the level of abstraction

adopted and the cluster of requirements and desiderata orientating a theory. The reader may wish to keep this in mind while reading this entry, where some schematic simplifications and interpretative decisions will be inevitable. Claude E. Shannon, for one, was very cautious: "The word 'information' has been given different meanings by various writers in the general field of information theory. It is likely that at least a number of these will prove sufficiently useful in certain applications to deserve further study and permanent recognition. *It is hardly to be expected that a single concept of information would satisfactorily account for the numerous possible applications of this general field.* (italics added)" (Shannon [1993], p. 180).

There simply does not even exist a philosophy of information that could deserve the appellation of 'informationalism'. On the other hand, most of modern philosophy deals exclusively with the problem of semantics. And we all know what a muddle that is.

Information is essentially a subjective matter, yet amazing levels of intersubjective communication are possible. There are indeed great communicators, whose communications are able to move people to sacrifice their lives in the context of the meanings contained therein and over time periods measured in millennia. The relative ease of communication and translation does point to a commonality of mind that transcends any quantitative or objectifiable measure. It is natural then to posit an overriding mental subject, of which our individual subjectivities are reflections. Religion is simply the binding of humans together in webs of meaning. The positing of a transcendent being is a perfectly natural reflection of the otherwise inexplicable effectiveness of human discourse. Once again the burden falls on those who would deny the obvious. The failure of the scientific method to have any significant impact in the realm of semantics, should alert us to the irreducibility of the mind, well apart from the even more intractable problems of consciousness. Semantic holism is just an aspect of the unity of the mind, pointing directly to a collective unity of all minds. I doubt that there can be any stronger or more prevalent indicator of something on the nature of a cosmic intelligence.

In this same vein we should reexamine the Anthropic Principle. This Principle manifests the necessarily subjective side of physics, a point that was first raised in the context of the quantum measurement problem. Measurement is ultimately a semantic problem. There can be no measurement without meaning and interpretation, i.e. observation. Can there be observation without observers? More technically we have the registration or recording problem. Can there be physics without physicists? Seemingly the universe can get on just fine without the intervention any life forms at all. But explain to us then the ontic status of unobservable universes? Is that the same status as the 'dark side' of the moon?

One is tempted to dismiss such abstract concerns until one begins to appreciate the very abstract nature of physics itself. From whence comes all that mathematics? Can mathematics be said to exist in the absence of mathematicians? Why do otherwise sober physicists find it so tempting to conceive of a Pythagorean God? If mathematical physics did not exist, we would pay no more attention to the ontic status of mathematics than we do to the ontic status of tennis. Is the semantics of mathematics and logic so very different from linguistic semantics? Are the two fields not mutually dependent? I would certainly hesitate to draw a bright line. As in every branch of knowledge there is the endemic and perfectly intractable problem of foundations. Everything is supported by everything else. No wonder that the ouroboros should be the mascot of every metaphysician. It is certainly the icon of the BPW.

It is not at all difficult to wax poetic about the holistic nature of mathematics, as I have in these pages. Take any significant theorem of mathematics and you will be amazed at the breadth and complexity of its proof structure. I remind you simply of the 15,000 pages constituting the derivation of the theory of exceptional groups, of which no one mathematician has a full grasp. Seemingly every field of mathematics was required to support the long sought proof of Fermat's Last Theorem. Holism is rampant in mathematics. Is it not also rampant in physics and everywhere else? From this perspective, the Anthropic Principle is perfectly natural. It should hardly be remarkable. It is all one 'semantic web'. What else could contain such a superstructure other than some cosmic subject? It beats the heck out of me.

[10/31]

On the philosophical side, I wish next to address the problems of perception and of the continuity of mind, as in the question of survival. Both of these issues gain and lend support in the context of the Semantic Web, i.e. Network of Being. But there are two more pressing political matters that need to be addressed first. There is also some recent correspondence which bears posting.

I notice, however, there is a review in the New York Times today of *Moral Minds: How Nature Designed Our Universal Sense of Right and Wrong* by Marc Hauser (2006). Here is prime example of how a reductive science, e.g. molecular genetics, struggles to explain a very significant piece of the Semantic Web, i.e. morality. Anybody can tell a Just-So story, but that is hardly science. Just-So story telling is, however, a legitimate piece of the coherentism that is the foundation of the BPW. If the scientists are not careful, they will be skewered on their own petard. They can just think of me as Cupid. Later.....

(Remind me to discuss this interesting paper: Jon Barwise -- [Information and Impossibilities](#) (1997).)

This was from yesterday:

Dearest Jack,

It has been awhile since you and I have had the pleasure of discoursing, but as usual we have the God question before us.

You pride yourself on your pragmatism, and perhaps in the past I have not appreciated nor exploited this proclivity of yours to its fullest extent.

So may we wax a wee bit pragmatic about the God question? There are two pragmatic issues that stand out:

Where lies the burden of proof for the (non)/existence of God?

Given the positive likelihood of that existence, who will then deign to represent said entity?

Since there already exists a vast, proven proclivity for a deep felt belief in a cosmic intelligence, pragmatically speaking, the burden of proof in the intellectual arena lies with those who choose to deny this most distinctively human of all our traits.

Virtually no one doubts that modern scientific materialism and pure physicalism have had their heyday. Postmodern eclecticism is upon us, with a vengeance. Everything is once again possible and tolerable amongst the intelligentsia. The God question is easily the most significant of all these resurrected possibilities and topics of intellectual discourse. There is not much point in discussing any lesser issue, until we are able to properly dispose of this one.

The intellectual burden has shifted and is still shifting back into the laps of the God deniers. Nolo contendere?

Thus the only truly practical question before us is who will now deign to represent said entity?

But here again, there hardly is an issue on the pragmatic side. If there were an issue, it seems to have been settled in a nicely political fashion. The simple fact is that there is no visible competition. Must I apologize for this fact? Should we not rather thank goodness, and get on with what little remains of the representational job at hand?

There are only two things that needed to be done: Link revelation with disclosure. Link the putative Visitation with the cosmic agency of said revelation.

These have already been accomplished herein.

If there is to be a human agent of disclosure/revelation, this is exactly where you would expect to find

any such, already politically linked to the putative Source.

I simply defy anyone within the sound of my voice to come up with a better scenario for revelation/disclosure than the one given here, which is an integral part of the Best Possible World Hypothesis. Simply by definition, there can be none better than the best of what we may collectively imagine. If I have done only a passable job of representing and initiating our collective/cosmic imagination in these regards, then it is a *fait accompli*. You need hear nothing more from me in this case. The ball is in your court. Get on with the game of Cosmic Pokatok or Apokatastasis.

Dan

There are two upcoming meetings of note: one with BJ this Hallowed Eve, and then with [Eduardo](#) and CF & Co. tomorrow. The latter is being billed now as the second annual 'Aquarium meeting', but note that several very significant fish will be absent from this administrative-type meeting. This is not a board meeting, in other words. And as before, any absent souls are invited to send their proxies, in whatever form is most appropriate. Some might think it would have been more convenient to try to combine these two meetings today, but besides a logistical problem, there was also the semantic problem of meeting with a 'witch doctor' on Halloween. The water-cooler commentators would have had a field-day, bless their hearts!

But listen up, now. Here is the word from on high. BJ has concerns about the professionalism of CF relative to these sorts of shenanigans. It may be BJ, though, who is having a problem with the semantic web. BJ equates professionalism with compartmentalism, we are told. This is well and good with well-defined problems, but when dealing with something such as threat assessment in its fullest meaning, compartmentalizing is liable to lead to tunnel vision. There are risks of muddying the water, but there may also be benefits that are deemed worth the risks. Crystal balls do tend to be cloudy, but they may still suffice. Where were the crystal balls on 9/11, you may ask? That is a question that more than a few of us have attempted to divine. I can certainly tell you where one of them was.

And how about them threats? I'm not overly concerned in the long-run. But could there be something worse than 9/11? Would it come from that same general direction? An outstanding threat is that of a paradigm shift. The makeup of the meeting itself, and the fact of its being noted here might well be taken as a sign of these paradigmatically unsettled times. It is my suspicion that threats of the kind being considered may be intended, humanly or otherwise, as inducements to sticking with the cosmic plan. This is not a poker game that I would voluntarily choose. Fatalism has its role, but this does not preclude every reasonable precaution. At the point of its matriculation or hatching out of our cosmic shell, humanity is at its most vulnerable, as our visitors of all stripes would be well aware. It behooves us to beware that we are all persons possessed. Possessed of what or for what is the issue at hand. What exorcism is desirable?

What we may be looking for is cooptation. That is the radical alternative. That is the paradigm shift/inversion. Damned if we do, damned if we don't. It's easy enough to see the stick here, but where oh where is the carrot?

The world is getting to be more dangerous, in that there are more things to go wrong, and more disgruntled and misguided people around to make sure that they do. We decry the excesses of fundamentalism/fanaticism, but that is one of the strongest inhibitions we have against further corrosion of the social fabric. Literalism of any kind is the first victim of changing concepts. The literalists are then the most threatened, and the first to act out. Terrorism may be seen as a logical reaction to the disruptive threat of the Internet. The fact that terrorists have to resort to the Internet does not argue against this idea.

Then there are the economic threats. Peak Oil being the most obvious of these, not to mention Peak Debt, etc. Do our creditors plot against us? Debtors and creditors have to be cautious with each other. When will that caution vanish? When will patience end and panic set in? Is Armageddon not avoidable? This simply describes the mental state of the panicked paranoid. What can be the checks on panic? If there is

any external intervention to this end, we would immediately become enslaved to that externality, at the expense of any further internal development. Fireside chats with God. How does that sound? It is all in the bedside manner. Where is the model? What will happen with the people staying home and not going to Wal-Mart? Those will be interesting days.

The centrifugal forces are extreme. Will the center hold? What center? Haven't I been saying that we need a center? That is what the semantic network is about. To be is to relate. There has to be a relational center of gravity. That is what YX1 and YX2 must be about. I'm still here typing because the meeting with BJ is off. I hope that is not an omen. It may be beneficial not to make two trips in two days, and hopefully I will feel better tomorrow.

[11/3] [a]

The lunch meeting on Wednesday was scaled back to CF, myself, Eduardo, AF and Mark P. I was told that about an hour before the scheduled lunch, there was a spate of talking amongst the prospective office guests, who then decided to go elsewhere. The day before, I was told that elements of the BPW site had been circulated in the office. We can only speculate as to whether this reaction was a reflection of the ongoing tension between the Aviary and Aquarium.

In the meantime, Gary [Bekkum](#) continues to report on a re-substantiated(?) FBI visit presumably to BJ, although CF had claimed recently that the report by BJ was suspect. Just further indication of the poor state of communications hereabouts.

The confrontation between the Aviary and Aquarium also includes PM [DIA] and GN, on opposite sides, not to mention RD who may already be resurfacing in a new Serpo context. The ultimate concern may be with DI in connection with the 'KC' treatment. In this latter connection, have I reported on the breakdown in communication between myself and RS concerning the BPW version of Y2X? Before that breakdown, RS had told me that DI had been gotten to, in this connection and wrt GN. I have never heard back from DI. RS is close with the Roil Family, and one can only imagine their take on these shenanigans. Laurence R has also been resurrected in these regards.

So what about the threat assessment? Well, Eduardo is returning to Ecuador to vote on the 20th. The leftist contender, Rafael Correa, would place his country squarely on the Chavez/Morales axis. The two of us later mainly discussed the more etheric connections. There was mention of the connection between the Mayan and Toltec calendars. He described their flood story: very similar to that from the Middle East. In their case, the Serpent is the agent of the Flood. There was mention of the tribal warriors now returning from the Sun. He and his brothers will be working on a video that might parallel some features of the 'KC' treatment. We talked about the pyramid symbolism, common with many cultures, including the Masonic symbol. The eye is the portal of the travelers, and reminiscent of the tail biting ouroboros. It is also the cosmic intelligence, which is the grail destination of every quest. The flood is the outpouring of knowledge and the upwelling of the collective unconscious. At the same time my spouse dreamt of my being washed over the railing of a boat by a wave. Who has their finger in the dike? Is this the Aviary vs. the Aquarium? The seals on the back of the Dollar: bird, olive branch, mountain, ark, serpent(?), etc., do seem to point to the aftermath of a flood and the return of the bird tribes. Eduardo also recalled my showing of the Mandelbrot some time ago.

[11/4]

I'd like to get back to George [Dvorsky](#). His blog is most informative, an excellent example of [transhumanism](#) in the raw. Dvorsky's blog links to a useful article in [US News](#): Is There Room for the Soul? New challenges to our most cherished beliefs about self and the human spirit By Jay Tolson Posted

Sunday, October 15, 2006. Restated, transhumanism attempts to graft an artificial telos to a materialistic world, which is, of course, blatantly self-contradictory. But just try to find a transhumanist who has more than a superficial grasp of ontology. Those few who do are lead into the labyrinth of a Matrix, never to escape its soul-negating paradoxes.

Tolson, as does the BPWH, blames the mind-body problem on the dualistic Platonic cosmology, especially as reformulated by Descartes. The answer is Buddhism. Are we surprised? Which is to say that the answer to bad cosmology is no cosmology or [acosmism](#). But that is not quite right. According to the BPWH it is mainly the quantitative or scientific/objective aspect of cosmology that is illusory, while the subjective side is what finally is real, just inverting the modernist paradigm. Buddhism posits both sides to be illusory. Buddhism places its absolute Brahmin beyond all subjectivity. This is similar to the *via negativa* so prominent in Islam. That negativity can be overcome only by a positive trinitarian or sephirothic plurality of some kind. Thus can gnosis transcend mysticism and theism transcend pantheism. Only thus is communion possible. The subjectless object is an empty abstraction, a false projection of a misguided mind, the epitome of all illusions. It is designed to exercise social control by truncating human inquiry and discourse. If the BPWH is correct, then x'ianity is the closest approximation thereto. It is this impulse toward rationality that made science possible. Science however became, quite logically, too much of a good thing, and in the process it sowed the technical and intellectual seeds of its own transcendence, thus perhaps the BPWH & Internet. Is there a more rational denouement?

[11/5]

Yes, Jay's article provides a very useful summary of the core issues between Searle and Dennett: what is the meaning of meaning? Is there a difference between semantics and syntax? Searle posits there is no objectivity to meaning; it is purely a matter of intersubjectivity. Syntax is purely objective. Semantics is nothing without a cosmic subject.

Just the opposite tack is taken with [Moral Minds: How Nature Designed Our Universal Sense of Right and Wrong](#) by Marc Hauser (2006). It is [reviewed](#) in the NY Times on 10/31. The unstated assumption in the book is that innate = genetic. It is about nature vs. nurture and argues only against the view that morality is something that is taught or acculturated. I am not aware that anyone besides the behaviorists has held such a simplistic view. It borders on the obtuse, that such a straw-man argument is even presented, and then allowed to go uncriticized. This has, however, been the nearly unstated assumption of sociobiology since its inception by Edward O. Wilson in 1975. The problems of reductionism are patently ignored throughout its history. Originally it was put forward as an attack on behaviorism, an idea that had been found logically faulty many years previously. Having very successfully beaten the dead-horse of behaviorism, it was soon retargeted upon the almost dead-horse of theology. Only a very ill-defined group of anti-analytical, anti-reductionist philosophers take exception to its thesis. Theologians have been eschewing logic for centuries, with neo-Thomism and process theology as the only even partial exceptions still extant, both being decidedly acosmic. Theology has long since abdicated all reason to the scientific enterprise. The only political obstacle to science is fundamentalism which is notably a-theological. There simply is no contest from that quarter either. Due to the absence of any rational competition, science has grown flabby in its intellect. And now, in its very fragmentary state, it cannot even conceive of a global or coherent attack.

[11/6]

Back to Marc's *Moral Minds*. Nicholas Wade points out.....

Dr. Hauser argues that the moral grammar operates in much the same way as the universal grammar proposed by the linguist Noam Chomsky as the innate neural machinery for language. The universal

grammar is a system of rules for generating syntax and vocabulary but does not specify any particular language. That is supplied by the culture in which a child grows up.

As with language, these rules of 'grammar' have never been codified. It is fair to say that no one has even attempted to codify them. Moral behavior: you know it when you see it. You may not always agree with the particular behavior exhibited, but can there be any real disagreement as to an underlying intent? You speak French, I speak English, but neither of us can accuse the other of not being linguistically competent.

Since morality and conversational coherence cannot be codified, they can only be perceived directly, they cannot be analyzed in any compelling fashion. Direct perception is the radical thesis underlying any non-analytic ontology. It is only the supervening illusion space and time that allows us the occasional illusion of analysis.

The digital processing of images and sounds, does help to maintain the illusion of sense data, but nary is the philosopher who would defend such today. There simply do not exist any ontological reductionists anymore. There are not even any representationalists amongst the epistemologists. But neither are there any coherentists, simply because there is no place for them to go, except ultimately to the confessional, and that is not going to happen in a modern secular environment. The theologians cannot go there either, because such a paradigm shift would set them on the path to the Spirit of Truth, and that should be fodder for analyst's couch and then professional ridicule and worse. Postmodernism has to maintain rigid political boundaries on thought, since there are no longer any rational boundaries. Most of all, the thought police have been well internalized over the centuries of modernism. It takes a Sophia to free the thought of an individual. It will likely take the three Magi to free the thought of any collective.

The only perception possible in a non-local, non-localizable world is direct perception. Then the only perception possible is that with a cosmic Telos. There is no logical middle ground between pluralism and monism.

But wait:

Dr. Hauser believes that the moral grammar may have evolved through the evolutionary mechanism known as group selection. A group bound by altruism toward its members and rigorous discouragement of cheaters would be more likely to prevail over a less cohesive society, so genes for moral grammar would become more common.

Many evolutionary biologists frown on the idea of group selection, noting that genes cannot become more frequent unless they benefit the individual who carries them, and a person who contributes altruistically to people not related to him will reduce his own fitness and leave fewer offspring.

Aye, there's the rub. Notice the *leger de main*. The *reductio* of Darwinian selection is avoided by the invocation of of an indemonstrable 'group selection'. The molecular geneticists will have none of it. What is left of reductionism is an empty shell game. There simply is no pea. Every one passes the buck of coherence. What is left but a circle jerk, speaking of our beloved ouroboros? Coherence does come piecemeal. It is all or nothing. Can mathematical coherence distinguished from linguistic coherence? Not in the end, and not in the beginning.

But there is a gentleman's agreement between the specialists: you don't piss in my soup; I don't piss in yours. Thus is the larger Truth held hostage to a thousand professional compromises. Thus is Gulliver ensnared by the Lilliputians. How do we break the grid lock of reductionism? How else but by the minimal intervention of the Telos? How else but by a second Advent and a new Pentecost? Speaking of [which](#).

Can we get to the bottom of the problem of [analysis](#)? I have spoken much of Quine, but little of Kripke. How do they relate? One's arguments are the obverse of the other's. Saul Kripke is said to have made metaphysics respectable again with the [publication](#) of his *Naming and Necessity* (1980/1970). Saul is

perhaps best known for his 'causal theory of reference', outlined therein. What does the CTR say about reductionism? A name might be reducible to a single act of baptism, but to what might that act be reduced. Baptism is one of the most elaborate acts around. And, furthermore, it is merely a significant component of the semantic web. Was he such a genius that he cannot now be criticized/exorcized? The reduction of that web to one of its strands, was an act of unpardonable hubris, and I ought to know of such. It was a lifeline tossed to the drowning analysts. They cling to it for dear life. The illusion of a physical causality excuses their surrender of descriptivism, the last bastion of analysis, a sensory data version of epistemology. Notice that it even seems to bring a kind of communalism to the project of episteme. Shades of group selection? So much for the idolatry of the solitary Genius. Idolatry is the end of thought. Professionalism is just that. The BPW is the death of prophecy and the beginning of thought. Is that just slightly pretentious? Well, thought has to begin somewhere, and where else can it begin, other than with its own end?

Note further that physicists gave up on causality centuries ago. Causality is partially resurrected only in the context of the quantum observer paradoxes. We are left with a web of mathematical abstractions.

It is the CTR which gives rise to the paradoxes of modal realism. And who am I, adherent to the BPWH, to cast such a stone? I am a conceptualist concerning modality, not a realist. Free will is only locally valid. It applies to God only in the 'hood.

Perhaps this is truly the end of analysis ([Kripkenstein](#)):

Kripke finds in Wittgenstein all the difficulties that beset analytic philosophy, especially those that shake the very possibility of certain knowledge. He restores certainty by declaring that common sense is the guide to philosophy. He ascribes to Wittgenstein this idea, without denying that G. E. Moore had advocated it too, but without subscribing to Wittgenstein's rejection of all philosophy as nonsense. Kripke adds to Moore's view an answer to the most obvious criticism of common-sense philosophy that Bertrand Russell has so eloquently expressed in his *Skeptical Essays*: common sense and science diverge. Kripke recognizes this, and even gives an example: common sense asserts and science denies that the whale is a fish. He says this difference is marginal. He does not address the more serious differences between science and common sense, nor the criticism that there are different kinds of common sense, and that most extant common sense is imbued with ***magic***.

Has there ever been, need there ever be, a more succinct statement of the end/telos of formal philosophy? Common sense is communal sense, neighborhood, neighborly sense. Can this 'hood be logically restricted to anything less than the cosmos? There can be no common sense without a direct perception of that commonality. The semantic web is unavoidable. (See also [sense and reference](#).)

There simply exist no rules for [naming](#). What's in a name? We only know one when we perceive one. See also [semantic externalism](#):

Externalism is generally thought to be a necessary consequence of any causal theory of reference; since the causal history of a term is not internal, the involvement of that history in determining the term's referent is enough to satisfy the externalist thesis. However, Putnam and many subsequent externalists have maintained that not only reference, but sense as well is determined, at least in part, by external factors.

But then consider B Russell's [omphalos hypothesis](#):

There is no logical impossibility in the hypothesis that the world sprang into being five minutes ago, exactly as it then was, with a population that "remembered" a wholly unreal past. There is no logically necessary connection between events at different times; therefore nothing that is happening now or will happen in the future can disprove the hypothesis that the world began five minutes ago.

N.B. that the BPWH embraces a moderate version of the OH. Some such a version is a logical extension of the semantic web. Did Adam and Eve have navels? Probably, yes, they being the substantial representatives of an indefinite reproductive [cycle](#).

Another important reference here is Chalmers' '[Sense and Intension](#)'. Well, sorry, I'm not able to get the sense of this lengthy paper. The most I can say is that all of these issues remain muddled. Opinions wax and wane over these fundamental issues. Fashion rules. There is no discernible foundation for ontology or epistemology. Rules don't rule. Semantic intuition is the final judge of the basic issues. If there is an external foundation it will remain unknowable. Rorty is perhaps the best known of the anti-foundationalists, pragmatist and story teller that he is. He views philosophy from the perspective of interwoven narratives. Metanarrative? Not hardly!

[Elsewhere:](#)

Rorty encapsulates the essential goal of postanalytic philosophy in that it is not intrinsically opposed to analytic philosophy or its methods, but only to its ultimate aspirations. Postanalytic philosophy may also be known as postphilosophy, a term used by Rorty to emphasize the fact that philosophy no longer serves the role it used to in society and that this role has been replaced by other media.

[11/7]

Rorty suggests that we should see knowledge as a matter of social practice rather than as an attempt to mirror nature. This reading, however, fails to do justice to the unreasonable effectiveness of the mind in its mastery of nature, an effectiveness which may be taken as an extension of the Anthropic Principle. How could the philosophers be so dense about this crucial factor? It's simple a matter of professional myopia as usual. Never underestimate the power of social and professional solidarity. It is a real force that must be treated with caution, but cannot be ignored.

Is the BPWH sufficiently cautious? It does the only thing it can do: follows the coherence to a logical conclusion. Does it not put too much stock in the appearance of coherence? My only point is that there are no partial measures that suffice when dealing with the matter of coherence. Coherence is all or nothing. Show me a piece of coherence and I'll show you a curiosity, or I will attempt to make something of it. Coherence is either fortuitous or it is global.

Can there not be a local coherence? Coherence in the 'hood? There can be, but without a context it remains a piece of flotsam. Without a teleology, there can be no rhyme or reason. There is a holistic imperative in any bit of reason. There cannot be a microcosm without a cosmos. Does mathematics provide an example? Can there be numbers without a number system? This is rather like the argument between the realists and the constructivists in mathematics. I will use the Wiki [article](#) as a starting point. Or not.

As a possible example of isolated coherence, consider the game of tic-tac-toe. It is a finite, self-contained (meaningful?) system of action. A computer could be programmed to engage in an exhaustive acting-out of the game. There is a rub. One may easily imagine the implausible but possible circumstance of accidental tic-tac-toe. One could take most any sufficiently complex natural process and, with suitable definitions, overlay the functional equivalent of a tic-tac-toe game upon it. I suggest that this possibility constitutes a counter-example to the idea of isolated meaning or coherence. The idea of subjectless coherence is incoherent. In any ideal system, there is the presumption of a universal subject. A purely natural proxy of such a system violates that presumption. Unobserved or unobservable coherence is oxymoronic, and so is accidental or a posteriori coherence. Coherence is empty without a coheree. And, as with Wigner's Friend, there is implied thereby a transcendental telos. This may only be an elaboration of Quine's thesis of linguistic holism. It does suggest that epistemology and ontology are two sides of the same coin.

Speaking of overlays, consider [this](#): (Hans Moravec, 1998)

Perhaps the most unsettling implication of this train of thought is that anything can be interpreted as

possessing any abstract property, including consciousness and intelligence. Given the right playbook, the thermal jostling of the atoms in a rock can be seen as the operation of a complex, self-aware mind. How strange. Common sense screams that people have minds and rocks don't. [...] Is a ventriloquist's dummy a lump of wood, a human simulacrum, or a personality sharing some of the ventriloquist's body and mind? Is a video game a box of silicon bits, an electronic circuit flipping its own switches, a computer following a long list of instructions, or a large three-dimensional world inhabited by the Mario Brothers and their mushroom adversaries? Sometimes we exploit offbeat interpretations: an encrypted message is meaningless gibberish except when viewed through a deliberately obscure decoding. Humans have always used a modest multiplicity of interpretations, but computers widen the horizons. The first electronic computer was developed by Alan Turing to find "interesting" interpretations of wartime messages radioed by Germany to its U-boats. As our thoughts become more powerful, our repertoire of useful interpretations will grow. We can see levers and springs in animal limbs, and beauty in the aurora: our "mind children" may be able to spot fully functioning intelligences in the complex chemical goings on of plants, the dynamics of interstellar clouds, or the reverberations of cosmic radiation. No particular interpretation is ruled out, but the space of all of them is exponentially larger than the size of individual ones, and we may never encounter more than an infinitesimal fraction. The rock-minds may be forever lost to us in the bogglingly vast sea of mindlessly chaotic rock-interpretations. Yet those rock-minds make complete sense to themselves, and to them it is we who are lost in meaningless chaos. Our own nature, in fact, is defined by the tiny fraction of possible interpretations we can make, and the astronomical number we can't.

Another example of isolated coherence would be an isolated subject. This seems related to the private language [problem](#) first posed by Wittgenstein. Kripke relates this problem to Hume's skepticism concerning unique causation. There can only exist intersubjective patterns of communally reinforced behavior. In the final analysis, the sun will rise tomorrow, not by law, but only by tendency. Rules are only a human rationalization of the generally cyclical nature of a temporally oriented world suitable for habitation.

Does this then reduce the problem of meaning to mere convention? It passes the buck of individual intelligence to collective intelligence. But wait! What is to block the infinite regress? Nothing, says I. And right there you have the whole shooting match of the BPWH. At least subconsciously, we suspect there cannot be a finite end to the chain of being and meaning. Cannot meaning bite its own tail, like the ouroboros? Can there not be self-reference? That is the only reference there can be, to an interminable self. No lesser construct will suffice.

Am I not just cribbing from the Ontological Argument? This may be the obverse of that. Meaning is either an illusion or not. Matter is illusory relative to meaning. Meaning is illusory relative to what? Meaning is illusory relative to felt meaning, i.e. to (some) 'gut feelings'.

Try a google on 'Wigner's friend regress'.

And we interrupt this program to bring you a message from (to?) our sponsor:

[CF],

I tried to call you at your new number, but there was no answer and no answering machine.

I have just spoken briefly with [RS]. He said that he had already sent you some additional pricing information this morning relative to your request below.

Furthermore, he questioned the reason for my calling him at all. He stated that he did not want to talk to me until I had offered a proper apology for my prior transgressions.

So, allow me take this opportunity to recap the situation between [RS] and myself, at least as I understand it.

Last week [RS] and I had a phone conversation concerning our respective views on the Second Coming. This was partly in reference to the [DI]/[GN] treatment of *Kingdoms Come*.

The upshot of that conversation was that [RS] did not wish to discuss with me his views on that topic, besides his stating that he adhered to a literal, scriptural view of that prospective eventuality. This was in response to my attempt to explain to him my own take on the possible relevance of the Aviary/Aquarium/BPWH to such an eventuality. This scenario is succinctly captured in the putative equivalence of the Magi/Eben interventions in human affairs, as described in numerous communications and blog entries.

As you well know, I feel a personal obligation to move forward with the Magi/Eben scenario as best I can. Based on my admittedly sketchy information, it is not difficult for me to surmise that [RS] is the primary and proximate proxy for all those who might wish to oppose such a Magi/Eben gambit relative to a Second Coming scenario.

If there is any substance to the 'Core Story', then there is some level of historical seriousness to the speculations just outlined. If that is indeed the case then there is likely to be an historical linkage between the above proximate duality and the traditional duality seen between the Christ and the anti-Christ. Which way this polarity might be projected upon this present company is moot relative to the conclusion that we here are quite possibly engaged in a passion play with a moral scope of cosmic dimensions.

This is the information that I meant to convey to [RS]. If I failed to properly convey this information, then I surely apologize for that failure, and I trust that this explanation will make amends for that failure.

Dan

Back to the observation/regression [problem](#):

Does this mean that up until the transferred potential is received that the 2nd twin is collapsing the combined wave-function of the 1st twin and the radioactive atom instant by instant based on her knowledge of what she has not yet seen transpire on her own EEG? No physical influence has passed either inwards or outwards across the walls of the chamber and it has never been opened. Only a non-classical quantum jump was made between the two twins in the form of a transferred potential. What meaning can we now ascribe to the terms observer, observation, measurement, consciousness and knowledge in a situation such as this?

Good questions, but a faulty premise. I would submit that the quantum problem is the result rather than the cause of the observer problem. This reversal should be seen as a corollary of the logical reversal of the usual mind-brain problem in the context of immaterialism. Wigner's paradox, especially as specified here, demands that we take a collective/Jungian view of the mind.

But what I think we should really be interested in is the epistemic horizon problem, but I am having a problem locating a statement of this problem. It is generally treated only as a physics problem. Now I see what my [problem](#) is:

If one's mental horizons are allowed to expand too far, there will be serious consequences. If not contained, this cognitive process can become quite disabling. Fortunately, modern medicines and other forms of treatment enable increasing numbers of us to avoid the worst of these consequences. The mind's tendency to expand its horizon of meaning can be kept in check. Our sensitivity to semantic and phonological relationships does not have to become so acute that we can no longer focus on the problems of everyday life.

On the other hand, there is the problem of existential alienation when one's horizon of meaning is arbitrarily circumscribed. Does this not contribute to Sartre's *Nausea*? Thus it seems that we choose between paranoia and nausea. The only non-arbitrary, *natural* (sic) horizon of meaning is just the Telos.

Thus do we see that the Telos provides the only vantage point for reflective equilibrium for creatures burdened with the power of ratiocination. In that one stroke is the enterprise of Science rendered ultimately Sisyphean. Which is not at all to say that Science has not had an absolutely essential role to play in the historical development that carries humanity from its premodern to its postmodern posture.

The Telos has a role in human thought that is similar to the point at infinity or vanishing point in drawings. It need not have an explicit presence, nonetheless it serves to render coherent the entire work of art. We may choose to ignore it, all the while taking advantage of its local supervenience in the tangible realms of immediate interest. This point at infinity comes into consciousness only when we stop to reflect upon the coherence of the larger picture. The scientific view of the world compares with the teleological view, rather as a pre-perspectival drawing compares with a perspectival drawing. A pre-perspectival drawing and the scientific view present a subjectless perspective. The perspectival view, however, explicitly acknowledges the presence of the subject. The scientific response is atoms swerving in the dark: castles in the sand.

Presently I'm reading [Graham Hancock's *Supernatural: Meetings With the Ancient Teachers of Mankind*](#) (2005). Not a bad read.

[11/9]

Any attempt to formalize or in any other way to restrict the scope of meaning leads to an artificial horizon of thought. The act of human genius is simply the refusal to accept artificial horizons. The act of human spirituality is to recognize the necessary natural horizon of the ouroboric Telos. Without that cosmic object, there can be no cosmic subject, and vice-versa. Both are captured in the dialectic/trinitarian/etc scheme of love. Use or lose it, and we'd sure look funny without it.

A case in point is [Godel's Incompleteness Theorem](#):

Later, Roger Penrose entered the fray, providing somewhat novel anti-mechanist arguments in his books, *The Emperor's New Mind* (1989) [ENM] and *Shadows of the Mind* (1994) [SM]. These books have proved highly controversial. Martin Davis responded to ENM in his paper "Is Mathematical Insight Algorithmic?", where he argues that Penrose ignores the issue of consistency. Solomon Feferman gives a critical examination of SM in his paper "[Penrose's Gödelian argument](#)".

In that paper, Feferman concedes that mathematics requires a non-algorithmic understanding, while declining to accede to Penrose that mathematical reasoning cannot even be represented in algorithmic terms. One may also say that mathematical understanding, which is necessary for mathematical reasoning, is necessarily informal or supra-formal.

To put this yet another way, there seems no way to strongly distinguish mathematical sense from common sense. Common sense is notoriously non-circumscribable. Nor is there any way to circumscribe one mathematical specialty from any of the others. There is also a general consensus that proficiency in mathematics requires an aesthetic sensibility. Is this not true of any mental proficiency? There is simply no fine distinction between art and any other mental activity.

This brings us right back to tic-tac-toe. This game is not a game at all if it is not embedded/embodyed in a social context. Seashells by the seashore engage in tic-tac-toe-like behavior on a sporadic basis, but we are reasonably sure that nothing is thereby signified.

[11/10]

A final question. I have given the answer already, but it is worth repeating. Can there exist two or more

uncorrelated semantic webs? The answer is that Nature abhors a vacuum. What is the vacuum that could separate these two webs? It would be a magical vacuum, indeed! There can only be one Cosmos. So much for atoms, monads, strict polytheism, the Many Worlds Interpretation of QM, modal realism, etc., etc.

Leibniz posited his monads as not having windows. Could he actually have been that stupid, or is he being misinterpreted?? My hero!

All intelligible roads (and *ex hypothesis* there can be none other) lead to the Singular Semantic Web of the Best Possible World Hypothesis.

"Give me a lever long enough, and a fulcrum strong enough, and single-handed I can move the world." - Archimedes. We have the fulcrum, but we're not quite sure where the lever is. I'm suggesting it is the wired Hollywood. Could Archimedes have conceived of Tinsel Town? Tomorrow is 11/11/06. Do we really want to wait 'til 11/11/11??

[11/11]

From someone we know.....

Artist: Snow Patrol Lyrics
Song: Run Lyrics

I'll sing it one last time for you
Then we really have to go
You've been the only thing that's right
In all I've done

And I can barely look at you
But every single time I do
I know we'll make it anywhere
Away from here

Light up, light up
As if you have a choice
Even if you cannot hear my voice
I'll be right beside you dear

Louder louder
And we'll run for our lives
I can hardly speak I understand
Why you can't raise your voice to say

To think I might not see those eyes
Makes it so hard not to cry
And as we say our long goodbye
I nearly do

Light up...

Slower slower
We don't have time for that
All I want is to find an easier way
To get out of our little heads

Have heart my dear
We're bound to be afraid

Even if it's just for a few days
Making up for all this mess

[11/17]

Back to Graham [Hancock](#), who may be something more than just a good read.

He raises some issues that I have not properly dealt with. In [Supernatural](#) he explores the history of shamanism, particularly as it relates to the prehistoric cave paintings found around the world. In his other books, Graham speaks of a lost civilization. This is an idea that I have considered in the context of [Hamlet's Mill](#). In a nutshell, the idea of an ancient civilization is just the flip-side of our [Kingdoms Come](#), if you will. It is the Alpha reflecting the Omega in ouroboric fashion. The shamanic mindset is the repository and the harbinger of the Alpha/Omega teleology.

What then do we say of Jack S and GN? What is the technology of teleology? I suppose it is a kind of Transhumanism, but with a human face. Here we need also consider the Mandelbrot cosmology. Each sub-world is a mindset, and that includes especially our own Earth. Our world has the thickest walls. Our minds are the most set in their ways, the most mesmerized by the 'ordinary'. Our thick skin is technologically reinforced. Technology has helped to get us into this hole; can it get us out? The Internet is the primary technical shadow of the Telos. The various EEGs and CAT scans will surely help us to redirect our consciousnesses in some coordinated fashion. I have to be more skeptical about the role of conventional physics, or any logical extension thereof, in our passage between worlds. Nor would I advocate a global popping of LSD pills as an eschatological aid. The eschaton will be primarily a culturally and rationally mediated mind shift. It cannot be short-circuited with other than disastrous results.

The artificial enhancement of natural portals or star-gates is where the action will be, or may already be. This stratagem I have already discussed. Or it might be better to think of this as the stabilization of relatively spontaneous shamanic processes. This was done traditionally with tribal ceremonies. This would have to be done in cooperation with groups of helpful entities, which could include the dear departed. There must be general limits on the unilateral invasion or interference in other spaces, as an extension of the Prime Directive. The eschaton has arrived when the entire Earth functions as a portal. The veil is then lifted. It would be naive to suppose that human competition will not extend to these endeavors and realms. Precautions and restraints will be needed.

[11/18]

A basic problem is to explain the seemingly physical interactions of non-physical beings. Simple materialization presents a serious problem for physics. The proto-typical trace phenomenon is the 'fairy ring', the precursor of the modern crop-circle phenomenon. Another such are the radar traces of UFOs. How might these differ from the phenomenon of stigmata?

[11/19]

The conveyance of information from one 'dimension' to another also implies a physical interaction between the two. This could happen on a quantum level without violating the conservation of energy.

In chapter 19 of *Supernatural*, Hancock attempts to enlist DNA as the repository for the shamanic mythos. This is an ill-conceived gesture toward scientism. In just a few pages his thesis degenerates from

the sublime to the ridiculous. Graham has the choice of following Jung or following Crick. He falls from the supernatural to the super-technical. Our mythos has been coded into our 'junk DNA' since time immemorial by interdimensional genetic engineers, just waiting for us to discover LSD to unlock the code. No, sorry, our DNA was FedExed via conventional rocket ship. We segue from Lucy in the Sky to Buck Rogers.

[11/20]

In chapter 23, Hancock finally comes out against a reductionist view of the shamanist phenomenology, positing rather an ontology of other dimensions of existence, i.e. the 'supernatural'. The issue posed by the ufologists is whether our intercourse with these other dimensions is purely ideational. They would strongly argue against this. And so, it would seem, does Graham in his describing the Fatima and other such encounters. In such situations there would have to be physical portals or even a more robust overlapping or interpenetration of the dimensions.

I, more or less, equate the supernatural with the Telos. Not quite. There are the other worlds or dimensions as represented by the other, off axis, 'bulbs' in the Mandelbrot scheme, but the central cardioid would then represent an ultra-dimensional Telos. Something like Serpo would be one of the other, presumably 'lesser'... less 'dense', less populated, etc., worlds. I have not attempted to describe the divine Telos, leaving that to the mystical encounters with the God-head.

At some point there must be a collision between the teleological and the evolutionary accounts of the world. Give teleology an inch and it will take a mile. Let teleology get its foot in the door of reality, and it will take over the whole cosmos. There is no rational compromise between teleology and materialism, short of immaterialism.

But then in the last ten pages, Graham reverts to his buck-passing scheme. Rather than positing a Telos, he enlists an earlier evolving, extraterrestrial species with having been our genetic engineers. He refuses to choose between the genetic engineering and the ontological hypotheses. Thus does he avoid facing the immaterialist consequences of the latter worldview. He simply cannot face it, and so he persists in his waffling up until the end. The narrative account is strangely discontinued at the beginning of what was billed to be Hancock's definitive psychedelic trip.

There will be no point in another waffling account of shamanism. There will be no point in attempting another preamble to immaterialism, such as this one. This one is definitive. The next stop on this path can only be at the BPWH.

In Appendix I, Graham details the last fifteen years of controversy surrounding the 'neuropsychological', i.e. shamanistic, theory of cave art. He fails to understand the vehemence of the opposition facing the shamanistic theory. He fails to do so, because he fails to comprehend the magnitude of the ontological stakes. It is tantamount to the landing of a UFO on the White House lawn. The slope from cave art to alien abductions is a slippery one, indeed!

Further related material comes from Rick [Strassman](#). He too is compelled to ascribe ontological status to the entities encountered by half of the volunteers in his, the first and last, legally sanctioned experimentation with psychedelics in this generation in the US. Circumstances and politics contributed to its discontinuation. I recommend this [chapter](#) from his book.

We do seem to have two types of portals into the other dimensions: 'physical' and 'mental'. This sounds like a capitulation to dualism. How can we bridge this gap? This is THE fundamental issue, certainly in the context of eschatology, which is our primary context.

One may distinguish two types of psychedelic experience: dream-like and waking. The usual experience

is the former, when one becomes unconscious of one's normal surroundings. In the latter type, the psychedelic effects seem to intrude, more or less spontaneously, into one's normal surroundings. The next step toward 'physicality' is then the *folie a deux*. I am not aware of such experiences being other than purely spontaneous. A relatively rare exception is in the case of coordinated lucid dreaming, but then we have reverted to a quasi-dreamscape. Another exception is in the case of a poltergeist phenomena, even such as at a spoon-bending party. Collective hypnosis (C/H) is not difficult to achieve, but the results are difficult to verify intersubjectively.

The collective hypnotic model is perhaps our most robust model for understanding the intersection of otherwise independent realities, given that our normal 'reality' is only one such. Under (collective?) sensory deprivation or disruption we become open to other domains of intersubjective phenomena. Waking alien encounters may then be deliberate intrusions into the communal trance state that we call the Earth. Space travel is one well-documented means of weakening those inter-subjective bonds. Just ask BJ, who was responsible for debriefing the astronauts.

In the C/H model, 'spiritual density' and physical 'regularity' could readily be related to population density taken for the whole world. I have discussed this model previously, but I have not yet found the links. Indeed, I find no variation of 'hypnosis' on the website. I will have to make amends. I am more than a little surprised by this unexpected omission.

What I do find on the website is 'mesmerized', e.g. see [aa](#), [bb](#), [cc](#), [dd](#), [ee](#). The [pokatok](#) model for Creation is another version of the C/H model. The Hindu concept of [maya](#) is closely related to the C/H model, which exists without all of the negative connotations of the former.

While we are recapping, I would suggest that the alien reproduction phenomenon, as reported particularly by many female abductees, may provide some insights into the phenomenological origins of biological reproduction [cycles](#), in general.

[11/21]

The CHM is, per force, a corollary of the BPWH. Breaking that hypnotic hold is the task of the Y2X.

The reproductive cycle is simply the mother of all cycles. It is inherent in the ouroboric 'cycle', with the proviso that the latter is actually a singular circuit. We could say that some form of biological cycle is the conceptual prototype of the ouroboros.

[11/22]

Here we are at Deep Creek Lake with a password protected 4K dialup jobbie. I won't try to update the blog 'til we get back to Baltimore. In the meantime I can use this as a scratch pad for emails.

There is an ongoing discussion with TF concerning the reality of contact. He argues with Dawkins that religions are the result of viral memes that are self replicating.

We might ask about the context of this discussion. I labor under the impression that there is a serious phenomenological problem. This is what I have been told by CF. In contrast, TF claims there is a serious viral meme phenomenon. The remedy, Rx, is vastly different in these two cases.

I wonder if TF will be willing to engage in this hopefully developing discussion?

If TF is not willing, then I guess it will be a one sided discussion.

If this is not a matter of national security, then I will stand corrected.

This discussion continues without benefit of TF. *C'est dommage.*

Then we have to wonder if CF will contribute.

I maintain that Hancock and Strassman have effectively demonstrated that the only rational explanation of shamanism and the prehistoric cave paintings is an actual contact with alien intelligences.

[11/23]

Where do 'we' sit wrt phenomenology in general and contact in particular? 'We' includes especially the Aviary. There are now only two skeptics in the Aviary: TF and CF. TF has come to his skepticism only within the last few years. This only after lending his imprimatur to the opus that became Collins' EfD book, which endorsement is still on display there. He continues to be a public supporter of Rick Doty and all his many tales. This latter continuing support seems now strangely at odds with his turnabout on the Core Story and on the premise of contact in general. What is the rationale? What is the explanation for TF's public pronouncements?

It does seem that TF is severely conflicted. How much of this conflict is personal, and how much is political? CF tries to make out that TF is psychologically unstable and veridically challenged. I kid you not about this. Of course, according to CF, CF is the only sane and truthful person in the world. Nonetheless, in the case of TF, CF has been unstinting and especially detailed in his unfavorable diagnosis. Even so, this position of CF relative to TF is likely to be strongly colored by political exigencies. This is not to say that CF is anything like your normal political denizen of the Beltway. If he were even slightly normal he would long ago have foresworn all avian/aquarium associations. But this has certainly not happened, nor does it even seem to be in the offing.

What is going on here? Is there not some kind of avian evolution? The birds have always been players. There has always been an unofficial sanction for these birdgames. The quasi-official side of the aviary has tracked increasingly with the career track of CF. This track has occasionally been reputed to be stellar, but those imputations remain unverifiable. Nonetheless, the original sanction has and will only gain in it's quasi-official status, rather like an increasingly established public right of access into the bowels of MJ-12, all in the interest of acclimation to Kingdoms Come (NWO?).

In this context, TF becomes the lead trickster. The prime shape-shifter. That is about as close as I can come to a rationale for the recent gyrations in this perennial soap opera.

[11/24]

I am still of the opinion that the logical outlet for for this soap opera is tinseltown. But at this point GN has a death grip on the A/A access to TT, with the possible exception of J&VA. I had been assigned to baby-sit for GN, but in a weak moment I fronted a modicum of cash, which sum spoilt my role as *parentis in locus*. CF is now back again holding that bag. Sorry 'bout that.

Meanwhile the ufology crowd remains deathly afraid of the shamanistic perspective on their bailiwick. They refuse to accept any mentalistic, paranormal, non-technological, tricksterish interpretation of their beloved nuts & bolts spaceships. They are wont to ignore odd and inconvenient socio-political details

such as CF supplementing his meager scholarship funds with vampire performances.

This is exactly how modern society manages to ignore the postmodernists. There is no rhyme or reason beyond the atoms swerving in the dark. Well, there are plenty of rhymes in the fundamentalist scriptures, but precious little reason. The semantic vacuum left by materialism is easily filled by the bible pounders, the more shrill, the better. There is no competition.

The A/A microcosm is left with a heavy social burden to bear. Almost by definition, there can be no competition. The US, amongst all nations, does retain its manifest (masonic?) destiny amongst the stars. Poor little Pelican is left holding that bag, as well: the hopes and fears of all the years, in the hands of a vampire impersonator! Pelican is the albatross around the necks of the ufologists. All ufo roads lead to Area 51. DIA/MASINT is the PR office for Area 51, viz. especially Serpo, which may be about to resurface after a less than stellar debut. RD/Falcon is probably back in that mix, contra his probationary NMSHP status, but now on an even shorter leash than before. TF is the wild card in the A/A deck. Just imagine typhoid Mary with an MD and an NMRI. Wisely, perhaps, he refuses to debate the merits of mimetics vs. shamanism. He can easily hide behind his exclusive access to the NAS/NRC Tiger Committee. CF refuses to level the playing field by even so much as allowing SF a parking coupon for the NAS. I remain the demented uncle in the attic. And TF still sees fit to complain about these paltry and obscure scribblings.

[11/25]

In Oakland yesterday I picked up two books: *Mysteries of the Middle Ages - The rise of feminism, science and art from the cults of Catholic Europe* - by Thomas Cahill (2006), *The Left Hand of God - Taking back our country from the religious right* - by Michael Lerner (2006).

These two books may be seen as cautionary addendas to Hancock's *Supernatural*. They outline the very hard historical lesson that we had to learn in the process of our being weaned from the cosmic tit. This is the lesson very conveniently forgotten by our New Ager cousins.

This very same lesson now needs to be learned by the nuts & bolts (physicalist/materialist/ufology) crowd. Shamans had us feeding off the Big Tit for the millennia that it took us to learn our ABCs. With the alphabet came monotheism and/or pantheism. It was the jealous paternalistic God who severed our cord to the cosmic/pantheist Mother and her Zodiacal/Mandelbrot, often fratricidal, brood.

It required the incarnation of the favored Son, to bring the mariological Mother in the ecclesiastical back door. And so Sophia tamed the patriarchal excesses of the Hebraic/Islamic/Fundamentalists. Sophia/Orpheus, in the guise of Scientia, finally left us the cosmic, existentialist Orphans, having to reckon with the absurdity of life in a meaningless Universe.

This brings us to the cosmic precipice that we now face. Modernism has brought us to this existential brink. There is a tremendous undertow that pulls us back into the premodern tribalism/shamanism/totemism. It is our Islamic brethren who, never having experienced the modern, except in the most vicarious, insubstantial fashion, are most susceptible to this undercurrent. It is they who most ardently raise the black flag of an eschatological nihilism, followed not too distantly by their Christian, unwittingly co-conspiring, fundamentalist cousins.

This brings us back to the A/A microcosm. The fundamentalist branch is presently being represented by TF & RS. There is an older Xian contingent going back to DG, EK and JM, the latter two coming out of Kirtland AFB, then EK connecting with DG at W/PAFB. There is rumored to be a larger invisible contingent of Xians in the MJ-12 orbit. This is the Avian axis of resistance to the Aquarium/Y2X/KC initiative. They rightly see this initiative as being part of, or susceptible to, an Anti-X/NWO gambit.

It is not too surprising that the Xian axis wishes to remain anonymous. They are content to blackball the Aquarium from the shadows, definitely avoiding any dialog. A possible switch hitter here is RH. He was reported by CF to have come around to an aquarium agenda some months ago, but then fell of the radar screen. Might he have been waylaid by TF/RS?

What we do continue to see are the attempts of TF/RS to undermine any Hollywood/KC/DI/GN gambit. In the microcosmic fishbowl, the role of CF remains strictly C/I. His job is to keep the thumbs of any pre-programmed outsiders off of these fish-scales. This is part of our untouchability. There will be no tilting of this playing field. Nature takes its course, slowly, inevitably. The opposition is brought to the end of their tether. There is no stopping the slippery slide to 'disclosure'.

Here the term 'disclosure' may be used in its most generic sense. It can simply mean the spontaneous demise of materialism and dualism. There need be no substance to the 'core story'. That story may have been a deliberate hoax; it will make no difference in the larger scheme. This would constitute a strict adherence to the Prime Directive. Even if there never were any Magi, the pre-eschatological Millennium, the pre-millennial Y2X may unfold unimpeded.

Humanity cannot escape its rendezvous with its own inherent divinity. We are closer to that divinity than any angel ever hoped to be. Not even Satan could know more about evil than do we. Having committed every possible evil, we have nowhere else to go. The fundamentalists wish nothing more than to be left to wallow in their own sinfulness, until the trumpets sound. They will be the very last to see their own inner light.

Is there any irony to the necessity that nearly every possible evil must be committed in the best possible world? This is simply the other side of the 'prime directive' coin. Must the PD be sacrosanct? We cannot truly see the light without confronting the heart of darkness. It is that which makes us stronger than the angels. We are given no choice, but to rise to the ultimate challenge of our own salvation. That this apokatastasis is logically inevitable does not detract from its metaphysical import. Our self-salvation is the logical outcome of the ultimate self-sacrifice of God. That is the pearl of great price.

When we finally grow tired of being ignorant and doing evil, we will have nowhere to turn but to salvation. The angels and aliens will be instrumental in the salvational economy, but we will provide the salvific brains and brawn. The historical sacrifice of God is a singular event. The Earth is God's better mouse trap. The cosmos beats a path to our doorstep. This is Her legacy to us. The message directed to us from the stars is 'God help us!' That is the one request we cannot refuse. And who do I think I am to possibly get away with stating this? Chicken Little!

[11/26]

The historical fact is that the 'official' secrecy, once enforced by the national intelligence apparatus, has been privatized to a latter-day Xian cabal who see themselves as holding their collective finger in the dike against an onrushing tide of satanic forces from beyond what little is left of the Xian pale here on Earth. We are left with the nearly anonymous silence of the imperial catacombs. That is all except for the residual chirpings and gurglings of the A/A.

Has the Visitors' trail grown cold? Were there never any visitors in the first place? Visitors? Yes. There have always been such. Did they manage to penetrate the inner sanctum of the National Security regime? Certainly to some substantial degree. No security fence has ever held them at bay. One could even say that they find nothing more enticing than a locked door. But was there ever a coherent message from our starry messengers? Likely not.

It was the task of the Phenomenology Network to extend itself into a Civil Phenomenology Patrol, thus the A/A and their many extensions. We are the latter-day Josephs, wearing our Technicolor dream-coats,

interpreting the alien 'dreams' of Pharaoh. We too were virtually abducted into this imperial service. The message finally is in the medium. The last bird chirping gets this worm. Chicken Little is the energizer chick in the chirping department. The only competition is JS, GN and RD. Someone of the DI ilk may get to decide the winner, that is if the Xian Cabal releases its death-grip on the time-honored A/A conduit to Tinseltown.

[11/28] [a]

The religious soul, of whatever persuasion, has been badly buffeted by modernity. It has acquired a very thick shell. It will not be easily coaxed out of its shell of fundamentalism and/or mysticism. Nonetheless, that will be the job of the Y2X advent. Postmodernism is helping to soften the shell, in proportion to the weakening of the pall of materialist orthodoxy. That orthodoxy will probably never recover from its conflation with the Marxist creed, but it has endured a long bout of sclerosis. It survives now as the only historical alternative to fundamentalism. The recent electoral defeat of the 'moral majority' in the US midterm election does provide breathing space for a liberal religious revival. We speak here of a so-called '[progressive christianity](#)'. It is a tribute to the Xian spirit that, unlike virtually any other religious tradition, the term 'progressive' may be appended to it in a non-oxymoronic fashion.

The soul of this movement for social justice was resurrected most recently in the abolitionist movement, mainly in the US. This movement was commandeered by the socialists in the 19th century. But the collapse of secular liberalism globally in the latter half of the 20th century, leaves its spiritual core as its last remnant. Will this spark reignite spontaneously? I suggest not.

Why the pessimism? The spark of social justice was last ignited by the euphoria of the nascent confluence of the movement toward liberty and scientia coming out of the Renaissance. The rationale of this movement was utterly destroyed by Social Darwinism. Fundamentalism was the only possible religious counter to Darwinism. The political conservatives naturally co-opted that reactionary force to their own ends. Only now is that co-optation running out of steam in the US. Read Cahill's *Mysteries* for a well articulated summary of the Xian roots of Western progressivism. No such spark animates the other traditions. But the tinder remains drenched in the leavings of materialism. I do not foresee an entirely spontaneous combustion.

Thus a minimalist Visitation in the spirit of the Prime Directive. That Visitation deftly drove a stake into the heart of the beast of modern materialism and the power structure that has grown up around it. That Golem now stumbles aimlessly, soullessly. The A/A is a terrarium where a cosmic seed may be allowed to sprout. Will that sapling stand up to its inevitable scrutiny? Only one way to find out. The only issue is the trigger for that scrutiny. Is CF somehow the delayed political fuse? What trick may be up that sleeve? Does anyone know or care to speculate?

[11/29]

Jack,

You can be entertaining at times, but this exercise is not strictly for entertainment.

I am here primarily at the behest of the US intelligence officer who is in charge of tracking 'phenomenology'.

You are here as the ex-officio representative of the (fringe?) physics community, in its belated effort to provide a physical explanation for a panoply of previously unexplained phenomena.

By your own admission, you have failed to provide any adequate explanation for all but possibly a very

small subset of such 'paranormal' phenomena. It is not even clear that you have been able to make a case for the conceivability of a 'physical' explanation.

It does not appear that you or your fringe physics colleagues are making any progress in persuading the scientific establishment even to take a second look at these phenomena. Debunking remains the response of choice for this establishment.

That does not mean that the Phenomenology Group wants you and your colleagues to give up your quest. It won't hurt for you to keep trying, even against all odds. 'Damn the torpedoes,' you like to say. It might be more realistic to be saying, 'Damn reality,' but realism in these phenomenal domains is not your strong suit.

Let me also remind you, Jack, that if, per chance, God does exist, She does not do so by your leave. You claim to find the concept of God to be personally repugnant. By holding such a belief, you represent a vanishingly small fraction even of the scientific community.

Show me one person, even amongst your fellow travelers, who would claim that there is no conceivable manner of God/Creator that would be preferable to taking our pot-luck in the Big-Bang/ Many-World lottery. This is an absurdist position that we ought to suppose is simply a gimmick for what you suppose is our entertainment.

But I remind you, Jack, this is not about our personal preferences; this is alleged to be about national security.

And what might God have to do with national security? A lot of things.

First and foremost, there may be a 'divine' plan for the world. It would not behoove us to disregard any such plan. Even if the powers-that-be did not like the plan laid out for us, they would be well-advised to be cognizant of what the possibly higher powers might already have in mind. Only thus might the PtB attempt a work-around.

Failing a viable work-around, the PtB would do their level best to keep their thumb in that pie. I submit that I am that thumb, or am some sort of proxy or decoy for said 'thumb'. To some approximation it would also be my job to represent those Fat Kats, but I don't suppose that would be the end of it.

This is where I am. If this is not what I'm supposed to be doing 'here', then I have been frequently encouraged to labor under a false flag over a rather large number of years.

The Revelation of the Kingdoms Come will come as a shock, even to the most spiritual amongst us. No community will be more shocked than the scientific community. I am placed here to hold that hand and practice my best bedside manner. If you have a problem with that, then you ought to consult with CF.

Dan

[11/30]

David,

They're right; the squeaky wheel does get the oil, or is it the one sheep in ninety-nine that strays.

Evidently, David, you hate the very concept of God. I don't know of anyone who has made it past Theology 101, who does not take it as a truism that we are nothing other than a temporary and illusory extension of the trinity, or, more crudely, that we are one with God.

It is logically impossible for the atheist to hate God. Otherwise, to hate God is tantamount to

hating oneself. I say this out of no sense of pity, but simply as the baldest expression of theology.

What does it mean to hate oneself? I have been with you on several occasions. I generally see a hale fellow, well met. It may well be that you feel that you have failed to live up to certain of your expectations, or having managed to meet your own expectations, you feel that you have failed to meet others' expectations, and so on.

In short, you may feel that God has not done right by you. But doesn't everybody entertain such doubts on a daily basis, and yet 99/100 go right on loving God, also on a more or less daily basis.

Perhaps the problem lies closer to home. I doubt that you go around with a sign in public, proclaiming your hate for God. It does seem then that I have a peculiar knack for triggering that feeling and expression in you.

This could indicate several things. First it indicates that, although you may not take me seriously, at least you credit me for doing so. But, no, you must partake of some of my seriousness, because clearly you are seriously perturbed by my elocutions. You do not see fit just to laugh me and my posturings off the stage. Come to think of it, that is the one thing that has not transpired in this little sojourn. T'is a minor miracle.

It does seem rather like you have a score to settle with God, and, lo' and behold, guess who shows up on your doorstep?!

But wait, what is the point of these slings and arrows? The vast bulk of humanity, directly or vicariously, knows deep down that we have already performed the crucifixion thingy. I also credit you with knowing that, on some level of your historical/Jungian being.

I don't suppose that you are so obtuse as to want to bring more coal to Newcastle.

I am trying to see things from your perspective. You may be trying to see things from mine, and not quite getting it. You may realize, deep down, that there is a phenomenon here that calls for an explanation, and you are frustrated in your failure to find one.

If you could understand what makes Dan tick, that would settle it.

Let me see if I can help. What you and others may find to difficult to believe is that somewhere behind these posturings there is not at least a modicum of willfulness. That is probably the reason for the slings and arrows: scratch the surface and see what emerges. I hate to appoint or disappoint you, but it is just turtles all the way down. Yes, it is WYSIWYG. After this sojourn, that acronym will probably have to be retired.

What I think I come by honestly is the truth. Being the Spirit of the Truth is not terribly far fetched, if I am right about the immaterialism and the eschatology, and that is not nearly as big an if as many would like to think. That was practically a no-brainer. It is the Messianic thingy that may induce sweaty palms and a dry throat. From day one, I knew there would likely be some confusion about the latter-day roles of the third and second persons. That is until c. 1995 when CF & SF were named in an, oh so, casual remark. Three persons in one substance is supposed to be the formula. But it could as well be 10^{10} persons in one substance. It's all just one big multiple-personality disorder. More precisely it is a personality reordering or 'recycling'. The quotes are to indicate that this is not a quantitative cycle; it is rather a singular, qualitative, ouroboric loop of 'time'. The First shall be Last and the Last shall be First. Alpha = Omega.

Whatever may be the problem, David, between you and God, it will get worked out in the end, or my name isn't Dan.

One (2?) last point(s) before we turn to the below:

The power of God and the Spirit is real; it is more real than TNT. Like TNT, it must be handled with care, and all too often, out of sheer ignorance and occasional malice, it is not. When it is mishandled, many suffer, seemingly unnecessarily. Does that mean, however, that we can or should renounce the Spirit? Science has been one very long exercise in spiritual renunciation, and look where that has gotten us: bigger and better bombs.

Given that there is to be something, at least, vaguely recognizable as a messianic second coming, to whom would we entrust such an advent?

Why not the proverbial saucer landing on the White House lawn? That would meet most of our expectations. Come to think of it, that is almost exactly what did happen. What you see unfolding here is just a considerably delayed reaction to that event.

The next stop may be Hollywood; at least that is my present inclination. Any suggestions?

<<<<<<<<<

[Dan] "I do believe that the very worst characteristics ascribed to God were simply lifted straight out of the 'old testament'."

Oh, really?! You reveal your bias with that remark Chum. It just so happens that your arrogance is only matched by your ignorance. Listen and learn:

Who was it who said that the child should not suffer for the sins of the father and vice versa? Jesus? NO! That was Ezra the Lawgiver. It is he who contradicted the nearly global belief that punishment for sins should be applied to one's family and descendants.

How long have the Christians continued to apply this barbaric idea to the Jews for supposedly killing Christ? The title 'old testament' is a Christian invention. The Jews do not call it old as if it had been superceded by something new, which is an egotistical way of taking center stage. The Moslems have done the same thing and it's bunk.

>>>>>>>>>>>>>>

David. This, too, should be a no-brainer. Well, maybe not quite! It is actually a brainer.

This is simply the difference between theism and pantheism, to wit:

The pantheist/materialist/transhumanist would prefer to fly in an airplane that is on automatic pilot. This would be certainly one way to solve the problem of hijackings.

When the pantheist meets God on the path, he is under strict orders to kill Her. So it would be better to think of me as a hijacker, in connivance with the CIA, all in the interest of 'national security', mind you!

Wait, where were we?

<< which is an egotistical way of taking center stage. >>

Egotistical? Yes, the CIA has aided and abetted my attempt to purloin the messianic persona from the Jews. Shame on me! The question I put to you, David, is, if you were God, how would You rather handle the all too evident global messianic fever and expectations that were caused, in no small part, by Your alleged historical machinations? Do you dare to second guess the CIA?

True story: The day before his assassination, I confronted RFK concerning the 'Population Bomb', you may recall his eleven offspring. His rather annoyed response was, "You handle it!!"

<<<<<<

And how do you know what the God of Jesus was? The God of Jesus was the God of Abraham, Isaac and Jacob. The God of Christianity, or let me put it this way, the Three headed polytheistic faith called Christianity is posing as a monotheist faith, it is more like Hinduism, with innumerable demigods. Basically, a pagan faith, perfect for the degraded Greeks of the Roman era. Pericles and the rest were long dead.

"Are you claiming, David, that such a being is not conceivable?"

Sure, it's conceivable, many people conceive of just such a God, but it's fiction. Just like the Greek romances that form the subtext of the NT.

"I would go further and state that any other such Creator would be inconceivable."

Only to those of limited imagination. I can certainly conceive of other creators. Read Olaf Stapledon's 'Starmaker'.

>>>>>>

You are nit-picking here. Do you really suppose that God would have created so many people, if, deep down, She were not a people person?

Yes, on occasion, She has man-handled us, but has that not been, at the very least, a collective form of 'tough love'? And did she even spare Her own Son, for God's sake??

Dan

[12/2]

Sam et alia,

<< We would be naive indeed if we too easily dismissed the concept of a technological god thing at this juncture when we haven't even figured out what the hell Dark Matter/Energy are, and we have no idea how far a living being can evolve technologically in this universe yet. >>

What most of you physicalists/technologists fail to appreciate is the actuality of mind over matter, as in the simplest of PK phenomena.

There is only one mystery that really counts, and that is the mystery of the mind.

Sam implicitly espouses here transhumanism. That implies a teleology that is focused on the power of the mind to transcend nature. This, in turn, implies that the mind is an essential aspect of reality. It is not an accidental or epiphenomenal aspect nature.

If you accept that reality is essentially a mind oriented, teleological system, then it is natural to posit the fact of mind over matter. That is no longer a mystery. It is simply the basis for any conscious system.

This is simply to say that VALIS (Vast Active Living Intelligence System) is not an accidental byproduct of the world, but is at the heart of reality.

There is no way to avoid this logical deduction. If you see a way, then please spell it out.

This simple deduction is the basis of the BPW hypothesis. QED.

Dan

[12/4]

Subject: Re: The measurement and signature of the non-local mind

Dan,

You are fixated with the idea of dismissing the phenomenological carrot on the stick that drives us forward, in favor of direct consultation with the master(s) that placed it there.

I have already been there, done that.

The stick, nevertheless, continues to serve a vital purpose. Without the stick we would cease chasing after the dream(times) and give up our material existence.

That would appear to defeat the entire purpose of a 'virtual' reality, or am I wrong here?

The non-local mind and many worlds suggest that any shift away from following the reality stick will only bring about passage into a different world, no more and no less. If we already inhabit the BPW, then any shift into 'elsewhere' or 'elsewhen' would be a step for the worse, don't you agree?

Are you suggesting a rebellion against the powers of the heavens, the same that sought fit to place us in the BPW ?

Gary

Gary,

You are raising a valid issue, as best as I am able to decipher your thoughts.

What I am saying to you and to others trying to push the scientific envelope to encompass the teleological dimension is that you will not be able to get there from here; that is, not without a

better understanding of the carrot, to use your analogy.

I can best explain this epistemological problem with an analogy from the construction industry.

Your donkey and carrot analogy dismisses the fundamental idea of theism, which is that we are created in the image of the Creator (VALIS?). This fact tells us that we must always be trying to think and act like God. Keep this in mind as we examine our present predicament or challenge.

We appear to have reached a very critical and unprecedented point in our history. This is true from many perspectives, be they scientific, political, existential, spiritual, etc., etc.

It is as if we have come to a precipice, the brink of our existence. There is no clear way forward.

Can we stop dead in our tracks? That hardly seems possible. Human history is the story of our Long March. None of us has the power to halt this parade. We can only attempt to bridge the chasm before us. The fog is thick. We cannot see the other side; we cannot see the bottom.

(NASA was an attempt at an escape plan. It seems rather too little, too late, and probably ill-conceived, too 'linear' in its vision.)

Like the shaman of a 'threatened' jungle village, we consult the oracles. The spirits bring mixed messages. The most consistent message is that we must consult our own innermost spirit, i.e. God is within.

The upshot of these machinations is quite simple, What would God (have us) do?

The BPWH is just my attempt to answer that question. I construct the simplest coherent cosmology that can be obtained from the sum-total of our historical wisdom, to-date.

Back to the engineering analogy: the bridge across the chasm.

Theism tells us that there will come a 'judgment' day. The vast majority of humanity believes this, in one form or another. I, for one, do not place my own intuitions above those of 90% of humanity. Rest assured that some sort of cosmic intervention this way is headed.

The least apocalyptic intervention scenario would be the 'bridge' design. That is what I am attempting to replicate/anticipate with the BPWH.

There must be an advanced team that can establish a foothold on the far side. That is what the Aquarium is about. Going to the other side to establish the beachhead from which a lifeline can be suspended and then a bridge constructed over the chasm from our space-time world to beyond space time on the far side of the chasm.

That bridge is our only alternative to a physical apocalypse on the near side, in the near term. The way to avoid a physical apocalypse is to be open to a mental/spiritual apocalypse/revolution. The Visitation was to prepare us for this revolution.

(to be continued...)

[12/5]

Gary and Caryn,

So we have arrived here at our historical watershed, with its combined spiritual, material and scientific crises, an existential abyss, a global clash of cultures, etc. Pure science appears to have run out of answers for our multiple predicaments. Politicians fare no better.

Those of us on the intellectual/spiritual margins look to something like VALIS (non-local mind) for a clue. We readily detect strong intimations of extra-mundane agendas.

It is most natural to take a Jungian slant on VALIS. It has impacted our cultural traditions up to the advent of our scientific, analytical, reductionist enterprise. VALIS is the veridical source of what is irreducibly holistic.

We can only suppose that our own minds must, to some degree, reflect VALIS. If there is a deeper, nearly subconscious coherence in the human mind, it represents our most likely point of access into VALIS. That slender thread of coherence is our one known lifeline to the far shore of the existential abyss that we confront.

Within the human spiritual tradition there is the one great divide between theism and pantheism. If our Jungian thesis about VALIS is correct, there must be a coherent synthesis of these two traditions. That historically neglected synthesis must contain the long sought philosophers' stone that is the singular, unified foundation for the wisdom of the ages.

I submit that VALIS is simply Pantheos, i.e. the God that is everywhere. Our job now is just to look for the footprints of Pantheos.

The most likely place to look for these footprints will be in the universal aspects of the human mind. These should include the universal aspects of language, aesthetics, morality, and, of course, mathematics.

Furthermore, the positing of Pantheos provides a solution for the unsolved problems on the frontiers of science, all of which appear to be pointing in a pan-Theist direction. I'm referring to the Anthropic principle, to the unreasonable effectiveness of math in physics, to the organic nature of mathematics, to the unreasonable power of mathematical genius, to the mind-body problem, to the shamanic origins of our historical cultures, to the origins of life, to mention the most obvious.

VALIS/Pantheos provides a coherent, unifying answer to these looming scientific anomalies. Pantheos is nothing more nor less than the ultimate unifying field theory.

Correlating VALIS with the anomalies of science cannot fail to give us an insight into its nature. Clearly it must be embedded in the fabric of reality, i.e. in the mental, physical and biological components of reality. Should we not posit that VALIS is simply the foundation of the world? It is the creative principle behind all existence.

Then we must ask, from 'whence' came this non-localizable VALIS? The answer is not difficult to discern. VALIS/Pantheos is the ultimate, cosmic bootstrap principle. It is the logical precursor of all localizable existence. Space and time, for instance, must be counted amongst its byproducts. VALIS 'exists' beyond space and time. It has no origin. Like the Ouroboros/bootstrap it is logically self-originating.

This sounds terribly abstract. What does this have to do with the here and now? It has almost

everything to do with the crises presently facing our civilization. It is what lies on the far side of the existential precipice we now face. It is the cosmic mind upon which we must focus our own minds in order to bridge the chasm before us.

Our visitors are another manifestation of this cosmic lifeline, that and nothing more. They are not our rescuers bringing lifeboats to take us to planet X. They are only here to facilitate our awakening to our cosmic situation. They can contribute to our gnosis of Pantheos, but only to the extent that we realize that our primary access to Pantheos is within ourselves, both individually and collectively. Our ultimate destination is 'dimension x', if you will.

There you have the most basic elements of our present situation. We have 'merely' to connect these dots. To play the 'game' that confronts us, we will have to have a full deck of cards. There are many players in this arena who cherish and hoard their own pieces of the cosmic pie. But to eat their pie they will have to find their places at the table. That requires a unifying vision.

Dan

[12/6] [a]

Per Jack's suggestion, I am presently reading

- Hepburn and Peacock, Begging the Signaling Question: Quantum Signaling and the Dynamics of Multiparticle Systems -- <http://arxiv.org/abs/quant-ph/9906036>
- Raphael Bousso, The holographic principle -- <http://arxiv.org/abs/hep-th/0203101>

Both of these papers deal with the problem of non-locality: the first in QM, the second in GR. The issue before us is whether these two problems are somehow related. The further issue would then be whether both of these problems point to the larger holographic problems pointed to by M. Talbot and K. Pribram independently. All of these problems leave a rather large opening for a VALIS version of a 'hidden variables' interpretation of physics. All of this is to say that physics is a phenomenological theory rather than ontological. There is a deeper, non-local, 'informational' layer.

The above, fairly standard speculation is a just bare step away from the BPWH. The BPWH is the only way to avoid the logical absurdities of infinite modal worlds. I do not have a problem with infinity, per se, as long as it is essential to a qualitative semantic web. There can be no separate realities, because there can be no real separation, without an infinite regress. A cognizable semantic web is the unavoidable universal glue and solvent.

Then Jack calls to complain about Eric Julien and Gordon. We agree that the technology is premature, at best, and that the 'physics' is ill-founded, at best.

Then we get onto Bousso and Hepburn. We agree that these lead to VALIS, and I enquire as to the difference between VALIS and God. Jack insists that I watch his [video](#), produced by Sam Arnold, which I transcribe below, reproduced with permission:

- Sarfatti-Causation (c) (R)
- No joke about 1953 either
- Consciousness, Cosmology and Gravity
- Think of $\langle A, B|x, x \rangle$ as an advanced wave from the future

- and $\langle x, x' | A, B \rangle$ as a retarded wave coming from the past.
- VALIS = Einstein, Podolski, Rosen tensor product of
- the Mindscapes of all transient, conscious minds
- everywhere-when.
- The facts are: signal nonlocality exists in living matter.
- Is consciousness some kind of physical field
- that can couple strongly to the fabric of space-time itself?
- You cannot reach the stars without dark energy powered vehicles
- [or] dark energy stabilized star gates.
- The boundary between fact and fiction is not as sharp as it once was.
- Because of signal nonlocality violating micro-quantum mechanics,
- the parts of the whole can be aware of each other.
- I suspect there are discarnate cosmic scale intelligences like V.A.L.I.S.
- Vast Active Living Intelligence Systems.
- I get attacked by both sides: the debunkers [and] true believers.
- I am even skeptical about my own crazy ideas.
- The question is: are they crazy enough to be true?
- If you have a will to survive, there is no choice but metric engineering,
- warp and wormhole to achieve Timothy Leary's SMI2LE:
- Space Migration, Intelligence Increase, Life Extension.
- Do not seek, VALIS will find you.
- ODLRO [off-diagonal long range order]:
- Space-time fabric is spun out of the super-conscious mind of God
- VALIS not God [!?!]

I have no problem up that last point, the one that I raised with Jack on the phone.

We agree that VALIS is very likely to have the capacity to restrain Susskind's Landscape of possible worlds associated with the 10^{500} mathematically possible versions of string theory.

But given that VALIS is able to constrain the ontological profligacy of the mathematical possibilities of physics, and given the Cosmological Anthropic Principle, then how far are we away from something looking a lot like the BPWH??

The basic bootstrap principle of the BPWH requires that all sentience participates in the cosmic mind:

$\langle\langle$ VALIS = Einstein, Podolski, Rosen tensor product of the Mindscapes of all transient, conscious minds everywhere-when. $\rangle\rangle$

Perhaps the most basic notion of the BPWH is that the space-time manifold is a projection of the cosmic consciousness:

$\langle\langle$ According to ODLRO[VALIS]: the Space-time fabric is spun out of the super-conscious mind of God. $\rangle\rangle$

Given all of this, then I am failing to find any logical distinction between Jack's version of VALIS and the cosmic intelligence/Telos of the BPWH. The only real distinction between the latter being and the God of traditional theism is the degree to which we are perceived to be separate from each other and from that being. I suggest that the separation between ourselves and between us and God is mainly a matter of perspective.

Thus do we see a convergence between the wisdom of the s/ages and the deepest insights of modern science. This should be a cause for celebration. It should indicate that we are close to the completion of our intellectual sojourn. All in all, it should be no great surprise. We are finally drawing nigh to our Destiny Matrix/Telos.

Jack mentioned on the phone another cute idea that he derives from Bousso (p. 45). The IQ (informational entropy) of God/Cosmos varies as the inverse of the cosmological constant. Our cosmic $1/\Lambda = 10^{120}$, which is rather far above the genius level of 1.4×10^2 . Presumably, however, we can make up for our individual deficiencies tuning into the clear signal God channel, to whatever extent possible. Practice makes perfect. We could easily settle for a few crumbs off that plate. Will this compensate for my arteriosclerosis?

Where Jack and I may still differ is on the technological front. I am rather more skeptical there than is he. The issue at hand is that of the design of portals or 'star-gates'. Jack hypothesizes that dark matter must be used to construct such portals, whereas the BPWH posits that cosmic intercourse is mediated by mind over matter, as is everything else, ultimately. Creation, such as it is, is a mental construct, after all. This is simply in accord with the definition of immaterialism.

Mind Bridges & Portals

This is a continuation of the thoughts from the previous page, being motivated in part by a discussion with Jack Sarfatti.

Back to basics and a recap.

There many kinds of non-local, irreducible phenomena:

- quantum phenomena
- the mathematically described laws of physics
- 'emergent' biological properties
- mental phenomena in general
- psychosomatic phenomena and holistic medicine
- a collective unconscious realm
- altered states of consciousness

More controversially there are parapsychological and paranormal phenomena:

- mental telepathy
- psychokinesis
- poltergeists
- reincarnation/'survival'

It is not terribly controversial then to posit some sort of mind-field to tie these phenomena together. Currently we are calling this field, VALIS, after PK Dick. Jack may equate VALIS with his Destiny Matrix.

The BPWH posits that a self-generating VALIS is the foundation of all being, thus equating it to the Cosmic Ouroboros. I am not averse to a close identification between the ouroboros and the Telos or a Destiny Matrix. I may also refer to it as God or panTheos.

All being is interconnected via this Cosmic Mind Bridge, to add another phrase to our collection for the All-in-All.

Where Jack and I presently differ is in his more dualistic and my more monistic view of the CMB.

The difference is most readily apparent in the matter of portals or star-gates. Jack supposes that these portals are necessarily technological artifacts. I suppose that portals are simply a more or less spontaneous sort of mind-bridge. This difference may be traced to our differing conceptions of space and time.

In the BPWH, space and time are functional projections of VALIS. To put in most succinctly, space and time are God's way of keeping everything from happening at the same time and place. It is God's necessary filing cabinet, if you will. It is partitioned in various ways. In particular, it is partitioned between individual minds and individual worlds. This is to say that reality is naturally a unit, and it takes some doing to stretch it out over time and space. We creatures supply most of the scaffolding and glue in this cosmology.

Keep in mind, however, that the space-time of the BPW is purely *phenomenal* space and time, it is *not* the *deep* space-time of modern cosmology. Physicists strain mightily to save the macro and micro appearances. They find themselves in nearly the same position as the Ptolemaists before the Galilean

revolution, i.e. they have to keep adding epicycles on top of epicycles. This great edifice is about to come crashing down on their heads, almost literally, as we experience the ontological inversion between mind and matter, i.e. the world turned upside-down and inside-out.

The apokatastatic Telos is the natural, relaxed or 'collapsed' state of the world. This is where the ouroboros bites its tail, where Alpha = Omega. We creatures, like Atlas, struggle to keep the sky from falling. And me, well, I'm just Chicken Little. Don't mind me!

As the Millennium proceeds, the natural and spontaneous portals here on Earth will expand to the point that the entire Earth is just one big portal. We are well on our way to becoming the cosmic crossroads. That A/X/O marks the end of our linear history. This is the Emerald Cafe of Star Wars. This is Douglas Adams' Restaurant at the End of the Universe.

My answer to Jack & Co. is that we have no need to go there. They are much more anxious to come here. Talk about 'broken borders' and 'illegal aliens'! You ain't seen nothin' yet, my friends!

The apocalypse is the parting of the veil of nature. That is our omega-portal to eternity. Talk about rush-hour!

The problem is not to build more portals, but to keep the existing ones from bursting at the seams.

So here we are at the cosmic cross roads, with the whole cosmos knocking at our door. What is truly going on? Since when did we volunteer to become the cosmic traffic cops?

Do we man the barricades with our dark-energy, quantum bazookas? All that we would manage to do with our big guns is rip more holes in the space-time fabric, which is becoming increasingly threadbare, just on its own.

The question we need to ask is, 'What's the big attraction??'

Well, they can hardly help it. We are at the center of cosmic gravity. The Earth is metaphysically the 'densest' of all the worlds. Everyone is dying to come here, and come back again. If you can't come by the natural/biological route, you'll break down the doors of our perception and be our incubi, etc., etc. Once they've seen Paris, they won't want to go back to Kansas or Serpo.

Is it just the bright lights? Is it just our women? Perhaps. What marks us out, more than anything, is that we are the only planet of choice, to quote the Council of Nine.

To put it another way, the aliens come here mainly to experience our alienation! Why? Because they know as we know, that the first shall be last and the last shall be first. At this cosmic center of spiritual density, we are at the bottom of the totem pole. We are all pearl divers. We dive here to find the pearl of great price. We come here to find that which makes us closer to God than the angels.

The visitors come from their respective aboriginal dreamtimes to be thrown down into our hard rock cafe. They partake vicariously, or otherwise, of our heaven and hell on Earth. They come to find out where they will be sitting on the glory train of our apokatastasis. This is the eschatological Grand Central Station. This is the great wedding feast of our Hierogamos. All roads lead to Rome.

Jack says:

<<The low entropy of the early universe at the ALPHA POINT is the PAST EFFECT whose FUTURE CAUSE is at the OMEGA POINT de Sitter ultimate FUTURE HORIZON for all of us observers. This is all a NONLOCAL TIME LOOP where the high entropy at future OMEGA pays for the low entropy at ALPHA setting the direction for the ARROW OF TIME of the 2nd Law of Thermodynamics.>>

This seems to be a partial substantiation of the ouroboric style of cosmology.

[12/8] [a]

The Collapse of the Space-time Manifold

I don't envy Jack in his present position. He is so near, yet so far from his Copernican de-revolution, *a la* the BPWH. That's where I was in 1980, when I had my immaterialist epiphany while reading *Masquerade* by Kit Williams. I realized then that nature and art could not be that far apart, in that there must a ubiquitous intersubjective intentionality. Nature art or super-realism, if you will, is just the surfacing of the Jungian uCs. There is no room for accidents. Is this a pro-life paean against nature's abortions? Yes and no. It is a metaphysical statement, not a political statement. This is the beginning of teleology or 'retro-causation' to use the infelicitous phrase of the physicists. It also reopens the door to eschatology, in a rather serious way: how can there be a telos without an eschaton?

It is the beginning of 'pronoia', if you will. This new attitude built upon my Sophia encounter and led up to a series of incidents in June of 1991 that led me to call MUFON, to delve into the British crop-circle scene and finally to call Ron. Who else to call, re. the eschaton? You can't just dial 911. 9/11 would come later.

How can we spare Jack the agonizing fall into Maya/immaterialism/idealism. For a physicist, the collapse of the space-time manifold is like a trip to the dentist where he tells that your teeth are fine, but the gums have got to go! How can we cushion the impact of this revelation. So near, yet so far! How do we explain to Jack about jumping over this candlestick?

What does Jack now have in his armamenta?

- conformal physics
- It from Bit
- WAP -> SAP?
- Ouroboros *a la* Penrose and retro-causation
- VALIS
- Mach's Principle
- Portals & mind-bridges
- paranormal phenomena
- mind over matter
- skepticism concerning String Theory
- hidden variables
- non-local signaling
- Holographic principle
- unreasonable effectiveness of mathematics

The collapse of the space-time manifold is the subtext of everyone of these items.

We live in a projective, holographic world. This world is a self-generating, time-looped, informational complex. The conformal point at infinity collapses into the eternal, shining Present. This is the Aquarium's version of the immanentizing of the eschaton.

The still unsolved mystery of Mach's Principle is symptomatic of the conformal immanentizing of the 'fixed stars'.

This is the conceptual precipice at whose edge I stand vicariously with Jack. What do they say about leading a horse to water? Jump on in, the water in the Aquarium is great! Where is the blindfold? We're trying to lead him out of the burning building. That's all that's left of the old, alienating worldview.

If Jack were to make this jump, it would make a nice splash. Jack is a big frog in a small pond. This mini-tsunami would be felt far away.

Quite possibly I'm missing some neat little physical argument, a nice little push, that would make this jump easier for Jack and his comrades. If Jack can figure out this argument, that would surely set him up for his Nobel Prize, the last one for physics as we used to know it. If not, we may be standing here for awhile. There will then have to be some phenomenon that will push us over. This would be a less desirable, more shocking outcome.

[12/11] [a]

This recently from a usually reliable source:

She [Sophia?] says you are so very close but you were partially blinded by the light, but your vision will finally clear. There is one pearl you still seek to complete the string...it is coming.

You cling tightly to the coat-tails of two men – one is a lifeline, the other is falsely conceived.

This next coming year will be the way of unveiling but also silent contemplation. Significant dates will be January 24th - May 17th and August?

More listen than speak in your defence – they wait for the tide to turn.

There is a man of influence who watches closely from the wings...You don't know him but he will make himself known to you.

Interesting. The two men are likely Jack and CF. 'Falsely conceived' is ambiguous. Does it mean deceptive or mistaken? And which would be which? I'm not sure I would want to bet my life on the answer, but I may have already. I have always presumed that CF was a mixed bag relative to disclosure, and a perennial source of disinformation, mixed with information, of course. That's his official duty as an intelligence officer, only actually beholden to the President. Even the President is served only on a need to know basis. I may have a greater or lesser need, depending. A particular issue with CF of late is my (non)support of GN. The issue used to be the positive, but now it has become the negative. What has become of 100+ billions allocated to MJ-12? Perhaps CF has no personal slush fund. JS is under the impression that he is on an inside dole, as was GN up until his falling out with RS.

I was told that the pearl and the unveiling probably refer to the same thing. One might suppose that this is also related to the turning of the tide. How much of this hinges on my silent contemplation? Are we talking about a formal meditation? That has never been my style. So is the pearl mainly something internal or external? Is it something more conceptual or intuitive? More of a scientific, social, or metaphysical insight?

There continue to be the exchanges with Jack. His coming around comes in fits and starts, but mostly fits, especially in what he gives me. Might something of substance emerge in that exchange? One might hope it is not all wasted.

'Blinded by the light'? I wonder. Does that mean I am too focused on the One, and not seeing important particulars? Am I too focused on the 2nd Coming? Focusing on the KC project was one way to avoid the latter, one might think.

[12/12] [a]

This from Mario C:

My question is this: If the presumption that the soul goes onto a higher stage of being upon one's death, and if we presume that all those that have passed have reached the next level which we will attain after the eschaton, what would be the hurry, or even the need, for those that are living on this planet to attain that next level while still alive? Unless we insert the concept of purgatory as a "parking lot" where all of the souls await until judgment day, I cannot see the logical reason to eliminate this "middle existence", if you will. Why not let every "body" continue to cycle through all of the steps? Where am I going wrong?

Mario, excellent question, and thank you for asking. The answer may be implied in various of my scribblings, but it does need to be explicitly emphasized, because it is important, as you well realize.

