At 7:45 p.m. on 27 October, 1975, Staff Sgt. Danny K. Lewis was patrolling the weapons dump when he saw an unidentified aircraft nearing the north perimeter of Loring at a low altitude of about 300 feet. Lewis noticed what appeared to be a red navigation light and a white strobe light on the aircraft. As Lewis watched, the craft entered the perimeter of Loring. Meanwhile, in the control tower of the air base, Staff Sgt. James P. Sampley of the 2192nd Communications Squadron was on duty at the radar screen. He got a radar return from an unknown aircraft ten to thirteen miles east-northeast of Loring. Sampley made numerous attempts by radio on all available communications bands, civilian and military, to contact the craft, but he got no response. The unidentified craft began to circle, and came to within 300 yards of the restricted nuclear storage area at a low altitude of 150 feet.

Back at the nuclear weapons dump, Lewis notified his Command Post that an unknown aircraft had penetrated the base perimeter and was within 300 yards of the nuclear weapons area. The base was immediately put on a Security Option 3 alert and Security contacted the tower regarding radar tracking of the aircraft. At 8:45 P.M., Sgt. Grover K. Eggleston began observing the craft on radar from the tower as it began circling ten miles east-northeast of the base. The Wing Commander ordered a ground search and requested air support from Hancock Field, New York and North Bay, Ontario, Canada. Both bases refused to send air support. The Maine State Police and local airport flight services were contacted to attempt to identify the unknown craft, but without results. Intense ground searches produced no results.

The craft continued circling for approximately forty minutes, at which time it broke the pattern and headed toward Grand Falls, New Brunswick, Canada. In the vicinity of Grand Falls, twelve miles from Loring, it vanished from the radar screen. There was no further activity that night, although the base remained on high alert into the next morning. SAC Headquarters was notified.

1. A copy of your letter dated 22 August 1977 was received in this headquarters for direct reply on 19 September 1977. The following Log entries have been extracted for release:

a. NORAD Command Director's Log (1975).

29 October/0630Z: Loring, Maine — Command Director called by Air Force Operations Center concerning an unknown helicopter landing in the munitions storage area at Loring AFB, Maine. Apparently this was second night in a row for this occurrence. There was also an indication, but not confirmed, that Canadian bases had been overflown by a helicopter.

31 October/0445Z: Wurtsmith Michigan — Report from Wurtsmith AFB through Air Force Ops Center - incident at 0355Z. Helicopter hovered over SAC weapons storage area then departed area. Tanker flying at 2700 feet made both visual sighting and radar skin paint. Tracked object 35NM SE over Lake Huron where contact was lost.

1 November/0920Z: Loring — Received, as info, message from Loring AFB, Maine, citing probable helicopter overflight of base.

8 November/0753Z: ~~Wurtsmith~~ Malmstrom, Montana — 24th NORAD Region unknown track J330, heading SSW, 12000 feet. 1 to 7 objects, 46.46N 109.23W. Two F-106 scrambled out of Great Falls at 0745Z. SAC reported visual sighting from Sabotage Alert Teams (SAT) K1, K3, L1 and L6 (lights and jet sounds). Weather section states no anomalous propagation or northern lights. 0835Z SAC SAT Teams K3 and

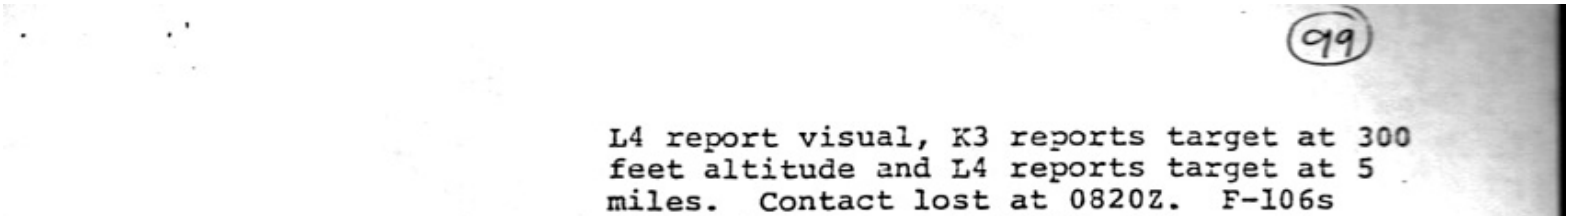
a. NORAD Command Director's Log (1975).

19 October/0630Z: Command Director called by Air Force Operations Center concerning an unknown helicopter landing in the munitions storage area at Loring AFB, Maine. Apparently this was second night in a row for this occurrence. There was also an indication but not confirmed, that Canadian bases had been overflown by a helicopter.

31 October/0445Z: Report from Wurtsmith AFB through Air Force Ops Center - incident at 0355z. Helicopter hovered over SAC weapons storage area then departed area. Tanker flying at 2700 feet made both visual sighting and radar skin paint. Tracked object 35NM SE over Lake Huron where contact was lost.

1 November/0920Z: Received, as info, message from Loring AFB, Maine, citing probable helicopter overflight of base.

8 November/0753Z: 24th NORAD Region unknown track J330, heading SSW, 12000 feet. 1 to 7 objects, 46.46N 109.23W. Two F-106 scrambled out of Great Falls at 0745Z. SAC reported visual sighting Sabotage Alert Teams (SAT) K1, K3, Li and L6 (lights and jet sounds). Weather section states no anomalous propagation or northern light. 0835Z SAC SAT Teams E3 and



returned to base at 0850Z with negative results. 0905Z Great Falls radar search and height had intermittent contact. 0910Z SAC teams again had visual (Site C-1, 10 miles SE Stanford, Montana). 0920Z SAC CP reported that when F-106s were in area, targets would turn out lights, and when F-106s left, targets would turn lights on. F-106s never gained visual or radar contact at anytime due to terrain clearance. This same type of activity has been reported in the Malmstrom area for several days although previous to tonight no unknowns were declared. The track will be carried as a remaining unknown.

b. 24th NORAD Region Senior Director's Log (Malmstrom AFB, Montana).

7 Nov 75 (1035Z) - Received a call from the 341st Strategic Air Command Post (SAC CP), saying that the following missile locations reported seeing a large red to orange to yellow object: M-1, L-3, LIMA and L-6. The general object location would be 10 miles south of Moore, Montana, and 20 miles east of Buffalo, Montana. Commander and Deputy for Operations (DO) informed.

7 Nov 75 (1203Z) - SAC advised that the LCF at Harlowton, Montana, observed an object which emitted a light which illuminated the site driveway.

7 Nov 75 (1319Z) - SAC advised K-1 says very bright object to their east is now southeast of them and they are looking at it with 10x50 binoculars. Object seems to have lights (several) on it, but no distinct pattern. The orange/gold object overhead also has small lights on it. SAC also advises female civilian reports having seen an object bearing south from her position six miles west of Lewistown.

7 Nov 75 (1327Z) - L-1 reports that the object to their northeast seems to be issuing a black object from it, tubular in shape. In all this time, surveillance has not been able to detect any sort of track except for known traffic.

7 Nov 75 (1355Z) - K-1 and L-1 report that as the sun rises, so do the objects they have visual.

7 Nov 75 (1429Z) - From SAC CP: As the sun rose, the UFOs disappeared. Commander and DO notified.

L4 report visual, K3 reports target at 300

feet altitude and L4 reports target at 5 miles. Contact lost at 0820Z. F-106s returned to base at 0850Z with negative results. 0905Z Great Falls radar search and height had intermittent contact. 0910Z SAC teams again had visual (Site C-1, 10 miles SE Stanford, Montana). 0920Z SAC CP reported that when F-106s were in area, targets would turn out lights, and when F106s left, targets would turn lights on. F-106s never gained visual or radar contact at anytime due to terrain clearance. This same type of activity has been reported in the Malmstrom area for several days although previous to tonight no unknowns were declared. The track will be carried as a remaining unknown.

b. 24th NORAD Region Senior Director's Log (Malmstrom AFB, Montana).

7 Nov 75 (1035Z) - Received a call from the 341st Strategic Air Command Post (SAC CP), saying that the following missile locations reported seeing a large red to orange to yellow object: M-1, L-3, LIMA and L-6. The general object location would be 10 miles south of Moore, Montana, and 20 miles east of Buffalo, Montana. Commander and Deputy for Operations (DO) informed.

7 Nov 75 (1203Z) - SAC advised that the LCF at Harlowton, Montana, observed an object which emitted a light which illuminated the site driveway.

7 Nov 75 (1319Z) - SAC advised K-1 says very bright object to their east is now southeast of them and they are looking at it with 10x50 binoculars. Object seems to have lights (several) on it, but no distinct patern. The orange/gold object overhead also has small lights on it. SAC also advises female civilian reports having seen an object bearing south from her position six miles west of Lewiston.

7 Nov 75 (1327Z) - L-1 reports that the object to their northeast seems to be issuing a black object from it, tubular in shape. In all this time, surveillance has not been able to detect any sort of track except for known traffic.

7 Nov 75 (1355Z) - K-1 and L-1 report that as the sun rises, so do the objects they visual.

7 Nov 75 (1429Z) - From SAC CP: As the sun rose, the UFOs disappeared. Commander and DO notified.

8 Nov 75 (0635Z) - A security camper team at K-4 reported UFO with white lights, one red light 50 yards behind white light. Personnel at K-1 seeing same object.

8 Nov 75 (0645Z) - Height radar personnel picked up objects 10-13,000 feet, Track J330, EKLB 0648, 18 knots, 9,500 feet. Objects as many as seven, as few as two A/C.

8 Nov 75 (0753Z) - J330 unknown 0753. Stationary/seven knots/ 12,000. One (varies seven objects). None, no possibility, EKLB 3746, two F-106, GTF, SCR 0754. NCOC notified.

8 Nov 75 (0820Z) - Lost radar contact, fighters broken off at 0825, looking in area of J331 (another height finder contact).

8 Nov 75 (0905Z) - From SAC CP: L-sites had fighters and objects; fighters did not get down to objects.

8 Nov 75 (0915Z) - From SAC CP: From four different points: Observed objects and fighters; when fighters arrived in the area, the lights went out; when fighters departed, the lights came back on; to NCOC.

8 Nov 75 (0953Z) - From SAC CP: L-5 reported object increased in speed - high velocity, raised in altitude and now cannot tell the object from stars. To NCOC.

8 Nov 75 (1105Z) - From SAC CP: E-1 reported a bright white light (site is approximately 60 nautical miles north of Lewistown). NCOC notified.

9 Nov 75 (0305Z) - SAC CP called and advised SAC crews at Sites L-1, L-6 and M-1 observing UFO. Object yellowish bright round light 20 miles north of Harlowton, 2 to 4,000 feet.

9 Nov 75 (0320Z) - SAC CP reports UFO 20 miles southeast of Lewistown, orange white disc object. 24th NORAD Region surveillance checking area. Surveillance unable to get height check.

9 Nov 75 (0320Z) - FAA Watch Supervisor reported he had five air carriers vicinity of UFO, United Flight 157 reported seeing meteor, "arc welder's blue" in color. SAC CP advised, sites still report seeing object stationary.

9 Nov 75 (0348Z) - SAC CP confirms L-1, sees object, a mobile security team has been directed to get closer and report.

9 Nov 75 (0629Z) - SAC CP advises UFO sighting reported around 0305Z. Cancelled the flight security team from Site L-1, checked area and all secure, no more sightings.

8 Nov 75 (0635Z) - A security camper team at K-4 reported UFO with white lights, one red light 50 yards behind white light. Personnel at K-1 seeing same object.

8 Nov 75 (0645Z) - Height personnel picked up objects 10-13,000 feet, Track J330, EKLB 0648, 18 knots, 9,500 feet. Objects as man as seve, as few as two A/C.

8 Nov 75 (0735Z) - J330 unknon 0753. Stationary/seven knots/ 12,000. One (varies seven objects). None, no possibility, EKLB 3746, two F-106, GTF, SCR 0754. NCOC notified.

8 Nov 75 (0820Z) - Lost radar contact, fighters broken off at 0825, looking in area of J331 (another height finder contact).

8 Nov 75 (0905Z) - From SAC CP: L-sites had fighters and objects; fighters did not get down to objects.

8 Nov 75 (0915Z) - From SAC CP: From four different points: Observed objects and fighters; when fighters arrived in the area, the lights went out; when fighters departed, the lights came back on; to NCOC.

8 Nov 75 (0953Z) - From SAC CP: L-5 reported object increased in speed - high velocity, raised in altitude and now cannot tell the object from stars. To NCOC.

8 Nov 75 (1105Z) - From SAC CP: E-1 reported a bright white light (site is approximately 60 nautical miles north of Lewistown). NCOC notified.

9 Nov 75 (0305Z) - SAC CP called and advised SAC crews at Sites L-1, L-6 and M-1 observing UFO. Object yellowish bright round light 20 miles north of Harlowton, 2 to 4,000 feet.

9 Nov 75 (0320Z) - SAC CP reports UFO 20 miles southeast of Lewiston, orange white disc object. 24th NORAD Region surveillance checking area. Surveillance unable to get height check.

9 Nov 75 (0320Z) - FAA Watch Supervisor reported he had five air carriers vicinity of UFO, United Flight 157 reported seeing meteor, "arc welder's blue" in color. SAC CP advised, sites still report seeing object stationary.

9 Nov 75 (0348) - SAC CP confirms L-1, sees object, a mobile security tem has been directed to get closer and report.

9 Nov 75 (0629Z) - SAC CP advises UFO sighting reported around 0305Z. Cancelled the flight security team from Site L-1, checked area and all secure, no more sightings.

(101)

MINOT

10 Nov 75 (0215Z) - Received a call from SAC CP. Report UFO sighting from site K-1 around Harlowton area. Surveillance checking area with height finder.

10 Nov 75 (0153Z) - Surveillance report unable to locate track that would correlate with UFO sighted by K-1.

MINOT AFB

10 Nov 75 (1125Z) - UFO sighting reported by Minot Air Force Station, a bright star-like object in the west, moving east, about the size of a car. First seen approximately 1015Z. Approximately 1120Z, the object passed over the radar station, 1,000 feet to 2,000 feet high, no noise heard. Three people from the site or local area saw the object. NCOC notified.

2. HQ USAF/DADF also forwarded a copy of a NORAD document for a review for possible downgrade and release. We have determined the document is properly and currently classified and is exempt from disclosure under Public Law 90-23, 5 USC 552b(1).

withheld

3. The decision to withhold release of this document may be appealed in writing to the Secretary of the Air Force within 45 days from the date of this letter. If you appeal, include any reasons for reconsideration you wish to present and attach a copy of this letter. Address your letter as follows: Secretary of the Air Force, thru HQ ADCOM/DAD, Peterson AFB CO 80914.

National Investigations Committee On Aerial Phenomena

Form: 97 Initial Report
Date: Wed., 6 June 2007, 11:13:23 -0500
From: Larry Fawcett and Barry Greenwood <uhrhistory@comcast.net>

Subject: "Wurtsmith and Others" - 1975

Source: Clear Intent, 41-56
To: nicap@insightbb.com

October 30, 1975. At the same time that plans were being prepared at Loring for the return of the intruder, things started to break open at Wurtsmith Air Force Base, Michigan, another of the northern tier bases that were put on a security option three alert.

Wurtsmith is a Strategic Air Command base located three miles northwest of Oscoda, Michigan. It serves as the home base for the 40th Air Division and the 379th Bomb Wing.

At approximately 10:10 P.M., personnel in the vicinity of the family housing area located in the southeastern portion of Wurtsmith reported seeing what appeared to be running lights of a low-flying craft which was thought to be a helicopter. The craft hovered and moved up and down in an erratic manner.

Airman Martin E. Tackabury, assigned to the Capehart housing area gate, said that he saw the object for about five seconds near the perimeter of Wurtsmith, due south of his location. Tackabury reported that the object had one white light pointing directly downward and two red lights near the rear. The object seemed to be heading in a west-southwest direction. Tackabury could not hear any sound coming from the aerial craft because a B-52 was in the air nearby to the north.

Near the main gate at Wurtsmith, Airman Michael J. Myers, assigned to Police Unit Seven, was on duty at the Wurtsmith motor pool. As Myers looked toward the west, he could see several lights near the western edge of the base. The lights turned north and appeared to lose altitude. He did not hear any sound.

41

Sergeant Robert J. Anderson, also at the motor pool, reported that he observed an airborne KC-135 tanker and another craft with a steady red light. The craft appeared to be flying slower, ahead and below the KC-135. Anderson believed he heard a sound similar to a helicopter. After thirty to thirty-five seconds, the object passed out of view.

Airman Roger Skipper, at the Wurtsmith main gate, said that when he responded to the activity at the motor pool, he heard sounds that diminished quickly.

At 1014, 1020, and 1025 P.M., at the back gate of Wurtsmith, security police reported to the command post that an unidentified helicopter with no lights came up over the back gate and hovered over the weapons storage area at a low altitude. Security police of the 379th security police squadron in the weapons storage area could not make out the type of craft. The craft started to move towards the northern perimeter where its lights were again turned on.

Sergeant James A. Miller of the Wurtsmith security police reported his observations of the unknown craft while on duty in the weapons storage area. He stated that he heard the sound of a possible helicopter coming from an area off the base toward the north. He thought he had heard the sound of a flying helicopter fifteen minutes earlier, but he didn't report it.

As he listened, the noise became drowned out by a military jet, and when the jet passed out of range, the original noise had stopped. No other similar sounds were heard.

The local police were notified; however, no evidence was found to corroborate a landing. Wurtsmith Control Tower personnel did not make visual contact with the craft, and no efforts were made to challenge the craft by radio.

Security police at the weapon storage area notified Colonel John J. Doran, Vice Commander, 379th Bomb Wing, that the guard posted at the back gate had reported what he thought was a helicopter overhead. The command post notified Col. Boardman (wing commander) and Col. Doran, and they proceeded to the flight line. It was at this time that Radar Approach Control (RAPCON) reported low-flying objects on their radar scope. They tracked the craft for approximately thirty-five miles on a southeastern bearing from Wurtsmith. Simultaneously, a KC-135 tanker was returning from a refueling mission. It entered Wurtsmith's traffic pattern and received permission to fly transition approaches. Col. Boardman ordered the KC-135 to attempt to identify the object. Wurtsmith air traffic control vectored the tanker in the object's direction.

Aboard the KC-135 was Major Frederick Pappas, the plane's commander; Captain K. E. May, co-pilot; Captain Rick Meier, the navigator; Captain Myron Taylor, instructor navigator; Captain Randy Higginbotham, instructor pilot; and Sergeant Steve Smith. The following statement on the KC-135 encounter with the UFO was given to the 379th Bomb Wing Histo-

rian, Staff Sergeant Paul J. Cahill, by Captain Taylor in a "Memo for the Record" dated January 18, 1979.

> We were returning from a refueling mission and during our first approach into the traffic pattern, RAPCON vectored us to check out a reported UFO in the area of the Wurtsmith Weapons Storage Area. As I recall, this activity occurred between 10:30 and 11:00 in the evening around the 1 st of November. I remember seeing lights similar to strobe lights which were flashing irregularly. We followed the lights north out over Lake Huron and then the UFO swung south still over the lake toward the Saginaw Bay area of Michigan. At first it was difficult to determine whether there were two different objects because of the irregular flashing of the lights. But, after observing the lights we determined that there were in fact two objects and the irregular flashing appeared to be some sort of signal being passed from one to the other in an effort to maintain the same position. We were able to maintain visual contact most of the time and I was only able to paint an object on the radar scope for about 10 seconds. I would estimate that our altitude was about 2,000 feet and our speed approximately 200 knots. Shortly after turning south in pursuit of the UFO, we called Approach Control and received blanket clearance to follow the UFO at all altitudes and at all vectors. Occasionally, RAPCON would pick-up the UFO and help us by giving us vectors to the UFO's position. I would guess that we stayed close to the UFO most of the time, approximately one mile away, and each time we attempted to close on the object it would speed away from us. We followed the UFO down to Saginaw Bay and started across the Bay when we lost it because of all the fishing boat lights. At first we thought it had landed on one of the large oil tankers but later decided that we had been wrong. We continued to search the Bay area but didn't see it so we changed our heading for Wurtsmith. On the way back, we picked the UFO up again at our eight o'clock position. We turned away, and it proceeded to follow us. Finally, we turned back in the direction of the UFO and it really took off back in the direction of the Bay area. I know this might sound crazy, but I would estimate that the UFO sped away from us doing approximately 1,000 knots. We continued in the direction of the Bay until RAPCON called us again and said they were painting a UFO four to five miles over the coast traveling in a westerly direction. They vectored us to the position of the UFO and we proceeded but at that point we were low on fuel and were forced to return to Wurtsmith. I remember that while on final approach we saw the lights again near the Weapons Storage Area. Following the mission we discussed the incident and about a week later, Captain Higgin-botham was questioned by

the OSI and cautioned not to discuss the incident.

The historian obviously did his homework on the Wurtsmith sightings as this January 17, 1979, "Research Record of Events" will demonstrate.

The following actions and research requests have been accomplished regarding the UFO incident experienced by the 379 BMW in November 1975:
1. 15 Jan—0900L—Received a call from SAC/HO Mr. Caywood requesting that I provide him with any documents relating to subject incident.
2. Following that request, I checked the Oct-Dec 75 Wing History and found no references to the incident.

3. 15 Jan—1430L—Met with Colonel Doran, 379BMW/CC and asked him about the incident. He recalled the incident and described what he remembered. At that time, Colonel Doran was Vice Commander.
4. 16 Jan—0930L—Called Mr. Caywood, SAC/HO, and informed him of my findings. He requested that I prepare a "Memo for the Record" based on my discussion with Colonel Doran and send it to him as soon as possible.
5. 16 Jan—1000L—After talking to several crew members assigned to the 920AREFS who were at Wurtsmith at the time of the incident, I was able to obtain the names of three crew members aboard the KC-135 which tracked the UFO. All have separated from the USAF. One individual, Mr. Myron Taylor, was described as a good source. Mr. Taylor, formerly Capt. Taylor, had been aboard the flight as an instructor navigator. I requested that Mr. Taylor contact this office.
6. 16 Jan—1445L—received a collect call from Mr. Taylor, however, had to decline but instructed the operator to tell Mr. Taylor that I would attempt to call him. The operator gave me his number. Called the Command Section and informed Colonel Doran of my findings and requested permission to call Mr. Taylor. He agreed, however, instructed me to contact Ol and prior to forwarding a "Memo for the Record" coordinate it with him.
7. 16 Jan—1500L—Call Mr. Taylor. He described in detail an account of the mission and further informed me that approximately one week after the mission, the aircraft commander, Capt. Higginbotham had been contacted by the OS I.
8. 16 Jan—1520L—Received a call from Mr. Caywood, SAC/HO. He requested that I send the "Memo for the Record" to Mr. Schoem, Administrative Officer for the Air Force Office of History. He also requested that the information be prepared as soon as possible since the information had been requested by Congressman Stratton and was the subject of a Congressional inquiry. Mr. Caywood stated that Mr. Schoem had a suspense date of 26 January.
9. 17 Jan—1600L—Delivered draft copy of "Memo for the Record" to Wing Commander's Office for coordination.
10. 18 Jan—1000L—Met with Col. Doran. He returned the draft Memo and explained some changes he had made. He also asked if I had contacted Ol. Said no, had wanted to wait until coordination had been completed.
11. 18 Jan—1015L—Returned to Office and prepared "Memo for the Record" in final copy. Also called Office of Information and set up an appointment with Capt. Peck (10) for 1100L
12. 19 Jan 1100L—Capt. Peck and Lt. Owens came to the office and we discussed the Memo. All agreed that the Memo should at the very least be marked For Official Use Only. Called Colonel Doran and he agreed.
13. 18 Jan—1345L—Sent "Memo for the Record" to USAF/CYAU (S), Boiling AFB, D.C. (Attn: Mr. Schoem). Send info copies to SAC/HO and BAF/HO. Also sent three copies to Capt. Peck (01).

Cabill's "Memo for the Record" also alludes to the other incidents at Loring and Plattsburgh AFB, New York, during the same period of time.

Plattsburgh?

This was the first time that Plattsburgh had been mentioned in connec-

tion with the other reports. Unfortunately, no other bits of information could be unearthed detailing anything about UFO activity at Plattsburgh. Is it possible that the report is spurious and nothing happened? Plattsburgh received notices of the activity at other bases, and it is mentioned frequently on the reference list of released documents. Could the historian have mistakenly listed Plattsburgh as a sighting location after glossing over a teletype?

It is difficult to believe that a mistake was made in including Plattsburgh as a sighting locale. Many other northern tier Air Force bases, besides Loring and Malmstrom, experienced the inundation of UFOs, as we shall soon see. It would seem strange that Plattsburgh was left out of all the action. The thoroughness of Cahill's research would seem to argue in favor of it being a real event.

So, what actually happened? Was Plattsburgh involved in what Loring, Malmstrom, and Wurtsmith went through? Is information on possible intrusions at Plattsburgh being withheld? At this point, the questions remain unanswered.

In any case, Wurtsmith had its hands full with explaining its own UFOs. Were the objects merely helicopters? No positive visual identification was ever given by any of the personnel involved in the Wurtsmith sightings. Only lights and sounds were reported.

To summarize briefly, radar picked up the craft over the weapons storage area and followed it to the southeast, where the task of identification was handed over to the KC-135 commander. The KC-135 crew picked it up visually and on radar. Taylor, in his statement to Cahill, never once called the craft a helicopter, but called it "a UFO" and an "object." He said that their speed was about 200 knots, and in each attempt to close with the object, "it would speed away from us." Taylor added that when they were heading back to Wurtsmith, "we turned back in the direction of the UFO, and it really took off... doing approximately 1,000 knots."

One thousand knots! Certainly no helicopter ever built could do such a thing!

A NORAD Senior Director's log entry dated October 31 was located with a brief reference to Wurtsmith (NCOC is the NORAD Combat Operations Center):

> Alerted by NCOC of a helicopter sighted over Wurtsmith AFB Wpns storage area, a tanker sighted same and pursued it 35 SE over Lake Huron. Upon request of NCOC—Gen Wainwright and concurrence of Gen Taylor—contacted 379BW CP and offered assistance. Also advised ML, LH & JL alert of possibility of a scramble.

The Joint Chiefs of Staff files in the Pentagon contained an "Operational Report" dated October 30, 1975, which offered this comment:

> Upon information that the Dept. of Natural Resources sends out aircraft searching for hunters spotting deer, the Dept. of Natural Resources was

> contacted; however, they maintain none of their aircraft were in the area at the time.

The FBI field office in Saginaw, Michigan, was contacted by the Air Force and advised of the activity at Wurtsmith. The special agent in charge said that his office was "unaware of hostile threats against Wurtsmith Air Force Base."

There were efforts by the Air Force to confirm the route and arrival time of an Army helicopter from Wurtsmith to Selfridge Air National Guard Base, Michigan, and to identify any other Army craft in the area but this, too, did not explain the intruder.

Whatever buzzed Wurtsmith got away without a scratch.

On February 21, 1976, UFO researcher Robert Todd filed a request under the Freedom of Information Act for NORAD Command Director's logs. The logs were released to Todd on March 26, 1976, and confirmed that Canada was also having problems with UFOs. Taken from the logs are incidents related to UFO activity in the area of the Falconbridge Air Force Station, a radar site near North Bay, Ontario, Canada (times listed are Greenwich Zulu, 5 hours ahead of EST).

> 12 November 1975 0715 23rd NORAD Region. UFO Reported from Radar site at Falconbridge Ontario, Canada (Sudbury). Reported by Mr. Julian Prince of Sudbury thru Ontario Provincial Police (also observed by 2 OPP constables ZADOW & BRETT) 2 objects seen appeared to be artificial light fading on and off with jerky motion. Broken cloud layer with no estimated base. No radar contact made and no request for fighter scramble initiated.
> 15 November 1975 0742 UFO 23rd NORAD REGION. From Falconbridge Radar Site a civilian, Oliver Kizioja, Sudbury, Ontario, at 0615 was standing in back yard facing south. Observed one bright yellow object moving up and back, leaving a tail. It was very high but did not change position in regard to other stars. He watched for 15 minutes, then called radar site. Not observed on radar.
> 15 November 1975 1229 23rd NORAD REGION. From Falconbridge. At 1130, Lyman Paqutte, married student, residence Laurentian Univ., Sudbury, Ontario. Reported he had been looking due east, sky partly cloudy, saw one bright white object about 70° elevation, high out of range of binoculars. It climbed high out of range of binoculars. Observed for 20 minutes and witnessed by his wife, brother-in-law and sister-in-law. Negative radar contact.
> 17 November 1975 1705 24 NORAD Region UFO at 132345z Large orange ball with 2 red lights stationary; Azimuth 045° from River Court, Ontario. No radar contact. Called in to 24th NORAD at 16-1700z. 17 November 1975 1705 23rd NORAD region; UFO reported 0230z from a Mr. John Dunlops, address: Manitoulin Island, Ontario, Canada. Two objects, oval shaped with two yellow flashing lights, moving north to south, then became stationary, observed for 10 minutes, one above the other, sky was cloudy—no radar contact. Toronto AMIS advised no known traffic in area.

More entries appeared in the NORAD regional Senior Director's Log.

> 1205z 11 November 1975 Received unusual sighting report from Falcon-bridge AFS, Ontario, Canada. Info passed to NORAD Command Director, Intelligence and Weather.
> 1840z 11 November 1975 Actions pertaining to scramble of JL08 and 09 due to unusual object sighting. With Director of Operations approval. Scrambled JL08/09 at 1745z, airborne at 1750z. NORAD Combat Operations Center notified ol Fateortoridge KFS YnewtewV Nwcxaft. ON^ Fa\c,CK\hud<^e flying over incident, point no sighting, 1831 aircraft still in area, no radar aircraft or visual contact. Falconbridge AFS still reporting object at 26,000 ft.
> 2235z 12 November 1975 Transmitted unknown report to NCOC Surveillance on incident at Falconbridge AFS which occurred on 11 Nov. 1975. 0533z 15 November 1975 UFO report from Falconbridge, occurrence time 0202z. Report sent to NCOC Surveillance, referred to Assistant Command Director Space Defense Center, and Intelligence. These 3 individuals considered the report a UFO report and not an unknown track report.

On November 13, 1975, NORAD issued a press release to the media in Sudbury, Ontario. It stated:

> "At 4:05 A.M. Nov. 11, the Canadian Forces radar site at Falconbridge, Ontario, reported a radar track of an unidentified object about 25-30 nautical miles south of the site, ranging in altitude from 25,000 to 72,000 feet. Persons at the site also saw the object and said it appeared as a bright star but much closer. Two F-106 aircraft of the US Air Force Air National Guard's 171st Fighter Interceptor squadron at Selfridge ANGB, Michigan, were scrambled; but the pilots reported no contact with the object." The release was approved by

> NORAD's commander in charge.

The Falconbridge reports spilled over into 1976 and spread to other areas in Canada.

An aircrew observed an object with green and white lights traveling from right to left across its front on June 23, 1976. The crew was sixteen miles from North Bay Ontario on a 158° heading. The UFO was at an altitude of 20,000 feet and flew at the speed of sound.

A number of objects were observed at Penticton Tower, 140 miles east of Vancouver, British Columbia, on August 10, 1976. The objects had steady, flashing green and red lights and were seen by civilians and members of the Royal Canadian Mounted Police.

On October 8, 1976, Falconbridge relayed a report from a woman of Gorson, Ontario, saying she heard a beeping sound and saw one object, which had flashing red and yellow lights. She observed the object for a minute, then it vanished.

Falconbridge again reported on October 18 that the October 8 report by the woman was confirmed by a police officer. He said the UFO was oblong, with blue, white, and green flashing lights.

Meanwhile, back in 1975, NORAD logged a sighting from Minot Air Force Base, North Dakota. Minot AFB, located thirteen miles north of Minot, North Dakota, is a SAC base. Units stationed here are the 57th Air Division, the 91st Strategic Missile Wing, the 5th Bomb Wing, and the 5th Fighter Interceptor Squadron of the Tactical Air Command. Around Minot AFB, 19,324 acres of land are reserved for missile sites.

On November 10, 1975, a brief report was received that Minot was buzzed by a bright object. The object was about the size of a car and flew at an altitude of 1,000 to 2,000 feet, completely noiseless. According to NORAD, no further information was received. Requests were filed to locate additional information on the Minot AFB report, but precious little was available.

A long entry from the 24th NORAD Region Senior Director's Log said:

> UFO sighting reported by Minot Air Force Station, a bright star-like object in the west, moving east, about the size of a car. First seen approximately 1015. Approximately 1120, the object passed over the radar station, 1000-2000 feet high, no noise heard. Three people from the site on local area saw the object. National Command Operations Center notified.

While UFO sightings in abundance took place at other Air Force bases, a different sort of activity was reported from Grand Forks AFB, North Dakota.
Located about sixteen miles west of Grand Forks, North Dakota, the base is the home of the 319th Bomb Wing and the 321st Strategic Missile Wing. On November 4, 1975, the following message was dispatched from the base at 3:01 A.M., Event/Incident:

> Command post identified at 04/0130z Nov 75 that there were possibly some shots fired from on base toward hard alert aircraft on the Sac alert ramp. Security Police have responded. Reportedly one alert tanker and bomber were hit. No damage to any aircraft was discovered after thorough inspection by maintenance and aircrews using artificial light. Inspection will be resumed during daylight hours. No injuries reported. Further reports to follow.

This report was followed by another, more detailed message on November 5, at 11:05 A.M.:

> Sources provided information concerning shots allegedly fired at aircraft at the Grand Forks AFB (GFAFB) ND alert facility. Inspection of the concerned aircraft yielded no evidence of damage. B. (1) on 3 Nov 75, source advised that four security policemen heard what they believed to be shots and possible hits on two

aircraft. CNE 4 B-52 NO. 004, and one A KC-135, No. 7397. On 4 Nov 75, source, located in the vicinity of aircraft 7997, advised that he had heard five shots in groups of three and two with a space of approximately two seconds between the groups. Approxi-

mately three seconds later we heard two separate "thuds" on aircraft 7997. On 4 Nov 75, source advised that he heard two shots and then three seconds later he heard eight or nine more shots evenly spaced. He believed the shots to be from a rifle probably more high-powered than a .22 caliber rifle. The shots came from a southeasterly direction, which is from the direction of the golf course. He was stationed at the alert facility gate. On 4 Nov 75, source located in the vicinity of aircraft 004. Advised that he heard four or five shots in rapid succession from the direction of the golf course and then one hit which sounded like a large rock against aircraft 004. The shots were loud and clear and sounded as if they came from a small caliber rifle. Possibly a .22.

On 4 Nov 75, source. Located in the vicinity of aircraft 7997. Advised that he heard four or five shots in rapid succession. Possibly from a semi-automatic rifle. Probably a small caliber rifle. The shots came from a southeasterly direction from the golf course. Approximately two seconds later he heard what he believed to be two hits on the rear of aircraft 7997. On 4 Nov 75. Source stated he reported to the southwest corner of the golf course. Approximately 150 yards from the south perimeter fence. "Omar" picked up a scent and scouted to the perimeter fence. Across the fence and south to N.D. Highway 2. Across Highway 2 and across the debris (broken concrete). The track turned east nearly parallel to the highway and "Omar" tracked approximately 100-150 yards to a small trailer court (20 trailers) then turned south along a tree line and then southeast toward a trailer. The track was lost at a picket fence adjoining the trailer. No lights were on in the trailer and no one was located in the vicinity. Source was accompanied by Capt Klawon: 321 Security Police Squadron, GFAFB, and by Luther Edmonds: Civilian, EMEPADC, ND, Police Department. Inspection of aircrafts numbers 004 and 7997 by the crew chiefs and maintenance personnel assigned to the 319 bomb wing revealed no evidence of damage to the aircrafts. The area surrounding the aircraft and that from which shots were believed to be fired were inspected. No spent cartridges or bullets were located. The alert facility is located on the southwest portion of GFAFB. It is bounded on the south by ND highway 2 and on the east by the GFAFB golf course. No blast deflectors are located on the alert facility. The alert facility and surrounding area is flat and open territory. Aside from those structures in the alert facility, there are no buildings in the vicinity of the facility. Press coverage included local television news coverage (WXJB) and newspaper coverage—Grand Forks Herald, Vol 37, Number 130: Section Two, Page 3, coverage reported that several shots were heard near the base perimeter and that inspection revealed no aircraft had been damaged. The following individuals at GFAFB were notified of the transmission of this document: Dale E. Eppineer, Col. Commander, 321 CSE; Donald D. Johnson, CO, Commander, 319 Bomb Wing; William A. Cockayne, Col. Commander, 321 Security Police Group. This represents the first incident of this nature at GFAFB within the preceding 18 months.

It is difficult to correlate the Grand Forks events with what occurred elsewhere. There were no aerial craft involved. The shooting incidents all seemed rather pointless since no damage was done. Yet, this did take place in the midst of a wave of UFO reports at other bases.

At the risk of sounding like we are trying to rule out a potential explanation for at least some of what happened at bases along the U.S./Canada border, we feel that while the Grand Forks sniper firings are curious, and still unexplained, they probably weren't related to the UFO activity. To coin a phrase used by the Air Force, we regard them as "isolated incidents." We mention it here, because the government released data on the Grand Forks attacks concurrently with data on the other bases. It may have been, in some manner, an attempt to downgrade concern over the intrusions. The public, seeing that a base was attacked with hand weapons, would conclude that the other areas were experiencing attacks by protesters or terrorists and, thus, not push too hard for information on UFOs.

The aerial objects seen at Loring, Malmstrom, and Wurtsmith were something very much out of the ordinary. The

vehicles showed such advanced aeronautical qualities that no possibility exists for terrorists being responsible. In essence, the Grand Forks activity served as a convenient "straw man" for the Air Force to use in diverting attention from the real problem.

The Commander-In-Charge of NORAD (CINCNORAD) sent this message to NORAD units in North America, dated November 11, 1975:

> Part I. Since 28 Oct 75 numerous reports of suspicious objects have been received at the NORAD CU; reliable military personnel at Loring AFB, Maine, Wurtsmith AFB, Michigan, Malmstrom AFB, Mt, Minot AFB, ND, and Canadian Forces Station, Falconbridge, Ontario, Canada, have visually sighted suspicious objects.
> Part II. Objects at Loring and Wurtsmith were characterized to be helicopters. Missile Site Personnel, Security Alert Teams, and Air Defense Personnel at Malmstrom Montana report an object which sounded like a jet aircraft. FAA advised there were no jet aircraft in the vicinity. Malmstrom search and height finder radars carried the object between 9,500 ft. and 15,600 ft. at a speed of seven knots. There was intermittent radar contact with the object from 0807532 thru 09002 Nov. 75. F-106s scrambled from Malmstrom could not make contact due to darkness and low altitude. Site personnel reported the object as low as 200 ft and said that as the interceptors approached the lights went out. After the interceptors had passed the lights came on again, one hour after they returned to base. Missile site personnel reported the object increased to a high speed, raised in altitude and could not be discerned from the stars.
> Part III. Minot AFB on 10 Nov reported that the base was buzzed by a bright object the size of a car at an altitude of 1000 to 2000 ft. There was no noise emitted by the vehicle.
> Part IV. This morning, 11 Nov 75, CFS Falconbridge reported search and height finder radar paints on an object up to 30 nautical miles south of the site ranging in altitude from 26,000 ft. to 72,000 ft. The site commander and other personnel say the object appeared as a bright star but much closer. With binoculars the object appeared as a 100 ft. diameter sphere and appeared to have craters around the outside.
> Part V. Be assured that this command is doing everything possible to identify and provide solid factual information on these sightings. I have also ex-

> pressed my concern to SAFOI that we come up soonest with a proposed answer to queries from the press to prevent overreaction by the public to reports by the media that may be blown out of proportion. To date efforts by Air Guard helicopters, SAC helicopters and Norad F-106s have failed to produce positive ID.

Note that the Falconbridge report mentioned here contains a few more details than had been available. The November 11 UFO appeared as a "100 foot diameter sphere" and was pockmarked with "craters" on the outside. Hardly a conventional aircraft!

There is also concern in the message that the press would overreact to the stories and that steps should be taken to prevent this. The media hardly reacted to the incidents at the time, and when they did, it usually was in the local press where very limited public reaction could be expected. The "prevent" tactic worked, and the magnitude of the UFO intrusions was recognized only well after the objects have come and gone.

The Air Force was lucky. Had full-blown media coverage been applied to the stories in the same general time frame when they happened, a Pandora's Box of criticism would surely have resulted over the Air Force's inability to deal effectively with the aerial invaders.

More information continued to flow. Two log entries from the Air Force Intelligence Service's Alert Officer's Log were released in 1977. The first one is dated October 31, 1975:

> Per Ltc. Redican's direction. Contacted DIA OPS center and informed them of unidentified flight activity over two SAC bases near Canadian border. CIA indicated appreciation and requested they be informed of any follow-up activity.