Here is the deal as I see it in conformity with the general theme of the BPWH:

Although we may suppose that the BPW is qualitatively infinite, we may presume that it is quantitatively finite in every respect. Why? This is because Creation must be limited to a finite number of souls. And why, again? The whole basis of theism is a personal relationship between each individual creature and the Creator, referring now to us humans. This fact is emphasized particularly in the incarnational X event. If Creation were infinite in time and space, then an infinite number of creatures would be infinitely removed from that X event. The only remedy would be an infinite number of X events, but any such infinite cosmology would fly in the face of the whole concept of a Best Possible World. There would either be an infinite redundancy, or there would exist every possible world. There would be no feeling of our belonging to a personal Creation.

The issue becomes for us simply the question of the optimal number of souls. I am supposing that the answer is c. 10^{10} . I would argue that this provides us with the maximum of diversity and with a minimum of redundancy.

In a Mandelbrot style of cosmology, there could be an infinite number of worlds, each represented by one of the bulbs. I suggest, though, that there would be a practical cut-off at some minimal population per world/bulb. In keeping with the Zodiacal schema, there would be twelve principal worlds. Serpo, with about 10^6 souls, would be a principal one of these. There would be a rapid drop-off in the population of each such world. There would be, could be, no uninhabited worlds, with the possible exception of a few Jurassic Park/caretaker worlds. We remain the only Planet of Choice, and the only locus of a salvific incarnational event. That is why all the other souls must visit here to partake of this singular salvational history.

Mario, it is important to recognize that I do not foresee a dramatic, rapture-style eschaton. The drama, rather, will be focused on the imminent messianic event. This will become a media event, perhaps soon after the death of the designated individual. (The best saint is the dead saint?) That will be our Great Awakening, and from that point on our attention will turn toward our reunion with God. Our mundane business will be wound-down, accordingly. In particular, our baby-making business will taper off, more or less rapidly. This will be our promised Millennium. The optimal length of the Millennium might only be a few centuries at the most. The souls finish up their business/education here, and migrate on to other dimensions of non-linear space-time. Coming back here would then be possible as time-traveling walk-ins. You and I might be such ones. Any messianic-style pretensions would simply be attributable to our

prearranged cameo/video-game appearances. 'You pays your money and you takes your choice!'

The fate of the Earth? It goes back to something like the Disney/Edenic/conservation park it might once have been.

Having established the background of the BPW cosmology, I should return to the specifics of Mario's question.

What is the hurry? What about a purgatory?

There has always been in christianity the believers exhortation, 'Hurry, Lord!' The inference is that life here, even for the believer, cannot be as good as life in the direct presence of God. There must always be down here an existential alienation or deprivation. This would be true even, or particularly, in the Millennial Kingdom, which could hardly be much better than any purgatory. In the Millennium/purgatory we would be more aware of what we are missing, than we are now.

Beyond the spiritual impatience, there is also the fact of finiteness. Given an optimal number, c. 10^{10} , of souls, we eventually finish our education, and are ready to move on. This global readiness is apparently being underscored by the various material and spiritual crises that presently face us. I submit that these will not be solved without a messianic intervention. That will necessarily be a pre-millennial intervention. That inaugurates the winding down, wrapping up of our history, as just described.

The only alternative might be for us to colonize the universe. This, however, is an illusory notion based on the false premise of physicalism. It is rather the case that the other worlds have already started coming here to participate in the BPW/geocentric eschatology.

Have I satisfactorily answered your question, Mario?

Mario:

Thank you for your response, Mr. Smith. It is deeply appreciated.

In order for me to understand the logical sequence of the BPWH, I have asked myself these questions:

If before the Big Bang there was nothing, and this "singularity"/the universe was created by God's mind, then obviously God created all of the rules. It was, after all, His dream.

What was God's motivation for making the existence of our present situation finite?

Was it merely capriciousness? Judging from the orderly result of His creation He does not appear capricious otherwise.

From what the astrophysicists tell us, the Sun will lose it's ability to continue to function in its current form in a few billion years. As a result, the expansion of it to a red star will consume the earth and all within it. So there is, apparently a definite timeline which makes our earth/host relationship finite.

But why the need to have a pre-eschaton eschaton? If God included the near-future upcoming eschaton in his Dream/Creation what was his reason? There was already one built in to the scheme of things.

Do we need to release all of those souls from purgatory a few billion years ahead of the end of the earth? Does God need our transcendence in order to fuel the Cosmos? Himself? Something else?

You have opened whole new avenues of thought for me with your hypothesis, and I am very grateful to you for that.

Regards,

Mario

Mario, I think now I see the problem. What you are doing here is mixing the materialism with the immaterialism. This leads to incoherence. The basic premise of the BPWH is that deep space and time is just an illusion. It is just the logical extension of the veil of nature that separates us from the cosmic intelligence. I am supposing that actual linear history on Earth extended back only perhaps twelve thousand years or so. There need be no actual barriers in space or time, just an attenuation of normal, linear consciousness as one approaches the limits. It is just a fact that astronauts do tend toward more altered states of consciousness as they depart the Earth. This problem has been covered up by NASA as per my CIA informant. Thus the plan to return to the Moon, rather than extend to Mars.

The Big Bang and extrapolated Big Crunch are just appearances. There are other worlds from which our visitors come, but they are just scaled down version of our own dream-world.

Hi Mr. Smith,

OK, I see what you are saying. Let's invalidate my comments regarding the fate of the earth in a few billion years. If we presume no built in time system in place due to all of that belonging to the material folks, we are left with the eschaton built in by the Creator at a time of His choosing.

Is His choice in this the point at which we start to lose our personal relationship with Him? Is this due to the number of souls reaching x?

Would you agree that the alleged visitors have a vested interest in the eschaton?
Would that cause them to help it along in some way? Perhaps by helping us to lose our relationship with our Creator? Perhaps by helping us reach population x?

Regards,
Mario

More good questions.

The eschaton comes at the time of God's choosing? That tends to oversimplify a complex process:

- We creatures are the co-Creators.
- The spatio-temporal dimensions of the world are optimal from everyone's informed point of view.
- We creatures are presently, and for the most part, uniformed and misinformed specifically as to the Creation.

There are many factors involved in the optimization of the spatio-temporal dimensions of the world. Creation is a very complex system that is replete with time loops of all dimensions. Thus is it a very strong feed-back, self-stabilizing system, and so it is impossible to distinguish between cause and effect.

The 'tribulation' we experience leading up to the Millennium is a necessary conclusion to this, our long march into materiality. The sweet and the sour become very entangled in these latter-days. The pain is part of what awakens us, along with the messianic event itself.

The role of the visitors? The visitors have been with us since the beginning. They include both 'angels' and 'demons'.

Like Narcissus, we fall in love with our collective and individual material images. We almost literally fall into and are ensnared by this world. Angels can help to alleviate some of our problems; demons, among many other roles, ensure that our attempts to escape are generally futile. The Powers-that-Be are also interested in keeping us down on the 'farm'. They sometimes collude with the demons, to that end. But finally, certain of the visitors (the three Magi?) help to prepare for the messianic event by negotiating an offer with the PtB that they cannot refuse.

And continuing:

When you state:

* The spatio-temporal dimensions of the world are optimal from everyone's informed point of view.

I interpret that to mean that the near-future is crucial to the timing of the eschaton due to the optimization of the spatio-temporal dimensions of the world.

I can't remember who sang this song: "When the Moon is in the seventh house and Jupiter aligns with Mars, then peace will guide the planet and love will steer the stars. This is the dawning of the age of Aquarius"

If so, who are you referring to when you say that this information is coming "from everyone's informed point of view"?

Mario raises several interesting points here.

The *Age of Aquarius* was performed by the 'Fifth Dimension' back at a time when physicists were just beginning to expand their dimensional horizons. Now they are up to eleven, and still counting.

The Zodiac plays a 'stellar' role in the BPWH. I could go on at great lengths about that, and I have, throughout this website. It is one of the seven major archetypes, collectively designated by [AZO/X/QRP](#), q.v. This is part of the timing of the eschaton. See De Santillana's *Hamlet's Mill* for more information about how this mythos impinged upon history. In short, our cosmic calendar is written in the stars, as one might well have expected.

[12/13]

I have been asked to elaborate on the above passage:

<<Angels can help to alleviate some of our problems; demons, among many other roles, ensure that our attempts to escape are generally futile. The Powers-that-Be are also interested in keeping us down on the 'farm'. They sometimes collude with the demons, to that end. But finally, certain of the visitors (the three Magi?) help to prepare for the messianic event by negotiating an offer with the PtB that they cannot refuse.>>

A great amount of speculation is packed into this statement.

You might wish to familiarize yourself with the gossip about the Aviary and Aquarium on the Internet by combining those words with 'UFO'. The Aviary grew up around the allegations that the US government has been visited by Aliens, starting with the Roswell episode in 1947. There are alleged to have been three principal visitors, EBE1-3. The Aquarium, which is a spin-off of the Aviary, bases itself on the possibility that the historical role of EBE1-3 is similar to that ascribed to the three Magi, in that they came to expedite a messianic advent.

These Magi I would count amongst the Angels, although they are alleged to have come from 'planet' Serpo, a world not unlike our own, but with a population of less than a million. I do not draw any major distinction between the good, bad and ugly, when it comes to the visitors. They all have their functional roles to play in our psycho-social development here on Earth. With a few exceptions, it is they who come here to interact with us at this center of spiritual gravity. Our more robust physicality leaves us as targets of their often seeming parasitic advances. Their 'technology' is mostly just an advanced form of magic. Their disks operate more as flying carpets, than anything else. Their ingress here is mainly on the psychic level, but in an immaterial world there is no great distinction between the psychical and the physical,

certainly not to the degree we are wont to believe.

Like the parasites in our guts, they usually perform beneficial services, but they can get out of hand if we don't watch them and keep them on a short leash. How we do that is very situation dependent. I would not entirely discount the rumors that there have been pitched military engagements with certain of these critters in conjunction with their underground portals.

The coming Apokatastasis is participated in universally by everyone of the c. 10^{10} souls, including those in the outlying dimensional worlds such as Serpo. The Earth has been designated aboriginally to be the center of the Apocastatic action. This is the cosmic crossroads, and it is from here that the Glory Train departs, the way station on the path to heaven, if you will. If all goes well with our immanent Millennial Kingdom, the uploading process can be stretched out over one or more centuries. The Tribulation need be no worse than what we have already been experiencing.

The doors of heaven, i.e. mainly the portals, will be thrown open. Up to now they have been guarded on both sides. We might suppose that the initial primary cohort of émigrés will be our senior citizens, but as this process becomes culturally integrated, a more general population will participate, and our biological fertility will abate accordingly, until the Earth is gradually returned to its Edenic/caretaker regime.

I hope this brief elaboration can help. There is no real trick to performing such speculation. It is just a question of becoming familiar with the basic percepts of the BPWH, and then gradually filling in the details in the most coherent and expeditious manner possible. You do not have to be a card-carrying soothsayer to perform such a task. Just keep a level head!

There are those who have likened our spiritual matriculation to a kind of hatching out. JC Pearce refers to the paranormal or altered-state visitations/excursions as the 'cracks in our Cosmic Egg'. Our synchronized hatching in this millennial regime will afford us a protection of numbers over whatever predatory spirits may linger by the wayside. This model does seem to presuppose some kind of 'purgatorial' holding pen for the dear departed and for the new souls. N.B. that the BPWH is not at all averse to a reincarnational logistic for such souls. And that would include a 'video-gaming' faction of walk-ins, possibly including yours truly, to put another spin on the notion of incarnation.

Historically, it has been the priestly castes who have been the regulators of our cosmic intercourse. It has been their task to prevent the visitors from upsetting the social order. In particular, they must be able to monopolize the prophetic/oracular/magical functions. The advent of scientific materialism has significantly undermined the role of the priests, leaving the modern societies actually more vulnerable to the trepidations and trespass of wayward spirits. Scientific materialism found its symbiosis with the Protestant belittling of the phenomenal realm. To a significant degree, our latter-day 'ufologists' have attempted to fill the gap. To the extent they are allowed by the scientific establishment and the media, they try to establish a techno-social niche for the visitors. Support groups are built up around the various kinds of experiencers. New Age gurus hawk their wares. Psychedelics must be closely regulated with the imposition of harsh penalties for infractions.

These social machinations inevitably soften the underbelly of the establishment for a messianic advent. Our three Magi, redivivus, are the *coup de grace* for a materialist establishment that has been running increasingly on its own intellectual fumes. Its medical and communications *Techné* remains potent, but it does not hold us in the thrall it once did. The Internet overcomes NASA to power our inward/phenomenal turn. The three Magi are at once a Trojan horse and tar-baby to the establishment. The global intelligence community has been penetrated and compromised with mere trinkets from the visitors. The only effective defense will be disclosure.

Will we then be able to avoid the establishment of a new priestly caste? The aboriginal Xian communes afforded a partial reversion to an open shamanic/charismatic society. The Protestant tradition attempted to extend the life of these communes, until it was waylaid by the capitalist ethic. The winding-down (withering?) of capitalism will be a principal feature of the Millennium, *pace* Marx. A gradual, peaceable

exchange of material capital for spiritual goodwill will be a measure of its success. Mind you that it will not be about Simony.

The attendant hedonism should also be allowed to burn itself out. One might imagine that the problem of latter-day hedonism will be particularly acute in Islam that is now by far our most repressive society. The often violent fanaticism we see therein is an initial paroxysm of this burning-off as the psychic pressure is released. The rapid devolution of that mindset presents an enticing playground for the wanton spirits. That is a hot-house version of what will transpire globally in a less intense fashion, let us pray.

The trinket of most economic interest is the portable power supply, a kind of crystal battery that has powered any number of rumors, and perhaps a few mundane appliances. If it is a storage medium, it appears to operate in a self-replenishing fashion. Does this spell then end of our fuel shortage? I remain skeptical. Perhaps the greatest hold that materialism has upon us is through our addiction to fuel consumption. An unlimited supply of heroin is probably not the way to cure any such addiction. I would speculate that the 'crystal battery' is likely powered off of our attendant psyches in what may not be a wholly beneficial fashion. I would opt for solar power to tide us over into our matriculation. We may want to enquire, however, as to the infrastructure of the Great Beyond. Are there hot-water showers and garbage removal? There may well be metaphoric equivalents of such mundane systems, but this is not something I have yet attended to. We might first enquire as to the *Physis* of the Beyond. There are often reported to be varying stages of ersatz 'physicality' with whatever infrastructures might be attendant thereto.

It has also been noted that our psychic effervesces down here are likely to be useful as a fuel somewhere else. We could be the powerhouse of the of the Ouroboros, a kind of psychic dynamo whose passions keep the cosmic juices flowing. We will be living off our own fumes to some significant degree. If we can't stand the heat, we get out of the kitchen. Well, I just hope I'm not assigned to the cosmic Con Ed, if that isn't already the case.

Two more questions.....

You state: "Will we then be able to avoid the establishment of a new priestly caste?" Do you have some doubt, or if not doubt, then are you allowing for some possibility that this model could still "go south"?

Does your model allow for any possibility that the visitors are devoid of the same type of soul that mankind possesses? In other words, if "man was created in God's image" they are missing something that we have?

Doubt? Who, me? Usually folks on a spiritual path have emotional certainty and intellectual doubt, but with me it usually seems to be the reverse. In my case, the happens to be rather more to doubt than with most people on such a path. When doubt arises, a just have to go back over the logical options, and ascertain that there are still none other.

The related question is how bad might things get before they start getting better? I keep hoping that the worst is over, but realize that this hope puts me among a small minority of optimists. How much of a downturn could my beliefs sustain? I sure don't want to have to find out.

Visitors' souls?

I have been rather cavalier about souls. Our own souls are the most real things we can experience, save an occasional mystical encounter with the cosmic soul. I suggest that the self was the model for the Greek atom, as something indivisible. I further suggest, however, that there is an Aqua Regia for our souls and that is the cosmic agape. That is the basis of our eventual hierogamic apokatastasis. The visitors' souls are simply less well formed or individuated. They have a tribal/animal/communal/hive-like existence and consciousness. They 'hybridize' with us in a latter-day attempt to vicariously partake of our Earthly grist

mill. This is just *Hamlet's Mill*, refining the salt of our souls over the eons or, at least, the millennia of our mundane sojourn.

This only planet of choice is the Great Attractor, the finishing school for would-be souls. The souls are fired to their diamond essence, at which point they are ready to be dissolved back into the oneness. This is not unlike the Hindu notion of Nirvana, is it not? The only real difference is that our nirvanic salvation can be vicariously expedited, just as we can vicariously expedite the transmigration of the visitors. This has everything to do with the quantitatively finite cosmology of theism.

[12/15]

I am reminded, in essay by Russell Targ, that Bohm's 'implicate order' works on a holographic principle. Jack had earlier dismissed the speculation of the elder Bohm, but that is what Jack is now coming back to, in adopting the notion of VALIS. The IO/HP, or IHOP for short, is the backbone of the BPW. It is the flesh of the Ouroboros. It is the locus of the Akashic record and personal memory. Is it not also the *aqua regia* and repository of the residue of the spirits?

Dan,

I ran into this at the Stanford library while researching Berkeley (due to your remarks).

Would like your comments if you have the time and inclination.

<<<Thus, although there is no material world for Berkeley, there is a physical world, a world of ordinary objects. This world is mind-dependent, for it is composed of ideas, whose existence consists in being perceived. For ideas, and so for the physical world, *esse est percipi*.

So, when I say that my desk still exists after I leave my office, perhaps I just mean that I would perceive it if I were in my office, or, more broadly, that a finite mind would perceive the desk were it in the appropriate circumstances (in my office, with the lights on, with eyes open, etc.). This is to provide a sort of counterfactual analysis of the continued existence of unperceived objects. The truth of the counterfactuals in question is anchored in regularity: because God follows set patterns in the way he causes ideas, I would have a desk idea if I were in the office.

Unfortunately, this analysis has counterintuitive consequences when coupled with the *esse est percipi* doctrine (McCracken 1979, 286). If to be is, as Berkeley insists, to be perceived, then the unperceived desk does not exist, despite the fact that it would be perceived and thus would exist if someone opened the office door. Consequently, on this view the desk would not endure uninterrupted but would pop in and out of existence, though it would do so quite predictably. One way to respond to this worry would be to dismiss it—what does it matter if the desk ceases to exist when unperceived, as long as it exists whenever we need it? Berkeley shows signs of this sort of attitude in Principles 45-46, where he tries to argue that his materialist opponents and scholastic predecessors are in much the same boat.[19] This "who cares?" response to the problem of continued existence is fair enough as far as it goes, but it surely does conflict with common sense.>>>

Mario

Mario, what I take to be most 'real' are the 'natural'/biological/phenomenal cycles. Linear human history is superimposed upon that cyclic background. Thus are human artifacts added to the mix. Manufacturing is composed of artificial cycles, combined in some rational manner. The desk then is a kind of hologram, made interactively real because its manufacture and use is a coherent combination of natural and artificial [cycles](#). Over human history, the artificial cycles are modified in a gradual and teleological fashion.

The desk is real as a node of a great semantic web we call the 'modern world'. A visitor, fresh out of a UFO, might walk right through your desk or the wall of your bedroom, because she belongs to a different semantic web. It takes time to integrate these webs. That has been going on throughout history, but the

integration is speeding up as we approach the apokatastasis. [1/19/07 - I am reminded that there are many reports of ball-lightning (orbs) going through walls, and behaving in other paranormal/psychic ways.]

You, too, could walk through your own desk, given the proper semantic indoctrination of dis/re-integration. The paranormal is replete with such incidents. As we move forward into our eschatological dreamtime, the incidences of mind over matter will become more commonplace and controlled. The process must be done gradually and deliberately lest the semantic web suffer a collective psychotic break or tear. That would be the nightmare scenario. There will be increasing amounts of that on the fringes, which will help to keep the rest of us on a coherent teleological path.

It should be noted that the Internet and virtual realities will likely play a very significant part in our dis/re-integration.

Let me restate that first sentence. Your walking through a wall could happen through your induction into an alternate semantic web, say that of a group of visitors. Having an individual psychotic break would likely only land you in another part of our existing web. You would end up in a room with padded walls.

[12/17]

In a typical abduction experience the body stays behind. It is an out-of-body experience; yet, the experiencer is probably not aware of being bodiless, and is not, in the relative sense. Any potential witnesses left behind are likely to be put out of commission. This is the phenomenal limbo between worlds. The experiencer comes back here to the densest and the home locale, by default. The visitors come deliberately and in groups. They are excluded from staying here by the prime directive, shyness effect. Generally it is like oil and water. Then there are the exceptions like the Magi and possibly Serpo. These require a great deliberation on both sides, with a very strong teleological pull.

[12/18]

The occasional Big Foot type of appearance is a traditional, cameo role, signifying nothing new.

A physicist might well scoff at the notion of (de-) materializations, due to the equivalence of $E = mc^2$. There should be a very major release of energy accompanying any such event. This is not a trivial problem for the phenomenologist.

I can only suggest that the thermo-nuclear events are parasitic upon the phenomenology of the Sun, and upon their chemically explosive, phenomenological cousins. Is there a logical necessity for fire? Is fire parasitic upon metabolism?

Atomism is a logical adjunct to reproductive cycles. Nuclear physics is an adjunct to atomism. Nuclei are not phenomenological necessities, but atoms would look funny without them. They are both resultants of the quantum dynamics, the *sine qua non* of any *physis*.

The logic of high-energy physics kept me personally, and modern culture, on the straight and narrow track of scientific materialism for at least a couple of generations beyond what would otherwise have been possible. There has been a teleological necessity to the prolongation of the materialist hegemony into the phenomenology of the Internet. This has been no mean feat. The advent of the Internet will greatly expedite our global eschatological logistics, by greatly reducing the need for external intervention. This is one more reason for the delay of disclosure.

How do we know that there will not be additional reasons for the prolongation of the materialist

hegemony, without the benefit of hindsight? One does have to look carefully at the tea leaves. Nuclear proliferation is one of those leaves. The clash of cultures is another. The end of physics and near miraculous efficacy of the Internet are hard to ignore. Postmodernism and the rise of fundamentalism figure significantly.

I refer you back to [12/11](#). There remains the emergence of some significant piece of the eschatological puzzle. Should this be the final piece? I would suggest that the glass ceiling is that close to cracking, that any such emergence would be adequate for finishing the job. It would have to be something on the conceptual, political or disclosure front that would directly accrue to the Aquarium. The coming around of Jack in connection with the KC project might qualify. But there is the implication of a visionary pearl. That sounds more conceptual. Is there a neglected aspect of the BPWH? A missing link in the logic? A more substantial connection back to physics, for instance. Such linkage could sway Jack in the above manner. There have been times when I felt that I could almost taste such a link. Something further along the lines of VALIS and the implicate order, IHOP, implicate holographic ordering principle, related to Jack's ODLRO, off-diagonal long-range order of coherent quantum systems. Perhaps we just need a more complete teleological explanation of the quantum, or a new variation on the [e/pi](#) theme, or some related piece of numerological, '[monstrous moonshine](#)'.

Silent meditation.

The quantum is a kind of numerology: the interplay of the analog and the digital, especially as in [e/pi](#). We see this in the zodiac. Likely I do not understand the full meaning contained in [AZO/X/QRP](#). The power of complex analysis comes into play. The monstrous moonshine is an extension of that power. The anthropic principle also applies to mathematics. How does this relate to IHOP?

[12/19]

Hi Dan,

I noticed that in your blog you wrote:

"Is there a neglected aspect of the BPWH? A missing link in the logic? A more substantial connection back to physics, for instance."

From a layman's point of view there are lingering questions. For example:

As I think I have said to you before, the average mind struggles with the necessity of letting go of the perceived universe, material objects, distances, times, etc.

In order for it to "play in Peoria" there must be a very strong link made between the theory and the absolute NECESSITY for there NOT to be a real, solid universe with other worlds and great distances PLUS inter-dimensional space and the 11 or more dimensions that the material physicists have said exist.

The key, I think, is in why did the Creator need to make ours an immaterial existence? Could He not in his infinite power and wisdom have devised a material existence, a multidimensional universe, and a quantitatively finite journey?

A very strong case needs to be made for most to abandon the old concepts and sign on to it being mutually exclusive to have what I described above and have a material universe at the same time.

The alternative is innovative and interesting but IMHO it fails to resonate in the ears of Peoria at this time.

Respectfully,
Mario

Mario, you raise several issues here.

There are three ways to proceed:

1. mass entertainment initiative
2. find a new conceptual link between the BPWH and a domain of science
3. insider cooperation

Each of these initiatives is presently being pursued. It is not clear which one will have precedence. According to the [message](#) above, #2 will have precedence.

I do not dispute that the modern world is still under the thrall of materialism. But materialism is extremely vulnerable to a variety of serious insults. Except mainly for molecular biology, it has already outlived its conceptual usefulness. Philosophers and theologians have entertained dualism for the past three centuries, without making any progress. The only alternative is a radical immaterialism. The BPWH is the only coherent version of immaterialism. It is 'Us or Rust'. I certainly do not expect the Perorians to be on the front lines of this battle, but I do expect that there will be a finite fraction of them who will be captivated by various aspects of the BPWH, given a serious presentation of that only coherent cosmology. In social movements it is all about the 'Big Mo'. The BPWH will have no rivals in that regard. Thanks to the Internet, our wired globe is extremely vulnerable to new ideas.

Materialism is necessarily nonsense, given the mind-body problem. There is no problem than looms larger for science.

<<The key, I think, is in why did the Creator need to make ours an immaterial existence?>>

The answer to that question is the foundation of the BPWH. It is all about monism (google: monism site:www.bestpossibleworld.com).

It is not possible for there to be an entity that can create a logically impossible world. There cannot exist separate realities, as per the logic of the semantic web, etc.; no more than God could mandate that $1 + 1 = 3$, or create an unobservable world. The logic of atomism leads to the absurdity of unobservables, that is the single most pernicious bit of nonsense that has become embedded in the collective psyche of us moderns. Transcend that piece of nonsense and the future is ours.

<<The key, I think, is in why did the Creator need to make ours an immaterial existence? Could He not in his infinite power and wisdom have devised a material existence, a multidimensional universe, and a quantitatively finite journey?>>

Infinite power? This notion is a piece of absolutism. Monism is fundamentally relativistic. Absolutism is another bit of materialist nonsense. Theism is such a powerful belief system that it must be tempered either with dualism or pantheism. With the advent of the postmodern BPWH, our cosmic destiny hits us between the eyes. This is no kind of milquetoast cosmology. This is not for the feint of heart. But not one of us would be here if this destiny had not already been inscribed in our hearts. It is just about who we are, through and through. It will turn out that every mental malady is the direct result of our denial of our destiny.

In short, God could not have failed to create the Best Possible World. In the BPW, every creature is necessarily a co-Creator. If the Best is not to your liking, then what??

Dan,

You have yet to respond to whether or not the BPWH requires a 'collapse' to a single world, thus requiring a new (nonlinear) physics of dynamic reduction of the wave function, or RDM (random discontinuous motion) in Gao shan's theory, or Orch OR of Penrose.

Gary

Gary, the BPW has many worlds, but they are all functionally related to each other, and especially to ours, the center of metaphysical gravity. QM is merely a mathematical abstraction relative to the plethora of phenomenological cycles. It follows in accord with the basic syzygy of e/π with its digital/analog correspondence. Unfortunately, Gary, you insist on having the tail wag the dog. We are God's tail, and the quantum is our tail. Cookbook physicists will blanch. Immaterialism is not for the faint of heart.

Back to Mario:

Quote///<<The key, I think, is in why did the Creator need to make ours an immaterial existence?>>

The answer to that question is the foundation of the BPWH. It is all about monism (google: monism site:www.bestpossibleworld.com).<</////Unquote.

A better way to phrase what I was trying to convey:

The key to gaining wider understanding and acceptance of the BPWH in Peoria, I think, is in elucidating a clearer argument as to why did the Creator needed to make ours an immaterial existence? The BPWH may be crystal clear to you and some others, but to the final arbiters of whether it gains a foothold or not, it remains an unconvincing, if entertaining "theory".

After all isn't that who the target audience should be, an aroused Peoria, if you will? Those who will see to it that the process is not delayed any longer? The BPWH has been in the realm of the scientific and philosophical community for some time now, but yet you wonder:

Quote/////There remains the emergence of some significant piece of the eschatological puzzle. Should this be the final piece? I would suggest that the glass ceiling is that close to cracking, that any such emergence would be adequate for finishing the job. It would have to be something on the conceptual, political or disclosure front that would directly accrue to the Aquarium./////Unquote.

I submit to you that the missing piece may be simply that the argument is what the politicians refer to as too nuanced. The glass may be a lot easier to break with the wide acceptance of the BPWH by what we have been referring to as "Peorians".

Here's one for you: If in the event, you are perhaps destined to become "The Messenger", maybe I'm the guy showing you where the weakest part of the glass is.

Mario, if you can de-nuance the BPW message, then more power to you. You have my attention. You just need Maxwell's silver hammer. It would indeed be optimal for the 'message' to be of the people, by the people and for the people. It could be none other. My closest relatives live in Rockford, IL.

I admit that immaterialism is a difficult pill to swallow, but down through the aeons, almost all of us have been, by default, intersubjective phenomenologists. Anything else is a learned (im)posture. We just have to unlearn that (im)posture.

[12/21]

We're back to finding the conceptual link between the BPWH and an existing branch of knowledge. What are the candidates?

- consider the numerical aspects of π as they relate to aspects of the BPW
- looking at quantum theory as a corollary of the BPW

I need to continue surveying the Internet for related ideas.

[12/22]

An obstacle to progress is the insufficient coherence of the seven archetypes, [AZO/X/QRP](#). If they were sufficiently coherent, there would be a procedure for generating more of them. A, Z & O focus just on time while the other four include space and time. Q, R & P point to the syzygys of $e^{i\pi}$ and $e^{\pi i}$. These must mean something. The zodiac does include a coordinate sense. X may be the primary symmetry breaker of time. The twelve months are symmetric, but the seven days are not. It is not clear what the connections are between the week and the zodiac. The c. 26,000 year precessional cycle may indicate a link between the decimal and duodecimal systems. That is also how 'e' and pi relate. Five is space, and six is time. Judea was decimal oriented while Egypt was duodecimal. Manu-facture was our primary breaking of time symmetry.

Numbers arise from cycles. Counting implies a temporal dimension. This came from music and the heartbeat. We check the [Numbers](#) (the topic goes back to 6/15/03). I like the idea of prime [evolution](#). That will give the Darwinians something to think about. There is a co-evolution between the integers and the primes. This must be tied into anthropics. QM comes out of this. Also consider the [source](#) of measure. I had forgotten how close the meter 39.37" was to the seconds pendulum 39.14", while $c = 2.998 \times 10^8$ m/s. All of this meshing goes back to the Royal cubit, JR [Skinner](#) (1894). I was introduced to this book by Bob Clark, I believe. Things do seem to go back to the quadrature of the circle. That is what the j-functions are about. And we have 113\355 and Piazzi Smyth, a name to die for. The Great Pyramid was a model of the Earth.

I visited John Michell in GB, [A New View Over Atlantis](#) (1983). It was his book that referred to Smyth. Smyth does talk about elliptical differences. The j-functions are elliptical functions. The j's hold the ellipse and most of mathematics' together.

[12/23]

The modular, elliptical functions are the breakers of circular symmetry, but neither circles nor integers were primordial. Counting was a very inexact art, until, perhaps, the primes were recognized. The primes introduced in-dividuality into the anonymous numbers. So did numerology. Together they make music.

[12/24]

The modular forms, aka j's, are among the most versatile functions in math. They link the analog and digital sides of math. They are an extension of the Fourier series. Presently I'm reading Gannon's [moonshine history](#). Finally on p.23 we get to the geometry of moonshine. What I have not seen is the connection between the Mandelbrot and moonshine. A google search yields none.

There is an asymmetry between the triplets AZO and QRP. QRP has a trinitarian sense, which is less so with AZO. We could substitute the Mandelbrot for the Zodiac. Q and A then become questionable.

[12/25]

I'm thinking to leave the archetypes alone for now. It is too big a can of worms to confront head on. We'll need to sneak around by the back door, if we can ever find it.

Right now I'm reading Joy's back issues of *New Scientist*. There is an article about Gerard t'Hooft's theory of the quantum underworld determinism, hidden states, below the Planck length, a further reductio ad absurdum, IMO. We will need a mesocosmic TOE. This will probably have to do with Smyth's syzygys of mensuration, n.b. the seconds pendulum. There will have to be a rationale. What is the fulcrum for anthropics?

We are looking for the philosopher's stone; something, three things connected with X, e.g. geo-metric, pyramidal and pokatok-like. The EM constant, $\alpha \approx 1/137$, is something.

[12/26]

We don't want the natural constants to be overdetermined. They need to be anthropically open. How might they then relate to the numerical syzygys? What good are the latter, if they do not influence the former? The numerical coincidences may just be a model for the others, as seems to the case with the MB. This is an issue I have neglected. Are we talking about anything other than poetic meter vs. poetic license? Without the meter, there's no poem. The world needs a skeleton, and that is where the numbers come in, come from? We have to consider the co-evolution of numbers and *physis*; the anthropicity of numbers. What is the optimal organicity of numbers? Why poetry instead of free verse? This relates to the aesthetic of music. It relates to the ecological aesthetic of functionality. Music and poetry have an internal, relational functionality. So do numbers and ecology. That is not the usual view of numbers. The aesthetic and functionality of numbers is in their organic quality. This is also the holographic property. How much of the holography is internal vs. external? Is there any non-creaturely subjectivity? Holography implies a panpsychism. No? This is the idea of numerology and astrology; also what we find in fictional characters. All may be reflected in the personification of the trinity. Synesthesia has an aspect of panpsychism. Why are there 10^{10} souls? That seems arbitrary, but it would have to be the primary number. It has some significance in physics and biology. Besides that, there is the precessional year of 26,000 solar years, the measure of historical time.

The lunar/solar syzygys count in various ways.

[12/27]

Why does the decimal system seem favored in the syzygys? It is the way to break the grip of the zodiacal duodecimal system. Then there are the seven 'planets', but, no, it's just five, naked-eye planets. The 360 compass combines the decimal and duodecimal. Why not 240? It is the solar year, of course, plus the Sumerian hexadecimal system. The hexagon is six times its equilateral radius. Why 24 hours? It probably relates to the zodiac and the 2, 3 and 4 divisibility. The lunar system favors the decimal over the solar duo/hexadecimal. The eclipse [coincidences](#) then become more significant. This is also theism vs. pantheism. Some sense may be emerging. The solar/lunar coincidences would have pointed the sages toward the cosmic gnosis.

Note again that *mene*/moon is the root of measure, and note that Sol is then the god of poly/pantheism, and the role of the moon in anthropics. Mensuration points to a *deus absconditus/obscurus*. All this points to the feminine side of theism with Sophia, Gaia, Luna, Freya, Venus, etc., all in a dialectic with Sol. This is the zodiacal taming of Sol *Invictus*. The Mayan Venus calendar had a 52 year cycle. Is there not a 52 year lunar cycle? No. We are back to the source of measure.

We need to find a metrical/mathematical connection. What is the best we have so far? Well, we have elliptical orbits and functions. There is a possible Mandelbrot cosmology. Consider the role of pi in math and metrics.

[12/28]

I'm having difficulty connecting these dots, probably because I don't understand the larger meanings of math and metrics. Physical science is the use of math to connect measures, all of which reduce to combinations of mass, length and time. The only absolute scale for m, l & t are atomic. That brings in the $1/137$ force factor and Planck's constant, both of which are strongly anthropic, as in, 'Man is the measure of all things.' That brings in the second of time as a nearly natural unit.

Geometry and calculus appear to be embedded in nature, number theory also to a degree. All of math is to a degree.

[12/29]

Gary points to the [article](#), "Trialogue on the number of fundamental constants", M. J. Duff, L. B. Okun, G. Veneziano. Duff holds the view that there need be no fundamental constants. The number of constants is quite arbitrary and that none can be given priority over the others.

I am looking at the constants from the perspective of the anthropic principle and the attendant organicity of math and physics. Part of that organicity is reflected in the emerging joint coherence of those two fields. Part of organicity is reflected in the syzygys that appear in math, astronomy and metrics, but not in physics proper. Physics proper is dominated by anthropics, especially when it comes to the basic constants.

[12/30]

I'm looking at [mathematical coincidences](#). Also see [Some Mathematical Coincidences](#). Then there is [Riemann](#) in the BPW, and [here](#) in particular.

Now I'm back [here](#), and note especially "[Number theory as the ultimate physical theory](#)".

In his '[Prime Evolution notes](#)', Watkins shows how the primes behave like a physical system, gas, near a critical point. This would introduce a long range order; a 'conspiracy' that complicates the RH.

[1/1/07]

Matti P. claims that his physical theory of Cs is not anthropocentric. I [see](#) (p.7) that Matti takes a very physical and irreversible notion of time. This is contrary to the phenomenal cycles of the BPW. [Here](#) he takes a Cartesian dualistic view.

Furthermore, the states of supercanonical representations are genuine quantum gravitational states (state functionals in the 'world of worlds'). Hence they correspond to higher level of abstraction than ordinary quantum states and are natural correlates of brain consciousness. So called massless extremals (**MEs**) carrying these supercanonical representations seem to be for consciousness what hydrogen atom is for atomic physics.

And here we see a reductionist view, although he does claim elsewhere to be a non-reductionist in speaking of the holographic properties. Matti is missing out on Matthew W's idea of the evolution of the number system. Watkins refers to an international conference on p-adic physics not mentioned by Matti:

1. [Review of development of p-adic dynamical systems and their applications in physics and cognitive sciences](#)
2. [A crystal base model for the genetic code and its applications to genomics](#)
3. [Ultrametricity in the origin of life and evolution](#)

#3:

We speculate about two evolutionary paradigms: the Darwinian-type-evolution based on familiar diffusion, and the ultrametric-type-evolution based on ultrametric diffusion. In these contexts, we discuss "a bottleneck" for the biological specificity emergence, which is referred as "the error catastrophe". It is widely discussed problem know, that there is no way to avoid the error catastrophe under the Darwinian-type-evolution. We show, in contrast, that such a way may be found under the ultrametric-type-evolution. Some relationship between the ultrametric-type-evolution and the Kauffman model

Back to [Matti](#):

Intuitively self corresponds to a sequence of quantum jumps which somehow integrates to a larger unit much like many-particle bound state is formed from more elementary building blocks. It also seems natural to assume that self stays conscious as long as it can avoid bound state entanglement with the environment: everything is conscious and consciousness can be only lost.

This view predicts infinite self hierarchy with the entire Universe at the top. If one accepts the hierarchy of Planck constants, it seems unnecessary to distinguish between self and quantum jump. The hierarchy of Planck constants interpreted in terms of dark matter hierarchy predicts a hierarchy of quantum jumps such that the size of space-time region contributing to the contents of conscious experience scales like $\sqrt{h}$. The irreducible component of self (pure awareness) would correspond to the highest level in the "personal" hierarchy of quantum jumps and lower level quantum jumps would give rise to the experience of time flow. Entire life cycle would correspond to single quantum jump at the highest level of personal self hierarchy and the fact that pure awareness prevails during sleep in this case would make it possible to experience directly that I existed yesterday.

Self is assumed to experience sub-selves as mental images identifiable as "averages" of their mental images. This implies the notion of ageing of mental images as being due to the growth of ensemble entropy. Various qualia would basically correspond to increments of quantum numbers which leads to a general classification of qualia in terms of the fundamental symmetries.

The following sounds a bit like Leibniz and the BPWH:

Negentropy Maximization Principle stating that the reduction of entanglement entropy is maximal in quantum jump is the basic variational principle for TGD inspired theory of consciousness. If one accepts the notion of number theoretic entropy making sense for algebraic entanglement probabilities, entanglement entropy can be negative, so that algebraic entanglement can carry information and NMP can force the generation of bound state

[1/9/07]

We leave Nevis this afternoon. I'll miss having dinner with TF today, although CF may still join him. There was a phone call from GN a couple of days ago, but I will not respond except on the advice of CF. There has been no access to the Internet while down here.

My only reading this vacation has been Karen Armstrong's *The Great Transformation: The Beginning of our Religious Traditions* (2006), and last week's *Economist*.

Last Thursday there was a phone call concerning a 'hot tip'. Someone else had sent an email pointing out that some recent appointments had connections with the core story. The two names mentioned to me were Robert Gates and John(?) McConnell. I was told that McConnell had replaced John Negroponte at the DNI. I believe that Robert Gates was mentioned in Collin's EfD, but I do not recall hearing of John M. There was the suggestion that more than these two shifts were being touted, but a direct query brought no response.

We may easily wonder as to the import of the passing on of this tip. At best, this might signify a lame-duck repositioning in anticipation of some new disclosure, possibly in conformity with the above mentioned schedule. RG has been described as an insider with the GHWB circle. CF suggested prior to his nomination that we fly to Texas to provide an informal UFO briefing to GWB. Nothing came of this suggestion, but it may nonetheless be informative, especially when combined with the above. We might infer that GWB was less in the know than the old man. He would thus have known less about Jack Anderson's 'global balance of trade' than did 41. Now with Robert in the loop, he may be better schooled, or so we might speculate.

I have not gotten very far with Karen. She describes the ninth century BCE as Axial Age in our spiritual 'transformation'. This age marked the interiorization of our religious impulse. This same period was pivotal in our historical move toward self-consciousness. The *ancienne regime* was ended, perhaps, with the cataclysm with the Thera event in the Aegean. According to Karen, this age also marked the shift away from the more bellicose and coercive forms of religion to something more humane.

[1/10/07]

Correction (this was from last Thursday):

Former NSA Director Admiral Mike McConnell is expected to take Negroponte's place, reports CBS News national security correspondent David Martin.

Robert Gates is mentioned on pp. 99ff in Collins' book. McConnell is not mentioned.

I'm not getting any response to an APB on MM.

GN wants to convene a science meeting in DC. CF remains a bit aloof, seeming to focus on TF.

I'm trying to contact Bill Hamilton about MM, per GN.

[<-- Prev](#) [Next -->](#)

[Topical Index](#)

12/7/06

Show Time?

Are we ready for this? I'm afraid that we are as ready as we will ever be. That's not saying a heck of a lot, but, hey, it's good enough for 'gummint' work.

And who's calling these shots, we might like to know? That's the only real question right now.

Gates, McConnell and Gen. [Clapper](#). Gates appoints Clapper to be head of intel at the Pentagon. I didn't know that this was anything different from his present position as the director of the DIA, but I am told that it is. MM will need to be confirmed by the Senate, obviously, but I don't think GC will have to be confirmed by anybody.

I met separately with two birds in DC yesterday. I infer that one is against a show, the other is more neutral.

I am told that GC also has left tracks in the phenomenological jungle, but probably not as large tracks as MM. There are other such magi being repositioned, as we speak. Is this a palace coup? Is the Old Man taking Junior out behind the woodshed? Does Junior have a clue?

BH tells me that a source told him two years ago to expect something to happen this year. I could have such a source!

There is no question that MM and DB knew each other back in their Navy days. There is no question that DB subsequently(?) went 'nuts' and now blames it on MM. I am told that 'everyone' knows this; kinda like I was once told that 'everyone' knew I was SF.

The issue is whether this and possibly similar questions will get popped in the Senate hearing. Someone is consulting with some Senate staffers about this. Someone was supposed to be in the Courtyard(?) yesterday. He told me that he had to miss our first meeting because he could not get permission to skip a meeting at Foggy Bottom, but, over beers last night, someone else told me that he didn't go over to State, either. Prognosis: more fog on the river. How does one manage to not be in four different places at the same time?

Run silent, run deep? Easier said than done. Unlike most of its counterparts, the ONI is small potatoes. Precious few are those who make it beyond the grade of Captain therein. They are easy to track. And guess what? Virtually no one has been able to avoid this playpen. Even my old man's colleague on the academic steering committee in Cambridge, MA, Donald M, left his footprints in these not so quick sands. Davy Jones' locker is hard to keep locked. And don't forget that curious collection of *Challenger* alums in the same environs. Maybe it weren't manganese nodules, after all. USOs are not always a laughing matter, not when playing blind man's bluff with megatonnes. It may not only be the swabbees getting bf'd down there. If TF debriefs the astronauts, who debriefs the argonauts?

And what about those poor Senators that I had so much fun bugging a few years ago, before I turned to blogging? Fish out of water start to stink pretty quickly. How long can we ignore the stench? Are we not being provoked toward a collective 'pee-yew'? I told my first interlocutor yesterday that I was quite content with just the KC/Hollywood gambit. That would be sufficient unto the day, IMO; but, hey, maybe I'm not running this show.

Can of worms? Fish bait? How 'bout that 9/11 conspiracy? That's a real big worm!

The right few words in the ear of Art Bell, and forget Hollywood, right?

Is/was re-positioning the Fish Tank on the Potomac really necessary? That will force the hand of the 'skeptics'. But once the word is out, there will be a political free-fall/free-for-all, anyhow. It will be musical chairs all over again. Who knows when the music will stop? With the Hollywood gambit, we can explore our options virtually, in a more concerted manner than here-to-for.

But maybe we can just crank up the fog machine on the Potomac, and then take the show to the west coast. Will the UFO 'weenies' let us get away with the *leger de main*? So we could side-step the hearings problem, and let the gossip filter/percolate through the ranks of ufology for a few months, and see where we are then.

The handwriting is on the wall. Let the hand-wringing begin.

There is supposed to be a barbeque this weekend, and possibly a meeting with Stingrey next week.

And so it goes.....

[1/13]

Go Ravens!

This [interview](#) goes back to ~< 2001, it seems. I doubt that I could do as well today, but imagine what we might have done with 9/11!

It may well be that my willingness to blab about 9/11 is being used as way to prevent any Senators from raising a stink about MM & DB. That is why we had those meetings on Thursday. I am the Aviary's poison pill defense against unauthorized/premature disclosure.

It does appear that DB may have been a serious candidate. Is he still? What happened? Who knew what, and when did they know it about us 'Manchurian' candidates? Any wannabes would do well to review the plot details of this [vintage](#) film. There are scant details given in that link, but they remain clear in my usually depleted head.

And speaking of mind games, I just received this [link](#). I was once asked to deal with a similar such case. It was someone who seemed to be channeling the departed Bill Casey. He was a psychiatrist employed by Harvard.

[1/16]

Things have slowed down. I continue to suspect that no questions will be asked of MM concerning DB during confirmation. I have a call into DB, but there has been no response.

The repositioning of these probable magi does seem to argue for a disclosure plan that is in its late stages. The President would necessarily be aware, and at least partially compliant. So would most of the world's intel organizations. It would follow that a global deal has been brokered, including most of the major players, i.e. nations and religious organizations. There are those interests which want this expedited, and those which want to delay. The visitors have set certain time limits, which can trigger prods of various kinds.

One or more spokespersons would have already been selected by the various parties. Preemptive moves are probably anticipated. Countermoves must be available. It is likely that one of the spokespersons will need to be focal. At this late hour, there cannot be too many remaining possibilities.

If the repositioning is successful, then we should expect the final phase of disclosure to get underway within a few months. There are two gambits left: Hollywood and political. No longer can they be separately pursued. The linkage will now be unavoidable. Questions from the media can be parried only for a few more months. At that point there will be a rush to publish or perish. One or more basic scenarios will emerge. Energy will feed into them. We can hope that the best scenario wins. A BPWH will get fleshed out, with or without my continuing input. And that's about all She wrote.

[1/17]

A very recent communication from my principal interlocutor:

I suggest you terminate any additional entries into bestpossibleworld.com until you regain control of your life. X is willing to offer kind counsel. Gordon is willing to kick some butt if needed. But it is up to you to make the necessary changes.

Yes, I did badly misbehave at a bar near the respondent's office, in the absence of said respondent, and in a manner vaguely reminiscent of my long-ago musings about the landing of a small plane on the White House lawn. Although there are extenuating circumstances regarding my compliance with this specific suggestion, let the reprimand speak for itself. I'll be quite content as long as Gordon refrains from kicking my butt. 'Counsel'? The way I heard it, it was more like a brain scan to test for stroke induced abnormalities.

There follows a response to a recent inquiry:

Mr. Smith:

First, thank you for your inquiry.

When just an upstart youth of age 22, in 1986, I was privileged to embark upon what would become 20 years of service to Majestic. During that time, my response to operators (including some of the seated Maji), foisting their personal tack on procedures and protocol, was to often call them to account for breaking faith with the tenets and mandates of Majestic. Those mandates were established at approximately the same time the major provisions of National Security Act of 1947 were taking effect. While faithfully performing my duties, against the backdrop of the multi-layered goals of other sanctioned agencies and groups, and into my retirement, I hope history will record that my loyalty to Majestic has never been called into question. Such is the case as I write to you, this night, and such will hopefully be the judgment of history long after my humble time on this earth has passed.

During my tenure of service, I was privileged, albeit for a very short time, to have been seated with the 12, as one of them. Following my acceptance of that responsibility, I was made privy to specialized, highly classified, information and intelligence, concerning not only the defense assets and posture of the United States, but also of the earth, as it pertains to the future of humankind. Such highly classified information, added to the extant defense, scientific, and political/diplomatic material to which I was exposed, ever since the late 1980's. That earlier information included direct personal interaction with an extraterrestrial time traveler of human lineage. In the first few years of this new human millennium, I was also tapped to be involved with the treaty system, established by the Truman administration.

In October, 2005, I was provided with what I consider to have been an unambiguous set of orders, my final orders before being fully admitted to emeritus grade retirement. In September, 2006, I was judged by the empowered representatives of Majestic, to have completed the aforementioned orders, and was thereafter retired from service. As a now retired senior operator and scientist, it falls to me to continue by providing due honor to the Majestic, and demonstrate due diligence prior to responding to any inquiry involving contemporary actions of the United States government, especially where matters of intelligence and defense are resident.

Concerning the nomination by the President of the United States, of the Honorable J.M. McConnell to the position of Director of National Intelligence, it is incumbent upon me to exercise that due diligence, deferring either until the arrival of an authentic set of instructions, or being placed under a lawful subpoena. Short of that, the tenets of the adjourned Majestic are clear that I should either defer or recuse. To date, no such authentic instructions have been properly received, nor have I been placed under subpoena.

I am free to make a personal statement, about the nominee, and have done so, publicly. The statement follows:

"I can think of no better, nor more qualified a person, to hold the title of Director of National Intelligence, than J.M. McConnell. I laud the decision of the President of the United States, to nominate this gentleman, as the gentleman's record bears true witness to a life of service, honorably dedicated to the people of the United States of America, and the defense of our Homeland. During a time of necessary and right reliance upon Providence, the safety of the United States of America, and of the world, will be well stewarded by the assistive presence of this gentleman, in the ODNI.

Danny B Catselas Burisch, Sc.D.
January 6, 2007"

Save that statement, it would be improper of me to interpose within the machines of government, now set in motion by the President of the United States. On a personal note, I consider that I should be the last to assume a position whereby I would act in a questioning manner toward that particular nominee.

Once more, thank you for the inquiry.

We live in a seminal time, a time of human destiny, and I live in the hope that my humble service has at least, in some small way, been a benefit in that regard.

Sincerely,

Danny B Catselas Burisch. Sc.D.
H-6196-E *Maj-ret.*

Fair enough.

My interlocutor, in his dreams, would find such a dutiful acolyte in me. I can hardly wait to question and testify.

<<During that time, my response to operators (including some of the seated Maji), foisting their personal tack on procedures and protocol, was to often call them to account for breaking faith with the tenets and mandates of Majestic. Those mandates were established at approximately the same time the major provisions of National Security Act of 1947 were taking effect.>>

Boys will be boys. Rules are meant to be broken, even the rule of gravity. I acknowledge only one Rule, and that one is impossible to break.

[1/19]

The Burisch material is a significant piece of work. There is also a group saga that goes along with it. It represents at least as much of a concerted effort as the Doty material to which it is related. Now the fact that CF is inserting himself into that picture does nothing to diminish its possible import, quite apart from questions of its authenticity.

I have the same problem with the Serpo story as do DB&Co. The Serpo story deliberately misconstrues the interdimensional aspect of other worlds. At the same time, DB&Co overemphasize the back-to-the-future quality of the portals. Yes, there is some of that aspect, but it is not the crux of the matter. The crux is in the teleology, pure and simple. The apparent manipulations of the timeline are only minor sub-plots of that overarching theme. There are not actual alternative futures; they are only potentialities or shadows that appear mainly in our dreams. Only this world has a truly extended timeline. The other worlds are much more into the cyclical dreamtimes, where past and future are indefinite. Thus they are neither from our past nor our future in any strict sense, they are simply off the time-line, just as particles with imaginary mass are 'off the mass shell' as described in particle physics. The symmetry breaking of their cycles is due just to their 'symbiotic' interactions with us.

It has been both our privilege and our curse to be the slayers of the Dragon, i.e. the symmetry breakers of the ouroboric cycles, to the extent of our ~12,000 years of phenomenal history. The X event constituted the historical reenactment thereof. The apparent cosmic time scales are just a shadow of this phenomenal one. They are the necessary logical backdrop for our historical, intellectual drama, which drama includes science as a central feature. Mythically, Freya conspired with Thor to slay Saturn, the keeper of the cycle. See *Hamlet's Mill* about the relation of the (3x700yr) conjunctions of Saturn and Jupiter to the zodiacal churn. Thus do we break out of the prison of the planetary demiurges. We jump from the Freya-Pan into the eschatological fire. We force them to join in our hierogamic feast in the sky. The planetary logoi are not pleased with this turn of events, and often conspire to keep us in the dark by whatever Tricksterish means. In the end, of course, the Telos rules, the tail/tale of Serpo. The Sionic bloodline is broken, of which DB purports to be the last. There but by the grace of Sophia and CF went I.

Every phenomenal cycle is a time-loop. The *deja-vu* phenomenon is a quasi-restoration of some such cycle. That is the natural state of affairs. It is our linearization of time that is unnatural. The naturalness is restored only in the apokatastasis. Our clairvoyant prescience will increasingly portend the imminence of our apokatastasis. Last night we saw the *Donnie Darko* treatment of time-loops, assigned for Josh's psychology class. Ironically it had to be pulled from the US in 2002 because of its apparent foreshadowing of 9/11.

In these connections it should be noted that JR is returning to Chair the SSCI for the confirmation of MM. His Uncle Larry was well known hereabouts. Larry's former colleague, PH, part of his HSW [corr: below] trio, recently interviewed DB.

I did finally get through to JSt. I'll be interested to know what BLaP has to say about these developments. He interrogated me a few weeks ago at someone's behest.

[1/20]

A basic question is how may atoms be derived from phenomenal cycles. The short answer is that metabolic cycles entail chemistry. This provides a necessary condition, but not a sufficient one. Sufficiency would seemingly entail mathematics. Phenomena entail the physics; while the physics constrains the phenomena. This two-way street needs elaboration. How and why is mathematical regularity able to embed itself in the phenomena? Will the BPW shed any new light on the ancient question?

I did get though to BLaP. He has notes on MM from about 12 yrs ago, long before DB became an issue. It appears that BLaP can be credited with at least an independent discovery of the UFO gang over at ONI. He corrected me on PH. She was not part of Larry's trio, Bootsie G., Sandy Houghton, and Ms. Wood, the director of the BSW foundation.

Speaking of ONI, Bobby-Ray had a recorded conversation with Bob Oechsler, which he later disputed. He is also credited by JSt with having nudged Joe Firmage into his brief sojourn into ufology.

It was my interlocutor's recent conversation with BLaP that prompted him to call me about a month ago. That conversation was reported to be mainly about GN. Bill claims to know the source of much of G's material. Bill shows no proclivity to rejoin the ufo arena. Smart guy.

I see that Clapper is of NPIC/NIMA/NRO/NGA vintage. Not too surprising.

The idea here is that math does not exist independent of the phenomena. It is not, however, merely abstracted therefrom. It does have an internal coherence/organicity of its own, which poses constraints on phenomena. The Pythagoreans speak of the harmony of the spheres. There are the syzygys of math and astronomy. Math is not without a musical aesthetic transcending mere logic. The archetypes of AZO/X/QRP reflect this, as in the unity of $e^{i\pi}$ and in the organicity of $z' = z^2 + C$.

Coherence implies a kind of self-annealing breaking of the monistic/ouroboric symmetry. Something tells us that the fragmentation of God is limited by 10^{10} . The complexity of the monster group is limited by the factor of 71. The logos and the logic must support each other. Math may come out of the game-theoretic, self-imposed rules of the Creator. You have heard the stories of golfing in the kingdom. Physics is the chess game of God. Creation is the best possible Game. The rules can be bent only so far. Agape is the unbroken rule. The logos is the metanarrative; the logic is the grammar.

[1/21]

Asking about the origin of atoms is tantamount to asking about the origin of grammar. The interoperability of the metanarrative necessitates grammar and alphabets, which are eventually reduced to binary digits. The physics is the universal operating system. These are necessary conventions. They are the best possible ones. There is form and substance in nature. Form is the source of substance, viz. Pythagoras vs. Democritus. As with the metanarrative emerging from the Joycean 'ten thunders', so did math and numbers emerge from a primeval model of the monster group, which could have been something like the Mandelbrot. So did atoms, etc., emerge from AZO/X/QRP, i.e. the Adam Kadmon or X/christos. This was all part of the symmetry breaking, which proceeds to its optimal extent, until there is a sudden reversal in the second coming, prefigured in the first.

From whence came the musical scales, particularly the even tempered and the rational approximations thereto? There is a book about the mythical connotations thereof: Ernest [McClain's](#) *Myth of Invariance* (1976), recommended by Bob Clark. Plato's *Republic*, he claims, can be read as a guide to tuning theory. The octaval circle includes the ouroboros and $e^{i\pi}$. Music theory provides a useful analogy for archetypal symmetry breaking and the dialectic of the analog and digital.

Asking how there can be atoms is like asking how there can be people and bacteria, which for the BPW is asking how the zodiac can exist with all its astrological meanings. It is a squaring of the circle, which is the result and analog of the cosmic dialectic. The dialectic fills the void to its logical capacity. Atoms need exist no more in actuality than do notes. Notes may be abstracted and are used in the 'metabolism' of music. Consider the necessary universality of the genetic code. Atoms may not be nearly as robust on Serpo as they are here. Metabolism is rather more ephemeral.

You will notice the robust reliance on analogy throughout the BPWH. Analogy is integral to maintaining the coherence herein. I would argue that analogy plays an ontologically efficacious role here. It is part of the cosmic glue. In the BPW, emergence is never the issue; reduction is the issue. Reduction, rather than 'emergence', should be ontologically suspect. Yes, even we are the suspect/supervenient agents/avatars of

God's metabolic dialectic.

[1/22]

The underlying issue with metabolism is biological reproduction. How does it fit into the BPW? What are its metaphysical origins? It may be related to the symmetry breaking seen with the creation of the zodiacal pantheon or in MPD. The BPW does not advocate an absolute monistic source. It does advocate potentiality as the source of actuality. There was likely a potential, subjective pluralism, which became actually coherent in a zodiacal form. Symmetry breaking is partly a rationalization of the logically resulting coherence. Bacterial fission is the simplest form of symmetry breaking. Zodiacal/pantheonic fission is pre-spatial. It is a compartmentalization of psychic potentialities, facilitating cosmic intra-course. Each compartment must, however, holographically incorporate the others so that the semantics is interoperable.

Biological reproduction recapitulates features of the pantheonic 'symmetry breaking'. The sexual/romantic component thereof is a *reductio* of the vital cosmogonic/agapic potency that is the necessary core of the *ontos* and the *telos*. This is all incorporated in the cosmic bootstrap that is ouroboros. Potentiality is the only thing that does not require explanation. It would be the lack thereof that would have to be explained, but who would then explain? Potency is a logical aspect of potentiality. Actuality is only a logical abstraction from potentiality.

Where would the metanarrative be without reproduction? Then phylogeny can recap ontogeny, *pace* the Darwinists. Then we have a nearly unlimited supply of us amnesiacs to work out the cosmic drama: each family being its own incipient pantheon. The problem with the pantheists is that they have only a bacteriological/carcinogenic understanding of life. There can then be no conception of the Platonic Good and no BPW. There could not even be a subject in such a world. Pantheism is, as has been seen historically and metaphysically, a species of nihilism where it is not open, at least, to polytheism.

[1/23]

My correspondent points to Wiki's [pantheism](#) and suggests the need for clarification. My annoyance with conventional (naturalistic, deep ecological) pantheism stems in no small measure from the sure knowledge that I can and will be tarred with that same brush, perhaps more deservedly than many actual pantheists.

Yes, I am an incorrigible (dialectical?) monist, the hallmark of the pantheist. I have often characterized myself as a transcendental pantheist. One cannot have a close encounter with Physics without being enchanted by Pythagoreanism. Classical and biblical pantheism are just my cup of tea. I will need to pursue the idea of 'personification linguistics'. None of this, however, can detract from the theistic essence of my encounter with Sophia/John (16), the defining moment (*logos spermatikos*) of my spiritual life.

The great (and most felicitous!) sin of theism has been its misapprehension of the cosmic dialectic as a species of absolute dualism. Only thus did materialism become *scientia*. Only thus can you and I sneak under the cultural walls in this Trojan horse we call the Internet.

This brings me back, however, to my brief against atoms and other examples of our cultural effluvia. One contention is that atomism is a species of animism, i.e. the ascription of souls (real substance) to atoms and such other conceptual effluvia. This is simply another view of Pythagoras and Spinoza.

Atoms are little more than mental crutches. Once we have come to the Light, we throw down our crutches, as we will the Internet, etc., etc. Water, H₂O, can only be fully understood as the essence of life. Science goes to great lengths to hide its inability to even begin to explain the many vital and sublime

properties of water. Reductionism began with water, and there it shall end.

Yes, the monist will always be challenged to explain the seemingly inexhaustible natural pluralities, atoms being just one of the more egregious of those.

The Dialectic is all about intercourse and *logos spermatikos*, which, in turn, is the foreplay in the game of Agape.

I do like to point out that telephony is just the poor man's version of telepathy. Cellephony is, of course, the wireless version of telephony. Think of all that wasted copper! Nothing like a good old-fashioned ice storm to polish up on our inalienable skills.

We have spoken of the ontological marginality of musical notes. What about alphabets? What about books?

Consider the venerable CD. What is it about? The better the CD, the better is our encounter with the Muse. Composer, orchestra, technicians, all, channelers all. Transparency, trance-parentage is their telos, all in the service of our apokatastatic/apocalyptic Agape.

Grammar, physics and mathematics are universal, so is genetics. Holography ensures that we cannot truly understand alpha and bet without participating in Agape. Partial knowledge is the rickety bridge we must cross without looking into the abyss. To get to heaven, we need only one CD and one book, pick any (Run, Spot, run!), because there is only one Muse, one Sophia. Libraries give the very strong illusion of plurality. The voting booth gives the strong illusion of democracy. Hold fast to those illusions until Agape is securely in your grasp. In the meantime, don't look down!

How real is the Mandelbrot? It is not surfeit with with idiosyncratic detail? Yet is it bootstrapped recursively, non-locally out of thin air. Need a jungle, need the starry sky be any more ontologically robust? We have rune stones and the Library of Congress. Are they different in kind? Need one be more difficult to explain than the other, from the standpoint of immaterialism? Can we not have a veridical experience of the LC in a dream, out of body? Does our *folie a douze* make things harder or easier to explain?

We may easily surmise that both nature and the psyche abhor a vacuum. The Mandelbrot is an excellent example of that principle. Inflationary cosmology is another. The potentialities of QM are another, etc, etc. Since nature does abhor a vacuum, there can only be one cosmos of potentialities. There is a necessary identity of indiscernibles. Given only a dialectical bootstrap, how can there be anything other than a fractally oriented, organic BPW? Can Occam's razor ever shave any closer than this. Need it?

The Buddhists are our conscientious objectors. They wish to abjure even the best possible *Lila*. But, hey, did Siddhartha ever claim to be a cosmologist? His only point was that curiosity killed the cat. My only point is that perspicacity brought her back, apokatastatically speaking!

We next need to consider how our seeming disdain for the material record relates to the akashic record. What are we to make of eidetic memory? What might be the purpose of either? The facile answer, that time is an illusion, endangers free will. I readily admit that, in the age of egoism, free will is overblown, but I would not wish to banish it. Free will is an essential part of the vital force.

[1/24]

I would suggest that the akashic record is more akin to a Jungian-style collective memory than to an eidetic personal memory. It might also be usefully compared to the program of a video game that then needs to be fleshed out with the avatars. I have previously suggested that the game plan could be

sufficiently flexible to allow for limited replay, without having to distinguish a sequence of such.

It may also transpire that eidetic memory is not as photographic as is sometimes thought. There may be rather more conceptual components to it than would ever be found in a mere photograph. The photographic aspect of it is largely a conceptual reconstruction. Besides, taking my cue from neurophysiology and metaphysics, I believe that vision itself is rather far from being photographic. Immaterialism favors direct perception over representational theories of perception. The only thing we finally ever perceive is God, as Light shining through the prism of our 10^{10} faceted Subjectivity.

I've watched Gordon's interview with Kerry Cassidy. He does a creditable job. He manages to look more like a teddy-bear than a gangster. B-RI and TF are the only extant G-men to be named. He does make a number of vague references to a CIA contact. No Hollywood names are mentioned. He may not be aware of several previous inter-coastal meetings. I was not told the time frame or the subjects of those meetings. I was given to infer that there is an entrée, nonetheless. It does garner my attention. I now have to wonder about my being interviewed. I don't have any very warm feelings about that just now. It would need a more conversational format. Who would that be with? My only extended conversations have been with Jack, but they have usually been acrimonious. I said I would compose an email to Gordon and CF about a possible meeting:

I was captivated by Gordon's interview. Gordon actually manages to come off as warm and fuzzy. You and I could be so lucky.

I understand that our meeting with X has not proven to have been fruitful, not that we deserve any blame for that. He was apparently just fishing. This setback has had little impact on the rest of the project.

I am still supposed to be having a phone conversation with Y, as one preliminary to a trip west. Gordon would also like to have a meeting back here with you and some of his folks. I think, based on additional information from you, that the proper sequence would first be there and then back here, and that your additional presence there would not be necessary to bring us to the next stage.

Gordon and I should work out the topics for the conversations leading up to the trip west.

Dan

[1/25]

The akashic record is probably misconceived. In a regime of direct perception, the akashic record is just another bit of unneeded representationalism. Mama don't 'low no re-presenting. The only thing that is real is the Shining Present: being here now and all that good stuff. What we are left to explain is the temporal filtering of our perception of the time-line. It helps to keep in mind that time itself is the basic illusion in the regime of the Present. Yes, there is some 'cosmic' time asymmetry, via Freya & Co., but most of the asymmetry is psycho-social. *Deja vu* is not cool. Shaman and witches are necessarily untouchable. 'Normal' society cannot function in a regime of time symmetry. Our Millennial Kingdom will be decidedly 'abnormal', but time itself is the real distortion. Once that asymmetry is in place, the binary filtering of our 'memory' biased toward the past is a relatively minor feature. It is our collective sense of anticipation that reifies the temporal order. Once that bias is broken, the temporal order collapses onto the apokatastatic Present.

It was the advent of the All-Seeing Magi on these fair shores that initiated the collapse of time. Everything since then has been the political jockeying around that virtual Presence. Finding and reifying that still Point is the only trick left to perform. It is the nucleus around which the MK must crystallize.

The first coming was the virtual nucleation. We did not then have the tools for conceptualizing and communication. In short, there is no time like the Present.

On a more mundane note, if there cannot be re-presenting, can there be replaying? *Sub specie aeternitas*: of course. *!No problemo!* All of us therein are time travelers: ravelers and unravelers. Some folks even rave about it. And where does this leave free-will? It leaves it being pretty darn subtle, I would say. We are all constrained to do our Best, even if that might involve serial killing and such, as sometimes seems to be the case.

NEWS FLASH! Insider makes public confession?

I do not know exactly what in the future I may come to believe with more data, than the much more simple Core Story I am willing to attest is based on direct evidence I have now, but I am going to pay greater attention, pontificate less, and try to be a learner. Your interview did me a service.

This is an excerpt from an email from said insider to GN. I was not the only one on the bcc.

I have had several private meetings with this individual, who has not previously been even this explicit. Yes, there is a public repositioning of the insiders. No one wants to be caught with their neck out too far, but neither do they want to be left eating the dust, not after all their years of being good soldiers.

Meanwhile, however, GN is refusing to prioritize his projects, even at the behest of CF. He doesn't realize that CF has flown the coop for a week in the sun, leaving SF in charge. GN had best not squander his big fifteen.

Now with some additional information, we are getting on the same page, and hopefully can move forward in the interim. I'm waiting for a call from AS. As I have said previously, there will now have to be some inter-coastal linkage as we move forward.

[1/26]

Just when things were starting to look up, the alleged alter egos of RD, i.e. PM & GL, resurface. This precipitates a tirade from the allegedly absent CF.

I can only speculate that RD may be ignoring his probation in attempting to derail the aquarium express, of which GN is the present beneficiary. In the meantime RS has gone silent and TF seems to be shifting in this direction. With the personal politics heating up again, the substantive issues get pushed aside.

This may just be a lonely rearguard action on the part of RD. He was never willing to play along with CF.

In the meantime, GN is supposed to be meeting with DB at the Laughlin confab on 2/25. Come to think of it, CF recently proposed meeting in LV. In the meantime, GN feels quite comfortable in ignoring my latest suggestions. More power to him!

Back to the substance. I am closer to RD's position than to GN's, on two very important points. The reason for the secrecy is the content of the message, and the alien 'technology' is mind controlled. Both of these points are crucial to the BPWH. These positions carry over into the Serpo scenario. Again, I agree with RD, JS & DB, contra GN, that Serpo, from the physical perspective, is mostly fiction. This is the portals vs. spaceship issue.

The hot political question entails the alignments with and amongst the big 'twenty', the magi(?) that CF is

alleged to be tracking, several of whom were involved in the recent shakeup of the mil/intel leadership. Where lies the balance of the power? Is it on the aviary or aquarium side, and how will that get resolved?

The aviary side is trying to be conscientious about what they perceive to be the truth. What they don't understand is the double cover. They also feel more bound to what they perceive to be the unified protocol. They get upset with CF for being a 'loose canon with a big mouth'. They see him as a renegade. At the core of the aviary is a christian induced fear that the visitors are felicitating the advent of the antichrist. The aquarium/SF gambit looks a lot like what they fear.

This is where GN comes into the picture. He is quite willing to be the stalking horse, although he seems impervious to actually comprehending what should be fairly obvious. RD could not or would not play this role, and so he must be retired.

But again, where do the '20' sit wrt these shenanigans? Wouldn't we like to know?

But now back to our sponsor, with yet another change of signals. The priority wrt GN is now supposed to be a semi-private, NGO sci/tech conference with input from C&TF. This would be in lieu of the business meetings that have been requested. Our sponsor remains lukewarm about such other meetings. G may not rush to accept this counteroffer.

Another avian is coming to town and wanted to meet with C who will be away. I am to connect him with our shaman friend who is still I Ecuador, I believe.

[1/27]

The above noted change of signals relative to Hollywood does seem to be pushing me in the direction of an interview with Kerry and/or Jerry, with or without Jack. Probably it should be done in two parts: Q&A about the aquarium, and a conversation about the BPWH. The latter could be done in sequence with Jack's critique. The only other possibility is that G & I would team up against C, but that seems rather dim at this point.

[1/28]

Here is a note:

This is mainly directed to Kerry and Jerry,

This is about an interview pertaining to disclosure.

There is no disagreement amongst us that we are overdue for a disclosure, and that the USG will have to play a significant role therein.

The basic remaining questions are who, what, where, when and why.

Who? If the USG is to take the lead in the announcement, then it would have to be the POTUS. There is not much that we could do about such a scenario. But this option does not seem to be in the cards, in any case. A variation on that theme would be for the Secretary General of the UN to do the deed. This would be the most reasonable choice, given a secular announcement.

Why not secular?

It's not what we know, it's who we know. If there is a VALIS, and we all agree that this is very likely the case, then the first priority would be for us to become acquainted with that entity. If we want to get

ahead in the Cosmos, then clearly we will need to get along with VALIS.

The dis-Closer will necessarily be a VALIS messenger of some sort.

What will be the message? Clearly it will have a disturbing aspect. At the very least, it will disturb our status quo.

The messenger will have to play the role of Prophet, relative to VALIS. The messenger/prophet will have a vision that will inspire humanity.

There will have to have been an advance team for the messenger. This team, I submit, was composed of the three Magi/Visitors of the core story. Thus have the mundane powers been neutralized, relative to this advent.

Will the messenger be an unknown person? That would not make much sense. Rather it should be an emerging person, already on a visible trajectory.

When you combine just these few obvious prerequisites, the field becomes surprisingly narrow. Frankly, I fail to discern any competition, present company included.

Should there not be a competition?

But then who would decide the winner? Did the prophets used to compete? I don't think so.

It's simply a done deal. It's a package deal, and guess who's the package? It was worked out in a smoke filled basement at Area 51, between the Pols and the Magi, and I suspect that Sophia may have had some input.

Furthermore, if you look more carefully at the BPWH, the individual identity of the messenger is fundamentally irrelevant, and certainly subservient to the message itself. The ideal messenger for this Second Coming is just Everyman. The message is that every last one of us is a chip off the old VALIS. We are in the process now of awakening from what has often been our nightmare of materialism. This messianic second coming will be our global alarum.

Any questions??

Dan

Hey, I think I have just connected two more of the dots provided by we know who. It's about the 20 insiders being tracked. That number did sound familiar, and I have just recalled from where, being slow as usual on the uptake. That was the same number of folks that wkw said that he knew who had been briefed, and that number was compared with the eight (different?) briefees known to TF. At one point I was supposedly going to help debrief these briefees. Am I right, or am I wrong about the 20?

[1/30]

Jack and Gordon both seem to be in the throes of exploding and/or melting down in the aftermath of Gordon's interview and leading up to Laughlin. There aren't many Indians left standing, at this point. If there are any others, they must be feeling desperate.

Against counsel, I did feel compelled to tell Gordon who in the East has had meetings with whom in the West. From all appearances, it does seem that Gordon is all set to squander this information, i.e. he took off running, and forgot to look back.

My point to DF is that we have entered a sellers market, after many years where the buyers seemed to be

in control. Apropos of which, she is supposed to be meeting with Bill Ryan today. This after our little tempest yesterday concerning whether Ryan Dube should be included on an email list.

There is a slight problem in this arena with control freaks. If you are an atheist, and you try to stay in this game, then sooner or later you will become a control freak. Not a good move. Ask Steven Greer. Ask a lot of folks. If you don't have sufficient faith in the hidden hand, then woe be unto you.

Yes, there is an issue about attempting to conduct a reasoned interview in the circus atmosphere of a UFO conference, even in the best of times. I may be quite content to have DF represent the aquarium interests therein. Come to think of it, she would probably be the best one to interview at this juncture anyway, and she has already volunteered.

I suggested that she raise the issue of MM with BR, who ought to have some additional input from DB on that topic. That would be a good test of sincerity all around. If we can't get together on that page, then what is the point?

DF did raise the question about the repositioning. Is it for a requiem? To me it looks more like *Festiva*, but who am I to say? Is it possible that MM could have been positioned w/o explaining to GB? It comes back to what RD said about Stephen Hadley, last January. It is possible that RC is in charge of this stuff, but that would make his boss look even sillier, especially at this very late date. Any fair briefing on this topic would have to touch upon JFK. That would not be a data point that could be sequestered w/o undermining the Pres. And that does open a very big can of worms. That 'can' could explain much about the peculiarities of presidential politics over the years. Pass it on or not, there is undermining either way. There's the rub. The price is high.

Wkw told me that the newbies at the agency were often(??) asked to attempt to analyze that event. The question then is whether his analysis came before or after he was introduced to TF.

[1/31]

I did have a nice chat with Chris Iversen of the Open Minds forum yesterday. He pointed out that they too were having a [discussion](#) (also [here](#)) about this blog. Interest has picked up a bit since Gordon has taken to the airwaves. And now folks are waiting for the next shoe to drop, maybe in Laughlin. Gordon pointed out this [link](#). It goes back to 1993. It is an important bit of political data. I have not seen such a complete account of the Rockefeller/Gibbons meeting. It does point up the conflict between CF and the rest of the Aviary. Here he seemed clearly on the side of obfuscation.

This segues into my present predicament vis a vis GN. I have been slow getting focused on this impasse. It was CF's legacy to me before he took off last week. Be patient for a moment.

He first told me of his meetings with SS. When I attempted to follow up on that, he was negative. He keeps trying to duck out of meeting with G & Co. His counteroffer was a sci/tech conference on RAM, and volunteered TF to arrange it, who then politely declined. Where does that leave us? C was generally down on any Hollywood initiative, saying that they already had all the UFO scripts they could possibly use. What did they need with KC? This change of tone caught me by surprise, and I did not protest. I have become rather inured to such sidestepping.

Nonetheless, I did call Alison S yesterday. She did not seem to have any problem connecting the TT/DC dots, although she was (claimed to be) unaware of SS/KK being in this loop, and suggested another producer. Is this the end of the Hollywood story, or is this just micro-management by C?

Now flash forward to a putative interview with B&K. To be perfectly candid, I would have to stick with my understanding that RAM/KC is a stalkinghorse for Y2C. Am I ready to say this on the air? Will G be

grateful?! I have already proffered this surmise directly too him, and he has chosen to look the other way. What else could he do? In the meantime I attempt to go along with C's insistence that I act as the go-between. Is that really tenable? And what good is a hobbled stalking horse? It is possible that T may be meant to substitute for C in my little end of the fish bowl. C may have bigger fish to fry. They are hoping that G & I are the calico cat and gingham dog.

A fine kettle of fish! No? I'm scheduled to discuss this with T in a couple of hours. Wish us luck.

Bottom line, where does this leave us wrt disclosure? I hear rumors of imminent initiatives by RU and OM. Are they intended to coincide with a confirmation hearing? I would have preferred the Hollywood route, but, hey, I just work here.

[2/1]

Chris says we will be having a conference call next Sunday the 11th. This is on Skype. I don't know the times, nor if there is any signup procedure. It will be a first for me.

I look forward to watching the confirmation hearing for Mike McConnell at 2:30 EST today.

I spoke with X and Gordon yesterday. My impression was that the former was acting a bit dumb about our conversation from a couple of weeks ago. There could be several reasons for that. Perhaps he was chastised for revealing the source of his info, and not properly covering for C. Perhaps that was also why wkw went away on a down note, with the hearing coming up now. We don't want any surprises, do we?

Gordon was in the midst of a big dust-up with Jack. Jack is the master of email invective. It is good training. I had to tell Gordon things were back on hold for the time being, and remind him that he and I have rather different perspectives on the nature of the cover-up, etc.

I was interested to see that my old buddy BLaP was a primary source for the [information](#) on ufo dealings in the Clinton WH. It would be a useful exercise to compare this info and Doty's info on the GHWB initiative, as given in EfD, with what may be going on now. These are from three very different perspectives, with different and indeterminate degrees of reliability. Nonetheless, we can do no less than attempt to connect the three dots.

Bill's reliability is a big question. He is strongly biased against politicians of all stripes, and certainly against the Clintons. I have not had a chance to question him about the material in EfD. He claims to be no longer interested in the field, and was dismissive about the new information. I'm not totally assured that this is the whole story on Bill.

There was catch-up call from Y (n.b. X, Y & Z are merely local variables, referring only to the immediate context. I'm not trying to be difficult, just erring on the side of caution.) I overstated the hold on Gordon's conference. It is still in the works. X was only to be a consultant, not an organizer. I don't see myself as an organizer either. Even my minimal philosophic input would likely sew considerable confusion, as with Alison.

Then re. the possible interview. Alone, I come across as merely stoic. Is that better than crazy? He suggests Kit as a helpful interlocutor. Maybe. That might put Kit in a dicey spot. Perhaps he was being facetious. What then about Laughlin? If I go, can I gracefully refuse an interview? He did say something about having a sidebar there (non-alcoholic?), but I didn't get to follow-up.

I mentioned watching the McConnell hearing. His response was to mention Clapper. Do we sense a

compromise? They give Mike a free pass, and then ask Jim about something relatively innocuous, like remote viewing. Danny B. can pick it up from there. C-Span does not show a schedule for future hearings.

Is Bill correct. Did MJ-12 manage to stonewall the Clinton WH? Not likely. They may have been cautious about a leaky WH, and so they used Larry, et al, to muddy the waters, a fairly obvious C/I strategy. I still take seriously the rumor, directed somewhat at me, about Clinton's tarmac delay in Albuquerque. That was hushed up, but there was another one in LA, where they had to produce a Hollywood hair stylist. I suspect that both Bills may have known more than was let on. Shades of Ike's dental appt out of Palm Springs.

Frankly, Dick looks a lot like he may have had too many 'hair-stylings'. Or perhaps we should opine that only his hair-dresser knows for sure, his true colors.

After all, Ebe-3, aka J-Rod?, was ensconced on the Mall (before Danny kicked him upstairs?), as per the 'bird-codes'. But there is a gender problem here. I was under the impression that Ebe-3 was female, surely not J-Rod!

So here we are with Shrub&Dick, now being joined by Bob, Mike, Jim & Co. Are we ready to take up where we left off in '91, when SF hit the scene and the 'global balance shifted'? Is this slated to be another fire-drill?

Now going live to DC. Yawn..... Barbara M: will MM speak truth to power? Alright! So far, so good. We could do a lot worse.

Fire drill? Of course, but what next? How many drills can there be? Are they waiting for all good saints to drop dead? I apologize. We tried. It could still be arranged.

Maybe I'll call X back in a few min. See if we can do better than yesterday.

Just now, MM has a long background with Clapper. This was on C-Span.

[2/2]

There were several phone calls yesterday, after the hearing.

X, Y and I seem to be back on track. The private conference idea is moving forward. Y suggested the Sloane foundation might lend its name, especially if we find the money. RS is possibly willing to help out if we are all back on speaking terms again. The name of Brannon came up. Never heard of him. I'm supposed to make a token contribution, much to the consternation of Sam H. He is quite concerned that I'm following in the footsteps of his uncle who was scammed in a comparable(?) fashion not so long ago. Phooey!

MD tells me that Alison is moving right along, despite my confusing input to her about contrasting agendas.

Ryan Dube, apparently not wanting to be left out, now wants to schedule a phone interview for early next week. Fine by (stoic chicken little) me. But I would like to chat privately with the dude about our possibly conflicted religious views.

DB is slated to be at Laughlin only briefly. No private convos there.

But my heart is still in Foggy Bottom. So is this a fire drill or a *coup d'etat*? Y asked me many years ago, in about as serious a manner as he is capable of, if I wanted to be president. That did catch me a bit off guard. Well, thanks but no thanks. Nonetheless, there are some potentially serious political problems. I was surprised by the unanimous, bipartisan, unstinting support given to MM. Do these folks have any inkling? How can they not have more than an inkling?

I hearken back to my several conversations with Chris Straub, formerly ranking staff member for that committee. They sure knew something funny was going on way back then. Have they all forgotten? What do they know, when did they know it? Are the politicians being pushed/pulled into this? By whom?

A private little boys club at ONI is in the process of taking over the entire intel apparatus. Why aren't more people screaming?

If this is the final prep for Y2C, then, sure, the PtB would want to have the ability to batten down the hatches. That was their part of this bargain. But would we expect Barbara Mikulski to endorse it? The advance team must have put on an impressive dog and pony show. I doubt that Y could have pulled this off just on his own recognizance.

Disclosure of whatever will surely lead to some significant psychological readjusting, which is likely to get acted out in various, hard to predict ways. Whatever agenda gets put forward, there will surely be counter agendas, and a great deal of suspicion/paranoia all around. And it won't just be Dan, Gordon and Jack going at each others throats.

How do we spell 'witch hunt'?

Showdown

Allow me to quote from a message widely broadcast by Gordon last Thursday:

Langley's major players are indicating they or their business surrogates will support financially - the pending RAM Conference announcement. ***Do you object to being BCCd in the RAM broadcast lists?*** RP has had Dan contact Alison yesterday in L.A. to advise her RP has had surprisingly two previous meetings with Spielberg and has the **official** -albeit covert - support of the **"company"** and his new boss as Deputy Director of **ODNI** (Office of the Director of National Intelligence). Adm. Mike McConnell the new Director of **ODNI** is also the current or former MJ- #1 Director General.

Here is the response from RP on Saturday:

Effective sponsorship of a conference requires honesty and integrity. Please delete all the fabrications and nonsense.

Then, later on Saturday came this from Gordon, excerpt:

D) Mr. Smith while providing me a small amount of financial support recently at the behest of RP and which was much appreciated is reportedly now in complete disagreement with our RAMSTAR Productions screenplay treatment for the KINGDOMS COME film trilogy and directly intended to finance RAM in Phase One. Instead he has recently indicated to our new co-producer - the professionally brilliant Alison [...] - that he would instead like to replace our KC story with his Eschaton ideas to end our world and concomitantly have Christ II return to have 144,000 surviving souls worship him on a planet destroyed by an environmental or other global catastrophe over the next 1000 years per Biblical or Dan's prophecy. Dan's beliefs in who he thinks may be the Christ II who can't walk on water, fly without the assistance of technology, raise anyone from the dead, or feed multitudes with any kind of food falling out of the air - is not mine. I will leave you to guess who he thinks this second time around Deity may be.

And a couple of hours later, back from RP:

Actually I thought this was one of Gordon's more accurate letters. It is true that each of you has demonstrated at various times that you think he is psychologically unbalanced, a poor indecisive leader and scientifically inept relative to ARV=UFO=RAM. In that you certainly are not alone and in some respects you may be correct. In the phase space in which Gordon operates, there are no norms or metrics from which to gauge deviations. You could perceive him as balanced or unbalanced depending entirely on your immediate perspective. The issue here seems to be whether you are willing and able to support Gordon as he attempts to move forward. While it may not always be obvious what it means to "move forward" it is after all Gordon's prerogative to define this in terms of his perceptions. And it is within that frame of reference that he perceives alternating efforts to support and impede his progress. In the coming weeks Gordon will be attempting to define his path forward in terms of the RAM conference. I think it is important the he has an opportunity to do so without too much external interference. That said, the conference should provide ample opportunities for a mix of agendas. My suggestion is that where these differ, sponsors/participants express their views as additional context rather than as opposing context. Within Gordon's phase space, very little is certain, so it makes little sense to impede his progress unless that is in itself the objective.

Interesting. No? And what are we to make of all this?? Wouldn't it be convenient to have a whacko meter?

Additional context: BPW relative to RAM?? Now there's a stretch! If we were all geniuses, diplomats and saints, RP's strategy might work, but in the real world there will be confusion and conflict. The RAM conference portends to be a microcosm. I hope it can be pulled off. My intervention with Alison was a

friendly heads-up to her and the others that this would not be easy and not always pretty. How do we make sausage look like tenderloin? Spielberg is poised to earn another star in his crown.

For the past week on Jack's list there has been much chatter about the JJA notes. It sounds like there may be something serious there.