Numerous requests to the CIA for information have met with denial after denial. However, here's clear evidence that they had received reports on the sightings from the Air Force. Another log entry, dated November 3, 1975, says:

> Received call from AAC/IN (Alaskan Air Command/Intelligence). They had sent message 012224, Subject: Unidentified Foreign Object to INYSA and wanted to know if INYSA had received it. They wanted guidance from INYSA.

A UFO from the Alaskan Air Command now! We requested a copy of this report. The reply from the Air Force dated February 8, 1978, was very unsatisfying:

> The Alaskan Air Command message 012224 referred to on 3 November 1975 of the attached INZA Alert Officer Log extract is not available. Information received on this subject is considered raw intelligence material and maintained for only the briefest period of time.

Whatever happened must have been interesting!

U.S. sightings, as those in Canada, carried well into 1976. The National Military Command Center held a number of reports of sightings which were released after considerable correspondence. A "Memorandum for the Record" dated January 21, 1976, tells of a sighting at Cannon AFB, New Mexico:

> The following information was received from the Air Force Operations Center at 0555 EST:
>
> Two UFOs are reported near the flight line at Cannon AFB, New Mexico. Security Police observing them reported the UFOs to be 25 yards in diameter, gold or silver in color with blue light on top, hole in the middle and red light on bottom. Air Force is checking with radar. Additionally, checking weather inversion data.

A very striking object to be sure. Twenty-five yards in diameter, gold or silver in color with a blue light on top, a hole in the middle, and a red light on the bottom. It's not something you see flying around every day!

A "Memorandum for the Record" dated January 31, 1976, told of activity at Eglin AFB, Florida:

> 1. At 310805 received phoncon from AFOC: MG Lane, CG, Armament and Development Test Center, Eglin AFB, Florida, called and reported a UFO sighting from 0430 EST to 0600 EST. Security policemen spotted lights from what they called a UFO near an Eglin radar site.
> 2. Photographs of the lights were taken. The Eglin Office of Information has made a press release on the UFO.
> 3. The temperature inversion analysis indicated no significant temperature inversion at Eglin AFB at that time. The only inversion present was due to radiation from the surface to 2500 feet. The Eglin surface conditions were clear skies, visibility 10-14 miles, calm winds, shallow ground fog on the runway, and a surface temperature of 44 degrees F.

Additional information on the Eglin report appeared in the NORAD Command Director's Log for January 31:

> The Command Post received a UFO report from Eglin, FL, that Duke Field personnel saw a row of lights with a central white light at 1043. The lights were about 2° above the horizon at a zenith of 350°, range unknown. A later report (1245) states that further investigation in daylight indicated that the lights were probably on a building.

The "Memorandum for the Record" is dated several hours after the 1245 report received by NORAD of the lights being part of a building, yet it makes no mention of this discovery. It's strange that no one saw the building lights before that

time, and suddenly, one day, they became so sensational that official reports were filed with the National Military Command Center of a UFO. The memo refers to photos but all attempts to get them released, or to simply get an admission that they exist, were fruitless.

Wurtsmith and Others 53

Another NMCC Memorandum dated July 30, 1976, from Fort Ritchie, Maryland, relates this information:

> 1. At approximately 0345 EOT, the ANMCC called to indicate they had received several reports of UFOs in the vicinity of Fort Ritchie. The following events summarize the reports (times are approximate).
>
> a. 0130—Civilians reported a UFO sighting near Mt. Airy, Md. This information was obtained via a call from the National Aeronautics Board (?) to the Fort Ritchie Military Police.
>
> b. 0255—Two separate patrols from Site R reported sighting 3 oblong objects with a reddish tint, moving east to west. Personnel were located at separate locations on top of the mountain at Site R. c. 0300—Desk Sgt. at Site R went to the top of the Site R mountain and observed a UFO over the ammo storage area at 100-200 yards altitude.
>
> d. 0345—An Army Police Sgt. on the way to work at Site R reported sighting a UFO in the vicinity of Site R.
>
> 2. ANMCC was requested to have each individual write a statement on the sightings. One individual stated the object was about the size of a 2-1/2 ton truck.
>
> 3. Based on a JCS memorandum, subject: Temperature Inversion Analysis, dated 13 November 1975, the NMCC contacted the Air Force Global Weather Central. The Duty Officer, LTC OVERBY, reported that the Dulles International Airport observations showed two temperature inversions existed at the time of the alleged sightings. The first extended from the surface to 1,000 feet absolute and the second existed between 27,000 and 30,000 feet, absolute. He also said the atmosphere between 12,000 and 20,000 feet was heavily saturated with moisture. A hard copy message will follow.

Shades of Loring. One UFO was the size of a 2l/i ton truck. Several other UFOs were "oblong with a reddish tint." And they were seen over weapons storage areas!

Temperature inversions were indeed reported over the area at the time. This would have been significant had the sightings been reported on radar. But they weren't. Temperature inversions do not come down to 100 to 200 yards in altitude and hover over ammo storage areas. Neither do they present such a vivid visual appearance as described by the security police and civilians in the area.

The "hard copy message" mentioned in the last sentence of the memo is currently unavailable.

Serious military concern is reflected throughout the documents discussing the concentrated UFO sightings over these bases between October 1975 and July 1976. What was the reaction to all this by our Senators and Congressmen, the ones who control the purse strings of the military and who should be most disturbed by the lack of control of the armed forces over these events?

They, in fact, had almost no reaction because they weren't informed

54 Wurtsmith and Others

about the sightings at any time. It was only in 1978, three years after the initial outburst of sightings, that Congressman Samuel S. Stratton (D—N.Y.) became the first legislator to voice his concern.

On December 10, 1978, the weekly Parade magazine carried a story titled "UFO's vs. USAF, Amazing (But True) Encounters" by Michael Sat-chell. Basing its information on government documents released through the Freedom of Information Act, Parade summarized the events at Loring, Malmstrom, Wurtsmith, and other bases, as well as some foreign incidents acquired through U.S. government sources (see Chapter 6).

The Parade article had a significant impact on public interest in the 1975 reports. A copy of the article was sent to Congressman Stratton, who was, at the time, the Chairman of the Armed Services Investigations Subcommittee. Stratton sent a letter, dated December 20, 1978, to Major General Charles C. Blanton, Director, Legislative Liaison for the Office of the Secretary of the Air Force. In the letter, Stratton says:

> The attached item from Parade magazine of December 10 reports that unidentified aircraft penetrated the airspace at several Strategic Air Command bases in the United States and Canada on several occasions during the period October 27—November 19, 1975. The article proceeds to quote from Air Force documents to the effect that the intruding aircraft had "a clear intent in the weapons storage area" at Loring Air Force Base. Those same documents reportedly refer to unsuccessful efforts of Air Force air-crafts to intercept and identify the intruder aircraft. This Subcommittee is concerned by the alleged ability of unknown aircraft to penetrate airspace and hover over SAC bases, their weapons storage areas, missile sites, and launch control facilities, and the inability of Air Force equipment and personnel to intercept and identify such aircraft. Accordingly, it is requested that all Air Force reports relating to each of the incidents described in this article be furnished to the Subcommittee. It is further requested that all reports of any similar incidents, either before or since the October-November 1975 events, be furnished to the Subcommittee.

The letter was handled in the usual manner for a Congressional inquiry and was staffed to various internal Air Force groups. Amazingly, many replied that they had little or nothing to provide as information in response to the request and, in one case, the Air Force's Directorate of Operations and Readiness stated in a January 8, 1979, memo:

> We have been unable to find any official information regarding the incidents described in the Parade magazine article. Contact with individuals assigned to operational units where the incidents were alleged to have occurred indicate some of these incidents may not have happened at all [emphasis added].

The Air Force, mindful of the inadequacy of such a response to Stratton, had to provide something since more than enough evidence was available showing that the events did occur.

A formal response to Congressman Stratton was sent on February 9, 1979, by Joseph J. F. Clark, Associate Director, Legislative Liaison for the Air Force:

> This is in response to your recent letter concerning an item from the Parade magazine of December 10, 1978 regarding unidentified aircraft penetrating the airspace at several Strategic Air Command bases in the United States and Canada on several occasions during the period October 27 through November 19, 1975. Attached is a partial compilation of available materials obtained in response to your request for Air Force reports pertaining and similar to the incidents described in the Parade magazine article. We have requested such reports from numerous Air Force organizations, some of which are outside of this Headquarters. Not all of this material has been received, and it will be forwarded when it becomes available to us.
> Please note that the attached material rarely includes formal reports as such; rather, it mainly consists of copies of documents such as messages, memoranda, and duty officer log entries. This is because unidentified flying object reports are of transitory interest to the Air Force and permanent files are not maintained. In addition, please note that much of the enclosed material has been released to various people and organizations under the Freedom of Information Act.
> We trust the information attached will be helpful and hope to get additional information to you as soon as possible.

Attachments to the letter included memos, messages, and log entries relating to the sightings at Loring, Wurtsmith, Malmstrom, Falconbridge, and miscellaneous other reports. Clark was careful to emphasize that UFO records were of "transitory interest" and that "permanent files are not maintained"; that is, UFOs are not important and are no cause for concern. This is almost the precise wording of the Air Force's response to Barry Greenwood in 1977 in which UFOs were described as "transient in nature" with "no permanent record or file maintained" (see Chapter 1). Apparently, even

when you think you are getting a direct, personal reply, you still receive a canned response.

The letter also stresses the fact that the material had been released to various people and organizations under the Freedom of Information Act. If it were not for the relentless digging by researchers to unearth the information, much of which required lawsuits to obtain, what might the Air Force response have been?

There probably would have been no reason for a response. Congressman Stratton could never have read the Parade article, since Parade would have had nothing to write about. No documents would have been available.

Any hopes that a Congressional hearing might have been convened were dashed because Stratton did not pursue the matter after receiving the Clark letter and attachments. Why?

He pressed for various measures to close off the flow of information

from the military to the public and even urged substantial penalties for those who might print more than what the Pentagon would allow them to print.

Under these circumstances, it's obvious why Stratton said nothing more of the 1975 incidents. He avoided all attempts by investigators to contact him in his office, and no statements were given. His interest in 1975 is quite understandable, as any heavily pro-military person would be concerned over the Air Force's difficulty in dealing with the UFOs.

The fact that some individuals managed to locate specifics about the sightings was a necessary evil that the Air Force had to live with. The hope was that the small number of people who had this information would not have enough of a voice to draw attention. This worked until Parade picked up the baton.

Fortunately for the Air Force, Stratton was the only Congressman who asked weighted questions. He was friendly to the military and would not make waves. Politics did not enter into the 1975 picture in a serious way hereafter. The ball was definitely back in the court of the UFO researchers.

As strange as the 1975 activity seems, it was only a microcosm of UFO activity over the years. It has been estimated that for each UFO sighting reported, ten others go unreported. We might apply the same figures to military-oriented UFO sightings. Perhaps the differential between reported and unreported sightings is even larger in this case due to the more restricted atmosphere within the military for revealing UFO information.

If the reports proved one thing, they showed that for a "transient" phenomenon, UFOs were pretty persistent.

Francis Ridge:
This report of this incident comes from three sources.

Wurtsmith AFB, located 2 miles west of Oscoda, Michigan, had its beginning in 1923 as a landing area for Army airplanes from Selfridge Field near Detroit. In 1953, it was formally named for Michigan's World War II hero, Major General Paul B. Wurtsmith, who died in an aircraft accident.

Wurtsmith was home for the 379th Bombardment Wing which controlled the 524th Bombardment Squadron and the 920th Aerial Refueling Squadron. The base was signed over to SAC in April, 1960 and the 40th Air Division, which was reactivated in July 1959 and assigned to the Strategic Air Command's Eighth Air Force, was headquartered there. The Division's mission at Wurtsmith was to supervise and monitor the operation of the 379th and 410th Bombardment Wings, the 305th Aerial Refueling Wing, the 351st Strategic Missile Wing, the 128th Aerial Refueling Group, and the 931st Aerial Refueling Group. Wurtsmith was one of the northern tier bases that housed nuclear weapons. Wurtsmith encompasses some 5,200 acres of land and had about 3,500 people assigned. It was formally closed in June, 1993, and all nuclear weapons were removed.

10:10 P.M. Persons in the base family housing area in the southeast part of Wurtsmith began seeing a low-flying aircraft that they thought was a helicopter. It had running lights and it hovered and moved up and down in an erratic fashion. An airman guarding the Capehart housing area gate observed an object with one white searchlight and two red lights at the rear. It was heading in a west-southwest direction. Another airman, on duty at the motor pool, saw lights near the western perimeter of the base. Sergeant Robert J. Anderson, also on duty at the motor pool, saw a KC-135 tanker and below the tanker he saw an unknown craft with a steady red light. Sounds similar to that of a helicopter were heard intermittently by observers.

10:25 P.M. Security policemen at the back gate of Wurtsmith reported to their command post that they had observed an unidentified helicopter with no lights. The craft had hovered over the weapons storage area at low altitude. The craft moved towards the north, and when it reached the northern perimeter, it turned on its lights. Guards inside the weapons storage area reported seeing the craft and hearing a sound similar to that made by a helicopter.

10:30 P.M. Radar Approach Control reported tracking low-flying objects on radar. They tracked a return as it flew a distance of thirty-five miles southeast of Wurtsmith. No visual sighting was made by tower personnel, and (oddly) no attempt was made to contact the unknown craft by radio. At that point, a KC-135 tanker returned to

Wurtsmith from a refueling mission. The Wing Commander, Colonel Boardman, ordered the KC-135 to try to intercept and identify the craft. The tanker was vectored in by Radar Approach Control.

Captain Myron Taylor, a navigation instructor who was on board the KC-135, later reported in a statement to 379th Bomb Wing Historian Staff Sergeant Paul J. Cahill, that:

> I remember seeing lights similar to strobe lights which were flashing irregularly. We followed the lights north out over Lake Huron and then the UFO swung south...
> ...after observing the lights we determined that there were in fact two objects and the irregular flashing appeared to be some sort of signal being passed from one to the other in an effort to maintain the same position.
> ...I would estimate that our altitude was about 2,000 feet and our speed approximately 200 knots.
> ...I would guess that we stayed close to the UFO most of the time, approximately one mile away, and each time we attempted to close on the object it would speed away from us. We followed the UFO down to Saginaw Bay and started across the Bay when we lost it because of all the fishing boat lights.
> ...On the way back [to Wurtsmith], we picked up the UFO again at our eight o'clock position. We turned away, and it proceeded to follow us. Finally, we turned back in the direction of the UFO and it really took off back in the direction of the Bay area. I know this might sound crazy, but I would estimate that the UFO sped away from us doing approximately 1,000 knots.
> ...we proceeded but at that point we were low on fuel and were forced to return to Wurtsmith. I remember that while on final approach we saw the lights again near the Weapons Storage Area.
> ...Captain Higginbotham was questioned by the OSI and cautioned not to discuss the incident.

A report was made to NORAD. The extract from the NORAD Command Director's Log reads:

> 31 Oct 75/0445Z:
> Report from Wurtsmith AFB through Air Force Ops Center - incident at 0355Z. Helicopter hovered over SAC weapons storage area then departed area. Tanker flying at 2700 feet made both visual sighting and radar skin paint. Tracked object 25NM SE over Lake Huron where contact was lost.
>
> The local police and the Saginaw, Michigan FBI office were notified, with no results.
>
> All possible air traffic in the area was investigated, but none explained the UFO.
>
> Since the Michigan Department of Natural Resources sometimes sent out helicopters to catch hunters spotlighting deer in nearby Huron National Forest, they were contacted. They had no aircraft in the air at the time.

The incidents were never explained.

MEMORANDUM FOR RECORD

Subject: Low Flying Aircraft/Helicopter Sightings at Wurtsmith AFB, MI.

1. The SAC Command Post notified the NMCC of reported low flying aircraft/helicopter sightings at Wurtsmith AFB, Michigan at 302342 EST.

2. The attached OPREP-3s give a summary of the reported sightings.

(UFREP) REPORT

FROM: AF/XOOCOA

LOG SUP # 1-G

EVENT:
Identified Helicopter Intrusion

LOCATION:
Wurtsmith AFB, MI

DATE/TIME OF EVENT:
30/2255E Oct 1975

TIME REPORTED TO AFOC:
30/2327E Oct 1975

SAC (Lt Col Giordano) reports that an unidentified helicopter with no lights came up over the back gate of Wurtsmith and hovered over the Weapons Storage Area and then moved on. RAPCON had it painted for a short period. A tanker at 2700 feet had visual and skin paint out over Lake Huron for about 20 miles heading SE. Tanker reports he thinks he saw a second skin paint. The tanker lost all contact about 35 miles SE of the base over the lake. Tanker is still flying trying to locate by means of telephonic search with FAA and RAPCON. Increased security initiated at Wurtsmith.

31/0030E Update: Lt Col Giordano (SAC Senior Controller) updates and corrects the above information as follows: An unidentified low flying aircraft came up over the back gate of Wurtsmith and was visually sighted in the vicinity of the motor pool. RAPCON showed several aircraft at the time, one near the WSA (there was no hovering as previously reported). A tanker was dispatched and had visual and skin paint out over Lake Huron of a low flying aircraft (with lights on) heading SE at approximately 150 knots. Tanker reports that the aircraft appeared to be joined by another aircraft (with its lights on also). Tanker reports that both aircraft then turned out their lights simultaneously, as if on signal. Tanker lost all contact approximately 35 NM SE of the base. Upon information that the Dept of Natural Resources sends out aircraft searching for hunters spotting dear, the Dept of Natural Resources was contacted; however, they maintain none of their aircraft were in the area at the time.

DDO UPDATE

AS OF 310600 EST OCT 1975

LOW FLYING AIRCRAFT/HELICOPTER SIGHTINGS

(U) The SAC Senior Controller notified the NMCC at 302342 EST of unidentified low-flying aircraft/helicopter sightings at Wurtsmith AFB, MI. One aircraft was visually sighted in the vicinity of the motor pool. RAPCON showed several objects on radar at the same time. A tanker was dispatched to the area and obtained both visual and radar skin paint of two aircraft. Both aircraft had lights on initially but appeared to turn them off simultaneously. Subject: "Faded Giant"? - Intrusions at Malmstrom - 1975

Source: Clear Intent, 27-40
To: nicap@insightbb.com

There are more than 2,000 missile sites spread across the United States. At Malmstrom Air Force Base in Montana, there are twenty Launch Control Facilities (LCF) housing Minuteman missiles underground. The Minuteman sites are alphabetically coded, such as "L-l," "K-l," "E-l," and the like, and are distributed over a wide area. One of these sites, K-7, which is located in the Judith Gap region just south of Lewiston, Montana, was the scene of an event which caused a major stir for the U.S. Air Force.

On November 7, 1975, remote electronic sensors triggered an alarm indicating that something was violating site security. Underground, in the launch control area, two officers noted the signal, but there was no television surveillance topside. The normal procedure for detecting what had violated security was to call for a missile security helicopter to check the area. At the same time, Sabotage Alert Teams (SAT), consisting of four to six men, were also alerted to the fact that a violation was taking place and were ordered to proceed to the site.

On this occasion, an SAT team drove down the highway and onto a dirt road which led to the K-7 area. About a mile away, the team could see an orange, glowing object over the area. As they closed to within half a mile, they could now see that the object was tremendous in size. They radioed to the Launch Control Facility that, from their location, they were viewing a brightly glowing, orange, football field-sized disc that illuminated the missile site. The SAT team was ordered by the launch control people to proceed into the K-7 site. However, they responded that they refused to

go any farther, clearly fearful of the intimidating appearance of the object. It began to rise, and at about 1,000 feet, NORAD picked up the UFO on radar.

Two F-106 jet interceptors were launched from Great Falls, Montana, and headed toward the K-7 area. The UFO continued to rise. At about 200,000 feet, it disappeared from NORAD's radar. The F-106s were never able to get a visual sighting of the UFO.

All members of the SAT team were directed to the base hospital, where they were psychologically tested. It was determined that no one could identify the object that was seen, but that the members of the SAT team obviously had been through a traumatic experience.

Meanwhile, targeting teams, along with computer specialists, were brought to the missile site to check out the missile, and specifically, the computer in the warhead that targets the missile. Amazingly, when the computer was checked, they found that the tape had mysteriously changed target numbers! The re-entry vehicle was then taken from the silo and brought back to the base. Eventually, the entire missile was changed.