Meanwhile, back at the ranch, I have two interviews coming this week, Wed & Sun, to think about. My job is to provide a metanarrative for the various stories that have been surfacing:

And here is a **timeline**: [\[a\]](#)

- Jack Sarfatti, Beyond Space and Time, 1975.
- Sophia, 1977
- 1980, gave a talk on Rational Theism to the Guan Dong Branch of the Society for the Study of the Dialectics of Nature.
- c. '81, Kit Williams, *Masquerade* and my turn to idealism.
- '82-'83, my turn to eschatology.
- Cover-up Live, '87.
- Picnic with NBE, Aug '90. Opinion on Desert Storm requested.
- June '91, 'psychotic' episode.
- Abortive disclosure of Aug-Sept '91.
- Meet CF in Sept '91. Message from 'Aliens' to CF on CompuServe UFO forum. The near coincidence of this meeting/message to the scrubbing of the disclosure plan is interesting, retrospectively. No disclosure without a Closer.
- Feb. '92, Jack Anderson's [column](#). The new (package) deal?
- May '92, my last day as a working stiff, gratis the Navy(?).
- Apr. '93, Laurence Rockefeller [meets](#) with Jack Gibbons.
- '93, [conversations](#) with Vince Johnson.
- c. '95, meetings with an SSCI staffer.
- Core story: from RD to me ('95-'96) and then to Richard Boylan and onto the Internet, with me being referenced as [Beltway Throat](#), charming.
- Projected meeting in the desert, up until WC's Tippecanoe. Colby died on 4/29/96.
- Hale Bopp/Heavens Gate: (March 1997). [2/19 - EfD mentions 4/97 as a projected exchange date.]
- Dec. '98, Ron the [whistle blower](#).
- *Paranoia* [interview](#), 2000.
- Conversations and meetings on and about 9/11/01.
- Sept. '02, Bill Hamilton interviews Dan Burisch.
- Bob Collins' EfD (Apr '04): further details on the core story.
- Summer '04, CF first speaks of briefings.
- Serpo (Dec. '05)
- Abortive meeting with Jack & Co., Jan '06.
- RD tells of a meeting in the EOB (Jan. '06).
- Summer '06, CF talks to RD's supervisor.
- Jan '07, 'repositioning' of the '20'.

Now this from CI:

If RP truly wants to help pave the path to Disclosure then why use loose gravel instead of asphalt for the roadway, especially when you know the brand new vehicle (disclosure) has a delicate suspension and could use the best possible support system available???

Good point. Yes, the path to heaven is not paved with yellow bricks. Gravel is the medium of choice. This is just another application of the Prime Directive: minimal interference means allowing maximal leeway to the Hidden Hand. We are all God's Clowns. This is what TF refers to as the the Soap Opera. CF's job is to keep the pot stirred sufficiently so that nothing sticks to the sides and gets burned.

GN just called complaining that my one phone call to Alison has apparently sabotaged the entire RAM/KC project! He now wants to see me levitate, without benefit his anti-gravity torsion circuit. I do sympathize. What's a body to do? Am I to roll over and play dead? On Friday I told CF that the only reason I was involved with RAM was because of him, but he said the only reason he was involved with RAM was because of me. After all, I did introduce Gordon to an initially very reluctant CF. Here is a prime example of the Soap Opera.

BTW, Gordon, how do you spell KINGDOMS COME?? I spell it BPW.

I notice that Serponaut has [posted](#) some questions for our interview on Wednesday:

1. How do you foresee disclosure, or a "critical mass of awareness", ever coming to fruition and what is your estimate on the timeframe?
2. What political or social advantage do you perceive by the ongoing (20 years?) psyops employed by sectors within the intel / ufology circus?
3. What are your views on the historical and present occult connections to the governments of the world?
4. You have been writing about the Eschaton for over 10 years. What convinced you personally that such end times are imminent?
5. Out side of Paperclip and the popular history, what influence do you feel Nazi Germany has had on the landscape of American politics and values?
6. You may not be directly requesting such, but why should anyone place any trust or faith in what you or Pandolfi or Green or Novell or Hamilton or Puthoff or Scott-Jones or Sarfatti has to say about paranormal subject matter?
7. In terms of evidence to your claims and aside from educational qualifications, what differentiates you guys from the rest of 'uferdom'?
8. What evidence do you have that Adm. McConnell even knows DB?
9. Why do you personally place any credence in DB's claims?
10. What are your thoughts on George Knapp's article on DB?
<http://www.ufomag.com/articles/articles19/articles19.4/knapp.html>

Answers:

1. I have been laboring under the assumption that the PtB will want to be slightly ahead of this curve. If I'm their designated mascot, then they will need to keep me in play. At the present rate, the internet buzz will reach a critical level in a few months.
2. Advantage to whom? The PtB? They get me as their mascot. They could do a heck of a lot worse, and they know it!
3. Many and varied.
4. My powers of ratiocination.
5. Nazis? I'll bet we've learned a few tricks from them. Probably not good tricks.
6. I can speak only for myself. My transparency on this website is my only token of trust.
7. Differential? Us guys? Ron is the only official 'phenomenologist' in the public eye. I'm his only public eschatologist.
8. Virtually none.
9. Only from CF. But, allow me to opine that if DB did not already exist, it would be in the public interest to invent him. *Comprene?*
10. I'll read it next. Ok, I'll have to admit that George's report does give me pause. On the other hand, where are MY groupies? Why hasn't Ron been able to provide them? I'll be sure to ask!!

Any more questions? I gather that you have zero interest in the BPWH. Shame on you! Is your forum anything more than a motley crew of cynics?

[2/6]

This was posted yesterday to the RU forum:

There's been a lot happening lately that have led lot's of folk to believe we are close to "disclosure". It seems there is no limit to the stories that have been pounced upon and the noises coming from the so-called "insiders". All of this and more is being touted as the precursor for official disclosure being "just around the corner".

The sad thing is, there is nothing of the sort happening. We've been very busy behind the scenes these last few weeks and months and the only thing we have seen is a helluva lot of evidence suggesting that most of the people involved in this so-called process are unethical fraudsters and liars who have managed to successfully hoodwink people into believing their fabricated tales for many years now. The lies these people tell in order to have others believe their non-existent histories of past official capacity within the USG is frightening and ridiculous at the same time. What's frightening is most people simply believe these tales without really looking into who it is telling the stories in the first place.

To put it bluntly, We've had enough of these conmen and we will be lifting the lid on what is really going on and what has been happening lately within certain circles of the UFOlogy crowd. Most of this nonsense goes back a few years and for the most part it is the same set of people responsible for it.

Why unethical? Because what "they" have been doing is no different to what was done with Paul Bennewitz all those years ago. It's disgusting behaviour and it will be exposed.

So yes, full disclosure is "just around the corner". The only difference between our disclosure and theirs is ours will be the truth.

Cheers,
Zep

I am told that this was not specifically directed at me. I can well sympathize with Zep's annoyance with all the game playing. I have been caught up in it, as much as anyone. Where I probably differ from Zep is that I am in a position to better appreciate how high these stakes are. Once this Pandora's box is opened, nothing will ever be the same. Every last one of us will have some nostalgia for these good old days, i.e. the last six thousand years of history. Tomorrow that sweet sadness will be gone forever. It will be a brave new world. Savor our innocence for these last couple of days. We'll be wishing that Ron could have kept us all going in circles for just another week or two.

It is important to understand that I'm no ufologist. I was dragged into this game, kicking and screaming. My younger sister was put in intensive care at the same time with a similar breakdown. She headed for the hills, I headed for deep cover.

I have been presented with an expanded list of questions by Ryan, which are all basically nit picking, IMO. It's all about their debunking agenda, nothing really about disclosure, *per se*. This will be a waste of everyone's time. It will all be, 'he said she said'. Someone on the forum remarked that I wasn't seeing the bigger picture!!! If that isn't the kettle calling the pot 'black'. All the gossip I know is right there on the blog in black and white. Why waste air-time rehashing all this effluvia? Someone can write it up as background information for the miniscule number of ufo dumpster-divers. I'll be glad to sign my name to it. Then we can get on with the real issues.

Ryan and I have had a preliminary conversation. I will try to be accommodating of their interest being mainly in CF. After all, I have been his 'PR' person for these last many years. That is the least I can do. We have to get over that hump, before we can start bringing in the larger issues. I hope that the OM interview on Sunday can then take up where we leave off with RU.

Another excerpt from the RU [discussion](#):

It's important with an interview like this to keep in mind that there are religious aspects involved, and

regardless of our personal beliefs, Dan holds many things to be self-evident. Keeping those things in mind, admitting that you may not agree, there remains a large volume of information, data, contacts, and insight which Dan shares in his blog as well. He analyses his data through the filter of those things he believes are self-evident. But there is nothing to say that you can't (in fact, I believe if you ask Dan - he would **encourage it**) analyze the information that he presents through **your own filter**.

Self-evident? Wrong! I would like to see an instance of where I do that. I simply adhere to the coherence theory of truth, and I go with what seems to cohere the best. BPWH = Best Possible World **Hypothesis**. Can I be any more explicit than that??

And here is a question for the RUers: Why is scientific materialism like a balloon?

Answer: One paranormal prick and it's all gone?

I aim to be Sophia's Prick. If CF wants to help out, that's his business. There are a lot worse pricks out there than Chicken Little.

Or, why is Chicken Little like Joseph? He interprets Pharaoh's 'dream'. It's also called Unconventional Collections.

BTW, I am now told that Gene Lakes did work for NIDS. Is that already known?

[2/8]

CF called to get Ryan Dube's phone number. I would imagine that he might wish to preview the interview. I told him that it seemed uneventful to me and that there was nothing covered that was not already in the blog. I believe he commented something to the effect that there was, indeed, a lot in the blog. Some poor grad student may someday have to give it a thorough parsing.

'Ex-China Foreign Ministry Official says Extraterrestrials live among us' -- by Paul Chen, *The Canadian*, 2/7/07. This [article](#) is being circulated by email. The following paragraph hit my eye:

In the industrialized West, there evolved the prevailing Pseudo-religious dogma that human beings are at the centre of 'G-d's creation in the universe'. This dogma is the ideological motivation behind the on-going de-legitimization of the verifiable contact that people have had with Extraterrestrials (ETs). This apparent dogma has become the modern equivalent of the corresponding dogma, that "the world is flat", which Church and other elites centuries ago used to champion. In contrast, free of Western pseudo-religious based dogma, the Buddhist milieu of China, has freed their scientific community, with the support of government, and of community participation, to seek to explore UFO incidences and evidence of human contact with Extraterrestrials.

Ah, so! Our Western fear of ET's is merely a hangover from our theocratic heritage. Yes, there is no small amount of truth here. Dialectical materialists flock where our scientific materialists still fear to tread. I have spoken on these pages about CF's special interest in China, and my own sojourn therein. The dialecticians do not labor under the shadow of our perennial bias toward dualism. I am a Hegelian from way back.

BUT, dialectical materialism suffers from the incoherence of Transhumanism. Only theism can overcome that incoherence. Yes, where does Mao's Little Red Book speak of VALIS? Where is the Chinese Roswell? Not to brag, or anything. It does appear that the Three Magi took a wrong turn on their way to the Forbidden City. I'll bet there is a mad dash in the Kuomintang to dig up the notes to my talk in Guan Dong.

That's right folks, retail ufology may be terminally ridden with dialectical materialism. And, yes, the Xian hardcore of MJ-12 is right to be suspicious of the pinko greys; surely they must be on an mission for the

A/C. But, then, those Xians did not have Sophia come and knock on their door in the middle of the night.

[2/09]

Chris has forwarded to me some of the "J" material that they have not circulated yet. This is allegedly from Angleton. I'm not particularly impressed. I find it less impressive than the Serpo material, which at least had new stuff. This Angleton stuff is warmed over from things that have been out there for decades. It provides no new insights about what is going on.

The source spends too much time with petty ufo politics. This is certainly a turn-off in my book. Keep in mind that JJA was strictly C/I. This just continues in that vein. Meanwhile, Jack has access to other Angleton material that has Einstein talking about superconductors. I would be surprised if this were not anachronistic.

I was told by RD that there was a disturbing message. None of these other scenarios speak to any specific message. The only message is the basic inference that we are going to become food for the bad 'gods'. The good 'gods', evidently, can do nothing to protect us from these predations. This is downright silly. Where is VALIS when we need her?

But, yes, there is some sense in which we are food for the gods. This is what apokatastasis is about. There are only two stories: the core story and the cover story. The cover is a physical rendition of the core metaphysics.

There is a new age variant of the cover story. The evil powers on Earth have fallen in with the bad ET's, and are preventing the good ETs from bringing us to the next level of 'evolution'. There is no eschatology therein. The New Agers then must subsume some form of transhumanism. We all get genetically transformed or end up as avatars in a cosmic video game. Apokatastasis is beyond the ken of all who wish to traffic in such nonsense.

If you manage to scratch the surface of MJ-12, you find a Xian hardcore. The existence of that hardcore is nowhere visible in these cover stories.

[2/10]

Thanks to the intervention of CF, Gordon and I are provisionally back on speaking terms. Alison did have a chat with CF about my input, and they do not see that it should negatively impact the KC project, and perhaps the contrary. In any case, there may be a meeting out there next month, and, having already made my views known to the principal player, I can sit back and enjoy the show.

I had a lengthy chat with Gary B this morning. He has a lot of loose ends that he is trying to sort out before composing a new expose. In the meantime, Ryan D is threatening a major release any time now. After tomorrow's interview, will there be anything left for me to say? Perhaps I will have been fully debriefed. The rest will just be fleshing out the details, at least relative to the political side of things. But, as to the BPWH, it seems that the surface has barely been scratched. No one is really up for that hard slog, not at this point.

[2/11]

The question on most of our minds, Open and otherwise, is whether we are any closer to disclosure now

than we were sixty years ago. I certainly cannot say for certain. Perhaps we'll never get closer than we were alleged to have been in Sept. '91, a couple of weeks before I met CF. Blame it on me.

What are we waiting for? We're waiting for closure. Who wants to open a can of worms? Who wants to open a Pandora's box? Closure will have to address mainly our relation to VALIS. This is a moral issue which cannot be addressed globally by any any existing secular or sectarian establishment. There will have to be a fresh start. It will be a private, *ad hoc* group with a suitable vision and adequate connections. Clearly the Aquarium is a candidate to be that group. Steve Greer's C-Seti is another such group. It has been much more active and in the public eye. It has had many government connections. A principal distinguishing feature is the pronoia vs. the paranoia. Only the Aquarium provides a positive rationale for the sixty (twelve thousand?) year delay. It comes back to the basic point that there cannot be creation without concealment. Ask any artist. The self-revealing VALIS is the self-concealing VALIS.

[2/15]

I have gotten no feedback yet on the OM interview. I will check their website later.

In the meantime there has been a continuing controversy and confusion concerning the Angleton notes. Caryn is attempting to make some sense out of this. That is my principal source for what follows, the residual confusion being just my own.

The first known contact that JJA's grandson, JA, Jr., had with a ufologist was with Richard Boylan in 1998. Subsequently he distributed copies of these notes also to Hal Puthoff. Other members of the aviary have also been in this loop since back then. Between 1998 and 2001 the bulk of his fathers notes were stolen from a warehouse. Some of the remaining notes were water damaged in a hurricane after 2001. Also, these notes had been reviewed by the FBI, before they were stolen.

After being stolen, JA, Jr., attempted to retrieve the copies that he had already distributed. Some of these returned copies were then transmitted to Bob Collins and appeared in the 2nd edition of EfD. Somewhere in that confusion, it appears that some of Jack's and Mondanese's writings were collated into the copies of the original notes, and this is what had appeared in Collins' book. Various of the actors here have had recent communication with JA, Jr. about these matters.

What else do we know or are able to surmise? Three generations of the Angleton's have displayed interest in the ufological connections to JJA's original work. How much of this interest and material is informational or disinformational is open to speculation. Whether it will be possible to separate out the later interpolated bits from the original notes is not clear. There is no longer a definitive repository for any of this material.

As far as disclosure goes, this whole saga seems to have deteriorated into titillating bits of gossip. It is surprising that nothing about these notes has made it into the mainstream press. It is peculiar that the only remnant of these notes has to do mainly with ufos, when you think of all the other provocative stuff they must once have contained. Collating the notes was the project of JA2. JA1 died in 1987. JA2 developed a brain tumor in '01 and died in '04. The Sarfatti/Mondanese references were most likely to have been penciled in by JA2.

With the advent of the *Good Shepherd*, it is surprising that there seem to be no reporters involved in this recollection of these notes. This would now, at this late date, still be fresh material for a news story. As such, it would present a convenient vehicle for disclosure, IMO.

This material could be fodder for the last hurrah of the old Aviary. If they want to make a significant contribution to disclosure, they will need to get their act together, one last time. This is now happening only at the prodding of outsiders. There is still much foot dragging and whining on the part of Bob.

How much of this sideshow is being coordinated or otherwise overseen by other insiders? There has been much opportunity for meddling; a temptation that would be hard to pass up, we should suppose.

It remains amusingly probable that JA1 is contributing to this counter-intelligence effort from beyond the grave, along with the possible witting cooperation from JA2&3. Regardless of the residual informational content, it still makes for a great story. Jack has added the additional likelihood that the ghost of the KGB plies these same waters. Wouldn't we expect that all the major players would want to get their thumbs in this very aromatic and not so humble pie?

[2/16]

I am trying to make sense out of this Angleton business, but it is not computing.

We in the UFO community are used to handling two-bit affairs, but this is not one of those. We have not yet been able to get our heads around the possible significance of this story.

The *Good Shepherd* was a major work, and a significant bit of history.

I cannot even begin to imagine that JJA stole his notes. No other government employee is likely to have had such a sensitive collection. Think about it!! This is the biggest disconnect I have run across in my sixteen years in this business.

There is a simple explanation. These notes were much too sensitive to have been left to FOIA. The family was encouraged to get them out of the government files. Once out of federal jurisdiction, they could then easily be spirited away to a secret location.

The movie makes a big case about these files. The fact of their existence was suggested only in the second edition of EfD. Only when the movie came out, did we begin to suspect that we were only seeing the tip of an iceberg.

Where have all the historians and reporters been wrt these notes? Has no one wondered where the JJA files were? Has there been no FOIA request?

Of all the people that the family might have wanted to contact about these notes, only one person is known: Richard Boylan. I ask you, folks, does this make sense to anyone? It sure doesn't to me. If the world were normal, none of this would make any sense. However, if the world is not normal in the way many of us suspect, this begins to make perfect sense. [n.b. Richard was not the only one. He was the first one.]

It seems quite possible, even only based on the few things we think we know at this point, that the JJA files were a time capsule, or more like a time-bomb. This fact could not be an accident. Any number of insiders could have seen this coming years ago, ever since FOIA was a cloud on the horizon. This simple fact provides much information about the disclosure timeline and the number of people who must be aware of it. It would not be a small number. The number would be at least several times greater than the 28 previously mentioned. Yes?

I'm now willing to speculate that the JJA files have, for many years, been intended to be the primary vehicle of disclosure. And now they are missing? Yes, but. JA, Jr. is not missing. He now holds the key. I find it difficult not to suppose that he is well prepared to follow one or more scripts, depending on last minute developments.

Is all of this now going to wait upon his scheduled meeting with Jack in May? We shall find out sooner, rather than later.

Another point is that Jack, Richard, Robert and Hal are not the only people who have been in communication with JA, Jr. about the unusual content of these files. I have been told that TF has also had direct communication. That would be, at the least, semi-official. Everyone we know has their thumb in this pie, it seems, except CF. Is CF so important that he can ignore all these goings on? I sincerely doubt it. If this is not meant to be the dropping of the other shoe, then what is it meant to be? I can call Gus Russo now, and he can call his good friend, Seymour Hersh. That might fix this mess in a hurry. Want to make a bet? BTW, Seymour is not at all unaware of this angle.

Ok, so I have spoken with Gus, and he is more than a little bit interested in these developments. I submit, that if Gus is willing, that he should be our primary investigator in this affair, for many reasons, which I will get to when I have helped my nephew locate his cell phone.

Yes, Gus does know the family and he has had a long standing interest in our subject since his own experience at age 10. Look him up. Yes, he has met with CF almost a decade ago. He is now making some phone calls and will get back to us. Whoever we decide should follow up on this, should have it coordinated with both CF and TF. If there is an issue about that, then let's hear it, or hold your peace.

Gus agreed that these files would not have been sufficiently secure had they been left in the Government vaults. These would have had to been dealt with in some unique, *ad hoc*, i.e. 'private', fashion. Just like this disclosure.

[2/17]

Gus, Sam and I are meeting this evening to go over the background, and then do some strategizing about how to approach the story.

The likely approach for now is to focus just on the history of these files. How did they come to be privately sequestered by the family? Are these quite possibly the single most provocative set of files in our nation's history, quite apart from any questions about the weird stuff? The FBI was alleged to have been consulted. That, in itself, would provide the basis for several interviews. A single phone call from Gus to his friend, Tom Mangold, might go a considerable way to clearing up the preliminary issues about the handling of these files.

Once the one-time existence of the files has been established in the press, there will be ample opportunity to delve into the phenomenological issues. These steps will depend heavily upon the close cooperation of the grandson. He would be the designated control valve for the handling of it. The movement on this story will hopefully be keyed into the movement on the Hollywood front. There could be a tie-in on the storyline and politically, a natural spin-off from the *Good Shepherd*.

If Gus does want to move ahead on this, he will be needing the cooperation of the folks here who have already been involved. He needs some talking points from us for his approach to Tom. He and I will need to agree on some minimal coverage of his progress here on the blog.

Suggestions? Questions?

[2/18] [\[a\]](#)

This was received last night by Gus from a fellow investigator:

Gus, You haven't given me much to go on about the grandson's claim, so my short answer is "I strongly doubt it" -- although I hasten to add, anything is possible.

I'm unaware of any official files or documents taken home after he was fired (or at any time earlier). I also know that his successors (and subsequent investigators) were unaware of any official papers that were taken home. [I spent more than a week inside his house -- with his widow's permission -- carefully going thru all of the boxes of his personal and professional papers/notes/letters/photos that she had collected after his death.] The grandson may have inherited this interesting stuff that I saw. Or maybe he/they found some additional boxes of materials in the years since I was there. Hard to tell without knowing more.

Then this:

Dan,

In regard to your blog of 2/17...

A while back we were in touch with a person who knows Angleton Jr. well. We were told about the files; how they came into the families' possession and then were told via our contact, by Angleton to stay out of it.

Judging from Robert Collins' recent contact with him, Angleton's family is not wanting to get involved in revealing this publicly. So unless he changes his approach that is likely where things will stay. The files were, we were told, as I mentioned to Jack, confiscated in broad daylight, by members of the government or people posing as such. That's as much as we are able to state at this time.

However, if you are able to get in touch with him, we would love to interview him on this topic!

Best wishes,

Kerry and Bill

In response, Jack stated, in regard to his recent conversation with JA, Jr. about the 'confiscation':

That's not the way Angleton told it to me directly.

There are still plenty of things that don't add up.

Out of his files, Gus has sent me a copy of the alleged Angleton memo of Aug. 3, 1962, concerning Marilyn Monroe, JFK and UFO's, presumed to have been forged.

I spoke with Gus this evening. He and his colleague, Scott, know two people who worked directly for Angleton at the Agency. Neither one has recalled anything to do with UFOs. Nor do they imagine that he could or would have removed any files from the Agency before or after being fired.

Also Gus believes that Timothy Cooper has knowledge of the forgery of the Marilyn Monroe memo. Timothy being named as a contributor to EfD could be damning.

But we both agree that JA, Jr. remains a person of interest.

The following speculation is only mine. JA, Jr. is unlikely to have been motivated by either notoriety or greed, yet there seems to be no doubt that he has been proactive in disseminating UFO information alleged to have been recorded by his grandfather.

It is strange, however, that JA, Jr. would have gone directly to the likes of a Richard Boylan with this information. There are many more legitimate outlets for such information, to which he would have had easy access.

There is, however, a pattern here. This is the Rick Doty/Gordon Novel pattern: use easily deniable cutouts for the dissemination of sensitive information. Lest either of them should take offense, I may be tarred with the same brush.

Given that JJA had access to provocative UFO information, he might very likely have shared it verbally with his son, who also worked for the agency. If he had to share it with someone, it would have been smarter to share it with his son, than with an assistant, say. There are many instances of such familial lineage in this field.

The grandson might have felt a personal desire to share this information with the world. Thus was he incorporated or read-into a larger dissemination effort. He was instructed to go first to lightweights like Richard and Timothy to test the water. There may never have been any documents. The documents were manufactured on the spot to facilitate the transfer of (dis-) information. Thus do we have the management of leakage.

Could Gus hope to go back to JA, Jr. to sound him out about any of this? Would James be likely to be more candid? I would suggest a phone call, after having consulted with CF & Co. We expect that there will be more information from third parties by tomorrow.

Soon there will have to be a decision about going to Florida.

[2/19]

In EfD I notice a reference to an exchange scheduled to occur on 4/24/97. See this in the context of the [timeline](#) above.

There have been more phone conversations today relative to the alleged JJA notes. There is some encouragement from CF for me to participate in a meeting. Jack is being fedexed what few notes the grandson still has.

Meanwhile, an inside source has told one of us, that it is known that disinfo is still being fed into ufo channels. This has a specific C/I purpose, not specified to me. CF discounted this allegation as being counter to their charter to not interfere domestically. This is an issue that has been discussed here previously. There are expected to be further questions about this.

Jack said that the grandson noticed the theft of the bulk of the notes soon after his father's death in '04.

Gus is quite unimpressed with the material on Angleton in EfD, apparently originating from Tim Cooper. The grandson is reported to share this view.

[2/20]

I would like to say that there need not be a showdown. What is more likely is a split between a mahayana and various hinayanas relative to the apokatastasis.

In that regard, and with a slight shift in metaphor, I would be glad to nominate TF to be the archbishop of whatever, conceding that the R&D show is intended to be the papal nuncio. If TF does intend to be the devil we know, he does have his work cut out for him. I wish him Godspeed. We could do a lot worse, as in almost everything that will be transpiring. This is only to get our accounts in order for the crunch time.

What seems to be shaping up is a little treasure hunt for the sources who have been put in place. This way

we can all see who is where on the track. There should be an orderly queue. There need be no pushing and shoving. The grandson should be able to point us to the next logical source. One source does not make a story. We need someone independent of the family. It would have to be someone at least as credible as say, a Woolsey. There would then need to be some backup sources so that the first two would not be ganged up on.

This is how we could proceed for awhile and still avoid the WH press briefing for as long as possible. Before that point, there would need to be access to some of the 28. Some of them would need to be willing to stick their necks out, and this would be the logical place for them to put up a finger to test the breeze.

Some of this should be worked out before we could expect the grandson to say a whole lot. The main thing we will need from him will be additional live names. Well, those names could come from CF/TF.

If any of this is legit, then we should expect that the saber rattling relative to Mahmoud is meant to be linked into this timing. That will simply be another marker point along the trail.

Another person who might go to Florida is someone who baby-sat for Golitsyn for a spell.

This is from Gary:

A well-placed 'source' identified the counterintelligence aspect as originating with the IBC -- Intelligence Business Community -- and therefore outside of government supervision.

I've never heard of this designation: IBC.

I had conversations with CF and TF. Nothing new. There is still not a clear story about who was the Area 51 person who may have been employed either by NIDS or Bigelow Aerospace. TF has spoken to JA, Jr., but only about a personal matter. Also he is not optimistic about any of his (8?) sources as being willing to share any sort of public podium with the grandson. I have not brought this issue to CF, but, yes, he remains upbeat about a meeting with the grandson.

Gary interjects in reference to the alien/human encounters mentioned in the timeline:

I am wondering if these 'exchanges' might correspond to a specific category of anomalous mental phenomena -- 'encounters' involving the 'upload' and 'download' of 'mind-stuff' -- and not to nuts and bolts material arrival.

Me: [That could be overly mentalistic.](#)

The 'phenomena' presents as a lucid 'bubble' opening into the mind's eye. One is reminded of an operating room observation dome. Human? observers appear to be on the 'other side' and are involved in some procedure that extracts the personality and memories of the experiencer. An 'alien' presence appears to hide just outside of the range of observation, directing or facilitating the work at hand. A clone of the mind-memories is created and archived? There is an exchange of information, and then the memories/mind-stuff is returned to the original body, but not in the original state.

Well, this is an interesting metaphor. Yes, a stargate may have the properties of a bubble. It need not be two-dimensional. Are these stargates merely mental entities? Here is where I have to fall back on the immaterialist mantra. The good news is that ufos/stargates are merely illusions. The bad news is that so is everything else, and this is where the eschatology comes in. There is no absolute reality. Everything exists only in relation to everything else. We exist as 'physical' human beings only in the tension between the Alpha and the Omega/Telos. Gary is a smart guy, but leading him to this simple truth is like leading a horse to water. He may die of spiritual thirst, with his nose in the babbling brook. The floodgate will open. My best hint to Gary is to consider what probably happens when we die. We go to heaven. What we usually fail to appreciate in the BPW is that we never left heaven, it simply became frozen with our

little karmic feet stuck in the ice, so to speak. As we awaken to the true nature of our metaphysical/dreamtime reality, that ice will begin to thaw. The visitors never experienced our Big Chill. They bring their more fluid reality in through the portals that they can create down here. At those thresholds has been, and will be, much action.

But, yes, Gary is right: everyone of our individual minds is a mini-portal. The external portals are our *folie-a-deux*. These require a more robust external intervention. But we'll soon get the hang of it.

Yes, Gary is in thrall to the pall of orthodoxy known as the physics daemon. That is just the definition of Modernism. Gary is a thoroughly Modern Millie. It is the theoretical physicists who are on the threshold of post-modernism. They have seen the inside of the sausage factory known as professional Physics. They know enough to take physicalism with a big grain of salt. They ought to and usually do know how the physicalist fashion can change in the blink of an eye. They can have a much more nuanced understanding of the mental quicksand that otherwise passes for the Real World. Realism was something invented by a stressed-out philosopher. A realist physicist is an oxymoron who has given up looking for the next Big Thing.

The next big thing is metaphysics.

[2/21]

There always has to be a next step. We won't be able to get to JJA without one. TF does not wish to cooperate, not with R&D. CF has already noted this fact. Has TF shared any of his eight names with CF? That is a significant issue for our little triumvirate. If I were JA/J, I would not come forward without some company. It is up to C&T/F to provide that company. But JA/J already has come forward. No. Coming out to Timothy and Robert is something less than serious. We'll need a *quid pro quo*. That is a much for us as for JA/J. If C&T/F are half-way serious, they could, at the very least, have a heart-to-heart with JA/J. Make sure he knows he is on the side of the angels/daemons.

I'm expecting a call from [Nick Redfern](#):

Dear Mr. Smith

My name is Nick Redfern; I work as an author and journalist (I have copy-pasted my work history for you below this email).

I have a new book out in a few months from now that focuses on a past-and-present "Think Tank"-style group in the US Government/Intel/military world that has been (and still is) focusing on thwarting the activities of what they believe is the truth behind the UFO mystery - namely that these "things" have demonic origins and that they are attempting to usher in Armageddon via a "UFO-alien" deception.

The group is heavily influenced by Eschatology. I know the names of some of these people, I have already interviewed some of them for the book, and I now have some of their papers on this (officially via FOIA).

My reason for writing is as follows: I know that this is an area that you have studied and investigated (with respect to the Government interest in the subject of Eschatology and UFOs); and with this in mind, I wondered if you would be willing to be interviewed for the book about your experiences in this area?

If not, it's not a problem; but I'm just trying to find as many people with good credibility who know about this story, and who can comment on the issue of official interest in Eschatology and how it relates to concerns at an Intel/defense level about so-called "alien abductions" and UFOs.

Best regards,

Nick Redfern

My response:

Nick,

Yes, you come with a good reputation.

I did mention this to [CF], and his comment: "If these are not our people, then they are probably not important."

One could take this in several ways.

[...]

So I am looking forward to hearing more about the outsiders!

Gus and I had a strategy conversation earlier today. One issue was whether to have CF intervene directly with JA/J. I conceded to him that CF does not have a good bedside manner, or, at the least, it is one that takes some time to appreciate. He might even spook a spook.

That being agreed upon, there is the issue of providing cover for any witness. I have never dealt directly with such a one. Gus had much opportunity to do so in researching his JFK book. He did get the spooks to come clean in detailing their designs on Fidel, in support of his case that the JFK hit was blowback from Havana. Perhaps. That would be the most innocuous of all possible scenarios, IMHO.

That is all well and good, BUT, how do you tell a professional investigator that we are not in Kansas anymore. Is it even necessary? Naiveté is the order of the day. Cherish it while we can!

Interesting:

Dan: Many thanks for speaking to me this afternoon. As promised, here is the summary of the story I'm pursuing. I have no objection to my email address being included with the summary, as I'm actively pursuing leads that may shed further light on this, and I am trying to track down as many people who might have an awareness of "the project."

It basically goes like this: a couple of years ago I spoke with a former Department of Defense (DoD) guy who had been asked in late 87/early 88 by his superiors to study a huge body of data held by the DoD that originated with the UFO research community, such as books, periodicals (things such as Budd Hopkins' Missing Time; Whitley Strieber's Communion; complete collections of the MUFON Journal; old APRO and NICAP bulletins, and much, much more).

He was specifically asked to look for any data linking UFOs, abduction accounts, contactee accounts, "unusual dream" accounts with the human soul.

He said that elements of the DoD were concerned that the UFO presence on our world was a "deception" and that these things were literally demonic and that this same presence was focused primarily upon the manipulation of the human soul and the ushering in of an "anti-Christ" type scenario and doing so behind a false "ET smokescreen."

The way it was described to me was that this wasn't an official group as such, but more of an unofficial body of like-minded individuals who had these concerns and that focused primarily upon Eschatology.

Since speaking with him, I have uncovered other official sources telling broadly similar stories about how the UFO angle is seen as a type of deception and that concerns still exist at an official level about "End Times" and how the "UFO" entities are manipulating and orchestrating this for reasons specifically to do with "harvesting" human souls. It is my intention to publish the full story of what I have uncovered and to encourage anyone with knowledge of this to come forward and divulge what they know and set the record straight.

Best,

Nick nick_redfern@sbcglobal.net

Hmmmmmm.....

In fact, the DoD bloke contacted Nick while he was researching [Body Snatchers in the Desert](#) (2005). Furthermore, Nick did not get my name off the Internet. I believe it was given to him by one of his subjects. He did recall that I was mentioned in an article on Armen Victorian in about 1993. He has read Vince Johnson's article.

Nick says that none of the people he has been interviewing are known in this connection. They all know each other, of course.

May we live in interesting times.

[2/22]

I pointed out to Nick that there is a definite Christian streak within the Aviary. Nonetheless, he was quite sure there was no overlap with his subjects. I find that a bit odd. There would have had to have been an active avoidance of the Aviary on their part. Until now?

Gary's [interview](#) with Terry James was pointed out to Nick. While you're there, take a look at the updated website. There are several articles related to this blog.

Nick was anxious to know about any official backing for the Aviary/Aquarium. I had very little by way of specific information on that score. He is headed out to Laughlin in a few days, if anyone wishes to contact him there.

There are some interesting [reviews](#) of THE HUMAN TOUCH Our Part in the Creation of a Universe. By Michael Frayn (2006). It is about realism vs. idealism, or the revenge of the metaphysician:

Indeed, modern physics tells us that solidity itself is an illusion, that the seemingly real objects around us — rocks and trees, tables and chairs — are mostly empty space. And if you take a closer look at the more provocative claims associated with idealism, they're not always as outrageous as they sound. When idealists say that we "make the stars," they don't mean that we make them the way a brickmaker makes a brick; rather, they mean that we make them conceptually, right down to the elementary particles of which they consist. (But how, you ask, could we have made the sun if it was around long before we were? By making time too, the idealist knowingly replies.)

So who is manning the physicalist barricades against this postmodern subversion? Certainly not the NYT. And next comes the eschaton.

Today, though, the consensus probably tips toward realism — in part because of the strenuous pro-realist arguments of certain philosophers from Australia, where the bright sunlight is said make everything look really real.

Nice touch. Yes, all you reality freaks, your reality hangs by a slender thread, indeed.

And his attacks on certain deep ideas that he finds uncongenial — the theory of truth advanced by the great 20th-century logician Alfred Tarski, say, or the doctrine of an innate "language of thought," championed by Steven Pinker among others — have a facile hit-and-run quality.

I should take a look at Pinker. What is the connection between LoT and realism?

And here is from another [review](#):

The universe plainly exists independently of human consciousness; but what can ever be said about it that has not been mediated through that consciousness? What can ever be wordlessly seen of it that is not dependent upon the existence of a single viewpoint from which to see it? What can be understood of it without the scale and context of human purposes, or the instruments of human thought?

'... plainly exists...'? Is someone missing the point? To paraphrase another great philosopher, it all depends on what 'is', is. Or, to be or not to be. What is the horizon of existence without a point of view, to paraphrase Emerson. Where are space and time without Presence? Consider Heidegger's *Dasein*, being-with. There can be no simple *being*. What must contain any existence? If you have never experienced an existential vertigo, you had better stick to your knitting. God assuages her vertigo by creating a vertiginous us. And we are oh so quick to return the favor.

Corrections from TF/SI:

"TF does not wish to cooperate, not with R&D."

Not true.

"CF has already noted this fact."

Wrongly noted.

"Has TF shared any of his eight names with CF?"

Yes. Two.

Time's a-wastin'. Three are dead. Two are on their way. Three are kickin' and won't talk. One wrote a letter accepting another meet. Then on the phone said he had changed his mind and "forgotten everything about the subject."

CF is in the Cat-Bird's seat.

TF prefers to be known, as previously reported as *Salmo irideus* [Rainbow Trout] [hence-forth, SI]

[Later...]

And, in case the picture didn't get through...*Salmo iredeus*...is the Genus and species name of ... none other than...(Ta DAH!...) Trout fish...specifically...the Rainbow Trout.

(That was one of the Genus and species I used for my PhD Dissertation.)

Interesting. The ball is back to CF/CB. The grim reaper is stalking more than two of us. Who then is holding back, and why are they holding back? Is everyone waiting on JA/J? Is that fair? Who has the luxury of forgetting? If they won't lend their names, will they not lend their stories?

So SI has named 2/8 to CF, and CF has named 3/20 to us. If both were to tell everything they know to Gus, say; would that not be the end of this story? What are we waiting for? I ask everyone. Who decides the timing? Last I heard, it was Ferret and Ocelot, the birds who were not birds, and that was a long time ago. Where are they now? Have they suffered the fate of Puxatony Phil? Are they afraid of their own shadows?

To paraphrase another great philosopher, times a-wastin'. We won't ever be able to put this genie back in the bottle, but neither will we be able to let out a dead genie. The only valid excuse is that the visiting genies have a solid plan. And how can we know that, if we don't know what it is? So, who knows? Ferret and Ocelot? That is a big burden for two little rodents, afraid of their own shadows.

Speaking of which, how many of us have seen *Groundhog Day*? How does Bill Murray, the ghost-buster himself, manage to escape from his time warp? I think it has something with *I Got You, Babe*.
HmMMMM.....

And here is [Fodor](#) on Frayn:

The universe would still be just the size it is even if there weren't astronomers to measure it. And water would still be H₂O even if there weren't chemists to analyse it. And water would still run downhill, and there would still be hills for it to run down, even if none of us were here to take note of its doing so. You can't pin the natural order on me, Frayn; I'm not guilty. I didn't make the universe; I wasn't even there at the time.

Cute. Such is the state-of-the-art of critiquing of idealism. Jerry is never able to distinguish between solipsism and idealism.

Have I gotten this right, from Joe Stefula, that SI/TF was mentioned by Bill & Kerry on the Kevin Smith Show? He is putting them in touch with one of the principals of the Serpo saga. No, sorry, it was on the [Ian Punnett](#) show on Coast to Coast, 2/17. Would someone with a subscription care to check this out for us?

Chris Iversen supplies the following, mostly from the radio show. Kerry & Bill heard last spring about the existence of a backup Serponaut. More recently they were given the name and residence. They show up at his home with a letter explaining their desire to interview this 'old man'. He refuses. Soon after they get an irate communication from SI, chastising them for having 'harassed' the old man.

There are two additional points to consider. SI has been involved with the debriefings of the regular astronauts. Chris recalls that SI claimed to have been doing TDY at Area 51 c. '77. I was not aware of this. We wonder if any actual or would-be Serponauts are among the 8 people on SI's list.

If Fodor is not a fan of idealism, neither is he a fan of materialism: [The Trouble with Psychological Darwinism](#), Jerry Fodor on Pinker and Plotkin. Yes, philosophers are trapped between a Darwinian rock and a theological hard place. One can see them squirm. The simple fact is that cognition has global/holistic properties that no one has the slightest idea how to modularize. Without a robust modularity, natural selection has no purchase. No one can think of a non-theistic alternative to Darwinism, so the price for practicing secular philosophy is to forego all semblance of coherence. Analytic philosophy died ignominiously over half a century ago. All we are left with is a professional guild of nit-pickers. It's not a pretty sight. I can feel their frustration.

And the theologians? They stopped thinking 700 years ago. Metaphysics scares the Bejesus out of them.

DF reports that it was RD who supplied the name to Bill Ryan. It's a small world, after all. If this is all a con job, it should be an easy matter for someone like CF to set the matter straight. His failure to do so is a puzzle. Despite all his skeptical rhetoric, he lifts nary a finger to put an end to it. *Au contraire*, he is now a primary instigator.

CF owns SI's clearances. He calls him up and demands an explanation. One phone call, and it's all over. Where is that phone call, we'd like to know?

[2/23] [[a](#)]

No word, via Jack, from JA/J. Does this mean he is not a serious player, or that he doesn't want to play seriously? Has he taken to reading the blogs, and decided to dodge the bullet, just like every other alleged 'witness' out there? If that's the case, then it's time for our fellow travelers to step up to the plate. It's time for CF to call SI. It's that simple. Why fly to Florida, when the real truth is right at the other end of the

phone line? This is a terrible time of the year to be flying around.

Good, then we can get back to Jerry & Co. And in the meantime, I'll be calling CF to lodge my formal complaint. I won't even have to get out of my comfy chair, while the Siberian express howls past.

My formal complaint is that SI needs to come clean with CF, to the extent that he can without being *ad hominem* about his very bashful sources. Is this asking too much? Would this be violating any security oaths, or any other trusts? That is something he should be discussing with his Phenomenology supervisor. No? Ok, the call has been placed; the complaint lodged. We aim to please. You aim, too, please!

Jerry F. is messing with our minds by conflating his LOTH with Wittgenstein's much more important [Private Language Argument](#) (PLA).

Am I missing something here? Ludwig proved, to the satisfaction of most philosophers that the notion of a private language is incoherent. Fodor was an exception, and thus he concocted his own LOTH. This was a Godsend to the AI community. They wanted to adopt Jerry as their mascot. Jerry got cold feet, heat from his colleagues, and started back-peddling.

Here is the word from CF. Here is the innocuous interpretation. SI is wont to drop names onto Rick, Bob and Hal. You'll recall that this happened recently with John Gannon. After weeks, even months of public speculation, it is finally agreed by all parties that this was another case of confusion and miscommunication. A similar thing happened with the DIA woman who was IDed by this same group. The list goes on, I am told. In any case, CF has deputized me to take up this matter directly with SI, which should happen later today. I simply ask him if the 'old man' is connected with the Serpo story, or if this was another case of miscommunication. CF is strongly suggesting that it would have been SI who dropped the name, in the first place.

In this same vein, I brought up the lists of the 20 + 8. CF averred that, yes, Robert Gates, e.g., might be put in the same basket as JG, i.e. he is connected with the core story only through SI. Well, I could see where that was going, and I balked. Wait a minute, are we now blaming the entire Soap Opera on SI, with RD as the best supporting actor? No. There were indeed other connections, independent of SI & Co., and this was the case even for RG. CF did acknowledge that SI had passed to him 2 of his 8 names. I asked for CF's assessment of those names. Were they any more or less legitimate than JG? He again averred that the two names he was given did seem to have some independent validity. So there we are. More or less still on track. One step back, and one and half steps forward. I will get back to SI in my designated afternoon time slot. The Old Man and the Serpo? According to CF there can only be three answers: yes, no and can't tell. It would not be legitimate, in other words, for SI to substitute the second answer when it is actually the third. I trust that SI will understand this protocol and accept my *ad hoc* deputization. I'll just ask for his concurrence at the outset.

In the meantime, CF will follow-up with Jack about his non-follow-up from JA/J. Everything clear?

Back to [Wiki](#):

The LOT hypothesis has wide-ranging significance. It implies a strongly [rationalist](#) model of cognition where many of the fundamentals of cognition are innate, and challenges [eliminative materialism](#) and [connectionism](#).

And that includes Darwinism, as we have seen. So we need not be too hard on Jerry. He provided for the AI folks a sucker hole, as we say in the business. It looks tempting to the desperate/unwary pilot. When they find out, it's too late.

The LOTH is my main beef against Jack. He is a sucker, and like a pied piper, he has taken a lot of

physics suckers with him. This was the whole strategy of the cover-up and the concomitant disinformation. Jack has lent himself to that strategy with an unparalleled gusto. Now it's like shooting fish in a barrel. Hardly a sport.

All of the representational theories of the mind, RTM, suffer from regress, which is the prime exemplar of all the logical fallacies. This goes back to the [Cartesian Theater](#). There is a great temptation to compare the mind to a theater, with all its projected images. But then where is the homunculus? If you could ever find the homunculus, you would be right back where you started. It's like standing between two mirrors.

The PLA tells us straight out that AI is impossible. Jack's magic sword of non-locality has no bearing on this argument. The philosophers treat Ludwig's PLA as a skeleton in their closet. If they ever took it out and examined it, they would have to all run to the nearest confessional booth. Much better to leave it as Ludwig's little poetic curiosity, and go on as if nothing had happened. They can treat as just another (premature) piece of postmodernism.

Meanwhile, regression continues apace in its more robust form of endless complexification. Regression transforms into epicycles of every possible form. We see this in the compulsive striving for the next layer of complexity that will finally explain the previous layer. But guess what, when one finally reaches the horizon or the summit, it turns out to have been an illusion.

In the particular case of AI, the horizon is actually seen to be receding faster than anyone is even able to move. This is a quandary that few professionals like to brag about.

And what is the alternative to representationalism? [Direct realism](#), as coined and ably defended by Thomas Reid in 1764. It is the only safeguard against the slippery slope of regression into skepticisms of all kinds. He argued against Berkley, but I, for one, don't see how the direct realist can avoid immaterialism.

Take first the case of the stick that looks bent in the water. Direct realism does not say that the stick actually is bent; it says, rather, that the stick, which is straight, can, in some unusual circumstances, look bent. And to say that it looks bent is just to say that the light, which is reflected from the stick, arrives at our eyes in a crooked pattern.

Our poor, dear Wikipedian has got it muddled, IMHO. This is what happens when one attempts to understand direct realism outside the venue of monistic idealism. 'Tis a puzzle. There is only one thing in the world, which is love. There is then the dialectic of lover and lovee. The One stretches into the Many. Photons are merely an aspect of the semantic glue that holds it all together. Photons are a logically necessary component of the cosmic coherence. They are part of our bridge across these troubled waters, back to the Telos. But if we take them too seriously, in too reductive a fashion, they will pull us down off that bridge. We can appreciate photons without being mesmerized by them. That latter digression is the path into the absurdity of physicalism. I should know. I've been there, done that, and have the T-shirt. There but by the grace of Sophia and the altered Jack, go I.

Only thus do the visitors come here. Yes, they come like photons, oblivious to space and time, frozen in the eternity that is Serpo. They come here to get their blood circulating, to lay down with the daughters of Eve. Can we blame them? This is where the action is. We are their jail bait. Meet Br'er Rabbit. They come here direct, just as in direct realism. The 20-day carpet ride is just another aspect of the agape.

But, yes, I have had a not altogether friendly conversation with SI. He did not pass the name to Doty. He references a third party who connected him with the Old Man about a medical issue. Someone else, not SI, passed this same name to Doty. That other party is a party to a major piece of deception, or to a leak. SI said that he could say more about this to CF. I have a call into CF to expedite that conversation. I expect to speak with CF this evening. There should be a further report here, then. Yes, it was reported to SI that the Old Man had been harassed. But he is now satisfied that there was no such harassment. Then why did Rick pass the name to Bill and Kerry, we'd like to know? If there is blame here, some of it might

fall on Rick, but clearly not all of it. BTW, where is Rick with his alleged agreement to disengage from UFOs?

The above vignette is a piece of the frustrating runaround to which we've all been subjected for these many years. There is ample opportunity here to clarify one little piece of this mess. Am I right?

As Teilhard would say, nature is a mirror to God. We are part of that reflection. Like Narcissus, we fell into that pool. Only when we recognize the illusion, can we begin to extricate ourselves. But we must keep in mind that only by the projection of that reflection could we have been weaned away from the cosmic teat. *Felix culpa.*

There has been a second and more successful conversation with SI. A similar issue had come up earlier concerning people at DIA who were alleged to be involved with Serpo. In that case, SI turned all his information over to his local FBI office (sound familiar?), in the view that someone was posing as a government official. SI speculated(?) that it was the same person then as with the Old Man. The person who contacted him about the man, was the same one who contacted Rick, and had previously been involved with the DIA end of it. Does not SI have this party's identity? I should think so. Has the FBI not already questioned this person? Do we not now have a need to know about the resolution of this matter? I certainly think so!

SI told me that CF was upset about the DIA issue. It would stand to reason that CF was apprised of the identity of the third party in the former case, who may be the same person connected with the Old Man. It is quite likely then, that he knows the person and we know that he knows. But, hey, fool me once and you're to blame, fool me twice and I'm too blame! Enough is enough. Now this will have to be aired in public. [2/25 -- I believe that the name given back then was T....a. CF inquired further to determine that this information was bogus.]

[2/26]

If you want to understand what is going on with the BPW, you will appreciate this [article](#). Kaye argues against Fodor's defense of mentalese. To the extent that he succeeds, he defeats the AI crowd. Recall that Fodor does not appreciate the way the AI people try to exploit his mentalese. Jack is an AI person. But he does not even comprehend the implications of that.

[2/28]

Here's a helpful [article](#) by Pierre Le Morvan:

Since the demise of the Sense-Datum Theory and Phenomenalism in the last century, Direct Realism in the philosophy of perception has enjoyed a resurgence of popularity. Curiously, however, although there have been attempts in the literature to refute some of the arguments against Direct Realism, there has been, as of yet, no systematic treatment of all eight of the main arguments against it.

I'm realizing that many folks conflate direct perception with direct realism. Perhaps we need another phrase for this aspect of idealism. The use of 'perception' may be misleading. 'Recognition' might be more accurate. We might think of a concept as a person. We learn and recognize concepts rather the same way we learn about and recognize persons. Think of our individual learning of words as something like an ontogeny, which is recapitulating the historical, public phylogeny. And so we have these social,

conceptual maps.

Concepts are carved out of a spectrum of meaning, the way one might carve a figure out of marble. This is a process of symmetry breaking. Words are like handles, as are personal names. And how do they differ practically from the scents as remembered by the bloodhound?

Concepts, scents, words, names, sounds, etc., are all touchy-feely. They enable direct contact with the semantic individual that we are re-cognizing. There is the sensorium. We are fitted with prismatic glasses that distinguish the colors. Language is a social filter/prism that is internalized. Infants are color-blind, but can certainly distinguish shapes. We are all synaesthetes to a degree.

Each of us possesses a microcosmic map/genome, to a degree, but there need be no ultimate distinction between map and territory. Our idiosyncrasies are what enable us to recycle the cosmic intelligence. It all gets repackaged, and we make that possible by spinning our personal Rubik's cubes. This is the recombinatorics of the cosmic, semantic genome. There may be a lot of re-presenting, but not so much representing. Our space-time manifold is just God's sensorium; it is a house of cards. It is a balloon, filled mainly with the hot air of our overheated abstractions. Science presents us with a Rube Goldberg conception of nature. We wonder how it all hangs together. But that is the wrong question. The real trick is blowing up the balloon in the first place. It does take a bit more than hot air, and the Big Bang comes at the end, not at the beginning. The scientists do have good ideas, they just need to turn them inside out.

This message from our sponsor:

On occasion there is a raising of expectations, and we all get a bit antsy, and start seeing figures in the shadows. Then it's time for the bucket brigade. There was a vicious rumor afoot that CF had been visited by the bureau, somehow on my account. This merely precipitated the recounting of some tales about how our public servants and protectors have to struggle with the soap opera, through no fault of their own. It takes them well beyond the call of duty. It's J. Edgar in the funhouse. There are regular meetings with the bureau, not only about us, and something came up recently. I have been advised that it was probably as much to do with a recent broadside from GB, as anything appearing on this poor little blog. My precious innocence remains mostly intact, despite the accusations of GN.

Then there are rumors about confabs in the SW, i.e. TX/AZ/NV. We can try to connect the dots, but it won't amount to a hill of beans. Then there is the internal memo, containing proprietary medical information, mainly about the author, I understand, which must still be filtered.

Here is an interesting [paper](#): 'Perception and Hallucination: The Case for Continuity' -- Charles McCreery (c. '97). This appears to be a treatment of direct perception.

[3/1]

The McCreery paper is a significant one. In particular are his arguments for a top-down, hypothesis-driven model of perception. He also call this view, representationalism as opposed to direct realism. I have been calling it direct perception, which, as noted, may be a confusing choice of terminology.

According to the BPWH, the world is constructed teleologically, i.e. from the top-down, so that it should not be surprising that our minds operate in the same fashion, even on the perceptual front. What I have been trying to avoid, however, is the physicalistic or mechanistic aspect of the representational view. On the BPWH, reality is not reducible. In our perceptions, we have direct access to the ideas that make up the

world. All we have to do is add a fractal quality to those ideas, as witnessed in the Mandelbrot.

Another way to put this is that the representations we employ in thought and perception are universal, more than personal, certainly to a greater degree than we presently are willing to consider, in our egocentric view of the Psyche.

McCreery, as do I, points to hypnotic perception as exemplifying the top-down, suggestibility, sociability of perception. Once we take onboard the cosmic collectivity of the Psyche, we have an adequate model for an immaterialist, idealist view of perception.

Back to direct realism: consider the following paper by Pierre Le Morvan: [Arguments against direct realism and how to counter them](#) ('04). The author states clearly what he is arguing against, but what is he arguing for? 'Scholastic perceptionism'. What the heck is that? One idea is that the mechanisms or the causal chain of perception is merely the means of perception, and not what is actually perceived. This makes sense. Given that there is allegedly a continuous causal chain from input to output, where and how would one break that chain to produce an object of awareness? It would be entirely arbitrary. But so what? What were those Thomists up to?

The direct realists wish to avoid skepticism about the external world. But why would the Thomists be concerned? How does this issue impinge on the problem of consciousness? All the arguments I have seen about consciousness assume that, if it exists, it is inside the brain. But the brain is only one part of the causal chain of perception. Why should the organic part be privileged in that mechanistic chain? The representations are inside the head, but where? No one can point to the critical ones, and so we are left with the homunculus in the Cartesian theater. It is the intractability of this problem that motivates the direct realists. One may also wonder if the regress of representationalism is similar to the regress in the quantum observer problem.

In his [dissertation](#), A DIRECT REALIST ACCOUNT OF PERCEPTUAL AWARENESS (1998), Michael Huemer points to the problem of awareness in general. Every kind of epistemic occurrence depends on causal chains of one sort or another. Isn't hearsay just another form of representationalism, where the representations are mainly outside of one's own head.

Do I have a direct perception of the citizens of China? If there is a God, she does have that direct perception. In as much as I partake of her, then my perception is of the same sort, but a tad more fuzzy. Every other explanation suffers from an inordinate multiplication of hypotheses. God's sensorium includes China, along with you and me. That is the only place that any perceptual buck ever stopped.

It is the same with the observer problem. How could Wigner's 'friend' be anyone other than God? That is also the direct answer about teleology. Yes, how we have striven to complexify the world, but it's all a charade relative to the eschaton. It's all about deprogramming ourselves, and seeing beyond the cycles. The visitors will show us how to go. We'll show them where to go.

So, yes, there are not really any causal chains; there are just telic cycles. The cycles are always present. They encircle the Present. We stare at them, and they make us dizzy. Is this a course in TM? Yes, that's all, along with a little history and cosmology.

Of what are we aware when we are aware of Santa Clause? We are aware of a tradition of people pretending to be Santa Claus. Where is the exemplar? Sometimes at the North Pole? Sometimes reported as an IFO on NORAD radar? Generally someone about whom adults are supposed to be skeptical. How great is the ontological distinction between Santa and a UFO? I'll warrant that it is much less great than either the believers or the skeptics imagine. The good news is that UFOs are not real, the bad news is that neither are you or I. Each serves a social and cosmic function. One rules the night; the other rules the day. Each construct is unavoidable in its own way. Each has its own set of tricks. And me? I'm just a one-trick pony. At night, I sleep with my nose under the Big Tent, like everyone else.

[3/2]

Michael goes on to point out that awareness has both intensional and extensional connotations. Naturally, I would downplay any such distinction. The world is one big semantic web. Everything is intentional, even the Mandelbrot. Any singular object is such only by intension. Ostension does not compute, in other words. Pointing is only a convention, and often a taboo. Multiplicity is perfectly intensional in my book. Yes, all relations are necessarily internal. Space and time are fully intensional. Everything is entangled observationally. We cannot jump outside of our subjectivity. We can only ameliorate or enhance it. We can socialize it to varying degrees.

The lesson here is that 'direct realism' is one of the more egregious of the many oxymorons that philosophers are prone to utter. The only way that an object can be independent of the mind is to posit it as separate from the mind. This implies an intermediating representation that is a hybrid of mind and body. If you are willing to buy such a metaphysically concocted bridge, I know of another one in Brooklyn that just went on the market.

Philosophy and theology are essentially word games. The struggle between science and religion for the high ground in the semantic landscape has come to a stalemate. This stalemate constitutes a breakdown or, more accurately, a psychotic break in the body-politic. The social cost of that psychosis is mostly below the surface. It is a wound that festers. Pluralism is one thing, massive perplexity is another. If the truth is out there, we are overdue for a close encounter, for some kind of a fix. If you can find a better fix than the BPWH, you be sure to let me know. Hear! Standby for an electronic mimetic epidemic of biblical proportions, all at the speed of light. It will bring about a climate change unfavorable to Dinosaurs.

Meanwhile, speaking of festering, CF continues to sit on SI's report. It is beginning to appear that the gauntlet has been thrown down. I can hear the avian chortles all the way back here in the aquarium peanut gallery. Any day, now, Mr. Whack-a-Mole. As a point of fact, there are now two documents outstanding. Both entail notable anachronisms. Whoever is hoaxing this stuff does favor that Signature. I trust that MASINT is taking note.

What I have not addressed right here is the problem of the (non-existent?) [memory trace](#), when it comes to defending direct perception.

[3/3]

I have discussed the memory problem before. Treating memory as direct perception, does raise the problem of the asymmetry of time. If time is an illusion, then we should also be clairvoyant. Fortunately we are not, for the most part.

[3/4]

I called CF yesterday. He was in the middle of a tiling project. He said he would call back later. He has not. One person has suggested keeping the pressure on; another has advised me to sit back for a few days. I'm taking the latter course.

If the disclosure heat gets turned up, is the R&D show going to be put on hold? A three party consensus is that it is probably too late in this game to put aquarium on the shelf. There are too many loose ends now. Folks are going to demand answers. Where else will they go? Where else can the be sent?

I recommend [The Intelligent Universe](#): AI, ET, and the Emerging Mind of the Cosmos -- James Gardner (2/15/07) for the state of the art of Transhumanism. This crowd is way ahead of where the physicists will allow their own thinking to wander. Jack has not been following this crowd. He is not on the cutting edge of science. These folks are.

And here is the latest word out of Austin: Skinwalker is where the action is, and it is not about physics. If disclosure is actually moving forward, the physicists will be way out in left field. Jack does have something going, and so does Gordon, and they are both on the physical side of metaphysics, but Hal is the inside physics person, and he knows that the action is elsewhere. Hey guys, it's Ziebart or Rust.

Gardner (p. 31):

The longer that Fredkin goes on explaining the implications of his theory, the more he seems to veer off into a weird techno-religious zone that bears an uncanny resemblance to the scientifically disreputable intellectual territory populated by the Intelligent Design crowd.

Jack has been forced to recognize VALIS. He just doesn't know what to do with It.

Does evolution favor complexity? If it does, then intelligence is not a fluke, and neither is VALIS. VALIS + eternity = God/Creator. Yes, no, maybe??

Is the concept of a Creator truly THAT weird? I don't think so (p. 31):

Especially quirky is Fredkin's fervid insistence that the religious concept of the soul can be reformulated in terms of computational theory.

If this is not an egregiously arrogant dismissal, then there never has been such. Smell the coffee, Jim! Or, I can suggest a new figure of speech: praise with faint damnation!!!

Gardner (p. 36):

Life mind and human civilization are no mere accidents? Once again, this is starting to sound suspiciously like Intelligent Design rhetoric. But let's defer judgment pending a closer look.

Do, let's! Was the kettle calling the pot, 'black'?

Then Jim truly goes off the deep end with Seth Lloyd and John Wheeler (p. 39):

Can we become clever cosmic hackers? Can we learn how to stick out our thumbs and hitch a ride on the Software of Everything...

Some of us call it the Glory Train. Jack and Gordon have absolutely no clue. Hal does have a clue and is keeping his mouth shut.

Could the most efficient means of hijacking the ongoing cosmic computation be to somehow persuade that computation to hijack itself for our benefit.

Been there, done that.... JC is the ultimate software hacker.

I have finished Part 1 of IU. This was about the singularity in terrestrial AI. Part 2 is entitled 'Extraterrestrials'. Part 3 is 'The Emerging Mind of the Cosmos'. The next chapter is 'The Fermi Paradox Revisited'. Yes, I'm anxious to see which way Jim will go with cosmic intelligence. How will he finally manage to avoid the BPWH? I can hardly wait!

But we don't have to read ahead to know what the choices are. The only real choice is between a virtual and a non-virtual model for reality. Tipler only barely touched on this theme in his *Omega* book. Allow mind to get its foot in the ontological door, and everything else will be a quaint illusion. Allow mind to get its foot in the door of retro-causality, and we all stand at the threshold of Eternity. The WAP is dead on arrival. A virtual SAP is the only way to go. VALIS rules the roost. Everything else is decoration.

I guess I'd better skip to the last chapter, *Alpha* <-> *Omega*. It sounds positively Ouroboric, no?!

The simple point is that the Transhumanists are egregiously geocentric in their thinking. The Fermi Paradox barely registers in their hopelessly parochial disdain of cosmology. They are so parochial because of the ridicule that has been heaped upon the Flying Saucer phenomenon. The modern incarnation of that disdain is to be found with Donald Menzel's debunking of same. His debunkery stood on the broad shoulders of the Protestant debunkery of Catholic demon/angelology. That latter doorway was the doorway to the Cartesian/Newtonian worldview. Everything since that watershed has been one knee-jerk reaction after another. It has all been social conditioning within that stultifying metaphysical canopy.

Will James Gardner pull any surprises? I'm highly dubious. Without Sophia and Ron, what chance do they have? The R&D show represents a conceptual bottleneck of formidable proportions. Could it ever be reinvented? *Les jeux sont fait*.

The title of the last chapter in IU derives from Gott and Li's theory of closed timelike curves, CTCs.

Back to the Old Man and the Serpo. The report sent by SI to CF about the Old Man has been deemed unusable by CF. He will go back to SI to request something that can be released. One issue is a plethora of medical information that seemed only to obfuscate the issue of the identity.

Here is what I have been told. The Old Man has been a fixture of the Aviary going back at least to 1985 when CF first got involved. This one person may also have been variously IDed as Raven, Falcon, Ocelot, etc. Another speculation that has recently come to my attention is that this could be the alleged 'Paul McGovern' who has just shown up again at Laughlin, for at least the second time. This is a person who once contracted to NASA and is still doing consulting of an engineering sort, and who lives with some other individuals in Arizona who have a similar but still unspecified background.

SI was called in to provide medical consultation to one or more of this group, and his consultation had something to do with their job related experiences. Rick Doty provided this name to Bill Ryan in the context of Serpo. Evidently, the information provided by SI to CF about the Old Man does nothing to refute a link of that nature. Neither is CF personally impugning such a link. He has suggested that another specific member of the Aviary be approached to obtain more information on the background of the Old Man. By that suggestion is he contributing to the furtherance of this putative connection. Are we to believe that our erstwhile C/I sleuth has foregone the opportunity to ID this mother of all Typhoid Mary's? This would make sense only if he already knew the Grandmother.

It does appear that this process is being dragged out. One can go along with it, make an issue out of it, or ignore it. I go along with it while complaining about the runaround. This game would be forgivable only if it is an end game. That is only if the Old Man is a key element of the story. The players would have a pretty good idea whether or not this were the case. The Avians would already know the significance of that person. So why are they waiting on us to take it to the public? Why would Bob Collins not have included this information in EfD? It must have been waiting on the release of the Serpo story. It was not

Bob's job to follow up on that element prior to that release. We are given no other path to follow. The JA/J angle is in a holding pattern at present. That purports only to be a sidebar, in any case.

Ok, there is plan for getting back to Bob Collins to learn the role of the Old Man in the core story, which role has been known to the avians for at least the past twenty years. It is essential to understand this background in order to decide how best to move forward, and to make sure that the various players here have reached a consensus on this point.

Back to Gardner. I frankly see very little that is new here. He has made an admirable compilation of the ideas that push physicalism to its limits. He is endorsing a version of the cyclic version of the SAP.

There is a notable lacuna. There is much talk of the maximal ultimate computer, but nothing about what it might actually do, or how it contributes to the cosmology. VALIS? His vaunted retro-causation is never fleshed out. Tipler's idea of immortality in a virtual heaven is never alluded to. He is one of the many cosmologists who are playing a game of chicken, to see how close they can come to theology without ever using the G word. It is a transparently silly and exasperating game. There is a total disregard of the mind-body problem that should be seen as the heart of the matter. Even Wheeler's 'participatory universe' gets only the most cursory mention.

So near, yet so far. That will be the epitaph for postmodern physics.

Now back to the ETs and Fermi's Paradox.

[3/6]

Jim does a creditable job of trying to tie together a collection of very loose ends of theoretical physics. Like a plague, and like most of his colleagues, he assiduously avoids the heart of the matter. There is no entry in his index for 'mind', yet he has whole chapters on computers. It is sad how incredibly myopic science has become. Many of his colleagues do recognize that there may be a quantum-mind link, but Jim rushes right past those clues, in his haste to embrace the Megaverse. So, understandably, he refuses to jump off any of the available deep ends. His otherwise eclectic treatment will bring others closer to the proper edge of physicalism. That will be the peanut gallery for the paradigm inverting disclosure that is now upon us.

Fermi's Paradox? Jim talks all around it, but does nothing to dispel it. It's all about those marvelously advanced civilizations keeping us in quarantine. Jim has no sense of our reaching a critical stage in our history. He talks up a storm about how one universe must influence another, but then there is no conception of one civilization interacting with another.

James is the honeybee visiting the flowers in one corner of the garden. He has no conception of metaphysics or the discipline of having to make tough choices about basic principles.

He comes excruciatingly close to the notion that our universe must be a CTC, but then he drops that ball, and heads on to the next flower. He concedes that it must be possible for the cosmic intelligence to constrain the ensemble of possible worlds, but never considers Leibniz' conception of the BPW. There is not even a flirtation with the notion of anything beyond space and time. What could be the manifold of manifolds, if it is not strikingly mind-like?

Physics, the profession, has too many sacred cows in its forum. Some of those oxen will have to be gored if we are to get to the next level. Jim is hardly even going to ruffle any feathers. Jim is a cheerleader. He is not going to get his hands dirty. He knows his way around the physics ballpark. But to win this game,

you are going to have to swing for the fences. He does, at least, help to delineate the fences.

Jack is, perhaps, one step ahead of Jim. But Jack will have to step outside of his formulas if he wants to see the new dawn. Jack can see some of the holes in the fence, but he cannot see the light shining through those holes. That is what the Telos is. Jack can see the teleological formulas, but he is afraid to take his eyes off those formulas long enough to behold the Telos. He did that once, back in his hippie days, but without Sophia and Ron to hold his hand, he can only run for cover.

Back to the real world of the soap opera. A couple of the OM types are going to talk to a couple of the avians about the Old Man. I suggest a crib sheet of avian history to expedite the conversations, given that this fellow has been hanging around for a couple of decades.

The partial surfacing of the Old Man is linked to the Serpo saga. That now is being linked to the repositioning of the 20. It is all to get the ducks lined up, and to spearhead a private initiative.

The avians are gradually awakening to the fact of the aquarium. It is their least favorite option, and so they all drag their heels. They wanted to do their own thing, but they have not been able to get their act together. The closest approach was Bob's EfD, but that seems to have led to a falling out.

Why Chicken Little, why the eschaton? For most folks, the aquarium scenario is the worst possible one: repent, the end is near! But this is the offer (from CF?) that cannot be refused, try as they might. Even if the BPWH is only one of several possibilities, it is most prudent to lead with what appears to be the worst case. Yes, we lead with our chin! Then there cannot be recriminations later. You were duly warned. The disclosure warning label cannot be hidden in the fine print. It must be in plain sight. You can kick and scream and generally throw a tantrum, but you cannot fight City Hall on this score. Suck it up, boys! Quit the bellyaching and let's get this show on the road.

And a bit later at the **soap opera**. [\[a\]](#)

CF claims that the (Serpo?) Old Man's (SOM) connection with SI goes back to the late seventies when they were both working with Bob Frosch at NASA. At that time, the SOM was a NASA contractor. Around that time, according to CF, SOM was involved with a hoaxed transmission from an Apollo mission allegedly reporting a UFO encounter. Bruce Maccabee wrote an article on this alleged incident. RC claims to not know of SOM in this prior context. We need to check back with RD and SI about these allegations.

[This story has now been largely retracted by CF. See the update on 3/8]

At the end of the 'Alpha <-> Omega' chapter Jim does consider the case of the whole universe being a CTC, where the past and future co-evolve, yielding order for free. This is his only logical way to avoid the problem of infinite regress. This is then his Mother-of-all-Universes. He then arbitrarily tacks on the baby universes, which do nothing more than recapitulate the Mother universe. They do serve the political purpose of assuaging the many-world, WAP crowd. This Mother universe is as close as anyone can get to the Ouroboric BPW, without delving into an idealist metaphysic.

Yes, indeed, so near yet so far! If he took more seriously the Wheeler notion of the self-excited circuit/universe, bootstrapping itself out a quantum potential by including a virtual observer in the loop, he would be within a hair's breadth of the BPWH. A small step for a person, a giant leap for humankind.

When the physicists finally reach the summit of their Mount Improbable, they will find the ancient sages already gathered. It was a lot longer than forty years in the wilderness.

[3/7]

The only significant issue from yesterday is that the Aviary has a new honorary member: RF, deceased [3/8 - evidently not]. The unmistakable implication from CF is that RF was somehow complicit in the alleged Apollo hoax. If there were any reserve Serponauts, what better way to recycle them than as NASA contractors, and what better candidates to participate in an exercise in disinformation. That provides them with a double cover. Involving NASA in this panoply brings us far beyond the scheme of a military ruse. NASA was always supposed to be squeaky clean. Did NASA have its own skeletons in its own closet that would require the occasional mis-directional output. You betch'ya. Just ask SI. BTW, I believe it was RF who hired SI at GM.

Now we begin to see why SI had to be so coy about his report to CF on the Old Man. It's a long and involved story. Is there anything here that isn't. The convolutions easily become self-concealing.

Where does this leave us with disclosure? With the cover-up so effectively deployed, how long will it take to dig through the crap to get to something solid? Someone will have to get serious and stop all the buck-passing and the sarcasm. Someone will have to be deputized to this end. The most likely prospect would seem to be SI. Even if he does not have direct access to anything solid, he knows enough about where and how the BS is deployed to bring us all to the next level. Who would have the authority in this arena to mandate SI's compliance? Does anyone? It does not appear that CF does. The sixty year cover-up has been so effective that we may have to go on for another sixty years just to unravel it. They locked the vault, threw away the key, and left no one in charge. I've been told that the way to push SI's buttons is to ask about Jupiter Technology. To me, that sounds like an excuse for another round of foot dragging and recriminations. Can we in no way skip these endless formalities? Isn't our hero doing far more with GN? What do the Bahamian and New Orleans Port Authorities have in common besides the close attention of GN?

I've been reading the reviews of Jim's IU and *Biocosm* books. Most reviewers express frustration at his lack of depth. Where depth is most needed is just where it is most lacking. That is in his borrowing of Wheeler's idea of the self-creating universe.

JAW came up with that idea some thirty years ago. It is the absolute limit of how close science can come to the BPWH. No scientist, *qua* scientist, has ever come an inch closer. They run smack into the mind barrier. The reductionism of science is self-constrained from ever tackling the irreducibilities of the mind. It is finally the Self (Wigner's friend, if you will) that is the irreducible basis of any and all existence. It is the Ont in Ontology! Complexity theorists wax eloquent about the power of self-organization, yet we still have precious little understanding of what might have been the first self-replicating molecule. The subtle point is that replication is strictly a normative concept, not anything objective. Science has virtually nothing to say about normativity.

I have spoken of this lacuna in reference to cyclic phenomena of any kind. A 'cycle' is something that is surprisingly difficult to define objectively. You'll know it when you see it. It is a problem of identity. What is identity without an identifier? Nothing at all. Identity gets us mired in the problem of representation theory. Identity cannot be defined without a pointer or representation of some kind, yet all such are subjective to the point of being terminally controversial.

Ah, this is just semantics, you say. That is the problem. Recognition of any kind is a semantic problem. Self-organization implies self-recognition, or self-identity on some non-trivial level. There is no such thing as trivial recognition. This is where ontology is forced to deal with epistemology, right from the git-go. Identity is a primitive sign of logic. It has no definition. It can only be learned by repeated

exemplification, i.e. a normative familiarity. Science cannot deal with that which it cannot define.

Physicists are very familiar with the notion of identical particles. These drop out of mathematical representation theory. Then we are left with the profound mystery of how physics ever become pregnant with mathematics. Was this an immaculate conception?

A metabolic cycle is nothing, however, if it is not self-maintaining. That normativity can be sustained only *in vivo*, only in a larger reproductive, functional, semantic context. It is not reducible to an *in vitro* system, except as a laboratory contrivance. Are bacteria irreducibly semantic? Is this a form of vitalism? Of course! Life can only be functionally defined. A static cell is a dead cell. A non-metabolizing organism is simply dead. There cannot be life without a minimally very complex ecosystem. Such a system might conceivably have emerged by chance. Were there not false starts on the path to biogenesis? Near misses. That will be unknowable. What about life on Mars? Inferable long after the fact. I would say it existed only in an epiphenomenal sense, as I also say about dinosaurs. This fact should be much less difficult to take to heart than the scientific consensus that consciousness is epiphenomenal. Consider the the relative weight of the evidence, for goodness sake!

I say with all sincerity that bacteria, electrons and stars are epiphenomenal. They are abstractions, abstracted from the necessity of any functionally, historically robust form of creaturely consciousness. Is there not some extravagance therein? No, not in the sense of there being anything superfluous to the whole BPW.

The lowliest metabolic cycle is only an abstraction that only makes sense in a holistic semantic/functional web. Every attempt by science to reduce that web will only increase our confusion about the nature of existence. The benefits of science have been enormous, the costs have not been calculated. We will have to reconsider the cost/benefit ratio as we move into the Millennial regime. Undoubtedly, the techno-structure will commence to wither on its vine. The visitor's technology will be telling in this regard. There is no pig in the poke here. Every tire will be kicked.

Back to the soap derby.

We have SI, RF and SOM. This is the most telling link-up that has come to my attention. Is CF mistaken about the SOM having been involved with SI and RF? I have a message into BM, who is supposed to know about an alleged hoax that could implicate these three. CI has not been able to find any likely candidates in Google. Had there been such a hoax, then the hoax itself must have been covered up. How would BM have found out about it?

Any suggestions at this juncture?

Here is the response from SI:

I never even heard of the Old Man until very recently.

I also never knew anyone who looked like him or had a name like his before in my life.

So, CF's new information is new to me, too.

Perhaps there is a second person of interest, also connected with NASA. I can only note that SI does not respond to the second part of CF's allegation concerning a hoaxed transmission.

And this from Bruce:

The closest I can come to that is the "Discovery discovery" when (we think) Astronaut McGaha on the Discovery said something like "we have the ***** spacecraft under observance." The ***** stands for a

word I don't recall.

It might have been "alien". In any case we interpreted the statement as implying that there was some OTHER spacecraft within sight of the shuttle discovery. I think this was back in the 1980's. Been a long time since I thought about it. The words were supposedly picked up by a radio amateur listening to the shuttle communications and was recorded.

Was it a hoax? I seem to recall NASA didn't say anything about it.

Might this account for part of CF's recollection?

CI reports:

I knew about the incident referred to by Bruce. I don't recall any serious thoughts that it was a hoax. It was after this event that NASA went to secure communications. It is very different from what Ron was describing.

CI is of the opinion that CF may have made a major miscalculation here. I am a bit more sanguine, but, yes, if he is totally off base this would be a significant setback for the R&D show. CF sneezes and I catch cold. That could be the intent, even.

Correction to the story from CF reported on 3/6:

It now appears the CF managed to conflate two or three different stories, indicating what? That his memory is not 100% reliable. That may be a useful fact to establish, especially in government work.

He maintains that there was an incident involving a retransmission of a Shuttle feed, that was somehow tampered with. He vaguely recalls that there was a NASA contractor involved in that. He is thinking it might have been Hoagland. Why this came up in connection with the Serpo Old Man (SOM), I have no idea. I am now told that the link between SI and RF was Uri Geller.

Back to the SOM. Has this been laid to rest? It seems that the report about this individual that SI sent to CF contains a lot of medical information, but fails to explain how the SOM became known to SI and to Rick Doty.

In the meantime SI states:

My belief in the Core Story has faded almost to nothingness. You can ask [CF] what I really now believe and why...he has been fully briefed by me and recently.

CF says that this must have been lost in the mail.

Does this make everything as clear as mud?

[3/9]

Bill Ryan has sent a lengthy email to Chris and myself, copied to Victor, that he does not wish to publish, as yet. He provides further information and reasonable inferences about the involvements of SI and RD specifically in connection with the SOM. You may wish to contact him about this.

Yesterday, CF reestablished himself as more of a diclosurist than SI. SI is claiming now, as of a week ago, to be convinced that the idea of a conspiracy and cover-up is a mass delusion. Why am I unimpressed with this claim? Kit stands to know more about the provenance of this delusion than anyone who can be identified. He has fully briefed CF to this effect, but now his briefing document has been lost in the mail, and he has destroyed the original, leaving the rest of the world fully exposed to the fallout

from the virulent meme that he and Rick Doty, almost single-handedly, unleashed upon the world as part of a government sponsored psyop.

Now that his psychological experiment has run amok, Kit wishes that we should absolve him of all responsibility, and never ask him any more questions about his involvement in it. He wishes to retire onto his very lucrative government consulting residues from this very same experiment. Will we, the guinea pigs of the world, put up with this insouciance?

I'm also aware that this 'friend of disclosure' (FOD) contest between CF and SI may very well be staged. It's a lot like the horse race where the owners bet on whose horse will come in last. Hey, guys, how about switching horses?!

Two new links have been brought to my attention:

[3/25/07-- this link has been removed for good reasons.]

<http://www.mysterious-america.net/komarekinterview.html>

I had not previously heard Ed's background story. I suggest you check it out!

Now this from SI:

Ron just forgot the briefing...it was face-to-face recently at the Academy.

I was never connected with Bob and Uri. Bob and I never discussed Uri.

Back to you, Ron.

[3/11]

And this too:

I have no involvement except to communicate with many people (too often!) to try and figure out who is running the hoax, that I suspect is a fairly serious and large one.

Sometimes, I have even ruminated with [CF] about the motives of the mysterious "They" who may be doing it. The "Report" to CF was my telling him that, and his response of agreement. Several years ago...I also wrote several long emails to [CF] (we have sometimes called them "Reports" but that is a bit overstated. They were really ruminations at some length...long since erased from my GM computer when I left GM, where I expounded (before the SERPO Hoax) that while the "Core Story" might exist...and even part of it be true...we had zero idea of what parts, and neither of us (CF and myself) had ever been briefed on it by anyone in an official capacity. They were highly personal...because I named names...but they were not classified and they were not "official." Many people, including some pretty high-level people unofficially (including me) think there might be a "little" bit of the "Core" that is real...wrapped in mystery, magic, and absolute delusional meanderings of people who have created an artificial reality...that we are all seeing is very hard to rationalize.

But, no...other than being an analyst...and highly interested in the reasons that people become delusional (clinically)...I have never been "involved" in perpetuating any hoax about Serpo or any other thing.

(Oh yes, I also did not kill Holly Maddux, did not participate in her autopsy, and did not testify in Ira Einhorn's trial, and did not run a psychic warfare program. I am actually (well, in the past ten years or so) a fairly moral Anglo Catholic (Episcopalian) and try to be not bad guy...but I was pretty immoral in the past. Not about government stiff, though. That said...even then I never lied or participated in

hoaxes...or other nefarious activity that makes people sick. I do take my Hippocratic oath seriously. About 50% of the internetania about me is true...it is actually the good 50%...which in my business is a blessing. All the physicians in one of the Departments in which I have an appointment (Psychiatry and Behavioral Neurosciences...not the other one...Diagnostic Radiology) have tons of incorrect, sick, and frankly crazy stuff written about us all the time by many of the thousands of psychotic patients we see every year...so over time, our skins thicken up.)

Interesting. No?

<<to try and figure out who is running the hoax, that I suspect is a fairly serious and large one.>>

IMO, [a] there is really only one ('serious'!) issue left. Is it possible that this 'hoax' is of insufficient national interest to not warrant a high priority investigation? Is there even a reasonable case to be argued in the negative? What then was the conclusion of that investigation? More specifically, is it possible that CF would not be privy to that conclusion? Would he (finally) have been participating in the R&D show for the past fifteen years, if he had reason to believe that the story was just a hoax?

[Topical Index](#)

2/5/07

VLAA/SDP

VLAA is the Very Large Active Array. It derives from the VLA in Socorro, NM that figured in Carl Sagan's *Contact*. It is a follow-on from the CPN, Civilian Phenomenology Network, an offshoot of the Aquarium. The VLAA is also the Earth based counterpart of VALIS; it is actually intended to be our uplink to VALIS. It is our Global Brain. It is our Noosphere. It is our Psychic Early Warning System, PEWS. It is wired via the Internet, of course. In as much as it needs a control center, the BPW website is the temporary public aspect of that 'control'. It is also the precursor of the Global Portal that will be the Eschaton Live.

SDP? Well, that is the protocol under which the VLAA operates: Sleeping Dog Protocol. Yes, this is the radar system that flies under the radar that is the SDN, Sleeping Dog Network, e.g. the 'news' divisions of ABC, CBS, NBC....well, you get the picture. The entertainment divisions & Hollywood, etc., that is quite another story, don't we know.

Walk softly and carry a Big Array, those are the Aquarium marching orders, as near as I can tell. None of this is new, of course; it is just being reiterated at what may be a critical time for the aquarium.

And we have all heard about smoke and mirrors. One thing to bear in mind is that where there is smoke, there is going to be more smoke! The smoke will get thicker. Don't let the smoke get in our eyes. It is being used for multiple purposes. It is the chaff that helps to shield the VLAA from the SDN. But it is also used to send smoke signals, and for network analysis and maintenance, e.g., RAM/Jupiter/Serpo, etc..... Consider the case of BLP, Black Light Power. Was it only a money making scam? I submit, not. I submit there were ulterior motives. There always are. There always will be.

Master the possibilities. Look for alleged government, insider connections. Some may be real. Some of those will be dimwitted, others won't be. Cash will flow, virtual and otherwise. Some goes toward buying Jaguars, some may go deeper. Contacts can be made and broken. The public trough will have antechambers wherein serious deals may go down. It's the peeling of the onion. Try not to cry, and don't let the son catch you napping.

Is this perfectly clear?

Command and control. Presidents have been known to go bonkers with this stuff, or lose parts of their head. It can happen to the best and worst of us. The show must go on. Recall 20 + 8. Make that 20 + 15. 15? We're talking secretarial and above. 1/3 dead, 1/3 retired, 1/3 active, 2-3 repositioned. That is slim pickins. So, ok, we pick up the slack. Network redundancy? Of course, just like the Internet that we feed off of. I'm here today. Gone tomorrow. Fret not. There are plenty of chips off the Ol' Block. Just remember where you came from, and, trust me, it weren't from no primordial soup, *pace* Julia Childs, the intel brat herself, and friend of Carl's.

Speaking of which, I'll be out of the loop for a few days for some spring training down at the Fort, *a la* O's and Bosox. Don't let Art sell you any reptoids while I'm gone.

[3/20]

The following is a concatenation of emails to Ray and Jack composed this morning:

Ray,

Theory of mind:

<< It will contain math, yes. But will it be strictly math? I doubt it. Holism would not allow such a thing.>>

Ok, so far, so good. But then it cannot be said that the mind is physical, because everything physical is strictly reducible to mathematical models.

Jack, the cussed fool that he is, will not even admit this much. When he gets to this point in the argument, he just starts screaming and throwing a tantrum. It is not a pretty sight!

If the mind is not physical, then what is it? You wish to say that it is a System, but what kind of Beast is THAT??

<<System Theory IS a branch of science that deals with emergence and wholeness, rather than *reductio ad absurdum*... >>

Wonderful! I love it!

But is this, *ipso facto*, Science? I would humbly suggest that this is engineering, since there is no theoretical superstructure.

I have absolutely nothing against engineering. What I object to is when scientists, like Jack, inflate their theoretical ambitions to the level of a Metaphysic and then postulate that any other kind of Metaphysic is somehow illegitimate. If Jack were just a fool, it would be ok, but Jack is an arrogant and extremely mouthy fool, and that is much less tolerable. But also more amusing, in this long run-up.

The question before us, then, is whither Systems (Theory)?

Systems, *par excellence*, are biological. The (biological?) system that stands out, in all of nature, is the human mind. What are we to make of that System?

<<If it weren't for the fact that the possibility of science providing a better and better description of mind totally upsets the apple cart of your worldview, you would be jumping on Systems Theory and indeed Systems Engineering for the simple fact that it denies the eternal reductionist credo that you disdain... and it further embraces understanding emergence from the interrelationships of disparate elements. >>

Please, Ray, be my guest. Work your heart out to advance the disciplines of Cognitive Science and Artificial Intelligence.

I have (an) other fish to fry. I'm a prophet. I'm telling you what you will be discovering. Does this make me a Spoilsport? Perhaps. I do spoil Satan's sport.

Let's cut to the chase. Is THIS all there is to life?? Often, and seemingly for most or many of us, who do not own Jaguars in SF: nasty, brutish and short? OR, are these simply the times that TRY our souls?

I would much suggest the latter. Even for those of us who do not have to compete to survive on a daily basis, a life lived in the Shadow of transcendence is infinitely preferable to ten lives lived in the pursuit of TOYS in the California sun. No?? Anyone care to disagree? Better speak up now, because where we're going, there ain't no toys!!

What is there of a System that is transcendent? How about my Compaq? Is it transcendent?

My Compaq is a dream within a dream: an engineering dream, if you will.

I don't expect anyone to believe this off the bat. You will, like me, finally be forced, by the dint of

everything coherent about the world, to accept the overwhelming logic that the world is more like an idea than a mere 'mechanism'. But don't take it from me. See for yourself.

I compare my Compaq with a Symphony. It is a vision in motion. It has only a functional/aesthetic reality. Otherwise it is rusting metal on the way to being recycled, or a cacophony adding to entropy and global warming.

Yes, our minds have two overwhelming impulses: to analyze and to synthesize. Modernity is just the overweening of the former. With postmodernity, the balance begins to tip in the other direction.

My mission, should I choose to accept it, is just to seal the deal of postmodernity with a Metanarrative. Nay, with THE metanarrative.

But, hey, don't take it from me. See for yourselves.

Yes, I speak of the Soul of the Machine.

Thousands, nay, millions have worked their hearts out, just like Ray, to put this symphony in glass and steel right under my fingertips.

And now I am using that 'symphony' as an instrument to fire the Cadenza that will be heard around the world, or work my heart out, trying. How many Jaguars do you think it would take to pry this Compaq away from my Near Death Grip/Trip? Ask Debbie or Ron.