The Malmstrom K-7 story is excerpted from "A Strange Harvest: Thoughts Beyond the Scenes" by Linda Moulton Howe, Denver Magazine, September 1980, an article with background information about the development of "A Strange Harvest," a seventy-five minute TV documentary about the animal mutilation mystery which has haunted the United States, Canada, parts of Western Europe, Central and South America, and the Canary Islands since 1967. Linda Moulton Howe, Director of Special Projects for the Denver CBS affiliate KMGH-TV, produced, wrote, directed, and edited the film which was originally broadcast May 25, 1981, and drew the largest recorded audience for a locally produced program in Denver television history. Ms. Howe has received several state and national awards for her documentary work, including a 1981 Regional Emmy for Audio Achievement in "A Strange Harvest."

An additional bit of information surfaced later. In a National Military Command Center "Memorandum for Record" dated November 8, 1975, 6 A.M. EST, the following statement appeared in reference to Malmstrom:

> At 405 EST, SAC Site L-5 observed one object accelerate, and climb rapidly to a point in altitude where it became indistinguishable from the stars. NORAD will carry this incident as a FADE remaining UNKNOWN at 320 EST since after that time only visual sightings occurred.

The reference to FADE is interesting. This would presumably refer to a target on a radar scope "fading" and disappearing from the screen. Yet both radar and visual sightings are described in the above extract.

Coincidentally, there is an Air Force term used to describe an incident in which a nuclear device is tampered with. This term is "Faded Giant," a phrase which

"Faded Giant"? 29

Could this mean that Malmstrom sites K-7 and L-5 both experienced missile-tampering activity in connection with the UFO sightings? No additional information has been forthcoming from the Air Force.

This was not the first time that such an incident had occurred at Malmstrom. In his book Casebook of a UFO Investigator (Prentice-Hall, Inc., 1981), author Raymond Fowler describes two earlier instances of "Faded Giants."

In the early spring of 1966, two officers had relieved an earlier shift in the underground launch control area for the evening. As they ran through the routine of monitoring the missile facility's instruments, alarms began to go off. It seems that all of the ten missiles at their location had simultaneously developed a problem. A quick check with each launching site indicated that none of the missiles could be launched, if indeed, due to a fault in all of their guidance and control systems. This is an unusual problem, because the guidance system is the most protected portion of a Minuteman missile. Personnel above ground had indicated that at the same time the problem developed, UFOs were seen in the area.

Another similar event, during the week of March 20, 1967, disturbed officials at Malmstrom. Again, a flight of ten missiles developed problems. A UFO was in the area and was confirmed on radar. Jet fighters were sent after the UFO, but the results of the pursuit are not known. Later inquiries to obtain additional information met with silence.

Other sightings were received at Malmstrom during November 1975. The following information is taken from the 24th NORAD Region Senior Director's log:

> MALMSTROM AFB, MONTANA:
> Nov. 7, 1975 (1035Z) Received a call from the 341 st Strategic Air Command Post (SAC CP) saying that the following missile locations reported seeing a large red to orange to yellow object: M-1, L-3, LIMA, and L-6. The general object location would be 10 miles south of Moore, Montana, and 20 miles east of Buffalo, Montana. Commander Deputer [sic] for Operations (DO) informed.

Nov. 7, 1975 (1203Z) SAC advised that the LCF at Harlow, Montana, observed an object which emitted a light which illuminated the site driveway.

Nov. 7, 1975 (1319Z) SAC advised K-1 saw a very bright object to their east is now southeast of them and they are looking at it with 10 x 50 binoculars. Object seems to have lights (several) on it, but no distinct pattern. The orange/gold object overhead also has small lights on it. SAC also advises female civilian reports having seen an object bearing south from her position 6 miles west of Lewiston.

Nov. 7, 1975 (1327Z) L-1 reports that the object to their northeast seems to be issuing a black object from it, tubular in shape. In all this time, surveillance has not been able to detect any sort of track except for known traffic.

Nov. 7, 1975 (1355Z) K-1 and L-1 report that as the sun rises, so do the objects they have visual.

Nov. 7, 1975 (1429Z) From SAC CP: As the sun rose, the UFOs disappeared. Commander and DO notified.

30 "Faded Giant"?

Then, yet another sighting was reported. An off-duty missile launch officer and his deputy had just retired for crew rest in the Soft Support Building (SSB). The deputy went to the window and observed the silhouette of a large aircraft hovering about ten to fifteen feet above the ground and about twenty-five feet outside the Launch Control Facility. He described two red and white lights at the front of the aircraft, a white light on the bottom, and white light on the rear. The craft hovered motionless in this position for about one minute and then departed. The missile launch officer did not personally observe the aircraft, but from its sound, he speculated that it was a helicopter. The deputy also felt that the sounds he heard were those of a helicopter. The deputy's observations were limited by the darkness of the night, which prevented any good description of the craft or its shape.

On November 7, 1975, Captain Roscoe E. Moulthrop advised the Air Force Office of Special Investigations (AFOSI) that during the evening hours of November 6 and 7, two adjacent Launch Control Facilities approximately fifty miles south of Lewiston reported moving lights as UFOs.

On November 8, the 24th NORAD Region picked up one to seven unknowns heading south-southwest at about 1,200 feet. Two F-106s were scrambled out of Great Falls at 7:45 P.M. Simultaneously, SAC reported visual sightings from SAT teams at K-l, K-3, L-l, and L-6. This time the teams were hearing jet sounds and seeing lights. At 8:35 P.M., SAT teams at sites K-3 and L-4 were reporting that they had visual sightings on the objects, with K-3 reporting targets at an altitude of 300 feet. As the F-106s arrived at the location, SAT teams reported that the UFOs turned their lights off. The F-106s, in searching for the unknowns, never gained a visual or radar contact at any time because of the low altitude of the UFOs. However, when they left the area, the UFOs would turn their lights back on! At 9:15 P.M., four different locations were reporting that they had the UFOs and fighters in sight. The UFOs seemed to be playing a cat-and-mouse game.

At 9:53 P.M., the team at L-5 reported to the Command Post that the unknowns had increased in speed, climbed rapidly, and, at that point, could not be distinguished from the stars. A while later, the team at site E-l reported at 11:05 P.M. that a bright white light was seen approximately sixty nautical miles north of Lewiston.

On November 8, at 6 A.M., the National Military Command Center in Washington, D.C., distributed a "Memorandum for the Record." The subject was "Unidentified Sightings." It read as follows (excluding the L-5 report already mentioned earlier):

1) From NORAD Command Director: At 0253 EST 8 Nov, Malmstrom AFB, Montana received seven radar cuts on the height-finder radar at altitudes between 9,500 and 15,500 feet. Simultaneous ground witnesses observed lights in the sky and the sound of jet engines similar to jet fighters.

"Faded Giant"? 31

Cross-tell with FAA revealed no jet aircraft within 100 NM of the sighting. Radar tracked the objects over Lewiston, Montana, at a speed of 7 knots. Two F-106 interceptors from the 24th NORAD Region were scrambled at 0254 EST, and became airborne at 0257 EST. At the time of the initial voice report, personnel at Malmstrom AFB and SAC sites K-1, K-3, L-3, and L-6 were reporting lights in the sky accompanied by jet engine noise.

2) 0344 EST From NORAD Command Director. Objects could not be intercepted. Fighters had to maintain a minimum of 12,000 feet because of mountainous terrain. Sightings had turned west, increased speed to 150 knots. Two tracks were apparent on height-finder radars ID-12 NM apart. SAC site K-3 reported sightings between 300 feet and 1,000 feet, while site L-4 reported sightings 5 NM from their position. Sightings disappeared from radar at position 4650 N/10920 W at a tracked speed of three (3) knots.

3) At 0440 EST, NMCC initiated contact with the NORAD Command Director who reported the following: At 0405 EST, Malmstrom receiving intermittent tracks on both search and height-finder radars. SAC site C-1, 10NM SE of Stanford, Montana, reported visual sightings of unknown objects. 0420 EST: Personnel at 4 SAC sites reported observing intercepting F-106s arrive in area; sighted objects turned off their lights upon arrival of interceptors, and back on upon their departure. 0440 EST: SAC site C-1 still had a visual sighting on objects.

4) NORAD stated that Northern Lights will sometimes cause phenomena such as this on height-finder radars, but their check with weather services revealed no possibility of Northern Lights.

5) NMCC notified Washington FAA at 0445 EST of the incidents described above. They had not received any information prior to this time.

The Memorandum was signed by Brigadier General William D. Barnes, U.S. Deputy Director for Operations, NMCC.

On November 9, at 3:05 A.M., SAC crews at sites L-l, L-6, and M-l observed a UFO. They described it as being a yellowish, bright, round light twenty miles north of Harlowton at an altitude of 2,000 to 4,000 feet. At 3:20 A.M., the SAC Command Post reported the UFO twenty miles southeast of Lewiston. The color of the object was reported as orange-white, and its appearance was round or disc-shaped.

The only response that the Air Force would give to public inquiries was: "All documentation at Malmstrom AFB has been destroyed in accordance with Air Force directives for the dates of the UFO sightings mentioned . . ."

Since when are all records of a serious incident or series of incidents of this magnitude destroyed? We must conclude that either there is gross incompetence in the military's handling of such situations, or that the UFOs, in these instances, presented so considerable a threat to the national security of the United States that the Air Force felt compelled to deliberately misinform the public, and, as a result, violated the Freedom of Information Act by stating that existing records had been destroyed.

32 "Faded Giant"?

Not only was the Air Force having trouble with UFOs and mystery helicopters over the missile silos, but

also events began to happen in the air and on the ground in Cascade, Montana. The Cascade County sheriff's office was being flooded with reports of low-flying UFOs and peculiar, unmarked helicopters. They were also burdened with the task of trying to unravel another mystery: cattle mutilations.

Around 1974, strange reports had started to surface in the Western states about hundreds of beef cattle found dead across a section of the country running through Minnesota, Wisconsin, Kansas, Nebraska, Iowa, South Dakota, Colorado, Texas, Arizona, and California. By 1975, this activity had spread into Montana. Newspapers across the country carried stories of cattle mutilations and their possible connection with UFOs, which, in some cases, had been observed in close proximity to the time and place of the mutilation incidents.

Some of the cattle bore strange mutilations which could not be accounted for in the usual ways. Ears were carefully removed, tongues were cut out, udders and sex organs were gone, anuses sliced out, all with apparent surgical skill. Also, in such cases, involving mostly Black Angus and black, white-faced cattle, the carcasses were devoid of blood as if drained with a needle. No blood or footprints or vehicular tracks could be found on the ground. It almost seemed as if the bodies were mutilated elsewhere and dropped to the ground from the air.

Here are a few examples of what the Cascade County sheriff's office handled during the time of the overflights of missile silos at Malmstrom:

> "A mutilated cow is found in a plowed field, but there are no tracks in the soft earth."
> "The carcass of a mutilated animal is completely void of blood."
> "The cut area of a mutilated cow bears a neatly serrated edge, as though cut by a giant cookie cutter."
> "A farmer and his son watch four small UFOs darting about a larger one, described as being 'as big as a two-story building.' "
> "Strange, unidentified helicopters, some of them black, are seen but not heard—or heard but not seen."
> "An ordinarily aggressive watchdog becomes strangely quiet and refuses to bark as a strange light flooded his owner's home."

On October 16, 1975, at 10:25 A.M., a rancher stopped at the sheriff's department to report that one of his cows might have been mutilated. A deputy was sent to the ranch, located southeast of Great Falls. The cow was found in a securely locked pasture. The deputy could not find any visible tracks in the area, a feature which has been reported time and time again in cattle mutilation incidents, even when the ground is covered with snow. The deputy found that the cow's left jaw had been skinned. Its tongue had been cut out, and its right eye removed, not from its socket, but through the bone

directly above the eye. The cow had been last seen alive at 5 P.M. on October 15, 1975.

During the morning of October 18, John Struble of Columbia Falls, Montana, was driving his truck in the area of Flesher Pass, about twenty-five miles northwest of Helena. At about 12:30 A.M., he noticed a large object, fifty feet in diameter and twenty-five to thirty feet in the air, pass over his truck from the rear and then hover and stop about one hundred yards ahead of him. As the object did this, it directed a very bright light at him, causing the truck's lights and engine to go out. The UFO stayed there for about five minutes before moving away. According to Struble, the object made a noise like a big jet, then rocketed straight up into the sky and moved away to the east at an incredible speed. When the UFO disappeared, the truck's lights and engine came back on. Struble also noticed that his nonelectric watch had stopped for five minutes, the duration of the UFO's appearance.

Another sighting occurred at 4:30 A.M. on the eighteenth. John Giaco-mino, the vice principal of Flathead Valley High School, was preparing to go hunting when he noticed out his window a "big, bright object" near the top of Columbia Mountain to the north. He observed the object for about half an hour, reporting that it "lit up the whole mountain before dimming and turning a red color." The object moved up over the mountain and disappeared to the north.

The reports were logged by the Flathead County sheriff's office. Later, a spokesman for the Air Force 716th Radar Squadron near Kalispell said that they "officially" had seen nothing out of the ordinary.

The next day, the publisher of the Shelby, Montana, Times, Lloyd Stinebaugh, was contacted by the local police department at 5:15 A.M. The officer on duty said that he had a flying object in view, and he wondered if Stinebaugh could take photographs of it.

The object was very clear in the east. Pictures were taken from the newspaper office. Then Stinebaugh drove to a ridge near town for more photos. The object was seen through field glasses and appeared as an upside-down cross or a cigar shape with a cross or wings at the bottom. It hovered for nearly an hour before disappearing. The photos were developed, and most did not come out. Some did, and they showed an egg-shaped, bright object.

Malmstrom Base Operations received reports of UFOs on the night of October 18 between 9 P.M. and 7:45 A.M. Nine of the sightings came from the Cascade Eden areas south of Great Falls. At about the same time, law enforcement officers were getting reports north of Great Falls as far as Shelby. At 4:20 A.M., the Shelby sheriff's office reported that officers had sighted a UFO, and it was moving from one place to another at a high rate of speed. Its altitude was estimated to be around 2,000 feet. Malmstrom was notified by the sheriff's office, and NORAD tracked the object on radar.

34 "Faded Giant"?

Both Malmstrom and NORAD confirmed that the object was not a conventional aircraft. The Shelby officer described the object as having a white light, with a red flame behind, and a green light on top; there were red lights on both sides. About fifteen minutes later, the object started to climb and headed west.

At 6:04 A.M. another report came in from the Power area northwest of Great Falls. An officer reported that he could see a UFO changing colors from red to white over Conrad.

On October 20, at about 4:30 P.M., a couple living on a ranch near Priest Butte, Montana, reported that they had seen a UFO about half a mile from their home, on the east slope of Priest Butte. Using binoculars, they described it as being egg-shaped, with the large end of the craft on the ground. It had one yellowish-gold light which at first gave off a dull glow and then became brighter. It had two arm-like appendages which came out of the craft, one on each side. The arms made a continual motion similar to a breaststroke. The craft remained stationary for five minutes. Then the appendages retracted into the craft, and it went straight up and out of sight.

Three men were hunting in the Ford Creek area in Augusta, Montana, on October 30. The men had gone to sleep in a horse trailer after tying the two horses to the back of the trailer. At about midnight, the men were awakened by the sound of the horses pulling back on the ropes and pawing the ground. The men looked up and noticed an object which they described as a solid, white light, shaped like a football. The object was five times as large as a star and was moving horizontally across the sky, heading north. They watched the object for only a few seconds, as it was moving at a very fast speed. After it had disappeared, the men checked the horses and found that one was missing. As they listened, they could hear it running down the road. They called out and it returned, but it was very nervous— something very unusual for this horse. After a while, both horses simmered down and there was no further trouble from them for the rest of the night.

Larry Fawcett interviewed Captain Keith Wolverton of the Cascade County Sheriff's Department. Wolverton was able to give a firsthand account as to what was occurring in Cascade County during October and November 1975. He stated, "During that period of time people were calling the Sheriff's Department from all areas of the county, reporting that strange aerial objects were flying low over the land and ranches." Wolverton and other officers responded to these complaints in an attempt to identify the objects, but all investigations conducted during the two-month period proved futile.

Wolverton told of a personal encounter with one of the flying objects on the night of November 11, 1975. He and a deputy were returning to Great Falls from Missoula. The evening sky was clear as the cruiser traveled over the highway at about 50 mph. Suddenly, out of the northern sky, a very large orange light descended, lighting up both sides of the road. This object was traveling at an incredible speed and passed directly over the cruiser

"Faded Giant"? 35

at about 200 feet. Wolverton attempted to stop the cruiser to get a better view of the light, but it was traveling so fast that "It went from horizon to horizon in four seconds. It was impossible for us to determine its size or shape in the brief time we saw it!" There was no time to use the several thousand dollars' worth of photographic equipment in the cruiser. Both officers could not hear any sound from the light as it passed over the cruiser. Wolverton reported the incident to Malmstrom AFB, but they could not help him in identifying the light.

Wolverton told of another incident which occurred the same day. Occasionally, the Air Force would practice bomb runs over the missile sites by flying low over the silos and opening the bomb bay doors. As a B-52 bomber was flying over Freeze Out Lake, a Montana Fish and Game Department employee saw a light flying directly behind the bomber. Using his rifle scope to get a better look, he noted that the strange object seemed to be pacing the aircraft. It then briefly attached itself to the bomber, detached itself, and climbed out of sight. Wolverton said that this sighting was reported to Sheriff Pete Howard of Choteau County. Howard conducted follow-up interviews with military personnel and learned that as the object attached itself to the B-52, the plane's radar equipment went out! The Air Force has denied any knowledge of this report.

The authors would like to thank Captain Wolverton for his prompt attention and assistance in making the following information available. These police file entries document some of the aerial activities in and around Malmstrom AFB at the time of the overflights.

On October 7, 1975, the sheriffs department received a report that a neighboring county police department to the east had been working on two cows that had died and were cut up. The deputy who worked on that also ascertained that on or about October 1, two choppers were seen running together between 9:15 P.M. and 12:20 A.M.

On October 8, a report was filed by a Montana Highway Patrolman. On September 27, 1975, he was off-duty and camping in the mountains south of Great Falls, when he saw a helicopter fly over his camper. The canyon is a fairly narrow area. The helicopter was low enough to vibrate his mobile home. The time was about midnight. Also, on the eighth, the sheriffs department received a report that two ranchers south of Great Falls heard a chopper in their area during the night. The chopper stayed in one area for one half hour. This happened the third week in September.

On October 11, 1975, a black helicopter with a tinted bubble windshield and no markings was spotted flying east to west. This was reported by an unidentified caller. On November 2, a Choteau County police officer in a cruiser spotted a UFO south of Fort Benton. He watched it for thirty minutes. It was a very bright light flying in irregular patterns. RAPCON (Radar Approach Control) was called at 3:24 A.M. They told the sheriffs department that they did not have anything on the radar scope.

On November 8, the sheriffs department received a call from Lieutenant Peisher of Malmstrom AFB, who was in charge of the helicopter division. He told the sheriffs department that two nights prior, people around Lewiston saw a helicopter hovering and that last night two F-106s were scrambled to pursue a light in the sky. There was negative contact. Lt. Peisher also told Wolverton that two of Malmstrom's choppers would be on standby with armed guards and that they would notify the sheriffs department prior to launch.

On December 2, Malmstrom reported that missile crews reported a low-flying helicopter in the area of Juliet (Missile site), near the town of Brady, about twenty-five miles northwest of Malmstrom. This was first reported at 8:47 P.M. At 9:31 P.M., Malmstrom notified the sheriffs department that there were two craft being reported from different missile sites. On October 10, 1975, a man, his wife, and two boys observed a helicopter hover over their cattle at 8:30 P.M. It was one-quarter of a mile away. The craft was noiseless and had red and blue lights. This was in the county north of Wolverton's county and was handled by Sheriff Pete Howard. Also, on October 10, a local veterinarian observed a white light in the sky, with a red light on the side. It would disappear and then reappear. His observation was that the cattle in the area started howling louder than he had ever heard them howl. This lasted for about five minutes.

On October 16 and 17, a rancher south of Great Falls experienced a helicopter hovering over his ranch for fifteen to thirty minutes on both days. On October 17, 1975, a deputy observed a bright light southeast of Malmstrom AFB. It was hovering and reminded him of a landing light. On October 19, at 4:20 A.M., Shelby sheriffs office (Toole County) reported a UFO moving at a high speed at the altitude of 2,000 to 5,000 feet. NORAD at Malmstrom was notified. They indicated that it was not a conventional aircraft and that they would like more information. There were nine different sightings that night around Great Falls. On October 20, a black and white helicopter was reported flying one hundred feet off the ground, fourteen miles southeast of Great Falls. On October 25, 1975, an object was spotted ten miles southwest of Chester; it had green and blue lights. At 3:20 A.M., RAPCON was called. Nothing was sighted on radar. On October 26, Fort Benton reported a helicopter twenty miles east. At 12:06 A.M., Malmstrom reported no helicopter from base. On November 5, at 4:10 A.M., a man reported seeing several UFOs east of Great Falls. There were six objects together; one dropped down nearly to the level of his truck. On November 7, at 3:38 A.M., two girls traveling on the highway west of Great Falls reported being followed by a bright light, grayish in color with intermittent blue lights. On November 7, at 4:20 A.M., Malmstrom reported that SAC people around Lewiston had two UFOs in sight (Malmstrom scrambled two jets). On November 7, a man called, stating that he observed a bright light on November 2 around 9:30 P.M. around Belt; it was visible for fifteen seconds. On November 12,

at 4:04 A.M., there was a UFO sighting east of Fairfield; RAPCON was called; negative on (radar) scope. On November 16, at 4:00 A.M., Teton County sheriffs office personnel spotted and observed an object which moved rapidly and changed colors. RAPCON was called. They stated negative on the (radar) scope.

On October 25, Captain Wolverton talked to a woman who lived fifteen miles east of Malmstrom AFB. She stated that on October 17, around 10:30 P.M., she observed a large craft fly from east to west over her house. She said it was about the size of a DC-10, but it had no wings and no noise could be heard emanating from it. It had a ring of lights around the middle and was visible for about thirty seconds. While speaking to a neighboring rancher, Wolverton was told that a member of the family also observed a green light, described as large with a white light behind it, fly between their house and the above-mentioned house between 7:30 P.M. and 8:30 P.M. It came down by a haystack and then flew away.

During a Tuesday night and Wednesday morning in mid-November, Cascade, Teton, Pondera, and Chouteau counties were reporting unidentified helicopters over a wide area, including overflights of missile installations. Some objects seen were reported as helicopters, and others simply as nocturnal lights. On November 19, 1975, Cascade, Teton, Pondera, and Chouteau counties, as on the previous nights, again

experienced a helicopter/UFO wave. At least two helicopters were reported at once over a missile site. Malmstrom AFB verified that unidentified helicopters were in the area. On November 28, in Cascade County on the southeast edge of Great Falls, a law officer observed an unidentified helicopter which lifted up off the ground and flew away.

Between August 1975 and May 1976 in Cascade and surrounding counties, approximately 130 reports of unidentified helicopters and/or UFOs were logged. It should be noted that this Montana flap occurred at about the same time as similar phenomena which occurred over military bases in Michigan and Maine. The Cascade sheriffs office was swamped with so many calls on the aerial activity taking place over the county that the sheriff requested help from Malmstrom AFB. This help was granted in the form of security helicopters placed on twenty-four hour alert. The pilots would remain in the helicopter, even to sleep, in case a call came in from the sheriffs office.

We spoke to one of the pilots. He told us of an incident after a call for assistance had come in from the sheriff:

> People were reporting a craft at low level that they thought was a helicopter. They were reporting that the craft had strobe lights on it, like disco lights. Well, the weather was so bad when the report came in that it would have been impossible to fly a helicopter, with the icing and so forth. This made it kind of strange. We could not fly due to very bad weather conditions, but this craft had no trouble flying in this weather.

38 "Faded Giant"?

Then, again, there was the Malmstrom activity. On November 7, 1975, at 3:45 A.M., reports were made from K, L, and M Launch Control Facilities regarding bright objects in the sky overhead. At the same time, teams at K-8 and L-6 were reporting objects with bright streamers, which appeared to hover and then descend. There were other simultaneous sightings from different locations in an area approximately 120 miles southeast of the base on a 120 radial. Two F-106s were launched from Great Falls. The lights dimmed and disappeared. All radar contact was lost. The temperature was 35°F, and visibility was 45 miles.

Sightings in Montana continued into 1976 and thereafter. Wolverton and Sheriff Pete Howard went to Fairfield on January 29, 1976, to investigate a report of a UFO sighting. They interviewed Bill Link (pseudonym) regarding an object he observed on January 21, 1976. Link stated that he, his wife, a brother, and his two sons had observed an object in a field near their house (about twelve miles west of Fairfield). It was 9:00 P.M., and they watched the object from their house until they observed red lights on the highway. Thinking the red lights were either that of a highway patrolman or the sheriff, Bill Link and his two sons, ages fifteen and thirteen, got into his truck and went toward the red lights on the highway. As they got closer, the lights ascended from the road and flew toward the larger object. Bill stopped his truck 500 yards from the large object and used his field glasses.

The following is a statement given by Bill Link on January 28, 1976, in the presence of Wolverton, Howard, and a deputy from Cascade County:

BILL LINK: We first spotted them from the house. My boy saw them first just as we turned in to go into the house. My mother was visiting, and he said, "Dad, there's a funny light down in the field." So we all turned to look at it, and I went on into the house. It didn't look strange to me. My wife, boy, and little girl stayed out, and pretty soon she said, "Come out, Bill. Look at these. They're really funny!" So I went out there, and by this time there is a row of trees down the road about three-quarters of a mile. Well, by this time, these lights were coming back and forth out from behind this row of trees. And they appeared at that time to be landing in the field and taking off and landing in the field and so forth. So we watched them for quite a while, probably twenty minutes, there with the field glasses on. About this time we saw two red blinkers down on the highway and I said, "Well, somebody has reported it to the sheriff or somebody is out

there now with a patrol car watching them, so we'll go down, too?" So I took the two boys and jumped in the pickup and as we turned the corner off our approach on the main highway, why, these red things that we thought were patrol cars, they then floated off the highway over this field, still blinking or they were then. So we drove

"Faded Giant"? 39

on down there and then as we approached the field where they had went, why we saw this structure that looked like a hotel. A two-story hotel sitting out there in the field and the other lights were grouped around it. About four sets of lights grouped around it."

SHERIFF HOWARD: The big one looked like it was sitting right on the ground?

BILL LINK: It looked like it. That's what the appearance indicated.

SHERIFF HOWARD: About how far away was it?

BILL LINK: Like I said before, I would judge it to be 500 yards.

SHERIFF HOWARD:Is that as close as you got to it?

BILL LINK: That was as close as we got, maybe it was three, maybe it was five, maybe it was seven, but I would say, knowing where that field is, it wouldn't have been over five hundred yards.

SHERIFF HOWARD: What did the machine look like? Angular? Cigar-shaped?

BILL LINK: The one that looked like a hotel? Why, it had a rectangular shape, you could see the outline of it. You couldn't see the outline till you put the field glasses on. Then you could see the dark outline."

SHERIFF HOWARD: Did it have cabin lights or whatever you want to call it?

BILL LINK: Ya! Ya! There were, there were lights, windows, I'd say about . . . there were two rows of those and they appeared to be probably, oh, five to six feet high, and maybe two, three feet wide. With no ... that is standing on end like this.

WOLVERTON: Single pane windows?

BILL LINK: Single pane windows. No divisions at all in them.

WOLVERTON: Could you tell if there were windows all the way around it?

BILL LINK: Well, no, it looked like it was just . . .

WOLVERTON: One side?

BILL LINK: Face of one side of it.

SHERIFF HOWARD: But they were the full length of the machine?

BILL LINK: Ya, they were the full length of the machine. Well, they come about . . . they were . . . there was none in the exact corner of it. They started in a ways from each end of it. In the meantime, these other lights seemed to be kind of affiliated with it, cause they grouped around it. They would come up close to it and then they would leave, hover about it, and rapidly change places, and then they would appear to set down right in the stubble and then they would . . . some of them would die down to a very dim light and

then we would watch them for a while and they would flare right back up very brilliant . . .

This is only a small excerpt of a much longer statement on this case. It does demonstrate, however, the high degree of strangeness characterizing the reported sightings.

40 "Faded Giant"?

Certainly what happened in Montana during this span of time must be regarded as one of the most concentrated series of bizarre encounters in the history of the UFO phenomenon. Perhaps even more interesting than what we've discussed here is the story we haven't been told by the authorities.

Nuclear Connection Project
NCP

Subject: Malmstrom AFB, Incident (1975)

November 7, 1975
Lewiston, Montana

Francis Ridge:
Malmstrom AFB has had several major "nuclear connection" type incidents. The first one on-record is the March 16, 1967 case where ten Titan missiles were put into a "no-go" situation when a UFO hovered over the base. This later incident involved one missile warhead and occurred during the October/November SAC base overflights of 1975. After the event at Malmstrom, and the UFO began to rise to about 1,000 feet, NORAD picked up the object on radar. Two F-106 jet interceptors were launched from Great Falls, Montana, and headed toward the sighting area. See report link below for details.

MEMORANDUM FOR RECORD

Subject: Unidentified Sightings

1. 0308 EST FONECON from NORAD Command Director: at 0253 EST Malmstrom AFB Montana received seven radar cuts on the height-finder radar at altitudes between 9,500' and 15,500'. Simultaneously, ground witnesses observed lights in the sky and the sounds of jet engines similar to jet fighters. Cross-tell with FAA revealed no jet aircraft within 100NM of the sightings. Radar tracked the objects over Lewistown, Montana at a speed of seven (7) knots. Two F-106 intercepters from the 24th NORAD Region were scrambled at 0254 EST and became airborne at 0257 EST. At the time of the initial voice report personnel at Malmstrom AFB and SAC sites K1, K3, L3 and L6 were reporting lights in the sky accompanied by jet engine noise.

2. 0344 EST FONECON, same source:

Objects could not be intercepted. Fighters had to maintain a minimum of 12,000' because of mountainous terrain. Sightings had turned west, increased speed to 150 knots. Two tracks were apparent on height-finder radars 10-12 NM apart. SAC site K3 reported sightings between 300' and 1,000' while site L-4 reported sightings 5NM NW of their position. Sightings disappeared from radar at position 4650N/10920W at a tracked speed of three (3) knots.

3. At 0440 EST, NMCC intiated contact with the NORAD Command Director who reported the following:

0405 EST: Malmstrom receiving intermittent tracks on both search and height-finder radars. SAC site C-1, 10NM SE of Stanford, Montana, reported visual sightings of unknown objects.

0420 EST: Personnel at 4 SAC sites reported observing intercepting F-106's arrive in area; sighted objects turned off their lights upon arrival of interceptors, and back on upon their departure.

0440 EST: SAC site C-1 still had a visual sighting on objects.

4. NORAD stated that Northern Lights will sometimes cause phenomena such as this on height-finder radars, but their check with weather services revealed no possibility of Northern Lights.

5. NMCC notified Washington FAA at 0445 EST of the incidents described above. They had not received any information prior to this time.

6. 0522 EST FONECON with NORAD Command Director: At 0405 EST SAC Site L-5 observed one object accelerate and climb rapidly to a point in altitude where it became indistinguishable from the stars. NORAD will carry this incident as a FADE remaining UNKNOWN at 0320 EST, since after that time only visual sightings occurred.

Red Flash Seen In Sky Must Have Been Meteor

NOV 16 1960

That brilliant red flash seen over Vincennes and southern Indiana and adjoining areas Monday night must have been a meteor.

No body had any other logical explanation today, after a futile search for evidence of a plane crash.

First reports came from Florence, east of Vevay. Residents there said they saw an object burning in the sky. A Switzerland County farmer reported sighting "an object in the sky with three bright lights."

The Nike missile station at Dillsboro said it had traced an unidentified object with its radar but lost it as it traveled northwest toward Indianapolis. State police units rushed to the area looking for some evidence of a plane crash but could find none.

Disc with conning tower, No Sound, Duration: 5 Minutes
Evaluation: Berliner: 04/02

Francis Ridge, Field Investigator:
A reputable witness: "We were over at my mother-in-law's in Mt. Carmel, and that's about 11 miles from Princeton where I live, and it was evening and there was a storm coming up and we got upset over there. We had some bad experiences. A tree blew down and we decided to leave. We stopped at a filling station and got some gas and then we proceeded on to Princeton through the (Wabash River) bottoms and a, (of) course this was the time about when they were building PSI (the Public Service Indiana power plant) on the right hand side of the road.

"And we saw what appeared (now this was dark now) to be a couple of headlights. Well, we assumed they were maybe a temperature inversion, but then we got to thinking that during a thunderstorm or rainstorm you're not going to have a temperature inversion, it's going to be kinda stirred up. But directly in line with this was Owensville Rd. We thought maybe they might be headlights bouncing off of low clouds. These (lights) were up in the air.

"Our angle of perspective changed as we approached it. So we found out it was above the trees. The lightning caught up with us about this time and a pretty-good-sized bolt was behind it and we got it illuminated all around us and we saw what we appeared to be a saucer. Kinda weird, but the whole family witnessed it and nothing was said until we got home. "What surprised me, of course, we thought it was a car because it was the same spectral response that you'd have (received) from headlights, you know, the infra-red region, HEAVY in the infra-red. As we got closer to it, before the lightning struck, we saw what looked like clearance lights, one on each side of it. Later on it proved to be four, of whatever the light was, dotted around the cupola. And beneath it was a super-dark cone which apexed below the tree level. And this thing (the cone) didn't appear to be solid, the cone that came down to the ground or whatever it went down to. It was sort of wide at the bottom of the

saucer and evidently went to a point which would have been the opposite of a flashlight beam. And, ah, we kinda got a shock over it.

"I'd done a little snooping around during some rainstorms seeing if we could see it again, my oldest boy and I, back in where we thought it was in the woods. "As you come outside of Mt. Carmel and are proceeding towards Princeton, you'll find a large woods with a bunch of little spots where they've cut out to plant popcorn, I think, and corn. And it was over one of these patches, in fact it was the exact location where this Cavanaugh girl was found. "There is one thing. We've discussed this, the family and my oldest boy (he's 15 now), this is a good topic for us, inter-family. Ah, if these were lights shining on out, I would think they were more outside, than in, because if there were anyone inside this thing they would have been almost blind because the lights, if these were portholes, I'm saying, they would have to be almost blind because the lights were almost the same illumination as car headlights, although we didn't see any beams shooting out from them as you would on a car. "But the cone beneath it seemed to be, well, what I'd seen in laser, except on a much grander scale, in a different light spectrum. Of course in a storm you'll have heavy in ultra-violet, and ah, which could have made a red appear black, or any color would be off-color. Maybe there is something here in a beam, you know, like a laser. I think they (U.S. scientists) are doing experiments with green lasers that actually support objects. Why not?

"Another little injection here. It looked archaic, something out of Jules Verne, like a pickled metal, you know what I mean? When a piece of metal is heat-treated, pickled, a burnished silver color? It looked like this, well, you'd almost say you saw the rivets on the damned thing. Of course I didn't see any rivets. It was old-fashioned looking, not streamlined, (but) straight up and down, the cupola, with a little rolled edge on it. And ah, nothing ultra-modern that you would associate with space travel or something like this. I don't really believe the damned thing came from outer space (laughing). I mean, it doesn't ah, seem..... "Usually there is an explanation, but this damned thing, there wasn't any explanation for me (laughing again), you know, it was there, solid. "The damned thing was sitting awfully still, to be...it moved in from the west, or let's see, east, and then kinda stopped and started down. And so smooth and determined in its movements. It wasn't being affected by the storm any. "I'd say about 30' above the tree-level, five, six-hundred feet away, I'd imagine. I would estimate it about 30-40' (wide). Of course, I'm not very good on judging distances or sizes of objects. I overestimated (driving) because I thought it was landing or going down into a field which was just on the other side of the woods is an open field. So, I speeded up and went up there, and it had went down into the woods. So I had overshot my estimate there. We slowed down and watched it to almost a stop, I'd say three or four minutes. All the time we had good lighting from the lightning. Of course, I'd say it was ultra-violet, and this does make the colors...screws up the colors. It changes the shades heavy ultra-violet.

"The object was on a NW to SE track, descending." Weather was stormy, sky overcast with thick clouds, light rain, and lightning. Temperature was warm. The strong wind was from the west. The initial observation was of headlights, low on the horizon, to an object at about 30-degree elevation. The car was a 1971 Chevrolet 4-door Impala, air conditioning was on, windows closed "until I purposely rolled them down to observe. Realizing at this time it was a UFO, I turned on the radio, but did not hear any interference, nor did the engine stall, as I have read they did. At about 1,000' from the object, it stopped its linear movement and hovered, until we were within 500', then it descended very slowly into the woods."

AIR FORCE TEAM CHECKS OUT "LIGHTS"

Investigate 500 Claims A Year, Solve 98 Per Cent of Them.

An Air Force team of physicists from Wright - Patterson Field, Dayton, Ohio, spent the week end in Fairfield investigating the aerial phenomena sighted in Wayne county several nights last week.

Here were Lt. Col. Robert J. F[illegible], Capt. Hector Quintanilla a[illegible]/Sgt. Charles R. Sharp.

Made Interviews

The Air Force team interviewed persons who reported sighting strange objects in the Wayne county sky last week, starting with Ronnie Austin and his girl friend, Phyllis Bruce, who were startled by a strange lighted object which followed them in the sky near their Hickory Hill township homes last Sunday night.

What did the Air Force physicists find out? They aren't telling —yet, but Colonel Friend did make the following observations to the Press:

—The Air Force investigates 500 claims of strange aerial phenomena a year.

—It satisfactorily explains 98 per cent of them, at least in the years since 1956. From 1947, when "Project Bluebook", the Air Force name for investigation of aerial phenomena was started, the Air Force has satisfactorily explained 92 per cent of these sightings.

—Each Air Force base investigates such sightings nearest its base. He did not explain why Scott Air Base did not handle this i[illegible]tigation.

Investigate All

—The U.S. investigates every such sighting reported. "The one we didn't investigate might be the one which would blow us apart," Colonel Friend expalined.

—The story told by young Ronnie Austin and members of his

(Continued on Page 8)

AIR FORCE MEN CHECK LIGHT-IN-SKY STORIES HERE

A TEAM OF AIR FORCE PHYSICISTS were in Fairfield over the week end checking last week's light-in-the-sky stories. Here they are reading about it all in the Press . . . Lt. Col. Robert J. Friend (center), Capt. Hector Quintanilla, right and Sgt. Charles R. Sharp. They called the Press stories accurate and not overplayed.

SIGHTINGS IN SKY APPEAR ON WANE

None Reported In County Over Weekend; Seen in Other Counties.

Are Wayne county's neck-craning days over?

The eyes-to-the-sky activity appears to be waning, one week after a strange lighted object followed a Hickory Hill township teenager and his girl friend home.

A number of Fairfield and county residents sighted more strange lights Wednesday night.

The sightings brought Air Force

STORY OF ANOTHER LIGHT IN THE SKY

Harold and Roberta Flexter, of Cisne, Describe Experience With Light; No Date Given.

Harold and Roberta Flexter, of Cisne, write the Press the following account of their experience with a light in the sky. They gave no date, but it is presumed to be last week.

My husband, Harold Flexter, 28, and I, Roberta Flexter, 20, were at the farm house watching a cow that was to have a calf.

TOM FOGLE, 63, DIES IN CALIFORNI

Well Known Former Fairfiel Resident Will Be Buried There.

Tom Fogle, age about 63, die last week at his home in Cal fornia.

Word of his passing has reache friends here, but details are lacl ing.

Mr. Fogle was a son of tl late Mr. and Mrs. Orin Fogle, we known Fairfield residents a qua ter of a century ago.

The Fogles were one of tl

Project Moon Dust

Chapter 8

The History of Project Moon Dust

by Kevin D. Randle, Captain, U.S.A.F.R

When United States Senator Jeff Bingaman asked the Air Force about a classified project called Moon Dust, Lieutenant Colonel John E. Madison of the Congressional Inquiry Division, Office of Legislative Liaison, wrote, “There is no agency, nor has there ever been, at Fort Belvoir, Virginia, which would deal with UFO’s or have any information about the incident in Roswell. In addition, there is no Project Moon Dust or Operation Blue Fly. Those missions have never existed.”

What the documentation, now available thanks in part to the Freedom of Information Act, and the pioneering work of Clifford Stone, tells us is that Madison’s letter to a United States Senator is, at best, inaccurate. The question can be asked was he merely uninformed, or was he purposefully lying to a Senator? Stone, a researcher in Roswell, New Mexico, challenged Madison’s response with a series of documents, which had been obtained through Freedom of Information Act requests. He pointed out that documents originally classified as secret and since downgraded, mentioned the code name Moon Dust, and specifically a project for UFO-related materials. It also established as fact the location of the parent unit being at Fort Belvoir, Virginia.