We all struggle all the time to become one with our Function in the Symphony/System we call the Cosmos. We struggle always to find our souls. Yes, to keep body and soul together! Religions, and Science, usually try to pry them apart, and that is 90% of our struggle, i.e. compensating for the cultural forces of dualism.

Religion & Science is the Judgment of Solomon. Each bargained for half of the Baby, and so Both were shown to be counterfeit parents of the Truth.

Here, for the first time ever, you will hear the Whole truth, so help me, God! If you don't believe me, google it for yourselves. This is the only metanarrative that can make sense. It is the story of the Best Possible World, from Alpha to Omega. I own the domain: .com, .net, .org. As my baseball coach once advised, if you're gonna make a 'mistake'; just be sure to make it Big. Don't be a pussy with the Truth. Yes, this is Dan's Folly!

And, yes, there is that of this Compaq (and a Fifth of Beethoven) that will be going to Heaven with me/us, on the Glory Train. We cannot take our toys with us, but we can take their spirits. Thus the paper Jaguars that adorn our grave sites around the world. Yes, and that makes me a Paper Tiger.

And if I can keep typing at the speed of light, the other bloggers will still be lacing while I'm racing. But is Truth a contest? I don't think so. We don't own the Truth. There are patents only for the little truths, only for the toy truths.

Instead, we become the Truth. We become One with the Truth, which, by anyone's definition, must be God. That is the apokatastatic rapture. Let Jack stick that in his Formulas. This is the struggle/meaning of life. You can play it again, Sam, but only on your own nickel. God goes around but once. Despite the many appearances, Nature abhors redundancy. The same person who brought us the Best Possible World (BPW) also brought us the Identity of Indistinguishables (II), Wilhelm L. They amount to essentially the same thing.

There is only one electron, it just keeps being (a la Dirac) shuttled back and forth in the cosmic Warp and Woof. The same is true of our Souls and of our Toys. There is finally only one Soul and one Toy. We are God's Toy in the cosmic Dialectic of Alpha & Omega. She is our Toy in the Aeon of the Rapture.

I play God. You will, too, and much sooner than you think, nay, much sooner than you can possibly imagine!

Do I speak in aphorisms? It is the prerogative of philosophers, and certainly in the tradition of Ludwig W.

The Physicists can stand the Truth only when it lies etherized upon their Mortuary Slab, and under their Scalpel. I am their worst fear: the self-resurrecting Truth. God is coming back, and is She pissed!

Yes, the Ballyhooed Theory of Everything turned out to be 10^{500} theories of almost nothing. Yes, they learned more and more about less and less, and now the Whole Truth comes back to bite them in the Arse. Do I rub their noses in their own myopic intellectual arrogance? Were they asking for it?

Back to Ray.

Yes, you are absolutely correct. The Cosmos is a System. Like every System it has a Function. I am merely the first to spell out that Function, here on the Internet and in Real Time.

So what? What does that make me?

If my rendition of the True Metanarrative is even in the ballpark of the Truth, that makes me, IMHO, the Second Coming of the One who was and still is the Truth and the Light and the Life. Would anyone care to dispute, oops, discuss this?

So what? That and what else will get me a cappuccino on Capital Hill?

Yes, there is some value to being the firstest with the mostest. All you messiah haters can think of me as the least possible one of your many fears. There is blood in the water surrounding the body of Modern Scientific Materialism. Jack is one of the Sharks, and there are many others plying these same waters. But if you, little ones, hate the Messiah, think how much more the PtBs must hate Her!

But they could see the Visitors' handwriting on their Wall. Being pragmatists to their cold little cores, they decided to cut the best deal they could in the hopes of pulling one or two of their chestnuts out of the fire. I am the child of that pact made with the Devil.

In most people's (religious) eyes, if I appear as anything more than a cipher, it will be as the Antichrist. That's to be expected. It will all be over then, but the shouting. And to that end, the only good saint is a Dead Saint.

Was I ever given a real choice on this path? It sure doesn't seem like it to me. There, but by the grace of the cosmic System, went you, and you, and you....

But, finally, there can be only one Alpha and Omega in the Cosmic System. Individually we have, necessarily, pursued every possible path, and the Best Possible World is just the Least Action Sum over all of our individual (quantum) paths.

So there we are.

Dan

Any questions, comments, discussions.....???

P.S.

As I said at the beginning, Systems Engineering is not a Science because it lacks a supestructural Hypothesis.

If, however, you add the BPWH to SE it will become Systems Science. And, IMO, nothing less will suffice. Nothing less will provide it with any coherence.

In fact it will then be the Queen of the Sciences; all else will be relegated to footnotes. Eat your heart out, Jack!

[3/21]

Ray,

Only rich folk give money. Their heirs give of themselves. I do have some continuing, low-level 'commitments' from which I regularly struggle to disentangle myself. Thanks for the thought, however.

1.) <<Since we see fractal progression/regression all around us in the universe, would it not be a reasonable assumption that the human mind could indeed be a functionally fractal substructure to the human body? I think so.>>

2.) <<Quite honestly, we don't need "aliens" nor "global warming" to act as some explanation for an upcoming ELE. It seems clear to me that any closed ecosystem (such as ours) not only has a specific "carrying capacity", but that Nature has ensured (by design) that it shall be self-regulating. And all this leads to the "what do we do about it?" question. Well, that is what leads to the first principle of spirituality (as I see it):>>

These are two very important points.

As time permits, these are the points that must be pursued.

I shall be doing so in what follows. Please chime in as the Spirit moves.....

1.) <<Since we see fractal progression/regression all around us in the universe, would it not be a reasonable assumption that the human mind could indeed be a functionally fractal substructure to the human body? >>

Of course.

And then there logically follows the Amazing Twist: the human body may also be viewed as a functional, fractal substructure of the Human Mind.

That is the Missing Link of the entire Cosmic Puzzle.

Is there any good reason to suppose that the Cosmos is not a System?

If it is a System, we must ask ourselves its function.

Every other issue in the world becomes subsidiary, and, in particular, the ELE issue becomes subsidiary to the Functional Issue:

2.) <<Quite honestly, we don't need "aliens" nor "global warming" to act as some explanation for an upcoming ELE. It seems clear to me that any closed ecosystem (such as ours) not only has a specific "carrying capacity", but that Nature has ensured (by design) that it shall be self-regulating. And all this leads to the "what do we do about it?" question. Well, that is what leads to the first principle of spirituality (as I see it):>>

ELEs? [Extinction Level Events]

Where then would ELEs fit into the Cosmic System?

They do fit into our Gaian system, evidently.

Notoriously, it was an ELE on the reptilian side that paved the way for the mammalian/human domination of Earth.

That was functional for us, less so for them.

What then would be the function of a human/mammalian ELE??

Payback???

What kind of System is that? I'll tell you, it is the Pendulum/Oscillator System.

So where is the intelligence, where is the software? The IQ of a pendulum is simply 0.

But wait! If the Cosmos is a System then we must be an integral part of that System. No?

The cosmic software is VALIS, and since humans have a near hegemony on the Gaian software, we must assume that we are an integral part of VALIS. Nothing else would make the slightest bit of sense.

Where does that leave your precious ELE?

I'll tell you exactly where that leaves your ELE.....

The only known function of past ELEs has been to increase the Gaian IQ.

A future ELE would clearly fail to serve that function. Or would it?

<<Steven Hawking would agree with you Jack. He recently stated that the only hope for survival of the human species is to move out into the cosmos. A great number of global catastrophes await us beyond the current human produced one. Let's get those mother ships built and start colonizing. There are many traveling ET species out there, lets hope we can negotiate our way into joining them rather than being harvested by them. Certainly we want to leave behind the idiots that got us into the current scenario of destruction. >>

Evidently it is the PROSPECT of an ELE that can now serve to give our Gaian IQ a swift kick in the butt!!

But what kind of kick is this? Is it random or is it directed?

Steve and Jack certainly understand the direction of the kick, i.e. we are being kicked out into the cosmos.

But wait! Is that not much too literal and linear in their thinking??

Think back to the Dinosaurs. What happened to them, really? Did they just die off? Of course, not. They were TRANSFORMED.

They were transformed into birds and they took off into the sky.

So you see that Steve and Jack are no smarter than the Troglodytes.

What are they missing? They are missing VALIS.

They are missing the TRANSFORMATION.

The trick here is to think outside of the Troglodyte Box, to think outside the Jack-in-the-Box.

The Key to that is VALIS. Jack does know about VALIS, he practically invented it, along with Bohm (Implicate Order), Wheeler (Participatory Universe), Tipler (Omega Observer) and PKD.

BUT, he has not quite absorbed the Spirit of VALIS.

Jack is Avian, I'm Aquarian.

Our assignment, if we choose to accept it, is not to sprout wings (a la Steve), nor to become worms (a

la Jack).

Our assignment is simply to uplink into VALIS.

This is what the Aquarium has been about since Day One: VLAA/SDP.....

<http://www.bestpossibleworld.com/nexu67.htm>

Any questions??

[3/22]

Anna,

Yes, evidently I was mistaking you for Judy in this regard, but just now that is neither here nor there.

There is a conversation that will have to happen about this atrocity, if there is ever to be another chapter in the BPWH.

I have made only a few mentions of this on the website. Nor am I a student of the extensive literature on the deontology of the Holocaust.

So I don't know if I have anything new or helpful to say on this subject, but this is one way to find out.

I choose to think that I was a victim thereof. Will you hear me out? Weren't we all in one way or another?

But I am being more specific. I'm talking reincarnation, and the fact that I was born late in '43, for one thing.

Am I trying to exploit evil for personal benefit? Hear me out.

I have not had a single flashback of this sort. When I hear and see depictions of that event I am moved, as should be anyone with a grain of empathy.

I suppose it is somewhat in the spirit of JFK's *'Ich bin ein Berliner.'* and ironically so.

Oh, yes, BTW, my other sister, now in Montana, is a Holocaust denier, but that is another story for another day. She has afforded me every opportunity to attempt to think constructively on this topic!

I am likening the Holocaust to an historically unprecedented mass abduction. How else could it have been carried out without giving away the whole show?

It was precisely to test, and to educate a very specific and closely bound cohort of souls for a future mission.

That mission is just beginning to unfold now. This is the return of that Bird Tribe.

You get the gist of it. Need I say more?

Dan

Anna,

As I said, there has not been a single flashback. Nor need there be, nor even should be.

Dare I say, that is the 'beauty' of it?!

We need never know precisely who was what. We need, though, to master this Possibility.

Everyone is allowed to think, *Ich bin ein Auschwitzer*.

<< Personally I do not believe that people must suffer to become educated, or more human. Fact is that the victims of abuse often become later abusers themselves.

Any god who would want to test his creation with pain can go to hell! >>

Well, you will recall that Jesus was alleged to have done precisely that, for precisely this reason.

And yet we do suffer, and yet you do believe in a divine plan of some sort.

Some things we can learn the easy way, some things many of us can only learn the hard way.

A minimal degree of suffering is unavoidable. Has there been on Earth any more than that minimum? According to the BPWH, there has not been.

I will discuss that point here for as long as is required of me.

Fact #1: we are mortal! Most of the suffering in the world revolves around that simple fact. Why must there be mortality in the BPW?

We could never have accomplished our mission, the Recreation of God, without the circumstance of our mortality.

This is the double message of the X-event. God dies so that we may live. We die so that God may live. Think communion, think vicarious atonement, etc.

My sister?

She has her reasons, so does her partner, e.g. he was pilloried and sent to jail by the AMA. Are these good or adequate reasons? I think not, but I was not there, in Montana.

Dan

Dan,

I do not believe in general reincarnation. However, the fact that so many people remember 'past lives, points to something rather curious: perhaps memory is stored outside our minds(brains) and the access to it occasionally becomes possible. So, your 'memories about your past life, could be someone else's life. And if it means anything, I would like to point out, that Deuterium is the most memory retaining element in the universe.

< We could never have accomplished our mission, the Recreation of God, without the circumstance of our mortality. >

God should be able to recreate himself. So, if we need to recreate anything, this cannot be god. But what?...

Anna

Anna,

I would maintain that the best possible God is not an omnipotent God.

Consider that the worst curse possible is to be self-sufficient. That would be tantamount to the curse of solitary confinement.

We surely are not that. If we have been created in the image of the Almighty, then God cannot be almighty.

Consider the simple fact: there cannot be a Creator w/o a Creation. God could not be God without us.

The BPWH implies some form of Panentheism.

The BPWH implies a bootstrap form of Creation. That is the Ouroboric cosmology.

God creates us, we Recreate God. We are God's recreation.

There can be, need be no redundancy here. There is One best world. There is nothing to be gained from a second best.

There is that of Creation that is eternal. That is the best part. It is the Akashic Re-cord. It is also the Akashic Cord that is the bootstrap.

Need I go on? Is this not all just excruciatingly obvious? This is just the doing of Sophia. I'm just the translator.

Deuterium? It is actually an isotope of hydrogen, not an element. Well, according to the Homoeopaths, water does retain the memory of its solutes, indefinitely.

Dan

[3/27]

Let's suppose that the President were advised that there appeared to be an ongoing disclosure initiative hereabouts, and that he wished to put and end to it. What might happen? I don't think that much would happen any differently from what continues to happen hereabouts. I have sufficient reason to believe that the President does not have veto power herein. There is more than one player here who has sufficient information, and quite probably the motivation, to override any such veto, should one materialize at this very late juncture. And that override power would indeed be exercised, by one or more of these actors. 'Termination with prejudice' at this point would only hasten this unraveling.

Is this a boast or a challenge? I should hope it would not be taken as such. It is merely a sober assessment of much accumulating information. And I say this particularly in light of the alleged and abortive disclosure initiative of 1991.

I am taking pains to consult with several less involved individuals to check my assessment against theirs. If there is a significant objection to this assessment, I will post it here within a few hours. In aeronautical terms, then, we have, with some authority, passed the point of no return in this process.

The remaining issue then is whether some unforeseen event might truncate this process. It would have to be an event of some very considerable magnitude, and therefore probably of an *ad hoc* kind. That such an event might even be allowed to occur, would then count strongly as *prima facie* evidence against the BPWH. That is a challenge directed specifically at the CPtB, e.g. VALIS, etc. Or, make our day!

[3/29]

The following paper (c. 2003) has been brought to my attention:

http://www.nidsci.org/pdf/cattledeaths_tse_epidemic.pdf.

The author is Colm Kelleher. He has authored two books: *Skinwalker* (12/05) and *Brain Trust* (2004).

Another source tells me that an MJ-12-type document circulated c. 1986 made reference to a very specific genetic link to dementia that did not appear in the scientific literature in 1998. However, the import of the alleged anachronism was not grasped until a similar reference was found in one of the Serpo documents. This alleged Serpo connection has not been confirmed at this point. There is a related rumor, however, that some of the SOMs are/were being treated for dementia.

Kelleher (2003) proposes the following explanation for the epidemic in his fictional *Brain Trust*. The disease agent for *kuru* was imported from New Guinea:

Nevertheless, it can be unequivocally stated that the importation of dozens of kuru brains and their storage at Fort Detrick, Maryland together with subsequent infectious testing in multiple species at NIH during the 1960s, represented a huge introduction and spread of infectious TSE's into the United States. Primates (Chimps, Gibbons, Old World monkeys, New World monkeys), guinea pigs, mink, goats, sheep, mice etc were injected with human kuru brain extracts. It is intriguing that the first documented case of CWD appeared in 1967 at a Colorado State University wildlife research facility in Fort Collins, Colorado, within a few years of this intensive cross species kuru testing that originated from experimental facilities at Fort Detrick and Bethesda.

Kelleher also points to the likelihood that BSE and CJD related epidemics are being vastly underreported especially in the US.

In that same paper he dwells at length, and with much data, on the geographic and temporal links between incidents of cattle mutilation and outbreaks of the BSE-type. He concludes that the visitors are testing for the spread of the disease and, at the same time, attempting to warn us of the growing contamination in our food supply.

A less benign connection might well be made. This is the Andromeda Strain scenario. A disease vector was accidentally or deliberately injected into our biosphere by the Aliens. They are now trying to contain it and warn us about it, or they are facilitating its additional spreading and are leaving their inimitable calling cards in the process.

These problems and speculations were brought to the attention of CF, at least several months ago. He appears to have taken no action. When I recently asked him about this, he cited insufficient evidence as the reason for his inaction.

It seems now to have fallen to the UFO community to do a follow-up investigation, and some preliminary work is underway.

I'm having difficulty with several aspects of the above information and speculation.

If this were a serious problem, known by MJ-12-types, at least since the '70s, why this very belated bit of whistle blowing, just now, and why be dumping it upon us UFO-types? By now irrevocably contaminating this potentially very serious public health menace with UFO speculation, the net result will only be to further delay a much needed scientific study.

At least two other possibilities come to mind. This a real but perfectly mundane problem that is out of control, with no foreseeable solution, and the decision is simply to lump this in as a sidebar to the larger ufo disclosure process which is already in its late stages. Or there is, in fact, considered to be a real, undeniable link, and so the problem cannot be publicly addressed, independent of disclosure, anyway. In

either case, the epidemic could be helping to drive the disclosure timetable.

Or finally, the whole scenario has been concocted as a scientific hoax intended to be interjected into the disclosure process, either to derail or further delay it by muddying these already murky waters.

I would advise that we keep our powder dry.

Back to the politics, if you please.

If what I said two days ago is correct, then we should suspect something like the usual conspiracy theories that link the Bilderbergers to the ufo cover-up. After all, those folks would have a greater need to know than any given President. What then might be the connection between the 'Bilderbergers' and the Aquarium? Am I supposed to be their mini-ME (anti-X?) mascot? Or could I be the unwitting front for a Christian cabal, out to subvert the 'Bilderbergers' plot for an NWO, with its own KC/BPW scenario? Is there even a difference? Who the heck knows? I'm sure I would be the very last to know!

With all the potential for internal bloody strife, one ought to wonder why things seem to be proceeding in a relatively orderly fashion. Is that a sign of hope, or just a sign that nothing really is happening?

For those of you keeping score, the number of known briefees, recently reported here as 20, has now been expanded to 200. Anyone for 2,000?

[3/30]

The problem at hand is to firm up a timeline for disclosure.

We are talking about disclosure becoming a political process. At some point it will have to become integrated with the political processes around the world. The logical place to start is here in the US. This is based in no small part on the 'repositioning' described above, where, at a minimum, four of the main Intelligence officers have, at the least, been well briefed on these matters.

Just connecting these two dots, we should plan for a public disclosure prior to the primary elections starting in January. And the sooner the better? Well, let's see.

What needs to happen with the VLAA/SDP prior to the wakeup call? Basically, all we need to do is finish is the decommissioning of the inside control groups by D-day. Most of their functions would need to be transferred to outside control soon thereafter. We're not talking about doing this enmasse. The decommissioning has to be thorough and on an individual level. MJ-12/Bilderberger personnel could be recycled into the fish tank only on an individual basis. Of course, more outsiders would be brought in at the same time. Say what? One-third insiders, two-thirds outsiders, maybe. And we're talking about a part/full-time staff of maybe 100 by January. That would keep us all plenty busy.

Recruiting efforts would be extended to existing organizations. To some degree, existing outside groups could simply reorient themselves toward one or more aspects of an expanding aquarium agenda.

By January, at the latest, there ought to be, say, one hundred reasonably coordinated, mostly volunteer staff ready to participate principally in the state Primary elections.

Is that too much? Too little? Too late?

We turn a leaky old fish tank into a steam ship in a few months. That would be mainly my responsibility. My primary tool will have to remain this old blog, plus a lot of Skyping. Would there be any budget? I

wouldn't count on it for the first year or so.

Whatever was on the inside has been run as a tight ship. We will have to accommodate that fact during the process of decompression. The fish-tank will have to serve as a hyperbaric chamber for those who were in deep and wish to be cycled to the surface.

Our shakedown cruise will be occurring as if in the middle of a hurricane. There will be no ports-of-call.

I note that [Open Minds Forum](#) has another thread going on these latest posts. I suggest that as good place to start for those with questions about these topics.

Back to Mad Cows and other delicacies.

My sources are suggesting that Mad Cows are a great way to introduce the Best Possible World! I kid you not. Might lead out of the gate with the scary stuff, and then its all upward and onward.

The bad news is that our brains are turning to mush. The good news is that they are just for decoration anyway! I'm pulling your leg, right? Well, not entirely!

Remember, according to the BPWH, our bodies are really just for decoration. Yes? And our brains are part of our body. Recall the cases of hydrocephaly where the patient is found to have water on the brain, or just a little bit of brain floating in a lot of water, with the patient having a perfectly normal IQ. And take me, for instance, a quasi-stroke victim, and you'd never know it, right? Right!

Here's another way to look at Mad Cows. According to the BPWH, Creation is quantitatively finite. There are no more than about 10^{10} souls, i.e. humans, humanoids, angels, demons, etc., etc. The starry sky? Another decoration, just a backdrop for the main stage which is right here on Terra Firma. Am I hopelessly pre-Copernican? You bet your bippy! I'm a postmodern, virtual reality, Matrix fan. A horseback estimate should tell us that we 7×10^9 humans make up a goodly part of the spatialized component of the cosmic mind.

Cutting to the chase, we humans are to the cosmic Self as our 10^{10} brain cells are to our individual selves. It's all a cosmic Metaphor, as above so below, microcosm/macrocosm, etc.

The whole point of Creation is for the Cosmic Mind to recycle/rewire/refresh itself in an ouroboric fashion. It actually happens only once, since the Omega is looped back to the Alpha, as a singular teleological time loop. This is just the BPWH in a nutshell.

In our final phase of spiritual evolution, our Gaian mind, Noosphere, Global Brain is being rewired right here on the Internet, and through our collective unconscious/dreamscape, etc. This macrocosmic rewiring is being reflected in our microcosmic brains, as we all, hopefully, participate in a pandemic of Aspergers Syndrome. I.e. we all become functionally specialized genii in the global brain, the way our neurons have specialized functions and connections in our our own heads.

If we get this rewiring project messed up a little bit, instead of Aspergers, we'll all be developing autism. And if we screw up a lot, our brains will all turn to mush.

There you have it. The spooky juxtaposition of BSE/CJD/Mutilation cases is just a friendly reminder from our Visitors of what our options are at this Millennial juncture in our Gaian sojourn.

And, yes, our MJ-12 buddies just wanted us to know that they know there is a drop-dead date for disclosure.

I'm guessing it's in the next six months, but, hey, I've been wrong before.

It's probably fair to say that in the Millennium we'll all become much more interdependent, integrated and specialized than we are now. I don't think this prognosis augers well for robber-baron capitalism. What's the alternative? How about a Holy post-Roman Empire? How about a Global Guild system? You name it, but we won't be in Kansas anymore, Toto!

Before I forget again, and while we speak of Decoration, if you are a student of etymology you will know that the cosmos is just God's cosmetic. That's how we know God is a woman! And that also explains the whole BPWH in one sentence.

In this connection, be sure to see Indra's Pearls/Net, etc.

[3/31] [a]

Yes, I have been following the chat on the above OMF link. A junior forum member, 'Smokey', has suggested that I'm being M-Fed by my sources/handlers (S/Hs).

This latter point became a heated topic of discussion between us, just in the past hour. We agreed that I would summarize our discussion here.

The discussion boiled down to this one point, IMO: either my S/Hs must continue to attempt to characterize me in public as being another Bennewitz, or they would have to concede that, most likely, I am Jesus. Is there truly any middle ground in the argument? My point is that there is no longer any middle ground.

Off the top, it is conceded that I don't seem to be in the same ballpark as a Bennewitz case.

The issue then is about the Jesus connection. Why, she wonders, can't I just be another messenger, like a lot of people in this arena at present?

My answer is that this is a long story, going back with me for thirty years, which has been amply covered in this blog.

Then she asserted that it is not logically possible for me to be Jesus. That was where things became heated. The argument also become somewhat technical and theological.

Here is my thinking on that topic. Mind you, I'm no theologian, but do bear with me, folks. This is where, finally, I maintain, logic trumps even traditional theology.

I turn the argument right around. The logical first question is not whether Dan is Jesus, but whether Jesus was the Messiah.

The technical point is that Jesus was not the Messiah. Jesus, as the disputable story goes, was developing such a large following in his ostensibly Messianic mission, that the PtB decided they would have to put a wrench in the works, and allegedly nailed him to a cross. End of story for the Jews. The Messiah was supposed to be a human who would conquer the world on behalf of Yahweh. No way, Jose.

Then along came the Christians claiming, among other things, that Jesus was the Messiah. To every self-respecting Jew, that was, *prima facie*, a silly claim.

So now we have two different definitions:

I'm talking to Jake Reason.....

Now I'm trying to get through to David Gladstone through Jack, but I'm having no luck. We are trying to sort out the Messianic issues.

Is there a Rabbi in the house?

Everyone has deserted me now.

Where were we?

The last issue being raised was whether the Messiah's Kingdom was supposed to include gentiles as well as Jews.

I'm not sure why this is even a question. Are all the gentiles supposed to roll over and play dead? I don't think so.

Tell that to Gordon Novel, coauthor of KC, and he will come and break your leg.

The Proof is in the Pudding

April Fool's?? Sorry, that question rises beyond my pay grade.

Now this from Jack and David Gladstone:

What did Winston Churchill say?
Dan, what is it exactly that you want?
Put it in writing.
As you know I don't like audio phone calls.

On Mar 31, 2007, at 7:04 PM, d14947 wrote:

\$20,000??

Well, in a state not entirely sober, I told Jack I would pay him to arrange for me to discuss messianics with a Rabbi. I don't think Jack knows a Rabbi, unless his Father was one. So we settled on David. I offered 1k. Jack wanted to know what his cut would be. I said, 300. So let's see, I would owe David 700, if, by some odd chance, he were actually willing and able to discuss messianics with me. It turned out that David refused to discuss the issue unless I could first offer him proof that I was the messiah. I said, no way, Jose. So now you tell me, how much do I owe to Jack and David? I guess I could look in the Yellow Pages to see where I could 'rent' a Rabbi.

In the meantime, Rick Davis (aka Jake Reason on OMF, and Dolphin!) and I did discuss this issue. It was long and rambling. Rick is also an eschatologist.

There were two issues. Could the world be saved? And, if so, by whom? I made a plausibility argument on the positive side of the first question. We both agreed that the China card would be critical. I offered some evidence to the effect that the China card had already been played, not once, but twice. Once in 1980 and again in 1998. Students of these pages will know to what I am referring.

There is also the Islamic card. I have offered evidence that it was played on and before 9/11.

That brought us back to messianics.

Before talking to Rick, I had suggested that the argument needed to be turned around. The real question may be, to put it bluntly, not so much whether Jesus accepts Dan, but whether Dan accepts Jesus. It's also the problem of who is the Pope's confessor. There have to be two people at the top, each vouching for the other. This is just part of the Cosmic Dialectic.

The larger point is that there is a package deal going down here. It's gotta be all or nothing, folks. The world cannot be half saved! We're all in the same lifeboat, now!

And, by the way, don't cry for me. This vaudeville act here can hardly hold a candle to what I saw on Friday. It was *Bye Bye, Birdie* at Towson High School. My nephew, Josh, was in the band. In front of a live audience of 700 of her friends and their parents, Kim/Karly is required to perform a virtual striptease. Now that takes Nerve!

And speaking of Soap Opera, it appears that the Aquarium protocol has now been agreed that I'm supposed to be the last fish allowed to gurgle in public. Sure, you all can sneak around in the dark all you want, just don't get caught off the reservation or hand in the cookie jar when the sun comes up! The Sheriff, CF/(GN?), will get you!

<<Until [CF] publicly anoints Dan, we have nothing but Dan's word on all this. Dan, that just won't fly in this world. [...] Dan you may be frustrated but so are we...Reagan said trust is ok, with verification! That's what we all need. Otherwise we'll all go down with you and I'm not going to do that.>>

Actually, no. All that CF has to say is, 'Well, on second thought, maybe Dan is not entirely nuts, after all.' That's what it comes down to, David. In the Aquarium, it's sink or swim!

Rick wondered what about me being Elijah. Is it the 'star prophecy' where Elijah precedes the Second Coming? At first, I thought I was supposed to be Elijah. But I think that was the Visitors/Three Magi, i.e. the Witnesses. But, heck, I ain't no theologian.

But, I ask you, and you ask me, why can't we dispense with these silly formalities and just go out and save the darn world! Well, you'll just have to ask Sophia and CF. And they'll probably both say I'm nuts!

So, yes, the proof is in the pudding. And where is the pudding? Look around, it's all pudding. Apropos of which, look at history. If the world is to be saved by VALIS, et al, who really did the heavy lifting down here? It was surely JC and the boys. They are the ones who had to set the stage. Talk about your Protestant Ethic, the Incarnational/Alchemical and then the Scientific Transubstantiation of matter, etc, etc. I ain't no historian of Ideas; we'll let them shout it out in this after-Math. Me? I'm just the ten-minute Vaudeville sketch artist.

[4/4] [\[a\]](#)

Allow me another take on the politics of disclosure.

There are insiders and outsiders. The outsiders must explain why the insiders are so reticent. Two (three?) possibilities come to mind:

1. The insiders are good and weak, the ETs are mostly bad and powerful. Nothing for us to gain by publicly admitting our impotence. Jack Sarfatti is the only one espousing this view. But Jack can't explain why the good insiders and the good ETs do not rush to his side. They continue to hold him at arm's length.
2. According to most other ufologists, the bad insiders are in collusion with the bad ETs. The bad ETs are allowed to rape and pillage the Earth in return for their helping to maintain the PtBs in power, not upsetting the social, economic and religious orders.
3. A third possibility is that there are no true insiders, due to the effectiveness of the Prime Directive. We are all being left here to stew in our own juices, being held in probation by the Federation until we can get our own house in order, if ever. There might be a rescue operation for the lucky few.

None of these make a lick of sense, IMO.

All of these adhere to a transhumanist version of modern materialism. Going beyond that paradigm immediately entangles one in metaphysics and religion. The ones who penetrate the Buck Rogers/Star Wars smoke screen are smart enough to keep their mouths shut. To do otherwise is to run a double gauntlet of scientific and religious orthodoxy. I remain the only sustained exception to this rule. It is possible for me only because I have BOTH independent means AND inside political support.

There are then just two factions of insiders: the majority orthodox religionists and those (tiny minority?) who support the Aquarium initiative. All the others either drift or are pushed to the outside margins. Those marginalized ones may become, more or less, random sources for the outsiders. They may also become lumped together with the programmed disinformers.

Where does that leave us politically and tactically?

What holds us heterodox aquanauts in check? Can we not run the gauntlet of the conservative orthodox, conscientious objectors (COs)? Where does CF fit into this picture? I suspect he is simply the honest broker between the two sides, more or less holding me hostage in the process.

We are holding on, both out of necessity and in the hopes of a peaceful settlement with the COs. Both sides know there is a set time or signal for opening Pandora's/Poseidon's Box/Chest. The COs see nothing to be gained by jumping that gun.

In practical terms, this puts a severe constraint on the VLAA/SDP protocol. The COs control the Outsiders and can too easily shout-down and head-off any attempt at an end-run.

The starting gun must have a coercive aspect, to be effective. The COs, by holding out to the bitter end, are gambling that the time gained will more than make up for whatever they might lose by being poor losers, in effect. By their nature, the COs will dig in their heels, regardless of the final cost.

This means, then, that we should expect there to be a public and dramatic denouement to this stand-off on the inside. It's never good to kick a sleeping dog. Someone will get bitten, and it won't just be me.

Debbie found Peter **Tompkins'** [\[a\]](#) *The Secret Life of Nature* (1997), at the Goodwill yesterday. I enjoyed his Pyramid book.

You know he has guts when he attempts to reopen the case of the Cottingley Fairies. But I do not wish to enter into that discussion.

I am interested in the Cosmic dialectic of Shiva and Shakti, that Peter elucidates in Chapter 10. I had previously only thought of them in the context of the Hindu trinity: Brahma, Vishnu and Shiva. Well, Shakti didn't make that troika, but you get my drift. In the Western version, God is the circumference whose center is everywhere, as in General Relativity. In Peter's Hindu version:

The eternal point, Mahabindu, or one, by drawing apart from its static center -- in some miraculous but patently energetic way -- two poles, produces the number two, foci of the primary differentiation of Ultimate Reality into what the Hindus describe as consciousness and power, symbolized by the god Shiva and the goddess Shakti. Shiva stands for the static principle -- potential, changeless, stable -- and Shakti as the dynamic, kinetic source of movement and change.

I could not have said it better myself. I had not realized that this gives the elliptic functions which produce all of mathematics.

[4/6]

Ray,

<< I am that I am. >>

Yes, that is the World Knot.

This is the hallmark of Theism. God cannot be half a person. There is no such thing.

Given theism, deism and pantheism follow, but not the other way around. Yes, this is another form of Trinitarianism.

There is a holographic, organic, irreducible principle at work here.

Thus, it cannot be said that we are merely a collection of ad hoc systems. There is a vital irreducible Self or soul/spirit at the core.

<< And so, are we then to ignore or deny the Deity in other forms of creative creation? I don't buy it. My golden retriever may not be at the same level of sentience and intelligence as I am, but he has been a crucial part of meaningful revelations in my life that may not have come about in any other way. IOW, there is no element of life that is insignificant.>>

Of course not! A vital, divine spark animates every aspect of Creation. That is just the necessary Pantheistic component of Theism.

Nonetheless, we have a special and unsurpassable proxy with God. We are God's co-Creators. And finally, in the Rapture we become one with God, in no uncertain terms.

This special proxy rules out the possibility of Golem, Frankenstein, strong AI, Sentient Computers, Transhumanism, etc.

So let's get back to the J-man and the Rapture. JC was simply the "first fruit" of the Rapture/Transformation/Singularity (R/T/S) of which you speak. That is the idea of Resurrection. JC was the ultimate guarantee of our special divinity, the "I" in the "I am", if you will.

But JC was 'premature' in significant ways. The time was not quite Ripe. We were not ready for the Big R, and would not be for another two thousand years. We have fallen asleep at that switch and now need to be awoken.

What will be the Alarm?

I maintain that it was the secret Visitation of the Three Magi. That is the core of the core story. It is just that story and the expectations surrounding it that bring us together here.

The R&D show has replaced the Aviary as the semi-official outlet for that story. Evidently, Bob Collins has a hard time dealing with that.

I am not asking CF to confirm any of this. Not yet. That day will come. You and I need first to understand why things are the way they are.

Yes, this is a mission into the Wilderness, and we are the Missionaries. All that we lack is an agreeable Mission Statement.

We are here to prepare the Way for the coming Singularity (R/T/S). This R/T/S will be the chain reaction resulting from our global, real-time psychic realignment made possible now on our Unwired Planet. This is the VLAA. This is our Childhood's End. The time is Ripe. The price of delay and failure is made increasingly obvious. The Portals of our Rapture are already in place and ready to be expanded as needed.

What we are lacking is the Pied Piper/Moses to point the way to the Dream Land, the Promised Land.

This Synthesis requires a Thesis, a Cosmological Metanarrative to explain and rationalize the ultimate mystery of the I AM, YHVH.

If the BPWH is not the sufficient seed for that rationalization, then consider this a test-run.

Ray, we don't have time to wait for the Scientific Establishment to flesh out every detail in the R/T/S Theory. It will have to be compiled on the run. Consider this your Bully Pulpit to rally the scientific forces, starting with the Tiger Committee, if you will.

Dan

[4/11]

Alien Morality??

Jack,

For years you have been displaying an obsession with your own bloodline while speaking of your own explicit and implicit messianic proclivities.

Only in a playful way - curious synchronicities detailed in my book Destiny Matrix cannot be denied. However, I am basically joking - I don't want the job. The whole idea of it is nuts.

The only way that a Jew could now become a global King would be to bomb Arabia and Islam into submission, for starters. This explains why you keep flogging the Michael Savage/Neo-conservative line that has had many hallmarks of being a Jewish conspiracy.

Many Americans, Jack, would thank you for not dragging us into your ancient blood feuds. That is exactly why many of our forbearers came over here in the first place, to get away from people who think like you.

This is not a blood feud with me. That's nonsense. The Iranian extremists mean to nuke DC & NYC ASAP and they will because of Libs with Mental Disorders such as yourself who are in denial about the reality of the threat. They are as determined as Hitler.

And then this from Anna (pantheon):

Anna: Can you explain all this to me? Is this about recovering old, or original faith or??

Me: For me it's the completion of History.

Anna: Whose history? Jesus and original Christianity? Christians believe the Rapture will take place when Jews become converted to Christianity. Is this what you are trying to do??

I agree with this view from the following perspective:

The human sojourn to Earth has been for our education: a school for souls, as it is

sometimes called.

Just as we may be approaching a Final Theory of Physics, we may be approaching a final theory of our 4-dimensional existence, the meaning of biological life and human temporal history.

That would be our universal truth. We would have nothing more to learn HERE. That would be the end of our 4-D history. We would then matriculate to other dimensions. That would be our Rapture.

There would be a new Global understanding of the meaning of life and history. This would constitute a mass 'conversion'.

Dan

Jack,

I was hoping to get a bit more by way of histrionics out of you. You seem unusually calm this morning.

As an item of current events, Ron tells me that Robert Shaheen sent him an article about a Bill Shaheen (rel.?) who works in Hillary's campaign. He was speculating about which of us might get Cabinet appointments if we played our cards right with cousin(?) Bob.

Before that, there was a long conversation with Art Greenfield (Antigray) on the matter of Cosmic morality.

In all the years that he has been haranguing our lists with his warnings about the Repto-Sapiens eating us, no one before me has ever taken him aside to explain to him about Cosmic morality.

As the first miracle of my would-be messianic career, allow me to teach morality to Art.

Apropos of this, Ron also brought up the following issue this morning, as already reported to some on this list::

<< He then went on to ask why I was taking my messianic proclivities to be vetted by those of Jewish persuasion. And doing this while realizing they had failed in that vetting process the first time around.

I disagreed with him about that. I say it was Jesus who failed to fulfill the messianic prophecy. Now, that failure was due partly to the fact that Jesus did not have Ron on his team back then, and ended up being crucified. This time around, we come better prepared. >>

But back to morality.

Art can see nothing wrong with the Repto-Sapiens eating us, and causing wars and plagues here on Earth to increase their food supply.

I presume that there are more than a few on this list who agree with Art in seeing morality as nothing more than an intra-species survival mechanism. This is certainly the modern Scientific/genetic view of morality.

First, allow me to address this issue in amoral, survival terms:

Most sane ufologists suppose that there must exist a cosmic Federation to reduce the risk of inter-species war and predation.

Thus do they suppose that the UFO cover-up is inspired by a coalition between evil humans and evil/renegade aliens conspiring to violate the Prime Directive and our own human rights.

But not so Jack and Art. They suppose that the cosmic Federation is no more effective than our own UN. The law of the jungle pervades the cosmos just as it seems to pervade the Earth.

There are several glaring inconsistencies in the picture thus presented, nay, bombarded onto this list over the decade that I have been observing it.

In what follows, I will be addressing those logical inconsistencies, some of which I have pointed to in the past, which should have silenced anyone who had a lick of sense.

(cont.)

From the previous message:

<< Most sane ufologists suppose that there must exist a cosmic Federation to reduce the risk of inter-species war and predation. Thus do they suppose that the UFO cover-up is inspired by a coalition between evil humans and evil/renegade aliens conspiring to violate the Prime Directive and our own human rights.

But not so Jack and Art. They suppose that the cosmic Federation is no more effective than our own UN. The law of the jungle pervades the cosmos just as it seems to pervade the Earth. >>

I ask if Jack's and Art's position makes any sense.

Civilizations capable of FTL travel and of constructing WMD would not have been able to survive for millions of years while interacting with each other, without the most stringent controls toward any aggressive behavior.

That much is indisputable.

So then Art comes to Jack's defense with the following piece of 'moral' reasoning:

Morality has no absolutes, it is all relative:

Morality, if it applies, applies only to the high end of what ever may be the evolutionary pecking order:

In other words, it is no worse for an advanced Alien to kill us, than for us to kill a cow.

This is very much like the morality displayed in *Hitch-Hiker's Guide*, and many other movies featuring alien invasion.

Earth is just another ant-hill along side some Inter-Galactic highway. This is great fodder for laughs and horror, but, for it be the constant moral diet for those of you who have been its passive targets here over the years, should be shameful in the fullest sense of that word.

Nonetheless, I will attempt to explain/excuse your passivity here, in what follows.....

(cont.)

Jack, Art et alia,

(cont.)

Even if the Earth is not being viewed as an obstructing anthill or wayside diner by the Cosmic Highway Commission, most religionists believe that we fare hardly better than that in the eyes of God.

Thus does Art Greenfield's message carry some considerable cultural weight since it is only a slight adaptation of what most God-fearing people believe is actually true:::

We mean nothing more to the Cosmic Creator than would an anthill in the path of an Interstate highway. If our existence becomes inconvenient to the Creator, He would think nothing of sending a flood to wipe out 99% of us as in Noah's time, or to send European plagues to wipe out 90% of the Native Americans in the 1500's, allowing His Christian re-settlers to deforest and pave their lands with nary a tear.

And so it goes.....

Why shouldn't we be next on the Cosmic Menu and/or Clearance List?

Am I reading Art and Jack correctly here? Our only hope is to catch our would-be dinner 'guests' asleep at the switch.

This is the same moral as presented by the Transhumanists, except, in that case, the Cosmic Intelligence recruits us, via our own computer technology, to replace Ourselves with machines ultimately programmed by the Cosmic Computer.

Are not all of these scenarios merely slight extensions of Social Darwinism??

And Guess What?? The BPWH presents basically the same message as all of the above!!

Ooops!!

(cont.)

So it looks like I may have been recruited by MJ-12 to deliver the Charles Adams message, and do it with a smile and a blessing:::

"Sorry folks, the party's over; praise the Lord!"

Most people are going to hear it exactly that way. Can we blame them? Not at all.

But, perhaps by the 10th hearing, a few people will begin to get the underlying moral: life and mind must go on. Perhaps not in the old familiar ways, but, hey, aren't we becoming ever more accustomed to change?

Jack and Art will be defending our sacred sovereignty against all encroachments. They will be the Neo-neo-Cons. "Resist the Cosmic Spirit at all costs. Praise the Lord and pass the ammunition."

Can we blame them? Not at all.

I'll be the subversive trying to raise the white flag behind their barricades, preaching 'surrender to the Lord'!

In effect, my message here is, "Don't fight City Hall."

My only problem will be to show that I'm on the side of the Angels and not the Demons.

That will take a little time and a lot of discussion, and shouting. And, yes, we will be granted ample opportunity to try the Spirits.

And remember, folks, we will have all the time in the World!

And, yes, the Force is with us, but let's not get left behind.

Dan

Hi Dan,

Your mental anguish and machinations are pretty much what the Brookings report said would happen when the religious segment of the population merely found out that there were advanced races in the galaxy. They would not be able to handle the truth. I'll bottom line the truth for you. It is very basic. "The purpose of life" is so that life may go on. Nothing more, nothing less. We are not here for some cosmic schooling to learn to be good to go heaven. Our life allows the life that comes after us to live their life. It's the circle of life. Disney kind of explained it all in the movie "The Lion King" in the song, "The Circle of Life."

"Circle of Life" lyrics

Music by Elton John, lyrics by Tim Rice

Performed by Elton John

From the day we arrive on the planet
And blinking, step into the sun
There's more to be seen than can ever be seen
More to do than can ever be done

Some say eat or be eaten
Some say live and let live
But all are agreed as they join the stampede
You should never take more than you give

=====

So now you have to shake your fist in futility at me, God, and Disney.

Art

P.S. It's so easy a Reptoid can understand it. [cartoon of Dinosaurs discussing Descartes]

[4/12]

Art,

Won't you accept my belated capitulation to the logic of your argument??

Belatedly do I realize that you and I have been saying virtually the same thing, all along.

Your Circle of Life is exactly the Ouroboros, or cosmic Serpent eating its own tail. It is the coincidence of the Alpha and Omega. It is the Christian practice of eating the Transubstantiated flesh of God.

OK???

The issue between us is the matter of resistance.

The Circle of Life is supposed to be unbroken. Yes?

But it seems that you and Jack are proposing to break the Chain of existence, by turning the tables against our predators.

Instead of having the Lions continue to eat the Lambs, you suggest that the Lambs should turn around and eat the Lions. That would be your first preference. No?

Only if Jack fails in his arms race against our predators would you, as Plan B, attempt to negotiate a Feeding Treaty with them.

So why do you and Jack want to Break the Circle? Would that not upset the Cosmic Order of things, and very likely Provoke a justified and severe retaliation? Why should we tamper with the Natural

Order of Things??

Dan

[4/13]

Yesterday Chris spoke with CF concerning my sanity and some other matters. I am told that my sanity was attested to, for the most part. And, along the way, so was that of Bob Collins. If this conversation can be confirmed by another inside source, it would constitute a significant shift in the public stance of CF, and possibly, even, a change of policy. It appears that the OM and RU forums will be addressing this issue in the next couple of days.

[4/15] [\[a\]](#)

This from CF to Chris yesterday:

Chris,

Your posts were not transcripts of our conversation but rather commentary thereof. Your descriptions of the facts were generally accurate, but in a few areas your interpretations were off the mark, no doubt influenced by your discussions with Dan. My corrections are inserted below. I would appreciate if you would not emphasize my corrections concerning your interpretations of my comments regarding Bob Collins. He served our country well during his Air Force career. I don't share Jack's penchant for brutalizing people that have diminished mental faculties. Bob worked hard to acquire his limited understanding of physics. I would also appreciate if you would stop referring to me as CF or Cat Fish. As I mentioned during our phone conversation, Dan made this up as a link to the only tangible reality of his stories. Dan and I used to go cat fishing together.

p.s. Dan informed you that I did not wish to have any further discussions with you so you would post your story without checking the facts. He is indeed very clever. Jack is one of the few people I know who can stand up to a sober Dan.

This from Chris to CF. Note that CF has inserted his comments {thusly}:

Thank you for looking at the detail from my posts regarding our conversation. As I stated from the very beginning, I would be more than happy to go over any differences you feel we may have regarding what was said during our conversation. Also, I must say that I have the utmost respect for you, your position and our government. I realize that you are often put into a difficult position and that most certainly was not my intention with any of this. In fact, I had fully intended to discuss this with you prior to posting (as I have always done in the past with others) but I was informed by Dan that you did wish to have any further discussions.

Perhaps it would also be helpful if you could point out any agreements you might have with what is said below.

Here are my two posts:

[#1](#)

I had a conversation yesterday with the person Dan Smith refers to as his "chief interlocutor", CF. The conversation started at Dan's behest to CF to speak with a third party regarding the status of Dan's mental health. I was very fortunate to have been selected to be this person and I used the opportunity to ask CF a few additional questions. What followed was a long conversation covering several different topics CF has not previously discussed publicly. Additionally, some of the points are contradictory in nature to previous public pronouncements made by CF. Now as to why he chose this time and

place to make these statements are anyone's guess. This could signal a change in policy and content of the flow of information coming to us from the government, or it could be the continuation of a game that has been going on for a very long time and we are just being introduced to a new chapter. I'll let you be the judge.

As I stated above, the first question I had for CF was regarding his opinion of the state of Dan's mental health. He said that although he is not a mental health professional (CF has a doctorate in Physics) it is his opinion that Dan is not crazy. {I said Dan is not seriously mentally ill. He still functions reasonable well in society. That does not mean Dan is entirely well mentally or physically. [SI] and I used to joke that so long as a person can go into to 7-11 and come out with a cup of coffee, the person is basically functioning.} He said that Dan is a brilliant man and that he has known him for over 10 years. When I asked him why then had he repeatedly stated in e-mails and verbal communications for the last several years that Dan is crazy CF replied that the worst that could be said about Dan is that he is an eccentric who is occasionally prone to use stories and the assorted outrageous statement to make a point and get people's attention and to get them discussing points of interest to him and everyone. He then reiterated that Dan is not crazy. I then asked him if he had made those statements to create a "fuse in the system" or as a way of having "plausible deniability" regarding the information Dan posts on his blog, which often times uses paraphrasing techniques to refer to statements made by CF and other high level government officials. He responded by referring to Dan as a philosopher, restating his points made above and did not use this as an opportunity to deny the content Dan has posted on his blog about CF. {My point was that as a philosopher Dan makes up his Blog to fit his perceptions of reality. Scientists accept reality and try to understand it. All of Dan's references to me providing him with information or guidance are false.}

The next question I had for CF was concerning a statement he made in the middle of a long e-mail exchange from last week whose primary participants were Dan, Jack Sarfatti and David Gladstone. The subject of the e-mails had to do with Dan's referring to himself as a messiah. Dan had reached out to David and Jack to get their interpretation of what is a "messiah" from the perspective of a rabbi and that term's place in the history of the Jewish faith. CF said in the e-mail, "...why are you asking a Jewish rabbi about your role as the messiah...?" He laughed and said it sounded like something he said. I asked him if Dan's referring to himself as the messiah might not be considered to be delusional and what did he think about the proclamation itself? CF said that Dan is telling a story when he makes references like this and basically reiterated the same information as above. So I said Dan could be considered a messenger and not necessarily "THE Messiah". CF said that yes, Dan is using the messiah imagery to put forth his message.

The third question I had for CF was something Dan had asked to see if I could get him to confirm. This had to do with two people code-named "Ocelot" and "Ferret". The story is that these people made several monthly trips out from Washington DC to Los Alamos several years ago to either meet directly with "The Visitors" or to meet with the people who were responsible for holding or communicating with them. The supposed purpose of these trips was to find out what "their" message was for us regarding the process of and the timing of Disclosure. CF stated that yes, these trips did take place but they occurred over 15 years ago and are not happening today. (Note: this coincides with the first aborted attempt at Disclosure in 1991-92). He said that what was of significance was that this was a change in code from aviary- to feline-based names, and that you could possibly read something into the fact that felines prey on the aviary in nature. He also said that these were not two specific individuals but that they were the code names given to whomever was traveling out there for each trip no matter who they were. {I said the story was 15 years old, probably originating with Rick Doty, Bob Collins or other avians, and that within the context of the story it was interesting to see the introduction of one who pr[e]ys upon birds and another who pr[e]ys upon their eggs.}

After we had covered the questions I had for CF the conversation switched to various subjects which I will now cover in no particular order.

The first had to do with determining just what is CF's position and role in the government today. I said that I knew he used to be an Assistant Director with the CIA but that I did not know where he was currently assigned and who he was reporting to in the government. CF stated that he now reports to Mike McConnell (the Director of National Intelligence - <http://www.dni.gov/>). He said that his current role is focused on the foreign intelligence community. He invited me to pass on to him any information I might come across during our research and investigations which we think could be of interest to him in this role. He reiterated this invitation/request twice more during the conversation.

Next we spoke at length about several different people who are familiar to all of us. Most notably mentioned was Bob Collins. Now this may seem an odd person to discuss as CF has talked about Bob several times over the years, and almost never in anything but a negative light. However, this time was very different. He spoke of Bob, both his career and his accomplishments in absolutely glowing terms; saying that Bob rose from the enlisted ranks to become an officer, obtain a degree in Physics and retire as a Captain in the Air Force. CF said he was not aware of just what Bob was doing these days so I updated him as I have spoken to Bob and e-mailed him several times. I said that Bob has had a tough go of it ever since he self-published his book "Exempt From Disclosure". CF then praised the work Bob has done and the things he has accomplished in his life. Although he did not state so directly, the above could be construed as a not so silent endorsement of Bob's book. Again, the significance of the departure from past-stated opinions and comments by CF concerning Bob can not be understated here. {My positive comments concerned Bob's contributions up to within about 6 months of his retirement from the US Air Force when he apparently lost his mind. He was a good man.}

From: [CF] **Sent:** Saturday, April 14, 2007 7:42 PM
To: 'Christopher Iversen'
Subject: RE: Chris squirms ;-) and Jack misses nuance ;-)

My bullets to Caryn and Jack were in response to what others have been saying regarding your posts. Please send me your original post and I will point out any potential misstatements. [CF]

On Apr 14, 2007, at 1:30 PM, [CF] wrote to Jack:

I clarified with Chris several areas where he may have misinterpreted. It was probably my fault for trying to be sensitive regarding discussion of [--excised by Jack--]. For the more general audience I offer the following bullets:

- Dan's Blog and messiah stories are false.
- Dan's references to me providing him information are false.
- Bob's book is nonsense.
- Stories of meetings at Los Alamos that involved aliens or discussions of aliens are false, originating with Rick Doty or one of his avian cronies.

That is what we have up to now.

Now for the instant analysis.

It could be that one of the skeptical observers of this scene is correct: that this was an exercise to take down both the Aquarium and the OM forum with one harpoon. That might have made some sense prior

to CF's detailed response to Chris's report above. Until I read those responses, all we had were the original report and the above four bullets from CF. Until this posting, the detailed response had only been forwarded to me and one other person, and I had not read it until this morning.

What CF is telling anyone who cares to pay attention is that the disclosure process can be excruciating for those of us who are deeply involved. Every forward step must be accompanied by a smoke screen of public denials. This is not a playground for the faint of heart. If you can't stand the heat, please leave the kitchen.

Here is the critical statement relative to the R&D show:

{My point was that as a philosopher Dan makes up his Blog to fit his perceptions of reality. Scientists accept reality and try to understand it. All of Dan's references to me providing him with information or guidance are false.}

Technically this is correct, for the most part, and he is reiterating what I have stated frequently in the blog. When all is said and done, CF has been acting, over the last many years, much more in the capacity of handler than of interlocutor. In particular, there is no part of the BPWH that can be directly attributed to CF, with the notable exception of 'Sun Fish', which designation was allegedly just being passed from elsewhere.

What he is doing above is demonstrating that he has carefully read the report, and then rather casually has padded it with seemingly extraneous remarks. What more could we ask by way of an official stamp of approval? An approval that would fall just short of garnering tomorrow's headlines, or causing major embarrassment to the Bush Administration.

So we have moved two steps forward and taken a quarter step back, the latter just to give us another week to take some deep breaths.

Those who wish to see the above as vindication of skepticism and mental lethargy, are decidedly whistling past their own graveyard.

BTW, this is the first public acknowledgment that the private citizen being handled by him for the past many years just happens to harbor a messiah complex. The question here remains: am I a Bennewitz thinking I might be a Jesus, or am I a Jesus thinking I might be a Bennewitz.

[4/16]

If I'm right about immaterialism, then I'll bet I'm right about the eschaton. If I'm right about the eschaton, then, quite evidently, I have been volunteered to announce it to the world, which I have already done to a significant extent. If that is my job, then I may darn well perform that job under any guise or title that I so choose. The fact that the guise in question was already chosen for me, just makes that 'choice' easier. No?

Any questions?

Why Jesus? Why appeal to any lesser auspice in regard to announcing the eschaton? No one in history holds a candle to Him. Certainly not me! But! If, indeed, there is sufficient cosmic backing for my somehow being the embodiment of the completion of His mission, then I would be an ingrate not to remain open to this connection. In the end, this will not be decided by me.

I am told that communications are continuing about the CF/CI convo that include CF and CoR25. Clearly that story is being flogged at the highest levels. How much further can we peons push it, without going to the NYT. The four bullet 'retraction' was simply to avoid that final push, as now privately confirmed by

CoR25 to OM and RU and to Jack. The problem now is that the skeptics are realizing they don't have much to be skeptical about here. Thus there is no forum flaming to be bandied about by Victor.

Are we all to be left in stunned silence?

What is apparently being speeded up is the continuing shift of disclosure emphasis from the aviary to the aquarium. That shift has now been given a significant inside boost. It will take a while for that shift to be widely disseminated. Even in its heyday, the aviary only achieved a limited notoriety. It will be hard to expand the aquarium influence much beyond that high-water mark, without some backing from a mainstream outlet. That is the other shoe that is still being held in abeyance.

I notice that [RU](#) is back on the air with Max giving a balanced analysis of the CF/CI convo relative to me, at least.

Max points out that the bullets and the detailed comments are not very different. But that is missing the obvious fact that the message is in the medium. In the second case, CF's intended medium is clearly Chris's report, to which he is now merely appending a very few comments. Nowhere does he dispute the veracity of the original report. He is simply adding what appears to be an *ad hoc* and obviously biased interpretation of the original conversation. We the readers are left to decide if CF's added bias serves any other function than to keep this change of position from being picked up on the radar of the standard media. Correction. It has been picked up, we may be sure, but it will remain sourceless to them for the time being. Everyone has been given a very deliberate and unprecedented heads-up.

In a conversation on Friday, CoR25 volunteered that he estimated just a 1% chance that CF's public repositioning herein constituted a runup to disclosure. I replied that based on my greater involvement over the years with CF on this topic that I felt it would be fair to characterize his estimate as unduly conservative. He replied that, indeed, I was in a better position to judge that. The larger point was that this was the first time that he had even hinted at this possibility in connection with the R&D show. He has made this same estimate to another one of us: a very cautious, but 'calculated' repositioning on his part, in keeping with this whole calculated exercise.

Any close observer must now conclude that the R&D show has its neck stuck out much further than has any disclosure initiative to date. The only remaining question is 'why'. Why R&D? Well, if the eschatological card is in the deck here at all, then there are two obvious corollaries:

1. The eschatological card must be the first one to be played.
2. The necessary extreme caution about playing that card is the only logical rationale for the extremity of the cover-up.

Tell me there is another explanation for the two things we now know about the cover-up:

1. It has been extremely effective.
2. R&D is the official opening salvo.

I notice that Ray Hudson is currently the most vociferous skeptic on RU. Should not he and I have a one-on-one? Ray is a junior systems analyst of some academic kind. He believes he has an inside track on the cosmic system, and, for the most part, I would agree.

Recent conversations with Steven Broadbent and 'Max' of the RU forum reinforce my growing suspicion that they have no constructive criticism to offer to any process of disclosure. All they wish to do is to nit pick and take pot shots every step of the way. They have no desire to look beneath the surface of the verbal exchanges, as if they were Philadelphia Lawyers, defending a guilty client by using every legal technicality. They wish only to pursue the letter of every discourse without attending to the intent or the spirit of that discourse. They wish only to look for loopholes and escape clauses, they do not wish to enter into serious discussion of the problems at hand. It may simply be that these folks have a surfeit of left

brain thinking. That they are organically unbalanced to that hemisphere of thought. Too bad.

They are welcome to pursue their extremely narrow line of attack, but I would recommend that there be no further personal communication with the folks connected with that particular mind set. It continues to fall only on people who wish to be obstructionists. They are welcome to continue their narrowly legalistic pursuit on their own recognizance.

Thank you.

[4/17]

I guess I should be pleasantly surprised that anyone is being sympathetic with my situation. CI at OM is being warned by other people on the forum to not become entangled with either me or CF. This is certainly to be expected.

I have been informed that the other insider has sent an email to RU, bcc'd to OM which is very supportive of CI's version of the conversation with CF, pointing out the continuing need for deniability. There has been no mention of this communication at RU. OM does not have permission yet to publish it.

I did bring up this email in my conversation with SB last night. He was very dismissive of it. That, as much as anything, convinces me that they wish to be very selective in the evidence they present. There is no sense in throwing pearls before 'ungulates'. I wonder what the others will think when they discover that crucial evidence is being withheld.

Yes, of course, the Aquarium is making extraordinary claims. We do not expect the NYT or anyone else to swallow any of these claims, not by a long shot. I am certainly not looking for 'followers'. That would be the last thing that anyone would need. What is desperately needed now and for well into the future will be for a cross-section of independent observers to do their due diligence, firstly, in understanding exactly what is being claimed, and, secondly, in assessing the very wide range of evidence that might support or contravene such claims. So far, the surface has barely been scratched, but that does not prevent loud-mouths of all stripes from pronouncing their firm convictions from on high. It is not a pretty sight.

Probably the worst offender herein is that fellow avian, RMC. Yes, he has been treated dismissively by RP/CF in the past, and turnabout is fair play. BUT, he does not stop for a minute to consider the sensitivity and stringency of the protocols that must be in play here. And, like so many ufologists who adhere to the Buck Rogers, Nuts&Bolts side of these stories, he is proficient in only the most literalist and linear lines of thought. That Disclosure might be taking a Postmodern turn is to them like being asked to jump off a cliff. Yes, RMC is a thoroughly modern Millie, and let us not ever expect him to change those stripes. He and Buck Rogers will walk hand-in-hand into their own sunset. What no one can fathom is that RP may simply be playing the most serious game every played in recorded history. To be within a parsec of that ground-zero is far too mind boggling for normal folks. Their overwhelming reaction is to pull the covers back up over their heads, hoping that it is all a bad dream. Sleep tight, my children!

I quail for the Gray Lady. Will she turn blue in the face and go belly-up? So much of what is here goes ever so much against the grain of probity for which She is one of the very last Witnesses. Who will hold her hand when the day of her day of reckoning comes? It may already have come for some of the senior management. If they can still go into a 7-11 and come out with a cup of coffee, there may be hope for the rest of us.

Meanwhile, our intrepid RP is on the road to recovery from a double ear infection. A wide ranging discussion gave full assurance that the more things change, the more they stay the same. There was some back and forth on the Ocelot business. It is not to deny that something like that occurred, but it might only be a coincidence that the aviary story bears some resemblance. Coincidence, indeed. Otherwise it was

chit-chat. I'm supposed to get back with Gordon to see what his problem is. Is his new benefactor going to help him move to LA? And so it goes. RP did say that he did not realize that CI was going to be so public about his convo with him. I averred that I might not have made this intent totally clear, but, still, what would have been the point otherwise? Perhaps this was to excuse his public backtracking after the fact. Whatever you say, Master. No use crying over spilt milk.

This from Max today at RU:

Thank You, Dan. Personally, I'm saddened it has come to this. I still stand by my statement that yours is a brilliant piece of philosophical/metaphysical work.

Perhaps you'd like to post my response to your silliness. It can only give you more fodder for further attacks.

In case you missed it:

I feel it is necessary for me to acknowledge the fact that as Zep has pointed out, I too was subjected to a not too pleasant conversation with Mr. Dan. Although I am of a mind that you can usually say whatever you want to me when you disagree, one of the things I don't take kindly to is threats, however silly they may be.

During our conversation a quite angry and upset Dan (was it something I said?) informed me of several things that were going to happen to me if I did not become more cooperative.

In my naiveté, I had always thought that members of boards such as this one were free to post their opinions and the way they view a variety of things. Apparently I was wrong. I have been informed that it would well serve my interest to move over to that other board that shall remain nameless and to become more constructive and less obstructive such as the leaders there. Apparently the least amount of dissent presented is the favored way for those leading this parade.

Well, I will be damned.

I would like to inform Mr. Dan and anyone else that presumes to tell me how to act and what to believe of a couple of things.

I am the son of immigrants. My Grandfather and Grandmother owned and operated a successful ranch and dairy business in another country. That is, until Communism moved in. The ugly truth of oppression cannot be fully understood unless you've been a part of it. The loss of freedoms, including freedom of SPEECH is something that tears at the very fabric of a person. I saw my grandparents pass away as mere shells of the people they had been after losing their ranch, their business, their livelihood and all the freedoms that we in this country take for granted.

Later as a young man I volunteered for service in the armed forces of this country, during a time of war, and I went where they sent me and I did what they told me to do. Remembering all the while why it was necessary. I was happy and honored to do it.

I will be damned if I will let a so-called "messiah" silence my views or trade away my freedoms for some silly "insider status" in a fantasy adventure.

As I have repeatedly said, my faith and devotion belongs to the true messiah Jesus Christ and my future beyond this plane lies with his Grace. To do anything other than what I think is true and right would be an insult to my grandparents and to Him.

Put that in your pipe and smoke it Mr. Dan.

Ok. I'll try.

Yes, I understand there will be anger. It may be construed that I am exploiting others' beliefs to further some extraneous end.

But, in return, I ask those who might feel wronged to show where they think I might have made a misstep. The point is that I would have felt negligent had I not responded positively to the challenges placed in front of me. I have only attempted to rise to the occasions presented directly to me. To portray me as a puppet or a monster is not going to add one iota of understanding to what appears to be a complex situation.

The very biggest obstacle to understanding is the overwhelming desire for most people to avoid the appearance of being made a fool of in public. It would be like having to wear the dunce hat in class. On the other hand, it is an essential aspect, especially of the Christian persuasion, to be willing to be one of God's fools. Some folks might rather be crucified, it would seem.

The Monday morning quarterbacks fail to realize that the rubber has to meet the road somewhere, sometime. If there is anything about disclosure that is real, it will be the most crucial event in our history. It is not, therefore, something that can be treated as business as usual. It is like the cartoon: in case of emergency, break glass. Behind the glass is a Bible. What the heck else would any non-atheist expect to find there? Get real, folks. We're not in Kansas anymore.

AD on RU asks:

Question: What makes the "true believers" think someone like [RP] may hold the key to "disclosure"?

Seems to me two possibly erroneous assumptions are being made here:

1) There's something to disclose (that hasn't been already) and it's so "earth shattering" that it's classified at the highest level in the interest (presumably) of National Security.

2) [RP] (or anyone for that matter) is trusted with the "big picture" and spoon feeding it exclusively to select "true believers" in a official capacity.

Concerning 1) I believe my nemesis Springer has already touched upon the evidence (or lack thereof as it turns out) for making that assumption earlier in this thread.

Concerning 2) I find it hard to believe [RP] in particular would be trusted with such a well kept (presumably via compartmentalization) secret considering his past "performance" with the Agency as documented here...

Then he quotes from the 1998 NYT article, which end with the following paragraph:

Before long, [RP] was asked to testify on the incident by the Senate Intelligence Committee. Eager to head off any further leaks of information to a team of Congressional investigators scheduled to visit Hughes, Culver wrote a memo to the CIA's California field office, urging them to warn Hughes that Congress was starting to poke into the affair. Culver's letter triggered a Justice Department investigation into CIA for obstruction of justice, which is still being debated by a grand jury today. After [RP] testified in closed session before Intelligence Committee chairman Richard Shelby (R, Ala), he was removed from the China division and put to work on developing alternative energy sources. "In other words, he was given an empty office, without a telephone or a computer," one source familiar with the case said.

And then he asks:

Am I missing something?

Yes, as a matter of fact, and as detailed on the blog. But those are somewhat extraneous to the even more basic point as previously reported by CI and in the post following by AD:

He said that his current role is focused on the foreign intelligence community. He invited me to pass on to him any information I might come across during our research and investigations which we think could be of interest to him in this role. He reiterated this invitation/request twice more during the conversation.

Indeed.

And Ray continues:

Did you ever stop to think that [RP] could use your/our help much more than The Dan Smith Show needs [RP] to help you become a messiah? Would you rather do something patriotic, or are you so set on your "place in the Sun" Mr. Fish, that you can only think about how you plan to save the world?

Ray goes on to ask me to convey to RP that he may have been 'elicited' by a foreign aerospace student of his.

Ray, allow me to remind you that the most firm instruction ever passed to me by RP was that, come what may, 'never change your protocol.' I think you barely begin to comprehend what the R&D show has endured over the years. Has there ever been a sillier request presented to me than that I break that sacred(?) trust on the totally uninformed whim of a 'ufo weenie'? Am I supposed to laugh or cry???

There is one common denominator to all the armchair critics of the R&D show. They manage to convince themselves that no one, before they fell down this chimney about a year ago, ever bothered to notice the Show. Think about that, my friends. If the R&D show were a joke, how many decades would it be before one of RP's supervisors might have noticed it? You, little ufonauts that you are, are afraid even to talk to me lest you be made the fools. What about his supervisors? Consider their feelings about all this, my little ones!

How many FBI officers and Congressional staffers do you suppose have been alerted to the fact that a very senior intelligence officer is harboring a messianic wannabe? Nay, how many folks in the Global Intelligence Community have managed to avoid noticing this fact long before you little water-babies fell down the R&D chimney??

What will it take for you to stop acting like you were born yesterday??

Here is your next homework [assignment](#).

[4/18]

Despite RP's efforts to smooth things over with RMC, it is fairly clear that Bob is not going to desist from his long standing penchant to piss upon the R&D show. And this is entirely understandable. Bob was in on the ground floor. RP was the last on board with the aviary and has always been it's junior member. Bob resents the possibility that his position has been eclipsed by a 'junior' officer.

Now the folks at RU are happy to use the residual aviary resentment against the aquarium. That too is understandable. That is their job, to assemble the skeptical case. However, by concentrating on these petty differences, they are failing to see around the curve ahead. They fail to see the Mack truck careening around the corner. While focusing on disclosure, they fail to apprehend the Disclosure. It's the 800lb gorilla in the wings that escapes their field of vision.

The ground floor of disclosure is Soap Opera and Keystone Cops. It is designed just to lull the curiosity seekers into a sense of complacency about the potential seriousness of these issues. Clearly we are dealing with the Amateur Hour. The apparent casualness of the Aquarium protocol feeds into that sense of complacency. That my friends is the smoke screen that has been ever so effective for the past twenty years, at least, ever since that masterpiece of silliness, Cover-up Live! That has set the level of discourse for lo these many years.

It is very hard for those who have grown up on this pabulum to obtain any intellectual purchase on what is about to transpire.

Why then do we bother? Why this exercise in thumb wrestling? It's just a warm-up gig. By keeping me preoccupied, it helps to prevent the jitters about opening night.

And Bob is right, I truly know nut'n, honey. My mind is made up, don't confuse me with the 'facts'. Everything I knew about eschatology came long before I came tripping into these ufological tulips. And frankly, my dear, I can barely give a damn. I attend only to the politics, only to the end-game. And that is precisely where our junior aviating Pelican shines. The other birds could never get over his repeated acts of nose thumbing in their direction. Clearly he did not take seriously their precious little hoard of factoids.

Surely it was not that little Pelican had bigger fish to fry. Surely the chirpings of Chicken Little were not meant to be taken seriously by these no-nonsense 'Insiders'!

And so matters would stand, up until the very last day of our innocence.

Would it help the cause if the RUers could transcend their myopia, just for a day or two? Is their thickheadedness an unnecessary obstacle in the end game? Does it have no greater significance than to be my own, last minute, entertaining distraction from what is barreling around the corner?

The Aquarium strategy adheres to the old chestnut about hiding the truth in plain sight. People have gotten so used to looking under every rock for every little tidbit, that they simply become annoyed when the whole enchilada is unceremoniously waved in their faces. Don't we fish understand the traditional rules of this game? 'Play by the rules, you scaly scofflaws!'

Of all the birds, the Pelican does not fit the menagerie. Easy to dismiss, that one. Must be out of the loop. Or could that be merely wishful thinking on the part of our feathered friends? This is the socio-political IQ test presented to the RUers. We allow them a few more days to connect the political dots, before we have to move on.

They do show some signs of glomming onto the fact that Pelican may be playing a different game in a very different arena. We are talking inside the Beltway, are we not? But there must be something more. I think it's called 'asbestos BVDs'. That he has a pair should be plain to the most casual, even naive, observer. From whence did they come? That, my skeptical little friends, is the \$64 question.

There he was, fresh out of school and his vampire gig, ogling CoR25's gaggle of leggy psychics. And, slam-bam, thank you Mam, BJ is nursing his singed tail feathers. This was about five years before I met him in the Alexandria strip-club. Where did he get that mo-jo? From his Uncle? No, this is not about nepotism. It came from someplace much deeper than Challenger ever went. Someplace I never wish to venture. My precious innocence is shielded thus, vicariously. We are joined at the hip; its all about those miraculous BVDs. You don't need to check the manufacturer's label. Just know that they work. All the other birds have had their feathers singed. Their wings have been clipped. Is this my gallows bravado? Don't you think we'll find out soon enough?

[4/19]

I understand that feelers aimed toward taking the next step have been floated by a known insider. If it goes forward it would be the next to last step before D-day. That is the day when I am publicly put on the spot.

The next step being alluded to would be the insider answering questions straight-forwardly on a forum, in a relative thin disguise. I suggest that this next step not be taken until and unless that person is prepared to be interviewed in background format by a respected journalist, for immediate publication. The second step

could easily happen within a few days of the first.

I was surprised to hear that this next step was being vetted so soon after the Ivo convo. I speculate that it was floated this early to underscore that a related message may have been delivered as embedded in the otherwise rambling diatribe of the recent shooter. This would have been a previously assigned message/signal aimed to underscore the present timeline for the MASINT folks. Thus the quick turnaround. This would all be in keeping with previous protocols alluded to here. It is all about the carrots and the sticks.

An admirably puny stick, in this instance. Let us hope it can be the last of such markers.

Additional feedback tells me there is no pressure to move forward, not from the inside, not now. Ok, but that does not let me off the hook. The door may not be open a whole inch, just a millimeter. I'm certainly not going to kick it in, but neither am I going to ignore the the streak of light coming through the crack. Poor ocelot must be spinning in his grave. A quorum call tomorrow. I can't be overly anxious, just the steady shoulder.

And back again. Yes, one insider, Alphonse, will encourage another, Gaston, to answer questions, probably on the OM forum. Alphonse may provide a Venn diagram charting the wide range of statements previously made by Gaston on the various topics of interest. Hopefully there might be some narrowing of the rather broad historical range. But we should not expect to be ushered into any Great Truth. If the noise level is reduced by a decibel or two, we should call it a success. Will the NYT reporter be waiting in the wings to pounce on this story? That would truly be a long-shot. Alphonse remains adamant that nothing he said previously to any OM admin should in any way be construed as his endorsing any part of the core story. That will be leaving Gaston still a bit exposed, we think.

[4/20] [a]

A bit exposed?

More like RP pushing KG in front of the A-Train and walking away whistling *Auld Lange Syne*!

I don't think so, Ronny, boy.....

I appreciate your wish to ease the gnawing in the pits of our stomachs. I appreciate this nostalgic vignette, but we all know that the good old days of plucking feathers is gone for good. There's nothing left to do but face the music. How's that parachute looking? Shiny gold, or leaden gray?

Or not. There is this from DF:

The dropped penny:

Ron's intentionally putting Kit on the spot. Advice from Ron a couple of weeks ago, to Kit, was to stop talking to all the nuts...Kit's response was, 'I'll talk to whom I damn well please'. Is this a - 'Right Kit, you want talk to them....it's going to be all or nothing, what do you think of that? Bluff called!' ??

Was the 'message' in Ron's communiqué, through Chris, intended primarily for Kit and a couple of other 'old birds'? Ron had allegedly advised Dan that the only person he would speak to, to confirm the convo with Chris, was Kit. I was 'tasked' (by Dan) with the lovely job of informing Kit, who apparently knew nothing about the Chris/Ron dialogue when I first brought it up. A Ron shot across Kit's bow? Then the 'public clarification'. Makes a lot more sense than Ron backing Dan's messianic bid, though helping a friend retain his sound sanity status at the same time. 'Killing two birds with one stone' comes to mind.....

The Force is no longer with us?

Venn diagram? My ass!

The jury is slightly perplexed at this point.

Two birds with one stone? Or is it three birds with one boomerang?

I think I'll take the A-train.

Ron is leaving us to twist in the wind. Yes, that is supposed to be the picture presented to the public. And there should be some truth to that, otherwise we will not be able to play our roles effectively. We have the opportunity to get our own ducks in a row. This is Kit's chance to turn State's evidence. He can do that only by vicariously supporting my you-know-what. We minnows conspire to take down the Big Tuna.

That is our only way out, at this point. Ron will put up token resistance. Is this an engraved invitation to the Dirksen Hearing Room? Or what? Does anyone see the middle ground here? This is all about the vanishing of the middle. Remember the good ol' days of crashed discs and bug-eyed monsters? Pass the popcorn!

[4/22]

Sent: Sun 4/22/2007 9:05 AM

Subject: A reverse judas, a la Bennewitz.

[CoR25],

Enigmatic? Not terribly!

Ron seemingly contradicts himself yet again. A few weeks ago we know he was asking you to curtail your communication; now he seeks to encourage it. This suggestion was in response to my query as to a follow up to his conversation with Chris.

That is all I have directly from him. The rest is by way of aquarium inference, as usual.

The path forward, and of least resistance, goes through Ron. If there is a political lightning rod for 'disclosure', it would be him. You and I, rather by design, are the closest witnesses to that putative fact, and me rather closer than you.

My testimony has been in the public domain for years, but everyone has been studiously averting their eyes, out of what? Embarrassment?

Uncle Sam has a piece of spinach on his tooth. Every time he opens his mouth to utter a disclosure, there it is. I'm the spinach, Ron is the tooth. Can't Uncle Sam just use some floss?

Yes, he can, Kit. You're the floss.... Well, not exactly. You're the bullet!

Your job is to persuade the boys at RU to bite this bullet, not to mix metaphors or anything. They are a tad sceptical about my testimony, to-date. They may not know that Doty spent his 'final' hours, with John and Mark, detailing the Bennewitz affair. You support my public contention that Ron's attentions to me could easily be construed in that same fashion. How else??

Comprene?

Dan

P.S. my response here to you is also being posted to the blog.

[4/23] [\[a\]](#)

Louise does like to argue. She called today, going on about Webster [Tarpley](#) and his book on 9/11. I listened for awhile, deciding whether I wanted to engage or not. It came down to the fact that I had no other entertainment available. It did not then occur to me that the news would be so slow that this might become our first bloggable moment, if memory serves. Why now? God knows! Privacy? Well, Louise lives in the Montana mountains and she and Ben pride themselves on having no Internet or TV. Does that not border on the oxymoronic? Let me not get ahead of the story. Anyway, she will not read this until it has gone stale.

Here are two conspiracy theorists going at it. Whose theory is better? Louise came to her theory via Nicaragua. I gather that a friend of hers was there in the time of the Sandinistas and Contras.

Sorry, we have to interrupt this family gossip, to bring you some updates:

[Getting Naked](#).

Then there is RU. They are doing their due diligence on the R&D show and will make a public statement by the end of the week. Ryan was on vacation last week, and that has slowed down the process.

Then there is the [TC](#) group. It ostensibly has a Vatican link, but I am skeptical. The real link must got to Exopolitics and [Paola Harris](#). She is a protégé of Father [Balducci](#). But, that may not be the deepest deal. I suspect the Vatican has signed on to the big deal, privately. They are not yet prepared to get naked. They should be the last/first.

Yes, now I do appreciate the aquatic antipathy of Michael Salla. He is not in the final loop. And he is snooty as hell. Maybe he was born that way. He has no clue. He follows his script. If you have not seen a Michael presentation you may not appreciate these words.

You need to look at approximately [here](#). It ain't nothin', [honey](#). Expect the RU folk to elaborate upon this deep insight by the end of the week.

Any other questions?

Anyway. Somehow we got from the Contras to UFOs. That was in place in 1991 when I joined MUFON [see 4/24]. The issue concerns salvation. Can there be vicarious atonement? I say yes, she says no. But it is mainly a question of degree. She says that the ignorant people must suffer for their ignorance. I suppose that they do not have to pay the full penalty. There are extenuating circumstances having to do self-concealment and self-revelation. Louise is anti-messianic. To me, that seems to come from vindictiveness.

[4/24]

I should also point out Zep's [blog](#). The battle of the blogs is heating up. Goody!

Back to Montana:

A defining incident between us was in 6/91, previously mentioned, when we both became entrained for a few days in a borderline psychosis. We came out with diametric interpretations: me toward pronoia, she toward paranoia. That marked the beginnings of phenomenology and ufology for both of us. She follows the Greer conspiracy line; I follow the aquarium conspiracy line. The added fact for her is that there can be no remission for our sins committed in ignorance. I am blue in the face from trying to explain about the self-concealing creator. It is precisely the Creator who is ultimately responsible for our materialist inspired ignorance. That is just the veil of nature, not penetrable by an analytic science. There can be no creation without separation. Thus our existential angst and all the depravity that goes with it. But I don't know of a single modern who has been able to take on-board the geo-anthropocentrism of the BPWH. Once thrown into Pascal's abyss of space&time, only by the grace of a higher reasoning may we again find ourselves and reclaim our souls. If the Aquarium cannot be a focal channel of that grace, then someone else will, and sooner, not later. It's us or rust. It may look like a Tippecanoe, but do you wish to gamble that an Ocean Liner waits around the bend. This is just the prime directive row boat. Grab an oar.

Back to the Rome connection:

Take a look at [Michael vs. Steven](#). Michael is clearly hewing closer to the Balducci line, and closer to the phenomenology. Steve takes the New Age line that was aptly portrayed in the early sequence of Independence Day. Recall the fate of those poor peacenik hippies. Where does this put the Balduccians concerning the exopolitics of the City within the City? Is Pope Benedict afraid of John Negroponte? Is the Vatican once again going to take the side of the forces of darkness? Where is the one whistleblower in the Church? Salla laid down the gauntlet to the Aquarium, when my phone call to Ed Komarek at their Hawaiian conference resulted in his being purged from their board. I kid you not! Scott Jones intercepted the call.

Clearly the Aquarium represents the A/C, aX Ishmael, NWO/CIA initiative, and Michael is the (self-?) appointed Vatican whistleblower! Yes, the battle of the blogs experiences a global warming. Despite their philosophic and personal antipathies, we do note a marriage of convenience between Exopolitics and the Disclosure Project, via Paul Hellyer and others. All the better to defend against their common foe, the Fish Tank. When Michael and Steven finally decide that they must take us on in public, that will be the final chapter in this saga. They will both have to follow in the footsteps of RU. Welcome to the R&D tar-baby.

Michael, however, is finally forced to adhere to Exo-political hypothesis rather than the Ultra-political hypothesis. Why not the UTH? Should that not be the preferred Vatican position? Did they burn Giordano Bruno for naught? No. Monsignor Corrado does nearly follow the BPWH/UTH hypotheses. If Michael were to take that tack, he would all too soon fall into our ratiocinative/tender trap. This avoidance of the UTH will buy the PtB/Vatican only a few months further delay of the Passover Plot. Spend it wisely, boys!

I think I'd have to admit that the Greer hypothesis is more rational in the ETH context than is the Exopolitical/Sarfatti/Mixed-Bag hypothesis. The M-BH only stands up in the UTH context. Isn't Michael smart enough to realize this? I suspect he is, but is toeing the ETH line in keeping with the PtB/Vatican strategy of pushing the ETH as long as possible. Balducci quietly espouses the UTH/theistic line to keep the faithful in line. This double ploy on the part of the PtB/V will work only on these margins. Once the light begins to shine into these recesses, these creepy crawly things will all be running for cover. Are the RU boys smart enough to see through these ploys? Not real sure about that. It's all about agenda vs. reason driven discourse and 'investigation'. The debunkers have the luxury of hedging every hypothesis. That is the analytic ploy. If there exists a larger truth, it will never be uncovered in that piecemeal fashion. Truth is not an agenda item for RU. All they need to do is effectively blow the whistle on R&D. The rest will take care of itself.

And this from Ryan on [RU](#):

However the elephant remains in the room. Our challenge, or better-yet Caryn's challenge, to Ron remains unmet. All of these people observe these confirmed truths outlined above - that Ron writes these things, and says these things, to a man who is at least somewhat mentally ill. The question, "Why?", remains unanswered. And Ron continues to look more and more silly in not providing everyone who is staring at this huge elephant in the room, somewhat of a more reasonable answer.

Do we hear that whistle blowing? I might need a hearing-aid. Now what? Sounds like a dead-end. Is this the last word from RU? Do we shrug our shoulders and walk away? What will it take to make this tiny pot of ambiguity boil over into a more general alarm? Hmmm.... Must be beyond my pay grade. They'll have to find a media outlet. Does Gary B have the answer? Perhaps they should try to light a fire under Michael S. We let it alone and see if it festers. DC is rather well inoculated against the R&D mimetic virus. They'll have to go out to the hustings. The folks in the hinterlands are not likely to comprehend this insider 'joke'.

Do we have to dredge up 9/11 again? Where is Paul Bennewitz when we need him? Will the Doty movie help to move this mountain of indifference? Someone will have to do a very clever, man bites dog, kind of write-up.

[4/26]

This from the Seinu/TC thread on OM, referring to the aquarium:

The names mentioned above and their side-kicks are in a dream world to believe they are the chosen ones. Do they not understand others are pulling the strings to make them dance?!! That is why we have taken the other path, as it leads to the puppet masters (we are closing in on the first - over seas).

Chris was saying that he saw a positive reference, but this appears definitive. DF said that TC decided to bail out of OM after the RP/CI convo. We understand that RU is investigating the TC/Bren connex.

Mind you, I suspect this is mostly superficial squabbling, just to stir the pot. PtB/V must have signed on long ago, or we wouldn't still be here. I'll stick with the above analysis of these petty politics. Each of the big players has its own proxies in the ufo arena. Just a little pushing and shoving.

Some folks are pushing to activate CoR25 again. I'm saying I don't wish to keep screwing around. It's about time to nail this mother, don't ya think?

[4/27]

There is the problem of promiscuity in the field of disclosure, as in all fields. It is the problem of establishing value and authenticity. Otherwise there will only be false flags from here to KC.

This is not just an aquarium problem; it is your problem and God's problem. On the one hand we have Deus Absconditus, on the other we have everyone and their sister. Yes, there will have to be more than a little chaff to protect the payload. In that department we are not wanting. Folks know that I do reach out. They must also know that I eschew promiscuity. We must all keep our powder dry.

There must be evaluation and revaluation every step of the way. Thus can priorities be established. Thus can thresholds be designated. There cannot be playgrounds without fences. There cannot be a circus without rings; not a play without a stage and a stage door. All the world is a stage. BUT his-Story is Metanarrative, and, be there such, it can have only one script. The aquarium is here for one purpose: to inaugurate the composition of that Script, retrospectively and prospectively. All else is cacophony. There will be many writers, but one Story.

That Story will be someone's Vision, and everyone's Guide. You are invited to put your shoulder to this wheel. There will be no kudos; the only prize is Sophie. We could all do a lot worse.

I have reread James Gardner's [The Intelligent Universe: AI, ET and the Emerging Mind of the Cosmos](#) (2007). If only he would take his Ritalin, he might get somewhere. He is like a kid in a candy store. And he will only touch one kind of candy, that kind invented by card carrying Physicists. That is the problem that amateurs have when they try to impress the Pros. They get bent out of shape, and end up as lap dogs.

Here is a non-physicalist approach to the Anthropic problem: [A New Theory of the Universe: Biocentrism](#) builds on quantum physics by putting life into the equation -- by Robert [Lanza](#) (4/2007). I'll give it a look.....

Things are definitely heating up on the Anthropic front, especially since the Physicists have so manifestly fumbled this ball.

[4/28]

Yes, it is very instructive to contrast Lanza and Gardner. Lanza takes the Physicists to task, speaking with all the biological authority he can muster, yet, even he gets hung up on the quantum, in his last gasps. Physicalism is due to take a great tumble, the greatest intellectual tumble taken by any profession, ever. It will not be pretty, but their intellectual arrogance to-date has been even less pretty. *Hasta la vista, Babies!* Take your Bomb and shove it, to paraphrase Allen Ginsberg.

Am I bitter? Do I kick the Sleeping Dogs of Materialism? Did they ever kick me? They were the intellectual hand that fed the dream of my youth. And then I awoke and took a stroll, right out the front door of Palmer Hall, their citadel. No hard feelings, guys. Just some last minute butterflies. Just a little finger exercise over here.

The Quantum is not the problem, nor the solution: it is a significant one of many symptoms of the falsity of materialism. Get over it, everybody.

I have still not heard back from Kit, despite my leaving another message yesterday, at Ron's prompting. Ron still has his double ear infection, first in ten years, and he wanted Kit to prescribe anti-biotic eardrops for him. Viral memes, anyone? He had already sent an email to that effect, but wanted me to underline his request. He must have gotten an earful. Both of us also have requested Kit to participate in an online discussion about R&D. Now, I did not remember to ask Ron about Kit's suggestion of an intermediary to relay Ron's approval for his being nailed in this revisitation of Operation Bennewitz. But, nonetheless, is Kit exercising a pocket veto over Ron's 'necktie' party? We should find out in the next couple of days. I sure can't go to the party without him.