The response to this documented information was another letter to Senator Bingaman, apparently from Madison’s boss in the Congressional Liaison Office. Colonel George M. Mattingley, Jr., wrote, “This is in reply to your inquiry in behalf of Mr. Clifford E. Stone on the accuracy of the information we previously provided to your office. Upon further review of the case (which was aided by the several attachments to Mr. Stone’s letter), we wish to amend the statements contained in the previous response to your inquiry.”

It is necessary here to suggest that the Air Force had been caught in a lie (or misinformation) to Senator Bingaman because the documents were available to positively refute them? We can look at this as a simple mistake, based on the lack of information available to the Congressional Liaison Office and Lieutenant Colonel Madison. It can be suggested that nothing nefarious was going on here. Madison simply wasn’t aware of the classified Project Moon Dust and responded without checking the information, as he should have done.

We could believe that, except for the response written by Mattingley after Madison had been caught. It would seem that once they had been caught, they would be sure their information would be as accurate as possible.

Mattingley, in his letter to Bingaman to correct the previous mistakes, wrote, ”In 1953, during the Korean War, the Air Defense Command organized intelligence teams to deploy, recover, or exploit at the scene downed enemy personnel, equipment, and aircraft. The unit with responsibility for maintaining these teams was located at Fort Belvoir, Virginia. As the occasion never arose to use these air defense teams, the mission was assigned to Headquarters, United States Air Force in 1957 and expanded to include the following peace-time functions: a) Unidentified Flying Objects (UFOs), to investigate reliably reported UFOs within the United States; b) Project MOON DUST, to recover objects and debris from space vehicles that had survived re-entry from space to earth; c) Operation BLUE FLY, to

expeditiously retrieve Soviet Bloc equipment."

Having access to the previously classified 4602d records, I know that Mattingley's statements are not accurate. By the end of 1953, after the wave of summer sightings in 1952, after Blue Book had virtually ceased to exist, the 4602d was involved in UFO sighting investigations. Mattingley suggested the change came in 1957, but Mattingley is wrong. The only question is if he was as ill-informed as Madison, or if he was deliberately trying to suggest something else.

Mattingley also wrote, "These teams were eventually disbanded because of a lack of activity; Project MOON DUST teams and Operation BLUE FLY missions were similarly discontinued. The Air Force has no information that any UFOs were ever confirmed downed in the United States."

Again, this simply isn't the truth.; We know from released documents that Moon Dust wasn't discontinued. Its code name was changed after it was compromised. Robert G. Todd, in a letter from the Air Force dated July 1, 1987, learned that the "nickname Project Moon Dust no longer officially exists." According to Colonel Phillip E. Thompson, deputy assistant chief-of-staff, Intelligence, "It, [Project Moon Dust] has been replaced by another name that is not releasable. FTD's [Foreign Technology Division, headquartered at Wright-Patterson] duties are listed in a classified passage in a classified regulation that is being withheld because it is currently and properly classified."

And, we know, from documentation, much of it recovered from State Department records, that Moon Dust teams were notified and dispatched for various cases, some examples of which will follow here. It should be made clear that most of these cases deal with material and wreckage that is clearly of terrestrial origin. The point here is not to prove an extraterrestrial connection, but to confirm the use of Moon Dust teams, which contradicts the statements made by Colonel Mattingley to Senator Bingaman. The messages also confirm Moon Dust interest in UFOs and the involvement of the State Department.

On the night of March 25-26, 1968, four objects fell in an area of Nepal. The American embassy in Kathmandu, in a secret message dated July 23, alerted the 1127th USAF Field Activities Group, which had once been the 4602d, and the 1006th at Fort Belvoir, that they expected full cooperation with the government of Nepal. The subject of the message was… MOON DUST.

It is clear from the messages that the debris was readily identifiable to the staff at the embassy in Nepal. They had seen photographs of three of the items but had not been allowed to inspect the fourth. They noted that a "technical team should not be sent unless visual examination of the fourth object is felt essential."

This is, of course, a backward way of getting to the point. However, the embassy did prove that technical teams were available and that they were dispatched. The composition of those teams was described in another document that surfaced in the various Freedom of Information Act requests made.

Stone provided me with a copy of a document created in November 1961. It seemed to be directing the creation of the reinforcement of AFCIN Intelligence Team personnel. That document, however, is now wrapped in controversy because two versions have been discovered.

First, we must understand what this document is. The problem, according to the opening statement is, "To provide qualified personnel to AFCIN intelligence teams." The document has a section deleted and then, in paragraph 2, subsection C, says, "In addition to their staff

duty assignments, intelligence team personnel have peacetime duty functions in support of such Air Force Projects such as Moon Dust, Blue Fly, and UFO, and other AFCIN directed quick reaction projects which require intelligence team operational capabilities (see Definitions)."

It should be pointed out that this document ties Moon Dust, Blue Fly, and UFOs together. It points out that their assignments already existed, and they were already assigned personnel.

The definitions mentioned appear in paragraph 5. It covers not only those assigned to the teams, but also the terms used in the document itself. What is important here is the fact that "Moon Dust," "Blue Fly," and "UFO" are all parts of the definitions. Moon Dust is defined "As a specialized aspect of its overall material exploitation program, Headquarters USAF has established Project Moon Dust to locate, recover and deliver descended foreign space vehicles."

Although Mattingley defines Blue Fly as an operation to "expeditiously retrieve downed Soviet Bloc equipment," this document suggests that Blue Fly was "established to facilitate expeditious delivery to FTD of Moon Dust or other items of great technical intelligence interest." Certainly, Soviet Bloc equipment would fit into that definition, but it covers other items, including UFO-related debris, as well.

And finally, under definitions, it says, "Unidentified Flying Objects (UFO): Headquarters USAF has established a program for investigation of reliably reported unidentified flying objects within the United States. AFR 200-2 delineates 1127th collection responsibilities."

The second version of this document, one that I have seen, is exactly the same as the first, but contains a handwritten note that says it was a draft proposal and that it was never implemented. Robert Todd located this version. It is clearly the same as the first document, which I have in my possession, the difference being a handwritten note at the top. Barry Greenwood of Citizens Against UFO Secrecy suggested to me that the version Stone has, a copy of which he supplied to me, is the same as the version Todd has, with the exception of the handwritten note. According to Greenwood, the two versions are the same, and the source id the same, but someone inside the UFO community removed the handwritten note before releasing it to other UFO researchers. Greenwood seems to suspect Stone of having altered the document for the purpose of advancing his belief in Project Moon Dust and the missions it carried out.

Stone, on the other hand, claimed that he received his version from military sources without the handwritten note. His sources were not the same as those used by Todd, and he didn't receive his copy from Todd. Stone also makes the point that the handwritten note is irrelevant and refers only to the "Action Recommended" section at the end of the document. The other material, referring to "Factors Bearing on the Problem" and the "Discussion" reflects the situation as it already existed. In other words, the discussion about the composition of the teams and their missions was not a suggestion to develop those teams. The "not implemented" statement referred to adding, or tasking, additional Air Force personnel with Moon Dust.

So what we have, then, based on the documentation, including the disputed AFCIN intelligence team documents, are two letters from the Air Force to a United States senator that do not reflect accurate information. Even after being caught once, the Air Force came back with information that was less than perfect. And even if Todd and Greenwood are right in asserting that the November 1961 document was merely a draft, it provides information about the various projects and operations that were in existence at the time.

In fact, the information about the composition of the intelligence teams is corroborated by

other documents I recovered through both the Freedom of Information Act and general research conducted through the Air Force Archives at Maxwell Air Force Base in Alabama.

As mentioned elsewhere, I learned that members of the 4602nd and later the 1127th learned parachuting, horseback riding and animal packing, skiing, mountain climbing and various other survival skills. The November document, under "Criteria" notes, "Intelligence personnel can perform effectively only with an adequate background of training and experience. Inadequately qualified personnel in such assignment would be a liability rather than an asset to successful accomplishment of the mission."

The question that must be asked is if the Moon Dust personnel were ever used. Clearly, since the mission began in 1953 and continues today, as far as we can tell from the information available, we must answer, "Yes." This, too, is a contradiction to the letters from Madison and Mattingley.

Stone, in his response to the Madison letter, enclosed two debriefings of Soviet pilots in which UFO sightings were mentioned. If there was no interest in UFOs, Stone wondered what purpose was served by including that information. Mattingley replied, "Enclosures 3 and 4 of Mr. Stone's letter pertain to debriefings of two Soviet sources who were being interviewed for possible military information of interest. Their recounts of UFO sightings, even though they had occurred many times earlier, were included in the report for historical interest and were incidental to the main purpose of the report."

It is possible that Mattingley, in this respect, was being candid. But the question that can be asked is what historical interest can there be in sightings of objects that, according to the Air Force, do not exist? Why waste valuable time and effort recounting old UFO sightings? Just what was the historical context to which he referred?

Stone, in his rebuttal, argued, "Inclosures 3 and 4 were once classified Air Force Intelligence Reports. Enclosure 3 was IIR 1 517 0002 88, dated November 25, 1987, entitled Soviet Aircrew Sightings of Unexplained Phenomena. This report deals with UFO sightings that occurred in 1984 and later."

Stone asks, and rightly so, "What was the main purpose of these reports?? They deal directly with UFO sightings and make no references to Soviet missiles, or MIGs, or tanks. So what was the main purpose of these reports to which UFOs were incidental???"

So exactly what was Project Moon Dust? Did the Air Force ever activate it? Did the team members ever participate in the retrieval of an alien spacecraft?

We have a time frame for the beginning of the project from Mattingley's letter: 1953. As we have seen from the project's history, this was apparently an outgrowth of the situation in the summer of 1952. If Moon Dust came into existence at that time, to take over the investigative duties that had formerly rested with Blue Book, we have one set of answers. Blue Book was too public and the military was afraid of what might be spilled into the public arena because of that.

We must remember that in that time, at least publicly, the Air Force was telling us that there was no evidence for the existence of UFOs. If they were convinced of the accuracy of that statement, then why form teams to recover the material?

Teams were formed. We've already seen the documentation about it. And I know they were deployed. Again, there is documentation, but there is also personal testimony. Brigadier General Arthur Exon was the base commander at Wright-Patterson Air Force Base in the mid-1960s. During an interview I conducted with him in May 1990, he said, "Well, the way

this happened to me was that I would get a call and say that the crew or the team was leaving and they knew…There was such and such a time and they wanted an airplane and pilots to take X number of people to wherever…They might be gone two or three days or might be gone a week.

According to Exon, these were officers assigned to the Washington, D.C., area. They would fly into Wright-Patterson on commercial flights and then deploy on military aircraft. Their missions, according to Exon, were to investigate UFO sightings. He mentioned a case in Arizona where the craft had touched down and left a burned area.

These were, according to Exon, priority missions. He didn't ask questions, just alerted the proper facilities and scheduled the flights using their aircraft. It is clear, however, that these were Moon Dust teams engaging in the collection of UFO-related material Exon retired about the time that Project Blue Book was closed. His information doesn't suggest that any activity survived the end of Blue Book. However, it must be noted that Blue Book was based at Wright-Patterson, and if the officers coming into Ohio had been part of Blue Book, they would have already been there. In other words, it suggests an agency outside of Blue Book was interested in UFOs.

The other documents we've seen show that Moon Dust survived the end of Project Blue Book. There are, of course, the State Department records, and Colonel Thompson's letter telling Todd that the name, Moon Dust, had been changed.

Moon Dust became the real investigation of UFOs, the secret study that all of us claimed existed and that the Air Force denied. It was carried out by specially trained intelligence personnel. And, its existence was denied by the Air Force despite the facts.

Now we have all the data.

National Investigations Committee On Aerial Phenomena

Form: 97 BB Document
Dated: 4 March 2006, updated 19 April 2016
From: Fran Ridge

Subject: The Bolender Draft (Not Memo), Oct 20, 1969

Distribution: nicapresearch, SHG, NCP

Our thanks to Barry Greenwood for the clean version of this draft. Our thanks also to Gildas Bourdais for the first copy of the 3-page document. That reproduction was poor but readable and was a copy made from FUFOR's "U.S. Government Documents" package. The text version presented below was provided by Brad Sparks. Robert Todd obtained the release of the Bolender document in Jan 1979. The implications from this memo, issued just before the shutdown of Project Blue Book, is clear, and is found on page 2: " reports of unidentified flying objects which could affect national security are made in accordance with JANAP 146 or Air Force Manual 55-11, and are not part of the Blue Book system." Although this comment has been made before in BB memos going back to 1958-9, this is the document often cited.

The Bolender Memo (document not memo) states that "in 1966 the Air Force Office of Scientific Research contracted to have the University of Colorado conduct an independent scientific investigation of unidentified flying objects. This study, directed by Dr. Edward U. Condon and made available as the "Scientific Study of Unidentified Flying Objects," serves as a basis for evaluating the Air Force investigative effort. After an extensive study of this report as well as the review of the report by a panel of the National Academy of Sciences, past studies, Project Blue Book operations and other inputs, the Office of Aerospace Research concluded, and we agree, that the continuation of Project Blue Book cannot be justified, either on the ground of national security or in the interest of science." The flawed study was fully exposed in a May 14, 1968, LOOK Magazine article, Flying Saucer Fiasco, by John G. Fuller.

(Brad Sparks: There were 16 Attachments to the Bolender Memo and Bob Todd spent years trying to get the AF to find and release them, but the AF totally stonewalled him. Several of the 16 Attachments are already known separately and have been released long before, but several are unknown and not released, several more are not described well enough to identify.)

SUBJECT DATE

Unidentified Flying Objects (UFO) 20 OCT 1969

SUMMARY

1. For more than twenty years the Air Force has had the responsibility within the Department of Defense for the investigation of unidentified flying objects (UFOs) (Atch 2). As stated in Project Blue Book, this investigative program has two objectives:

a. To determine whether UFOs pose a threat to the security of the United States: and

b. To determine whether UFOs exhibit any unique scientific information or advanced technology which could contribute to scientific or technical research (Atch 3).

Procedures for Project Blue Book reporting are defined in Air Force Regulation 80-17. This regulation requires the Commander of an Air Force base to provide a UFO investigative capability and for Air Force Systems Command to continue Project Blue Book (Atch 4). In response to this regulation most Commanders have appointed a UFO investigating officer, usually as an additional duty. Project Blue Book has two officers, one NCO and one civilian assigned on a full-time basis. In addition, Dr. A. J. Hynek served as a scientific consultant until 1 July 1969.

2. In 1966 the Air Force Office of Scientific Research contracted to have the University of Colorado conduct an independent scientific investigation of unidentified flying objects. This study, directed by Dr. Edward U. Condon and made available as the "Scientific Study of Unidentified Flying Objects," serves as a basis for evaluating the Air Force investigative effort (Atch 5). After an extensive study of this report as well as the review of the report by a panel of the National Academy of Sciences, past studies, Project Blue Book operations and other inputs, the Office of Aerospace Research concluded, and we agree, that the continuation of Project Blue Book cannot be justified, either on the ground of national security or in the interest of science (Atch 6).

3. The general conclusion of the Scientific Study of Unidentified Flying Objects is that "nothing has come from the study of UFOs in the past 21 years that has added to scientific knowledge." As to what the federal government should do with the UFO reports it receives from the general public, the authors add that they are "inclined to think that nothing should be done with them in the expectation that they are going to contribute to the advance of science." A panel of the National Academy of Sciences concurred in these views, and the Air Force has found no reason to question this

---

conclusion. For example, it has been the Air Force experience that although a significant portion of the Air Force's environmental research program is

concerned with natural phenomena that could be associated with unidentified flying objects (Atch 7), Project Blue Book reports have not added any useful data to these research efforts (Atch 6). Thus, we concur with the University of Colorado recommendation "that only so much attention to the subject should be given as the Department of Defense deems to be necessary strictly from a defense point of view."

4. As early as 1953, the Robertson Panel concluded "that the evidence presented on Unidentified Flying Objects shows no indication that these phenomena constitute a direct physical threat to national security" (Atch 9). In spite of this finding, the Air Force continued to maintain a special reporting system. There is still, however, no evidence that Project Blue Book reports have served any intelligence function (Atch 8). Moreover, reports of unidentified flying objects which could affect national security are made in accordance with JANAP 146 or Air Force Manual 55-11, and are not part of the Blue Book system (Atch 10). The Air Force experience therefore confirms the impression of the University of Colorado researchers "that the defense function could be performed withing the framework established for intelligence and surveillance operations without the continuance of a special unit such as Project Blue Book."

5. The conclusion which follows is that Project Blue Book does not merit future expenditures of resources. Accordingly, we recommend that it be terminated and that the actions which follow from this decision, such as cancelling Air Force Regulation 80-17 and not renewing the consultant contract, be initiated. Termination of Project Blue Book would have no adverse effect on Air Force operations or research programs. It would free manpower for useful purposes, eliminate the need for a scientific consultant and relieve base commanders of a minor responsibility and an administrative burden.

6. Termination of Project Blue Book would leave no official federal office to receive reports of UFOs. However, as already stated, reports of UFOs which could affect national security would continue to be handled through the standard Air Force procedures designed for this purpose. Presumably, local police departments respond to reports which fall within their responsibilities. Similarly, as to scientific research, the Colorado researchers conclude that, although they do not see "any fruitful lines of advance from the study of UFO reports, we believe that any scientist with adequate training and credentials who does come up with a clearly defined, specific proposal for study should be supported." We see no reason why the normal channels and criteria for the funding of scientific research should not be adequate for UFO-related research.

7. Some feel that a central reporting center should be established, and a proposal has been made to establish a Rare Atmospheric Phenomena Reporting Center (Atch 11 and 12). Because the problem affects a number of agencies, this center might be under the auspices of the Federal Council on Science and Technology. However, in the light of the University of Colorado recommendation

---

that the federal government should not set up a major new agency for the scientific study of UFOs, we do not favor this suggestion and feel that UFO reports should be left to normal scientific and defense channels. If such a center is established, it should not perform an investigative function and should be initiated only on a trial basis for a specified lifetime.

8. Project Blue Book has accumulated records on over 13,000 sighting cases. During his study, Dr. Condon expressed concern about the possible loss of these records and their relative inaccessibility at Wright-Patterson Air Force Base. He was assured by Secretary Brown that we would look into the feasibility and desirability of relocating the files in the Washington area and that no action would be taken until the Colorado report was released (Atch 13). If Project Blue Book is terminated, the records should be transferred to an appropriate archive and preserved for historical value and to prevent charges that the Air Force is concealing facts.

9. To receive the candor and cooperation essential to the successful investigation of UFOs, the Air Force adopted a practice of confidentiality; witnesses were assured that their names would not be used without their permission (Atch 14). Therefore, access to these records and the publications [illegible] access must be carefully reviewed and controlled. SAFOI feels that an Air Force controlled archive away from the Washington, D.C. area is the most appropriate storage facility. Considering the existence of local, privately sponsored UFO investigative organizations, the ready availability of these records in the Washington area would result in an inordinate workload in clearing investigators, providing documentation, and reviewing and clearing manuscripts. Therefore, the Air University was queried about the possibility of storing these documents at the Air Force Archives (Atch 15). Air Force Air University will accept these records providing:

a. SAFOI will answer all requests about Blue Book, and not require AU research to answer such queries.

b. SAFOI will rigidly limit the right of access to recognized, legitimate researchers, and

c. SAFOI will screen researcher's notes to insure that "confidentiality" is maintained (Atch 16).

10. Project Blue Book should be terminated, and Blue Book records should be transferred to the USAF Archives at Air University. The attached memorandum would initiate these actions.

RECOMMENDATION

11. That the memorandum be signed.

Brookings Report - The NY Times 12/15/1960

Dateline: *The New York Times*, Thursday, December 15, 1960

Mankind is warned to Prepare for Discovery of Life in Space - Brookings Institution Report Says Earth's Civilization Might Topple if faced by a Race of Superior Beings

Washington. Dec 14 (UPI) -- Discovery of life on other worlds could cause the earth's civilization to collapse, a Federal report said today.

This warning was contained in a research report given to the National Aeronautical and Space Administration with the recommendation that the world prepare itself mentally for the eventuality.

The report, prepared by the Brookings Institution, said "while the discovery of intelligent life in other parts of the universe is not likely in the immediate future, it could nevertheless, happen at any time." Discovery of Intelligent beings on other planets could lead to an all-out effort by earth to contact them, or it could lead to sweeping changes or even the downfall of civilization, the report said.

Even on earth, it added, "societies sure of their own place have disintegrated when confronted by a superior society, and others have survived even though changed."

Responding to Crisis

"Clearly, the better we can come to understanding the factors involved in responding to such crisis the better prepared we may be."

The agency's 100-page report, prepared at a cost of $86,000 was for the space agency's committee on beings-in-space studies. The members, headed by Donald M. Michael also recommended further study of other space activities, including the symptomatic and propaganda effects and the implications of communications and weather satellites.

On the question of life in outer space, the report said that if intelligent or super-intelligent beings were discovered in the next twenty years they would probably be found by radio communications with other solar systems.

Evidence of such existence "might also be found in artifacts left on the moon or other planets," it said.

An attempt already has been made to contact outer space. Government scientist at Greenbank, West Virginia used radio astronomy in an effort to pick up signals that might have been beamed by intelligent beings. They concentrated on a star about fifteen light years away.

Signals were sent from Greenbank were of a kind that would show to anyone receiving on other planets that they were man-made and not natural phenomena.

OFFICE OF THE SECRETARY

Dear Mr. Laub:

This is in response to your inquiry of October 2, 1969.

The Rand Corporation has never made any reports on unidentified flying objects (UFOs) for the United States Air Force. If any reports were made by this corporation they were made on their own.

We trust this information will be helpful.

Sincerely,

JAMES H. AIKMAN

SECURITY INFORMATION
SECRET

INTRODUCTION

The year of 1953 saw the 1st "birthday of the 4602d Air Intelligence Service Squadron pass amid a solid period of building for the organization. The original purpose of the squadron, as outlined in ADCR 24-4 is two-fold. First it has "the combat mission of supporting the Air Defense Command intelligence function through overt collection, limited field analysis, and rapid reporting of air combat intelligence from positive field sources within the area of Air Defense Command responsibility. It will render such other general support of the Air Defense Command intelligence mission as shall be directed." Second, "During peacetime, the 4602d AISS has been assigned the primary mission of training, effecting liaison, and otherwise preparing for full and instantaneous performance of its combat mission; and the secondary mission of supporting Air Defense Command training and other activities to the extent consistent with the squadron's combat mission and primary peacetime mission."[1] It is the youngest and most unique of the five (5) AISO's within the Air Force, and covers the largest area geographically. Consistent with the peace time mission of the 4602d, training is going on at full speed within the squadron. Some is done through special Air Force Schools, some in conjunction with the Army, and those unique courses which cannot be found in the regular curricula are taught in the Squadron Headquarters. Liaison contacts, together with promises of equipment and manpower, have increased more than ten-fold, and many areas of the country have now been well covered. Reporting procedures have left with many military, semi-military, and civilian groups, so that they will know what, where and how to report to the

4602d in case of an attack.

This reporting period also saw the activation of six (6) new field units, one at Great Falls Air Base, Montana, in January; second at Minneapolis in February, the third at Tinker Air Force Base in February; the fourth at McGuire Air Force Base in February; the fifth at Pittsburgh in March; and the sixth at McGhee-Tyson in May.

It is the aim of this historical report to tell of some of the problems faced by this organization, and report some of the strides forward from 1 January 1953 to 30 June 1953.

Air Technical Intelligence Training

As of June 1953 a total of 12 officers and 57 airmen had completed the Air Technical Intelligence Course at Wright-Patterson AFB Dayton, Ohio. After this course became an official USAF course, difficulties were encountered in getting authorization for 4602d AISS personnel to attend because of the prerequisites established. However, a letter from Col White to the Commanding General, ATIC, requesting the training of 4602d AISS personnel on an average basis without actually awarding an AFSC is expected to be favorably considered..[1]

procedures and techniques was installed to equip 4602d AISS linguists and operations personnel to successfully discharge that part of our mission requiring interrogations.

The first curse was held at Headquarters 4602d AISS from 16 Feb through 13 March 1953 and included:

1. Importance of Far East Operations (Col White)
2. Wringer Operations (Col Gallagher)
3. Basic Intelligence Terms
4. Psychology of Questioning (Lt Woody, Base Legal Office)
5. The Soviet Mind
6. Basic Interrogation Techniques
7. Map and Compass Reading
8. Soviet Air Force
9. Basic Interrogation Reports, AF Form 112
10. Soviet Psychology and Soviet Intelligence System
11. Geneva Convention
12. Air Interrogation Guide
13. Psychology, Form, and Tactics of Eastern Interrogation
14. Sample USSR Documents, Customs
15. Interrogation Problems and Report Writing
16. Resisting Russian Interrogation (Lt Col Work, SAC)
17. 4602d AISS Operational SOP's
18. Personal Experiences (Col Rankin, ADC)
19. Russian Equivalents and Abbreviations
20. Intelligence References for the Interrogator
21. Air Interrogation Guide, Technical Series
22. Soviet and Satellite Air Forces

SECURITY INFORMATION
SECRET

23. Training Films

The second interrogation course, revised and abridged, was held at Headquarters 4602d AISS from 18 May through 29 May 1953. It included the following:

1. Basic Intelligence Terms
2. Basic Interrogation Procedures
3. Soviet and Satellite Characteristics
4. Eastern Cases
5. Recognition of Aircraft
6. Recognition of uniforms
7. Geneva Convention
8. Air Intelligence Guide and Air Intelligence Bulletin
9. Russian methods of Interrogation
10. Interrogation Approaches
11. Basic Interrogation Techniques
12. Map and Compass Reading
13. Case Histories of Eastern Interrogations
14. Soviet Intelligence and Security Agencies

The instructors for these classes were chosen for the most part from squadron personnel. Many of these were experienced interrogators from Project Wringer in Europe, the 6004th AISS in Japan and Korea, and various intelligence agencies in World War II. During this period the 4602d AISS was fortunate in obtaining qualified speakers who addressed the students and permanent party personnel at headquarters, supplementing the regular interrogation classes. These lecturers were:

1. Lt Col Robert E. Work, D/I, 3904th Composite Wg, Stead AFB, Nevada (SAC), on 19 March 53. Col Work is one of the AF experts on interro-

SECRET

gation, and his lectures on his experiences in interrogating POW's during World War II proved most enlightening.

2. Col R G Ronka, Hq, ADC, gave two lectures on POW interrogation procedures and techniques. Col Ronka interrogated German prisoners during WW II and, drawing from his personal experiences, gave extremely informative and interesting lectures.

3. Major Arthur Lilly, Human Resources Research Institute, Maxwell AFB, Ala., on 20 Mar 1953, explained the mission and composition of his organization to personnel of the 4602d AISS. Major Lilly stated that the HRRI will soon complete an interrogator's guide based on their research and that the 4602d will be included on the distribution list for this study.

4. On 18 Mar 1953, Piotr Pirogov, a former Soviet Air Force Lt who became famous in 1948 when he flew from the Ukraine to Linz, Austria, spent the afternoon at Headquarters 4602d AISS. Mr. Pirogov described his background and career in the Soviet Air Force and the events leading up to his now historic flight.

5. Major Ellis Vander Pyle of the Intelligence School, Lowry AFB, presented a lecture on the Far East situation to headquarters personnel on 9 April 1953.

6. Lt Col George E Schneider, former USAF Air Attach, to Poland, spoke to headquarters personnel on 18 June 1953. He described his experience during the 2 1/4 years he spent in Poland, the status of Polish airfields, and the observation of Soviet activity in Poland.

Atomic Energy Indoctrination

Information received from Headquarters, USAF indicated that 300 spaces will be available to the Air Force in the Special Weapons Indoctrination Course conducted by the Armed Forces Special Weapons Project at Sandia Base,

Albuquerque, New Mexico. These spaces will be available during the period 1 May to 31 Dec 1953.

In compliance with the letter (1st Ind, 24 Mar 53) 4602d AISS requested a quota of five (5) spaces in the Special Weapons Indoctrination Course be made available to qualified field grade officers. It was further requested that consideration be given to permit ten (10) company grade officers of this organization to attend this course. This request was based on the requirement for special weapons information in relation to the primary mission of this organization. These company grade officers would possess the required TOP SECRET clearance. Copies of the basic letter and endorsements have been included in the documentation of this history.

SECURITY INFORMATION SECRET

PERSONNEL AND ADMINISTRATION

During this period, due to the increase and intensification of the mission of the organization, the following changes were proposed to Headquarters ADC in the Table of Distribution of the 4602d AISS:

1. To be Deleted: 1 AFSC 20470 (Intell Ops Technician)
1 AFSC 20530 (Tech Intell Specialist)
1 AFSC 70230 (Appr Clerk)
3. AFSC 20471 (Photo Intrp Technician)

2. To be Added: 3 AFSC 20370 (Lang Technician)
1 AFSC 29351 (Sr Ground Radio Op)
1 AFSC 29370 (Sr Ground Radio Technician)
1 AFSC 64132 (Supply Records Clerk))

These changes are now under consideration at Headquarters ADC, and are expected to be approved in the near future. It is felt by this headquarters that the additions to the squadron T/D will be of incalculable value in the performance of the mission of the 4602d.

Since 1 Jan 53, the squadron personnel strength has steadily increased, primarily due to the return of personnel from overseas assignment. This squadron is the only organization the Zone of the Interior to which Intelligence-Linguist personnel can be sent for the best possible utilization upon their return from overseas assignment. Consequently, we have received a number of people from the 6004th AISS in Japan, the 7050th AISW in Germany, the 5004th AISS in Alaska, and the 1142d SAS in Austria. Since there are four OS Intelligence Organizations and only one in the ZI, the percentage of gains to this squadron is not consistent with the percentage of losses.

ADCR 24-4

1-5

ADC REGULATION) HEADQUARTERS AIR DEFENSE COMMAND
24-4) Ent Air Force
Base, Colorado Springs, Colo.
3 January 1953

ORGANIZATION - AIR BASES AND AIR UNITS

1. Purpose. This regulation prescribes the mission, organization, functions and responsibilities of the 4602d Air Intelligence Service Squadron (AISS) and the responsibilities within the Air Defense Command for its control, support and general deployment.

2. References. ADCR 200-1; AFR 23-9; AFM 77-1; AFR 200-5; ADCR 200-3 (Classified), and General Order 47, Headquarters ADC, 1952.

3. Mission. a. The 4602d AISS has the combat mission of supporting the Air Defense Command intelligence function through overt collection, limited field analysis, and rapid reporting of air combat intelligence from positive field sources within the area of Air Defense Command responsibility. It will render such other general support of the Air Defense Command intelligence mission as shall be directed.

b. During peacetime, the 4602d AISS has been assigned the primary mission of training, effecting liaison, and otherwise preparing for full and instantaneous performance of its combat mission; and the secondary mission of supporting Air Defense Command training and other activities to the extent consistent with the squadron's combat mission and primary peacetime mission.

4. Organization, Control and Support. a. The 4602d Air Intelligence Service Squadron is a Table of Distribution Unit allocated to the Air Defense Command by Headquarters USAF for the specific purpose of performing the mission set forth in paragraph 3, above. it is organized as follows:

(1) Headquarters 4602d Air Intelligence Service Squadron will be located at Headquarters, Air Defense Command.

(2) Detachment Headquarters will be established and maintained at each air defense force Headquarters.

(3) Numbered flights, each subordinate to one of the detachments, located at various points throughout the area of responsibility as may be specifically prescribed from time to time by the Commanding General, Air Defense Command.

(4) The squadron headquarters has full administrative capability, but no logistic support capability. detachments and subordinate flights have only limited administrative and no logistical support capabilities.

b. Headquarters, Air Defense Command will ensure over-all logistical support to the 4602d Air Intelligence Service Squadron and its field units throughout the Air Defense Command. This support will be provided by the nearest Air Force base in accordance with AFR 11-4. The squadron commander has direct access to Headquarters Air Defense Command staff agencies.

5. Functions. The functions of the 4602d Air Intelligence Service Squadron are:

a. To fulfill Air Defense Command combat readiness elements of information by overt collection of air combat intelligence in the Air Defense

==========

Command area of responsibility through the interrogation of captured enemy personnel, the examination and field analysis of enemy materiel, and the translation of captured enemy documents.

b. To supply the Deputy Chief of Staff/Intelligence with timely information and technical assistance in discharge of responsibility for Weapons Impact Evaluation (Air Defense Command aspects of the Bomb Damage Assessment Program).

c. To procure and/or train and maintain the necessary personnel qualified in general intelligence procedures, written and spoken foreign languages, technical intelligence investigation, photography and photo interpretation, and other such activities as may be necessary for the accomplishment of the mission.

d. To establish through procurement and training, a capability on the part of the personnel for prompt physical access to and effective operations in remote areas, over all types of terrain, and in all conditions of climate and weather. Training will specifically include, but is not confined to, cold weather, desert and swamp survival; skiing, snow shoeing, mountain climbing, animal transport and parachutist operations.

6. Responsibilities. a. The 4602d Air Intelligence Service Squadron will be responsible for:

(1) Exercise of administrative control and, under the general direction of Deputy Chief of Staff Intelligence, Air Defense Command, centralized operational control for deployed units and personnel.

(2) Establishment and maintenance of effective liaison and coordination with military, semi-military, governmental, and civilian agencies listed below:

(a) Military organizations to include, but not limited to, Headquarters Air Defense Command and subordinate units, Army Anti-Aircraft Command, other Air Force commands and subordinate units, Army, Navy, Marine and Coast Guard command and subordinate units.

(b) Semi-military agencies to include, but not limited to, Civil Defense Administration, Ground Observer Corps, and Civil Air Patrol.

(c) Governmental agencies to include, but not limited to, Central Intelligence Agency, Federal Bureau of Investigation, Civil Aeronautics Administration, Federal and State Park and Forestry Services, State and local law enforcement agencies.

(d) Civil agencies when appropriate and in accordance with governing regulations, AFR 205-1 and ADCR 190-4, to include, but not limited to, the press, radio, television, telephone and telegraph companies, land grant agencies, flying clubs, etc.

(3) Arranging through local facilities for transportation of requisite personnel to intelligence targets.

(4) Arranging for rapid dissemination of collected intelligence through prescribed channels using organizational communications where appropriate.

==========

ADCR 24-4
6-7

(5) Keeping fully acquainted with all established training facilities, exploitation of which will further the squadron's training mission, and initiating action pointed toward such exploitation.

(6) Exploitation of squadron capabilities and training activities for the benefit of organizations to which attached to the maximum extent consonant with the squadron mission, along such lines as crash rescue and investigation; language, technical, and intelligence instruction; and direct support of intelligence operations within Air Defense Command.

b. All echelons of Air Defense Command are responsible for the administrative and logistical support o the field units of the 4602d Air Intelligence Service Squadron in discharge of their highly specialized mission. This responsibility includes, but is not limited to the provision of:

(1) Transportation -- surface and air. Operations officers will authorize flights for 4602d AISS field units for training purposes, photo reconnaissance requirements, and liaison and coordination visits to local governmental and civilian agencies. Transportation officers will authorize vehicles to be used for round trip distances up to 500 miles, in accordance with Chapter 3, paragraph 8h, AFM 77-1.

(2) Communications facilities, as tie lines and teletype.

(3) Office and storage space and supplies.

(4) Billeting and subsistence.

(5) Petty cash facilities. Funding assistance will be rendered field units in obtaining petty cash from bases at which they are located. Petty cash facilities normally will be limited to purchased incident to the peculiar mission of the 4602d Air Intelligence Service Squadron. Any other purchases will be rigidly controlled by the limitations of paragraph 11, AFR 70-19.

c. Air defense force and air division (defense) commanders, or their representatives are authorized to provide letters of introduction to of detachments or flights of the 4602d Air Intelligence Service Squadron, within their area of responsibility, in order to facilitate liaison with local governmental and civilian agencies.

d. Headquarters, Air Defense Command will take appropriate action to assist in the procurement of collateral training facilities and equipment to the maximum extent required for accomplishing the squadron mission.

Authority. Letter, this headquarters, 7 January 1952, to DI, Headquarters USAF, Washington, 25, D.C., Subject: Air Intelligence Service Squadron, 1st Ind thereto by Headquarters USAF, 6 February 1952. (ADDIN)

3. THE TEXT OF A SPEECH GIVEN BY BRIGADIER GENERAL WOOBURY M. BURGESS, DCS/I, HEADQUARTERS ADC

Last Friday while Colonel White was away, Lt Col Gallagher called up and said that they had been requested by Washington to send eleven officers to Korea, and to come back, in case of a truce, with the returning U S Prisoners of War for the purpose of interrogation. That, of course, means about sixty days TDY for eleven officers. That will seriously cripple your present capability , especially for interrogation. It will cripple some of your language capability. nevertheless, it's the type of thing which this squadron must be ready to do at any time; and it will certainly have an advantage from the point of view of training, from the point of view of gathering certain information in which the Air Defense Command may be interested. In other words, we can by the use of that addition to the interrogation team have some influence on the type of interrogation. I'm very much interested in the project as it goes forward, and I think we can afford to take the calculated risk of lessening the effectiveness here in the United States.

5. OPERATIONS (SUMMARY OF LT COL JONES' PRESENTATION)

a. UNIDENTIFIED FLYING OBJECTS

Investigation of unidentified flying objects is not presently part of the mission of this Squadron. Field units are not authorized to make investigations of this type unless so directed or prior approval is obtained from this Headquarters. If ATIC gets a report and feels an investigation is necessary, they will notify this Headquarters and we in turn will then direct the proper field team to make the investigation.

If you are asked by the D/I of your division to make an investigation, let us know about it. If it is not going to involve too much time, you can go ahead and make the investigation based on your own judgment. Don't let this sort of thing get out of hand, but if it will assist you in your relationships with the D/I and you feel that you have the time, go ahead. Otherwise, notify this Headquarters for prior approval.

The EEI will be used as a basis for reporting during the ADX. Develop information outlined in the EEI, but don't refer specifically to the EEI when you submit your intelligence report.

During an actual war, it is permissible to transmit information classified up to and including SECRET in the clear provided it is operationally necessary. However, information classified above RESTRICTED would never be sent in the clear during a training exercise.

SECURITY INFORMATION
4602d AISS, ENT AFB, COLO
2ND CMDRS CONF, 22 JUNE 1953 RESTRICTED

When a field team reaches the scene of a crash, they should send a flash report in immediately stating that they are at the scene of a crash with a brief description of what is found. Three hours after reaching the scene, another flash report should be sent listing all flash intelligence gathered to that time. Twenty-four hours after reaching the scene, a twenty-four hour intelligence summary will be submitted. If the mission lasts for more than one day, a twenty-four hour report will be dispatched for every twenty-four hour period. There is no limit to the number of flash reports which may be transmitted on a single investigation. The number of flash reports will depend on the intelligence value of the information being collected.

Then within seventy-two hours after the field team returns to their station, they will submit a complete report on the investigation on the Form 112 to the local D/I with an information copy to Headquarters 4602d. Only one Form 112 will be submitted per investigation except in rare cases where extremely vital intelligence information may be involved. Time is of the essence - get all intelligence information into intelligence channels just as soon as it is humanly possible.

...

g. POLICY ON PUBLIC RELATIONS: do not try to get the 4602d AISS or the names of 4602d personnel in the paper. When members of this Squadron participate in special activities such as rescue missions where it is virtually impossible to remain anonymous, it is all right to identify yourselves as members of the 4602d Air Intelligence Service Squadron. Inasmuch as this Squadron is new and completely unique, PIO men would like very much to publicize our activities and write-up Squadron personalities. However it is again emphasized that absolutely no publicity is to be given to the Squadron mission or to individuals within the Squadron. the only exception to this will be in special cases such as the one mentioned above where the Squadron activities are necessarily in the public eye. In other words, stay away from publicity except when it becomes a must. If there is any doubt or if special permission is desired to release information in various media, contact this Headquarters for an approval or disapproval.

b. SECURITY CLEARANCES

It is necessary that every man in this organization be cleared for access to SECRET information. It is further necessary that no man be given access to classified information above restricted until he is cleared. All clearances are requested by this headquarters. In several instances, clearances have been requested by OIC's through local Provost Marshals. This procedure results in duplication of effort by this Headquarters and, more important, a duplication of effort by investigating agencies. All clearances will be requested by the security section at Squadron Headquarters.

Confusion has existed in the field as to the degree of clearance to which an individual is cleared for access and the clearance previously granted and entered in appropriate personnel records. Because a man's records reflect that an NAC and a BI have been completed and he is cleared for Top Secret does not mean he may have access, within this squadron, to Top Secret. Even though his records reflect clearance to Top Secret, he cannot have access to even confidential information until he is granted such access by the Provost Marshall, Ent AFB. This is not a situation peculiar to this organization or to this command, but a procedure which is Air Force wide. Neither clearance previously granted nor rank authorizes access to classified information. In many instances persons who have previously had access to Top Secret may, in the Squadron have access to Secret only.