In the meantime there is likely to be a follow-up interview in OM, focused on the BPWH. There was a bit of a communication glitch yesterday when a text from DF impacted the domestic tranquility, resulting in further clampdown. So it goes..... Security is tight. Speaking of which, Richard opined about water-skiing on Lake Placid. Does he know anything the rest of us don't?

In the same issue of the *Scholar* there is an article by Robert [Orsi](#), 'When $2+2 = 5$ '. He explores the passion of the Passion, i.e. the politics of transubstantiation: this being the underpinning of the Hundred Years War: the problem of the empty Cross, etc....etc. *Il Papa* wins that argument, IMHO, against every other metaphysic in the market. Am I just kissing ass, er....ring? And so what? We are the World?? No, my friends, we are the Body! No way around it. No shortcuts, save vicarious atonement. How do we

know that? Salvation can only be collective. Even Karl Marx had this one nailed. Buddhists and Protestants argue otherwise. Hmm..... It's all about apokatastasis. The soul is an illusion, *a la* Buddhism, but Hare Krishna wins in the end. You gotta press the flesh, just ask DF. Reality is a social construct, *a la* the primordial version of pokatok. End runs get you nowhere, fast. It is harder than for a camel to pass through the eye of a needle. This is precisely why the UTs beat a path to our doorstep, with their proctoscopes. God is a circle whose center is everywhere? Not quite. Agape is the center. Sophia is not incoherent. That is the Good. That is the BPW. Like it or lump it; you'll look funny without it.

Protestants, Islamists and Physicists have a lot in common. They all abjure the Biocosm. Get over it. Get used to it. Heaven is no abstraction. Neither is Hell. That is not a threat; that is The Promise. There is no other. Seventy-two virgins is small potatoes. Folks are dying to get there, but, hey, look around before you leap. Kick a tire or two, and love your neighbors, every last one of them. Just remember, there is no meaning without feeling.

[4/29]

This from [Wired](#) 3/8/07:

WN: I imagine that a lot of physicists will be rather upset by your article. How do you expect them to react?

Lanza: People are not going to be very happy with what this all means. This theory is going to invalidate their (some scientists) entire life's work. I will definitely get crucified.

We've got the scientific structure and framework incorrect. We need a theory that is internally consistent. We can't do this without creating a biological understanding of space and time. This will require restructuring science so that biology is above physics.

WN: In your article, you make the assertion that time and space do not exist. What do you mean by that?

Lanza: There is something very unusual about them. We can't put them in a marmalade jar and take them back to the lab for analysis. Space and time are forms of animal sense perception. Space and time are not objects or things -- they are forms of animal sense perception.

Thousands of articles and books have danced around the desire to toss off the current mechanical world view that has dominated Western culture for hundreds of years. While some imply that time and space may not in fact exist, this article diagrams, for the first time, such a universe -- a universe in which time and space do not exist as physical realities independent of humans and animals.

From an [MSNBC](#) posting:

"Physicists have had [a] 100 years of trying to resolve the conflicts in their foundations, and they've had no luck," Lanza said. "It's not because they're not bright. It's obviously because there's a part of the puzzle that's missing. And I think this is the answer: The answer is biology. Hopefully, if that message gets out, I think we'll be able to basically resolve the conflicts very quickly."

"The very first thing that embryonic stem cells do, without any effort at all, is that they make neurons," Lanza observed. "They are assembling basically into the fundamental structures that are the building blocks of reality. ... If you look at embryonic stem cells, they can do anything - every cell of the body - but what they do, and every scientist who has studied this will tell you, is they make neurons. All the other cell types are a lot more problematic, they require more signaling. But this is what they do on their own without any external signals. I find that interesting, and I don't think necessarily it's an accident."

Now for the [Scholar](#) article:

The urgent and primary questions of the universe have been undertaken by those physicists who are trying to explain the origins of everything with grand unified theories. But as exciting as these theories are, they are an evasion, if not a reversal, of the central mystery of knowledge: that the laws of the world were somehow created to produce the observer. And more important than this, that the observer in a significant sense creates reality and not the other way around. Recognition of this insight leads to a single theory that unifies our understanding of the world.

All of this makes sense from a biocentric perspective: time is the *inner* form of animal sense that animates events—the *still* frames—of the spatial world. The mind animates the world like the motor and gears of a projector. Each weaves a series of still pictures into an order, into the "current" of life. Motion is created in our minds by running "film cells" together. Remember that everything you perceive, even this page, is being reconstructed inside your head. It's happening to you right now. All of experience is an organized whirl of information in your brain.

Twenty-five hundred years later, the Zeno arrow paradox finally makes sense. The Eleatic school of philosophy, which Zeno brilliantly defended, was right. So was Heisenberg when he said, "A path comes into existence only when you observe it." There is neither time nor motion without life. Reality is not "there" with definite properties waiting to be discovered but actually comes into being depending upon the actions of the observer.

The late Heinz Pagels once commented: "If you deny the objectivity of the world unless you observe it and are conscious of it, then you end up with solipsism—the belief that your consciousness is the only one." Indeed, I once had one of my articles challenged by a reader who took this exact position. "I would like to ask Robert Lanza," he wrote, "whether he feels the world will continue to exist after the death of his consciousness. If not, it'll be hard luck for all of us should we outlive him" (*New Scientist*, 1991).

What I would question, with respect to solipsism, is the assumption that our individual separateness is an absolute reality. Bell's experiment implies the existence of linkages that transcend our ordinary way of thinking. An old Hindu poem says, "Know in thyself and all one self-same soul; banish the dream that sunders part from whole." If time is only a stubbornly persistent illusion, as we have seen, then the same can be said about space. The distinction between here and there is also not an absolute reality. Without consciousness, we can take any person as our new frame of reference. It is not my consciousness or yours alone, but ours. That's the new solipsism the experiments mandate. The theorist Bernard d'Espagnat, a collaborator of Niels Bohr and Enrico Fermi, has said that "non-separability is now one of the most certain general concepts in physics."

You may question whether the brain can really create physical reality. However, remember that dreams and schizophrenia (consider the movie *A Beautiful Mind*) prove the capacity of the mind to construct a spatial-temporal reality as real as the one you are experiencing now. The visions and sounds schizophrenic patients see and hear are just as real to them as this page or the chair you're sitting on.

Physical reality begins and ends with the animal observer. All other times and places, all other objects and events are products of the imagination, and serve only to unite knowledge into a logical whole. We are pleased with such books as Newton's Principia, or Darwin's Origin of Species. But they instill a complacency in the reader. Darwin spoke of the possibility that life emerged from inorganic matter in some "warm little pond." Trying to trace life down through simpler stages is one thing, but assuming it arose spontaneously from nonliving matter wants for the rigor and attention of the quantum theorist.

Space and time, not proteins and neurons, hold the answer to the problem of consciousness. When we consider the nerve impulses entering the brain, we realize that they are not woven together automatically, any more than the information is inside a computer. Our thoughts have an order, not of themselves, but because the mind generates the spatio-temporal relationships involved in every experience. We can never have any experience that does not conform to these relationships, for they are the modes of animal logic that mold sensations into objects. It would be erroneous, therefore, to conceive of the mind as existing in space and time before this process, as existing in the circuitry of the brain before the understanding posits in it a spatio-temporal order. The situation, as we have seen, is like playing a CD—the information leaps into three-dimensional sound, and in that way, and in that way only, does the music indeed exist.

We are living through a profound shift in worldview, from the belief that time and space are entities in the universe to one in which time and space belong to the living. Think of all the recent book titles—The End of Science, The End of History, The End of Eternity, The End of Certainty, The End of Nature, and The End of Time. Only for a moment, while we sort out the reality that time and space do not exist, will it feel like madness.

This is OK for a start, but next he'll have to get into the phenomenology of cycles and archetypes, as in [AZO/X/QRP](#). What is important about Robert Lanza is the pragmatic gravitas that his [person](#) brings to this topic. It becomes a political phenomenon for about the first time. This is the shifting tide into which the Aquarium is about to plunge. Ron signals his readiness, apparently having received his final earful. Kit stares nervously into the abyss. Ours is not to reason 'why', Kit.

I am reading two articles: [5/2 -- got interrupted here, I think I was looking at [Timothy](#) O'Connor at Indiana U. I'll try to get back to this, asap.]

[5/2] [[a](#)]

There has been a conversation with CoR25. There was a discussion as to whether this conversation might constitute a news story. The correspondent said he would be surprised if it did rise to that level.

CoR25 said that he will confirm to whomever that there have been extensive communications between me and Ron over a number of years, and that Ron is well aware of my bias toward eschatology of the traditional kind.

I have had discussions with OM and RU, and they are prepared to make the case that a confirmable R&D show should rise to the level of legitimate news. Well, OM is so prepared. We'll have to see about RU. They are welcome to call CoR25.

CoR25 was surprised that the R&D show had not already been publicly confirmed. I contended that it had not been so confirmed, and he readily consented to be the official confirmer of the R&D show.

Any questions?

I then called Ron. He did not indicate that he had any problem with this 'small' additional step. I don't recall that we discussed whether this should rise to the level of a legitimate news story.

[5/3]

There have been postings on OM, RU and Starstream relative to the above. I plan to meet with GR this pm to obtain his expert opinion about a possible news story. Also I expect to be talking to John Lundberg about his documentary. On Saturday there should be another interview with OM, focusing on the BPWH.

The ideal position for the Aquarium would be to arrange for two or three news outlets that could be activated within two or three days of our final decision. So, yes, I would hope to be consulted by CoR25 before his speaking positively with a credentialed reporter on this topic. If we continue moving as above, then the increased Internet chatter should become news in itself within a few weeks. We might only wish to slightly preempt that spontaneous event.

Then we have the issue of what hereabouts might rise to the level of newsworthiness. This from RU:

What we were trying to convey to you last night, Dan, is whether something of this nature would be a little more interesting to the general public:

"Ron talks to Dan extensively about eschatology and issues related to ufology - and supports and encourages Dan positively in his online blog statements related to eschatology, ufology, and related phenomenology. Furthermore - Ron submits correspondence to Dan on various ufology issues in a supportive role, including controversial issues such as supporting Gordon Novel's RAM project both on the blog and monetarily (encouraging Dan to invest a few thousand dollars in Gordon's project), investigating Rick Doty's involvement in Serpo, and all of the other issues discussed on Dan's blog. Ron has had Dan meet with officials, members of Congress, and even foreign delegates. These activities appear, at least, to represent official, not personal, investment and interest in Dan Smith - a controversial figure in Eschatology, Ufology, and Phenomenology who [CF] has reportedly called insane and 'sick'."

That would constitute confirmation.

Most of this is untrue! Then there was this from [DE](#):

When I approached Dr CoR25 for his comments, and he offered many, his closing response was this:

"I have no clue what the "confirmation of the R&D show means"...I said I would tell ANYONE that I know Ron and Dan are friends, have talked about all manner and matter of stuff for years, they disagree vehemently [on] essentially any matter of substance, have great humor, and know each other very well: they talk often, and are very open when asked by anyone that they communicate a great deal in person, by phone, and by email, but neither knows what the other is really all about...nor do I. If THAT is the "R&D Show..." you bet: I will tell anyone THAT...good heavens I have been confirming that for many years!

"I also do not know what Dan will post, if or how he will refer to me, if it will have a spin that I either care about or would agree/disagree with...or anything else. I told Dan I trusted him to represent what I believe, and anyone who wants to confirm can. That would include any "reporter" except from Blogs and web sites...which I [do] not consider legitimate journalists...because none of them follow even the most simple or courteous Chatham House rules, much less journalistic ethics of sourcing backgrounder conversations."

So, ok, the more things change, the more they stay the same.

Now we reenter the Spin Zone:

Let me repeat my common refrain: Ron has contributed virtually nothing to the metaphysical speculations herein. Or put another way, Ron has been acting more as my handler than as my interlocutor. It is true that I have often referred to him as my 'interlocutor', simply because that sounds a bit more highbrow, less sweaty, if you will. It was WoR30 who once remarked that hubby and I were 'joined at the hip', in some sociopolitical sense of the phrase. Whatever!

From this perspective, the underlying issue here is and remains the Bennewitz/Jesus issue, not to put too fine a point on it. To be more specific, given that I came to Ron presenting symptoms of Delusions of Grandeur, it is fair to say that he has failed in his continuing attempts to cure me of those delusions. Should Ron's diligent, but futile, psychiatric interventions with me rise to the level of Newsworthiness? That would depend a lot on how some reporter might wish to spin that story.

Then this:

I will go on record confirming that I speak with Dan irregularly, am aware of Dan's interest in what he calls eschatology, and try to maintain a supportive role. In a broader sense I concur with all relevant comments by Dr. Green whose amazing skills in differential diagnosis and knowledge of current pharmaceutical products may have recently saved my hearing. That said I am concerned with the motivations of those who constantly bait Dan to make strange and public pronouncements. If you like reading Dan's Blog entries enjoy them, but enjoy them for what they are.

Yes, I am tempted, but allow me to leave the comments to others.

Mirage Men (R)

or

On being careful what we wish for

or

The non-messiah does not announce that the world won't end

Rumor has it that GR is onboard with a nominal stipend. That rumor was true as of yesterday. He had a lengthy convo with CoK25. He will talk to TF (not Trout Fish) this weekend. Things should be sufficiently smoothed over with CoR25 to permit a meeting back here in the next couple of weeks. Soon after that would be a meeting with CoK. There was a previous such meeting 10 years ago. A press kit would be compiled by the end of the month to be released by mid June that would be published under a bi-byline in the Style section of the *WP*. That, at least, is one possible scenario at this point in time.

The article would be something of a segue into John's and Mark's film, *Miragemen*. There is already circulating a promo disc with about twenty minutes of Doty on Bennewitz. They had backgrounders with CoR and TF. No communication with CoK is scheduled. They also have film of Hansen, Durand and Weaver. A two hour documentary could be released on Channel 4 in July, and over here on the History Channel soon thereafter. CoK suggests that I need not be filmed therein. GR will try to cooperate with them. At the present time there is no plan for R&D to be referenced in either the film or the article. Even the article would not name names. It would all be on background.

So will the sky fall in June/July? The hope is that it won't. Will eyebrows be raised inside or outside the Beltway. Perhaps.

CoK suggests that the focus going forward should be on the persistence of the phenomenon/viral meme, rather than on the history of the visitation. Is that an acceptable substitution?? Who would'a thunk it? Chicken Little bites the dust....the Aquarium goes glub....glub.... Those eardrops must have worked wonders.

Comments? Suggestions?

Oh, yes, (R) is for the copyright, not the Rating.

BTW, somewhere in here is the inferred suggestion that were I to travel abroad, it might be prudent to assume another name. So much for the safe house! Well, which would you prefer? VLAA/SDP, here we come....

[5/6]

This from Starryeyes on [OM](#):

Do you really think something will be disclosed via a piece in the *Style Section* of the *Washington Post*? They might assign it to Joel Achenbach again... You do remember how he covered Greer's Disclosure Project testimonies after the press conference at the Nat Press Club in 02...

I knew there was a connection! The more things stay the same, the more they change. We are in good Company. There is a rumor that *Miragemen* will be released in Britain on the Fourth of July, speaking of irony.

Or not..... This from Bren at OM:

A small update - Mark Pilkington told me (today) that they are still filming and won't be ready to roll out until NEXT year! They are self-funded, which is slowing the process down, apparently.

No minor correction, this. It leaves us with our necks out wrt the timeline.

Back to Tim O'Connor: '[And This All Men Call God](#)' (2004). It is, of course, on the dry side, but he does hit the salient points.

Necessary being? Why does anything exist? Could nothing exist? Is all existence accidental? Is there possible existence? These are the basic issues of ontology. The BPWH is based on a moderate version of [mereological nihilism](#): nothing exists absolutely outside of God. But God herself is contingent upon Creation, etc. God is necessarily a dialectical being that includes Creation as an essential part (sic). There exist no proper parts. This is just a restatement of Leibniz' PSR. There are no ontological atoms. Everything hangs together, or we all hang separately, twisting in the wind.

The hairs on our heads are numbered? Well, not quite. Numbers, too, have only a contingent existence. The sandcastle has ontological precedence over the grains it contains. There exists vagueness, about the dark side of the moon, and Schrodinger's cat, etc. There exists mathematical contingency. But ontos always has precedence over chaos. Fractal 'chaos' just fills the ontological gaps, as with our blind spots. Drivers are killed everyday by what is in their blind spots. That is the hard lesson of ontology, but should that fact turn us into atomists? It should rather teach us to exercise caution. Omniscience is not something that even God could afford. There would be no room for love, no dialectic, no Creation, even. Love is nothing if not blind. Fig leaves are of the essence. As Chris Straub said to me wrt the eschaton, 'Well, Dan, I guess you'll just have to surprise us!' I try to minimize that, but even I cannot eliminate it, thank goodness. Teleology is not incompatible with mystery. It may be its ultimate Source.

[5/7]

This from JakeReason on [OM](#):

Smokey, in talking at length with Dan Smith, concerning this issue. He believes that what we would call "Disclosure" is that time in which mankind comes face-to-face with the eschaton. The global ET awareness (Disclosure) is merely the door opener. Disclosure automatically brings into view the true nature of the universe. Which then rapidly brings into collective focus our final destiny - oneness with G-d.

Dan Smith's the BPWH is the detailed description/explanation of this awakening, in which all things are past and all things become new. Dan believes everyone will eventually grasp the BPW Hypothesis. This within a generation, to perhaps a couple hundred years at most.

And so in Dan's view, the Disclosure period can be equated to the prophesied "second coming" - eschaton. And furthering that thought, the BPWH consequently reflects the "second coming".

Then Fore:

I wonder how the second coming translates into a disclosure scenario. Is it the aliens who come or the truth that they bring. Or is the second coming a sort of revelation from a body of government?

The more I look the more that I'm confused as to how two texts clash together. Wouldn't people be

disappointed if the role of the messiah never came about. What if instead we all found out that disclosure was just the revelation of old alien pals for a second time? This makes me wonder if our future is not a make or break scenario. Disclosure could break the camels back if it doesn't fulfill long standing religious beliefs.

Then Shmush:

Who's saying disclosure has begun? Dan, or is Dan saying that RP told him that it has begun?

Who is predicting the signals will get "stronger"?

I guess I'm not sold on DS yet.

While I personally don't think disclosure is happening, I will recognize the fact that there has been an increase in the amount of UFO information being made public. Also, it seems like the Media has been more apt to follow a couple of stories, UFO related.

<<I guess I'm not sold on DS yet.>> Well, that makes two of us. We have a long way to go. I'm getting old. I may not make it to the Promised Land, but I'll do my best to point the way. And, yes, there cannot fail to be a close link between Revelation and a messianic event. There must also be a close link between Revelation and Disclosure. For the sake of historical economy, why not have these delivered in one package? I would feel negligent, and even unpatriotic, were I not to attempt to model myself upon a minimalist version of such a package. It does seem that I have been invited to do so. No?

But right now, much of the reporting responsibility rests with GR. Were he to drop the ball, it could be a significant setback. He must be granted access to CoR & CoK. That is still being negotiated. We should learn more today. The fact that *Miragemen* may not be released until next year means that Gus's article would have to stand on its own. It's not clear, then, what its hook would be. R&D may be too big of a stretch, even for the *Style* section.

Back to Tim. Necessary Being is necessarily mysterious, even in its logical necessity. We should suppose that, despite its quantitative limits, it would have no qualitative limits. Obviously, there can be only one NB. Creation is an essential part of an NB. Self-Creation fits that bill. It, again, must be Singular. Thus there can be only one four-dimensional Creation, and, with moderate mereological nihilism, that Creation may have no proper parts. It must be an organic/functional unity. Thus do we have a geo/anthropocentric Creation, which fact is the essential feature of Trinitarianism, and found nowhere else. Disclosure will either confirm or deny the fact of our Singularity. Do stay tuned.

GR has spoken with TF. The hook here may have to be the briefings. BTW, *Miragemen* may actually be first released to Theaters. The signals keep switching, on a daily basis. CR on film? Another Swan? J&M still lack a storyline.

Briefings are a blast from the past; not forward leaning as CK has urged. R&D is forward leaning. What else would be? 'Open' cooperation between MASINT and VLAA/SDP? Would that require an 'act' of Congress, violating the SDP? Nothing less could fit the bill. That could be the implication of the article. Then what about CR? CK did discuss the problem of defining 'briefing', and how that definition tends to shift. J&M will only be a blast, of the PB kind. GR needs to be a bridge from past to future.

BTW, there may now be two yellow book sources: Rick and HP.

We need another word besides 'disclosure'. Implicit acknowledgment. That seems to be where we are headed. It is all a matter of degree, and it is cumulative, to a degree.

Here it is: it's all about the Internet. That is the beginning and ending of this story. Will GR buy this? This is why it is in *Style*. Yes, or no?

Then this from the OM thread:

Uncle John here: I've been trying for years to get some messages back to those controlling disclosure. So here goes, Dan Smith (DS).

I agree with DS that disclosure is much more grand than disclosing the ET interaction with earth. One could look at it as Eschatology, but in reality, nothing that continually evolves ever reaches its ultimate destiny.

Perhaps mankind will wake up to this:

Your memory and consciousness is located outside your brain in a mechanism which operates outside time and space and is located in an unknown time and space. This is much more than the Akashic records in that it is the actual memory and consciousness itself.

By control of this mechanism, individual minds can be signaled, controlled or virtualized. It is like the Matrix movies but it is reverse. In the Matrix movies, the mind is real and the scenes are virtual. In this mind mechanism, the scenes are real and the mind is virtual.

Those managing the ET situation need to understand that they are mind controlled by an ET collective, this ET collective is running the world and their plans are not in the best interest of humans or God.

Short of any other beings doing this, it seems that the destiny of humankind is to design and construct this mind mechanism. What could be greater than this? Ask not what God will do for you, ask God what you can do for God.

Sometimes I think that this whole universe is just a joke in order to get me riled up.

<<this ET collective is running the world and their plans are not in the best interest of humans or God.>>

Well, John, I don't entirely agree. The BPWH is postmodern and post-Copernican.

You need to do a little BPWH homework, and then we might be able to communicate a bit better. And I look forward to that.

John comes back:

John previously: <<this ET collective is running the world>>

Of course I don't agree that any force is completely running the world. Every being has free will to a certain degree. IMO, the ET's have been behind the major global forces that shape the world and not some lineage of rich families. The fallen angels, the illuminati, the black-ops, the masons, old European money, the big corporations and our elected government have all been postulated as the major force behind running the world instead of the ET's. What is your guess or opinion?

We all contribute to the self-creation/maintenance of the world: we humans, the UTs and God. It is we humans who do the heavy lifting. God is the conductor; the UTs play critical roles at critical times in history: the Three Magi/Visitors expedite the second coming, IMO.

John previously: <<their plans are not in the best interest of humans>>

Whoever is running the world does not care about needless human suffering. That is clear to me, although the word needless can be interpreted in many ways.

Regardless of who runs it, this is the BPW. If you disagree, John, then you assume the burden of offering a superior alternative version of history. By assuming this is the BPW, I assume the burden of rationalizing all of history. I submit that mine is the lesser burden.

John previously: <<their plans are not in the best interest of God.>>

Well like any mortal man, I can only presume the interest of God. But to me, God is love. Since I don't love to see all the needless suffering of humanity and the ravages to our environment, I assume that God doesn't either. Just my point of view and partially explains my last comment/joke.

I readily agree that God is love. I submit there is no needless suffering. It is God's version of tough love.

Gee Dan, I have no idea what postmodern and post-Copernican mean. I'm 63 years old and I quit doing homework a long time ago. I've read some of your blog and listened to some of your interviews. It seems that your blog is mainly directed at disclosure. Perhaps I have misunderstood this.

I misspoke. I should have said post-Newtonian rather than post-Copernican. This is what needs to be disclosed. This brings us back to a pre-Copernican understanding of a geo-anthropocentric world. The starry sky is part of the veil of Nature, behind which the act of Creation is hidden. This is a virtual reality, a collective dream-state, of which God is the author, conductor, hypnotist, or what have you.

[5/8]

John comes back again:

Of course humanity is doing the heavy lifting. I didn't ask you that. I'm assuming that you responded that God is the major force running the world. I doubt this. This is not what the religious texts say.

What are the UTs? Who are the Three Magi/Visitors? I can't respond to that I know not.

Let me repeat: God is the conductor, we are the orchestra. We are the co-Creators of the BPW. The UTs are the ultra-terrestrial visitors, i.e. they come from dimension X, not planet X. There exist no conventional ETs according to the BPWH. The three main visitors were EBE1,2,3 of the Core Story. They are also the Three Magi of biblical fame, prophesied out of time.

Dan, if you think that this is the BPW, then why are you bothering yourself to try to change it on your blog? How can you say you rationalize all of history when you can't even respond to all of my post? A short one at that!

Who said I'm trying to change it? I'm merely telling it like it is. Our free-will is vastly overrated in our ego-consciousness: this in accord with Freud, Jung, etc. I am merely the designated pump-primer for our ratiocinative overcoming of our historical ignorance. We awaken in a timely fashion from our slumber of materialism. As an exercise in history, we can attempt to rationalize the Holocaust.

If you feel that there is no needless suffering in the world, then you have lost some of my respect. Perhaps you hang out at the Bohemian Club where they celebrate the death of care?

I hang out in Baltimore, MD. Please give me an historical example of the suffering that you deem to have been needless.

Back to Tim. Is it possible that there could have been nothing? That strikes me as an incoherent, inchoate idea. Incoherence is something that is not knowable, and, therefore, not effectively observable. Such states of being can only exist as abstractions of our overactive imaginations. We can try to imagine

Nothingness, but it is only ever an extrapolation from the Plenum/Pleroma of our Sensorium. There is no logic that is not dialectic. All is process.

Can we not die? Could we not be lost in space? Free-will depends on the existence of paths not taken. Can such a path or such a world exist? Modal realism, like free-will, is vastly overrated. In quantum theory all paths are taken, and the BPW is the *constructive* interference of those paths, resulting in the Leibnizian PSR/PLA/BPW, etc.

Given the impossibility of sheer Nothingness, there then exists a necessary Being. Given moderate mereological nihilism, all that exists is an essential aspect of that necessary Being. There are no proper parts or atoms. Given the impossibility of Absolute Incoherence, necessary Being is coherent Being, and so we have the best possible Being as the singular necessary Being which is tantamount to the BPW. This is the BPWH. It is that simple. It is that unavoidable. That we have been able to avoid and deny this hypothesis for so long is, perhaps, the greatest mystery of existence. This historical fact is the central mystery of the Self-concealing God. Necessary Being is necessarily Self-concealing. A remarkable, but perfectly logical corollary. Yes, Virginia, there is a logic of mystery, and a mystery of logic. Hallelujah! This is part and parcel of the mystery of the self-creating Ouroboros.

How do we explain the real nausea of Sartre's Nothingness? Modern existential Angst? It was a necessary phase of our growing up. As Owen Barfield would say, it was the necessary psychic discontinuity or discombobulation between our Original and Final participations. It was our teenage angst. Think James Dean! It is being played out daily on the streets of Baghdad. It is the Black Flag of Nihilism. The Romance of Nothingness. The Great Attractor of a Chaotic System. The Great Illusion within our Great Illusion, i.e. our vaunted separation from God.

Here is a [quote](#):

The conclusion to which the foregoing argumentation points is that, owing to the mereological complexity/diversity of the natural world, on the one hand, and the constraints implied by the very notion of necessary being, on the other, a necessary being cannot be right in the thicket of natural-worldly things, as the friend of Spinoza would have it. It must be transcendent. Although some of the details of the route we've pursued are novel, the upshot should not be entirely surprising, given the tradition of metaphysical reflection stemming all the way back to Parmenides. For when necessary being has been conceived as immanent to the universe, it has invariably involved the supposition that the world is radically different from that which it appears to be. I have argued that this move cannot be sustained, given only the minimal assumption of the compositional and causal nature of the universe.

I guess I must be a Spinozist due to the pantheist tendencies of my theism. Conventional theism is highly conflicted concerning the immanence and transcendence of the Creator. It is the transcendental or deistic account of the Creator that made room for scientific inquiry. The early scientists were simply Deists. This *felix culpa* opened the door to a mechanistic, dualistic world view. The potential for coherence became lost in the limitations of the machine. It was great for the forced coherence of industrial development, not so great for our spiritual development. With Disclosure, the spirit has much catching up to do.

Back to John:

Overpopulation, hunger, poor health, high death rates and war are examples of needless human suffering where these problems could be fixed if our collective governments gave a damn. They don't, although they appear to be trying in order to put on a good show.

The problems you mention are mainly a result of our ignorance. The BPWH places a high value on ignorance. Ignorance is the cost of Creation. Creation cannot occur without a forced separation between creature and Creator. The measure of the separation is the measure of our ignorance. That is the most basic trade-off that we creatures must bear. Is Creation worth the price of ignorance? I submit that it is worth the price, many times over. I don't imagine that any sane individual would disagree.

I see that Smokey, also of OM, is not having a good day. He lashes out against the reasoned hope of the BPWH. What is the psychology of cynicism? What is the cure? Cynicism is a defense against the slings and arrows of daily existence. Cynicism is the dark side of hope and faith, no matter how reasoned they may be. CoK is a fraud. Dan Smith is a sucker. There is an implicit challenge to prove the cynic wrong. The challenge would not be made if there were no doubt about it. Smokey would not be here, if he harbored no doubts about his cynical posturing. His cynicism is inherent in the legacy of our scientific materialism. I am not here, however, to minister to the those who are not willing to make an effort to transcend the limitations of modern culture. I have no time for those who prefer to curse the darkness. Smokey will have to find another sucker.

[5/9]

Convo w/ CK yesterday was noncommittal. CR is being bashful. With the film on hold, a pre-primary disclosure would then have to come from our side. Playing the PB card would not be easy. I could support it, but I cannot be in front of that. Remember, I'm supposed to be a victim. We are all walking a fine line here. We can push the envelope, but we don't want to tear it.

I went to hear Al Gore give his talk at a UMBC last night. I tried to ascertain if he might have been briefed, just by listening to the undertones of his alarums. I could not catch the hint of a subtext. Nonetheless, the idea of a global and alarming paradigm shift is in the right ballpark, wouldn't you think.

Another convo, and a bit more upbeat. And so it goes.... Not only are there at least two Doty's, there are now two Col. Weavers, but I should have known.

Back to Uncle John:

I like the way you put that. One of my favorite sayings is from a Buddhist when asked why he felt bad, "Stupidity leads to love."

There are four elements I'm perceiving about ignorance.

1 - Lack of knowledge of the facts to solve the problems at hand and making choices which maximize one's life.

2 - Having the best methods to select the right facts to be applied in a situation. Who to listen to?

3 - Not caring what the facts are. One of the wisest things I ever heard was the statement that people are not interested in solutions to their problems unless they can own the process of coming up with the solution.

4 - Having the facts or ideas blocked from one's mind. This is the hardest thing for one to see, but I assure you, it is real. The suppression of humanities knowledge of the truth of 911 and chemtrails are good examples.

"The measure of the separation is the measure of our ignorance." Now that is a very interesting statement, especially when ignorance is broken down the way I just did.

Evil that is interjected into our life by unseen forces is outside my discussion of ignorance but it is very real. Where does a discussion of ignorance lie when our governments are secretly ruled by hidden forces.

<<maximize one's life>> Is that why we're here? That is not even the Darwinian view. The BPW view is more like 'mission accomplished'. This is the spiritual view generally.

<<Who to listen to?>> Yes, we do have to try the spirits.

<<unless they can own the process of coming up with the solution.>> Yes, ultimately, salvation must be of us, by us, and for us.

<<Where does a discussion of ignorance lie when our governments are secretly ruled by hidden forces.>> We are all so ruled. The search for truth becomes all the more pressing.

Ultimately we are forced to trust our best informed, most coherent and innermost judgments. Simply put, we must trust the God within. What else can we trust? We must develop a healthy ego before we can appreciate our higher Self. There must be a 'breakdown of the bicameral mind' before we can hope to pass from other-direction to inner-direction. Our Final Participation must be deeply voluntary and deeply reflective. Anything less would be abortive.

If our highest truth cannot be identified with love, then we know that we must go back to the drawing board.

If you know of any cosmology that comes closer to these criteria, I want to be the next to know.

Evil revels in ignorance, but those entities can get their act together only on an *ad hoc* basis. It is always rotten at the core. It is always fly-by-night.

If there is a cover-up, the fact that it has lasted for several generations points to the fact that it cannot be simply evil.

I see that I have neglected to respond to Fore's early morning posting on OM. It is thoughtful, but not too well informed on the ins and outs of the BPWH. He does hew to a more orthodox religious view than is to be found here. My word for Fore is Apokatastasis. Until one fully groks on that, one will be most confused.

This is the one and only Planet of Choice. Did we individually choose to participate here? More or less. This is the default school for souls. If you wish to opt out, you need a good reason. The amazing thing is that even with our overrated free-will, there are no real mistakes. Like a sausage factory, everything gets used, even our squeals. Even Adolph can't be said to have made a mistake. He let himself become the fall guy in a major sub-plot, having eschatological implications. It probably could not have happened to a more deserving schlemiel. Rwanda, Darfur, etc.? Is not some of this bloodshed gratuitous? It starts becoming increasingly less gratuitous, right about now. The grace period is about over. Things quickly start getting more serious, if we are to have anything to say about it. Fun and games suddenly become much more costly for the perpetrators. Why else do you suppose there is this last-minute foot dragging?

Uncle John:

Apokatastasis: The Final Restoration of All Things.

Uncle John here: All those philosophers who wrote about Apokatastasis didn't understand that in the higher densities everything exists beyond the confines of linear time and space. Grok that Dan. There is no such thing as final in eternity!

Everything gets used, but not in a all in one solution like stuffing a sausage. Couldn't be further [from] the truth. What happens is that everything is share and unified. Each sentient being's life experience is shared and unified with others and the choice or authority [is] given to each individual soul as to who they share and unify with. As the souls get unified into soul collectives then that choice is appropriated to that soul collective. Guess what? Adolph's soul ain't going to be shared or unified with my soul until it's one of the last pieces left. Adolph ain't going to have much enjoyment in this process. He is going to

be left out in the cold, so to speak. Out there with all the other hidden rulers of humanity.

Every thought and feeling is being recorded by the mind mechanism.

And why are things changing, just about now. Perhaps because of the internet those ET's running the show are reading my reflections and are starting to awake to the major mistakes they are making. The cost of the perpetrators fun and games are beginning to stare them in the face. Death is no escape!

ETs = UTs = angels & demons. We are closer to God than the angels.

<<...ET's running the show...>> What gave you this silly idea, John? Are you an atheist?

[5/10]

Shmush on OM:

I really don't like the direction that DS is suggesting to us that Disclosure has to happen, via Eschaton. When did this happen?

What ever happened to the Gov't simply admitting that they know about "them" have had contact with "them" and that they are good/bad?

Personally, I feel like what DS is saying is, "Yes, I'm gonna die, but before I get into that, let me tell you about all the math goes into determining when it's gonna happen." Is DS an actuary or someone that can actually give us something that isn't just theoretical and rhetoric? I don't think we are "there" in determining whether or not that is the case yet, but until that happens I think I'll stick to my copy of "The Day After Roswell".

It's a long road from 'crashed disks' to eschatology. But, Uncle Sam is obligated to issue a *Caveat Emptor* to anyone wishing to proceed down that path: there is a finite probability that should we choose to start down this path, we will end up at the threshold of the Eschaton.

The need to know of a few curiosity seekers does not obligate the Gov't to arbitrarily subject humanity to the possible consequences of disclosure. Thus the sixty years of foot dragging.

The day of reckoning can be postponed only for so long. We are rapidly approaching the end of the Grace Period. This is the Final Warning prior to Disclosure: be careful what we wish for! At the outside, we will have a couple more years to grasp the possibilities. After that, it is Truth and Consequences. We will have done our humanly best to infiltrate the Message under the radar of the News Media. This is the last gasp of our preparation. Take full advantage of the short time that remains. One last tongue-in-cheek article in the *Style* section, that is the most we can reasonably hope for, at this late hour.

Please note the recent [post](#) of Greg Bishop concerning his role in *Mirage Men*.

I can't quite seem to get off the topic of [Necessary Being](#). Allow me to start from another place. It is generally assumed that $2 + 2 = 4$ is a necessary truth. But does this imply that 4 or any other numbers exist necessarily?

But wait, let's go back to the beginning: [why does anything exist](#)? Is pure non-existence even conceivable? Can we even conceive of the non-existence of particulars? Is there anything that is inconceivable? A typical example is a square circle. I humbly submit that there is no way to distinguish between a square and a circle when they are projected into a lattice world. In such a venue, square circles would be the norm. How can one conceive of that which is inconceivable? It is an empty set. Is an

empty set conceivable? Not strictly, but only by extrapolation. Notice how late in our history did the concept of zero emerge. It is not a simple concept. What about the set of married bachelors? That set might have been more obviously empty in Victorian times, but in our postmodern world, we have to stop and think about it. Absolutes are rather more difficult to come by in these latter days.

Let's go back to 4. 4 is inconceivable outside of an infinitely complex domain of math and logic. 4 simpliciter is inconceivable. It comes with a tremendous load of conceptual baggage. This is a restatement of Quine's holism.

Do doughnut holes exist? As a matter of fact, they may be purchased in most bakery stores. Is that just a play on words, or does the phrase contain a grain of metaphysical truth? The marketing success points to the latter. Then see [holes](#) and the [hole argument](#), if you think you are too smart for this.

I humbly submit that nothing is inconceivable, on both construals of that statement. So there necessarily exists something. Given something, then everything, *a la* Quine. Have I not blurred the distinction between ontology and epistemology? How does this relate to the BPWH? Is a sub-optimal world conceivable? Taking a page from QM, suboptimal paths are necessary to construct the optimal path. Nightmares form the shadow of the BPWH. The Holocaust is the reification of such a nightmare. Paradise is necessarily bordered by hells, but not by Hell. There is an ill-formed idea here, which I would prefer not to beat upon just now. Satan cannot exist, other than in the abstract, like 0. The God of love in arguably the most powerful idea of all time. The God of hate, seems little more than oxymoronic.

The purveyors of cynicism and nihilism can run, but they cannot hide. They have no place to rest their heads.

Our free-will exists only in our navigation of the shadows. As we go toward the light, our free-will becomes a mere shadow.

Smokey here:

Dan admits that he's a government operative taking instruction from that most mendacious of agencies- the CIA. That in itself ought to elevate our sense of smell. Implied in all of his absurd comments is the willful belief that 'he who controls disclosure controls human destiny.' While that proposition may contain a modicum of validity- it also contains the necessity of resistance by any means available. Lab rats and white-coats; Smith is an exquisite blending of the two- a white-coat technician with whiskers, a twitching nose, and the ass of a garbage truck.

Just this morning CK felt it necessary to remind me that I was running this (disclosure?) show. To what extent is my leg being pulled or not being pulled? The countdown to the *WP/Style* putative piece continues apace. If the train has not been derailed by then, well, we might wish to reconsider the odds. Yes? Shall we rush to judgment or to print?

[5/11]

Hi Dan,

I understand the point you are trying to make about "it's all (ultimately) good" / 'Hitler had a purpose' - thing.

HOWEVER - I predict that raising that as an example will switch 'off' the vast majority of minds you are reaching out to. And they will switch off in disgust at the thought of reconciling holocaust with some Gaiatic plan.

People simply will NOT want to take that on board. I may be wrong, but even my own reaction was - 'You've crossed the line there, Dan!' Had I not known you any better - which 99% of your readership *don't* - I would have immediately moved on from the Dan Smith version of the Eschaton. Dan, do you not think there is a certain amount of 'tact' responsibility involved in enlightenment? If your (loved one) had been raped and sodomised by some evil nut-ball and your children had been .. (.. I don't want to labour the point, so will refrain from going any further..) ..etc - would you like to read about someone else's perception of events, published as a form of 'grand cosmic plan to enlightenment / spiritual evolution'?

Did that hurt or offend you? I am truly, and honestly sorry if the analogy did, and I feel sick for even using it - but that's the point I am *trying* (perhaps tactlessly and feebly) to get across.

Enlightenment comes via tact and compassion for human understanding, not through making your audience eat shit.

With many apologies and best wishes,

Bren.

Bren,

You've got to be kidding!

Being an eschatologist has absolutely nothing to do with being tactful.

I'm not here to 'sell' the idea of the eschaton. This is not about market economics.

I'm not here to 'reach out'. I have a message to deliver, and it will be delivered.

Does the name 'Jeremiah' mean anything to you? I'm sorry it took you so long to figure this out.

I did not come here for absolution, yours or anybody else's.

If you want pabulum, look elsewhere.

<<Enlightenment comes via tact and compassion for human understanding, not through making your audience eat shit.>>

If God were not able to 'eat shit', we would certainly not be here! Ask any mother! This is precisely how we become like God. I have a much higher regard for human comprehension than, evidently, do you, Bren.

But you see the lengths to which I have to go, just to get a single point across.

Dan

Bren,

<< Jeremiah means nothing to me >> Evidently!!

<< Of course you're trying to 'sell' it. >> Is that why I also acknowledge that my mission is most likely to be perceived as that of the anti-Christ?!

<< sermons >>? If you ever catch me sermonizing, please shoot me!

<< And even a damned prophet needs a bloody audience!>> Sure, but guess what, that's not my problem. That's Ron's problem. Why the f*ck do you think I play footsie with the CIA, for Christ's sake?

Bren, if you don't wish for your forum to be involved with the Disturbing Message, then please take that up with your Board. That is not my decision to make.

Dan

Bren,

<<Are the chosen ones meant to [believe] 'Nazism was a necessary evil' - 'Rwanda genocide is Gods Will' ? God can't get it wrong? Are YOU joking?

Whether it was Hitler, Stalin or The Pope - it was not necessary for a BPW.

If that was part of God's plan, then he presumably acted against even His own will. You don't *need* suffering for a BPW, not then, not now. Show me where the hypothesis demonstrates that 'it' is needed - on such a traumatic scale. It seems you are apologising for Hitler, not God.>>

If disclosure had come 70 yrs earlier, there would have been no Nazi Germany. The Nazis were 'selling' a perversion of the Disturbing Message.

Thus could God have easily prevented the Holocaust. Instead, She decided to let the 'show' proceed.

Was that a mistake?

Dan

It was only the advent of the Nuclear Age that finally forced God's hand. Thus we see the timing and location of the 'Roswell' incident.

<<...forced God's hand.>> This is, of course, just a manner of speaking. God knew perfectly well what would happen, given U235 and human ingenuity. The Holocaust was a preemptive move on God's part. It was a necessary prelude to Disclosure, having to do with the return of the Bird Tribes, as explained previously. U235 was not a gratuitous part of Creation. It was another part of the Telos of Disclosure. It is another part of God's political leverage that is being applied even now. Don't underestimate human stubbornness. God doesn't!

From Chris:

I think you might have missed Bren's point. You are a messenger, right? And as such you do have to carefully craft your message. Whether it is with your wordsmithing or with being careful about who and what you directly reference, it is something you do all of the time.

Chris,

This is not an easy message. If I cannot speak spontaneously and from the heart, I will very quickly get tied in political knots. That would be the end of the message.

This is many, many light years from having anything to do with political correctness. Pretending otherwise would be to sabotage the message.

Folks are invited to take it or leave it. I have been doing this for too long to change my stripes now. Supposing otherwise is being dishonest.

Dan

Hi Dan,

Sorry,. I just can't see it. I guess it's a damnation of not being Christened.

Genocide is a material act, created of human will - independent of God. Not part of God's Will. - God's Trust, maybe. And Humans go against God's trust sometimes - with terrible consequence. Hitler did 'it'. There is no evidence that God was involved, is there? From the forensics I've seen, it seems the perpetrator was very much an Anti-Christian. - and therefore surely anti-best possible world.

or something like that.

Bren.

Bren,

Are you saying that God could not have prevented the Holocaust?

If it was foreseeable and preventable, God's complicity is unavoidable. She becomes a co-conspirator. There is nothing gratuitous in or about Creation. The Holocaust becomes an essential part of the BPW. No one could have done it better. The Holocaust was not just an exercise of Adolph's free-will. That truly would be a travesty. Without it, the world-experience would have been impoverished in ways that we can barely begin to imagine, but about which we can and must begin to speculate.

Dan

Dan,

It is not a matter of speaking spontaneously or from your heart. You do those things and you do them very well. I understand perfectly where you are coming from. I'm not exactly politically correct either.

The point was just the analogy itself. Very few people understood it. Bren was pointing that out to you and so am I. I know that you readily accept any and all commentary about your favorite topic so I know in the end that it is all good in that regard.

Chris

Chris,

The Holocaust is no analogy. It is our closest encounter with unmitigated evil. It is a 'calculated' challenge to our understanding of Creation, of God and of ourselves.

Until we learn the lessons of history, we are destined to repeat them. The understanding of the depths of depravity is what stands between us and Apokatastasis.

Looking the other way is not going to get us anywhere.

Dan

BTW, the answer to Starryeyes is 'no'.

[5/14]

Yesterday there was a [discussion](#) at OM that was captured in part. The second part of my interview from a week ago should be posted there today.

Back to ontology.....

Is it possible that there could have been nothing? Is it possible that there could have been no possibility? Is not possibility logically prior to actuality? Could there be actuality without possibility? Does this question not confuse epistemology with ontology? Is modality purely epistemic? That is not the consensus of the ontologists. And what about abstract objects, particularly numbers? Is it possible that there could have been no possibility of numbers? Might nothing at all have existed? It is difficult to phrase that question in a non-question-begging manner. How can it be shorn of its epistemic baggage?

Quantum Mechanics is ineluctably modal. Might there have been no QM? E&M fields can hardly be envisioned without potentials of various kinds. Physics is essentially normative and modal. It cannot be otherwise conceived. Could there be an inconceivable Physics? What is the modality of conceivability? Nothingness is an abstraction. It cannot be objectified. It is essential subjective, as per the existentialists. It is essentially a contrastive, dialectical concept. There could not be nothing without something, and therefore there cannot be Nothing *per se*. But is that the same as saying there could have been nothing? That premise is modal. How can nothingness be so haunting if it is inconceivable? How do the existentialists manage to make such a big deal of it? Clearly it is entailed in our notions of death.

What about the conscious and the unconscious? Back in the heyday of Newton, we had no concept of the UCs. Nothingness seems derivative of a Newtonian worldview. It may now be more derivative of a (non-quantum) informationalist view. The ontological status of the UCs is problematic, even for the materialist. Well, no, it is less problematic than the Cs. Might there have been a Cs without a UCs? Or vice-versa. We once presumed the former?

Materialists claim that there are no qualities, only quantities. Quantities are never directly observed, only abstracted. Only qualities may be directly sensed. If there were no qualities, there would be no epistemic, evidentiary basis for quantities. What color are our UCs memories. At what point in the act of remembering do our memories become colorized? How do they become color coded, if not retinally? As noted previously, such problems with indirect perception argue for direct perception, and thus for immaterialism.

Back to politics for the nonce. Where are we wrt to IC involvement with phenomena?

- Unlike the academy, the IC cannot afford a pall of orthodoxy wrt phenomena.
- The IC must remain vigilant wrt possible threats potentially linked to uncorrelated phenomena (UcPhen).
- Unconventional collections (UcCol) must include civilians.
- The tracking of UcPhen must proceed with minimal upset to the pall of modernist orthodoxy.
- There likely exists a 'vault' or institutional memory bank of unconventional data.
- Any such vault poses risks of unplanned disclosure.
- Thus there is likely to exist an ongoing plan of acclimation.
- There is ample evidence for such a preemptive actuality/eventuality.
- Preemption would necessarily include a protocol for containment or minimization of the social repercussions of a major paradigm shift.

Does the Aquarium protocol and history not fit rather well with the above points? Is it not what the doctor ordered?

If not this, then what is its rationale?

Physics cannot allow for the subjective side of reality. Logic cannot avoid it. The logical conundrums of Physics speak to its denial of the foundations of logic. Whitehead is the only one to attempt to treat these conundrums. His 'process philosophy' speaks to an essential vitalism. Despite his valor, it was too little and too late. There is no logical way to invert the materialist paradigm. The Telos cannot be snuck in the back door. The Force is with us, deny it though we try. The Telos cannot be an afterthought. It is forethought. It is the potency that grounds all possibility.

[5/19]

Rick Davis put the following out on the large Martinez list last night:

Men & Ladies,

Is this the final hour? Is what many have worked on for years about to unfold? Is this another prelude to a failed 1990-92 Disclosure project?

Dr Greer's May 2001 Disclosure Project was silenced, as his initiative did not meet with the approval of the PTB.

But is the [...] R & D Show the *feme fatale*? The seeding of the ovum?

I interviewed Dan Smith on Saturday May 5th, and he believes that we are on that very ledge.

IF you are even the least bit involved in Ufology/Exopolitics and don't listen to this interview . . . then you may well miss out on the Most Important Interview you have ever heard, with regards to the "planned" Disclosure process allegedly in the works.

But if Dan is mistaken, then no worry, life goes on.

Most sincerely,

Richard Davis

He posted the following to the OM forum:

All is settled at the country club now.

Back to the main menu, "Disclosure: What's REALLY going on?" . . .

Gus Russo and Dan and CoK25 have been speaking. Things have become serious so I am told, and believe. CoR25 is uncertain what to say or not. All are in a quandary, and so should be!. This is the Big Show folks. It hardly gets any bigger than this.

Will there be an article published in the Washington Post? And if so, what should or will it contain? Each word will carry weight. Each sentence will flag others of import. Each paragraph will play a part as a stanza in the grand melody.

Few will pay much attention, but those few who do, carry utmost responsibility for the conscience understanding of the populous. Max, are you listening?

Of course the Presidential Administration will discuss it. So too will those who are working on forming the next. Dan is no doubt correct in saying, "This isn't rocket science."

Do we want "the sky to fall"? I suggest CoR25 is wise in considering, we must be careful in what we ask for.

If Open Minds Forum and RU are linked in this article to be, then serious reflection is in order.

Yes, indeed.

I put a call in to CR this morning, but he is reported to have a sore throat. He spoke yesterday with me and Gus while we were having lunch at the Spring Grove psychiatric facility. I kid you not. They actually did let me back out, afterwards. I guess they missed their chance!

The aquarium PR strategy is shifting back toward the full Monty, for several reasons. It just seems that the gradualism option is being taken off the table. I knew we would come to the 'wire-service' juncture eventually, but had been hoping to postpone it for maybe a couple of months longer, in order to expand the dialog on the Internet. But the sharks are already circling. They can smell the blood in the water.

In order for there to be further dialog, there would have to be a very skilled counterpart, willing to plumb the depths of the BPWH. Rick Davis is our closest approximation to such a one, but he has his own belief system to deal with, which inhibits his ability to grapple with another. At this very late hour, it is unlikely that a more capable interlocutor is going to drop in. Chris and I will make a final effort to see if Rick can pick up the ball here, but that is putting a lot of pressure on him.

Failing that, there is less reason to hold back on the publication front. That would mean that I would advise Gus to aim for the news section, rather than the style section, and that would require the naming of names, i.e. CK and CR. Gus can see that this story is already heading to get out of our control, and that has him leaning toward the one-shot strategy.

There are three possible explanations for government involvement:

1. Counter-intelligence operation
2. close observation of a viral-meme pandemic
3. a major phenomenological problem

The best evidence for discounting the first two alternatives is just the R&D show. By focusing on CR, we would be looking only at the first two alternatives, and this would only be muddying the phenomenological waters. We would be p*ssing in our own soup, in other words. What is the point of that? So, why not lead out with R&D? It would only be a matter of a couple of weeks difference, anyway. So there you have it. Gus will have to make the final decision, and soon.

It turns out that Rick and I will make another attempt at a forum dialog about the BPWH, hopefully starting tomorrow. The dialog thread would be posted on my board at OM. We had a preliminary discussion earlier today, which I will get back to in a bit. If this dialog can move forward, this will help to relieve some of the time pressure for early publication.

Apparently, what happened on the forum was that Rick, aka JakeReason, reverted to a sectarian critique of the BPWH, along with several other posters. I believe that we have a better understanding now, that I am looking for the best possible segue into disclosure, i.e. that there should be a continuing, robust dialog concerning the strengths and weaknesses of the BPWH, from a supra-sectarian point of view.

Nonetheless, Rick and I did attempt to clarify the differences between his orthodox and my heterodox

forms of Christianity. As I understand it now, he is a pre-millennialist, i.e. Jesus comes back and then there is the Millennium of God's Kingdom. We agree on that much. That is our joint sectarian understanding.....but we both acknowledge that there are bigger fish to fry, i.e. every other sect, including Science and the Mystics.

[5/20]

What follows is a preamble to the prospective dialog between Rick and myself. The main topic is to be a continuing exposition of the BPWH under the probing questioning of Rick. As a sidebar, there will be a continuing update of the process.

The idea here is to make a last ditch effort to implement the VLAA/SDP version of disclosure. The success of this effort will be measured by the Internet traffic at the sites carrying the dialog and its possible spin-offs. If that dialog can continue to expand indefinitely, then eventually and ideally it could even supplant the need for any official disclosure. Ultimately there need only be a personal acknowledgement on the part of any requisite officials, i.e. various heads of state and ecclesiasticals.

The SDP part of the game then becomes that of minimizing the spill-over from the Internet into the mainstream news channels. This can be accomplished, in part, by granting quasi-exclusive access to the insiders to one professional chronicler of this end game of disclosure. The likely candidate for this role is GR. Already he has had several conversations with our two insiders, CR and CK. There is expected to be a deep background session with one of them in the next few days. I will not be informed as to time, place or any detailed substance of the meeting. I will be given only enough information to be able to ascertain that the process is moving forward. Any publications resulting from GR's efforts will be aimed at increasing the Internet traffic, without causing any alarm in the news rooms.

Is this not the best possible way to proceed, given even the moderate probability that the BPWH is reasonably accurate?

Meanwhile, we should note that the good folks over at RU are very much less than pleased with this prospective process. Why are they being so unreasonable about this eminently reasonable process?

- They want to be the ones to ferret out the truth by a merciless grilling of the suspects.
- They are not happy with the metaphysical/spiritual overtones of the BPWH.
- They want disclosure to be a matter of shock and awe.

They are the hungry sharks circling these aquarium waters, having caught the scent of blood. We keep a wary eye on them. Hopefully they will help us to detect any bigger, hungrier sharks, deeper in the water.

Now let's get back to where Rick and I left off on the OM forum.

I evidently put my foot in it, when I made the unnecessarily provocative remark that Jesus failed. This is, nonetheless, a critical issue for many people.

We mostly agree that Jesus intended to be some kind of savior. The disciples initially thought of him as the Messiah, and he was crucified as being a false messiah. According to traditional Judaism, the Messiah comes at the end of history to usher in God's global kingdom. The Messiah was supposed to have also been the King of the Jews, a super-duper King David, if you will, performing the requisite miracles to convince the world of his Divine Kingship. What was supposed to happen next, I don't actually know. I think there was an Old Testament version of the Rapture of Israel. I need a bible expert.

In the New Testament role of the messianic savior became reenvisioned. Somehow, Jesus would return in triumph, and it would be sooner rather than later. In the meantime he would be the personal savior of the

individual believers. Basically, he would save them from sin. More generally he would redeem the world from the Fall of Adam, i.e. restore Creation.

At this point, the BPWH steps in to provide a new understanding of the Salvation Economy.

The nature of this Economy turns out to be integral to the cosmology. We start out by taking the point of view of the Creator. Suppose we wanted to create a world. What would be the best way to go about it? What would be the optimal criteria for a Creation?

There are two basic options: the theistic or the deistic modes, or maximal vs. minimal interaction. Should this even be an issue? What is the point of a darned creation if God doesn't get to push the buttons in some maximally entertaining interactive fashion? Isn't this the ultimate Video Game: the Game to end all Games? Creation is not meant to be a spectator sport.

Ok, so just how interactive can we make it? We can make it Ultimately Interactive! This is just the ouroboric, bootstrap model of the self-creating cosmos. You just can't get anymore interactive than that!

Is it too interactive? What it does is almost completely blur the distinction between creatures and Creator. There is a nearly continuous Great Chain of Being. This is actually a form of transhumanism, but without the evolutionary time line. It is actually atemporal in an important teleological sense.

The built-in teleology of the ouroboric cosmos, provides God and us with the best of all possible worlds. God gets to be both omniscient/omnipotent and to take the part of any creature at any time. And guess what? We get to do the same: the ultimate in shape-shifting. Just ask any mystic/shaman.

But then we have a big issue. Is there not a cosmic right-to-life? If one Creation is good, wouldn't two be even better? Hmmm.... That is basically what the pantheists believe: creation is an infinite loop. It is like the Inflationary Model of creation: all possible worlds exist simultaneously in some hyper-space.

But theists have never been particularly warm to such profligacy? Well, they did warm up Giordano Bruno to the point of his combustion! It is as if we were the cosmic version of the Catbird, pushing our competition out of the nest, in order to get the exclusive attention of the Parent. Here we are, all $\sim 10^{10}$ of us; shouldn't it be the more the merrier?

Why should monotheism imply mono-Creationism? This is where we come to the crux of the BPWH. There is just one BPW, virtually by definition. The only way to get around that logic would be to introduce polytheism, which becomes a very slippery slope toward pantheism. When God becomes redundant, God soon becomes otiose, which is not good for either the Creator or the creatures. *Note bene* the degree to which pantheism ultimately devalues creation. The only purpose of the creatures is to get off this Wheel of Illusion as soon as possible.

The point of Monotheism is that we are not God's spawn. We are God's children, all 10^{10} of us. Only thus are we all responsible for each other and to the one and only God. This is the only way to maintain the total interactivity. When you pull out the stops on creation, it loses all value and coherence. It just becomes one darned thing after another. With monotheism we go for quality, not quantity. It just so happens that 10^{10} is the best possible number of souls. That's us, folks! We and God are the Best Possible combo-plate. We are one Big Family. Would we have it any other way? Only thus do we obtain the total interactivity of Creation.

Now I have to run to the baseball game. It's not bad, for a spectator sport! Go, O's, and ain't the beer cold!

It's been almost a month since my last posting here on the blog. In the meantime I've been hanging out over at the OM and RU forums.

We, R&D, seem to be coming to the end of a 5 month activity cycle that began with CK announcing a 'repositioning' back in January, and culminating with the posting of Gus's article, 'The Real 'X-Files': Is Uncle Sam a Closet UFOlogist?' on Tuesday.

The highlight of the article was Gus's interview with CR, which happened a couple of weeks ago. CR evinced a nervousness about that interview, which did contain some provocative references to his interactions with other officials, as previously noted here. CK's nervousness was the sign that any prospect of a disclosure party was off the table. The interview was played down, with the exception of CR's diagnosis of mental instability, particularly on the part of 'fully involved' ufologists.

Sorry, folks, the party's over!

What now, my friends?

Was disclosure ever even a prospect in these past months? Was there any rhyme or reason for this latest fire-drill? We're not likely to ever know the answers.

Where does this leave the BPWH? The upshot of CK's bout of 'nervousness' is that my blogging of it is most like to be confined here for the foreseeable future. It was an uphill struggle to sell the BPWH to ufologists. I'll doubt that I'll have a better shot at it than what was provided in the past few months. The prospect of any better audience is dim at this point.

Am I giving up too easily? I'm not entirely giving up, simply retrenching. Perhaps it is time to let someone else try their hand at an R&D-type show.

How close did I come to even getting one person to seriously consider the BPWH? I may never know. There was a definite problem with an already limited attention span being further attenuated by the radical nature of the hypothesis itself. As I strongly suspected almost 25 years ago, it would take nearly the equivalent of a Presidential Decree to have any serious attention given to the BPWH.

My last effort at OMF was to convey the idea that the BPW would necessarily be finite, especially in regard to the number of 'souls'. Even with this modest proposal, did I not only encounter surprise, but even downright hostility. And in none of those reactions was I even able to find a toe-hold for a further discussion. And I still don't get it?

I simply don't understand the thickness of the stonewall that separates the modern mind from even the mildest aspect of pre-modern philosophy. I'm doubting that even a Presidential Decree would make a dent in that wall. Quite possibly it is because I underestimate the magnitude of the impression that Sophia made upon me, so I don't appreciate how much is required to move a person to think outside the box of materialism and dualism.

The modern mind simply cannot conceive of a Theo-centric cosmos.

[6/15]

The present day evangelicals are not pre-modern. They are part mystic, part dualist, and mostly incoherent. The first and only time that the Church dabbled with coherence was when it took up Thomism in the Middle Ages. Yes, there is a neo-scholastic revival, but it is too much wedded to its traditional

forms and arbitrary distinctions to be able to compete effectively against postmodernism, or even to make a significant dent therein. Coherence, per se, is no longer an objective. Neo-Thomism remains a chapter in the history of philosophy.

Theo-centrism is not the primary problem of the BPWH. The problem is the very idea of self-containment. Quantitative infinitude is just too alluring. Folks have trouble seeing quantity as a metaphor for quality, especially in this context. The far frontier is no longer out there.....it is in here. Many find that notion claustrophobic, probably as a hang-over from the excessive psychologism of modernity.

People don't understand that an infinitude of potency is much more to be desired than is an infinitude of actuality. In fact, the one seems logically incompatible with the other.

It is just the potency of the Present, that is foundation of reality. And how does that potency conflict with our teleology? It has to do with the immanence of the eschaton. There is the bumper sticker admonition that we not 'immanentize the eschaton', this being the present fear of the fundamentalists. But, to a large degree, that is what the BPWH is about. Yes, we are about the internalizing of the eschaton.

Xmas Surprise

A couple of days ago, Tim Russert popped the UFO question to Kucinich and Obama. This was an unprecedented campaign event, and is at least as indicative of our timeline as the #27 release. Given what we already know, it would stretch credulity to suppose this was not staged. Kucinich recounted his spiritual reaction to his encounter. Barack blew it off. The previous week a small boy had asked Rudy if he could protect us from the ETs. Even that question was likely to have been vetted.

I suggest it would be prudent for some of us to prepare for the next Victor release. There is a target date for January, with the suggestion that it might be put out in time for Xmas.

I have registered strong skepticism about #27 on OM. I have then come under heavy pressure to keep my criticisms muted. The possible strategies outlined below are my considered response to this pressure.

I will give #27 a pass, more or less, and now start preparing for Xmas #28. If #28 does not meet my minimum metaphysical/spiritual requirements, then I consider it both my national and cosmic duty to register a strong protest, especially considering the proposed date. The first option to consider would be a high-profile act of civil-disobedience, such as 'crashing' the gate at the White House, given that an appropriate team can be assembled, it being understood that the others would be present only as witnesses. The pros and cons of such a move need to be discussed.

It could well be argued that if I were to attempt anything less, I would be shirking my own obligations.

Another move would be to turn up the heat on the alleged and surmised sources/conduits of the inadequate information. In particular we would go after CK, CR and Hal. This would likely take the form of extended discussions about them and their roles, taking place mainly on Victor's list.

The purpose of these protests is to emphasize the obvious imbalance in the information being presented, imbalance in regard to its total lack of spiritual content.

Another approach would be to keep the discussion contained mainly to my section at OM. If that became shut down, I would then shift the focus to another public, and probably physical, venue.

So much for the formalities, let's get back to the substance, namely, the alleged imbalance.

As Dennis Kucinich's response indicates above, it is widely understood that these encounters, more often than not, have a lasting spiritual impact on the individual. As stated in #27, a prime excuse for the cover-up is the expected disruptive impact that it would have on Religion. Despite that caveat, this subject was never otherwise broached in this lengthy, wide-ranging alleged 'briefing'. It is widely suspected that Billy Graham has been involved in these briefings for every President under his tenure as the de facto WH chaplain. One piece of evidence for this is his book on this topic.

What should be crystal clear to any but the most casual observer is that disclosure is coming in stages. How many stages? I suggest that logically there can only be two:

1. Physical
2. Metaphysical

The physical has come with these two main 'Serpo' releases: Serpo proper, and now the breifings. How much longer can we stay with this physical layer of this disclosure onion? I'm suggesting that it is not an onion, but rather an avocado, with a large core. Or how about an enchilada with the meat on the inside?

I doubt that this guise of pure physicalism, in the briefing context, can be sustained beyond this first shot. Especially not if some troops can be rallied to raise systematic and sustained objections to this blind-spot in the information. If the disclosure team had wanted to avoid this looming confrontation with the other side of this story, they would have salted this release with more in the way of token religious concerns. But nada!

I can only interpret this obvious neglect as an intentional provocation, even meant to be a red flag, to all of us who are not totally 'left-brained' about these phenomena.

This deliberate provocation, plus the timing of the next release, should be a fair warning that the next release will be addressing this issue. But how will that look? These briefings are supposed to be in a natural sequence. It will look strange, indeed, if suddenly the religious issue gets inserted in a later briefing, without a proper segue from this first briefing. The whole sequence will then appear even more contrived than even this first one, just on the face of it. Perhaps that is the intent, to underscore that we are dealing with an enchilada here. We then cannot fail to comprehend the shape of the whole enchilada, if you will.

Lets look at the circumstantial religious context of the cover-up. There are two given aspects. The first that was brought to my attention by CK was the Scientology connection. This pertained particularly to CR and HP. It is widely known and reported that Scientology has gone to considerable lengths to infiltrate key segments of our social order, notably Hollywood and the USG. Their infiltration of the IRS led to several arrests. The SRI remote viewing program was basically a Scientology operation, as near as I can make out. Ingo, HP and CR were members. HP was a high level operative. CK has raised the issue as to whether the initial contact between CR & HP was mediated through the Church. The basic teaching of the Church is focused on the ET/UT presence. Hubbard was closely involved with the Crowleyans at JPL, notably Parsons.

CR has told me that he has a shelf-full of books on the Illuminati. I get the strong impression that this represents the core of his concerns about the phenomena, and provides his rationale for wanting to sustain the cover-up. His key role, along with HP, in the Serpo releases represents their rearguard action in this disinformation layer of the process. Are they being blindsided by the two stage process noted above? I believe they are under the impression that this physicalist cover can be maintained for at least a few more years. I suggest they reexamine these tea-leaves.

But, yes, there is another, deeper layer to this religious presence among the insiders. This was never actually pointed out to me, nor did I attempt to discuss it with CK. What we discuss are the superficialities, Scientology being the case in point.

The folks that he has introduced me to are hard-core Xians. It does not take much effort on my part to suss that out. Opus Dei is one prominent example. My Navy contacts have been more on the Protestant side. Two of the major players in the Aviary met in an evangelical church in Dayton.

As I've discussed previously, once there is a recognition of any metaphysical content to these phenomena, the Xians are sure to be sensitive to the point of paranoia about a demonic, anti-X aspect of it. Just take a look at the 200+ pages of VLAA discussion here at OM.

If you mix greed and secrecy with the metaphysical, you have a sure-fire recipe for unadulterated Evil. The standard rationale for the cover-up is that the PtB have negotiated a bargain with the bad ETs, i.e. the Devil. For just how long would the hard-core Xians tolerate such a bargain? Would they not be the very first to blow the whistle? Now add to that the R&D messy antics, and, as you have seen right here, the Xians are shouting bloody murder! On the other hand, given their firm allegiance, these same Xians would provide the most logical core for any sustained cover.

This is not rocket science. This is just political common sense taken to its most basic level. Anybody who cannot read these signs and add 1 + 1 is simply in a state of denial

In the buildup to the Xmas surprise, I just need to keep expanding and expounding upon these points. If the pall of physicalist orthodoxy is sustained in the Serpo section, I will be highly disappointed. We will need to confront the ring-leaders with the illogic of their positions. That some may have ulterior motives, has not been lost on me. It is possible that Serpo and Dan can be two ships passing here in the night. That makes for a strange spectacle, indeed!

Apropos the above, a source of mine has just forwarded the following: [a]

http://www.scientificexploration.org/jse/articles/pdf/13.1_kress.pdf

Ken Kress CIA Afterword added to original STUDIES IN INTELLIGENCE article

QUOTE:

"Consider the second assertion that the motives of psychics clashed with mine and taught me, too late, to be very wary of psychics. In the late 1970s, several years after the project was terminated, I got a secure line call from a person who identified himself as an FBI agent. He suggested that I should be prepared for a spate of publicity about the remote viewings of Pat Price. Pat had died a few years before and I was surprised that somebody had leaked information about these defunct activities.

The FBI agent proceeded to explain that Pat Price was a member of an organization that was recently raided for documents indicative of illegal activity. The organization was vigorously resisting the government investigation but the raid produced hundreds of files and papers that supported the government's allegations. These documents were now in the public domain as part of the discovery process in the legal proceedings.

One such file included debriefings of Pat Price about his CIA remote viewing projects. The debriefings were a detailed record of the intelligence objectives I had given Pat and results that Pat provided to me. The files revealed the meeting places as well as all the names of those present. My esteem instantly rose for my colleagues who had used first names only with all meetings with Pat! As the file made clear, Pat, who had signed an official secrecy agreement, would immediately go to his superior in the organization after sessions with me and divulge everything. As far as I know, the documents were never read by anybody who publicized them and the organization never used them."

The person who hired Pat was his fellow Scientologist, Hal Puthoff under the direct supervision of the CIA contract officer, and fellow Scientologist, Kit Green.

Can you see why CK waxes apoplectic over the counter-intelligence vulnerabilities presented by such negligence? I have heard about this more than I care to remember.

We have high confidence that Hal Puthoff is Victor's primary source and/or confidant in the long and sordid Serpo saga.

Just a few weeks ago it was stated to me that Hal was defrauding the USG. What is contained in the above is far, far more serious than the matter of simple fraud. The sanction in question is the Death Penalty.

And the Admins hereabout are scolding me for being too hard on these folks!!

If my concerns are misplaced, I am owed a detailed explanation.

11/2

With installment #27, we have reached another stage in the disclosure arena. We still have the 'Gang of

Six', now cast in a more active role, with the lead role being taken by HP. A notable change is the absence of RD. In the initial round of Serpo, almost two years ago, CK suggested that RD could be the sole perpetrator. The lone hoaxer theory has now been put to rest. In that original installment, there was no attempt to connect the plot to any known elements of the USG. With #27, the USG is front and center.

The alleged involvement of DIA personnel remains a prime ingredient. At one point in the original saga, CK very casually acknowledged such involvement, so casually that it could have been taken as facetious. But, a few weeks later he was turning every stone in attempting to establish the identity of the female officer alleged to be in contact with RD. I was told that it was a fruitless search. The fact of a serious, high-level search, followed by CK contacting RD's supervisor in the NMSP, tells us that this is not being treated as a mere prank.

If this is not a prank, what is it? For 18 months all was quiet. Now this. The considered opinion is that #27's account of a Presidential briefing is, on the face of it, a work of fiction. It would be a felony matter or high crime, were it not. But that is not the crux of this matter.

The crux of the matter is whether this piece of fiction is sanctioned, and, if so, by whom?

The first logical presumption is that this is sponsored by the Church of Scientology, or some off-shoot thereof. That organization has a unique history, MO and motivation for perpetrating such a hoax. This has been CK's frequently stated hypothesis. Does it stand up? If it did, the consequences are of sufficient magnitude to warrant an additional investigation, which could have, some time ago, put an end to this particular conspiracy.

Do the consequences rise to this level of concern? A positive answer should be a no-brainer, given the well-known history of multiple intelligence concerns relative to the phenomenological problem. In case that problem were to suddenly expand, for whatever reason, there would be much interest in preempting any groups who were clandestinely preparing to exploit that situation.

Another point in this regard is that if this were intended as a pure hoax, it could easily have been made to seem more authentic. We then have two facts. There is a real conspiracy, by folks with known government connections, involved in disseminating a mediocre piece of disinformation. These folks could have done rather better.

It's not a prank. It's not a concerted hoax. Than what?

Then it must be something sanctioned by an organization embedded in the USG, now including CK, along with CR and HP. Do just those three add up to a hill of beans? Yes and no. It is possible that CR and HP could fly under the radar. CK? No. Not with Tim Russert popping this question to Presidential candidates in prime time. May I rest my case?

On the surface of #27, there is very little substance, but when you dig into the explicit and implicit politics surrounding it, well, we have come a long way, baby!

Where does this leave us wrt Scientology? I would suggest that they are a prime ingredient in this first layer of the onion. As with outsourcing Fidel sanctions to the Mob, there would be a considerable rationale for outsourcing aspects of the cover-up to Ron's org. Just off the top, this certainly facilitates the compartmentalization. And what a group of eager beavers! I would go so far as to suggest that CK has been deliberately outing his own outsourcing as a clever way to test the security involved, all part of his established MO. Does this mean the DIA is infiltrated? Why the heck not? They are infiltrated by everyone else, why not take advantage of that fact, even encourage it for very special operations. Smoke & Mirrors.

Should we thereby revoke the death penalty for HP? Well, let's keep him on his toes.

Let's take this 'fact' and relate it back to aviary politics. With one hand, CK is 'contracting' Ron's org to perform sensitive work. With the other hand he is slapping CR and HP for being involved. I wish I were half so clever. It is just possible that CR is unaware. HP? I'm more doubtful, but he has to play along, anyway.

And what about Ron's org? Don't they wonder? Can they not sense that we are dealing with layers. There are likely to be only a couple of the top operatives, along with HP, who would have grounds for definite suspicions. They would obviously wonder where the Xians were. They would wonder about ONI, which would be a much tougher nut for them to crack. I'm confident that CR has his own suspicions, but he is pretty much left to twist in this teapot tempest. He is the aviary weather-cock. I can relate to that!

Are we still on for Xmas?

I'd give it even odds, and I don't mean for #27b. We're talkin' #27C++. How so?

All I want for Christmas is a babe in a manger. A dog in a manger won't do.

I don't care too much about the swaddling clothes, just surprise me! And maybe I can surprise you. That's my job, isn't it?

Next layer.....

What more can we do with this layer? Could there be a 27b? Without impinging or infringing on the hypothetical 27C++?

What could be useful that would not be 27C++?

We agree that there was nothing of substance in 27a. The interest was that the political content seemed to make contact with the political context. Notably that HP was acquainted with one of the players, who then is said to have contacted Victor. Is that at all believable? I'd give it a solid 50% probability. In that fact alone, we have come a long way.

What can we do to up that ante? Do we need to? You know about rising expectations. They make for a restive audience. The content could just continue to follow the Core Script. There is considerably more of that to be covered. Is that enough? It would bring increased cat-calls from this increasingly sophisticated and skeptical audience? It would constitute a backward step relative to acclimation. More names and dates could be mentioned, that would be subject to partial verification. There could be a significant plausible amendment to the Script, that would not infringe upon C++. It is hard to imagine what that might be since there are already so many emendations and variations in the Script in the public domain. It would fall on sated ears. It would have to have something of a new political dimension. Just adding more names would not make it. It's not likely to produce any live actors. That door has been shut. More names of dead people is not likely to raise the ante.

Once the acclimators decided to head down this path, they weren't leaving themselves much room to maneuver. When you start feeding a ravenous animal, you had better have sufficient food on hand. If you don't, that animal is going to come after the feeder. The feeders, in this, case are too well known. Are they being given hazard pay? They could have let this drop with Serpo proper. Now the DIA and the WH have been put on the spot.

CK had 18 months to put a stop to this nonsense, but he failed to do so. This installment escalates this problem from one of benign neglect to one of deliberate provocation. I don't think CK is stupid. I don't think he would have continued down this path without an exit strategy. We have looked for a conventional exit. We are not seeing one.

There is going to have to be something unexpected, and soon. Otherwise, acclimation comes to an unceremonious halt.

11/3

Jake takes me to task for being too hard on Hal & Co. I'm biting the hand that feeds us, he suggests. I've been biting that hand since day one. You expect me to change my stripes now? Perhaps it's my protestant nature. We get exercised when anyone interposes themselves between us and God. We like nothing more than to burn the priests. Hal reminds me of that little ditty: Boston, the home of the been and the cod, where the Cabots speak only to the Lowells, and the Lowells speak only to God. I don't think you are catholic, but you sure act that way.

Yes. I authorize the burning of Priest Hal & Co.

Yes, it is the papist sheeple who genuflect to the ETs and MJ-12. I'm cut more from the rough, puritanical cloth of Mathers and Edwards. Like it or lump it. I come from a family of regicides. Don't tempt me.

But, no, I'm not going after the small game here. Kings are a joke. God is a more worthy target at this point. Where is God, I ask?

Is God a no-show in our hour of need?

Was Ronnie going to protect us from the Devil with his SDI? Give me a break. Nancy relied more on her astrologer than Ronnie ever relied on SDI. Read your history. It was all a sham.

Ronnie wasn't educated, but he wasn't stupid either. Like every President before or since, he was God-fearing. You don't find yourself in the Bully Pulpit without wondering Who is looking over your shoulder.

Haven't you ever seen the cartoon: In Case of Emergency, Break Glass. Behind the glass is a Bible. Hey, Jake, you are the Bible pounder in this crowd. Where was the Bible in the Briefing?? Where was Billy Graham in the Briefing? Has Billy, the UFO author, not been the hand-holding confessor to every modern President?

Get real folks. This is not about green cheese and little green men. Our asses are on the line here, or we have no asses, or there is no line!

Watch the interaction between the President and his national security advisor in Independence Day. Then go back and read your precious little Briefing Document again. What a Joke! You, however, must be happy to see that Ronnie is portrayed as genuflecting to MJ-12. Georgy Porgy may genuflect to Dick C, but not our Ronnie.

It all comes down to a very simple matter: soul, soul, who's got the soul?

What percent of the Nobel Prize winners disbelieve in the soul? What percent of those disbelievers are also students of the mind-brain problem or of the paradoxes of transhumanism? Do you really think that

any one of those disbelievers would ever debate the mind-brain problem in public? For sure that no one has ever wanted to debate me on this topic. And certainly no ufologist!

If souls exist, then the visitors come here to help save our souls. If souls do not exist, then the visitors come here to eat our dinner.

But the ufologists have been so brainwashed by the SDI-type cover story, that they've got their knickers all in a bunch. They cannot think straight.

That is the NUMBER ONE question for anyone who has ever had to confront an Alien. Are we soul-brothers or are we predator and prey?

Do you nincompoops, with all your little conspiracy theories, really think that Ronnie was such a stupid hypocrite that this QUESTION would not be at the very top of any briefing agenda? How about Billy?

Give me a break, boys and girls!

Let's get back to basics. Our 'asses' are on the line here.

Yes, 27a is not about a briefing. It is an IQ test, and most of you are flunking miserably.

If I were even slightly paranoid, I would tell you that this was a meatball pitched for me to hit right out of the ball-park.

But, hey, I don't get paranoid about this stuff.

This brings us right back to 27b. Is it going to be another meatball? I swear that I'll knock it right back down their little throats.

Or, are we going to be treated to the next layer of this onion? So then it can't be 27b. It will have to be 27a (rev.). And won't that look stupid?

11/4

There is continued consternation as to the purpose of #27. This should be easy. It is to pick up where we left off 18 months ago, even to the extent of having RD back on-board. In the interim? I would suggest that it is now under new management, i.e. with CK in charge. If not, he would still be sitting on RD. RD & Co. were calling the shots before. Now HP is the figurehead. It is CK's MO to shutdown competing conduits. This would be the third such occurrence. The difference is that instead of taking it into the black, he is taking this more into the public, with his own involvement being scarcely concealed. He has finally exerted full control over what is left of the aviary. He is doing so through HP, with the others being left to speculate.

It seems that R&D is a likely casualty of this process. I have been wondering when the cord would be cut. This is not an insignificant event, even in the larger picture.

To what degree was I the instigator here?

The BP incident was, certainly in retrospect, intended as my signal that it was now or never wrt the putative disclosure. It was time to cr*p or get off the pot. Evidently the signal was received. The subsequent x-mission of #27 and its attendant protocol is a hopeful sign, IMO.

This would be the fourth such occurrence if we include the putative DG/Red Book episode in which I was also peripherally involved.

Subject: RE: They're coming to take Smith away?

Gary,

Normally I would attempt to intervene and help Dan recover, but I entered into a competition with [CR] for a fine quality beer, and I am not about to give that up. The Little Chicken is on his own now.

[CK]

It sounds kinda official, doesn't it.....?

Like one of those personal notices in in the classifieds.....'I am no longer responsible for any debts incurred by.....'!

And this from CR to CK:

And, as I am similarly profoundly focused on winning the bet, I must also continue my self-imposed exile into interventions of all sorts concerning this subject (especially with Dan, but not limited to him). While I doubt the FBI JTTF will take the case, they have my blessing. I didn't think they had the manpower, but, what do I know. I do hope they don't call on me for a prescription pad.

Ron: full warning...it will be a Pilsner Urquell, on tap, WHEN I win the bet. You might as well find the bar now.

The light tone may be hiding something more serious.....or not.

I think we may take take this as a hopeful sign that we are still on the same page, somewhere out in the ethers.

The next two months are likely to be the longest in my short life. After that.....

Wiki:

As its name indicates (both "Urquell" and "Prazdroj" mean "original source"); it is the world's original pilsener, or golden beer. Most popular lagers produced in the rest of the world are based upon this original beer

Nothing like going to the source.

I'm still worrying about 27b. They have already dug themselves a hole with 27a. I don't see how they can avoid either digging themselves deeper into that hole, or trying to set off on a new tack that would only give the game away.

Were they so lacking in imagination or perspicacity to have not foreseen the poor reception of 27a? It does not bode well for us that the team has wrong-footed itself here in what ought to be a final phase. Perhaps the B team was given this final chance. Now the A team will have to step in.

But are we not still stuck with the Core story? That story is a logical dead-end, from several perspectives. How many more times are we going to have to beat this dead horse before the disinformation team gets the message? If there is supposed to be any kind of acclimation going on, they are going to have to hire some new writers, and change the storyline.

CK seemed his usual chipper self in that last email. Is he reading the reviews? I would be wondering how secure my job was. I realize I'm not helping out my old buddy here, but what am I supposed to do? Go down with the ship?

27b+ is just not going to make it. Yet, a 27C++ would make 27a look truly lame. Like I say, it would give away the whole game. Is this a deliberate sabotage? CK is quite happy to let folks hang themselves. It's his favorite spectator sport. I've been twisting here long enough. I don't intend to get pulled down in the back-wash. But do I have a choice? I don't have a prayer without inside support, which is looking pretty thin and incompetent just now.

Is this a setup for the *Deus ex Machina*? That takes more faith than I have. God helps those who.....

How many years before there will be this window of opportunity again? It will be several years, and most of us are already reaching mandatory retirement. I wouldn't want to have to reinvent this wheel. That, in itself, would be lame.

The Internet has got to play a central role. The movies and TV specials have been run into the ground. Rehash after rehash. Where is the Internet Plan B? Once you admit to even a smidgen of a second or metaphysical layer to the disclosure onion, the Religions are going to be up in arms. Then you will see some real shouting. Just a whiff of the metaphysical in this mix, and all hell will break loose. Am I wrong about that? How are you going to finesse that move? That is way above my pay-grade. Every rapturist will be heading for the hills, Who will keep the airplanes flying?

Folks have had 60 years to contemplate this next move. I've got my script, but there is not enough sugar in Cuba to make even a minimal eschaton go down easy. Isn't it a bit too late now to expect to fly the BPWH under the Internet radar? Too much of the mechanics here has already been given away. The 'sleeping dogs' are getting restless and hungry. I guess we'd better all sleep on this one, and pray that the trickster still has a few good ones up her sleeve.

10/5

I'm plumb out of new ideas. Unless CK chooses to recruit a new team of script writers, 27b will be even a bigger flop than 27a. Let it die an ignominious death.

It should be a lesson to the anti-metaphysics crowd. There is no techno-physics scenario that makes any (political) sense. But I am skeptical that it is possible to teach those jokers anything. They could never even figure out the next episode of Star Trek, and they don't know anything more than high school physics. Jack can lead them around by their noses.

The most obvious thing to do would be to facilitate an influx of fresh talent to OM, now that the bible shriekers have grown a bit hoarse. I doubt that would be difficult to arrange. Still, there has to be some active, semi-plausible linkage here to the insiders. If they are not facilitating some kind of dissemination, what would that be? Is CK going to resume contact? What substance could that contain? Another repositioning? That would be lame. Once again we are running out of options for maintaining a progressive acclimation. I wonder if CK is quite as sanguine as he seems.

If there is going to be an Xmas surprise, I have not been able to figure it out. Neither do I see how acclimation can proceed smoothly at this juncture. Has CK finally reach the point where he can shut down disclosure? That could be. What about the Xian insiders? Will they go along with this? Are they the ones behind CK? How then do we explain the twenty years of the soap opera? Who was behind that? Have they all been neutralized?

A presupposition of the BPWH is that the lid has been kept on for the past 60 years by having the insiders preempt the potential whistle blowers with a consensual program of progressive acclimation and disclosure. If CK were to put a wrench in those gears, then there would likely be a concerted reaction. Is that his plan, to provoke the insiders? That seems risky all around.

The **Briefing** Problem..... [a]

Serpo #27 suggests the need to address the briefing problem.

Here are some talking points:

CK tells me that he has been tracking upwards of 200 individuals who have been briefed. CR is one of these. So are those military officers involved in last January's 'repositioning' within the Intel community. He has also told me that Presidents are briefed only on a need to know basis, not to satisfy their individual curiosity. Both Clinton and Carter demonstrated considerable interest in the subject, and went to some lengths to obtain information. Whether they succeeded remains clouded.

CR claimed to have briefed three ex-Presidents, at the invitation of third parties. One of the briefings was cut-short after an hour. At least one of them appeared to be mentally unstable relative to the topic.

The White House, in general, is considered to be a haven for gossip, especially for anything of a sensational and human interest variety. Would anything score higher than ufos on that scale?

It is not terribly far-fetched to suppose that JFK's indiscretions and ambitions on this score may have contributed to his early demise.

The seemingly casual and canned manner of the presentation alleged to have been given to Reagan, makes a mockery of most of the above points.

If, against all logic, it were to have occurred as described, it most likely would have been something concocted mainly for his entertainment and/or to feed disinfo into the WH grapevine. This does not preclude his having received other, ad hoc information, for which this piece of stagecraft would have been a useful or necessary cover.

If our topic has any substance, the problem of Presidential knowledge would be at the very top of the list of specific problems. Let's attempt a plausible scenario.

The last thing you would do with this is go directly to the Pres. The first thing you would do is pick out someone close to the leading Presidential candidates, each of whom also has a solid record in handling sensitive intelligence matters. There would be informal contacts with the person to discuss the advisability

of even bringing the matter to his boss. It would very likely be decided, that absent some emergency, it would be much the better part of discretion to have the trusted lieutenant be the final repository of the bulk of the information. It would be up to him to apprise and encourage his boss not to open this can of worms needlessly. In many/most cases, that would suffice. If the Pres were insistent, you would try to get by with as little as possible. There would be the general understanding of 'ask us no questions and we'll tell you no lies.' Former Presidents and their confidants would be available to the Pres for his personal consultation, and to assure him that he need not rock this boat.

As the above practicalities suggest, #27 tends far toward something that has been scripted and staged for various consumption, including ours. Even this may be giving it too much weight. \

Whatever info is given is said to be heavily edited to be in accord with the President's personal profile. This is certainly not what is implied by #27. If anything so sensitive and potentially disturbing were to be conveyed, it would not be done at a marathon weekend. It would be done piecemeal, and with general synopses at each step, so there would be ample time to gauge the next installment, if there truly had to be a next installment.

All of the above points apply to us now, only much more so!

11/6 [a]

Kucinich's comments drew fire from veteran political commentator Chris Matthews during a postmortem interview with Governor Bill Richardson. "This is shaping up to be a contest between the [anti]-evolution party and the pro-UFO party," he said.

Truer words may have never been spoken. It appears that there has developed a *de facto* sharing of the BPWH metaphysical burden between the two parties. How convenient!

I first became aware of this *de facto* arrangement when I attempted to get debriefed at the SSCI, c. '95. It turned out that the, newly in control, Republican members had gotten a special (Langford?) briefing, containing info pertinent to the R&D show, but that the Dems were not privy to this. The Republican staffers refused to talk to me. CK had to arrange for the ranking staffer and former Jesuit seminarian, Chris Straub, a private briefing before he could discuss R&D and eschatology with me, behind two sets of code-locked doors. That sheds as much light on the politics of ufos as any incident that I am aware of. Let's see if we can apply this to recent events.

Jimmy Carter: No Truth to UFO Rumor

"I have never thought there were extra terrestrial beings on a ship from outer space," Carter explained. He went on to speculate that the light may have resulted from military testing at nearby Fort Benning. Carter also rejects a common rumor spread on UFO websites that George H. W. Bush, then director of the CIA, restricted his access to classified UFO documents.

The Red Book, as we now know it, was created specifically as a briefing instrument for Pres. Carter. For awhile it came under the custodianship of Dale Graff, at least until CK was able to sideline Dale and Dick D. after their psi-spy junket around the world. Dale told me in '92 that CK was a 'loose cannon with a big mouth'.

I am suggesting that Jimmy was required to make a decision. He could keep talking about the problem, or he could get the skinny on the Visitors. He made the proper executive decision: listen and don't talk. He knew he still had the talk option, but was probably apprised of the JFK problem. His public response:

tears.

Dick D. was the Senate staffer who attempted a surprise helicopter visit to Area 51 to check on black-budget concerns. I had several encounters with him at CK's behest.

Before I misplace it again, allow me to insert this nugget, appended to an ongoing discussion at RU, now including CR:

Subject: Origin of Core Story

I did not intend to imply that the core story was originated in Remote Viewing, but that it was transferred into government records via that process. My actual hypothesis regarding the Core Story is that it originated within Scientology during the early 1970s. Scientologists dominated the early Remote Viewing program and used it as a venue to promulgate the Core Story.

This has been CK's long-standing, proprietary cover story. He is glossing over much of the pre-history of the Aviary, and the likely fact that the CoS is now contracted by him in his ongoing game of hide and seek, spy and counter-spy.

Where were we.....? The Republicans uphold the BPW cosmology, i.e. young earth, etc., while the Dems are upholding the UT portion of it. It is important to keep these two functions compartmentalized until D-day. CK burns the midnight oil to keep this sorted out.

What then with Chris? When it comes to eschatology there is a very strong confusion on the whole Church/State jurisdictional issue. This is true for every religion. All the intels orgs have been apprised and, *ipso facto*, so have the religious orgs. Chris should have eventually consulted with one or more of his co-religionists. When I last spoke to him, from near the Baltimore FBI office a few days after 9/11, he was quite upset that his replacement staffer had given me his new phone #.

We had been good buddies back when. Who got to him? Was it CK or his confessor? I would suggest the latter, mainly. It is the HoP, hands off policy. Any insider interaction with the SoT has to go through CK. This is understood by the rel/orgs, as well as the intels. My untouchability is enforced locally/parochially, however.

Jimmy was exactly right on Sunday when he nixed the ETs. It's the UTs that the Dems know about. It's all in the Red Book. Scientology is aware too, but they are paid to emphasize the ET angle, which is the Core/Serpo angle. The Republicans, good fundamentalists that they are, don't deal in demons. They deal in Armageddon/Rapture. That is their job. Just ask Dick and George, or James Watt.

So you see how nice and clean and simple this is.....until we mix the nitro with the glycerin on D-day. CK can hardly wait.

11/1/07

Back to the Beginning

I had been giving a synopsis of the BPWH at OMF, ending [here](#), when a member there, 'Nibiru', posed a simple question: what is the origin of mathematics? The problem of origins is one that has been treated extensively on this site, yet I feel that I am lacking a simple answer to a simple question. Complete answers are never simple, but the demands of pedagogy motivate one to provide a simple synoptic answer, which in this particular case was missing.

There is a deeper motivation, as well. It is the just the BPW thesis that our minds potentially offer a pure reflection of the Creator. The mind of the Creator is simple, especially in its origin in love. Love is at once a simple and complex notion. To understand it, or anything else, one must start with the simple and work toward the complex, which is the world as we know it. The eschaton/rapture is then just the reverse: we work from the complex, back to the simple.

Language reflects our own minds. Contained in that reflection is our singular and simple origin that we are working our way towards. Simplicity is not only a matter of pedagogy, it is also a matter of eschatology.

Let me hasten to point out that simplicity here has nothing to do with the simpleton. What I have in mind is the simple elegance of a beautiful mathematical or physical theorem, or the simple theme underlying a great orchestral work.

Recall the basic archetypes, [AZO/X/QRP](#). Did I pull these out of a hat? They are the net result of a still evolving deliberative process, recorded on the previous pages, and which is about to continue right here.

From the material perspective, the world is composed of atoms interacting in space and time. From an immaterial perspective, the world is composed of interdependent phenomenological cycles. The basic cycle is the reproductive cycle. So which came first, the chicken or the egg? The ouroboros came first, the tail-eating serpent.

How so?

The meaning of the ouroboros is similar to that of the Taoist yin/yang symbol or I-Ching, where its dialectic significance is more obvious.

With monotheism, the nearest equivalent symbol is the zim-zum of the Sephiroth, therein the circular symmetry is made linear. The dialectic is broken with the progression becoming unidirectional. This loss of reciprocity was the necessary but fatal flaw within the strict monotheistic tradition. The BPWH is based essentially on restoring the necessary reciprocity to theism, while maintaining the singularity of the Creation. Trinitarianism was a partial step in this direction.

I just refreshed my memory of the [Tzintzum](#) from Wiki:

Tzintzum refers to the notion in the Kabbalistic theory of creation that God "contracted" his infinite light in order to allow for a "conceptual space" in which a finite, seemingly independent world could exist. [...]

The function of the Tzintzum was "to conceal from created beings the activating force within them, enabling them to exist as tangible entities, instead of being utterly nullified within their source". The tzintzum produced the required "vacated space" devoid of direct awareness of God's presence.

[...] This etymology is complementary with the concept of *Tzimtzum*, in that the physical universe conceals the spiritual nature of creation.

The second two points are shared by the BPWH. I refer to this concealment as the veil of nature. I take some exception to the first point.

Continuing with Wiki:

On the one hand, if the "Infinite" did not restrict itself, then nothing could exist - everything would be overwhelmed by God's totality. Thus existence requires God's transcendence, as above.

On the other hand, God continuously maintains the existence of, and is thus not absent from, the created universe. "The Divine life-force which brings all creatures into existence must constantly be present within them... were this life-force to forsake any created being for even one brief moment, it would revert to a state of utter nothingness, as before the creation..."

This is not such a problem with the BPWH, which maintains a strongly pantheist or panentheist view.

An additional paradox of Creation:

This paradox is strengthened by reference to the closely related doctrine of Divine simplicity, which holds that God is absolutely simple, containing no element of form or structure whatever. This gives rise to two difficulties. Firstly, according to this doctrine, it is impossible for God to shrink or expand (physically or metaphorically) - an obvious contradiction to the above. Secondly, according to this doctrine, if God's creative will is present, then He must be present in total - whereas the *Tzimtzum*, on the other hand, results in, and requires, a "partial Presence" as above.

The Dialectic of the BPWH, and the Trinitarian view are two ways of dealing with this paradox.

11/10

There are the cyclic vs. the linear conceptions of the cosmos and creation. The OM, the breath of Brahma, the yin/yang, the I Ching, the zodiac on the one hand. The Tzimtzum/Sephiroth and the Chakras on the other hand.

The latter two relate to the linearity of the Anthropos or Adam/Kadmon, as opposed to the serpentine. Thus the distinction between theism and pantheism. The BPWH finds the logical combination of these concepts by juxtaposing the Alpha and Omega, thus arriving at a dialogic and trinitarian coherence.

East is east and West is west.....and ne're the twain shall meet, not until now. Why this historical divide?

This global divide was the lynchpin of the concealment strategy. The bridge between had to be reserved for the final act.

The distinction between a singular circuit and an endless cycle was too subtle to prevent a theism, thus defined, from degenerating into pantheism.

A cyclical history renders the God of History otiose. Fate then rules the cyclic roost. Eastern fatalism becomes the norm. Anything to get off the Wheel.

Abraham became the Father of History, as we know it today. What a slim thread by which the world hangs!

How and why did this history-making (sic) notion take hold in just one nomad's tent?

This from Paul Tillich's '[The God of History](#)' (1944):

The way in which Jahweh revealed himself to Israel as the God who is the first and the last, the beginning and the end of history, was very painful. Only the complete national breakdown made the remnants of Israel ready to receive this revelation in its universal meaning.

And whenever the Jewish nation made the revelation a reason for national pride and transformed Jahweh into the god of their nation, the national breakdown followed. Jahweh as a national god is condemned by Jahweh as the God of history. This is the mystery of Judaism to this very day.

Why not plural planetary histories? Why not Planetary Gods? Perhaps, if they were forever separated. But then we are obviating even the possibility of a cosmic mind, in favor of planetary minds.

Now we may understand why the visitors, even though they come from dimension X, must first appear to us as if they were from planet X. Creation is not a local affair. If the Anthropic Principle tells us anything, it tells us that Design is, and must be, universal.

The one God is nothing, if not the God of the heavens. If there are ten histories, there are an infinity. Surely then, our little history is of little or no account. We are nothing more than an experiment, another throw of the dice. Certainly we are not the BPW.

If separate planetary histories make sense, then why not have separate national or continental histories? Each continent or each hemisphere could have had its own rapture? Who needs the Vikings or Christopher Columbus? But then we would not have had the Internet and NASA. We would not have had Science and Cosmology.

And what about Heaven? Would Heaven have hemispheric or planetary partitions?

God is all or nothing. Polytheism quickly degenerates into pantheism. The accepted understanding is that Contact will render Religion meaningless. But it would be more accurate to say that Contact, as commonly understood, would render us meaningless, i.e. infinitely redundant.

11/11

It was in 1989 that Francis Fukuyama penned his essay, 'The End of History'. And the winner was deemed to be secular free-market democracy.

Perhaps we need an update on that thesis. We add to that the end of science, the end of oil, and the resurgence of religious fervor.

Each one of these facts is disturbing, but taken together they are.....disquieting?

The question marks for science are the future of energy and computing. The last breakthroughs in science that made contact with reality or technology came with Einstein's relativity and quantum papers in 1905. These lead to the technological breakthroughs in both energy and computing. Only the computing breakthrough is still in progress.

Physicists see no sign, no, they see no opening for any such breakthrough nowadays. There are no observable natural phenomena which remain unexplained, outside of life and mind, neither of which seem even slightly amenable to basic physics.

The one possible exception to the above is the domain of quantum computing. That there could be such a breakthrough hinges upon the metaphysical issue of emergence, which happens to be the cornerstone of the BPWH. Thusly is there but one escape hatch for the future of science and technology: right into the arms of the BPWH.

In all of the above, there is but one wild card: phenomenology, i.e. anomalous or uncorrelated phenomena. Nearly all such phenomena are highly correlated with the mind. The possible exceptions are those few that end up being recorded electronically or photographically. Despite all the sightings,

there are no other noteworthy artifacts.

And, with all of the alleged contactees, there is no consensus concerning any useful or coherent message. There is not even an noteworthy instance of such that has attracted anything more than cult-like followings.

These phenomenological facts do not bode well for a physical explanation for these phenomena. There are other problems with an extraterrestrial (ET) explanation, as already treated extensively here, leaving us with only mind and ultraterrestrial (UT) based explanations.

This then brings us back to the problem of origins and ends.

The secular idea of history cannot be taken as distinct from the idea of progress, which dates back only to the Renaissance or Enlightenment. Before that, we only had the promise of God being revealed at the end of history: history being mainly a long lesson in how not to please God.

There is a general consensus that history as we have known it for the past several centuries is bound to end, and sooner rather than later.

The question before us is whether it will end with a bang or a whimper. There are materialist versions of both, but this is the principle divide between the theists and pantheists.

Pantheists accept the scientific cosmology, and see both ETs and UTs in our future. Pantheism, along with postmodernism and paganism, are pluralist to a fault, at the sacrifice of any semblance of coherence.

We come back to the question of a cosmic history. One that would necessarily leave us in its backwater. Our centuries of progress would have been a flash in the pan, and largely for naught. The net result of our acquiring technology would have been to force the Federation to deal with us openly, and so we become its welfare clients. There are any number of examples of primitive cultures that have literally collapsed under the influence of modernism. Next on the block is Islam, unless the oil and credit crunches or the eschaton get us first.

What would hold a Federation of ETs together, keeping it proactive? There would have to be some sense of a transcendental teleology. There would have to be the idea of a commonly shared soul. How long would they be willing to wait for stragglers like us before they would grab for the gold ring, the Big Omega? What would keep them going in the meantime?

Would the vast majority of them be hibernating, leaving only a skeleton crew to add the occasional stragglers to cold storage, to wake up on D-day?

Given there is a Telos, then there is a Creator. Does this sound like the BPCosmos? Not unless 'salvation' is strictly a numbers game. Virtually everyone who believes in salvation believes that it will be highly selective. The Saved/Select always constitute a small minority.

Among ufologists, there are a substantial number of Xians, and they, like the pantheists, accept a mixed cosmology that includes ETs and UTs. They don't make an effort to draw distinctions. They don't see ufology as an evangelical opportunity. Like their fellow ufologists, they are there out of plain old curiosity.

Xians, unlike their (non-jihadist!) Muslim brothers, have very much bought into technology, and so are pure dualists about Creator and Creation. The Muslims are dualistic also, but to the exclusion of technology or any idea of progress. Technology hastens the eschaton, either positively or negatively,

they, xians, don't care which. As to the ultimate impact of Contact, they remain vague. They hardly seem bent upon evangelizing the Grey buggers. Nor do they expect to be evangelized. Contact remains a weighty but moot possibility. Immaterialism is about the furthest thing from their dualistic way of thinking.

11/12

Yes, I think the issue of history, as God's own self-generating bootstrap, is the crux of the BPWH. God, then only appears to evolve, from this very limited space-time perspective, i.e. from inside the bootstrap.

Can there be more than one history or one bootstrap? No more than there can be separate Gods. There cannot be separate Pantheons.

Is this imposing a limitation on God's creativity? It is purely a logical Self-limitation. And it is only a pseudo-limitation, because there is nothing to be gained by creating a second-best world. Nor is there any point in, or even logical possibility, of creating a facsimile. We are back to Leibniz' Identity of Indiscernibles.

And only thus can we have a theodicy. Everything that was ever going to happen, had to happen right here. Evil would be objectified just so that it would lose its potentia or potency.

If there were other worlds or creations, there would be no excuse to have more than one holocaust. Every other world should be a paradise. No point in making the same mistakes over and over.

Thus also is there a premium on real-estate right here, on the one and only real place. This is definitely going to be an SRO show. Be here or be square.

The problem of evil was not really a problem until Giordano and Copernicus came along, and the possibility of other worlds began to dominate our thinking. Remove that possibility and theodicy takes on a whole new/old meaning.

Given one world, there also had to be one tribe to stand out. Being on the theological hot-seat is surely no walk in the park, but somebody had to do it. Why, though, a Savior? This was God's definitive moment and swan-song all wrapped into one. He dies to make room for the Holy Ghost, risen Christ. Then what? Then this. Why this? Because it says so in the Good Book? Not an acceptable answer here.

At the least it should be seen as a recapitulation and explanation of the swan-song. It is also the wake-up call. Why just one alarm? There have been, oh, so many warning bells. There is a regular cacophony for all but the stone/tone deaf.

But if God is truly personal, then the most critical junctures must be up close and personal, otherwise God becomes an abstract/absent Deity. The personalities are meant to fit the occasion. There need be only a minimal linkage. This necessity need in no way diminish the necessity of every other personality who ever existed. Has Jesus ever detracted from anyone else? No, he only ever added depth to all the others. If anything, we would probably want the X2 to be more the everyman, within the scope of the mission. We would certainly not want it to detract or distract from the original, which is mostly left to everyone's best imagination, anyway. This advent would be less anonymous, so the greater precaution to avoid any overshadowing. Don't mess with success.

But how will this actually come about. Lately I have been hopeful of a spontaneous event with minimal insider interference. But the time is running very short for any such eventuality. The next step would be for a minimal, clandestine interference. That might already be happening, but I would be the last to know. And where can we truly make the distinction between these possibilities? One shades into the other, when considering the omnipresent hidden-hand.

Is it worth waiting another year for this to happen? Certainly not any longer. The problem is to find the first one. There would be a lot of questions about that individual's spontaneity. It would not be easy to fake. We are between a rock and a hard place. My kingdom for a 'horse'.

11/13

I am reading more from the advanced copy of Mark Booth's *Secret History of the World* (Jan. '08), obtained by my librarian spouse.

He helps to confirm my contention that the BPWH is unique in the world. His is admittedly the first modern attempt at an idealist history of the world.

He too finds nothing comparable on the Internet or on the bookshelves. Some of his phraseology does seem to be chipped right off the block here. He has no previous publications. Was he put up to this? He admits as much. Should I object? Nah! All is fair in love and Salvation. God will have ample opportunity to sort it all out.

Conveniently, Mark falls down in his eschatology. I have not yet to come to where he deals with cosmology, reading from both the front and back. There is no index in this advanced copy. What he does have is a precessional version of history, also taken from *Hamlet's Mill*. But he employs the full cycle which will lead him into a cyclic pantheism, if he is not very careful. I'm quite content to just take a quarter cycle, which provides an Xian interpretation, thank you very much. He also places the X-event at the mid- or turning-point in history.

Yes, Mark has done considerable heavy lifting for me, in terms of research and publishing. I will be glad to borrow back from him what is useful, and I will make every effort to provide the proper attribution. We shall see what we see, and let you know. The only review I could find was rather derogatory.

11/16 [\[a\]](#)

So here I am, between a rock and a hard place. On the one hand we have Scientific Materialism, the rock. The hard place is religious fundamentalism. Both of these are forms of reductive literalism: the one about atoms, the other about the words.

Where I need to go, where we are going to end up, is closer to where religion is than to where science is. So why not just capitulate to religion? I fear that would be too easy, especially in the short-run. Being scripturally correct would be easier now, but it would land us in a bigger hole later on. If we are going to do this at all, then we had better get it right the first time.

The early resistance is coming from the fundamentalists. And, ironically, they are the only ones willing to engage. The philosophical materialists are smart enough not to engage at all. It is the more naive transhumanist technophiles who make up the rank and file of ufology. And there is a sizeable

New Age, contactee contingent. These are the pantheists, pagans and polytheists. I have gotten limited engagement from their quarter. To make matters more difficult, still, R&D is on hold for the foreseeable future. This latter development does allow me to focus on these external politics.

One might wonder why there would be any fundamentalists in the ranks of ufology. I still do, but who am I to look a gift-horse in the mouth, even when they wax so mouthy? My last shot in their direction was to bring up the issue of ET religion. At first blush, their silence on this issue might seem surprising, but on reflection, it makes more sense. Why has it taken me almost 300 pages of postings to place this salient point front and center? That's why I'm back on here from OMF, trying to work it out. This ought to be easy, but it is giving me pause.

About a week ago 'Jake' acknowledged a problem with this, but in a cavalier fashion. Now he has gone silent, probably on further reflection. There obviously must be a lot of sub-conscious issues that are not being addressed, by definition.

The Xians in ufology represent the bleeding edge of the no-man's land between science and religion. They are barely aware of how precarious is their situation. I am not reluctant to rub their noses in it.

So you might think they would want to come down strongly on the UT side of the UT vs. ET issue. But they don't. They are afraid to confront their fellow ufologists on this issue. They would rather do battle with me. The ET religion issue is not a problem for the technophiles that make up the bulk of ufology. They are not confronting the deeper sociological issues that would soon arise, after we finished opening to pretty packages with all the shiny new gadgets. They do not understand the deeper connection between religion and technology. Very few would, if they have not confronted the problem of Contact, even as it has occurred in our own history. We were always on the winning team. The notion of the Prime Directive ought to figure more prominently in these discussions.

What I have not done yet is to put these several issues in a succinct form that points to the BPWH. They relate strongly to the ethics of disclosure.

With all these problems, why is there still a considerable clamor for disclosure? Don't they get it? Are the vocal ones really so naive? Where would I be if they weren't here, shouting?

It is the issue of secular salvation that is driving the technophiles. On the religious side of that issue, being here is just a bit more genteel than beating the drums for Armageddon.

Virtually no theologians have addressed the ET issue in modern times. The few preachers who address it put it in the context of the latter days, and usually with reference to the anti-X. This raises problems about the mechanics of the Second Coming: will it be via flying saucer? Not a simple issue.

Who are noticeably absent from this debate are the Intelligent Design folks. How do they manage to avoid the ET question? By treading lightly.

So I fancy myself the Savior. And, for the sake of argument, at least, do hereby so declare. Who am I here to save? As many as possible. Not just certain sects of scriptural literalists. Why so?

It stands to reason that if the Creator is capable and beneficent, that the vast bulk of her Creatures would be salvageable. Is this then just by fiat? What, if anything, is to be demanded of the individual creature? Need this even be decided on an individual basis? Perhaps not.

If salvation were intended only for fearful rule followers, who would wish to be included? Where is the love in that?

The issue is: saved for what? Saved to party with God? Or saved to be part of God? Ah, there's the rub.

There are problems here with entitlement and reward. We all like to talk about love, but, let's face it, there are a lot of us who operate out of fear. We refrain from taking advantage of our fellow creatures out of fear of the cop on the beat. And when there aren't enough cops to go around, we give God a billy-club. How many parents have never used the Bogeyman?

Keep your nose clean down here, and you will get your just desserts in heaven.....or else!

What is going to happen with all the fearful ones when they find out that fear is the only thing to fear? Debauchery, here we come?

That is one reason why love has had to wait, for the most part. Yes, even and especially in the BPW, love has had to be put on hold.

Yes, up to this point, (cosmic) love has definitely been of the tough variety. Many are those who despair that, when it comes to love, WYSIWYG. Well, I think these ones will find that what is to come will have been worth the wait. We were not designed just for hanging around the earth, twisting in the wind.

Yes, I do feel a special responsibility towards those who have struggled so hard to do what they were told was the right thing, in the expectation of a reward, especially when it seemed that so many others were doing just the opposite. They have lived by the Book, and the rest of us are the better for it. We owe them something for their good behavior. Will we not see that virtue is its own reward? Is that not enough? If not, then you may not fully understand the virtue of virtue.

Vengeance is mine, said the Lord. That may be one reason why Xians are somewhat less inclined to be suicide bombers. Does that mean that all that stored up vengeance is just going to explode, if it is unsatisfied in this eschatological context? I suspect that God has a pretty firm grip on that situation, but thanks for asking. Anyway, what do you think Halo III is for? Ersatz Armageddon.

For all those who lived by the Book, whichever good book it was, you are in for a little surprise. But your surprise will probably be less than for the others. Imagine how surprised will be the ones who were working overtime to get to that warm spot, down yonder. They just didn't realize how terribly difficult it was to actually get in, down there. Better luck next time!

So there you have it; Heaven is not going to be a Bacardi Party. Now is when the real work begins: God's work. Welcome aboard the galley! Your new Taskmaster will try to be sparing of the lash.

In some sense we will be participating in the retro-fitting of Creation. Much of creation has been pay-as-we-go, and much has not been. We will be looking at both of those aspects, *sub specie aeternitas*. We have been God's eyes, ears and hands all along.....now just more so.

A large part of the task ahead will be our self-amalgamation. We hatch out of this Chrysalis, now in butterfly form, transitioning from our past pupal/pupil stage.

My job is just the conceptual one of giving you a cursory introduction. Much of that introduction will be a review of how we got here in the first place.

Many may feel that they have been lured here under false pretenses, and there is a modicum of truth to that. It is much more the case of operating on a need to know basis. We need to know what we need to know, when we need to know it. And, trust me, we ain't seen nothin' yet. And that applies to yours truly nearly as much as to you. I would not be a good teacher if I were not also a good student, learning right here on the job. Don't you find that reassuring!!

Yes, there is some confusion as to how we got here.

And, hey, that's mostly our (management's) 'fault'. If any of you did get fooled, it was only by the best in the business. Had you not been, you and I wouldn't be here now. Always keep that in mind. Wrt the BPW, things could have always, always been a lot worse! That's why we call it the BPW!

For some time now, I have been running into a lot of flack from the Universalists. I don't mean the Church that goes by that name, but rather those who will feel cheated to find out that we are not actually Lost in Space. So, you see how this works, there's plenty of apologizing to go around, if you think you haven't been cheated yet, your turn will probably come.

A lot of us, especially ufologists, have been waiting, oh so patiently, for our very first ride in a flying saucer and to go zipping around this vast Universe of ours. The Universe was going to be our Heaven! You are my poor, dear Universalists. I gotta tell ya, right now, when it comes to the Universe, it is WYSIWYG, for sure. You may not really need or want to go there, because they're all dying to come here, and we do mean that, literally. Even I can be literal, once in a while.

Just this one little apology to the Universalists could take up books and books, and I'm going to give it my best shot with a couple of paragraphs. See, why should I take all the apologizing fun away from the rest of you? You'll be getting the knack of it in no time. Besides, my stomach is rumbling for its lunch, and Sam should call any minute.....! Oooops, he just called. Saved by the bell! Sophia, you'll just have to fend for yourself, my dear. It must be tough being stood-up like this.

Now this from 'Tel' at OM: [\[a\]](#)

God is an Artisan. He is a prolific creator and I don't believe He would stop at just one world. While He might have created millions of planets and sparked life on thousands of different worlds, that is not the point.

The point is, we should be focusing on our world and our eschaton.

A true-believing Universalist.

Here is my open response.....

True, but..... OMF is at ground-zero for ufology. It does seem that the little Grey buggers have their noses right in our business, and it is becoming increasingly difficult for us to ignore that fact. We have to wonder if there might be a connection between eschatology and ufology. Here are some possibilities.....They are here to:::::

- gorge themselves on the leavings from Armageddon (see Nic).
- transport the Saved ones to Paradise.
- bring down the Anti-Christ.
- bring back Jesus.
- keep us on the Federation's Watch List.
- etc.?
- All of the above.....

But here is my other point:

First and foremost, God is alleged to be the God of history. This is the Point of the prophetic tradition. It is not just we who are supposed to attend to history, it is also God. He is not just supposed to plant the seed and skedaddle; he is supposed stick around and tend to the garden. So,

sure, God is multi-tasking.

But wait. Look how it worked here. God planted the Prophetic seed with Abraham, and from that one person it has spread to the entire planet.

Why should it be different in the Universe? On this model would God have planted the seed on one Planet, and then arrange for it to spread to the whole Universe.

But this model seems to have broken down? But wait again.....Abraham and all the prophets could have been ETs. In fact, that is even a consensus view among ufologists.

Now connect this consensus view with the above points, and you see that eschatology is up to its eyeballs in ufology. Or is it the other way around? God arranged the cosmos for the ETs to be able to get here even more easily than we were able to sail across the oceans. Hey, don't blame me for that! I just work here.

And when the Missionaries come, can Cortez and the Conquistadors be far behind? The conspiracists tell us that we have already been conquered, it's just that the Intergalactic Conquistadors have learned their tradecraft better than the Spanish variety. See Dick Cheney and the Bilderbergers.

Can you excuse me, Tel, for being curious about the cosmic dimension of eschatology?

I guess my problem with the above scenario is that it seems like the ETs could have done a better job of this. How many thousands or millions of times have they run this scenario, and over how many millions and billions of years? Is this any way to run an Eschatology assembly line?

Sure they might have made some mistakes early on, but, really, wouldn't they learn from their mistakes. Hey, on this Planet, is there anything that could have gone wrong that hasn't gone wrong?

The gods must be crazy.....Nah, they must be sociopathic and serially genocidal. Cosmic sadism might be an apt phrase.

The Christians want to blame it on us. Sure, blame the victims!

Something surely went very badly wrong somewhere. Who the heck are we going to blame?

Guess what folks there is an incredibly easy explanation for all of the above.....

Them little Grey buggers.....they ain't ETs. They're UTs.

All you have to do is change one letter, and it all makes perfect sense.

This is exactly what the BPWH does, it just changes one little letter!

And, hey, I'm not the first one to figure this out, but I am the first one to make a federal case out of it.

Well, at least I'm trying to.

Oh, Ron.....Were are you.....??

[Nib](#), (@[OMF](#))

[...] Common dude! You sound like a 4th grader who saw a bad accident! SPIT IT OUT. It might be important!

No. I saw a good accident, but it weren't no accident, neither. It was a gosh-darn coinkydink. See, I don't think Mozart was an accident. An accident is when the movers drop the piano down the stairs. Mozart carried the music of the spheres right to the top, in all its synchronous, euphonious glory. There will never, and need never, be anyone to carry music to higher plane. We can't get higher than the angels. Mozart was music's Theory of Everything. Everything in physics is a footnote to Einstein. Everything in philosophy is a footnote to Plato. Everything in writing is a footnote to Shakespeare. You get my drift.

Those folks were angels brought to Earth. We are all that. We are lacking only in our eschatological inspiration. Sophie and I try to be that. One of us will succeed.

Is there a higher order of existence? The mystics speak of such. If so, it must be in higher dimensions, beyond space and time. But we already know about that. We call it the Internet. Pull out the electric plug, and it is the Real thing.

There have always been portals on the Earth, of different sizes and shapes. Some are biological others are less so. Some are in the sky, some are six-feet under, and deeper still. With the help of the Internet, the Earth is about to become one portal, the cosmic Grand Central, the Restaurant at the end of time.

(But, speaking of restaurants, I'm out to lunch.....)

We can all wear the T-shirts with Earth: Been there, done that. No, we don't need another billion years down here. We have a couple more centuries to finish our business here and skedaddle.

There is nothing else to disclose. We have all had our contacts of one sort or another. If we cannot reach a consensus on this, then nobody can.

Consider Occam's Razor.....

We know that the mind is not just a 'meat machine'. We know that consciousness expands and contracts. There are many altered states, and that 'normal' waking is just another state. Most of us have had numinous experiences of one sort or another. It is hard to believe that mind is not something pervasive and connected. The thought that mind is ever only a local, one-time machination, seems rather more improbable than the many alternatives that 99% of us feel strongly about. Is that just our egos talking, or is it the base-line of any existence?

Where then are we when we are not here? Where do our encounters come from? There are other places and spaces, and we don't need flying machines to get around. There are lights in the sky. Are they flying machines, or are they the manifestations of other minds and spaces?

Occam's razor suggests that we make mind the basis of normal and abnormal experience. We sure don't know the limits of mind, but every year we get a firmer grasp on the limits of physics. We know there are miracles without mechanics, so why should we invent a miraculous mechanics to explain what already has an age-old explanation in the connectedness of the cosmic mind? Why invoke and invent other kinds of connections? That is to deny the economy of explanation first invoked by William of Occam.

The is a very good explanation for nuts&bolts ufology. It is a socio-political explanation. It make much more sense than the nuts&bolts explanation of abnormal experience.

Has there ever been a President more believable than Jimmy Carter? Did you notice that Jimmy chimed on this unprecedented examination of ufos by our Contenders? Did he say there were no strange things out there? Did he need to say anything at all? Did he say that he had never been briefed on ufos? He said none of those things. He only said that They were not coming from other planets. Does that simple statement not speak volumes? And he is a deeply religious man who puts every neo-religious politician to shame? Yes, he could have just kept his mouth shut.

Recall that Jimmy is the only physicist ever to become President. If any one of them would have known about nuts&bolts, he would.

This reminder from Jack today:

"In wartime, truth is so precious that she should always be attended by a bodyguard of lies." -- Winston Churchill.

And here we are dealing with Armageddon. So, yes, what better bodyguard than Nuts&Bolts?

Flying saucers came of age with the coming of age of the American empire, which was an empire of air power. Our eyes were on the skies.

Blue Sky Dream (1996):

Beers's poignant, eloquent autobiographical memoir of growing up in Silicon Valley during the 1960s is a stunning eulogy for the middle-class American Dream. His father, Hal, a Lockheed engineer and former navy jet pilot, worked on secret projects designing spy satellites. His mother, Terry, a devout, mystical Catholic often at odds with her scientifically minded, Protestant husband, raised four children in their suburban tract home and "assumed the task of making us not merely Catholic, but Irish Catholic.... In inventing an ethnicity for us, she selected only Irish positives, giving us to understand that we were genetically impish and fun-loving." Beers's parents adopted the widespread faith that America's technological superiority would ensure limitless prosperity, but disillusionment set in as Hal grew disenchanted with a corporate culture of compartmentalization. As a muckraking Mother Jones editor, Beers critiqued the military-industrial complex that assured his father's livelihood. His incisive takes on suburbia, the ever-present seductions of television, Reagan's reinvigoration of the Cold War, Clinton's alleged reneging on the "peace dividend" and the downsizing of corporate America make this a memorable document.

This was the heart and soul of the American Dream. The ufo dream machine is the tip of that spear. Gordon Novel, the protégé of DeLorean from the Bonneville Salt Flats, and co-protégé of CK, lives that dream like none other, as we speak. GN is the bodyguard of the Aquarium.

Ufology would be nothing, if it were not infatuated with the Transhuman possibilities of Technology, and with War of the Worlds. If they did not have their booster rockets and their sights set on the stars. Who can begrudge them that? Certainly not me.

IF IT WERE NOT FOR THE AVIARY, THERE WOULD BE NO AQUARIUM.

If Jimmy was not smart enough to figure this out, I'll eat my hat. He is reading from the Playbook in real-time, folks. Don't say you weren't warned by Dan and Jimmy.

[11/18](#)

I maintain there is enough favorable evidence that we don't need disclosure to conclude that the BPWH is substantially correct. It is just a matter of time before the interest in alternatives to materialism and to sectarianism bring more people to study the BPWH.

The timing is the only matter of special concern. But as long as the hidden hand can keep us out of too much trouble, then we should be willing to pay the extra costs of delay, due to the extra benefits that come from spontaneous self-disclosure.

Sophia just needs to find a more effective spokesperson. That should not be difficult.

Getting over the ETH, in favor of the UTH is the single biggest hurdle. Once the UTH is taken on-board, you only need to invoke a primordial cosmic intelligence in order to grasp the BPWH.

With this pedagogical sequence laid out, the move to immaterialism becomes a logical and slippery slope.

Perhaps all that Sophie needs is a pedagogue with more patience.

The average ufologist thinks that the world owes them something, and is quite content to wait around for someone else to spoon feed them with information. Mere curiosity is enough. They generally come into the field with superficial preconceptions about what is going on. There is little incentive for them to rethink their existing worldview.

If I were Sophia, I would not cater to that mentality. I would keep disclosure on hold for however long it might take for some folks to give serious thought to the alternatives.

There has been some forward momentum on the acclimation front the past couple of years. Even if that were to slow down, I don't think it would be too many more years for a few more right-thinking folks to turn this field around.

I doubt that Academia will be the source of this new talent. More folks like myself will find it within themselves to put in the required effort. These new folks may likely be from other countries where English is not their first language. The continued expansion of the Internet will make this eventuality a virtual inevitability.

This would be my official recommendation. Don't do any more than is already being done by way of disclosure/acclimation. The Lord will help those of us who are willing to help ourselves.

[11/19](#)

ETH vs. UTH

This is the crux of the matter for disclosure. Let us discuss how we may have come to this impasse, and how it may be overcome.

The cover-up has strongly exploited this bit of public confusion. We are interested in who originated the ETH subterfuge, and how it is being maintained.

I believe it was the UTs who originally cloaked themselves in an ET guise.

This harkens back to the 'airship' flap of the 1890s. Here they presented themselves as just a bit ahead of our technology. It gets our attention, without befuddling our sensibilities. Nothing came of it.

Next up was the séance craze around the turn of the last century. This had some lasting impact on the fringes of the scientific community. Particularly in the UK, of which the PSR is a remnant. This was UTs dressed as UTs.

There were some notable phenomena on the battlefields of WWI, not particularly noted since. The exception was the foo-fighter phenomenon of WWII. Those phenomena became focused around our nascent nuclear activities. Thus the high-tech aura that has surrounded these phenomena since. NASA is well-rumored to have had its own version of the foo-fighters.

The triumphal rise of technology in the last century created a very tempting hook in the human imagination for the UTs to exploit, and so they became our ETs.

Hollywood and NASA seemingly combined their efforts to solidify the public consciousness around the ET metaphor. They may have been abetted by the insiders, but it did not take much coaxing for Hollywood and the whole Sci-Fi community to take this ball and run with it.

There has arisen a very considerable social inertia behind the ETH. As most everything in history, the development was anticipated teleologically. This barrier to comprehension will be overcome in due course, in its appointed time and manner. I would save myself a lot of trouble by being able to foresee such, but my present ignorance is as much a part of the Telos as is my knowledge.

What I find particularly difficult to understand is the strong backing of the ETH by at least some of the religiously minded ufologists, of whom there are a sizeable number in the rank and file, even though they are underrepresented among the spokespersons.

It is a sociological fact that religious conservatives are very well represented in the traditional technological fields, up to and including especially the aerospace industry. This is only somewhat less so amongst the 'hard' sciences. In the life-sciences, such folk are strongly underrepresented, reflecting the problems with Darwin and Freud. I don't know what these figures are for the medical field, in general.

In general, the religiously minded are admonished in the NT to 'not suffer a witch to live'. That is strong advice! If the Rel-cons (X-cons, Neo-con Xians) are going to satisfy their curiosity about ufos, it then behooves them to be doing so under the rubric of the ETH, about which the Bible is mum, as compared to the UTH.

If we may use Jake@OM as our case study, he supposes that the Elohim of the OT who 'laid with our women', were, if fact, ETs, rather than fallen angels. But why draw this distinction, which could only be seen as borderline, at best? When I attempt to argue some of the finer points he backs off, but then is back again a few days later with the same sticky mindset.

By the same token, the Young Earth notion has become a pejorative amongst the IDers, who now fancy themselves as amongst the Intelligentsia. It was only a few decades ago that the Vatican pardoned Galileo.

If even a substantial fraction of this emerging mindset may be traced to deliberate machinations on the part of MJ-12, then they have succeeded in digging a rather deep hole in which to bury the truth. Was I their affirmative action until recently and, conveniently for them, cutting my own line? If they wish to be so devious, then I am well rid of it.

Let us recap the salient points of UTH vs. ETH:

1. Occam's razor relative to the phenomena
2. **Problem of evil** is exacerbated by the implied repetition and redundancy [\[a\]](#)
3. Lack of any Federation rationale, in terms of their interaction with us
4. General lack of artifacts and traces.
5. High-strangeness factor
6. Failure of SETI
7. Physics counts more against ETH than against UTH
8. Metaphysics even more so (BPWH)
9. Lack of rationale for a conventional cover-up
10. Problem of distinguishing between ETs and UTs.

11. Incompatibility of theism with the ETH.
12. Different levels of souls required for the ETH. It get's very messy, very quickly.
13. ETH makes a shambles of teleology and eschatology
14. Inconsistencies with Darwinism
15. It exacerbates the mind-body problem
16. The Simulation Argument counts against the ETH
17. Same with the Doomsday Argument

Each of the above points constitutes a fatal flaw for the ETH. Taken together, the ETH would be a non-starter, were it not for the Hollywood factor. There is ample evidence of insider influence in Tinseltown.

11/20

Looking @ #7 above.....

Every year that physics progresses beyond Einstein's twin breakthroughs of 1905, it counts as more evidence against a physical explanation for the visitations, i.e. in favor of the UTH vs. the ETH. Yes, there are problems in science. There are unsolved puzzles; there is an horizon of our knowledge, but this horizon is, every year, taking a more definite shape. It looks more and more like a hole in our scientific, reductive knowledge. It is an Anthropic shaped hole. It has to do with emergence and the irreducibility of vital or anthropic related phenomena. This is just what we would expect for a world that is more mind-like than machine-like.

So, yes, they tell me this is my B-day. How many more 'til D-day, is the question?

We don't need a D-day. All we need is one other person who can understand the basics of the BPWH. Some of my correspondents have claimed to have gotten a handle on it, but I remain skeptical. The few who may have are then spooked by R&D and the messy antics, which is not hard to understand.

That is all we need at this point: one knowledgeable interlocutor. That should be very simple for Sophie to arrange, and even for CK. It could be a plant; it wouldn't matter, once the logjam at OM was broken, it would all be water over the dam.

One Interlocutor would be worth a hundred Serpos or Drones or Briefings. It would be vastly more productive of understanding in the longer, eschatological time-frame.

The lack of even a single Interlocutor does become more puzzling with each passing day. When one does finally show up, it will be all the more startling, hey, even miraculous!

When that happens, the BPWH will be going on-line and interactive 24x7. It will be all over but the shouting. That is why R&D is already over. Been there, done that.

In the meantime, I'll be working overtime to neutralize the opposition, which will be the same as clearing the decks over at OM, or wherever might be more strategic. But I'm still not seeing a more likely spot.

If CK is worth his weight in salt, he would already be having tryouts for the Interlocutor's role. May the best person win!

Checking out for the holiday.....

BPWH Tutorial

And

Critics Corner

11/23

In the wee hours of Thanksgiving morning an email we sent to me announcing that I had been banned from 'posting' on the Open Minds Forum. This was sent by 'Jake Reason'. It was a solitary decision on his part, he said. I'll copy the email to this space when I am able to access it via my laptop. This was apparently in retaliation for my merely pointing out that, according to the section announcement, I had been granted sole discretion over the use of the 'Dan Smith' section at OMF. I am guessing about this because, perhaps unknown to 'Jake', his banning of me included my even being able to read any messages on the forum where he has posted his 'Reason'.

This incident does raise some important issues:

- I am fortunate for the hospitality that has been extended to me at OMF for the better part of this year.
- I am not likely to find a better public forum for discussing the BPWH
- Even if there were such a place, it would take months to establish a presence and work through the issues that have come up here at OMF.
- A particularly sensitive issue is my connection with CK. This takes some arranging, and inputs from various sources. This becomes especially problematic at a time when the R&D show is in abeyance.

I will be posting this from an Internet café. I don't know if I will be able to make another update prior to getting back home on Tuesday.

11/24

I may be back home by late tomorrow. I have not attempted any further response to the OMF issue, pending my having regular access to the internet. This update is being ported from the Berkeley Springs Library.

There have been no follow up emails from anyone at the forum. As noted above, I am unable to read the messages on the forum.

11/27 [\[a\]](#)

Logos Spermatikos

According to [Justin Martyr](#) (100 - 165 AD):

This seed of the Logos (*Logos Spermatikos*) planted in every man's mind from the beginning, was the true source of philosophical truth. Between Philosophy then and Christianity there could not be any real and final opposition. All who have lived according to that light are Christians, Socrates and Heraclitus as truly as Abraham.

According to Simon and Garfunkel (1966):

Hello darkness, my old friend
I've come to talk with you again
Because a vision softly creeping
Left its seeds while I was sleeping
And the vision that was planted in my brain
Still remains
Within the sound of silence

In restless dreams I walked alone
Narrow streets of cobblestone
'Neath the halo of a street lamp
I turned my collar to the cold and damp
When my eyes were stabbed by the flash of a neon light
That split the night
And touched the sound of silence

And in the naked light I saw
Ten thousand people, maybe more
People talking without speaking
People hearing without listening
People writing songs that voices never share
And no one dared
Disturb the sound of silence

"Fools", said I, "You do not know
Silence like a cancer grows
Hear my words that I might teach you
Take my arms that I might reach you"
But my words, like silent raindrops fell
And echoed
In the wells of silence

And the people bowed and prayed
To the neon god they made
And the sign flashed out its warning
In the words that it was forming
And the sign said, "The words of the prophets are written on the subway walls
And tenement halls"
And whispered in the sounds of silence

[#2 >>>> #1](#)

I am coming to believe that #2 is the missing link, or more accurately the keystone/lynchpin of the BPWH, certainly from a pedagogical point of view.

In fact, it should no longer be referred to as the BPWH, but rather as the BPWT, i.e. the BPW Thesis. As such it is ready to be nailed to the door of the PtB.

The Problem of Redundancy transcends its lowly ufological origins. It rises to the level of a theological/cosmological argument that, taken together with the SAP, proves in the most economical fashion the BPWT.

To round this out, here is Carly Simon (1972):

I had some dreams they were clouds in my coffee
Clouds in my coffee, and...
Well I hear you went up to saratoga and your horse naturally won
Then you flew your lear jet up to nova scotia
To see the total eclipse of the sun
Well you're where you should be all the time
And when you're not you're with
Some underworld spy or the wife of a close friend
Wife of a close friend, and...

You're so vain, you probably think this song is about you
You're so vain, Ill bet you think this song is about you
Don't you? don't you?

Anyhow.....

If you had asked me just a week ago, I would not have thought we were going to make this.....

Now it seems that it is all over, but the shouting. Mark my words: mission accomplished, it is

finished, yes, the ordeal.

What a difference a week can make. Why didn't I see this thirty years ago, or three years ago? I guess it required Jake pounding me over the head with his bible for the last three months to get me to see the light. I knew there had to be an answer out there.....I had already taken note of #2, but just didn't grok that it would be the lynchpin, until yesterday and last night.

I've been wrong before, but now the opposition is going to find themselves on the defensive. They'll know it, and they'll know that I know it.

Let's look at [#2](#) again. [a]

It is certainly not easy to see why a God that is good would permit the Holocaust. It would be utterly impossible to justify its recurrence. It is like the X-event in that regard, only more so. The same moral logic would apply to a Federation overseeing our historical development.

At some point the Prime Directive must be broken. We would not allow a repetition. Why would God or the Federation allow such? We would intervene.

Does that same lesson have to be relearned on other worlds? Can it not be transmitted vicariously? How would the victims of the Holocaust feel if they were to learn that their ordeal was simply a repetition? Would that not render it unjustifiable by any means at all?

An omnipotent Deity could not allow such to happen, even just once. It can be justified only on the grounds that its suffering is an essential aspect of a unique eschatological context. The BPWH provides the only such context.

.

[12/2](#)

I have realized while being away the last two days that Jake's (@ OMF) problem of accommodating xian eschatology to modern cosmology is even more difficult than I had been imagining. He has kept me on the defensive for, lo, these several months by focusing on the messy antics. But since my renewed focus on the ET vs. UT issue, I am better understanding the difficulties of his endeavor of accommodation.

As I better understand the difficulty of his present position, I am having more trouble understanding what brought him to the present impasse. Among xians, Jake is nearly alone in attempting this accommodation. The mainline xians, who generally accept modern cosmology and evolution have generally given up on any sort of eschatology, just as they have given up on other metaphysical claims, besides that of the existence of a soul and its survival. They remain skeptical about both ETs and UTs, supposing those questions to be a matter of empirical/scientific determination, that has only turned up negative results. Jake, however, accepts both as already having been demonstrated beyond reasonable doubt.

The basic problem, as I see it, is that the complexity and confusion of eschatology are thereby greatly augmented, for no real gain on the pedagogical or evangelical front.

The upshot is that the eschatology continues to be geocentric, but now it is alleged to transpire in a small corner of a decidedly non-geocentric cosmos. The question before us is whether the residue is recognizably xian.

When I came to OMF, I did not expect to run into anything more religious than the occasional wayward xian. I knew from way back, without even asking, that the messy antics would attract the opprobrium of any respectable believer. I had assumed that my target audience, if any, would be agnostics of various descriptions. I failed to appreciate even the modest degree to which I would become a target of opportunity for a contingent of orthodox xians who, for reasons I can only partly comprehend, find themselves drawn to the field of ufology.

One explanation for the presence of the xians is that they have been sensitized to the possibility of signs and wonders relative to the Latter Days, despite the fact that there is an active dissuasion, on the part of their co-believers, from pursuing that interest in the arena of phenomenology.

But what better place to pursue such interest? The only acceptable outlet appears to be to meddle in Middle Eastern politics, as if there were not enough of that already.

Having garnered even a small amount of notoriety in one corner of a field of marginal interest to the public at large, I am, nonetheless, in no position to ignore it. But it does require no small amount of rethinking and retooling of my pedagogical effort. And I have to admit to having been slow on the uptake.

It may be that Jake, like me, was coming here to evangelize. Seeing the overwhelming bias of the ufological community toward a Nuts&Bolts interpretation of the phenomenon, it was natural for him to attempt to accommodate his xian message to that mindset. I happened to be the first to seriously challenge that strategy. Now we have what amounts to the Jake & Dan show at OMF. Both of us stand to benefit in the process, but both of us cannot be correct in our diametrically opposed interpretations. The only certain victor will be the J-man himself.

Here begins my exposition and critique of Jake's arguments. I have to admit to finding his various statements to be difficult to reconcile with a coherent picture. I say the same about the Bible, when it is taken from a putely literalist perspective. That Jake is less troubled by his own inconsistencies, is likely due the general acceptance of such in the fundamentalist milieu in which he has been immersed.

The fundamental confusion with Jake lies in his failure to reconcile Heaven with the heavens.

Thus is he forced to include both UTs and ETs in his Jakian cosmology.

His basic strategy is to attempt to imbed an xian, geocentric eschaton within the modern, acentric cosmos. It is obviously going to be the geocentric eschaton that gets the very short end of that long stick. I just don't see this attempt to fit a square peg in a round hole as gaining any significant traction within either the scientific or the xian community, even given some kind of Disclosure.

The nub of it is that the J-man comes off only as our local hero. Yes, he is a Big Fish here on Earth, but Earth, according to Science, is but a minuscule speck, lost in the infinite depths of the Universe. I just don't think this is what Jake's fellow xians bargained for when they accepted Jesus as their Savior.

According to Jake, their Salvation does not wait for them in Heaven, but rather it lies out there amongst the stars. This version of salvation presents us with several difficulties.

Instead of a being offered a return home to God, we are being offered an interstellar Diaspora. Right away this raises questions about who is responsible for getting us to our eventual destination. This turns Jesus into a mere station master. He can give us a passport, but what good is a passport without a Visa to some specific destination? He can arrange for our embarkation, but has no control

over which sovereign port will offer us refuge. How do we know that we will not end up as homeless refugees, wandering the high-seas, looking for a port in the storm and trying to avoid the pirates?

And what about Heaven and God? Why has Jake taken it upon himself to deny us direct passage to Heaven? Why have we been condemned to wander the high-seas? It sounds potentially hellish to me. It certainly does not sound like going Home. It does not sound like the promised Wedding Banquet. It will be left to the individual refugees to strike the best bargain they can with a potential 'host', whose 'responsibility' they would then become. Sound familiar?? Too familiar!

The lucky ones might be those who can arrange to die in passage. What will be their fate? However, take note, that Jake has alluded to our being refitted with special (permanent?) bodies, prior to embarkation. Does this mean that we have no escape? Now it's beginning to sound like we may have to share the fate of 'poor' Charlie:

When he got there the conductor told him: "One more nickel." Charlie couldn't get off of that train! Well, did he ever return, No he never returned, And his fate is still unlearn'd. He may ride forever 'neath the streets of Boston. He's the man who never returned.

Our hoped for Glory Train has, according to Jake, become rather more like Charlie's MTA. Should we look this Gift Horse in the mouth?

I would recommend that to you.

12/3

The Nuts&Bolts Xians (N&BXians) are saying that I am putting God in a box, by suggesting that Creation is geocentric.

The N&BXs will have to choose between Scientific Materialism and X'ianity. Even dualism cannot reconcile the two. There is no convenient place to draw the line, once Darwin comes on the scene. The IDers are focusing just on the Earth, hoping that the ET/UT issue will not impinge upon them. That is wishful thinking on their part.

For the N&BXians, Star Trek is better than Heaven. Their only concept of Heaven is spending an eternity singing God's praises. I agree, that would get tiresome in about a week. Their imaginations are delimited by fairly run-of-the-mill Science Fiction. They merely append a watered-down X'ianity to the basic Star Trek storyline. It is definitely not your old-time religion. Dr. Spock is their Jesus.

It will not be easy to dissuade them from their Blue Sky Dreams that they hold with an evident passion.

Given this view, how do we know that our next Visitor will not outrank Jesus in the cosmic hierarchy? Jesus only saved one planet, we are told. He may have brothers and sisters out there who have saved several. They may, quite naturally, have differing views on the nature of God and Salvation, depending on their respective missions.

It seems that Jake may now be agreeing that Jesus is the Creator of the universe. So I ask, why would he be sacrificed only on Earth? A rather obvious question for an Xian, one might think. But rather than provide an answer, Jake accuses me of 'beating a drum, seemingly for the neo-cons, no less! That is a bit of a stretch.

I should enumerate a list of questions for the N&BXians, at this juncture:

#1: (as above) Why is Earth special in the universal salvation economy?

#2: Why does God need angels if the ETs can perform every function, including the demonic functions?

#3: Where does God exist, if not in Heaven? Where does one go to be in His presence?

I'm asking how we know that Jesus is not an ET. If Jesus is such, then why not God? This is hardly a frivolous question. That is what many scientists are already willing to contemplate: that our universe is a lab or computer experiment in another universe.

According to Jake's interpretation of the Bible, all of us who are saved go to Heaven to enjoy the Wedding Feast with Jesus. But after the Feast, we return to some sort of interstellar patrol. In that function, we would be taking on the role of both Angels and/or of 'cleared' ETs with permanent special bodies.

Presumably, that patrol duty could last for billions of years. I suppose there is no reason why we could not be afforded the occasional R&R back in Heaven.

There are also hints that some of us would advance to the point where we would be able to create our own worlds. But how do you and I know that we are not in one of these student created, experimental worlds. That might explain why we seem to be such a problematic creation.

When I posted the above on OMF, Jake takes exception to it, but refuses to offer his own synopsis, claiming that it is too complicated. It seems to me that this is tantamount to an admission of his own lack of understanding. He can quote scripture left and right, but fails when it comes to connecting the dots laid out therein.

In the view of the BPWH, in order to make sense of cosmology, we must develop a Meta-critique of scripture, which is one of the things I have done on this website. The fundamentalists will object that any such critique is prohibited. Sure....keep us barefoot in the winter and ignorant in the summer.

And no one else on the forum has claimed to have been able to make sense of either the Jakian or the scriptural cosmology.

We have not heard from CK for almost two months. But RMC copied this email:

Know who TamaraLinden40 is? Yes, it's our Anon source. Tamara talks just like our notorious Anon while Doty talks like Doty, Gene Lakes talks just like Gene, and McGovern talks like McGovern. Tamara Anon is a con man/woman putting out a constant stream of utter nonsense mixed with some true facts. Even Pandolfi wanted to find out who she/he was. And now you know why the editor was fired, yes the one mentioned 2nd below who seems just about to have a stroke. Finally, Doty wanted to be listed as a contributor because some of the stuff in the book is just too hot..... :-) Rmc

11/21/2007 8:58 PM: [CK] wrote:
Bob,

Your book arrived today, and it is far better than anything I had imagined! I don't understand why Kit and others made such a big deal about a few typos. Your writing is very good, data is presented in an orderly fashion, and your conclusions follow logically. I wish I had taken your advice and purchased the book when it first came out. Doty is a fool for not accepting your kind offer to be listed as a coauthor. After I finish the book, I will give you reviewer comments.

Thanks also for providing Steve and Ryan with an exemplar header. Please follow-up at your convenience with headers from an early "Tamara Linden" e-mail. I want to compare it with another "Tamara Linden" e-mail I have.

Ron

[12/4](#)

I am attempting to make sense of Jake's cosmogony, cosmology and eschatology.

Here is a collation of the highlights. The emphases are mine:

[Link to Post](#) -- Jake's eschatology, posted yesterday, e.g.....

[...] Why a new earth? And what is a new heaven? This is a strange **Picasso-like** picture.

But all this was based on my original supposition, "What if the universe was not destroyed."

OK, so let's say it was. We are still faced with a new heaven and a new earth.

Would not all God's eternal beings be saved? i.e.: those mysterious Elohim, YHWH made the heavens and the Earth, why did He have Elohim make man?

In contrast to the BPWH, I believe we are shown not only by prophetic writings, but also by the nature of creation itself, that physical universe and the spiritual can exist together, both as it has in the past and into the future.

Would this make us ET's? Certainly not, we're immortal. Would we be Angels? No, the promise is to become children of G-d, above the angels & inheritors of all that is His. Would we be UT's? Certainly that *could* be, for we would know all the levels of the heavens.

Relevant pervious posts.....

[Link to Post](#) --

Me: Are we agreeing that Jesus is the Creator the Universe? So then why is Earth so special, among all the planets in all the galaxies, that the Creator would be sacrificed only here?

Jake: Through the Word, the universe was made. Big difference.

Jake: **As above, so below.** The universe displays a **consistent** creator. You suppose He's going to renege on it all.

[Link to Post](#) --

Me: Why do we have to get caught up in the eschatologies of other worlds? Shouldn't one eschaton suffice?

Jake: **As above, so below.**

Me: Why should we have to go there to participate in their eschaton?

Jake: "In the beginning G-d created the heavens and the earth." That's what He does . . . creates!

What do you suppose Children of G-d will do?

[Link to Post](#) --

Me: So you do not accept the Big Bang theory?

Jake: I accept that the universe is and has been expanding, and that before the universe was, I Am was.

[Link to Post](#) --

It is written that there are numerous realms, sometimes called different levels of heavens = havens. Which seem to exist in different dimensions. Those in the higher heavens (realms) refrain from or in some cases are not even permitted to move to the lower heavens (realms).

However man's realm (heaven/haven) is the lowest density. And we are also a special creation, whereas the physical & spiritual laws of creation permit all those in the higher realms to interact with us in some way.

[Link to Post](#) --

Only *begotten* son. Only "Son of Man". The first born of many ~ *mans*.

YHWY (Eli) said "Let there be light . . ." (singular)
Elohim said, "Let us make man in our own image". (plural)

Genesis tells of "sons of God" coming to earth (pre-flood) and taking women as wives. There are other mentions of 'sons of god' in scripture. There is also mention of Elders in heaven, who are distinctly different than angels.

Jesus however was not Elohim *per say*. He is one with G-d. On the cross he spoke aloud to Eli.

The hope in Christ is eternal life and becoming the family of G-d. Family of G-d = Elohim.

Put it all together.

After we become Elohim, then what will we do? I doubt it will be singing Hymns for billions of eons.

The idea of a New Heaven and New Earth (Rev. 21) is a key feature of the BPWH. This idea, however, appears to be the most troubling part of the Bible for Jake's localized version of eschatology. Let us set this problem aside for now, and look at the others.

Another basic problem arises when he attempts to draw a firm distinction between ETs and UTs.

Jake emphasizes that we will not become ETs. We will be transformed/resurrected (some with the Rapture and others at the end of the Millennium) into (immortal) UTs. We will be even higher than the Angels, we being the 'inheritors of all that is God's', and we would 'know all the levels of the of the heavens'. This is true for those of us who have been saved by Jesus.

What then are the ETs? They are the mortal denizens of the other planets. They are what we are now, before receiving our glorified bodies. How did they get here? Apparently they came here by purely technological means. They do not have the magical powers that we will receive when we have been transformed into UTs.

Does this mean that those humans who are not saved could remain on Earth, and, eventually, by the sweat of their brows, become interstellar ETs? Or will the unsaved just be damned? This raises some possibly intractable issues for Theodicy.

Even by the most optimistic estimates of the Sectarians, no more than 10% of humanity may expect to be saved. I am not aware that Jake disagrees. Thus the 90% of the unsaved on Earth would have been far better off to have been born anywhere other than where Jesus, or one of his ilk, was born. On such planets you could hope to become interstellar beings, and not have to worry about being damned by Jesus or one of his ilk.

Am I the only one who sees the theological problem here?

Immaterialism: [a]

[Link to Post](#) -- Jake:

And so in closing Dan, prophecy is unclear. But the sum of prophetic teaching suggests we will be both spiritual and physical at will.

[Link to Post](#) -- Tel:

Does your supposition concerning the BPW work if the body, mind and spirit are distinct from one another? If not, you have a mighty big hill to climb.

I have this to say about that.....

The mind/body problem is the greatest challenge confronting Science, in the latter-days.

It is also the greatest challenge confronting Religion and Ufology.

It is an issue that is long overdue for a fundamental reassessment.

[Link to Post](#) -- Jake:

For the sake of clarity, I don't rule out a completely spiritual (non physical) existence in our future. However when biblical scripture is factored in, there is a strong emphasis prophesied, that we will have a body.

The description of the risen Christ, is that of a recognizable body that is touchable, can eat yet needs no food, can walk through a solid wall, appear out of no where and rise up off the ground into the air, all the while seen with the naked eye.

It is this type of body that many believe we will be changed into; as it is written His apostles taught "we shall be like him", "we shall have a new body".

[...] And so, I am persuaded that our appearance will be as a normal human being. However having metaphysical properties like the risen Christ's body was described. This body/existence is both a 4 dimensional body (space/time) and extra-dimensional ~ quantum level effect.

[Link to Post](#)

And so, IF he had been shown a dissolution of everything, with only a spiritual heaven remaining, could he not have described what he saw? Of course. But that is not the vision he describes.

We see how quickly the theologically inclined become entangled in the intractable mind/body problem.

Here is the central paradox of religious history.....

That polytheism evolved into monism, while monotheism evolved into dualism!

In attempting to understand this historical paradox, one can also obtain a purchase on the mind/body problem. That has been my experience.

The only possible conclusion to be reached is that the mind/body problem is not a scientific problem at all, rather it is an historical/conceptual problem.

On this conceptual account, both the materialists and the immaterialists agree. But which of us has the solution?

This truly is a Chicken & Egg problem..... Which came first, mind or matter?

Here the immaterialists agree with the theists and the and the pantheists.....mind is the foundation of reality, i.e. it has ontological/metaphysical priority over whatever else came along afterwards.

What is hard to explain is how, only within the Western Theistic tradition, did mind/matter dualism arise.

To my mind, the emergence of Scientific Materialism out of theism is the most felicitous mistake in all of human history.

We are familiar with the saying that if reality were an elephant, we are like a blind person trying to size it up. Just to make that task more of a challenge, God, in her infinite wisdom, cut the elephant in half, giving one half to the West and the other to the East. This cut was not bilateral; it was latitudinal, and I do believe that the West got the better half, but that may be somewhat subjective. Clearly our half was the part with the greatest challenges.

We got monotheism and dualism, while the East got polytheism and monism. The BPWH envisions a limited polytheism, along with its monism, but it does come down strongly on the side of the Prophetic Tradition, nonetheless.

Is this fair? Well, let me tell you this.....all is fair in Love and Creation! And especially so when the two are of a piece!

We could not all be the Chosen people. Is that fair? Perhaps not, but it was absolutely essential to the BPW. And, hey, the essence of monism is that everything works out in the End, i.e. Apokatastasis/Redemption.

Without dualism, there never would have been science or technology. But dualism was not sufficient. Islam had dualism, but their scientific effort fizzled. What they lacked was the mitigation of the Creator/Creation dichotomy that appeared only in the Incarnation. Be advised that alchemy was the key ingredient of the scientific revolution, and the psychological basis of alchemy was to be found in the miracle of the Eucharist. Yes, alchemy, like all the ancient traditions, did pass through the Islamic revolution, but it could only take root in Christendom. And that it did. Physics followed a similar path, but alchemy was at the heart of the whole industrial revolution. The Protestant Ethic played a substantial role, but shared its basic motivation with alchemy.

And how does this development relate to Prophecy and Revelation?

Suppose that John had been granted a vision of the Beast as the Alchemist conjuring in his Laboratory. Alchemy would have gone the way of Witchcraft: up in flames.

If the identity of the Great Deceiver had been granted to John, there would never have been a scientific and industrial Revolution. Materialism would have never been allowed to rear its ugly head. Like anyone else, God tells us what we need to know, when we need to know it!

Suppose that Jesus had warned the Disciples about Judas? There never would have been Christianity! Same Deal!!

You can kick and scream, but show me where I am wrong.

And, yes, there is a silver lining to Scientific Materialism, and guess what.....We're it!

The average Xian will tell you that Materialism is great, as long as we give our Tithe to God.

The phrase 'simple minded' springs to mind, in this instance. The problem of Materialism runs far deeper than the collection plate.

Dualism is nothing more nor less than the bugaboo of the Western mind. Basically it is Deism. It is the Clockwork universe. God sets it running, and the rest is on Autopilot. It is the Cartesian dichotomy that dates back to the very beginning of the scientific revolution. Yes, alchemy was about the interaction of spirit and matter. Descartes' pineal gland concept was about the interaction of mind and matter. Each had its Holy Grail, its Philosopher's Stone.

Jesus is the 'pineal gland' of X'ianity, mediating between Creator and Creation.

The Great Pretender to the Truth was Scientific Materialism. It was the perfect setup for the BPWH. This is Armageddon, right here on OMF, between Jake and Dan. Is this enough blood for the bloodthirsty fundamentalists? Perhaps if they took Communion, they wouldn't be so bloodthirsty!

Just a thought.....

Then there is Evolution, surely the Tower of Babel for the Materialists/Transhumanists. If there is no God, we will become gods. Ah, yes, but God was a step or two ahead of the Nietzschean Transhumanists. That is God's job, to be ahead of our game plan, with a plan of her own.

[12/5](#)

We have this from Jake: [Link to Post](#) --

- 1) Soul creation
- 2) Soul merged with Body in womb - birth
- 3) Accepting God's grace - becoming aware of atonement "saved", "marked".
- 4) Paradise
- 5) Re-Birth - new body (cloistered on earth. *For a period of further development?*)
- 6) Full grown adult Spirit - Married into G-d Family.

This is his interpretation of the various scriptural accounts of the life of a soul.

First we have the issue of soul creation:

[Link to Post](#) -- Jake:

From then on we were "born" of women. And of course, given a soul. Which according to scripture is created by G-d before our body is formed in the womb.

We could also say there needs first be an earth before a body can be born. There must first be a Sun before an earth could sustain life of any kind. And on and on and on - Anthropic Principle.

If there be a process of one creation added to another to another to another etc, in order to create a haven sufficient to contain all the components to create man and then sustain that life. . . Why would there not also be a process at work to create an eternal "child of G-d"?

Put my other posts together.

I propose that scripture teaches us the soul is like unto an embryo with the potential of becoming an

eternal spirit.

And just as a child has the potential to grow up, transform through adolescence into adulthood and able to bare off-spring. So does a soul have a similar potential & process.

Does this provide any hints about the hypothetical souls of Jake's hypothetical ETs?

[Link to Post](#) -- Jake:

Whatever the case, we see that the essence of us is created before we are born in the flesh. This is a clear scriptural concept. And for the most part overlooked.

We 'are', before we are born. And so there is a birth that precedes human birth.

Does that essence include a free-will and/or a proclivity toward sin?

There are a number biblical prophets that are said to have been known by G-d before they were in the mothers womb. And God said, I knew you before you were born.

Many believers presume this means that because G-d knows all things, past , present and future, that he knew us before, because he knew our future.

Would God knowingly have made so many fools and/or sinners were it not part of the plan for our Salvation?

Where, again, does this leave our little grey buggers and their ET cousins? Or are they all our cousins, i.e. 'children of God'?

Ok.....

Here is one suggestion.....

Most of the alleged ETs possess only a collective soul. Their 'hive mentality' has oft been noted. I would say that the same is true of most animals. One indication of this would be the lack of, or strongly attenuated version of, a (nearly eidetic) personal memory that is the hallmark of humans.

We might conclude that a human-like soul is a special thing, not to be squandered on the run-of-the-mill ETs.

Yet.....

These same ETs have the special bodies, previously noted by Jake: [Link to Post](#):

The description of the risen Christ, is that of a recognizable body that is touchable, can eat [strawberry ice-cream?] yet needs no food, can walk through a solid wall, appear out of nowhere and rise up off the ground into the air, all the while seen with the naked eye.

Jake forgot to mention shape-shifting, which applies to the Resurrection and to UT's.

So why are we calling them ETs? Why not UTs?

Anyone for Occam's Razor?

Clearly, for those of us who already believe in UTs, there is no pressing need to postulate ETs in addition. It only adds to everyone's confusion, as well as providing a bigger target for our critics.

In particular, it greatly complicates the issues of Eschatology and Salvation.

And here is the kicker.....

What is the point of creating exobiological sanctuaries, if they are not going to come here or we go there? Their eschatologies would be entirely separate. There would be no interaction. Their existence and histories become entirely irrelevant to each other.

What then do we make of Serpo? I don't see that we need to make much of it at all, although that may amount to blasphemy for some at OM.

And so then we need to face the Big Question.....

Why all those other worlds out there? Or is that the wrong question?

For whom are those worlds made, if indeed they be world's at all?

What is the definition of a world?

Can there exist an unobservable world? Well, if God made it, God can observe it. So the answer is 'no'.

God might have a reason for creating worlds without creatures, but we have no reason to assume that He would.

Physics tells us the no phenomenon is real unless observed. We know then that God is not observing the individual atoms in our bodies. Doing so would collapse their wave-functions and disrupt our God-given biochemical processes.

Why should we suppose that a distant, unobservable planet is any more real than an unobserved quantum electron?

Jake tells us that God is an Anthropic physicist. That God must follow the dictates of Anthropic physics when it comes to Creation.

But, a couple of centuries ago, the intellectuals said that God was a Newtonian physicist. So who are we to dictate physics to God??

Doing so might make some Christians look smart, but it just makes God look stupid!

Science only deals with appearances. God deals with essences.

The essence of Creation are the creatures. In particular, we get the strong impression that Creation is a school for souls.

Suppose that God wished to create a world. That world would be anthropocentric. That fact is hardly debatable amongst theists.

But, say the astronomers, the cosmos, even though it may be Anthropically biased, is NOT geocentric.

Is that fact debatable? Not if it is a fact. But how do we know it is a fact and not 'just' an appearance?

Does not the fact of Neil Armstrong walking on the Moon prove that every other astronomical supposition must be a 'solid' fact?

[Jakianity02](#)

I am still attempting to discover if there is a rationale behind Jake's cosmology. What I see is an unconnected collection of his thoughts, suppositions and idiosyncratic interpretations of scripture. If anyone in the sound of our voices has a better understanding of Jake's MO, then please help us understand.

[Link to Post](#) -- Jake:

I believe there is no such thing as magic. I do not believe that any miracles that have ever been witnessed were manifested through magic. I believe however that G-d operates just like our magicians, as in it's all an allusive trick and fully explainable. Not to us mind you, we're not high enough on the ladder to have the faculties to comprehend, even if explained. G-d does not play dice with the universe(s) - heavens.

Jake expresses a strong contempt for anything spontaneous or random, and somehow he connects anything 'magical' with this despised spontaneity.

I asked for his opinion about free-will in this context, but he has not responded.

[Link to Post](#) --

That is the power of technology appearing as magic. However G-d's MO is vastly superior to any concept of "technology" we currently understand.

The difference between us and interstellar travelers is that they have figured out more of how that MO works. But they too are just babes in the grand scheme, they are only ET's. They know there are others far more developed than them. We might call those ones UT's. And among the UT's there is a hierarchy as well.

I ask about the limits on the powers of a UT.

[Link to Post](#) -- Are you suggesting G-d is a UT? I would say, there is a gulf fixed between that heaven and the one of UT's.

But by the same token, it is not clear that there is a distinction, with Jake, between Jesus and a UT, especially since he is positing numerous Sons of God that would be involved with other planets. This would make a shambles of the Trinity.

Then this, relative to the 'technology' of life: [Link to Post](#)

Forget about the complex molecules, which would be an enormous achievement by itself, where did they get the atoms to construct the molecules in the first place? And which lab created them?

Earlier there was this -- [Link to Post](#) --

You are lost in the term "technology". Tell me, what advanced technology makes a flower blossom?

Jake is very positive about what Divine 'technology' is NOT, but very vague about what it IS.

I suspect that what is gradually surfacing here is the deep disdain of the scientist and technician for the paranormal, magical, personal and spontaneous aspect of Creation.

What we see in Jakianity is the last refuge of Deism vs. Theism. This same sentiment is also endemic to ufology. Thus do we have the Nuts&Bolts ufologists in a constant struggle of having

their Technological dreams being engulfed in the spiritual and the paranormal. Jack Sarfatti is an excellent example of this, and Jake does see Jack as a mentor in this regard, although Jack has no truck with fundamentalism.

The literalism of the fundamentalist is cut from the same cloth as the analytic bias of the scientist and technician.

There is a very great fear of the Numinous and the Uncanny. There is the fear of being consumed by such. This is not difficult to appreciate.

This is the problem of identity and the potential loss thereof. In psychological terms, this is the ego's fear of being overwhelmed by either the id or the super-ego. It is the narrow passage between the Scylla and the Charybdis. Only great attention to ritual and/or the Letter of the Law will bring the ego through safely. But what is magic if not highly ritualized?

We all want God to be trustworthy, but the fundies seemingly demand more than that. They want God to be Law-abiding, just as they are. They want God to play by the Rules, and they see physics as an extension of those rules. Technology is never a violation of the Rules, only an exploitation of them.

Part of this syndrome is Jake's strong contempt for contemporary X'ianity. Mind you, not because it is too materialistic, but because it is not sufficiently materialistic, in the sense of Scientific Materialism.

There is very little difference between Jakianity and Transhumanism. The only difference is the Jakian must adhere strictly to the Ten Commandments. This will allow the law-abiding Jakian to be periodically upgraded on the ladder to the (next to?) Highest Heaven. In fact, the good Jakian will be able to bypass the several intermediate ET steps on that ladder, and go directly to the higher UT steps.

This is Transhumanism without the worry of ever being obsoleted! Plus, there is a final resting place. Utopia = Heaven #2, on this scheme. It is a true Nirvana. Virtually all the benefits of being God, without any of the responsibilities. I had never imagine such a Paradise until now. It's sure got every other paradise beat to heck!

Jakianity = Transhumanism with an Xian veneer + an Omega Paradise! Wowser! I wonder if Jake is offering Franchises? He is a professional marketer/salesperson, so the rest of us had better get in line, quick.

[12/6](#)

But, so far, we have neglected a very important part of Jakianity, namely the afterlife. This is something most Xians, not of the hellfire persuasion, are quite vague about. So we usually have to prod them a bit, to even get them to speculate. The only thing they are usually sure of is that their personal destination is Heaven, to be there with many of their friends, relatives and, of course, the J-man and the Old Man, Himself.

If you are a human and not with J-man, chances are you are headed for oblivion. Hey, it's better than hellfire. But Jake does make exceptions for the pure souls who may not have had the fortune of a close encounter with the Bible, or been born-again in the usual manner.

Human souls remain in limbo until Judgment Day, at the end of the Millennium, when at least 90% of them will be obliterated. The lucky few remaining souls receive the glorified, permanent bodies

promised by Jesus. So far, so good.

Jake, like me, is skeptical about our spending the rest of eternity singing praises to God. Think of the throat lozenge concession.....that would be the place to be.

So what's a glorified body to do. If Heaven gets boring, we can spend our days on assignment in the heavens. In fact, choral duty may hardly be an option, after all. There is a lot of work out there for us UTs to attend to. And there are INCENTIVES.

There is a hierarchy in Heaven, and only God sits in the Highest Heaven. Below that level are Jesus and his Brothers, all the special Sons of God, who are the planetary saviors. Not all planets need or warrant saviors, but, presumably many do. This is the highest possible rank of UT. Below that are many steps in the ladder that is heaven. If we manage to get on the fast-track of salvation, I see no reason why we might not aspire to be selected as a Savior-UT to some other planet that is presently coming on-stream to receive their allotment of souls. We could then sit at the Savior/Sons of God Council table, right next to Jesus, if we play our cards right.

The rest of us UTs will get no higher than Heaven #3, counting the rungs back down the ladder.

How am I doing so far, Jake?

Now we come to the ETs. This is where things may get a bit tricky/sticky.....

The ETs are the ones born on unsaved planets. Why should there be such? Because they are here!

They are here and they are not acting like a good saved UT should act. We're talking about those little grey buggers, in particular. Clearly they could not just be Demons, because we have their saucers in storage and their dead bodies on ice.

We wonder what is the meaning of their lives. What is their purpose in Creation? They sure don't add much to our lives.

Then there is the technological issue. They are allowed to develop interstellar transport, without benefit of being saved. Whereas we, humans, are not vouchsafed interstellar travel until we have been granted our glorified bodies.

Now Jake is adamant that all magic is deception, and all miracles are technological. We have to wonder, then, how does ET technology differ from that of the UTs?

Why are the ETs not able to master the 'technology' of producing glorified bodies? The answer must relate back to the Chain of Being, or ladder of bio/spiritual evolution. The ETs occupy the mid-levels between where we have gotten to now, and where we will be as UTs. The UT 'technology' is higher up the ladder than what the ETs can ever aspire to.

Just as this is getting interesting, I'm going to have to run out for a few hours.....

The ETs, even with their limited mid-range technology, obviously have the ability to get around. Many have come here, and some were allegedly on hand to witness the X-event. If they wanted to get saved and advance to UT status, they would have had ample opportunity to do that by visiting anyone of the many 'saved' planets, i.e. planets visited by one of the Sons of God. They would also have often run into or rubbed shoulders with individual UTs who had been saved. Why would they

refuse to avail themselves of so much opportunity for upward mobility on the Chain of Being?

The only sufficient reason would be that they were never granted free-will, to begin with. They were meant to permanently languish in the spiritual backwaters, like animals. It has been said, however, that even some pets manage to come back as humans. Perhaps the ETs can reincarnate as free-will humanoids, and take their chances on one of the planets scheduled to be saved. That's the best answer I can come up with on the fly.

But, if this were the case, humans would, generally, be better off if they could first be born as ETs. They could arrange associate themselves with those UTs and those planets that were most likely to afford them the opportunity to make the transition to UT status.

Otherwise..... Being an ET would basically suck, it would seem. They are fated to watch all of us glorified gorillas, who love nothing more than to beat each other over the head, go on to the Highest Heavens. No wonder that they can find nothing better to do than come here and bugger our kids and mutilate our cattle. Can we blame them?

We can just chalk up the ETs to God's superior wisdom. But that doesn't tell us how to deal with them. Should we just treat them as the demons they often seem to be? Why should we even suppose that there are ETs visiting us rather than demons. The Bible certainly does not support this view. It seems to be motivated only by wishing to conform with the presuppositions of the generally non-xian ufology crowd. This bit of political expediency does not strike me as being a smart move, for anyone concerned with ascertaining the truth of the matter.

Jake is under the impression that he is killing two birds with this one ET stone. He is conforming both with ufology and with modern science. The problem is that modern science has no truck with ufology. The scientific community is extremely skeptical of the claims of ufology, and for very good reasons, which Jake fails to appreciate. Jake is being expedient, but expediency is never a winning strategy when it comes to matters of ultimate concern.

Then there is the issue of technology that Jake raises. I truly have not before heard the issue of technology raised in the context of God's powers of creation. Somehow this must be connected with the ETs.

[12/8](#)

It does seem that Jake has backed off from his technology gambit, certainly relative to God. But I'm not sure where that leaves the ETs and UTs relative to technology. He is probably going to hang in there with Jack S. until the bitter end.

In the meantime Tel @OM has a question or two.....

Do you mean be at one with God, be one of many hanging out with God, or be physically integrated into God's body... or something else?

Me:

Elsewhere I have suggested that we exist as brain cells in the mind of God, even at present.

So, yes, we are, even now, one with God in Heaven. But we will not fully appreciate it until the Paraclete 'reproves' us of that fact.

Tel:

Are you suggesting then that God is clinically insane? That is what comes to my 'mind' when I think of someone who cannot fully control their own thoughts/actions.

Will He get lobotomized as the grand finale in the BPW? Is this how He is supposed to get rid of all the unproductive and rebellious gray matter?

The God I follow is not, has never been, nor will ever be, a schizophrenic.

Tel's question points to the fact that the BPWH is of one piece. Taking any part of it out of context will destroy the organic meaning, as with any organism.

Let's go back to the organism. It is the monistic cosmos. This is close to the pantheist concept: God is in everything; everything is in God. God is the circle whose center is everywhere. Physicists would call this the zeroth approximation to reality.

To increase the level of realism, we introduce the simplest form of symmetry breaking, and that will give us a first approximation to reality. All we have to do is squash the circle. By introducing that one bit of cosmic asymmetry, we derive most of the structure of the BPWH.

What was the center is now a virtual center. It is where the two axes of the ellipse intersect. Historically, that center is what we know as the X-event. The axes then represent yin and yang, if you will. In this dialectical sense, yes, God has a left and right brain, just like we humans do. He and we are schizoid in that sense. We were created in that image. It is the breakdown of the bicameral mind.

Let us take the horizontal axis of the ellipse to be the time axis. This is the venue of History. There are now five defined points in history. The X-event is the center. The Alpha and Omega are the two end points. And there are the two foci of the ellipse that also lie on the time axis. It is those two foci which are of timely concern to us now.

This model I have just described has a venerable history, originating with Joachim da Fiore (1135-1202):

<http://www.songsouponsea.com/Promenade/JOACHIM.GIF>

And my own early version:

<http://www.bestpossibleworld.com/aAquarium/cosmol02.htm>

The canonical Xian view is that the second focal point is the Second Coming followed by the Millennium, leading up to the Omega.

The first focal point, within the prophetic tradition, might be Abraham or Moses. Greater historical symmetry comes with the latter choice, IMO.

We derive the Ouroboric configuration by partially equating the Alpha and Omega to obtain the cosmic circuit.

God, in the prophetic tradition, is revealed at the critical points along the historical axis. According to Joachim, the Millennium, or age of the spirit, is inaugurated by the third person of the Trinity.

There does seem to be a backlog of events that might be appropriate for this final focus of the cosmic ellipse.

So much for the timeline, where does this leave God?

Recall the divine purpose of Creation: it is a recreation in the sense of a singular recycling of the Cosmos. It does not have to be repeated, *sub specie aeternitas*. Creation is the Cosmic Bootstrap by which God realizes/reifies herself. Her points of greatest personification are just the critical points of the timeline.

The personal God of theism is not the old cobbler in the woods, it is the combination of these cameo appearances. In the Trinitarian scheme, there are three main appearances: Moses, Jesus and (?); or Father, Son and Paraclete. On the canonical view, the third person is not a person at all. Instead, we are treated to a return of the second Person.

Why should there be these three faces of Eve? Each of us is an image or face of God.

It is simply a matter of the logistics of revelation. It is where the pantheist background is necessarily supervened by a special ingress or sojourn of the Creator, recalling his sojourn in Eden. These three points are the three main historical links between the Alpha and the Omega.

The Xians, at first blush, are likely to feel cheated out of a special reappearance of Jesus, but this is not difficult to rationalize.

But what, then, will be the situation in Heaven.....?

Will Jesus be sitting on the right-hand side of God? Hold that thought. Let's consider the general case.....

Consider the life of our brain cells.

They do have a cushy existence: the highest rent district of any known biome. It is a cellular paradise. 'Eternal' life is part of the contract. Every residence is wired to the cranial Internet. It is a constant chat room, not unlike what we are doing here.

And, hey, no day jobs! No commute.

What about bodies? Strictly optional, we may suppose.

What is the biggest conceptual challenge is time, and the malleability thereof.

Eternity is neither endless time nor timelessness. There will be temporal loops, and multi-dimensional time.

What about the hierarchy of the heavens?

There are various species of neurons, but there seems to be no functional hierarchy. There is a supervening Self, but it is very hard to pin down. You can give it a name and a social security number, but that is about it. There appears to be no intermediation between the Self and its neurons. There is no God neuron or Jesus neuron, rather as there is no 'grandmother cell' to mediate our memory of same. Instead we have Karl Pribram's holographic model of the brain. The Self, like God, resides in the totality. This does not mean that Creation, in any sense, precedes the Creator, but rather that there is a symbiosis between them.

This very simple syllogism of neuron : self :: self : God, ought to be sufficient to disprove pantheism and atheism.

[12/9](#)

On these pages I have often made a 'Zodiacal' interpretation of the Godhead. Yes, one could say, very crudely, that God suffers from a multiple personality disorder. This is one way to interpret the Xian Trinity. Put any normal person into a isolation tank, and very quickly they will begin

exhibiting MPD. Consider the recluse talking to himself. We are social creatures in the image of the Creator. Take away our society and we will create one in our minds, just like God did. Even the strictly monotheistic Muslims have 99 names/atributes for God!

According to the BPWH, the trinity is actually a subversive conspiracy within the zodiacal/olympiad/pantheon. MJ-12 is likely to have been modeled upon that conspiracy. The original pantheonic PtB were not in favor of Creation, because they knew it would eventually overpower them, just as today's PtB know that they will be overpowered by the Millennium or God's Kingdom.

The trinity of conspirators formed a secret conspiracy within the Pantheon. They tricked their fellow gods into a game of Pokatok. The gods became so engrossed in the game, like teenagers today engrossed in Halo, that the Trinity was able to wrest control of Olympus from them, and so they became the fallen angels, not by a sin of commission, but by being neglectful. Ever since, the fallen pantheon, becoming the planetary rulers, have attempted to use us to regain their place on Mt. Olympus. They were not about to let us return to Mt. Olympus without them in tow.

So we and they are allowed to return only in these latter days. The Three Magi are now the postmodern Serpent. They planted the seeds of the Internet, a la Corso, etc. And so the Visitors will be able to hitch a ride on our Glory Train, back to Mt. Olympus.

In this case, Jesus and his two co-conspirators in Creation will want to keep a low profile back on the Mountain. If I were them I would want to have a tourist class ticket on the Glory Train.

The moral of the Metanarrative is that you had better watch your manners when you get to Heaven, because you may not know that the beggar standing next to you is actually your Creator, just keeping a low profile wrt the PtB.

So, you see, heaven may not be all that different from down here, except that more people will be more neighborly, out of necessity.

The first shall be last and the last shall be first. And if the top dogs are really smart, they will always travel incognito.

12/10

Beyond space and time, there will be 'maintenance' duty wrt Creation. More generally, there will be the filtering of the mainly background noise of the Potentia. In that process there will be mini-creations, rather like the Minor Leagues in baseball. This will maintain the circulation of the vital force. But none of this will ever undo or surpass the eternal BPW.

That last sentence could probably use some qualification. There may be other kinds of creation in higher dimensions of reality that would serve as cosmic appendages of one sort or another. I would doubt, however, that these appendages would ever house as many souls as does Earth. The same souls have access to every creation and to every heaven, although there is no ultimate difference. So this is not much of a qualification beyond what was stated in the previous paragraph.

For instance, what could Jesus possibly do in any other heavens or creations that would surpass the X-event? No artist has ever come close to imagining such.

This right here is the climax of the biggest show in the cosmos. We had better pay attention and mind our p's and q's.

The Xians have a hard time equating $SM = aX$. Their disappointment is of a piece with their non-acceptance of $BPWH = X^2$ or SoT. Will they demand their money back?

Where is the drama of it? Is not God supposed to be the cosmic dramaturge? This is more like Beckett.

I suggest there is a trade-off between the external and internal dramas. It is the internal drama that is being optimized in this manner. Everyone will have to wrestle with the Truth in their own fashion. Only then will they find their seats on the Train. Are they assigned seats? Perhaps so. Thus the extended process to ensure an orderly exodus.

If we awoke one morning to discover that entire congregations had vanished in the night, there would be absolutely no need for an aX . The ensuing panic would decimate the global population within a few weeks or months, at the most. Is that any way to run the Exodus?

The creation conspiracy trinity theory (CCTT) may have possibilities. It does help to connect a few more dots.

If it is true, then the Mt. Olympus enclave is about to receive a boat-load of refugees from the Exodus. St. Peter had better hire on some extra security. I hear that the Blackwater folks are looking for a new assignment. Tent city/FEMA trailers, here we come. The Wedding Feast will be more like K-rations. But I don't think the Olympians can hold out for long, not against the loving industry of the refugees. They will be good sports about the invasion of their neighborhood. What choice will they have?

This imminent inevitability will be a good thing to keep in mind as we attempt to fence off the southern border. What goes around, comes around.

If the Olympians and the CCTTers are smart, they will work out a deal between them so that the Olympians will look like they were pushing for Creation all along. That way we can minimize the hard feelings on both sides, and get on with the maintenance and recreation.

Those who wish to roll up their sleeves and get on with God's work, will probably find that they can work better without having to drag around their glorified bodies all the time. You don't have to wear an ID chain inside the Pearly Gates. The standard issue uniform is no uniform at all. Birthday suit? Well, something like that.

Folks might also wonder what the Earth will look like in a couple of centuries, after the Exodus.

Yes, I have the temerity to suggest that it will have shrunk considerably. It will be on its way back to Edenic dimensions, along with its caretaker crew.

Human artifacts? Cities?

I would suggest that they will be melting back into the primordial forest/jungle. Will the Loiseau brothers of controlled demolition, Towson (and WTC?) fame be kept busy? I think not. Will the modern cities not become like Mayan artifacts? More quickly, and they also have the option of falling off the edge of the observable world, as it contracts, and curls up around the edges. Ask me no questions, I'll tell you no stories.

New heaven, new Earth, new Jerusalem.....?

Hey, it is possible that all of that could transpire right here. But, unless a better idea comes along, I'm inclined to see the Earth set aside as a natural enclave, with the new Jerusalem more in the clouds, if you don't mind. Then, as far as the Earth is concerned the Omega becomes the Alpha. The Gaian circuit is then partially independent of the Olympian/zodiacal cycle, which may also return to a simpler state to complete its circuit. Perhaps the zodiacal and Gaian circuits can merge into a common, edenic Alpha with a Mt. Olympus. In that case, the next couple of generations on Earth is the final Omega, or great attractor. The exodus is a return to Alpha.

A remaining conceptual hurdle is the likely end of human fertility. It is generally assumed, without protest, that biological reproduction, or any reproduction, is limited to occur down here in historical time. Elsewhere, elsewhere, there is attrition. But then death and reproduction are usually linked. The simplest resolution is that we truly do meld into a singular God consciousness, in some perfectly benign and continuous fashion. Who is likely to object? Few, indeed. Some, however, may find this rather too much like a reverse communion. I certainly remain open to suggestions.

The end of fertility raises the issue of its metaphysical origin.

I have not come up with any satisfying answers on that score. There are various biological models to be considered, as well as the probable cloning of souls. But, frankly, there is nothing quite like the real deal. Mythology seems unhelpful, as well. Athena emerging from the brow of Zeus is not an inspiring picture. Seeding Pokatok with fair maidens is one way to beguile the Pantheon. But that does seem like putting the chicken before the egg. Perhaps germination is the path to follow. It has ample metaphysical precedent, certainly. Nonetheless, putting that into a mammalian package is no mean feat. A tricky venue for metaphysical experimentation, one might think. It is far from obvious how to bootstrap certain aspects of biology. But in the end, necessity is the mother of invention. Nature found a way. Divine forethought could not hurt the cause.

Who said we had to solve every mystery today?

Hands on a Hard Body

Yes, it does seem that the disclosure and salvation game has devolved into an endurance contest being played out at [OMF](#).

If that is the case, then I'm showing less signs of fatigue than the others, at this juncture.

It has been a learning process for me, in upholding the BPWH in discussions with Biblical conservatives. I am even encouraged by the progress in understanding the ins and outs of that PoV. I continue to be more hopeful that progress on this front can supplant additional disclosures by the insiders. A continuing low level of phenomena and insider rumors ought to be sufficient to move forward on the religious issues. If this is possible, it would be the optimal course.

The discussion at OM is unique on the web, and long overdue. Why has it not occurred before now? It is an 'accident' of history, relating back to the Cartesian dichotomy, that religion has been ruled out of bounds in polite and intellectual discourse. Of late there have been some exceptions, mainly as a reaction to the Intelligent Design initiative being carried out in the schools. Christopher Hitchens is a case in point.

There are a number of 'progressive' Christian sites, but I don't see signs of an active dialog with the conservatives, and particularly not on issues related to eschatology. The progressives do not contest the massive conservative dominance in that arena. On the side of progressive eschatology, the BPWH is a lone witness.

[12/16](#)

Nibiru @OMF points us to: [veryelect.shtml](#).

This one idea ought to clinch the argument for: Great Deception >> Falling Away << Scientific Materialism. This, in turn, would clinch the argument for the BPWH.

There is a mystery, however. Why am I the only one to be making a cosmic/biblical case for the above connections?

Surely the growing ID movement ought to be making these same Biblical/historical connections. But they have not, to date. Not as far as I can tell. How could they, without coming up with the whole BPWH enchilada?

Point of fact is that there is no plausible scenario for a personal AC. If there were, I would be as good a candidate as any proposed so far. How do we explain this to the literalists? It need not be that difficult a job. There is just a lot of social inertia to overcome, but there will be help, when and where it is truly needed. But what is the rush, now that Mahmoud has relented on his nuke surprise? We have as much time as we need to do this right.

ScaRZ @OM responds:

The very elect in my opinion are those who have been sealed by God. They will be protected from the great flood of deception that comes from the mouth of Satan. The whole world will swallow up that flood of deception, hook, line and sinker.

The very elect will have in place the full armor of God. They will know that the first bridegroom who came is a false bridegroom.

This is the sink or swim issue for the BPWH.

[12/17](#)

I have read the above linked page: Can 'The Very Elect' Be Deceived? Here is the Biblical passage in question:

Matthew 24:24, "For there shall arise false Christs, and false prophets, and shall shew great signs and wonders; insomuch that, if *it were* possible, they shall deceive the very elect."

The author [points out](#) that:

Notice, the words "it were" are in italics designating that these words ARE NOT IN THE ORIGINAL scriptures, and for our more perfect understanding we should eliminate those words.

Besides John 16, no other biblical passage has 'til now garnered such scrutiny from me. What is at stake here is the SoT vs. the aX.

There are also references to a 'falling away': 2 Thess. 2:

3: Let no man deceive you by any means: for that day shall not come, except there come a falling away first, and that man of sin be revealed, the son of perdition;

This is the key passage in the Bible, besides John 16, dealing with SoT vs. the aX.

Notice, first off, that 'man' and 'son' are not capitalized. The reference here should thus be taken as generic. Yet, this is the closest encounter with the concept of an aX, outside of Revelation. The other references are all to the 'many' false Christs and prophets.

I am reading the Wiki entry on the ['man of sin'](#).

Consider 2 Thess. 2:

⁴Who opposeth and exalteth himself above all that is called God, or that is worshipped; so that he as God sitteth in the temple of God, shewing himself that he is God.

⁵Remember ye not, that, when I was yet with you, I told you these things?

⁶And now ye know what withholdeth that he might be revealed in his time.

⁷For the mystery of iniquity doth already work: only he who now letteth will let, until he be taken out of the way.

⁸And then shall that Wicked be revealed, whom the Lord shall consume with the spirit of his mouth, and shall destroy with the brightness of his coming:

I submit that the balance of the biblical evidence favors an impersonal interpretation of the aX.

In Revelation there is mention of a Beast and a Harlot. These hardly seem to refer to personal historical figures.

The more I look at the biblical references relative to the anti-christ, the less support I find for a singular historical figure matching that description. The closest such comes from the commonly held interpretation expressed by Dwight Pentecost as quoted in the Wiki [article](#). I have not seen a plausible modern-day scenario for this interpretation. Examples of such come from LaHaye and Lindsey who suggest the Secretary-General of the UN and the head of the European Union,

respectively.

On the contrary, there is general agreement that modern secularism has given rise the greatest apostasy in history. Why then do so few biblical commentators make a connection between the rise of Secularism and the aX? A few who come close may be found by searching Amazon under secularism & antichrist, but I find no notable examples.

Secularism is old news. Preachers of the end-times need drama to entertain their flocks. It is surprising that such a superficial and implausible plot could capture the attention of so many. It is less surprising that the author of Revelations would wish to personify the devil. It fit the mindset of those being persecuted by Rome. The fact that even Hollywood has been able to do so little with this popular plot is a good indication of its unworkability.

In contrast, apocalypticism has never been more popular in Hollywood. But I cannot recall any such movies that feature anything resembling an aX, let alone a plausible one.

In modern times, the primary reason for the popularity of the aX is that it relieves (conservative) xians of any proactive social responsibility. It allows them to remain in a defensive posture, even while pursuing an aggressively reactionary political agenda. That this agenda should conform so remarkably to the agenda of the PtB can hardly be entirely fortuitous.

There is no thought here of reformation. There is no point of reform with Armageddon just around the corner. It is a perfect excuse for political negativity and social apathy.

But I don't believe this is the whole story. There is a deeper agenda here. Is the hidden-hand hard at work to deflect attention from what would otherwise be so obvious?

X'ianity, amongst all traditions, has had a special connection with the eschaton.

How so? Why so?

Deism provides a special connection with the Alpha. Theism also provides a special connection with the Omega. This is true particularly for Judaism and X'ianity. Let's consider them individually.

Judaism has the God of history and the messiah. Why the chosen people?

How better for God to manifest in history? There must be a vehicle. There must be an historical Omega to match the Alpha. But what is to be accomplished with history?

Is it even the case that we have a need to know the answers to any of these questions?

History is a story. What is a story if there is not a challenge and a resolution? At the least there is a separation and a reconciliation. What is a reconciliation that does not entail a mutual understanding? What is a story that does not provide insight?

The concept of the messiah, alone, does not provide all of this. It provides a simple justification through a political or military victory. Might makes right. What lesson there?

[12/18](#)

These questions need not be so hard to answer. The hard part is asking them. I truly wonder if

these terribly obvious questions have ever been asked before, in any systematic fashion. I am skeptical that anyone has. It comes back to the question of WWJD/WWGD. Yes, this question can be seen on any number of bumper stickers. But it seems only to be taken personally. There are progressive Xians who would apply it politically. But no one has been inclined to raise it to a metaphysical level. The Anthropic Principle is required to start this ball rolling. Only thus can there be a sufficiently high level of seriousness and confidence.

But there is more. Besides needing the very impersonal physics background, one has to be able to take the metaphysical question personally. In my case, this would not have been possible without Sophia, and perhaps not without Ron, as well. This does narrow the field considerably, and also specifies a time window. Add to this the necessary independent means, and it is surprising that anyone fit at all.

So here we are, asking the terribly obvious questions that everyone else forgot to ask.

And where were we? What is the point of Judaism, other than to demonstrate God's power? Israel was God's Trophy Tribe.

Where does that leave the J-man? The jilted suitor? If the Xians are not to be left standing foolishly at the altar, then we must suppose that God was looking for something more than a trophy tribe.

Great. But did Jesus have to be a Jew? There's the rub. There are pros and cons, but perhaps so, if he was to be taken seriously enough to get crucified. And from where else could the messianic part of his story derive?

Clearly, also, Rome proved to be quite a convenient conveyance for the message, so why could Israel not have gone the way of Rome?

It has to do with reconciliation and covenants. Xians recognize that, belatedly. Muslims have not yet. We know about unfinished business. They don't.....not yet.

Israel is a witness to God's unfinished business. Israel is a witness to the necessary finality of history, in a singular fashion. Xians borrow from that, but on no uncertain terms. Between us, we see how God has to connect the two biggest dots in history. Then come the Moslems, then the pantheists. Yes, there is a logical historical sequence, keeping in mind that the first shall be last, and the last shall be first.

Why these separate conveyances and covenants? Why this historical compartmentalization?

But what is the alternative? Homogeneity? Is it simply a matter of historical aesthetics, or is there an underlying ontological necessity?

As a first approximation to an answer, the historical separations are likely an extension of the ontogenetic separation of Creator and Creation.

Yes, there was, of course, a primordial communication problem that only now, with the Internet, can be transcended. But we are talking here about more than just logistics.

There was a lot to learn in a short time, so the pedagogical problems had to be divvied up. We were multi-tasking, parallel processing throughout history until the end.....until the Internet. It is that simple. Everything in its time and place. Minimize the redundancy; maximize the organicity.

This historical logistic should also provide a lesson in cosmology. Organicity is the name of the history game. How can the Gaian eco-historico-logistic be applied to the cosmos?

So as not to belabor the point, it obviously cannot, without stretching the organicity to the breaking point. What's a cosmologist to do?

The choice is simple: think up a new religion, or think up a new cosmology. Given that choice, is it small wonder that the cosmologists turn to pantheism. Historicism is irrevocably parochial in the sense of being geocentric. The Transhumanists do make a stab at projecting history onto the cosmos, but the failure of that exercise should be instructive.

So history and cosmology don't really mix. We can't reinvent history, but maybe we can reinvent cosmology. That does seem like a tall order, especially in the space age.

But wait, who is afraid of NASA? Must we place one piddling Agency above all of history? I don't think so. They can barely keep one space-station aloft, and we are supposed to concede to them our hearts and minds.....the hopes and fears of all our years?

The cosmological question, which is the heart and soul of the BPWH, comes down to the question of the provenance and agenda of the Visitors, if there be such.

What if there are no visitors? Right there you have killed the possibility of a transhumanist solution to the history problem.

To paraphrase Fermi, Where the heck are they? If they have not managed to get here, after millions and possibly even billions of years, what is the chance of our ever getting there?

But set aside the travel problem, and just consider a SETI-style Contact. We're talking cosmic Internet. Sending photons should be a lot easier than sending rocket ships. But nada.....nary one measly photon have we been able to detect, despite some seriously concerted efforts.

Even a medium bandwidth cosmic Internet would not be practical without an unprecedented breakthrough in Physics, involving the supra-luminal propagation of signals. This one change would make a shambles of physics as we know it. Fringe physicists like Jack Sarfatti have been playing with such ideas for decades, without being able to make any inroads amongst their colleagues, or even to suggest how such signals might be detected.

What the layperson fails to understand, and what the fringe physicists fail to explain is that Physics is not open to being hacked into, like some computer system. It is a self-contained, closed system, and we are an integral part of it; we not a *deus ex machina*, as is the hacker, relatively speaking. The more we learn about the system, the more obviously is it tamper-proof. You cannot tweak one part of the system without having everything else be effected. The Anthropic Principle shows how everything has to be tuned just right, or the whole system will self-destruct, starting with us, the observers.

In the early days of radar, there was a game amongst the maintenance crews to see who could remove the most vacuum tubes, and still have the contraption work. The Anthropic Principle tells us that this game is not possible with theoretical physics.

If there is going to be a paradigm-shift at all, it will have to stand the whole system on its head. And this is just what the BPWH proposes.

According to the BPWH, we are more closely aligned with the *Deus ex machina* than we are with

the machine itself. God is the source of reality, and especially of us creatures. The rest of Creation is epiphenomenal relative to us who are God's co-creators. That is all that it takes to make sense of the world, just allow us humans to be a little bit closer to the Creator, as if we were her proxies. The result of that shift is to shed a whole new light on the nature of reality. Mind over matter becomes the order of the world. All sentient beings have this potential, but only we have the freedom to exercise it to its full and intended conclusion.

As long as we are going to have to bust a paradigm in order to make sense of the world, and explain our peculiar status wrt it, we might as well do it correctly and decisively the first time, and not exacerbate the pain and confusion by prolonging the process with mere palliatives such as adding more epicycles to an already overburdened system.

[12/19](#)

'Murnut', a colleague from OM, attended the recent Bud Hopkins' Intruder event in NYC. Speaking there was Leslie Kean, one of the organizers of last month's UFO press conference at the NPC in DC. Ivo is asking us to consider the question posed by Leslie:

"Assuming the US Gov't agrees that some type of study needs to be done of the UFO phenomena....what agency should do the investigation?"

To be perfectly frank, this question strikes me as more than just a bit silly and ill-posed.

First off, name one credible investigation that was not publicly supported by either the President or a Congressional committee. To the best of my knowledge, it is a null list. A possibly exception might be a GAO investigation, but they are not a likely candidate for this topic.

IMHO, the Larry King/NPC show, far from being an initial push, was a last hurrah. It was a damnation with faint media praise. It was a deliberate misdirection into a political dead-end. It was a belated reaction to the last couple of years increase in public interest internationally in things ufological. Of course, Leslie would not be aware of this unless she was paying very close attention and filling-in between the lines. Someone, with Ron's approval has tossed us a bone to play with. There just isn't any meat on this bone, in case you didn't notice.

At best, this errand into the governmental wilderness is a place holder for something substantial. The only new thing that ufology has going for it is the Internet. This is our power base right here. Pointing us back toward some kind of governmental action is a regression to what has been amply proven to fail. Why beat this dead horse, when we are already sitting on a perfectly healthy one?

What is new, in the last couple of years since Serpo, is the ufo forum, of which OMF appears to be the state of the art. There has not been anything like this since the pre-Internet UFO Forum on CompuServe, on which I also participated back in 91-93. Between '94 and '06 everyone and their cousin was setting their personal websites. There was a push for content, at the expense of discussion, until Serpo came along.

Reverting from this new departure back to some creaky governmental bureaucracy is just a non-starter. That such a move would be seriously considered can only be seen as an act of desperation, a desperation born of lack of other news.

And here I am, telling Ron and the visitors to stay cool. Mama don't 'low too much pot-stirring at this juncture. I am not suggesting that ufologists should roll over and play dead. I am suggesting

that they need to set aside their shiny toys, and get back to basics.

This ufological juncture, IMO, is a critical component of our much larger historical juncture. We won't be able to make sense of the individual trees, if we have no sense of the forest, or bigger historical context, in which they are all situated.

In such situations there are ever only two schools of thought:

1. Keep on trucking, muddling along.....
2. Get out the monkey wrench and roll up our sleeves.....

Yes, every one agrees that events are accelerating, but why.....

1. Is it just a technological push, or
2. Is there also something pulling us forward?

There's no doubt that we are accelerating, but toward what end....

1. the edge of a precipice?
2. a new dawning?

Here's the nub of it.....

1. Leslie & Co. run around in the same old circles, berating us to just keep muddling along. Just keep pulling those oars, mates!
2. Dan (& ?) sees an unprecedented opportunity to think big thoughts. Nay. Think the one Big Thought.

The naysayers are many. The horses refuse to leave the burning barn. The lobster refuses to leave the boiling pot. They can see no alternative, and they sure don't want anyone else to look for one, either.

We have come to an historically unprecedented intellectual, spiritual and political grid-lock. Someone, something has to break this logjam, or the whole darn mess is headed right over the briny brink into the drink.

Humanity has just one thing going for it: the Internet. Whatever solution is out there, the Internet will be an essential component.

Granted that, so far, the Internet has been generating more noise than light. It is a postmodern version of the tower of Babel. But there are hopeful signs, and foremost amongst these is the Wikipedia. Its drawback is that it is merely an encyclopedia. In its heyday, the Britannica was to be a compendium/thesaurus of wisdom and knowledge. But on the way to that Utopia, knowledge became Balkanized by Academia, which based itself on the Henry Ford model of efficiency: breaking every field of knowledge into a subset of mindless components. Quine demonstrated the futility of any such analytic strategy that was not geared simply to mass production.

So how do we get from a mindless analysis to a mind-full synthesis?

There is only one way that has ever worked: *cherchez la visionaire. Cherchez Sophia.*

Whither Sophia? Are we looking for a needle in the haystack/internet?

Sure, there is Google. Having spent most of my life studying the history of ideas, I know pretty much how ideas can get linked together, and it is not difficult to determine the essential set of old ideas that any new idea will have to address. And, yes, I own the domain name of the one, absolutely essential idea. If someone is not entirely clueless about the history of ideas, they could sooner find the BPW website than they could roll off a log. If they are clueless about that history, they have no business in the visionary business.

But web pages are not going to solve any problems. Only people do that, and only people working in concert.

If an idea is sufficiently radical, folks will shy away, maybe after kicking a tire or two. A radical idea goes nowhere without an armed escort; that is a group, however small, that is willing to stand up and fight for it.

Where to find such ones?

Where else than ufology? And here's why.....

Ufology comprises an international, self-selected group of individuals who are in the market for something earthshaking, and they are open to any number of possibilities. Yes, there is a strong bias toward the Nuts&Bolts mindset, but even there they are mindful that the critters will surely have earthshaking ideas. All I would have to do is pass myself off as a critter! But that need not be such a stretch, when you think about it.

And nothing else comes close, IMHO. And there aren't many fully functioning ufo forums. They are easy to find.....hard to miss.

And in the Greater Scheme, is it not probably the case that this audience has been established by the Phenomenon itself, for a good reason? And what better reason?

So, no, no point in wasting our time looking for bold strokes from some stuffy committee room inside the Beltway. What better fulcrum for moving the world than the ufo Internet arena? I'm sure open to suggestions on this front, but I'll be surprised if proven wrong. I'm doubting that my 15 years with the aviary/aquarium was entirely fortuitous.

What has developed during my few months at OM is a realization that the not insignificant Xian presence within ufology could expedite the consideration of the metaphysical aspect of the phenomenon. Jake has been the main one opposing my attempt to do so, but in the process he has educated me on the in and outs of the various xian interpretations of the visitor presence. I now have a better idea of how to proceed on that front.

Ufology is the loose cannon on the deck of our storm tossed ship. Most everything else has been battened down in its most protected/conservative position.

So we have ufology + the Internet to contend with. One is the wild card, the other is the ace in the hole.

Even a definite negative result from both ufology and SETI would be an earthshaking outcome. It

would spell the doom for our blue-sky/transhumanist dreams. It would leave us twisting in a very chill cosmological wind. This, however, is the least likely of the outcomes, with a probability approaching zero, on any reasonable estimate. How so?

Ask almost anyone, besides the remnant handful of die-hard materialists, who are the professional debunkers of all things religious and paranormal. Then consider the overwhelming evidence. Next consider the intractability of the mind-body problem. Consider the Anthropic Principle....., and the list goes on. To say that materialism is in retreat is a gross understatement of its dire straights. That ufologists cling to the hope of selling a nuts&bolts version of ufos to the rapidly dying mindset that is materialism, is an historical irony of the first water.

The Internet, for all its tower of Babel cacophony, is creating a vacuum. It is creating a vacuum of coherence. Yes, we have heard of the knowledge explosion, but we haven't seen anything until we have seen the knowledge implosion. Is it inevitable? What goes up, must come down? Or is it just one darned thing after another? Physics, math and biology are separate examples of coherence. From whence did they come? Art provides its own, widely ranging examples of coherence. What is aesthetics or ethics without coherence?

From whence came this coherence? Is it subjective? Is it intersubjective? Is it objective?

Certainly coherence emerges. Does it emerge spontaneously, or does it bespeak of either a Source or a Telos? The Anthropic Principle is the definitive example, and it points to both an Alpha and an Omega. It points to a Logos. Coherence does not come from nothing. It bespeaks of a cosmic Potentia, a vital force. That human history is an outworking of that force seems beyond question, unless you happen to be a professional debunker/nihilist. The Force has been with us for Aeons. Has it and we come to the end of our rope?

Yes and no!

It's been swell, folks, but it is time to move on, and there are not too many options before us.

We can annihilate, or.....we can experience Apokatastasis. On first blush, there might not be so much difference, but, in the end, who will forego redemption? Jesus was crucified for our redemption. You might wish to think twice before spitting in the face of the most influential person who ever lived. But that is just my suggestion.

Before the sky falls on our heads, there will be the knowledge implosion. This is simply due to the fact that the world is more like a great thought than a great machine. This is theism vs. deism. It would be *nolo contendere*, were it not for the vagaries of history. God is best seen in those vagaries.

Like any great masterpiece, it has a singular existence in the mind of the beholder. Hum a few bars, and the whole of Beethoven's Fifth will fill the mind of the connoisseur. It is the holographic principle at work.

12/26

The basic and practical issue before us, still, is the ET vs. UT identity of the visitors. The BPWH is up against the standard assumption that the ETs are physical and the UTs are not. In the Bible there are three general types of entities: angels, demons and fallen angels or sons of God. The demons are almost always discarnate and without physical trace. Angels have the power to shape-shift into

seemingly physical form. The sons of God (Elohim) are are mainly from the time of Genesis. They had offspring with the human females.

Ufologists generally suppose that the fallen angels or sons of God refer to ETs. According to the BPWH, humans are fallen angels. In Christianity, generally, we are the fallen children of God.

According to the BPWH there is just one order of being, with degrees of physical and non-physical attributes.

Christians tend to distinguish between spiritual and physical beings, in accord with their dualist metaphysic.

Xian oriented ufologists are thus inclined to minimize the modern presence of UTs/angels, in favor of ETs. There is also a distinction to be made between evolved vs. devolved beings, with humans on that border.

With the BPWH, all beings are devolved, with the possible exception of God who might be partially evolved.

Then there is the issue of ETs vs. humans, This is where Jake and I have had considerable discussion. ETs, evidently, are allowed to wander the stars at will, using their own technology. We will be allowed to wander only after being saved, and after receiving glorified bodies. Our technology will be derived from ETs, but may be adjusted to our special bodies. The ETs technology allows them to perform all feats alleged to be performed by angels. Will the ETs still need to reproduce biologically? Only as a possible option, one might suppose.

Or not? Would we not be given angelic powers at the same time we receive glorified bodies. Why can the ETs not provide themselves with glorified bodies? What is the ultimate difference between the saved and unsaved? Not all ETs need to be saved.

Jake became quite exercised about my denial of ETs, supposing that I was denying the existence of physical visitors.

According to the BPWH, we are the most fallen of the ensouled beings. But that fallen state will serve as our springboard to a special grace.

A key point of the BPWH is that the existence of ETs, as opposed to UTs, virtually precludes an xian Soteriology. And it would create enormous difficulties for the Jewish understanding of the God of History, an essential ingredient of the Gospel.

There may not be enough xian ufologists to turn the tide against the Nuts&Bolts crowd. The N&Bers want to distinguish themselves from the Angels&Demons crowd.

[12/27](#)

It does appear that Ron has been replaced by Jesus, in the Aquarium. Naturally, many xians will be upset by this substitution, but I must say that Ron has been most gracious: nary a complaint.

That this might be the case, barely registered with me until a few weeks ago. An interesting swap.

Part of the inspiration does come from watching this [debate](#):

From The King's College in New York, Dinesh D'Souza, author of "What's So Great About Christianity," and Christopher Hitchens, author of "God Is Not Great," debate the question Is Christianity the Problem?

Dinesh won, even with his hands tied. He used the anthropic principle and Hume. But mainly he won just by being nice in the face of Hitchens' over-the-top critiques. The sum of his arguments in the 90 min. debate could barely hold a candle to the BPWH. But there is a big difference in that the paranormal was mentioned only obliquely, via Hume.

The BPWH focuses on the Fermi Paradox: where are they? There is a great, yet to be revealed, irony behind this paradox. Enrico, and most of the top Manhattanites, almost certainly knew that SOMETHING was here. They knew, for sure, that they were the primary provocation for this latter-day advent of the Visitors. That he would have his name so prominently associated with its apparent negation, makes him the first public proponent of the UTH over the ETH. Did this make him and his colleagues closet xians? Quite possibly.

But now the focus is back on Jesus. Yes, this is about the Second Coming. Why? Because Jesus, of all our historical figures, has the most to gain or lose wrt the Fermi 'Paradox'.

Jake, @ OM, has made the best possible case for putting an xian spin on the ETH. But it falls way short of compensating for the enormous, nay, fatal problems raised by the ETH for X'ianity.

Taking Jesus from the literalists should be as easy as taking candy from a baby. I have made it look difficult, because I wasn't really trying. No one has tried, and therein lies another historical paradox.

The simple fact is that X'ianity makes far bigger ('negative!') cosmological claims, relative to science, than any other tradition. And so it has been the most severely impacted by the rise of scientific cosmology. Jake's xian version of cosmology continues the capitulation of X'ianity to science, precipitated mainly by Darwin. As materialism has seemed to conquer the objective world, liberal xians have responded by subjectivising Jesus and his message.

The only political response has come from the literalists. Their primary targets have been abortion and evolution.

The BPWH reverses this history, in the only way possible, by focusing on the fundamentals. And what are they? The fundamentals of any belief system are its basic or foundational ideas. The literalists have, however, taken the Bible as their foundation. This is just the Back to the Bible movement that figured in the rise of Protestantism. It is just the renaissance of this biblicism or bibliolatry that has figured in the 'fundamentalist' revival of the latter half of the last century.

Literalism in the 16th century was a belated response to Papalism. Literalism in the 20th century was a belated response to Scientism.

In each of those historic periods, there was the weak sister: pietism first, charismatics lately. The first was a quietism, the second is its nominal opposite, particularly the speaking in 'tongues'.

It is the role of the BPWH to give voice to the quietism and to those tongues. Provide the Truth that they dare not speak outright.

Every spiritual tradition has its mystics and its charismatics. They provide the spiritual lifeblood. It is only thus that the Charism is not routinized to its death. It is the terrible irony that the suicide bomber is the lifeblood of latter-day Islam. We have the blood of Jesus, we don't need no suicide bombers.

Nowhere is the Charism more powerful or more central than in Christianity. It is this brute fact that no amount of bibliolatry can subvert.

Reason has always been taken as the enemy of Charism. But that is not to reckon with Sophia. That is to ignore the Spirit of Truth:

"I have much more to say to you, more than you can now bear. But when he, the Spirit of truth, comes, he will guide you into all truth. He will not speak on his own; he will speak only what he hears, and he will tell you what is yet to come. He will bring glory to me by taking from what is mine and making it known to you. All that belongs to the Father is mine. That is why I said the Spirit will take from what is mine and make it known to you."

If you wish to know the truth of Jesus, you must follow the blood of the martyrs, including that of the heretics. It is their blood that most clearly distinguishes the Charism of Christ. Blood is thicker than words. It is the task of the BPWH to turn that blood into water, if you will. Thus the universal baptism in the Truth.

It is the strange irony of history that all of this will hinge on the Fermi 'Paradox'.

In effect, the future of humanity is being held hostage jointly to the liberation of Jesus and to the disclosure of the Visitors. Why this peculiar three-way linkage?

To understand the linkage at the end, we have to understand it at the beginning. Creation is the history of the Logos. The Logos is the Alpha and the Omega. That is the ultimate Link here.

Our cosmic Visitors show up only at the beginning of the story, and then again at the end. They act as our midwives/facilitators in both instances. Think of Stanley Kubrick's *2001*. Jesus' own life is a microcosm of the cosmic story. His final tribulation was to expiate ours, despite what the literalists may make of John's Apocalypse. Expiation was the point of his life. To suppose otherwise is to render it meaningless. In two thousand years, there has been enough tribulation to go around. We needn't ask for more.

The solution to Fermi's Paradox is that the cosmos is Christocentric, and so anthropo-geocentric. What a strange and disturbing message for the then very select audience of those latter-day Prometheans. Yes, indeed, What hath God wrought?

This is just the UTH over the ETH. That is the disturbing message of the BPWH.

And who will believe it? Christian ufologists are few and far between. They should have enough problems without the BPWH. Half of them probably already belong to OMF.

12/28

Can anyone think of a better way to proceed? How better than with xian ufologists? What other intervention might better expedite their attending to and understanding of the BPWH? Any such would be turned into a circus by the other ufologists.

If any insider were to intervene on behalf of the BPWH, they would be set upon by the others. If it were any other reputable person, their reputation would quickly be targeted.

But then we have to explain why God would apparently go to such lengths to disguise the geocentric nature of the cosmos.

The best answer is that the cover is generated mainly through us in a teleological fashion. It is a minimal filling-in of an otherwise blank sky. How else would we have it?

What other explanation for the phenomenon and the treatment of it by the PtB?

If even just a few people cannot handle the disturbing message, what else can we do?

And here is my posting to OM:

If the BPWH is substantially correct, then I would recommend a strict adherence to the Prime Directive: a minimum of intervention in the dissemination of the 'disturbing' message.

This message is directed first to the Christian ufologists. Until someone of them can give it serious consideration, then there should be no further steps taken toward disclosure.

My efforts here constitute a sufficient test of our readiness for disclosure.

Next we consider the cost and benefits of a strict adherence.

A minimal intervention would be to guide a suitable recipient to the message, rather than just leave it to a 'chance' encounter. That such has not already occurred is evidence against the BPWH. However, it may be that the negative reaction needed to be elicited first. Apparently, having accomplished that preliminary task, the clock is just starting. That is where we are now. Each additional day of silence argues against the hypothesis, unless an explanation for the additional delay is forthcoming.

I don't know what might be a plausible rationale for a planned hold, at this critical juncture. Perhaps there is a cosmic neutrality. Mine is the only finger to be lifted. It could simply be that the cost/benefit of a continued business as usual remains positive. But then why this token effort? Just to keep the cosmic option open? To demonstrate a good faith effort relative to the truth, on the part of all the interested parties?

How can we be proxies for the timing of the eschaton, if we don't know exactly what is entailed thereby? There would likely be others who would know more, but we are the only ones who can deliberate in public. No one can say that the Truth was not proffered in plain sight. Being too lazy to look even in as obvious a place as this, does not argue for our readiness for the eschaton.

[12/30](#)

The Christians have the most at stake (sic!) wrt disclosure. We have the most to gain or lose depending on whether the ETH or the UTH proves out. That is one reason why the US is the designated discloser. The other reason is that we are the global power broker. The further point is that these two facts are probably not unrelated. As long as we refrain from overplaying our hand, as we are sometimes wont to do, the other nations and faiths are willing to accede to this cosmic arrangement.

The BPWH is the potential proof of that pudding. It is also the pie in which no extraneous fingers are allowed.

The scriptural literalists at OM have provided a valuable lesson for all of us in the finer points of apologetics. Relative to the BPWH, they have helped to hone the arguments for elevating the Word over the words. It is an obvious case of not seeing the forest for the trees. For all their noise about the words, the rest of us may more clearly distinguish the Word. Nothing is wasted in this sausage factory down here.

I do anticipate that, as the wrath of the literalists is further quenched, there will slowly emerge more moderate and measured voices. The Internet is like a flood plain after a recent rain. The water will eventually find the shortest path to the sea. That this path runs through the BPWH or its cousin, is nearly a foregone conclusion. There is no greater point of coherence on the vast horizon of this plain, a plain that may be so easily reconnoitered.

So, no, we can't hurry love. Love don't come easy. It's a game of give and take.....

That there is a cover for this exercise in agape is assured. That its core can only be a Christian conspiracy is beyond doubt. They are sworn to neither interfere nor permit interference in this incubation of the truth. They only have hints as to the outcome. They, too, are bystanders. They may feel as much frustration as do we. But they also know the consequences of any failure of diligence. They, too, have an ultimate faith in the process.

There can be ETs, and there can be UTs, but having them together would only make for chaos.

The only path to a cosmic interface would be in the transformation from ET to UT. The Xians understand this about us, but they cannot see how to apply it to the other ETs, without violating the the Spirit of the Trinity, and so they feel they must postulate a conventional path for the ETs. In attempting to do so, they jump from the frying pan into the fire. It is not a pretty picture. Jake & Co are beginning to see this picture, and so are caught between the twin literalist dogmas of science and religion. It seems too big a leap for them to transcend those contradictions. They wait for the frying pan to get hotter, especially in the Tribulation.

If there are ET visitors, then there almost certainly is a Design along with a Vital Force or Telos. This is tantamount to the notion of God, which entails the existence of UTs, who seem much more likely than ETs to fit the profile of the visitors.

Furthermore, given the existence of a Creator and UTs, the role of additional ETs becomes problematic. More likely is it that we are 'fallen' UTs, than risen ETs. The positive needs of eschatology and the concomitant concealment, more than justify the appearance of the heavens. The compulsion to populate the visible heavens with ETs renders incoherent the notion of eschatology. Christians should and will understand this notion better than anyone. If not, those who do will soon find themselves of that general persuasion.

[12/31](#)

All I am attempting to do is to translate the Christian message into a broader idiom, pouring old wine into a new bottle. In that process, we incorporate the salient points of other belief systems. And we use that composite to revamp and reinterpret Scientific Materialism into an immaterialist frame, so that it, too, may be incorporated into the BPWH.

This new and comprehensive translation of the xian fundamentals will, along with disclosure, transport us into the aeon of the eschaton. This transpires under the aegis of the promised, definitive advent of the Spirit of the Truth.

What the literalists are ignoring is the virtual necessity of a pre-millennial revelation. They speak instead only of a rapture or of the wrath of God meted out to the unsaved at the end of the Tribulation.

I find the following to be an interesting interpretation of the first horseman:

Saving the Appearances

(In tribute to [Owen Barfield](#))

I have only read this one book, and that was years ago, but his influence has been considerable. In particular, he has written on the history of consciousness. He is a key figure in the small world of Christian idealists, along with C.S. Lewis.

I recommend to you Owen's concept of [Final Participation](#). This is his Kingdom Come, his Eschaton. He sees it in the distant future. I respectfully disagree.

Barfield hastens to remind us that up until the time of the Copernican Revolution, a hypothesis was widely understood to mean a "proposition, the truth or untruth of which is irrelevant"--one intended, that is, to "save the appearances." "All that mattered was, which was the simplest and the most convenient for practical purposes" (SA 49).

A true saving of the appearances, Barfield tentatively predicts, may come with the advent of final participation.....

The appearances will be 'saved' only if, as men approach nearer and nearer to conscious [figuration](#) and realize that it is something which may be affected by their choices, the final participation which is thus being thrust upon them is exorcised with the profoundest sense of responsibility, with the deepest thankfulness and piety towards the world as it was originally given to them in [original participation](#), and with a fuller understanding of the momentous process of history, as it brings about the emergence of the one from the other. (SA 147)

This way of understanding science is almost impossible to convey to the modern, objectively minded person.

1/19

The modern worldview is based on science. The essential fact about science is that it is necessarily reductionistic. Science is necessarily objective. The quest for objectivity necessarily entails analysis and reductionism. The logical and historical end of that process in the physical sciences came with the discovery of atoms and elementary particles. In the life sciences, the logical end was the discovery of the genetic code.

And let us not forget information science. Information science was invented by Claude Shannon who showed how to measure information objectively, by reducing it to binary bits.

These three landmark discoveries came near the middle of the last century. Since then, science has become much messier, as it attempts to grapple with whatever is the residue of the great success of its reductionistic quest.

That residue is addressed, in its most general form, by a hodge-podge of competing Complexity and Systems theories.

Complexity theory runs headlong into the expanding philosophical debate around the issue of reductionism vs. holism.

Is there an objective or analytic explanation for complexity? Is complexity merely a subjective appearance that can be 'saved' by science?

Religionists have taken on this issue, in no small way: [Irreducible Complexity](#), but they take a very unphilosophical slant on it. They, the advocates of Intelligent Design, look only at specific biological mechanisms that appear to defy any evolutionary explanation, and so require the

postulation of a *Deus ex machina*. Theirs is a 'God of the Gaps' argument. They see divine intervention as something exceptional. In marked contrast, the BPWH takes a panentheistic view of the matter.

We come back to Owen and the evolution of consciousness. Mind is a natural unity. The unit of mind is referred to as a self. But can there exist an isolated self? Owen and others argue that the ego has evolved out of a social Self or the tribal mind. Julian Jaynes and Owen Barfield both reference a 'breakdown of the bi-cameral mind', from tribalism to individualism, at the dawn of recorded history.

[1/20](#)

Before rushing to the rescue of the appearances, it would behoove us to decide which ones needed our special attention. To a considerable degree, this is an exercise in aesthetics. Scientists would prefer us to think that it is an exercise in objectivity. More accurately, theirs is a quest for reification. Whether the scientific and technological imperatives may have unduly influenced and biased this process is a matter of growing philosophical concern. That a few stalwarts may have prematurely declared a victory for science, is hardly debatable.

The issue is simple. If there be an ultimate explanation, will it be bottom-up or top-down? Will reductionism or holism prevail? The jury is still out, but the BPWH is an extended exploration of the radical possibilities/consequences of holism.

Holism strongly implies the influence of a teleological or vital force. In the future lies a Great Attractor. Does this attractor operate mainly in the biological or psychological realm? On the one hand we have a 'directed' evolution (toward what?), while on the other hand there is projected an [omega point](#), or singularity of consciousness.

Transhumanism is something of a middle ground, but strongly leaning toward the Omega solution, especially when we factor in the Simulation Hypothesis of Nick Bostrom. Frank Tipler's transhuman omega is a projection of the Anthropic Principle, also lying in the distant future. But keep in mind Ray Kurzweil's [Technological Singularity](#), projected to occur c. 2045. Nor let us forget the [doomsday argument](#) of Carter and Leslie.

We then must reexamine the ETH vs. UTH, in the light of these Omega theories. The OH (omega hypothesis) very strongly argues in favor of the UTH over the ETH. If there were going to be an Omega, it would have been triggered long ago and far away. So either there is no omega, or it is geo-anthropo-theo-centric. This latter case is the central hypothesis of the BPWH, which includes the UTH as a corollary.

Everyone can see the information/intelligence explosion. What they fail to see is the I/I implosion, I^3. This is just a projection of the [Unity of Consciousness](#) hypothesis, with an eye toward the Omega. Do note that Tipler is now moving toward a Christo(?) -centric Omega: [The Physics of Christianity](#) (2007). Is my poor little SoT act about to be blown out of the water by the Big Boys?

Just from looking at the reviews, it seems that Frank, like Jake@OM, wants to retain the ETH along with the UTH. Sorry, guys, but it is a logical dead-end. However, the SoT will have to keep on his toes. It can't be long before the fringe physicists start seeing the connections between the Simulation hypothesis and something like the BPWH.

[1/21](#)

The greatest mystery, besides existence itself, is the coherence of the experiential world. Yet, it is [seldom remarked](#), outside of the sparse field of the philosophy of [coherentism](#):

As an illustration of the principle, if people lived in a [virtual reality](#) universe, they could see birds in the trees that aren't really there. Not only are the birds not really there, but the trees aren't really there either. The people *know* that the bird and the tree are there, because it coheres with the rest of their experiences in the virtual reality. Talking about *coherence* is an abstract way of talking about the things that the people really know, without regard for whether they are in a virtual reality or not.

The most often noted aspects of coherentism are the [unity of consciousness](#), the [unreasonable effectiveness of mathematics](#) and the evolutionary and ecological coherence of the biosphere.

In the first instance we have a subjective unity, and in the second instance we have an objective unity of the world. The skeptics argue that the first two instances of coherence are largely the illusory product of the third. However, the overarching coherence implied by the Anthropic Principle ought to give pause even to the most hardened skeptic.

Then there is the problem of emergence. Emergent phenomena are just those that defy a reductionist explanation. The skeptics chime in once again by arguing that emergence is only apparent, and is just the measure of our ignorance of the underlying physical mechanisms. This skepticism finds its greatest challenge in its attempts to explain how, even in principle, mental phenomena might be reducible to physics. And this brings us back to the unity of consciousness.

It is the basic premise of the BPWH that the every form of coherence is grounded in [teleology](#) in general, and in the Telos/Omega in particular. This simple premise is just the result of applying Occam's Razor to these seemingly diverse phenomena, once again with an eye to the Anthropic Principle.

At work here is the Holographic Principle. We have a panentheism relative to the Omega/Telos: as above, so below. The macrocosm is reflected in every microcosm. We are created in the image of the Creator.

All of this is just to show how the BPWH proposes to Save the Appearances. In doing so, it envisions the Saving of the World.

BTW, while googling, I have hit upon the [ISCID](#) with some interesting forums:

The International Society for Complexity, Information, and Design (ISCID) is a cross-disciplinary professional society that investigates complex systems apart from external programmatic constraints like materialism, naturalism, or reductionism.

What I must continue to stress is the incompatibility of teleology and the ETH. Teleology, as seen in the evolution of life on the Earth, is very difficult to translate into a many-worlds context. This is especially true when we look at the projection of evolution onto the notion of progress, or technological progress in particular.

When we look at the historical trajectory of life on Earth, the most remarkable feature in the secular acceleration of the quantitative measures of life and its artifacts. The emergence of the Internet is just the latest and most egregious example. It is this principle of accelerated 'evolution' that is the most difficult to project onto an ETH. We are confronted by Fermi's Paradox in all its starkness: Where are they?

The accelerated evolution observed on the Earth is just what we would expect to see as we come increasingly under the influence of a Telos. If this acceleration were a universal phenomenon, then we would expect to have become an integral part of the universal phenomenon, long before the

present time. But we see virtually no evidence of such external influence. Our isolation is stunning!

Instead, what we see looming ever larger ahead are the limits to our accelerated growth. The teleology of our evolution is not computing. Should we join with the skeptics in assuming that our progress is just an illusory flash in the cosmic pan?

The only alternative to the cosmic pessimism is the BPWH. It is the scientific reductionistic attempt to save the appearances that is misguided. The only alternative mandates a fundamental shift in our understanding of the nature of reality. Only then may coherence be regained and extended to include its logical Telos. Only thus may the appearances and the world be saved together.

1/23

Time to reiterate.....

[The Latter Days](#)

Let's try for a post-R&D-show update. Revelation without Disclosure: R(w/o)D.

The Prime Directive suggests that we let (human) Nature take its course. We let the currently visible trends work themselves out:

1. Materialism, scientific and otherwise, is on its last, shaky legs.
2. Increasingly we understand the limits of science and technology.
3. Post-modernism is on the rise.
4. Reductionism gives way to the increasing coherence and holism of our knowledge.
5. The all pervading/invading Internet presages $I^3 = I/I \cdot I = \text{Information/Intelligence Implosion} = \text{Cosmic Coherence} = \text{Final Participation} = \text{Telos/Omega} = \text{Apokatastasis}$.
6. The scriptural literalists of all stripes and sects are increasingly challenged on their own turf, hoisted on their own petard.
7. The BPWH, or something rather similar, becomes a benefactor/instigator of I^3 .
8. We enter the Age of the Spirit, i.e. the Millennium.
9. The paranormal becomes the normal.
10. Our Cosmic eggshell becomes increasingly porous: UTs come in, we go out.
11. The end of linear time/history follows naturally within a very few centuries.
12. And that's all She wrote.....

[1/28](#)

On the OMF, I say that a ball-park estimate of the probability of the BPWH yields one chance in a thousand, but with a probable error of at least a factor of a hundred. That could put us in the range of one chance in ten, which would be a whole other ball-game.

This latter estimate puts the BPWH well within the range of being a self-fulfilling prophecy. This would make it the most urgent topic of discussion on any global agenda. But what eventuality would be required to fulfill that potential? Could this come about in the natural, foreseeable course of events?

Yes, but that would be at least another ten or twenty years away. That is not too long to wait, unless there is an untoward unraveling of the global economy in the meantime. Such an eventuality commands perhaps only one chance in ten, at this point.

Points 1 thru 7 in the above list will become more obvious with each passing year. An activist nucleus of a dozen people on the Internet, relative to the BPWH or some reasonable facsimile thereof, could well be sufficient to push this discussion into the general blogosphere and thereby into the purview of the cognoscenti/PtB, i.e. those not already in the global intel loop relative to R&D, etc. It might be useful to discuss these additional points on OM.

I give little credence to the possibility of a rogue or premature disclosure, either on their part or ours. There has been ample opportunity for that in the past sixty years. With each passing month, the BPWH becomes more amenable to a prime-time debut, thus obviating the possible rationale of a rogue action.

On the phenomenal side, all we need is an incident of sufficient magnitude to be noticed in the national media every few months. This is sufficient to keep the public in a state of wariness, and to keep the skeptics on the defensive. If there develops more than this minimum, it would be an indication that the potential of a major downside risk warrants an accelerated time-line, and vice-versa. There is, thusly, a continuing contest between revelation and disclosure, with the former being seen as preferable.

In the meantime @OMF, the critics have seemingly grown weary of their debunking tasks relative to the BPWH. They have run out of steam, while the energizer bunny keeps on trucking. I don't mean to provoke them by saying this, but, on the other hand, it is a very significant part of the revelation equation and timeline.

The historical fact is that the non-literalist, formerly 'mainline' xians, have simply not been keeping up their end of the evangelical boat. As a result, the literalists have come to exaggerate the strength of their position. I am glad to be in the vanguard of a resurgent and more 'liberal' or charitable evangelical movement. My charitable colleagues will never be able to keep up, as long as they continue to ignore the significance of the BPWH.

Early on here, there were interested parties who may have been persuaded to keep their distance, by the vehemence of the mainly literalist skeptics. As the latter fade back, it may allow anyone more favorably disposed to come back into the picture. That is the biggest unknown at present.

There is a '[nic654](#)' at OM who purports to be in cahoots with an anti-human contingent of UTs, who are gleefully counting the days 'til humanity is wiped off the Earth, and sent to hell. There is a backlog of issues to which Nic has failed to respond:

1. Is Earth not the most populous and physically rigid or dense of the created worlds?
2. Is it not then fair to say that the Earth is the center of spiritual gravity?
3. Is Jesus the only Son of God? The only sacrificial Savior in the known cosmos?
4. How many other species of sapient beings were created on other worlds?
5. What if any is their salvation 'economy'?
6. Is there no Federation of these beings?
7. What is the purpose of their existence? Do they have no mission?
8. Will any of them experience Apokatastasis or reunion with the Creator?

Further questions:

- Since humans are the most physical of the sapient creatures, is it not true that we are also the most physically proficient in terms of our technologies that are based on physical science?
- Presumably, other beings have 'technologies' that are based more upon a spiritual 'science'.

True?

[1/29](#)

Once again the 'literati' at OM have given up on me. But as they predicted, the others have given up as well. All that anyone ever wants is a piece of the rock. Nothing sufficiently solid appears with the BPWH, especially with Ron *in absentia*. The trick I have failed to learn is how to create that perception. Many have done much more with much less.

Other ufologists might be taken to task for avoiding the religious issue. The exopolitical folks are a case in point. Where is Ed K when we need him? He is still active at OM. He seems to support the UTH over the ETH. I am perusing his [blog](#) at present. Here is a [post](#) by Jake that is worthy of consideration.

In his blog, Ed places most of his emphasis on the technological superiority of the Visitors, and the impact that their superiority is likely to have on our economy. Ed makes a strange move in his essay on 'Societal Collapse' [reposted](#) at OM.

Ed argues that the advanced societies have become sedentary, and so they try to suppress creativity, and so they suppress interest in UFOs.

The exception to this rule is Japan, according to Ed:

The recent open political UFO/ET discussions in the Japanese Parliament were in my opinion indicative of a developing secret power struggle between east and west over the suppression of ET technological innovation for the private sector by North American and European countries. This power struggle between east and west seems to be reaching a crisis point as Ben Fulford former Asian Bureau Chief for Forbes Magazine has indicated. The newly emerging civilizations in Asia are embracing technological innovation and creativity and can see the value and competitive advantage that open knowledge of ET reality can bring to their growing civilizations. While European and North American societies resist, propagandize in the media, and generally suppress the knowledge of ET realities we can expect the newly emerging societies to embrace these realities as the truth about extraterrestrial realities becomes more widely recognized.

The only reference to this rift, that I can find, is a BBC [story](#).

Let's look at [Societal Collapse](#). We are told that collapse may occur in two ways: due to internal or external causes. Here are examples of the latter:

It may be gradually incorporated into a more dynamic, more complex inter-regional social structure. This happened in ancient Egypt and Mesopotamia, the Levantine cultures, the Eastern Roman Empire, Mughal and Delhi Sultanates in India, Sung China, the Aztecs and Incas in Mesoamerica, and the modern civilizations of China, Japan, India as well as many modern states in the Middle East and Africa.

Here is the picture of sedentary societies being overcome by more advanced and dynamic cultures. The key word is 'incorporated'. Ed supposes that we can, once we eliminate the foot-draggers, be incorporated into a cosmic Federation.

It is only Jake who adds a note of caution in this cosmic optimism:

It is my opinion that the greatest hold-back fear, is the Religious Implications and that economic power would take a second position.

The potential technological explosion will pale in importance to the Religious Implications and subsequent shift in consciousness. Such could create absolute chaos, of which the PtB are fully aware of. Modeling scenarios are virtually impossible to predict within any certainty, what the world would look like after the first decade Post Disclosure. That is the Great Fear.

If the entire world learns they have an **eternal soul** confirmed by an advanced civilization, there is no telling how economies will shift, as our collective wants, needs and desires will transform. Any secular predictions or summations in lieu of this view are therefore secondary in importance.

Ed responds:

Hi guys, the reality is that the same thing is true with religion. Its not openness that is the threat but the continued cover-up that only strengthens organized entrenched religious interests at the expense of newly emerging creative enlightened religious interests through the whole of the population. It is the secrecy, the lies, the deception in religious circles that is contributing to the eventual collapse of established entrenched religions just as with other entrenched interests.

The problem of our incorporation, not only into a superior civilization, but into a superior species, opens the genetic [question](#), for those who are so inclined. Let's see what Ed has to say:

I find it even more interesting that increased intelligence through artificial genetic modification has adaptive evolutionary value. Increased species intelligence and technological development would allow a peaceful race to outmaneuver other hostile races without having to resort to overt hostile action. So we can assume that within a dynamic environment of both conflict and cooperation evolutionary forces would push species to artificially modify their genome and that of their allies toward increasing intelligence at ever faster rates. I would hazard a guess that we earth humans are and have been since our inception caught up in a evolutionary race for genome superiority between competing extraterrestrial races.

So Ed has failed to respond to or even to understand the soul question as posed by Jake. This, I believe, is my best port of entry into the mind of Ed.

Now Ed has this to [say](#):

Lucky for us these human ETs that look like us seem to have superior technology to those making the secret agreements and alliances with different entrenched interests around our world. The impression I get is that these benevolent ETs won't make secret alliances and treaties because this is not the way they operate. They are waiting for the time where they can make full open public alliances and treaties. This of course irritates the elitists because they won't cooperate and so they are harassed even to this day by world military forces especially American forces.

The way this thing is shaping up it seems to me is that our situation is not just of our own doing that we on emerging worlds are on the battle lines and that there are essentially predatory races creating alliances with our predatory special interests. That seems logical to me. So this is much more than just about us, it means we are the center of attention in a ongoing power struggle between two very different types of ETs. Those that are competitive and predatory and those that work together cooperatively. Nature has to very different competitive evolutionary strategies on earth and I see just as with the laws of physics that this also extends out into the universe as a whole.

It is a very murky issue as to whether the visitors are ETs or UTs, in the world according to Ed.

Ed is a good-old country boy from the South. He has many strengths, but logical consistency is not one of them.

[1/30](#)

Let me try to be transparent about my concerns relative to Ed and Exopolitics.

I have never met Ed, but I have spoken with him on the phone several times. I heard Michael Salla give a talk at Steve Bassett's X-con a few years ago.

The definitive event for me was my phone call to Ed about three years ago when he was at an Exopolitical meeting in Hawaii. Along with Ed, Alfred and Michael, also present were Paola Harris, Scott Jones and Paul Hellyer. Ron had been invited, but did not attend. Ed was a board member at the time. Ed had been talking to Scott when I called, and he briefly put Scott on the

phone.

A few days later I got a call from Ed. He was in a cave on the coast of Hawaii, having been instructed to go there by an entity with which he was in contact. Ed told me that, largely as a result of the previous phone call, he had been removed from the board.

I don't know to what degree Ed may be back in the good graces of Exopolitics, but he does make a show of that connection. I believe that Steve is now active with them.

It was Paola and Scott who moved against Ed, back then. To my limited knowledge, Scott is the least savory of the aviary. You may wish to consult Dick Farley and George Hansen on that matter. Scott has virtually gone to ground since Dick left his HPF under a cloud of serious political and personal recriminations. And see George's essay, 'Will the real Scott Jones please stand up?'

Paola Harris is a free-lance reporter living mainly in Rome where she covers UFOs and the Vatican. She escorted Fr. Balducci to the above mentioned X-con in DC where he gave the keynote speech.

I labor under the impression that Alfred and Michael are both of European origin, while they have spent much time over here, where at least one of them is a college faculty member. It does seem that we have a well-financed foreign invasion of the domestic UFO scene, with an emphasis mainly on political meddling, rather than fact gathering. None of these folk engage in serious dialog, and that even includes Ed.

The above are my personal, and admittedly rough, impressions. I would like to hear other impressions and information.

[Note that Ed is occasionally active on the [Exopolitics](#) segment of OMF, and his recent posting is the motivation for this entry.]

Back to the [Soul Question](#).....

I wish to discuss the 'soul barrier'. I bring this up in connection with the so-called 'species barrier'.

The issue behind this question is the potential for cooperation vs. competition amongst ETs/UTs.

Ufologists of the Nuts&Bolts variety fail to consider this question, probably to their own detriment.

There is the question of our cooperation with allegedly more evolved species of ETs. This also relates to the possible existence of a Federation of ETs, to which we may or may not be admitted.

In natural history there are ample examples of interspecies cooperation, the study of which comes under the rubric of ecology.

However, within archeology, there are no examples of cooperation among the hominids. It has always been winner take all. Homo sapiens sapiens are the winners, and we have taken it all.

It is a niche problem. Almost by definition, two species can never inhabit the same ecological niche. One must give way to the other. On this planet, the use of technology is a single niche. There can be only one 'homo faber'. How might this Gaian experience translate into the cosmos?

Imagine two advanced species having colonized two different galaxies. What happens when they inevitably meet? What might be the basis of their cooperation?

A primary basis would be MAD, mutually assured destruction. You mind your galaxy; we'll mind ours. We have galactic niches.

But then there is galaxy C, currently uncolonized. Will there be a scheme for avoiding inter-galactic war?

Given the high probability of separate origins of life, the early evolvers into intergalactic conquest would likely have already divvied up the few billion available/habitable galaxies. End of story?

It is very unlikely that competition would be tolerated within any given galaxy, let alone over any given planet. That would be a sure recipe for MAD. Over the aeons, the Federation would have devised elaborate precautions just to prevent any such eventuality.

I strikes me as being highly improbable that there could be anything more than the appearance of inter-specific competition relative to the Earth. Any rumors to the contrary would be a sham.

The above speculation concerns only the ETH.

If instead we are confronted with a UTH, there will be other considerations.....

Given the UTH, we have no choice but to posit a cosmic creator intelligence, CCI. In this case, every sapient creature is a UT, an **ensouled** entity, having been spun-off directly from the CCI. By virtue of their direct divine lineage, each such creature is an integral part of the Creator. It shares all powers with the Creator, which would include sapience and shape-shifting, in particular. Ensouled entities experience neither birth nor death; they merely shape-shift from one realm into another. Their powers are limited only by the necessarily shared fate of the communal/cosmic Telos. Needless to say, their powers may be temporarily limited by their given shapes/bodies. And those limitations are largely just psycho-socially ingrained. The various realms of existence may best be thought of as dream worlds or virtual realities.

In light of these considerations, I don't believe that any sense can be made of the notion of different types or grades of souls. At most, there could only be temporary distinctions due to the varying experiential components of a given life-time, for instance. But, eventually they all return to, and become one with, their Singular Source, the CCI. The non-sapient species do not harbor individual souls. They do not individually possess long-term eidetic memories, which are the hall-mark of the human/UT soul. There is rather a collective soul.

A soul is an all or nothing, personal attachment to the CCI. The shape-shifting is omni-valent, or toti-potent.

Does this excurses into the UT/soul hypothesis reflect back upon the ETH?

I submit that the more carefully that one considers the UTH, the less palatable becomes the ETH. In any scheme of creation, the UTH simply exhausts the relevance of an ETH. Given the possibility of the former, there is just nothing to be gainsaid for the latter hypothesis.

If the Nuts&Bolts ETHers are properly confronted on the Soul Question, their system of beliefs will come under severe strain.

The existence of souls is either going to greatly simplify or exacerbate the Visitor problem: either we are their soul-brothers or we are not. If we are not their soul-brothers, then there is not likely to be any basis for long-term cooperation. If we comprise different orders of creation, the competitive instinct is likely to overrule the slim chances of cooperation, without very strong divine

intervention.

However, if we are soul-brothers, cooperation is the only real choice.

The general point is that if souls don't exist or our souls are of a different order, the chances for a cooperative outcome are greatly reduced. If we are soul-brothers, all things are possible, and a mutual outcome is virtually assured.

Or we can look at this same issue from the PoV of the Creator. A creation without souls, or with different orders of souls, would be a recipe for disaster. We can only imagine that if there is a soul, it is universal and sapient. Furthermore, the mere existence of a soul greatly favors the UTH over the ETH, particularly if you consider the problem of Transhuman evolution.

Transhuman evolution would require different orders of souls, if there were any such. The existence of a soul argues strongly against evolution being the underlying order of reality.

The Soul Question

I recently raised the Soul Question on [OMF](#). A google search for 'soul' on this site yields 44 hits, several of which are just quotes from other sources. It will need to add an entry for the 'soul' in the topical index. [Here](#) is my latest post on this topic:

There can be no exo-politics, other than on the presupposition of a Universal soul: one soul for every sapient creature.

Souls are created and protected by the Universal Creator.

The existence of such a soul generally favors the UTH over the ETH, for reasons that may easily be explained.

The UTH >>>> BPWH >>>> Eschatological Hypothesis.

I will be attempting to collect my thoughts on the soul here and at OMF.

As I have attempted to explain @OM, the Soul is a critical bridge issue between exo-politics and exo-theology. But I have only taken this fact onboard since transitioning from my interrogation by the biblical literalists at OM, over to the exopolitical discussion section there.

Yes, I am remiss for not having made a bigger deal out of the political implications of the soul early on, both here and there.

My best excuse is that this site was mainly targeted at a general, and presumably secular, audience. It was only after tangling with the literalists at OM (I did not expect to find there even the handful that showed up) that I have given more serious consideration to acknowledging a more conventionally religious or spiritual audience.

Belief in a soul just happens to be the highest common denominator of virtually every spiritual tradition.

I'll be starting out by perusing the wiki entry on the soul.

But first, speaking from my previous studies, the theist and pantheist versions of the soul are quite different. The pantheists, as one might suppose, are rather more profligate with their dispensing of souls: to every biological creature. To my mind, this move greatly diminishes its spiritual significance, something that has been noted by more than a few pantheist philosophers. I recollect that this profligacy is seen as supporting the view that souls do not have any real ontological basis, a fate shared by virtually everything else that we can think of.

I am not entirely unsympathetic with the pantheist view of the 'relativity' of souls. According to the (relationalist) BPWH, souls are functional, along with everything else we can think of. Souls serve a crucial function within the BPW. There is no (coherent or cognizable) existence outside of the exigencies of the BPW, of which Creator and creatures are an integral part.

Wiki:

The soul, according to many religious and philosophical traditions, is the self-aware essence unique to a particular living being. In these traditions the soul is thought to incorporate the inner essence of each [living](#) being, and to be the true basis for [sapience](#), rather than the [brain](#) or any other [material](#) or natural part of the biological organism. Souls are usually considered to be [immortal](#) and to exist prior to incarnation.

The concept of the soul has strong links with notions of an [afterlife](#), but opinions may vary wildly, even within a given religion, as to what may happen to the soul after the [death](#) of the body. Some religions don't even believe in the soul. Many within these religions and philosophies see the soul as immaterial, while others consider it to possibly have a material component, and some have even tried to establish the weight of the soul.

On this site I have followed the modern philosophical fashion of attending to the notion of the soul mainly under the rubric of the mind-body problem, which also includes the problem of personal identity. Most philosophers of the mind, which includes an ample portion secularists and agnostics, remain skeptical of the very few of their colleagues who claim that a biological or physical basis of the mind will inevitably be found. It is fair to say that the majority of academic philosophers are not at all pre-disposed to dismissing the general idea of a living soul, if one does not include the issue of an afterlife.

The reality of the mind-body problem is a bedrock issue for the BPWH.

Wiki:

Buddha taught that there is no permanent self in the conventional sense (anatta), what most people call self is a delusion or wrong view, not seeing things as they really are, (principally; lacking experiential insight of the five aggregates of clinging). [...]

Some say that the self endures after death, some say it perishes. In the Theravada Buddhist view, both are wrong and their error is most grievous. Theravadins believe that if one says the self is perishable, the fruit they strive for will perish too, and at some time there will be no hereafter. Good and evil would be indifferent. This salvation from selfishness is without merit.

One might consider this doctrine of anatta as not entirely unlike the doctrine of Apokatastasis, in which the individual souls are reabsorbed into the mind of the Creator, as the functions of our individual neurons are absorbed into our own minds.

[2/5](#)

The above wiki article references the Taoist belief:

There is a constant 9.6 billion souls or primordial beings according to two books on Taoist beliefs, which would reside in the realms of [heaven](#), earth or [hell](#) depending on the state of purity.

Presumably this would include any sub-worlds. This is certainly well within the range of 10^{10} souls postulated by the BPWH.

There are no traditions which specifically reference an infinite number of souls.

That even the pantheist traditions fail to support, either implicitly or explicitly, an infinity of souls, is a strong corroboration for the BPWH. Where the pantheists diverge from theism, is in the postulation of recurring creations. The idea of recurrence, however, is optimally captured by the BPWH in the notion of the Singular Ouroboric/Bootstrap circuit.

This was just forwarded by Gordon to a large list.....

> On Feb 4, 2008, at 5:42 PM, [CK] wrote:

CK almost never airs such work related matters to us outsiders. Do we have a need to know?

The pantheist intellectuals recognize that the existence of a specifically sapient soul strongly favors Theism. They have only two possible responses:

1. The soul is a temporary illusion (Buddhism).
2. The soul is universal to all life (Hinduism).

Neither of these responses stands to reason, but that is mysticism for you.

Then along comes Exopolitics, Inc. They pride themselves on their scientific secularity, with the occasional nod to pantheism. They model themselves on the UN.

Can they avoid the Soul Question? Can they avoid exo-theology?

I suggest not.

[Gary alerts me to the following [paper](#) (Paula Zizzi, 2000), which I am now perusing:

Abstract: In a previous paper ([gr-qc/9907063](#)) we described the early inflationary universe in terms of quantum information. In this paper, we analyze those results in more detail, and we stress the fact that, during inflation, the universe can be described as a superposed state of quantum registers. The self-reduction of the superposed quantum state is consistent with the Penrose's Objective Reduction (OR) model. The quantum gravity threshold is reached at the end of inflation, **and corresponds to a superposed state of 10^9 quantum registers**. This is also the number of superposed tubulins-qubits in our brain, which undergo the Penrose-Hameroff's Orchestrated Objective Reduction, (Orch OR), leading to a conscious event. Then, an analogy naturally arises between the very early quantum computing universe, and our mind.

Not bad, huh? Unfortunately this paper has not been cited since 2001, except [here](#) ("The universe is structured like a language", '06) wherein it is cited by Jack's friend, Tony Smith. How Gary dug this up, I don't know.]

2/6

Things seem to be progressing Ok at OM, where I have started a new topic: [The Soul Question](#).

On the [VLAA](#) thread, there is the perennial question of sin: is it a stain or a shadow?

Is sin a crime of commission or omission? I suggest that it is an essential feature of Creation, i.e. separation from the Creator, i.e. ignorance. This is the standard gnostic, idealist view of sin. Wiki.....*Felix Culpa*.....

Felix culpa is a Latin phrase that literally translated means a "blessed fault" or "fortunate fall". As a religious term it refers to Adam and Eve's fall and the loss of the Garden of Eden, known theologically as the source of original sin. The phrase is sung annually in the *Exsultet* of the Easter Vigil: "*O felix culpa quae talem et tantum meruit habere redemptorem*," "O happy fault that merited such and so great a Redeemer." The medieval theologian Thomas Aquinas cited this line when he explained how the principle that "God allows evils to happen in order to bring a greater good therefrom" underlies the causal relationship between original sin and the Divine Redeemer's Incarnation.

Here is a question for the experts:

Did Adam and Eve have free-will before or after the Apple incident? Can one have free-will without a knowledge of good and evil? At most, there was disobedience. But without the knowledge of their relation to their Creator, how can there even be said to be disobedience?

[2/14](#)

I've lately been focused on the soul question over at OMF. It's not going too badly. It shows some promise. Sufficient to supplant disclosure? That would be a stretch, but less of one than any that are visible, and less that how it appeared just a few weeks ago.

That discussion does help me to focus on the most salient points.....

1. The belief in souls is the most prevalent of all metaphysical beliefs
2. It is strongly supported by the vast body of philosophical thought engendered by the mind-body problem
3. Parapsychological phenomena, often associated with ufo incidents, provide much additional support for the existence of the psyche.
4. Personal souls imply a personal Creator, *pace* the pantheists
5. An infinity of souls is not compatible with theism
6. A finitude of souls provides the best single argument for the BPWH and its eschatology, contra materialism

The ETH, in contrast to the UTH, is the consensus view within ufology. Those ufologists who also maintain traditional beliefs, will be likely to subscribe also to the UTH, but only as a sidelight. They accept the notion that the preponderance of the seemingly physical manifestations or visitations are ET related. In the absence of evidence to the contrary, these persons generally suppose that all sapient ETs possess souls like ours. To assume otherwise would smack of anthropocentrism, a view that flies in the face of the rest of the spirit of ufology.

Thus do the theistically inclined ufologists suppose that Creation contains an indefinitely large number of ensouled beings. This view was first espoused in modernity by Giordano Bruno in 1584, following the ideas of Democritus.

In modern times, it is only the orthodox Christians who have maintained a Christocentric theology.

I am presently reading Msgr. Balducci's 1995 [statement](#) on extraterrestrials. The essay is introduced with the following note:

"The Lord certainly did not limit His glory to this small Earth. On other planets other beings exist who did not sin and fall as we did."
- St. Padre Pio of Pietrelcina (1887-1968), canonized June 16, 2002.

Balducci argues for the ETH relative to the UTH:

Let me state very clearly: We can exclude that angels use spaceships. As purely spiritual beings, angels can project themselves at any place they want to reach and, in rare instances, when they want to reveal themselves, take a visible form without any difficulty. The same is certain for the defunct. When the Holy Virgin wants to reveal Herself to Mankind (as it happened in rare, well-documented cases) she chose forms in which She can express Her love and care as a mother and Her motherly compassion with us. We don't even have to waste a thought on the devil and his demons, who still kept their angelic nature, being fallen angels and therefore also purely spiritual beings, since they are limited in their activity by God and therefore not able to bring all their hatred to us.

Jake @OM makes this same argument. Continuing.....

2. The existence of other inhabited planets is highly probable. The distance between the angels, purely spiritual beings, and us, beings of spirit and matter, body and soul is too large. Our soul cannot act without the body, its unalterable means, which through its passions and sinfulness influences the soul so deeply that man becomes unstable and rather tends toward the bad than towards the good.

Therefore it is highly probable that in between, between us and the angels, another life form exists, namely beings which still have a physical body but one which is more perfect than ours and influences the soul less in its intelligent acts and intentions. This assumption is confirmed by the ancient principle defined by Lucrezio Caro as "Natura non favit saltus" (The Nature makes no jumps, see "De rerum natura"), still quoted by theologians. [...]

"It seems to be the purpose of the Universe that the celestial bodies are inhabited by beings who reflect the glory of God in the beauty of their bodies and worlds as man does, in a limited way, in his world." But they are no angels, Father Grasso added, since angels are purely spiritual beings and can perceive matter only indirectly, just as we can only indirectly perceive the world of the spirit.

And then this:

3. The inhabitability of other planets is not only possible and probable, but also desirable. In the future, even in a far-distant-one, their possible inhabitants, if they are indeed superior to us, can help and support us in our spiritual development. In this way, which we cannot prove, they might have helped and protected us already in the past. If indeed intelligent beings exist on other planets, their existence might very well be correlated with the Salvation through Christ. It is certain that Christ is the center and head of the creation or universe, as St. Paul already stated (Col. 1, 16-17). Therefore there exists no world which is not related to Him.

For the record, I quote from Colossians 1:

¹⁶ For by him were all things created, that are in heaven, and that are in earth, visible and invisible, whether they be thrones, or dominions, or principalities, or powers: all things were created by him, and for him:

¹⁷ And he is before all things, and by him all things consist.

¹⁸ And he is the head of the body, the church: who is the beginning, the firstborn from the dead; that in all things he might have the preeminence.

¹⁹ For it pleased the Father that in him should all fullness dwell;

²⁰ And, having made peace through the blood of his cross, by him to reconcile all things unto himself; by him, I say, whether they be things in earth, or things in heaven.

I frankly find Msgr. Balducci's statements to be an incoherent admixture of science and religion. What stands out is the manner in which he glosses over the problem of evolution. He conflates the notions of spiritual and biological evolution. Eschatology is absent entirely.

The Msgr., with his theological ineptitude, has managed to make a great muddle of the ETH.

Was not the fall of humankind directly related to our (lowly?) biological status? How did the ETs acquire perfected bodies/souls while we did not? How much of our imperfection was due to a spiritual fall, or to a faulty evolution?

Will we, for the rest of eternity, be under the tutelage of our superior ET brothers? Do the ETs celebrate Communion? Why did God send Jesus? Could He not have just permitted the ETs to teach us? Why are they so bashful?

And what do we make of the badly behaved ETs?

I have to wonder if everyone in the Vatican is quite as confused and confusing on these issues as the Msgr.? Was the confusion a deliberate ploy to play different sides in the same game? Was he left entirely to his own meager devices, twisting in the theological currents.

Let us focus now on the problem of infinity, and particularly on the possible infinity of souls.

Why should this be a problem for God? The problem becomes critical when we consider it in the context of Soteriology.

The problem could be dealt with, in part, by supposing that the universe is either just one big World, or many separate little worlds. But our universe with its alleged interstellar travelers, is neither one extreme or the other, and so we confronted by a very complex logistics

[2/15](#)

I remain amazed by the shoddiness of the theology presented by Msgr. Balducci, and excerpted above.

I know that the Vatican retains some very competent theologians. That they would allow such poor quality on the part of one of their colleagues to see the light of day, beggars my imagination. As I mentioned previously, I attended a talk by the Msgr. at the X-Con. a few years ago. It was

translated on the spot by Paola. I found it to be mind-numbingly boring and pedantic.

His colleagues (and particularly Benedict (ne. Ratzinger), then Keeper of the Faith) would never have permitted his media exposure in DC, without prior scrutiny. One reason it was so boring was that the Msgr. spoke only from a written text.

Yes, folks, I sense a very calculated plant. But calculated to what end?

The only other Christian sects to take UFOs seriously are the literalists in the US, and they uniformly see a demonic presence. And they frequently couch this phenomenon in Apocalyptic terms.

My first estimate is that the Vatican is very concerned that its flock of 1.1 billion souls is already being caught-up in the spreading apocalyptic frenzy, world-wide, and so is using the soporific 'genius' of the Msgr. to sprinkle its dampening holy water on this most contagious of enthusiasms.

Meanwhile the visitors are keeping the pot stirred down in Texas, a few miles from the Crawford ranch.

Yes, the shoddiness of the Msgr., explains much to me about the politics and metaphysics behind Exopolitics, Inc., and, yes, even behind the Ron & Gordon show. It is all coming from the same source. The plan is to keep the lid on the Apocalypse until the last possible moment.

There is only one exception within this global plan, and that is whatever remains of the R&D show.

According to the Msgr., the visitors should be bringing Theological coal to our Newcastle, along with some high-tech. Their first order of business should be to settle the theological disputes between Christianity and the other religions and with science. That certainly has not happened, except provisionally under the auspices of R&D. But that intervention in itself would be tantamount to a final Revelation, which could not occur in the absence of a Second Coming. And this Second Coming would be witnessed by the entire universe.

Then what, Msgr. Balducci??? What do you suggest for an encore? We get our perfected bodies like the ETs, and all become angels?

It sounds like a universal Resurrection to me.

The logical implication is that the last, we lowly Earthlings, shall be the first on the Resurrection Glory-train....Mark 10:31:

But many who are first will be last, and the last first.

Even the Vatican, with all its intellectual resources, is finding it difficult to obfuscate the Eschatological implications of the inevitable Disclosure. They totally fail to address the problem of the Cover-up!

Meanwhile, the Erath (sp!) fall-out keeps drifting right toward OM.

[Infinity of Souls?](#)

This abstract question points to the crux of the BPWH.

What, if any, are the quantitative considerations that might go into Creation?

Modern cosmology has vastly expanded the accepted size of the World. Even the most literal minded of the religionists do not question the enormous scale of the universe being posited by science. At the most, only a small portion of those literalists still deny the enormous age of it, as also designated by science.

Another irony is that even the immaterialist pantheists have generally subscribed to the scientific cosmology, taking it to be a confirmation of their pre-scientific speculations about the great length of the cosmic cycles, some of which happen to be in the same ballpark to where science is now.

These historical ironies, I maintain, are not just accidental. They constitute a significant part of the the setup, or teleological hidden-hand at work to ensure the dramatic novelty of the cosmological paradigm 'inversion' that is about to take place.

In all of this speculation, it is only the BPWH that points out that theism cannot be comfortable with an indefinite number of ensouled creatures.

Theism, as contrasted with Deism, entails an immanent Creator. If Creation is infinite, and God is immanent in Creation, then there arises the problem that Creation may simply absorb God as in pantheism. This threat is particularly acute where the ensouled creatures are taken to be created in the image of God.

Furthermore, I hardly think that we can be commanded to love that which is beyond all reckoning or imagining. We are only asked to love God as we might love a parent or our soul mates. We cannot be asked to love an infinitude of soul mates or of anything else

It is often said that God and heaven are eternal, in contrast to Creation. I disagree. Rather, God creates time, which itself is not eternal. By the same token, God is not unlimited. Rather, God defines all limits. God is all-limiting. And he is self-limiting when appropriate, e.g. in the case of Incarnation.

The Greeks spoke of *Apeiron* or the Unlimited. That is not God. It is Chaos, and we are not commanded to love Chaos.

God is all-powerful and all-knowing. That does not imply that God is infinite in those regards, but rather is circumscribing, defining or creating of all else.

Neither would we wish that God be blindsided by some monster emerging from the depths of Chaos....every child's nightmare. But does this require that God be infinite in order to protect us from monsters? No, it is God's overpowering love that protects us.

[to be continued....]

[2/16](#)

God relies on a VLAA, very large active array, of us intelligences to spot any emerging threats. The Earth is the primary node in that Array. What happens on Earth, stays on Earth, by-and-large, until the Rapture. We are God's Dream Catcher, among many other functions.

God is not infinite, but is omnipotent, with the cooperation of his creatures, ensured by a mutual

love and trust.

The point is that God is naturally self-limiting, and often so, so as not to overwhelm his Creation, and to maintain a mutuality with it.

As an integral part of God, we share in those self-limitations. One of the main benefits is a quality control, which become the basic premise of the BPWH.

The counter argument, such as it is, is a cosmic right-to-life argument. If one creature or one creation is good, then more must be better. An infinity of both would be expected. But according to Cantor, there is an infinite ladder of infinities, each being at least an infinite exponential greater than the one below. Very quickly in that process, all semblance of a personal God is lost. And what is more important to any creature than our personal connection with our Creator?

So what is the best possible size of Creation? Well, by-and-large, we are looking at it!

Sure, there can be many outlying, hyperdimensional worlds, but they must be functionally, and historically related to us, especially with regard to an end-time synchrony. Creation must be an organic unity, and we are its heart, if not also its head.

That's it. That's the BPW, and this is the BPWH. Would we have it any other way? Would God?

Be our Guest. If you can think of a bigger and better Creation, with one Family and one History, then let's hear it. Be God for a Day! That is the notion behind the chutzpa that is the BPWH.

The BPWH is the best solution to the problem of evil, i.e. the best theodicy. If something is ever going to happen, it has got to happen here. Every challenge to life and love that is worth facing, will be faced right here.

Will the Star Trekkers be disappointed? Will the ufologists be disappointed? Like I say, the Earth is God's Dream Catcher, and so especially is every Star Trek convention.

Thanks for all the Fish!

So why all the Stars and Galaxies?

Did I ever say that the Hubble couldn't paint a mean picture! JHU/HST outsources the picture painting to the North Pole, I suppose.

What other picture would you prefer? God mending shoes in a forest?

A blank?

And think of all our Blue Sky Dreams.

I'll tell you this, my little friends, three centuries of being Lost in Space has done wonders for steeling the human Soul.

Yes, once we were lost.....

Through the Hubble glass, darkly. Then the dawn.

Why would God lie to us?

First and foremost, God is the God of History. History is no lie! The Blue Sky is but a backdrop to History. God is the Great Dramatist. Would you have preferred another stage on which to strut our stuff? Get Real. Ever hear of the Globe Theater? You're living on it. Get back, Willie!

There is the prevalent view that God's first priority in Creation was astronomy, and biology was almost an afterthought.

Yes, the idea now is that God mainly wanted to get the astronomy right, and then, hopefully, would find a place to squeeze in some biology.

People are so impressed by the grandeur of astronomy, especially with the Hubble photos, that they find it hard to believe that God was not also big on astronomy. It seems much too impressive to be a mere backdrop to history. Small faith do they have in the teleologically inspired artistry of their Lord!

The Anthropic Principle might have done more to restore faith all-around, but has, so far, had little impact on the overwhelmingly anti-Anthropic bias in science. Unfortunately this is true even, or especially, amongst the lay scientists who make up the bulk of ufology, most of whom have paid it no mind, whatsoever.

Ufologists shun the UTH just because they are focused on winning the acceptance of the phenomenon within science, as a physical phenomenon.

The minority of ufologists who are avowed Christians are more inclined to focus on the apocalyptic and demonic aspect of it. At best the aliens give lip service to a 'cosmic christ' entity. The Christians are wont to take a gnostic view of the matter. But the immaterialism of the BPWH remains a great conceptual barrier to them, as well.

[2/17](#)

My way forward is clear. Focus on the demonic aspect of the ufo phenomenon, and how it argues and augurs against the ETH.

The ETH, by itself, argues for a Strong Anthropic Principle (SAP), i.e. Design! But we can hardly conceive of a Designer lacking a spiritual entourage: thus the UTs. But given any UTs at all, the ETH is then placed in violation of Occam's Principle of Theoretical Parsimony (PTP1). This brings us right to the threshold of the BPWH.

Then, by invoking the Principle of Theistic Personalism (PTP2), there can only be a finite number of ensouled creatures.

$SAP + PTP1 + PTP2 = BPWH!!$

QED.

[2/18](#)

The above informal formula, is easily the most succinct formulation of the BPWH, to-date.

This is no small advance for coherence.

What is now the weakest link?

The PTP2 component of the BPWH is the least known of the three arguments. I can say this with some authority, because it has not been previously stated, to my knowledge. Neither has the PTP1, in this context, but it is better known and more direct in its logic.

I have argued that the PTP2 was part of the logic behind the immolation of Giordano, but it was not explicitly invoked then, or since.

Personalism is implicit in theism as opposed to deism. But only in the formulation of the Trinity is it explicitly evoked in the monotheistic prophetic tradition.

Theism is just the statement of God's immanence in Creation. That immanence is, naturally, focused on the ensouled creatures, which are necessarily persons, by definition. Immanence then implies intimacy of a very personal sort. This can only be a mutuality between persons, each fully exemplifying the other. Love is the operative word in this context.

However, and this is primary role of the PTP2 within the BPWH, intimate, personal mutuality, i.e. love, CANNOT occur between entities, any one of which can viewed as REDUNDANT.

One might attempt to argue that God, in all his omnipotence, might be capable of such redundant love. I abjure.

Redundant love violates the principal of mutuality, on the face of it. My expendability, in the larger scheme of things, militates against my feeling of mutuality wrt the Creator. Even if God were capable of such love, it could hardly overcome the actual violation of the bond of mutual dependence.

The strict monotheist, i.e. deist, denies all dependence of Creator on Creation. But that view, my friends, is oxymoronic, on the face of it!

So it is QED, once again.

But that need not, and will not be the end of this argument.

With Judaism, we have the God of history, and so, necessarily, his Chosen People.

All of that (tribal) history might conceivably have been repeated on another planet. But not the Holocaust.

With the Holocaust is an intimacy of horror. It is the event of history that, if it were ever to be excused as occurring under the aegis of God, could be excused only as a cosmic singularity/necessity. Such an Excuse can only be invoked Once within the purview of God. Even the invocation of an additional Creator would only serve to obviate any singular theodicy. Thus does this incarnation of evil rise to the level of the X-event, itself, in sealing God's unique bond with humanity in the consummation of history. Yes, there is here even the intimation of a cosmic complementarity, and so it becomes a central pillar of the BPWH, with all that terrible but necessary irony.

I would hardly expect the above statement to make sense to the novice wrt this cosmology. It can make sense only in the end.....the end of learning and the end of history. It is the necessarily terrible counterweight to the otherwise 'lightness of being'. By comparison, the Inquisition was an *auto-de-*

fe. The Holocaust transcended even that last full measure of devotion, when seen in all the clarity of eschatological hindsight.

The redundancy of evil is just the banality of evil. Rest assured, there is nothing banal about the God of History.

It is the latter-day deists amongst the ufologists, who invoke the scepter of many-worlds, just to alleviate their own apprehension concerning the mutual dependency of Creator and Creation. Their apprehension stems mainly from their personal inability to comprehend the fullness of that Saving Grace, right here on Earth. Their own feeling of unworthiness is projected unto their fellow man, as an act of desperation. Jesus did not suffice for atonement. They need to enlist most of their fellows in bearing the burden of their own feeling of unworthiness. And, seemingly, we are brought back to the Holocaust.

Their invocation of another Holocaust, i.e. a literal Armageddon, is just the measure of their lack of faith and understanding.

Their invocation of multiple creations is, by the same token, just the measure of their disdain for this one. Thus do they blaspheme against the work and power of the Creator.

Yea, and thus do they blaspheme against the Spirit and Power of Truth.

Having thus shored up the contribution of the PTP2 to the BPWH, we turn next to the SAP, the Strong Anthropic Principle, in the continuation of this 'principled' defense and explication of the BPWH.

In the interest of professional decorum, the original C(osmological)AP has devolved into just the W(eak)AP. Lately there has arisen a conceptual problem with the many-worlds invoking WAP. There turn out to be too many worlds, as if that were possible for a physicalist cosmologist. This problem, ironically arises out of the greatest success in the history of physics, i.e. the Theory of Everything or Grand Unified Theory, the latest incarnation of which is Matrix String Theory or just M-theory.

Here are the numbers: There are no less than 10^{500} distinct versions of M-theory. And when you add in the cosmological boundary conditions necessary for the bigness of the Big Bang, the number of logical alternatives to this universe skyrockets, as if that were possible, relative to 10^{500} !

These imponderable improbabilities open up a horrendous loophole in the WAP. The loophole is so big, that the WAP now suffers from the 'invasion' of the [Boltzmann Brains](#)! Yes, my friends, it is now infinitely more probable that you are a brain floating in the void, dreaming of the universe, than an actual denizen of a real universe that has turned out to be as astronomically improbable as our is calculated to be!

Shades of God's virtual reality invoked by the BPWH?? You bet your bippy!

Thus, sports fans, does the WAP evolve right back to where it started with the SAP *cum* CAP.

The upholders of the WAP were wont to invoke the PTP1, Occam's 'Razor', in their own defense. It was considered the lesser of theoretical evils to invoke a plethora of unobservable universes, in lieu of invoking a new theoretical entity, i.e. God. One measly God vs. an infinite ensemble of unobservable universes? That is a bit of a stretch! Methinks that professional correctness is much

the more likely culprit.

Never, in the history of thought, has the notion of the ***Reductio ad Absurdum*** been more worthily exemplified, than right here, *vis a vis* the WAP in favor of the SAP.

Yes, the WAP invokes the PTP1, and is then hoisted on its own logical petard.

WAP >>> R.I.P.

This was easier than even I had imagined. We have come full circle, and have barely gotten our feet wet. There remains plenty of dry ammunition. The principal one of which is the mind-brain problem, speaking of the Boltzmann Brains!

If I were now to wield that stick, I would be liable to be condemned for cruelty(?) to dead horses.

The most important lesson to be learned, each time the circle of the BPWH is completed, is that its greatest strength lies in the holistic synergy of its mutually supporting arguments. This is what finally recommends synthesis over the analysis of scientific reductionism, which ends logically without a leg to stand on, not even a quantum atom to stand on.

And now, finally, in the technology of the Internet, it has sown the seeds of its own comeuppance. So proceeds the Revelation/disclosure event that brings history to its much deserved and logical point of rest, nay, resurrection.

[Mind & Brain](#)

Artificial Intelligence:

Although the mind-body problem has been much discussed in these pages, the discussion has been used mainly as an introduction to immaterialism. Now I take a somewhat different tack by explicitly alluding to the question of the soul, this being more of an introduction to theism than to immaterialism. This new tack simply adds to the importance that the BPWH ascribes to the problem of the mind.

Of all the promissory notes that modern secularism freely extends to scientific materialism, the one that is nearest to default is the largest note of all: that is the promise of artificial intelligence. Whatever happened to the soul in the machine? It is looking more ghostly with each passing month.

The only development in AI which keeps its promise alive, is that of the [quantum computer](#). There is something sufficiently ghostly about the quantum which prevents *rigor mortis* from claiming the entire field.

On the other hand, the once promising idea of the [Quantum Mind](#), led mainly by Roger Penrose, with much initial fanfare, is now a boat without a rudder.

It was the notion of the quantum mind that was the point of departure for my metaphysical quest back in the late '70s. It was with much hesitation that I eventually discarded my original 'quantum dualism' in favor of a full-blown immaterialism.

The quantum computer, on the other hand, still maintains a sense of promise. The [timeline](#) for quantum computing is impressive in an exponential fashion. You will search in vain, however, for ongoing research in the possible links between quantum computing and the quantum mind.

One function being served by these quantum gambits is to put conventional AI further out of contention when it comes to solving the mind-body problem. But, on the other hand, there is nothing that a quantum computer can do, in principle, that cannot be done by a classical computer. Computers that transcend the limits of Turing computability are dubbed 'hyper-computers'. There is no one suggesting that such a computer would ever be feasible, but that does not prevent some folks from talking about them as mathematical abstractions.

The above considerations render the notion of a physical basis of the mind, or of a truly artificial intelligence, more implausible than it has been since the day in June of 1863 when it was first conceived.

This negative result for AI is *prima facie* evidence for the non-physical basis of the mind. This is only a first step in an argument for the soul.

Animal Intelligence:

The next issue is the existence of an animal soul. Metempsychosis is an article of faith among pantheists: our souls can be shared by animals. The most recent *National Geographic* (3/08) has a compilation of extraordinary 'mental' feats on the part of a wide variety of animals. But these same studies also point to limits in this arena, rather more than they do to a transcendence of barriers.

The only effective probe to any mind is through language, and these animal language studies can only be reproduced in the laboratory. This provides scant hope that any conceivable evolutionary mechanism might have hidden a human-like mind in the brains of any of these animals.

The feats of genius evidenced by human artists and mathematicians, for example, defy any possibility of measurement. With no feasible computational or quantitative models of even the most mundane examples of human ability, how far can we push such comparisons?

Besides rational and aesthetic judgments, the unique feature of the human mind is its eidetic memory, especially amongst those of us gifted with photographic memories. Even if it could be quantified, and I'm not aware of anyone having even taken a stab at this, there is a retrieval problem that has barely been broached.

The one human trait that we take so much for granted is 'common sense'. Yet this remains the most elusive of all traits that anyone has even attempted to simulate.

The point that I have made in support of Theistic Personalism is that the individual soul, on this planet at least, is only possessed by humans.

Beyond all of these problems remains the problem of consciousness itself. This is the granddaddy of all mind-brain problems.

The only ones who think this problem is soluble are those who deny its existence. Consciousness is simply an artifact of language, they say. As if all toddlers were zombies.

The problem of the mind remains the most challenging in all of science.

Should the 'promissory note' for the mind be withdrawn from the bank account of science? No, not unless there is an overwhelming extenuating circumstance. The circumstance envisioned by the BPWH is the end of history. If there ever was an excuse for wrapping up our human affairs and concerns, this would be it.

The answer to this question is likely to be fundamental to any final Revelation or disclosure.

It is a question, however, that can be answered only in the context of the other fundamental issues of human existence.

A final point that I have neglected to touch upon is parapsychology. Parapsychology figures prominently among all paranormal phenomena, which, in their turn, are a central feature of ufo phenomena. Parapsychology is widely seen as direct evidence for a non-physical basis of the mind. It would likely constitute a significant component of Disclosure.

There is little point in speculating about a soul, however, if there is no conceivable source. It is the SAP that provides independent evidence of a Creative Intelligence of the sort that is taken as the canonical source of the soul. The mind-body problem reinforces the SAP, in that both point in the same general direction.

Reinforcing the SAP is the ufo phenomenon, regardless of the ET vs. UT aspect of it. Either resolution of that phenomenon greatly enhances the credibility of extra-scientific or 'uncorrelated' phenomena. The synergy factor then comes into play across a broad range of issues, all of them militating against the continued hegemony of scientific materialism. A widely perceived crisis therein will further feed the demand for a paradigmatic change in our modern worldview.

The Principle of Theistic Personalism (PTP2) is the logical culmination of all these new insights, and this then leads us most crucially to a reexamination of the metaphysics of eschatology. All these roads eventually lead us to our ultimate concern: whither do we go?

[1/20](#)

There is an argument with Jake on the VLAA thread. It concerns the number of souls.

Jake takes the reasonable position, given the apparent size of the Universe, that God has his heart set on producing as many souls as possible. I demur. This violates PTP2, especially from the perspective of the creatures, that must be taken into account.

One could suppose that God is capable of infinitely loving each of an infinity of creatures. Would Christians be any less able to love Jesus, just in case there might be too many converts?

The problem here is not the number, *per se*, but the fact of being numbered! Yes, Christians are confronted with a big cosmos, as measured by science. Science is all about numbers, so how can the rest of us not take them seriously?

But, surely, God is beyond numbering!

Yes, there will be a logistics problem, especially when it comes to eschatology.

And what about the salvation problem? There is the core assumption that Jesus was the only begotten Son of God. How many Saviors can Christians be led to accept?

The core assumption of the Prophetic tradition is Monotheism. There is also the key assumption that there is only one lifetime in one Creation. Does not the idea of multiple creations seem to violate the spirit of Monotheism? With multiple creations, are we not on a very slippery slope toward either Deism or Pantheism?

Here is just one consideration:

Suppose Jesus sends me to Hell, and unfairly in my mind. While roasting in hell, could I not be appealing to another Savior on another Planet who might be more lenient than Jesus, and who would intercede more liberally for me with God?

Or does Jesus have his own Private Hell, wherein other Saviors are not allowed to trespass, on pain of what? On pain of their being so condemned by our local, proprietary Savior?

More to the point, when I look around and see other creations that are not fallen, might I not wonder why, with my unlucky stars, did I have to be born on the planet where Adam and Eve succumbed to Temptation?

On the Orthodox view, we, Earthlings, are born into sin. We are born with two strikes against us. As a result, most of us will suffer eternal pain and damnation, unless God sheds his Grace on us as individuals, and allows certain lucky individuals to see the light of salvation.

Excuse me if I find something wrong with this picture!

But let's do the numbers again.....

Clearly the Christians have a numbers problem when it comes to Jesus. Jews have a numbers problem when it comes to Abraham.

Muslims? They don't seem to have a numbers problem.....uh, oh!

What about the Koran? Has it been translated into Klingonese?

Uh, oh, again.....The Koran is the Seal of all the Prophets and it is valid only in the original Arabic. There exist no canonical translations....Period!

Damn, those poor Klingons had better study up on their Arabic.

Yes, the prophetic tradition is a tough nut to crack.

One way or the other, all prophetic roads lead to Earth!

Or the prophetic path, in its entirety, is false!

Jake now tells us on the VLAA, that the Third Covenant is about to be delivered.

I am attempting to ascertain how it will be delivered.

We could still say that Mohammed was the Seal of the Prophets, in the tradition of Abraham and Moses.....

We could be told that Abraham, Moses, Jesus, and Gabriel were all ETs. It was merely a projection onto the Earth of a galactic tradition, preparing us to join the Federation.

But then why all the eschatology? Of what is that a projection? For what does that prepare us?

And we still have the Soul Question: Who is the keeper of our souls?

'Now I lay me down to sleep, I pray the Lord my soul to keep.....'

Who will decide the disposition of our souls, upon our bodily demise?

Will it be the Big Karma Machine in the Sky (BKMS), or will there be mercy?

Here is the choice.....

Would you rather have your Judge be a random flunky in the Angelic hierarchy, or would you prefer a computer grade?

The Pantheists have opted for the computer grade, and how can we fault them for that?

Only those of the Abrahamic/Mosaic tradition opt for the Angel. Why?

Because they believe that theirs is not some random tribal/planetary Angel. They believe that their Angel is the Big Kahuna in the Sky (BKS).

That's it, folks.....BKMS vs. BKS.

Either way, there is no appeal. If you get sent to Hell, you may rest assured that all legal recourse has been exhausted. The Supreme Court has heard your case and made its decision, so just get on with your afterlife.

It might seem that the pantheists have a definite advantage over the theists. They can always look forward to parole into the next life. It's a kind of reverse recidivism!

But, wait, we theists have the Ace in the hole. We have the Mercy card.

And this is not just any mercy card. This is the Creator's Mercy Card (CMC)!

By definition, there is no higher Trump, nor Trumpet.

Yes, folks, ours is the Cosmic God of Love (CGL). And we have a personal, historical connection to the CGL: Jesus, His only begotten Son (OBS), who gave up his life so that we could be baptized in the blood of the Lamb. We are now blood brothers with God.

Big F*ing Deal (BFD)!

Big Egos! Where do those Xians get off, thinking they are so special in the whole Cosmos?

Yes, folks, Jesus was and remains the Cosmic Scandal.....the Cosmic Paradox!

Ask anyone, besides the Born Again Christians.

And this little preamble brings us right back to the State of the Cosmos...the State of the UN.....and

the State of the Religions.

So why did the visitors come here?

Well, they had to come somewhere.

Sure, the visitors have come everywhere, down almost every chimney.....BUT.....

The good ol' USofA does seem to own the story. Just ask Hollywood. Just ask Rick Doty.

The spirit of God is everywhere.....BUT.....

God was born in Bethlehem, or so the Story goes.

What then are we to make of Bethlehem and Roswell? Could there possibly be a connection?

Roswell remains the Global scandal.....the Global paradox. It remains the Core of the Core Story.

The hopes and fears of all the years are born in thee tonight.

Now this, ripped from yesterday's 'headlines': <http://www.ufodigest.com/news/0208/un-confirmation.html> :

Clay's and Shawn's confidential source (A) referred to an Admiral who was the ultimate authority for disclosure of the UN meeting to UFO/exopolitical community. Is this evidence that the **Office of Naval In[telligence]** is involved in the UFO disclosure initiative at the UN, or at least filtering information to be released to the UN and general public?

[...] The possible role of the **Office of Naval Intelligence** in filtering information that is being related through source A is something that cannot be discounted when considering what was specifically discussed at the UN meeting.

Well, we also know that Navy Commander Scott Jones is on the Advisory Board of Exopolitics, Inc.

Nonetheless, this is an interesting admission, coming from the alleged opposition to the Aviary.

We must recall Ron saying last year that all those attaining above a certain level at ONI can be linked directly to the Core Story, especially those who were involved in the Repositioning.

Yes, Rick may be a cop on the beat in Albuquerque, but he's got interesting connections.

Why Earth? Why Rick Doty?

Holy Blood, Holy Grail?

Pantheism vs. theism.

The buck has got to stop somewhere, or so we are told.

The pantheists want to keep passing the buck, forever.

Is it just a matter of taste? Or is it a matter of necessity?
It is a matter of Quality vs. Quantity.
All good things must end?
Yes, but they end in Eternity. Nothing then is lost.
Time is an integral part of Creation. We needed an Einstein to teach us that!
The pantheists never produced an Einstein. Why not?
Neither will they produce the Spirit of Truth.
The choice is between coherence and incoherence.
The choice is between Love.....and what? Is there anything else?
Love is personal, final and transcendent, or.....else!
Is that a scandal? Is that a paradox?
Or is it the most common and universal of all sense?
It is only in that Spirit that I would ever claim to be the Spirit of Truth.

Gary [Bekkum](#) alerts me to the following article: <http://arxiv.org/abs/0801.2962v1> .
Jack Ng reviews the evidence from physics that any creation is necessarily finite in its content, i.e. souls.
God could produce an infinity of finite creations, but only by partitioning Himself into non-communicating beings. If these beings, and/or their creations, were ever to attempt to communicate, they would immediately collapse into a black hole.
This is more than a mere physical limit. It is an intrinsic informational limit.
God might be able to transcend the limits, but He would then lose all contact with the creations.
One could say that these limits were imposed by God. That is to say that the best possible God is self-limiting and self-concealing.
Thus does God focus His attention on the Quality rather than the Quantity of Creation.
This is just the thesis of the BPWH.

Given the Self-imposed limitations, we can focus on the optimum number of Souls that God will ever create.

It is fair to say that God has imposed limits upon Himself concerning the total possible number of souls ever to be created.

And this number is finite.

The next question is whether God would actually choose to create this maximum number of souls. That maximum number would be far greater than the 10^{10} souls we observe on Earth.

I would suggest not. The main point is that God has chosen to not produce an infinity of life. We can conclude, that God is not a right-to-lifer. God is more concerned about the quality of life.

Given the universe, we cannot just assume that God would automatically fill it full of life. That is what a right-to-lifer would do, and God is not that.

But has not God filled the Earth full of life, to the point of overflowing?

If God was truly concerned about the quality of life, why would there be such a quantity of it on Earth.

Would it not have been better to spread us out on more planets?

In the case of the Earth, we have an apparent counter-example to what we have just proven: that God is not a right-to-lifer.

There is only one way to resolve this paradox.

Creation is focused on this One World that we call the Earth.

Only thus can we explain the legions of us in this one world.

Why just One?

Quality control demands the stratagem of putting all your eggs in one basket, and then watching that basket with utmost care.

For suppose there were two baskets. There would then be two competing histories. That would mean that there would be two competing Holocausts, but that would be Absurd!

Thus does God's own Physics prove the BPWH.

QED.

Wait, folks. Did I skip a step?

So why did God make all those other stars and planets, and leave them uninhabited?

Wasteful?

Not at all. That is why God created the Quantum, to avoid waste!

The only real phenomenon is an observed phenomenon.

There are no observers out there, and so the heavens are real only to us. Unless God enjoys observing an infinity of dead planets.

Thus the heavens are an intentional backdrop for the Drama of our Salvation.

I have already put out the challenge for someone to propose a better backdrop.

Once again.....QED.

Serpo?

It is just a staging area for Earth.

Any more questions?

And then there is this -- (c) Linda Howe --

Back to [Soul & Cosmos](#).....

My point about Creation is that there must be a closure.

Otherwise, Creation and its creatures are left twisting in the wind.

The closure is just the Redemption of Creation.

The alternative to Redemption is pantheism: an endless irresolution calling for personal escape/release.

Eschatology is the overarching distinction between theism and pantheism.

Theism has ever only been about a communal salvation, originating in a tribal context. In its sectarian splintering, it always reverts to a crude tribalism. But that is clearly not its evangelical intent.

There has always been the expectation of the imminence of the Closure. This is, indeed, an article of historical faith. That expectation simply does not translate to any form of scientific cosmology. Human history does not translate to billions of years. Pantheism would certainly win out in any ET contact scenario.

What I need to point out to Jake is that there is no theology that connects with the ETH. Only pantheism can do that, and pantheism is notorious for being anti-theological.

2/28

I am debating with Triform on OM.

I have brought up the question of the intrinsic value of life, and state that no one has seriously questioned that value.

The next question is whether there can possibly be too much of a good thing.

To the theists, this is a moot point.

The pantheists, however, are generally of the opinion that, yes, indeed, at some point we will all want to get off the wheel of life.

That is not to say, however, that when this cosmic round ceases, that it will not start all over again.

The theists all agree, that each of us only goes around once in this life. They are silent on the question of quantity. But there are ample indirections to the effect that Creation is not infinite, either in time or space. That remains, however, mainly an unstated, unquestioned assumption, outside the purview of eschatology! The implication is that the value of life is context dependent.

The answer is that neither the theists nor the pantheists place any intrinsic value on an infinitude of life.

On the other hand, those who believe in an infinitude of life seem naturally to embrace pantheism, and its emphasis on escaping from the wheel of life.

The theists place a sacred value on life, but only under the purview of a personal Creator, with a personal stake in our individual lives, and a great emphasis on how we should handle our end of that bargain.

It is only with considerable hesitation that some 'liberal' theists have embraced the 'scientific' notion of a universe teeming with life. The more traditional theists remain most skeptical on that score.

It is only the pantheists who have embraced the many worlds view of science, and then mainly just as a vindication of pantheism over theism, not because they see it as something of infinite intrinsic value.

The social fact of theistic eschatology is that it has focused us on the intrinsic value of historical time, which, by definition, is finite!

But should we be surprised that life, like nearly everything else, is valued according to its availability, or to its being viewed as a privilege rather than as something coerced.

Then we have the matter of the evidence.....

The visitors claim to be ETs. Astronomers find no lack of potential real estate for ETs, within Creation. The Bible seems to reference ETs. The pantheists are quick to embrace ETs.

[3/1](#)

The discussion with Triform at OM has ended for now.

What is interesting is an emerging pattern. There are any number of contactees that belong to, pass through or lurk at OM. Perhaps more of them there than at any other forum. And then there is me. I'm the homeboy/resident/dozent/*ex-officio* 'contactee', which is a podium that I sometimes share with Fore. Both of us are nominal Christians, at the least.

And then there is everyone else. The other contactees typically are not Christian, and none of our 'contacts' are that.

If pressed, the contacts will give lip-service to the Great Teacher and to Christ Consciousness, and they'll let us know that Jesus is fine, thank you, and off on assignment to some other world/planet. And that's it. It is the contact party-line, monotonous in its consistency.

What I would like to suggest here is that with the Contacts we have a Confederacy of Dunces.

There is a collective blind-spot amongst the Contacts with regard to Christianity in general. But then, specifically with regard to Christian eschatology, this blind-spot is more like a stick in the eye!

Yes, there is a cone of silence with regard to the Eschaton connection, within this emerging phenomenology and its conveyance via the Internet.

This Conspiracy of the Dunces seems tailor-made to provide me with a Bully Pulpit. A pulpit that has not come before, nor will it come again. This pulpit is mine, either to exploit or to mess-up. I will not pass it up.

The Contacts invariably claim to be most familiar with Earth history, and with our place relative to other civilizations. Invariably, we are very low on the cosmic totem pole, and that our increasingly problematic behavior has placed us in jeopardy of cosmic censure, or worse!

In other words, the Contacts are unanimous in their view that our Day of Judgment draws nigh.

Well! I declare! Where have we heard this message before?

Only from every branch of the Prophetic Tradition that ever existed!

Somebody here is a copy-cat.

Somebody is trying to steal someone else's Thunder.

And neither party to this most egregious act of Plagiarism in history recognizes the existence of the other party.

We have the Prophets on the one hand and the Contacts on the other hand, both giving us the same message, and both acting like two ships passing in the night.

Who are we to blame for this Impasse? Well, the Contacts are the last on this scene, and they claim to know the score and the story.

Do they not owe us an explanation?

It is out of this impasse that comes my Question to all concerned: Is the number of souls finite or infinite.

This is the one most objective point of entry into the contradictory cosmologies of the (pantheist?!) Contacts vs. us Theists.

Answer me this question, and every other question and answer will fall into place.

It is that simple.

It all boils down to this one question.

[3/4](#)

I have posted my favorable impression of the UN gambit, to the OMF.

Just what the doctor ordered, I would say.

How long now before this stuff hits the fan?

I don't see how it can be more than a matter of weeks, unless there is some very serious back-peddling.

Of course, I have said this before, but still.....

Things with CK seem to be getting back on track with a reasonable alacrity. At first there was hesitation about the above allegation, but then the door was opened a crack.

I don't expect any serious new departures with R&D, however, unless and until this does hit the fan. But it doesn't hurt to man our stations, in the meantime.

And in the meantime, I have recently restated the BPWH at OM.

I have it boiled down about as far as it will go.

It is my last ditch appeal to the theists, vis a vis the pantheists.

I note how the pantheists, ever so belatedly, have piled onto the scientific band-wagon, particularly with respect to cosmology.

The only people who haven't are the literalists, and, of course, they have less than no regard for my messy antics.

It all boils down to the question of the finitude of souls.

The acceptance of Darwin and the Big Bang(s) is tantamount to rejecting the finitude of souls.

There is no way, Jose, that theism can accommodate a quantitatively infinite Creation. That is only to capitulate to pantheism or deism.

If there is going to be a finite number of souls, then we can only suppose that nature is the veil of God.

Ironically, this is just what the pantheists believed traditionally. But now they have become the ever so modern Millies. They have swallowed the bait of scientific materialism, seemingly to embarrass the theists and literalists.

2/4/08

Is that the end of the tunnel?

Maybe.

Can anyone think of a more logical ending?

Reference is to the alleged recent ufo meeting at the UN. I certainly give it my blessing, FWIW.

The quasi-public meeting, attended by Gilles Lorant, was alleged to have been accompanied by more secure meetings on similar topics.

Yes, it would make eminent sense to include a 'decoy' meeting, to serve as a public peg for various purposes, having to do with both internal and external consumption.

Upcoming is a radio interview of Gilles, and then an article by Paola, which would almost certainly include a comment or two by the Vatican representative.

More details of the 'public' meeting will leak out in the next few weeks, with more speculation about the private meetings.

The crucial fact is the tentative(?) timeline: an internationally coordinated release of official information, by the end of next year, pursuant to two conditions: continued global 'stability', and a continued level of ufo activity.

Who can fault that? It does appear that the Brits are already beginning to comply. Other countries will feel free to report in, ahead of schedule, as some have already been doing. The dead-line may be mainly one that is being self-imposed by the US, the 800 lb. gorilla in the wings of this dog and pony show.

Is it possible that those three US Senators could be acting unilaterally in this matter? It is much more likely that they simply allowed themselves to be the representative signatories to a long planned international initiative, being chaperoned by the US.

And finally come the denials, although interestingly worded. It could be that we are seeing the countermoves of various independent agents, but more likely we are seeing more slight-of-hand on the part of the puppet-master, though not intending to speak derogatorily of the Almighty's hidden-hand.

Yes, now the denials are flying thick and furious. Perhaps, more than a tad too thick, and too furious, me thinks.

All the better to keep this pot well-stirred. Keep as many folks off-balance for as long as possible. All the more for the rest of us.

Lorant is too well-placed to just be a walk-on. And too many in the supporting cast.

And just enough flim-flam to keep the Media on the sidelines, gazing at their collective navel.

We can ill afford to ignore the rumors emanating from the NY.

Nor can we ignore the denials. The combination of rumor and denial is a fact of life in ufology. Those of us in the field have learned to live with this 'annoyance'.

Nay, we have learned to thrive on it! We wouldn't still be here, had we not.

I will even go further. This constant jerking around is not accidental, nor is it incidental to the process we are a part of.

The irony is that that the constant mixing of signals is designed just for our benefit. It is meant to facilitate the privatization of Disclosure.

Every time it happens, the Nuts&Bolts ufologists take another hit. They are forced further into a mindset of paranoia. Whereas, those of us favoring the UTH, are moved more toward pronia.

If the ETH is correct, the cover-up is illegal and immoral. If the UTH is correct, the cover-up is constitutionally mandated.

If the UTH is correct, then the privatization of disclosure is mandatory. Can the government thereby simply ignore the whole situation? They would love to be able to, but it's not that simple for them:

- They were left holding the bag, re: the core story.
- There is a necessary military and intelligence oversight.
- There are relevant international and economic obligations and interests.
- Individual concerns within the Legislative and Executive branches must be contained.

Nonetheless, most of these concerns are handled outside of the normal chain of command and/or are contracted out. The only known exception is CK.

This brings us back to the alleged UN meetings.

Michael Salla and I have been positioned to handle the ETH and UTH contingencies respectively. Others, of course, can find their own places at the table, but the table is not completely level, speaking for myself, and for Michael, as well, but based on sketchy information, in his case.

Michael leans fairly far toward the ETH, that still being the consensus view. And his bailiwick has been the secular/governmental arena, and especially the UN, considering his own international credentials. Nonetheless, each of the contrasting accounts of the February meetings emphasized the possible sectarian repercussions of Contact.

But each time the Disclosure signals get mixed, as they already have on this occasion, the secular/scientific/ETH contingent becomes increasingly frustrated, embarrassed and prone to paranoia. They are addressing a very demanding audience.

I, on the other hand, can more easily bide my time, up until such time as global stability becomes a pervasive concern. At that point, folks will not have time to attend to cosmic affairs. Eschatology will no longer be an intellectual concern. The BPWH will stand to rapidly lose its cogency.

In other words, the window of opportunity for the BPWH is limited, assuming an imminent eschaton. As the ETH continues to lose traction, the UTH will gain. The BPWH stands to benefit from this shifting of opinion, but only so long as the global situation does not deteriorate to the point that the fear of a Tribulation begins to overshadow the meliorist option represented by the

BPWH.

One of the UN rumors points to 2017 as being limit of where voluntary human action could be decisive. Given that there is such a limit, most people would find that date to be optimistically remote.

Another date given was the end of 2009, which would be the decision point to go ahead with an officially sanctioned, international disclosure. One might argue that if the BPWH had not made a public impression by then, the window for significant voluntary action will have been closed.

This earlier date would seem more realistic to most observers of the ufo scene, over the past few years. That, my friends, is precious little time.

[3/12](#)

I am quite pleasantly surprised to see Michael Salla participating at OM. I trust that he will get a good welcome. I will refrain from interacting with him until he is acclimated there.

In that vein, I will continue my forum posting about the UN 'meeting' over here so as not to distract from his welcome, and the focus on his message. Ed Komarek has ably paved the way for Michael, and I was able to do my venting with Ed.

BTW, I had a pleasant lunch with my shaman friend, now a citizen here, who has just returned from several months in Ecuador. He reports that FARC is seen as a symbol of liberation. Also that there is some concern about the stability of Barack. Our problems with drugs from SA is not a popular concern down there. Nor is the trend toward socialism.

Back to the UN.....

I think it is reasonable to discount the possibility that the UN rumors are the product of either independent hoaxers or of a rogue secret group. I will continue to pursue the next most conservative or skeptical possibility, that these rumors are the very deliberate product of a quasi-official, international intelligence initiative, and perhaps even some of the participants are unaware they are a party to a bluff. And, yes, by following this line of speculation, I will, unsurprisingly, find support for the BPWH. But patience, please,.....

You will find, on these pages, several instances of my speculation that the if there were ever to be an official disclosure that it would be couched in the context of a renewed effort toward a scientific study of the phenomena. And, indeed, that was just how these rumors characterized this proposed public initiative, even to emphasize that non-scientific approaches would be actively opposed.

This, IMO, is the core of this bluff. The scientific establishment will never allow itself to be politically exploited in this manner. They would see themselves as simply being the stooges or political scapegoats for the Intelligence community.

Prestigious members of the Scientific community have been consulted many times, over many years concerning these phenomena. They have repeatedly and vehemently refused to be otherwise suckered into this very messy phenomenological arena. My source has made this abundantly clear to me.

The public will never buy this ploy either. They would know full-well that if science could crack

this mystery, it would have done so, years ago. They would immediately demand the results of those previous studies. They would not put up with the charade of yet another such study.

Even the most true-believing of the Nuts&Bolts ufologists will hoot and holler at any such charade or delaying tactic, once this Pandora's box has seen the official light of day.

Next, the fundamentalists everywhere will be galvanized into a frenzy of suspicion of both the alleged ETs and of any who would propose to traffic with them.

This is very big political and scientific non-starter.

Did the perpetrators of this Bluff expect that it would have legs in the ufo community? By how much do they underestimate our political perceptiveness?

Let's give them the benefit of the doubt, and suppose that, no, they really never expected us to swallow this ploy. What then was its intent?

I suggest that this is their backhanded way of helping to bring us to our senses concerning the true nature of the Cover-up. They are pretending to give to the ET enthusiasts just what they have been asking for. As those fans of the ETH begin to chew on this bone, they will be forced to the realization that what they have been hoping for, just doesn't make sense. If there were any scientific evidence, a very convincing portion of it would have to be released immediately. Failing that, the floodgates of speculation would be opened, and very quickly we would be facing the potential of serious political instability.

In this context, a UN/science ploy just does not fly. It will be seen as a transparent political bluff, even before it could be publicly launched. Is this even a serious trial balloon? No, I frankly don't see that it even rises to that level.

[3/13](#)

Not even a trial balloon, have we here. Only a transparent bluff.

Are we then to ignore this episode? Most will, but not if we are in this game for the long-haul.

We are being given signs, and we endeavor to read them.

The message here is just to remind us that a science ploy wont work. That should already be obvious, as explained above, so why go to this trouble to point out the obvious?

But there is another part to this message. There is anticipated to be a problem with the proliferation of cults. Indeed, it is as if the main function of the scientific initiative would be to divert the public's attention away from cultish affairs, or to be a counterweight thereto.

But we have already reasoned that this counterweight would, in practice, prove ineffective. The public will immediately sense this is too little and too late. If, in all these years, no government has been able to acquire solid scientific evidence, why pretend to start over again, now? It is just showmanship.

What do we have?

- There is expected to be a continuing and even increasing level of ufo phenomena.
- There is the presumption of an ongoing contact, in that we are aware of their plans.
- A *de novo* scientific initiative is suggested, but mainly to counteract the threat from emerging

cults.

- This counter-action will not suffice. It will quickly prove embarrassing for the governments and scientists involved.
- The above facts seem intended mainly to provoke our speculation about what might the REAL plan.

But why would the Insiders wish to provoke this particular speculation?

Do they expect us to hit upon a plan that they have not already considered?

It is very unlikely that we would, or that they would have that expectation.

So what, if anything, do they want from us?

They want us to retrace their own thinking on this most delicate matter of Disclosure.

If we wish to continue playing this game, then that is the game sheet that has just been handed to us.

It is no small responsibility. How so?

The Insiders already have access to the best minds in the world, for the purpose of strategic planning. They are not looking for us to add significantly to that resource.

Ok, so they're not after our brain power.

So they simply want to use us to gauge the public reaction to their plan.

But we have just determined that we have been presented with a phony plan!

So they want us to recreate their actual plan.....and then what?

To provide a deniable channel for the preliminary dissemination of their actual plan? But then why add the extra step of our having to reinvent it?

For some reason they are provoking our special participation in the Disclosure process.

This brings us back to a more fundamental question. What is the role of ufology?

Over the decades of delay, the ufologists have come see themselves as playing an antagonistic role relative to the Insiders concerning disclosure.

We see ourselves as picking up the crumbs of information that inadvertently fall of the banquet table of the Insiders. We just hope that we might get really lucky one-day, and find a really BIG crumb. But, gosh, it just doesn't happen.

But perhaps we are looking at this the wrong way. Suppose, instead, that we are being spoon-fed. With what? With disinformation? For sure. But that is hardly a new idea, either.

What is new, now?

Now, the disinformational part of the message is transparent: a *de novo* scientific initiative to be conducted in public.

This UN ploy is the biggest single move in a cat-and-mouse game that spans decades.

If the disclosure was intended to be focused on actual scientific evidence, then why involve us in it? And why use the above nonsense suggestion?

If there is any message here at all, it is that this game is not about science. It is not about technology, and, therefore, it is not about ETs.

I'm sorry it took so long to get to this seemingly obvious conclusion, but we had to exhaust every other alternative.

The upshot is that the primary disinformation emanating from the Inside, for all these decades, was simply that the phenomenon was a scientific/technological issue or problem.

This latest message is intended to countermand the ruse of the decades. How many of us will attend to this goading of our ufological O's?

Some will. If I am right in this interpretation, and no others are being offered, it will take a few more such messages to make a very serious dent in the Nuts&Bolts mindset. But that won't be necessary as long as a few serious minded ones amongst us pick up on this new direction into a brand-new game in a brave new world.

This new direction need not have come as a big surprise. There have been plenty of hints in the past, coming from the inside. These past hints will, of course, appear more obvious now, in retrospect.

3/15

More thoughts on the UN rumors....

Yesterday, Robert Morningstar made the claim that Adm. Wm. J. Fallon, the recently resigned head of CENTCOM, was the one who was backing source 'A' in his disclosure efforts. Robert claims to be unilaterally released from his confidentiality agreement relative to Fallon, because of this resignation. I don't see the logic in that, but could it otherwise be true? Or is Robert grasping at straws, as the UN story is discredited?

Michael S. points to the main difference in the information reported by the two sources. Gilles reports a relatively innocuous plan for greater openness on the part of the participating governments with regard to taking these phenomena seriously, commencing with an international scientific investigation, possibly as early as next year. He refers to the science vs. religion aspect of the response. The purpose of the meetings he attended was to discuss the social response.

3/16

Source 'A' spoke of a possible preliminary disclosure on the part of the US, later this year, before the end of the current administration. He also spoke of the governments that were for or against disclosure, depending on their views on population control and/or polytheism. Only 'A' provided a time-table for increasing public exposure by the visitors, c. 2013-17, culminating at the end, with the visitors declaring the time frame.

He also made this [warning](#):

14) A contentious moment in the meeting had to do with the religious implications of contact. It is this issue which is of most concern. Our source stated that the more secular societies will adjust more easily to contact than the fundamentalist. He stated, " The Roman Catholic countries will not have a rough time, except for the population problem; the Roman Catholics already have three Gods in one, so accepting others is not that much of a stretch. The dividing point is going to be the containment of population. The Protestant countries will deal fairly easily with contact. So will countries with indigenous religions connected to nature. The Muslim, Hindu, and fundamentalist Christian religions will have the most difficult time, possibly even the elimination of said religions; we can expect mass suicides, social unrest and upheaval. The ETs will help with re-programming and the concept of an inclusive galactic order. However, society will have to step up to the plate to assist - one on one - those people who have shattered belief systems. The Chinese will have no problem because of the Buddhist and Taoist influences."

This is a dire warning, indeed.

The UN rumors constitute an historically unprecedented escalation in the seriousness of the message being delivered from ostensibly official sources. If this was a private or rogue operation, it would not be difficult to fully discredit the sources, without adding to the rumor mill. The longer this escalation continues, the more difficult will it be to contain. It seems clear that there is a unfolding strategy of some kind.

Consider the following questions:

- Is there a conspiracy behind the ufo rumor mill?
- Might this conspiracy be able to pose a threat to global security?
- Do the UN rumors not constitute a serious escalation on the part of this hypothetical conspiracy?
- Would it be difficult to discredit the purveyors of the UN rumors, without substantially contributing to those rumors?
- Why has that not been attempted?

3/18

The issue that I bring to the ufo investigators is that their tactic of pursuing the smoking gun has proven futile over the last 60 yrs. It is time to focus more on the analysis of the great abundance of existing data.

4/27

In the last month or so, we have gone through two iterations of the ufo rumor mill. One rumor concerned a UN meeting on the international aspects of disclosure. The other was a reopening of the California drone investigation that received significant media attention. These followed upon the ufo flap in Texas in the previous month. This has kept things busy at OM, where new records in viewership were set in this time period. In just the last week or so, the forum activity has returned to a more normal level.

With a fresh batch of new participants, I have been kept busy just trying to moderate the usual tendency toward a paranoid view of the alleged cover-up, where it is so easy to fall into an 'Us vs. Them' mindset. The newbies are also, as to be expected, rather unfamiliar with the UTH.

At the same time, there is a greater degree of tolerance for the BPWH on the part of the Christians on the forum. It is not that I am getting a free pass, but rather that we have reached a kind of stand-off, if not an actual accommodation. I would hope to use the current lull in activity to shore-up the standing of the BPWH at OM, in preparation for the next round of activity.

Time to do another recap of the BPWH. [Here](#) was a previous attempt. We need something more specific to the OM venue.

- Soul question vs. evolution
- pantheism vs. theism
- how many souls, what kind?
- ETH vs. UTH
- High-strangeness vs. physics
- mind over matter?
- SAP vs. WAP
- Teleological Force is with us
- Doomsday vs. Endtimes scenarios.
- paradigm shift
- Problem with conventional cover-up
- Where is the Federation?
- Contact protocol?
- WWGD?
- Disclosure strategy -- end game
- calling the bluff with the eschaton.
- R&D
- BPWH & Christian orthodoxy.

My main problem with this recap will be to not exceed the attention span of the OM audience. That is a major constraint.

Most of the writing may have to be done here, with just highlights posted to my section at OM.

4/30

Ps0 at OM reminds me of the Singularity argument. This is the closest that a materialist can get to the ideas of the BPWH. To get all the way, they would have to combine the singularity with the Virtual Reality argument. This is not easy to do, if one is strongly biased against the idea of spirit. One then needs to consider the mind-body problem, and consider the syllogism of humans : consciousness = fish : water, to borrow from Terence McKenna. We must also add the SAP to this mix.

Finally, if we add the UTH and X'ianity to the mix, it is a new ballgame.

[<-- Prev](#) [Next -->](#)

[Topical Index](#)

3/7/08

Ultra- vs. Extra-Terrestrial Hypotheses

I've been considering a new UTH initiative. This remains an uphill battle against the strong and continuing bias of 'retail' ufology in favor of the ETH. That mindset remains the single largest obstacle to the BPWH. There was a [poll](#) at OM concerning this issue. Mine was the only vote out of 32 for an exclusive UTH! But, by the same token, there was only one vote for an exclusive ETH. This sample was self-selecting on the religious side, it would seem.

I notice that there is no entry for the UTH in the topical index. This is a significant oversight on my part. A google site-search here yields only eight pages containing 'UTH', the earliest one being [More of the Same](#) in the entry for 10/24/04. There is an earlier entry for UTI on 2/14/04 of [Triumph of Science?](#).

Can we accept this conclusion? Does it subvert our gut instinct? Another test case involves [SETI](#). What is the ontic implication of ETI? Giordano Bruno was burned at the Inquisitional stake for being an early advocate of ETI. Immaterialism rules out ETI, but not UTI (ultra-terrestrial intelligence, e.g. God). In this instance, immaterialism agrees with the orthodox ontology of intelligence. For immaterialism, separate worlds entail separate creations, if not necessarily separate Creators. The Creator(s) hardly have the option of 'physically' linked creations. Therefore, a radio search would be logically futile.

It is worth rereading the entire entry.

For an earlier reference: [How Many Worlds?](#) (5/02):

And what about the starry sky? Well, it serves many purposes in this creation, especially as a very aesthetically, natural backdrop. Even Lucas would be proud. Aren't there other civilizations out there. I am suggesting there is no there, there. Whatever visitors we may have are of the interdimensional variety, not interstellar.

The basic concept of the BPWH is explicitly anthropo-/geo-/centric, which I frequently emphasized, but I did not stress its antithesis to the ETH until my recent foray onto OMF.

Contributing to the ETH bias is the natural desire of the ufologists to distinguish themselves from the 'mere' religionists.

The ETH is the mythos of the Space Age. It is future oriented. The UTH is sooooo.. Retro!

The ETH feeds into and on the Conspiracy mindset that is also a staple of retail ufology. The UTH does not argue against the notion of a cover-up, but it does cast it in a very different light.

The ETH has fueled the Sci-Fi craze that is a staple of modern culture, garnering the vast resources of the Entertainment industry. Consider *Star Wars* vs. the *Exorcist*; it is hardly a contest.

Yes, the UTH has an uphill battle against the ETH within ufology. Even the Vatican [endorses](#) the ETH, with nary a mention of the UTH!

This last fact, however, ought to give us serious pause concerning what lies behind the ETH.

The common (mis-)understanding of the ETH vs. the UTH issue is strongly influenced by the mind/matter dualism of the modern worldview. Any ufo-type phenomenon with a 'physical' component is automatically deemed to be supportive of the ETH. Ufologists become very defensive about the 'reality' of their phenomena. Raising the scepter of the UTH is, to them, seen as tantamount to labeling their phenomena as mere phantasms, and probably the result of an unstable mind or an altered state of consciousness. The UTH, taken in that light, may be construed by them as an attack on their sanity. The concern with physical traces then becomes paramount in their minds. The fact that such traces may be hard to come by, is no inducement to the UTH for them.

In maintaining the UTH, I will certainly play the religion card. But there is a problem here, as the literalists have been quick to point out. The canonical ETs are the Nephilim, Genesis 6:4:

The Nephilim were on the earth in those days, and also afterward, when the sons of God came in to the daughters of men, and they bore children to them.

This (cosmic) intercourse is taken to be part of the corruption of Antediluvian humanity. When I pointed to these entities as putative UTs, I was quickly 'corrected' by Jake & Co. Only Angels are ever said to materialize in the Bible. Demons act only in states of possession. Therefore the Nephilim could not be seen as mere fallen or demonic entities; they must be ETs! Yes, one does have to mind one's p's and q's when it comes to the literalists. Modern dualism is very strong in the minds of the literalists, literalism being almost contemporaneous with Cartesian dualism. I suspect a strong historical and conceptual linkage.

And what about materialization?

Dematerialization is the physical basis of nuclear and thermonuclear reactions, as I ought to know. If a ufo dematerializes, how is matter and energy still conserved?

Instead of a strict materialization, ex-nihilo, the BPWH simply posits a local overlapping of ordinarily distinct realities or realms of consciousness. In that sense, ufos manifest an alternate state of reality or collective consciousness that is, for some good reason, given to intrude upon ours. Such overlaps do not occur capriciously. They must be strongly motivated, and must serve some teleological purpose. There may well be a mutuality of intent, which is normally subconscious on our side. In the case of Stargates, this overlap of realities is more stabilized and localized in its manifestation. And, yes, there may well be a virtual or ersatz 'technology' associated with these manifestations. There can be a real magic involved, but it is a 'technology' that can in no way be extrapolated from ours, unless, possibly, we use virtual realities as an analogy.

According to the BPWH, the Earth itself is ultimately to be understood as a very strongly ingrained collective state of mind: a dream world that has become so strongly habituated that it takes on all the trappings of physicality. It is the occasional and increasing cracks in our cosmic shell that give lie to the perception of materiality. The eschaton will mark the culmination of this inevitable breakdown of the barriers between the various realities.

It is this projection of our dream-world that explains the origin of the Anthropic Principle along with the Unreasonable Effectiveness of mathematics. How else would the abstract and complex structures of mathematics become embedded in the foundations of our reality, that is so finely 'tuned' to the existence of life? How else do we explain the very peculiar 'ghostliness' of the Quantum Realm?

The high-strangeness and great variety of ufo related phenomena rules out the possibility explaining them with any single theory of physics. As it stands there is no theory of physics that comes close to explaining any of these reported phenomena. In fact, as physics becomes more mature and coherent in its mathematical theorizing, so does it become more impervious to they kinds of radical rethinking that last occurred over a hundred years ago. There is much less room for maneuver than there was back then. But even the revolutionary developments of a hundred years ago, pale in comparison to what might conceivably address this plethora of uncorrelated phenomena.

What is suggested instead is that physics and our modern worldview should be inverted or literally stood on its head. Our rethinking would have to go all the way back to the Copernican Revolution. If we reflect upon the world as being oriented toward the mind, instead of toward matter, we can keep our technology and still find ample room for the otherwise uncorrelated phenomena. The

BPW is the best of all worlds.

There are many seriously unresolved evidentiary problems inherent in the ETH:

- high-strangeness
- the physics problem
- missing evidence
- the cover-up problem
- the Federation problem
- lack of contact protocol

Each of these problems is easily resolved by the simple expedient of shifting from the ETH to the UTH.

Then there are the cosmological problems raised by the ETH:

- it pushes very hard on the Anthropic Principle
- thereby does it mandate the theological question
- the teleological and eschatological problems are exacerbated
- the soul problem is raised
- theism is rendered incoherent
- the future of humanity is rendered otiose
- the space-time frame collapses
- mind over matter is the only rational spiritual objective
- Doomsday Argument
- virtual reality must be considered

More succinctly, the ETH becomes coherent only when seen as a conceptual stepladder to the UTH and the BPWH. And even more important, the ETH provides the final cover story for the impending Revelation.

5/8

Thus have we seen that the ETH fails the tests of evidence and of reason. Whereas the UTH easily passes all tests.

It should be no contest. The supporters of the ETH are operating in an intellectual vacuum. They feel no compunction about the exercise of due diligence. They dismiss all contrary views as part of the conspiracy against them.

The knee-jerk reaction to the UTH is that it is intended as a denial of the physical reality of the phenomenon. But I do not know of any advocates of the UTH who are given to denying physicality. Rather, and especially wrt the BPWH, there is the view that physicality is not an absolute designation. The definition of physical is necessarily contextual.

According to the WAP, there are an actual infinity of universes that may be existing in parallel with each other, but they may interact so weakly or not at all so that a parallel Earth could pass right through our Earth, virtually undetected. To us it would be nothing more than a will o' the wisp! And so would we also (not) appear to our parallel cousins.

The fact of the matter is that we have almost no clue as to what makes matter material.

What is thought to make matter solid is a very abstract symmetry principle having to do with the

connection between 'spin' and statistics.

The quantum function of an electron changes sign when it is rotated by 360°. This anti-symmetry is dictated by special relativity. Therefore, two identical electrons cannot occupy same quantum state, and this fact is what keeps atoms from collapsing in a burst of energy. If you have a slightly different particle, it would not feel this repulsion from the normal, identical electrons.

Similar consideration apply to the 'ordinary' forces acting between particles. Particular particles only experience certain kinds of forces. Neutrinos can zip right through the Earth and feel nothing at all. Billions of neutrinos penetrate your body every second, with no effect.

Photons respond to electric charge, but not to the 'color' charges of quarks. There could be a universe of different particles and differently defined charges that might harbor sentient life, but that would be completely undetectable to us.

Or consider the case of an 'antimatter' world. It looks identical to ours until we go to shake hands with our antimatter counterpart.

Poof!! We both dissolve into a thermonuclear reaction.

What do these considerations say about our absolutist view concerning matter and reality??

Reality and materiality are in the eye of the beholder. That is what physics tells us, if we care to listen.

There are very many accounts of aliens and ufos acting in non-physical ways, such as passing right through our own ordinary matter. Walls and windows are usually of scant concern to the determined alien.

We could say that these creatures are non-physical, from our own perspective. They have their own kind of physics.

But we cannot stop there. We must push the matter further.

If there is Creation, then it is a process that occurs from the top, down. Creation has a purpose. It has a beginning and an end.

It is the end to which we now attend. Where does physics fit into this picture? Physics is an Anthropic projection.

Physics is the logical and necessary background for life.

Physics is not created *ex nihilo*. It emerges from the teleological necessity of metabolism. Metabolism requires an atomic basis for self-replication, plus an energy input. Thus do we obtain atoms and the Sun. Everything else in Nature is a logical embellishment of these vital necessities.

5/9

I'm now faced with the practical problem of disseminating the concept of the exclusive UTH within OM. The dissemination hardly has to be complete. It can be selective among the activists. This will be enough to send a definite signal to the rest of the ufological community, whether or not they like it. This will only require perseverance. I need to make the case that one person should be

selected to study this issue closely, as a proxy for the others, and that one person will vouch for the result.

I don't think this proxy student will be too difficult to locate, given the resources of OM, and even just a modicum of insistence on my part.

I feel, that with the mere formulation of the request, that it is a virtual *fait accompli*. This stratagem has been in the back of my mind since my arrival here, but the time now is particularly propitious.

Perhaps there should be two such volunteers, so that they may consult between themselves, and so be less likely to simply be bull-dozed by me.

One could say that the 'jury' initiative is long over-due, but I don't think it will constitute a significant delay in the larger scheme of things.

It may easily be argued that this initiative should be a top priority at OM, especially concerning the almost minuscule time and resources that it will require. I'll simply start lobbying on various threads and individuals, starting out with a soft-sell.

One useful medium would be chat mode on Skype. This would be simply be a self-recording conversation, with shorter delays than with posting. We might need to figure out a way for each participant to edit their own entries.

5/20

Now I've started the Messy Antics thread at OM, allowing myself two years for a break. The first order of business seems to be to designate MJ12. With the recent ET/VO announcement, I'm putting the Pope at the top of the list. There is an inclination toward the religious groups, as seems appropriate, considering the context. Joe XVI and Ron are the top two phenomenologists. I've said that China and Islam are the two main political concerns.

The model of the Moonies is SK is a useful model for China, but they made a harsh crackdown of the Falun Gong. How can they be persuaded differently?

5/21

It would appear that the UN/UFO Source 'A', is to be my designated aquarium angel. What am I to do about that? Clay Pickering, aka Temporal, is his go-between to OM.

5/27

Eschaton Focus Group, items of interest:

- selling the eschaton -- how difficult?
- costs and benefits
- avoidance reactions -- procrastination
- collective amnesia
- increasing cost thereof
- millenarian enthusiasm
- Millennium w/o eschaton?

- personal vs. historical eschatology
- Casts a long shadow, especially in ufology
- proper context for decline of fertility
- life on the other side -- transition to eternity
- recapitulation of ontogeny

There could be a thread about life on the other side: visions of eternity.

Unless there are some big changes, we are in for a rough time as we transition to sustainability.

[7/3](#)

Dear Diary, I see that it has been awhile. I do apologize. And I'm here only under duress, having told one of the OMF 'customers' to f* off. The customer is always right!

Baiting the Second Coming is sure to be even a bigger pastime when I return in 3 days. I'm getting off easy. It might have been 7 days for a second infraction.

So here I am on my busman's holiday.

Yes, it is always very instructive to be reminded of our vulnerabilities.

And I'm thinking now that vulnerability is the name of the eschatological game that we are playing. Hatching out is the most vulnerable time for any population, and we will be no exception.

For three hours yesterday, I was having a flashback to my three days at Princeton in 1966: the dark night of the soul. Talk about vulnerability. Hello darkness, my old friend, I've come to talk with you again....

Then I began to see the light. I am under demonic attack.

It started with my 'brazen' dropping in on the 27th annual Cosmos & Creation conference at Loyola, about three weeks ago. The two founders were still there: Frs. Jim Salmon and Tom King. I was actually a third-wheel, back then in '81. I lost contact in the early 90's. Jim invited me to see him afterwards.

About a week later I got a PM at OM from someone claiming a Jesuit connection, saying that he had been asked to tell me that someone was 'very angry' with me, and that I could rest assured that I was not the X2. I took this as almost a backhanded compliment.

I mentioned also about my last phone conversation with CK, over a month ago. He asked, why would the Second Coming consort with witches? This was his first ever use of that phrase. Another belated and backhanded compliment, one might suppose.

Back to demonics.....

Yes, allow me to use an extended definition of that word, as is my wont with most words. We have to expand them to fill the linguistic gaps in our quest to construct a new worldview.

It might mean something as innocuous as to say that we sometimes bring out the 'devil' in each other, in times of duress.

I have been very fortunate in the past thirty years to have experienced so little of this. We should suppose that times will get more strenuous.

Yes, I was not paying attention to detail. I had suggested that some of my attackers were acting as if possessed. I said that exorcism was not my specialty. They should pray to Jesus. I just wanted to be allowed to get on with my exposition of the BPWH. And so they did manage to set me off, not too difficult after '5 o'clock'. So, guess what. It looks like I'm being forced to act more like an X2, while still maintaining the SoT act. This is definitely pushing my envelope.

My stratagem: they get on my case; I get on theirs, while paying close attention to detail. Turn about is fair play.

Should there not be a 'Dan's free exorcism clinic' thread?

Yes, I am under attack mainly from demons of the left and right.

On the left are the pantheists. On the right are the literalists.

The pantheists are appalled by us low-brows who suppose that the cosmic intelligence would deign to degrade itself by taking on a human form, especially one that succumbed to such a bloody mess. Buddha is one thing. Jesus quite another.

At the other end of the line are the literalists. 'A mighty fortress' is their God. Many are born-again. They have experienced spiritual vulnerability. They would just as soon not experience that again, thank you very much! They gird their loins with the iron-clad words of God, quite forgetting about the risen Word, or the living Spirit. Yes, it is onward Christian soldiers. When their God returns, he will be on a white Steed, with a terrible swift sword:

*Mine eyes have seen the glory of the coming of the Lord:
He is trampling out the vintage where the grapes of wrath are stored;
He hath loosed the fateful lightning of His terrible swift sword:
His truth is marching on.*

Revelation 14:

18 And another angel came out from the altar, which had power over fire; and cried with a loud cry to him that had the sharp sickle, saying, Thrust in thy sharp sickle, and gather the clusters of the vine of the earth; for her grapes are fully ripe.

19 And the angel thrust in his sickle into the earth, and gathered the vine of the earth, and cast it into the great winepress of the wrath of God.

20 And the winepress was trodden without the city, and blood came out of the winepress, even unto the horse bridles, by the space of a thousand and six hundred furlongs.

Yes, these are the demons that form the two phalanxes guarding the Pieta. Evidently, Mary was not up to the Job.

- God vulnerable? Not over their dead bodies! The Bible is their life-saver. They cling to it with the tenacity of a drowning person.
- God accessible? Not to the spiritually unwashed! Narrow is the gate to Nirvana.

Between therapy sessions, I'll be continuing to work on Relational Holism. This has supplanted the Physics thread. Which has been locked.

[There should also be a Hit & Run, Sniping thread, for those who just can't contain or restrain themselves. On every other thread there will be rules of engagement that will be worked out in the course of time. I will need to negotiate these rules with the admins. I am still allowed to edit messages in my section, but can no longer delete. I have always used the edit function sparingly, mainly just to reduce unnecessary quoting of other messages.]

[Relational metaphysics](#) is listed in the Topical Index, where I associate it with Coherence. Wiki has a surprisingly sparse coverage of Relationalism that is mainly devoted to its specialized use in the philosophy of space & time. Holism only fares slightly better.

A key aspect of relational holism is to be found in Realism, or rather the [challenges](#) to it. The BPWH might be described as Agape Monism. Love is the one substance and glue. Everything else is a reflection of that substance. This view is usually paraphrased as God is Love. The philosophy of [Truth](#) provides another perspective on Realism and Relationalism. I am a nominalist or relativist about everything except love.

The point is that there is no middle ground between the two extremes of reductionism and holism.

Reductionism has played itself out over the last several centuries. There is no reasonable way to amend reductionism. Holism, practically by definition, cannot be appended to reductionism, especially not if God is involved.

The point is that Science has painted itself into an logical dead-end. The only way out of this impasse is to take a holistic leap. The BPWH professes to provide the simplest alternative to scientific reductionism.

The layperson fails to grasp the degree to which science is committed to analysis and reduction. This is the Dirty Secret of science.

They fail to comprehend the fragility of scientific materialism. Scientific apologists and popularizers go to great lengths to downplay this limitation. The layperson is not apprised of the desperation that motivates the debunkers of all things that smack of departures from the reductive Agenda.

How does the UT vs. ET issue line up with holism?

7/4

Happy Independence Day!

And back to business, as not quite usual.

What I failed to mention yesterday was a possibly disturbing piece of OM politics.

The Admins were polled concerning my display of rudeness to another member. JR/RD was assigned to notify me of the result. Only one other admin was identified to me. This was the person who I believe was most instrumental in bringing me to OM. He was the one who contacted CK about me, after Ryan Dube declined that offer. He and I continued to converse frequently up until the point that he was about to initiate a business deal with another PoI. Then our conversation dried up. This bothered me at the time, but I let it pass and continued on my way at OM.

On Wednesday I was informed that this person had requested that I be suspended for 7 days, since this was my second offence. So now I have to wonder what is going on behind that administrative

curtain.

There is another possibly related issue. The admin who was most involved in my latest incident is a person, recently arrived at OM, who identifies himself as Great Waller, and who sports an ET/Grey avatar. I understand that he is a Christian of Chinese descent who is a Canadian citizen. Why do I mention this? Back up to my '7 day' admin. The PoI has been majorly involved with the Chicoms for the past two decades. JR also has a continuing business deal with them. My three principle counterparts at OM may all have strong ties to China.

Meanwhile my 'handler' is most widely know as the Officer who blew the whistle on the Hughes/China missile collaboration that had gotten too chummy. But I was told by CK before the fact, and another person after the fact, that this incident was something of a ploy, and I have speculated elsewhere on this site about the possible nature of this ploy.

I have had my own independent/family dealings with China, back in 1981. Also, over 10 years ago, I had communications with both the Chinese embassy and the Falun Gong, per the instructions of CK.

So, yes, I have been highly sensitized to the China 'card' in all of this. And I have not even mentioned my long-term involvement with CK in his Save the Tigers campaign that was directed against the poaching of tiger parts, poaching that is underwritten mainly by the magical interests of the Chinese Tongs/Triads.

If I am to be subjected to the close supervision of Great Waller, am I not owed some further explanations about his beliefs and background?

Then, as mentioned yesterday, there was the recent arrival at the forum of someone claiming a Jesuit connection, who said that he had been asked to tell me that someone else was 'very angry' with me.

Rules about vulgarity are very easy to specify. But what about harassing and disruptive behavior? Where are those specified?

In the meantime I am left to wonder about any 'three-strike' rule. My not so loyal opponents will be gunning for me, for sure.

Am I defenseless? I could make a federal case out of this. Try to become less vulnerable. Make an effort to find other, more secure accommodations on the Internet.

Or, I could play it cool. I'm sure that is what CK would advise. The whole point of the R&D show has been to play it cool. And, yes, play it down. If we had not been cool and low-profiled, this Disclosure operation would have blown up a long time ago. Kicking down these cobblestones, we've got to make this morning last. This delicate flower will surely wilt in the noonday sun. A probably heartbreaking effort has gone into this very studied spontaneity and casualness. All good things must end, so let us not rush it, say I into the sound of silence, pronoid to a fault. The hopes and fears of all the years.....

Yes, I am not treated very well. I am tolerated as the mascot, sidekick to the serious, grown-ups only, Disclosure Team. Ask us no questions and we'll tell you no lies. And be sure to mind your P's and Q's. How else could it be? I can't imagine.

Back to holism.....

Let me just add that for all the heck that I know, there may not even be a team, that is in the normal

sense of the word. My experience of twisting in the wind might be more the rule than the exception. Ever hear of the spy who came in from the cold? We haven't. We are all strangers in a strange land. It is the hidden-hand of the soap-opera (random-walk?) fame that guides our individual (converging?) paths. This is an even more lonely thought. Spare me the gruesome details. It can be comforting to think there is a smoke-filled room somewhere, where the big deals of the MJ-12/Bilderberger genre go down, and the waitresses ply the drinks. Oh, well. We are all allowed our conspiratorial dreams and nightmares. If we knew the real system, we'd mess it up, for sure.

Just in is a [response](#) from an OM. admin.

My dearest Dan,

I've just read your blog and I feel as though I must comment upon the posts you have made on the blog.

I believe that the reasons behind the wheels coming off the track this past week on your board at OM had as much to do with the fact it occurred after 5:00 PM then anything else. Your perceptions of reality seem to have become effected by your penchant for the grape and have resulted in a skewed view of reality.

Your suspension for three days was not a result of a ChiCom conspiracy but rather due to your inappropriate name calling and racial slurs directed at other members of the forum. Despite the great degree of latitude allowed to posters in your board you managed to find that very distant line and crossed it with little regard for anyone else save yourself. Then you have the audacity to blame others for driving you to this point?

Try looking within yourself, Dan. Constant self-proclamations regarding you as being anything and everything from the Second Coming to the anti-Christ are statements which are going to draw an emotional response from others. If these are nothing more then attempts to create discussion and to draw attention to your board then that is all fine and good. But if you truly believe these things, then Ron's reference to "witches" and others claiming that you are under demonic possession are logical assumptions on the parts of the accusers!

I challenge you to lay off the grape (and hops, barley, malt, rye or any other fermented grain or fruit) for the next week and then come back and re-read your posts and this e-mail once more. I guarantee that you will be able to view them through a different light.

[...]

Fair enough, if this affair has absolutely nothing to do with eschatology. However, as long as eschatology is probably or even possibly on the table, then whatever this is, it is not Internet chatter as usual.

Yes, I take the cosmic situation seriously, and I take myself as a serious player within that drama. What is the point of playing this game if we don't take it and ourselves seriously?

That being said, I go to considerable lengths to keep the conversation light and up-beat when possible.

Yes, I am quite aware that I will be a target for any and all kinds of harassment. Am I afforded any defense? What will be the rules regarding harassment and preventing individuals from ganging up on opportune targets, and generally being disruptive in their comments.

This 'game' we are playing could take a turn toward the serious side at any point. When that happens, what we are seeing now will just be the proverbial Sunday School picnic. Are there no thoughts about such a contingency? Or am I the only one that does take any of this seriously.

If OM wants to be a serious player, and I hope that it will, then we do need to give this some thought.

7/5

Dan the Repo Man.....

(Am I Dan pretending to be God, or God pretending to be Dan? If the pretense is adequate, it may not make much difference.)

In any case, I am here to negotiate the repossession of your souls.

How will this work? There are two options:

1.) The Grim Reaper:

Revelation 14:

¹⁸ And another angel came out from the altar, which had power over fire; and cried with a loud cry to him that had the sharp sickle, saying, Thrust in thy sharp sickle, and gather the clusters of the vine of the earth; for her grapes are fully ripe.

¹⁹ And the angel thrust in his sickle into the earth, and gathered the vine of the earth, and cast it into the great winepress of the wrath of God.

²⁰ And the winepress was trodden without the city, and blood came out of the winepress, even unto the horse bridles, by the space of a thousand and six hundred furlongs.

Or,

2.) By means of our collective Incarnation of the Spirit of Truth.

Allow me, please, to recommend to you option #2.

The existence of the second option presupposes that there is a living and livable Truth.

It presupposes that the Truth is whole and organic. I am here to demonstrate these suppositions to you.

The end result will be an alignment between the Cosmic Mind and our Global Mind. We will be integrated into the mind of God, as if we were his brain cells. This is the Noosphere/Omega anticipated by Teilhard, but coming a million years sooner than he expected, thanks in no small measure to the rapid advent of the Internet. Good work, you all!

Yes, there will then be a New Heaven and a New Earth. The Earth will be reenchanting, the boundaries of our reality will become increasingly porous. As the Earth becomes a cosmic Portal, we will awaken to a new Dreamtime. Time will lose its linearity, and so will space.

From whence will come the whole Truth? Will it come from the stars or from our own hearts and minds.

[9/7](#)

It has been more than two months. Is that a new record?

My interest is focused on next month. In particular, we wonder about an October Surprise, relative to the upcoming election.

GR has been loosed upon the Source, about whom you may consult OM. Progress continues to be made on that score.

This is related to the alleged UN story, but that story had had little traction in the past seven months, since it was first broached by the source. Instead, the real story is the source himself.

We know that he met with Bruce M. about six months ago. He met him in his Navy uniform, bearing credentials and a photo album that included his time as a pilot in the first Gulf war.

I have been informed that a former Navy officer surfaced with ufo stories about three years ago. He had attended one or more ufo forums. He had become a government contractor who was part of a ufo working group. The story went away. The similarity of the stories makes it unlikely that they are unrelated. The new source has attended more than one ufo forum in that time frame. It is a story that would not go unnoticed in these precincts.

We await further verifications within the next few days and weeks. I have to decide when to contact CK.

What is it about this source that would most likely rise to the level of a wire service story?

9/8

But our source was definitely wearing a uniform when he met with Bruce. Could he have been 'recommissioned', or is this part of the ploy or cover? There is a very significant discrepancy in a statement he made about his background. Was this a careless fabrication or a deliberate plant?

I had not been aware of his educational claims. Claiming a science background fits with the attempt to have his story conform to the Nuts&Bolts aspect of the core story. But then he goes on to take pride in his people skills. His choice of interlocutors also fits with a casual cover.

I'm still not able to make sense of this seemingly casual, yet officially backed, operation. It could be an effort to forestall something more serious that might rise to the level of having an influence on the election. There is a nearly transparent pandering to the predilections of retail ufology. It has been a significant distraction here at OM.

If we did make a stink about this episode, it could be used as an excuse to go dark. Even distorted light is probably better than no light. The stimulus is calibrated to producing a small, containable effect, nothing to be taken too seriously. It would be a run-of-the-mill pot-stirring, except for the presence of the military official.

Does the Navy Dept. not expect to receive inquiries? What are their options? Where is their plausible deniability? Do we have the wherewithal to get a news story out of a denial? To get a news story we would have to demonstrate a clear pattern of officially sponsored disinformation. This has already been done in numerous publications. Does this incident rise far enough above the norm to warrant a new story? It may well not.

Would we not be remiss in attempting to get some resolution to this story? It is up to GR to have the first refusal on these options, and that would be at least another couple of weeks away. Compare the efforts that have gone into resolving the Drone case.

One possibility is that this might have been another test of ufological networking. I can't imagine what significant new information might be gleaned, however. So it may just be that the network is to be exercised once or twice a year to keep it operating smoothly, anticipating some future need. And, of course, these manufactured incidents may help to divert attention away from anything more real.

The failure of this latest episode to gain traction, puts us back on hold for at least another eight months or ten years. Of course there will continue to be periodic shakings of the ufological tree.

9/9

I remain perplexed by the Source. I can see no rhyme or reason for it, other than being related to disclosure. Clearly there are discrepancies and inconsistencies in his many stories. The only thing that is not in doubt is his status as an officer of the USN, and that the Navy must be aware of his actions, as reported on frequently at OM.

Then yesterday a colleague of CK's reported that he had left his job. Today the rumor was contradicted. Does any of this tie in with the impending change of administrations? Is there a jockeying for position, pending another repositioning? Are the phenomenology boys keeping their options open?

I would wager there would be a reasonable chance of getting a news story out of this, even if only about an attempt by the Navy to exculpate themselves in this affair, if we just use the existing resources at OM. This would be true even if we could only muster a fraction of the follow-up that we had with the Drones, which garnered significant coverage.

But as long as the Source keeps spinning tales, there will be less incentive to bring this back to the Navy Dept. But where are these stories going to lead? They are reputedly about ongoing contact and political events. Expectations have been raised. It will not be easy to meet those expectations, going forward. Is the Navy getting itself backed into a corner? Hardly by accident. GR's involvement presents another decision point for them. Are they prepared to bet the farm on this affair? That remains a stretch.

We should get a good idea today about whether this story will be taken to the next level. What are the odds? Is this a periodic test of the containment mechanisms? It could also provide a measure for our readiness.

Suppose there is a go decision. Who would be consulted? The White House? Anyone in Congress? Just the DNI? Suppose the WH was not consulted. Would they attempt to maintain deniability, or try to get out in front of it? They might only have a few days to decide. It would probably have to be presented to them as a *fait accompli*. If they said no, the Navy would be stuck with an embarrassingly transparent denial, which would only raise more questions. Insiders would have to be fired, raising still more questions. If this is anything serious, then we have likely already passed the point of no-return.

9/10

It is human nature to want to string things along, especially when you are riding in the catbird seat. This could be said about myself, but it does not apply very well.

What more do we stand to learn in this situation? We might obtain confirmation of the 'UN' meeting, but it turns out not to have been an official meeting. It could have just been a hobbyist gabfest, *a la* the Aviary, with a foreigner or two.

OM could continue to be a conduit for inside info: more tidbits off the table. But how much of the stuff that comes our way will be disinformation? And what will we do with this (dis)information? Just keep sitting on it? Are we serving as a significant focus group for the Navy? If all they wanted

was a focus group, then why come to a public forum?

Where else is there to go with this information, other than to the public? How much longer do we wish to sit on it? The very first thing that the public/press will do is go to the Navy Dept. to seek confirmation. It comes down to a question of timing. Is the Navy unaware that there is an election in progress? Do they have any other time frame in mind?

At the very least, these issues and questions should be posed to the Source. Should they not also be posed to CK? When?

Is it not time to drop the pretext that our Source is on the lam wrt the Navy proper? But then what about his MIB stories? Can they still make sense? It's just a battle of the internal factions. Some folks are dragging their feet more than others.

I'm inclined to take these issues back to the forum.

5/7/08

The Second Coming:

for all us Dummies

For more detailed explanations of what follows see:
<http://home.comcast.net/~dantsmith/index06.htm#BPW>

Why not Come?

- God belongs in heaven.
 - But can't she go wherever she darn pleases?
- God ought to have better things to do.
 - Being a Creator is a big deal for God.
 - She has put a lot of eggs in her Creation basket, and she will attend to it carefully.
- There is no God.
 - Ok, hold that thought, and we'll get back to you in a jiffy.

Why come?

- If you were the Creator, would you not want to participate in your Creation to a maximal degree?
 - If Creation were truly important to you, would your not want to pour yourself into it as fully as possible?

But why should we seriously consider the God hypothesis in the first place?

- Modern science and technology are here to stay.
 - And so is postmodernism
- Postmodernism provides only an incoherent pluralism.
- Many of us seek a higher synthesis in order to bring meaning and coherence to our world.
 - The pluralists rightly criticize any such move as being likely to foster theocratic and totalitarian tendencies.
- There is only one way out of this bind:
 - A rational, coherent synthesis of the various worldviews

A Rational Synthesis?

- Most everyone scoffs at this possibility.
 - Fact is they have never tried.
- The last serious attempt was by GHW Hegel (1770-1831).
- But how will we know if we don't even try?
 - This dummy rushes in where angels fear to tread.
- Here is the result of a thirty year synthesis, and the longer I work on it, the simpler it gets, q.v.

A Logical Synthesis: Step by Step

- First comes a switch from the correspondence theory of truth to the coherence theory of truth.
 - This is the single most important and far reaching step.
 - If you can grasp this, everything else will follow rather easily, and it is actually very simple, even though its ramifications are earthshaking.
- Correspondence theory of truth:
 - Reality is simply a collection of facts.
 - The facts need not cohere or have any other pattern except by accident.
- Coherence theory of truth:
 - There is no such thing as an isolated fact, just as there is no such thing as an isolated meaning.
 - In as much as reality is cognizable, so must it be coherent.
 - Epistemology and ontology cannot ultimately be separated.
 - There is a reason for everything.
 - This is true for physics, as well, with the possible exception of the initial conditions, e.g. the Big Bang.
- The next step?
 - There is no next step.
 - Everything else is just an elaboration of this one grand departure.
 - And what is the ultimate coherence?
 - Can it be anything less than love, truth and beauty?

Putting all our Eggs in one Basket?

- The main point is that we didn't put them there: they were already there.
- This is best seen from the perspective of mathematical physics.
 - In physics, this coherence is known as the Unreasonable Effectiveness of Mathematics.
 - This is why physicists can cogently speak of a Theory of Everything.
 - This fact motivates us to seek a higher coherence.
- The main thing missing from the prospective physical coherence is the mind.
 - Our theory of everything must include the mind.
 - The mind/brain problem is universally regarded as the greatest mystery in the world.
 - It was over three hundred years ago that Rene Descartes (1596-1650) announced the separation of mind and matter.
 - This act of great intellectual convenience triggered the Scientific and Technological revolutions and made Democracy possible by also separating the Secular from the Sectarian realms.
 - We can easily see why the Postmodernists are so reluctant to even reconsider Descartes' serendipitous act.

Damned if we do, damned if we don't

- The postmodernists would like to see the present state of pluralism continue indefinitely.
- In a world being shrunk by a rapidly expanding communication technology, all our disparate ideas and traditions are being thrown together into a disorienting, alienating cacophony.
- How can we hope to survive together on this crowded and shrinking planet if we have no common ground for communication, no common worldview?

A Quantum Leap to Synthesis?

- Nothing less than a quantum leap, an unprecedented gestalt switch, could now bring coherence out of the present chaos of ideas.
- Nothing less than a cosmic vision will suffice.
- Let us consider the visions of coherence:

Visions of Coherence

Yin-yang of Taoism

Buddhist mandala

Hindu Creator: Vishnu

Kabbalah: Sephiroth

'Tree of life'

Leonardo's *Vitruvian Man*

with sacred geometry

More visions

Michelangelo's *Pieta*

Ouroboros

Before the fall

Pythagorean visions of coherence

Mandelbrot set

$$\sum_{n=0}^{\infty} (-1)^n (s+2n) \frac{s^{(n)} (x+y+z+u+2s+1)^{(n)}}{(x+y+z+u-s)^{(n)}} \prod_{x,y,z,u} \frac{x^{(n)}}{(x+s+1)^{(n)}}$$

$$= \frac{s}{\Gamma(s+1)\Gamma(x+y+z+u+s+1)} \prod_{x,y,z,u} \frac{\Gamma(x+s+1)\Gamma(y+z+u+s+1)}{\Gamma(z+u+s+1)},$$

One of hundreds of formulas to be found in Ramanujan's note books

Archetypes of Unity

- Ouroboros (Orb)
 - Primal psychic circuit, zodiac, bootstrap
 - Later it will be argued that X & Orb are closely identifiable.
- MDX/Z
 - Matrix (primal potentiality), Dialectic, Logos/zodiac
 - trinity of :: Mother, Spirit, Son(s)
 - $e^{i\pi} = -1$
 - Mandelbrot
- AZO/X/QRP
 - Alpha, Zodiac, Omega/Logos/Quantum, Reproduction, Pi
 - Macrocosm/microcosm connected by the Logos
- Mb:S::An:X
 - Mandelbrot set : Srinivasa Ramanujan :: Anthropics : Christos

The role of the archetypes

- In the first instance, the archetypes and the previous 'visions' are meant to guide our imaginations toward coherence.
- In immaterialism the archetypes replace atoms as the foundation of reality.
- The first thing to recognize is that coherence demands an organic unity of the archetypes.
 - We aspire to a Pythagorean harmony rather than a Platonic absolutism.
 - This is essential to teleology and restitution.

The 'emergence' of the archetypes

- The organic unity of the archetypes is ensured by keeping in mind their essential relations to each other and to a common source or ground of being.
- The Matrix is that Source.
 - It is potentiality.
 - The BPW is the one rational realization of that potentiality.
 - The Best Possible World also conforms with the One World hypothesis (see later).
- The dynamic element is the dialectic.
 - It is the source of multiplicity.
 - It is the cosmic bootstrap, which we also experience as love.
- The christos/logos is the original thesis and archetype.
 - It is necessarily the Alpha and Omega, Creator and Telos.
 - In some strong sense, the symmetry breaking of the Creation event is the antithesis, and the eschatological restitution of Creation, i.e. apokatastasis, is the cosmic synthesis.

AZO/X/QRP

- This is the macro and micro-cosm connected by the logos.
 - In other words, it is the cosmic and mundane circuits that are thus connected.
- The Ouroboros (Orb) is represented in part as the zodiac. The Alpha and Omega are the head and tail of the cosmic serpent.
 - It is X that breaks the circular symmetry in the act of Creation.
 - One could say that X is the primal observer, taking the measure of itself and the Orb.
 - That is one reason to identify pi and the christos.
- QRP is the projection of the broken cosmic circuit into the linear dimensions of space and time.
 - Out of this comes the Monster Group that determines the Anthropic attribute of physics.

Mb:S::An:X

- These archetypes demonstrate a relation between the personal and impersonal side of God.
- The Mandelbrot is the image of the cosmos/god as imbedded in the number system.
 - All spiritual traditions agree that god/cosmos is reflected everywhere.
 - Srinivasa (S) Ramanujan, more than anyone in history, was able to project the pure mathematical logos out of his mind.
- The other side of this coin is seen in the second pair.
 - This is the personal side of god/cosmos.
 - The Anthropic (design) Principle is largely contained in the Monster Group, second only to the Mb in complexity.
 - The personal logos/christos, X, is reflected in the organic nature of math.
 - It is further reflected in the organicity of the microcosm.
- Perhaps these are two sides of a larger circuit.
 - On the one hand there is math coming out of the mind, and on the other the mind emerges from the math.
 - It is the christos that encompasses the whole dynamic of Creation.
 - Thus may the X and the Orb be closely identified.

X & Orb

- This brings us near to the ultimate mystery of being.
- The primal trinity of MDX/Z are coeternal.
 - Taken together they are the Ouroboros: Orb of being.
- In breaking the symmetry of the Orb, X is effectively sacrificing itself on behalf of Creation.
- Resurrection, restitution and apokatastasis inevitably follow, as the symmetry is reconstituted.

Ugly Facts?

- "The great tragedy of science -- the slaying of a beautiful hypothesis by an ugly fact."
 - Thomas Huxley (1825-1895)
 - Perhaps the theory in question was not sufficiently coherent.
- Yes, we do have to tough it out.
 - One needs a mustard seed of faith and confidence.
 - Cosmology is not for the faint of heart.
- Scientific materialism has been on a roll for more than three centuries.
 - There are many signs, however, that its grip on our imaginations is waning.
- We can sit on our hands, or we can start figuring out how to transcend its increasingly obvious limitations.
- Will it be revisionism or revolution, i.e. a gestalt switch?

The Way Forward?

- No point in rolling back the clock into dualism.
 - We've been there, done that!
- The only way forward is into a non-material monism.
- This quantum leap forward will necessarily have a spiritual content and so will impact every religious tradition.
 - As such, it will come as a revelation of 'biblical proportions'.
 - There will surely be a significant messianic component.
 - This vision will not emerge from a committee.
 - Once again, the faint of heart need not apply!
 - Fools rush in? Yet, according to Google there are not many who are rushing down this particular path.

Immaterialism

- This is a hard pill to swallow, especially for us in the western tradition.
- We have taken matter more seriously than others.
 - Ironically, this is due in no small part to the Incarnation.
 - Materialism, in a dualist context, is almost a part of our catechism.
- How can we give up that absolutism without devaluing the world and our lives?
 - This is too often the case with pantheism.
 - We replace pantheism with coherentism.
 - Then we replace atoms with archetypes, taking care to treat the archetypes as part of a Pythagorean harmony, and not as Platonic absolutes.

Dinosaurs and Stars

- If we can choose the archetypes to be robust, the rest of Creation will spin itself off.
 - God does not have to place every hair on every head, or every star in the sky.
 - The same is true for the Mandelbrot.
 - It operates under its own internal logic and coherence.
- God sets the example.
 - The example is to love and to strive for perfect understanding through time, knowing that perfection is never absent.
 - Mainly it is in this sense that time is an illusion.
 - It is mainly our understanding of perfection that is to be perfected.
 - The Second Coming triggers the final quantum leap in our understanding.
 - God calls the tune. God is the tune.
 - Creator and Creation are mutually essential.
 - We cannot understand the part without the whole, nor the whole without the parts.
 - One hair cannot be disturbed without disturbing the rest, as with the Mandelbrot.

Omega

- The critical idea here is apokatastasis.
 - This is the restoration/restitution of all things in God.
 - This is universal salvation.
 - It is now considered heresy.
 - Originally it was the orthodoxy of the Orthodox church.
 - All dualisms and paradoxes are transcended.
 - It is the temporal completion of Creator, Creation and history.
 - It is the reconstitution of the broken symmetry.
- The Omega is the beginning of eternity.
 - Eternity is not endless time.
 - It is the dimensions beyond space and time.
 - It is a timeless ending/beginning.
 - It is the ouroboros in its entirety.

The One World Hypothesis

- Rationalism demands a teleology.
- Teleology requires a OWH.
- Teleology is a concomitant of monotheism.
- All four of these concepts should be treated as virtually synonymous.
- All of these are essential to Coherence.
- Can this One World be anything other than the Best Possible World?

The Millennium

- The BPWH envisions pre-millennialism.
 - The Best Possible World hypothesis envisions the completion of God's salvific, sacrificial errand into Creation.
 - This enables the establishment of God's eschatological kingdom, traditionally to last a thousand years.
 - The actual time frame is likely to be substantially shorter rather than longer.
- And what may we expect of the Millennium?
 - It is a period of realignment between our hearts and intellects, after the long drought of materialism.
 - We finish our business here and prepare to transcend the barriers of space and time.
 - This may include the return of unprepared souls.
 - There will be a gradual breaking down of barriers between our individual egos, and between our separate states of consciousness.
 - Codified society gives way to organic community.

Relationalism: into the Millennium

- Relationalism is the foundation of Coherentism
 - To be is to relate.
 - The most real is the most related.
 - Rather than a chain of being, there is a network of being.
- Permit me to anticipate criticism from the conservatives, legalists and absolutists.
 - I say relationalism.
 - They hear 'relativism, contextualism, situationalism', i.e. 'everyone does their own thing'.
- The Millennial Aeon is a 'gathering of the tribes'.
 - The structured, stratified, codified order is replaced by the organic and communal, if we dare use that word.
 - The exemplars here are the early Christian communities.
 - These were extended, mostly non-biological, families.
 - They were mainly urban.
- Utopianism?
 - Legislating or codifying the Millennium is oxymoronic.
 - God's kingdom grows only from the inside out.
 - The true kingdom is always within.
 - We evolve into the body of Christ.
 - That is the eschaton.

Second Coming?

- By all accounts the prophetic tradition remains unfulfilled.
- Even the pantheist traditions envision a nadir of spirituality followed by a return to a golden age inaugurated by an avatar.
- The fulfilling of the prophecies is the prerequisite of the Millennium.
- The christocentric/incarnational hypothesis is essential to cosmic coherence and to its concomitant of an eschatological restitution.
 - The illogic of a dualistic monotheism had its historical purposes, but now we are poised to transcend dualism.

Immaterialism & physics

- Materialism and immaterialism are antithetical.
- In contrast, physics and the BPWH have Pythagoras in common.
 - This is the notion of a cosmic harmony based on the mathematical attribute of cosmic intelligence.
 - The only issue is which is God and which is the tail. In the BPW, the mathematical attribute is the tail.
 - The Anthropic Principle demonstrates that it is the personal side of God that is dominant.

Navigation button implementation

There are 2 types of buttons: ImgBtn, TxtBtn
 implemented as function objects. They share
 a similiar interface so the event handlers
 can call SetActive, for example, on a button=20
 object without needing to know exactly=20
 what type of button it is.

Context menu implementation

_CM() is the function that's hooked up to the oncontextmenu event. Once we're asked to show the menu, we first build it by creating DIVs on-the-fly. Then we position it=20 within the screen area so it doesn't get clipped.

Creating the DIVs using createElement() means we don't have to write out any extra HTML into the slide HTML files.

foster theocratic and totalitarian tendencies.</li>
</ul>
<li>There is only one way out of this bind:</li>
</ul>

```

A rational, coherent synthesis of the various worldviews

Most everyone scoffs at this possibility.

The last serious attempt was by GHW Hegel (1770-1831).

But how will we know if we don't even try?

This dummy rushes in where angels fear to tread.

I've spent at least thirty years on this synthesis, and I find that the longer I work on it, the simpler it gets.

A Rational Synthesis?

A Logical Synthesis: Step by Step

First comes a shift from the correspondence theory of truth to the coherence theory of truth.

This is the single most important and far reaching step.

If you can grasp this, everything else will follow rather easily, and it is actually very simple, even though its ramifications are earthshaking.

Correspondence theory of truth:

- Reality is simply a collection of facts.
- The facts need not cohere or have any other pattern except by accident.

- Coherence theory of truth:

- There is no such thing as an isolated fact, just as there is no such thing as an isolated meaning.
- In as much as reality is cognizable, so must it be coherent.
- Epistemology and ontology cannot ultimately be separated.
- There is a reason for everything.

- This is true for physics, as well, with the possible exception of the initial conditions, e.g. the Big Bang.

- The next step?

- There is no next step.
- Everything else is just an elaboration of this one paradigm shift.

mind.

- Our theory of everything must include the mind.
- The mind/brain problem is universally regarded as the greatest mystery in the world.
- It was over three hundred years ago that Rene Descartes (1596-1650) announced the separation of mind and matter.
- This act of great intellectual convenience triggered the Scientific and Technological revolutions and made Democracy possible by also separating the Secular from the Sectarian realms.
- We can easily see why the Postmodernists are so reluctant to even reconsider Descartes's serendipitous act.

8 Damned if we do, damned if we don't - The postmodernists would like to see the present state of pluralism continue indefinitely. - In a world being shrunk by a rapidly expanding communication technology, all our disparate ideas and traditions are being thrown together into a disorienting, alienating cacophony. - How can we hope to survive together on this crowded and shrinking planet if we have no common ground for communication, no common worldview?	9

m.

- This is essential to teleology and restitution.

15 The emergence of the archetypes - The organic unity of the archetypes is ensured by keeping in mind their essential relations to each other and to a common source or ground of being. - The Matrix is that Source. - It is potentiality. - The BPW is the realization of that potentiality. - The dynamic element is the dialectic. - It is the source of multiplicity. - It is the cosmic bootstrap, which we also experience as love. - The christos/logos is the original thesis and archetype. - It is necessarily the Alpha and Omega, Creator and Telos. - In some strong sense, Creation is the antithesis, and the eschatological restitution of Creation, i.e. apokatastasis, is the cosmic synthesis.	16 The

href=3D"javascript:GoToSld('slide0015.htm');" id=3DPPTL16>Ugly Facts?=</div>

<div id=3DPPTC16 class=3DCTxt style=3D'display:none'>

"The great tragedy of science -- the slaying of a beautiful hypothesis by an ugly fact."

Thomas Huxley (1825-1895)

Perhaps the theory in question was not sufficiently coherent.

Yes, we do have to tough it out.

One needs a mustard seed of faith and confidence.

Cosmology is not for the faint of heart.

Scientific materialism has been on a roll for more than three centuries.

There are many signs, however, that its grip on our minds is waning.

We can sit on our hands, or we can start figuring out how to transcend

its increasingly obvious limitations.

Will it be revisionism or revolution, i.e. a paradigm shift?

</div>

</td>

<td>

<div id=3DPPTP17 class=3DPPTxt>The Way Forward=?</div>

<div id=3DPPTC17 class=3DCTxt style=3D'display:none'>

No point in rolling back the clock into dualism.

We've been there, done that!

The only way forward is into a non-material monism.

This quantum leap forward will necessarily have a spiritual content = and

so will impact every religious tradition.

[Dinosaurs and S=tars](javascript:GoToSld('slide0018.htm');)

- If we can choose the archetypes to be robust, the rest of Creation will spin itself off.
- God does not have to place every hair on every head, or every star in the sky.
- The same is true for the Mandelbrot.
- It operates under its own internal logic and coherence.

- God sets the example.
- The example is to love and to strive for perfect understanding through time, knowing that perfection is never absent.
- Mainly it is in this sense that time is an illusion.
- It is mainly our understanding of perfection that is to be perfected.
- The Second Coming triggers the final quantum leap in our understanding.
- God calls the tune. G=od is the tune.
- Creator and Creation are mutually essential.
- We cannot understand the part without the whole, nor the whole without the parts.
- One hair cannot be disturbed without disturbing the rest, as with the Mandelbrot.

20

Omega></div>

- The critical idea here is apokatastasis.
- This is the restoration/restitution of all things in God. This is universal salvation.
- This is now a heresy.
- Originally it was the orthodoxy of the Orthodox.
- All dualisms and paradoxes are transcended.
- This is the temporal completion of Creator, Creation and history.

- The Omega is the beginning of eternity.
- Eternity is not endless time.
- It is the dimensions beyond space and time.
- It is a timeless ending/beginning.
- It is the ouroboros in its entirety.

</div>
</td>
</tr>
| </td> - The BPWH envisions pre-millennialism. - The Best Possible World hypothesis envisions the completion of God's salvific, sacrificial errand into Creation. - This enables the establishment of God's eschatological kingdom, traditionally to last a thousand years. - The actual time frame is likely to be substantially shorter rather than longer. - And what may we expect of the Millennium? - It is a period of realignment between our hearts and intellects, after |

http://www.bestpossibleworld.com/TheSecondComing.mht[28/07/2013 18:14:00]

the long drought of materialism.

- We finish our business here and prepare to transcend the barriers of space and time.

- This may include the return of unprepared souls.

- There will be a gradual breaking down of barriers between our individual egos, and between our separate states of consciousness.

- Codified society gives way to organic community.

22

[Second Coming?](#)

- By all accounts the prophetic tradition remains unfulfilled.
- The pantheist traditions envision an eventual collapse followed by a return to a golden age inaugurated by an avatar.
- The fulfilling of the prophecies is the prerequisite of the Millennium.

- The christocentric hypothesis is essential to the incarnational requisite of rational monism and its concomitant of an eschatological restitution.

- The illogic of a dualistic monotheism had its historical purposes, but now we are poised to transcend dualism.