1. HANDLING OF CLASSIFIED DOCUMENTS

The meaning of a registered document should be clarified. A registered document is a Top Secret, Secret, Confidential, or Restricted document assigned a short title and a copy number with instructions to account for the document periodically. This is not to be confused with a classified document to which a control number is affixed for administrative reasons, with no instructions to account for it periodically.

The first form used in connection with a registered document is AF Form 163, "Registered Material Transfer Report". This report will be prepared each time an Officer in Charge of a field unit is relieved of his duty assignment. This report will be prepared in four copies and signed by the newly assigned officer. distribution of this form is as follows:

1 copy to Air Adj Gen, Hq USAF, ATTN: Custodian of Registered Documents; 1 copy to Commander, ADC, ATTN: Custodian of Registered Documents; 1 copy to Hq 4602d AISS, ATTN: Custodian of Registered Documents; and 1 copy for file of the unit concerned.

AF Form 165, "Registered Material Inventory Report", will be used to report inventory of registered documents only and is due twice yearly. The due dates will be included in the Squadron SOP which is being prepared on this subject.

AF Form 164, "Registered Material Destruction Report". This form is to be used at any time a registered document is destroyed. A registered document will be destroyed upon written instruction from the Office of Record or when a change supersedes individual pages within the registered documents.

Classified documents - An inventory will be effected of all classified documents which are physically present at the time of the inventory and report of transfer signed by the newly assigned officer. Forms are being prepared for this report. It will be prepared in two copies, one copy for Hq 4602d and one copy for file in the unit concerned.

Certificates of destruction will be prepared an all classified documents destroyed and will include the classified log number assigned by this Headquarters, and the subject or title of the document, and the number of copies destroyed. this report will be prepared in at least two copies, one copy for Hq 4602d and one copy for file in the unit concerned.

The reports mentioned above will bear the following classification: Registered Document Transfer and Registered Document Inventory will be Restricted; Registered Document Destruction will be Confidential; Reports of Transfer, Inventory and Destruction of Classified Documents will be Restricted unless the subject or title of a document is classified. In this case the report will bear the highest degree of classification of the contents.

All Top Secret and Secret matter will show the authority for the classification, the initials of the classifying officer, and the date the classification was affixed, as require by par 28c, AFR 205-1A.

Changes in classification will be made in accordance with 27b (1), AFR 205-1. Individuals authorized to change or cancel the classification of a document will, when taking such action, write or stamp on the cover or first page thereof and such other pages as may be necessary, the following: "Classification canceled or change to _ _ _ _, by authority of (officer authorized to change classification by name and grade) (date)".

o. RESCUE MISSIONS

Let's keep up the kind of rescue service, whenever possible, which Lt. Johnson recently accomplished at San Gorgonio. Your units are in a position to render a great service by helping out in this way. I would rather see one rescue field mission accomplished than fifty classes in Russian. I addition to performing a humanitarian act, these mission do much to establish good relationships with agencies from whom we may desire assistance in the event of war. Never pass up an opportunity to assist in a rescue activity.

never take the cold-hearted approach to an air crash when death and disaster are involved. At a time like this, the humanitarian aspects are far more important than performing a technical investigation. So don't ask the Base Commander for permission to exploit a crash for investigation purposes when he is personally worried about the accident, notifying relatives, and recovering bodies. Rather, let the Base Commander know that you have the equipment and know-how, and make the services of your unit available in the event he wishes to call on you.

SUBJECT: (Unclassified) Atomic Energy Indoctrination

TO: Commanding Officer
4602d Air Intelligence Service Squadron
Ent Air Force Base
Colorado Springs, Colorado

1. Information received from Headquarters, USAF indicates three hundred (300) spaces will be available to the Air Force in the Special Weapons Indoctrination Course conducted by the Armed Forces Special Weapons Project a Sandia Base, Albuquerque, new Mexico. These spaces will be available during the period 2 May through 31 December 1953.

2. The mission of the Special Weapons Indoctrination Course is to familiarize designated Army, Navy, and Air Force Officers with the over-all operation of the Atomic Energy program. The scope of the course is:

a. To familiarize the class with the technical functioning, capabilities, and limitations of atomic

weapons.

b. To present the effects of atomic weapons.

c. To outline the logistic requirements for assembly organizations and the delivery services to include changes with new developments.

d. To discuss the employment of atomic weapons, including delivery systems.

e. To present the future developments and improvements that can be expected in the field of atomic weapons.

3. The length of this course is four (4) days, Tuesday through Friday. Frequency of course is approximately every two (2) weeks.

4. Field grade officers and civilian personnel with equivalent of GS-12 rating or higher who in the performance of their duties require access to information indicated above are eligible for attendance to this course.

DEPARTMENT OF DEFENSE
OFFICE OF PUBLIC INFORMATION
WASHINGTON 25, D. C.

26 January 1953

Henry Holt & Company
383 Madison Avenue
New York 17, N.Y.

Dear Sirs:

This will acknowledge your letter of recent date regarding a proposed book on "flying saucers" by Major Donald E. Keyhoe, U. S. Marine Corps, retired.

We in the Air Force recognize Major Keyhoe as a responsible, accurate reporter. His long association and cooperation with the Air Force, in our study of unidentified flying objects, qualifies him as a leading civilian authority on this investigation.

All the sighting reports and other information he listed have been cleared and made available to Major Keyhoe from Air Technical Intelligence records, at his request.

The Air Force, and its investigating agency, "Project Bluebook," are aware of Major Keyhoe's conclusion that the "Flying Saucers" are from another planet. The Air Force has never denied that this possibility exists. Some of the personnel believe that there may be some strange natural phenomena completely unknown to us, but that if the apparently controlled maneuvers reported by many competent observers are correct, then the only remaining explanation is the interplanetary answer.

Very Truly Yours
Albert M. Chop

Keyhoe Hall McCoy

Sound Byte No Longer Atributed To McCoy
February 8, 1966

http://www.nicap.org/audio/McCoy.mp3
I was in intelligence for a long time,
military intelligence. I was in the war.
It is logical (thank you)
not just military thinking, but as logical thinking
there was never a successful military occupation or adventure
where prior to the invasion or prior to the mass landing,
there were not agents sent ahead
This is standard practice
In Germany we and the British inserted Americans and we inserted British
who looked like the the Germans and spoke their language
In Japan we inserted, we had enough nisei
we inserted them into Japan
but we had agents in their country exactly the same as we have agents behind the Iron Curtain now

The main purpose of these people
is to be as exactly like the natives as possible
and yet the fact of life, the fact of military logic,
the fact of cultural logic
and especially since they have not been hostile,
dictates that there would be, if they are humanoid
there can be humanoids picked out
since the range of size shape and color on this planet is,
covers almost the entire spectrum
it almost dictates the fact that there would be agents of the space people,
wherever they come from,
living among us at the present time
and having been here over the last hundred years.

Date: Sat, 24 Sep 2005 16:58:56 -0500
From: mary <m.castner@COMCAST.NET>
Subject: Col. Howard M McCoy and the alien infiltration statment of 2/8/1966
Comments: To: project1947@earthlink.net, SHG <shg@ns2.txbs.net>
To: CURRENT-ENCOUNTERS@LISTSERV.AOL.COM

Last week the son of Howard McCoy, John McCoy, visited CUFOS and the subject of his father's voice on the NICAP tape came up. Turns out that John McCoy and his two brothers had all listened to the tape and claim it wasn't their father's voice. I can't think of anyone better to identify McCoy's voice then his three sons.

After some email exchanges with Dick Hall, who finally found a copy of the tape and a list of attendees at the NICAP reception for Fontes, he again listened to the tape closely and realized he had made a misidentification, an honest mistake, but an incorrect one. It was not the voice of Howard McCoy, but Howard Wright. He sent notice of this to Wendy Connors and John McCoy two days ago. Also, location of reception for Fontes was at NICAPs not Isabel Davis' apartment as posted back in 1999. Anyway, for the last six years everyone has thought the voice was that of Howard McCoy, but it is not. So we don't know what McCoy thought about alien infiltration or visitation nor can that inference be carried over to indicate how Project Sign was thinking as the initial posting stated. Even if McCoy had thought that way its still too much of a stretch to ASSUME thinking and conclusions of the Project Sign group.

List of attendees at the February 8, 1966 reception held at NICAP.

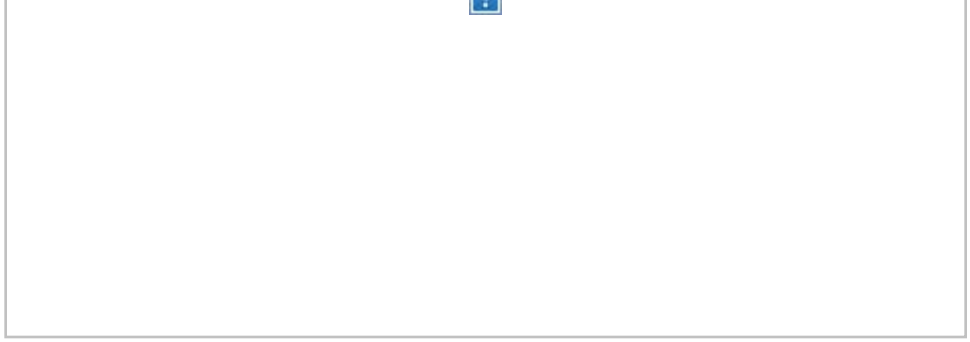
Other Audio File Histories - Work In-Progess
nicap.org/audio/
http://www.nicap.org/



In December 1947, the USAF Headquarters approved Special Project HT-304, codename, Project Sign, to investigate and analyze the proliferating number of reports of flying-disc sightings and phenomenon in the atmosphere which can be construed to be of concern to the national security. Assuming that the reports might be caused by Soviet innovations recovered from the Germans, the logical place to conduct the investigation was the Technical Intelligence Division at Wright-Patterson AFB. Most of the early analysis work was carried out by highly trained aeronautical engineers, in the T-3 Engineering Division. Their conclusion after seven months, drafted in an Estimate of the Situation was that the phenomena were best explained as being of interplanetary origin. The Pentagon refused to accept this, which resulted in the breakup of the Sign team and set the tone for USAF behavior toward UFOs for the next two years. The Estimate was declassified and all copies ordered burned, and for years the Air Force would deny that any such report ever existed.

This is one of the few photos taken of the team inside the T-2 Conference Room at Wright Patterson AFB in 1948.

Personnel from the left and around the table are: Lt. Col. Malcolm Seashore, chief of the Material Command Intelligence Technical Analysis (MCIAT); [unidentifiable person blocked by Seashore]; Lt. Col. J.J. Hausman; Col. Howard McCoy, director of Air Material Command T-2 Intelligence Division; [believed to be] Capt. Robert Sneider, Project officer under McCoy and Clingerman; [believed to be] Col. William Clingerman, executive officer for Material Command Intelligence Analysis (MCIA); and John "Red" Honaker, liaison to the AMC Commander Lt Gen. Nathan Twining, with a pipe in his mouth.

National Investigations Committee On Aerial Phenomena

HOUSE COMMITTEE ON SCIENCE & ASTRONAUTICS
Criticism of the Air Force, not allowed
Symposium on UFOs, 1968

(NICAP's optimism abruptly ended, when we learned the truth about the supposed hearings)

No criticism of the Air Force or the Colorado UFO project would be allowed.

The orders had been issued by Chairman Miller. They applied to Congressman Roush and all the other members of the Science and Astronautics Committee. The invited scientists also had been warned. Anything that might lead to disparaging statements about the AF investigation or the CU (University of Colorado) project was prohibited.

Although NICAP had played the leading role in securing the so-called hearings, we could not submit any information. Not only was our evidence blocked, we could make no comments on the discussions. No questions from the NICAP staff would be permitted, even if they were devoid of any AF or CU criticism - we could attend the meeting only as silent spectators. Although the discussions were officially called hearings, the meeting was also labeled as a symposium on unidentified flying objects, to remove any idea that this was an actual investigation.

Although the press had been invited, newsmen also were prohibited from asking questions. Some of them knew the inside story and they could have caused trouble. One correspondent, whom I had known for years, expected the muzzling order to cause a row.

"The Air Force must've pushed Miller into that," he told me. "But some of those Space Committee members are sore about it. They were all set to hit the AF and that Colorado Project. I know two who are going to try to buck the order. I'm not going to name them."

"I think I know who you mean.

"Well, it could set off a fight, and what a story that would be. That's the only reason I'm going-I already know most of the things McDonald and the rest will bring out."

Within minutes after the symposium began, Chairman Miller repeated his warning against criticizing the Air Force.

"I want to point out that your presence here is not a challenge to the work that is being done by the Air Force. Unfortunately there are those who are highly critical of the Air Force, saying that the AF has not approached the problem properly. I want you to know that we are in no way trying to go into the field that is theirs by law, and thus we are not critical of what the AF is doing.

"We should look at the problem from every angle. . . . I just want to point out we are not here to criticize the actions of the Air Force."

The first attempt to bypass the muzzling order was made by Congressman Ken Hechler.

"Is it your assumption," he asked Dr. Hynek, "that the AF . . . has not really measured up to a thorough scientific analysis of UFOs?"

But Hynek refused to answer the question. "The letter that came with the invitation to speak here strongly stated that we should not discuss the AF participation."

Congressman William F. Ryan, while questioning Dr. McDonald, tried to get his opinion of the Colorado Project Symposium Chairman Roush, following orders, quickly broke in:

"We agreed this was not the place to discuss that. . . . I'm sure Dr. McDonald would be very happy to confer with you privately on this."

Switching to another approach, Congressman Ryan led to McDonald's disclosing the Low memorandum to the National Academy of Sciences.

"You wrote . . . concerning this [Colorado] project?"

"Yes," McDonald replied. "I received a letter . saying we must let the Colorado Project run its course."

Congressman Roush interrupted. "I would appreciate it if we disposed of that."

But Ryan persisted. "I'm suggesting maybe this committee should make an investigation of the University of Colorado Project."

Committee Chairman Miller immediately stopped him. "That is something we don't have authority to do here."

In spite of the silencing order, a surprising amount of open criticism, hitting at the AF and the CU Project, was printed in the official Hearings Record. Most of it was contained in prepared statements which were not read aloud or quoted at the symposium.

One sharp comment on the project at Boulder came from Dr. Garry C. Henderson, Senior Research Scientist, Space Sciences, General Dynamics, Fort Worth, Texas. Dr. Henderson said prominent scientists had ignored careful research methods in dealing with the UFO problem.

"Such an example," he stated, "is the unfortunate selection of the University of Colorado team headed by a respected scientist, with the result that the squirrel-cage atmosphere usually associated with UFO interest has been augmented by built-in bias and confusion, rather than eliminated by one group of scientists' involvement. . . . The public has been led to believe that everything has been done to either prove or disprove the existence of UFOs - rubbish! Available information of a truly reliable nature should tend to increase activity, not place it in neglect, or worse, in ridicule."

Another paper, inserted in the Hearings Record by Rep. James G. Fulton, was prepared by nuclear physicist Stanton T. Friedman, who has worked on nuclear and radiation projects at General Motors, Westinghouse and the Aerojet Corporation. Friedman said that long studies and UFO investigations had convinced him that Earth is being visited by alien-controlled space vehicles. Referring to the AF debunking explanations, he added, "The low percentage of unknowns [unsolved cases] is the direct result of deception on the part of the U.S. Air Force . ."

Another indication of AF deception appeared in a discussion by Dr. Robert M. L. Baker, Jr., a noted research scientist engaged in NASA, Navy and AF projects. As a Douglas Aircraft Company consultant he made an eighteen-month study and scientific analysis of the famous Utah and Montana films. Oddly enough, this was requested by the AF, although it had debunked the film images as birds and reflections from aircraft. During his extensive examination, Dr. Baker found that the AF explanations were incorrect. He reported his findings, with all the detailed analyses, to Maj. Gen. H. E. Watson, head of Air Technical Intelligence. But the disproved answers were never retracted. (At the time of the hearings, the AF was still using these false explanations.)

Dr. Baker urged a truly scientific UFO investigation, with a mobile force of highly qualified scientists to secure the best information; a special tracking system; "listening posts" to seek out possible alien messages. Plans should be made, he said, to extract valuable information from an advanced society, if the extraterrestrial answer proves correct. He also urged studies to learn the characteristics of an advanced civilization and to be prepared for the psychological impact on our own culture, in case of "contact."

"The goal of understanding, if attained," he said, "may be of unprecedented importance to the human race."

The AF claims that UFOs do not exist were rejected by Dr. James A. Harder, Professor of Engineering, University of California. A prolonged investigation, he stated, had proved UFO reality. He also stressed the need for learning the technical secrets of these superior spacecraft.

The bad effects of ridicule were emphasized by Dr. Robert L. Hall, head of the Sociology Department, University of Illinois, and a former AF psychologist. As an example, he related the case of an American artillery colonel in Korea. While flying in his observer plane he encountered a typical UFO at fairly close range.

"He was an experienced observer," said Dr. Hall,". . . [but] when he returned he was so ridiculed he gave up trying to be taken seriously."

The risk of panic, from sudden contact with aliens, needs to be countered, Dr. Hall warned. Instead of issuing reassuring statements, he said, the public should be given sound information through a careful preparation program.

The most detailed expose of the AF cover-up was made by Dr. James McDonald. It was done without any harsh attack, through a long statement including over thirty pages of verified reports, with proof that public explanations were untrue-most of them AF debunking answers. Almost every important aspect of the UFO problem was covered, analyzed scientifically with confirmed evidence.

Even Dr. Carl Sagan, the least positive of the symposium scientists, made some important admissions. A frequent adviser to NASA, Dr. Sagan has degrees in physics, astronomy and astrophysics. He is an associate professor of astronomy at Cornell University, and is also connected with Cornell's Center for Radiophysics and Space Research. Interstellar flight at nearly the speed of light is not impossible, even with present principles of science, Dr. Sagan told the symposium members. "If we are being visited by representatives of extraterrestrial life, just sticking our heads in the sand would be a very bad policy. . . . If there are other technical civilizations, any random one is likely to be vastly in advance of us. It is unlikely there is any other civilization in the galaxy that is as backward [as we are]."

The only scientist adamantly opposed to acceptance of the UFO evidence was Dr. Donald H. Menzel, former director of Harvard Observatory. In his prepared statement Menzel explained UFOs as mirages, reflections from windows, TV antennae and car fenders and also as optical illusions, after-images, or spots before the eyes. Pilots and other trained witnesses, Dr. Menzel said, often make huge errors. Many unidentified objects, he claimed, were only birds, saucer shaped clouds, or wind-blown hats, spider webs, feathers and seedpods. In conclusion, Dr. Menzel stated: "The time has come for the Air Force to wrap up Project Blue Book. . .

<>Major Donald E. Keyhoe
***Aliens From Space* - 1973**

The extraordinary story of the half-million-dollar "trick" to make Americans believe the Condon committee was conducting an objective investigation

FLYING SAUCER FIASCO

By John G. Fuller

A statement from the director of NICAP

LOOK 5-14-68

A STRANGE SERIES of incidents in the University of Colorado Unidentified Flying Objects study has led to a near-mutiny by several of the staff scientists, the dismissal of two Ph.D's on the staff and the resignation of the project's administrative assistant.

The study, announced as a totally objective scientific investigation of one of the most puzzling phenomena of modern times, has already cost the taxpayer over half a million dollars. The committee is scheduled to release its report by the end of the year.

The announcement by the Secretary of Defense in October 1966, that the Air Force had selected Dr. Edward U. Condon and the University of Colorado for the UFO research contract was welcomed both by skeptical observers and those convinced of the existence of flying saucers.

Maj. Donald Keyhoe and his National Investigations Committee on Aerial Phenomena, who were among the severest critics of the Air Force's study, publicly announced cautious support and offered NICAP's nation-wide UFO reporting system to the new research group.

Condon, then 64, a distinguished physicist, former president of both the American Association for the Advancement of Science and the American Physical Society, had grappled with and subdued the House Un-American Activities Committee, and served as director of the U.S. Government's National Bureau of Standards from 1945 to 1951. His leadership appeared to promise pure scientific objectivity in the study. Only two details seemed to disturb some observers. Four out of the first five investigators appointed were psychologists. And Robert J. Low, project coordinator and key operations man in the study, held a master's degree in business administration (although his bachelor's degree was in electrical engineering). Some critics felt that more physical scientists were needed. Condon assured them that the staff would become more balanced, and later, it was.

The project staff received a minor jolt early in October of 1966, when the Denver *Post* published a story: **CU AIDE SLAPS UFO STUDY.** Low was quoted as saying that the UFO project "comes pretty close to the criteria of non acceptability" as a university function.

But the massive problems of getting the project started left little time for debate over that statement. Briefings were held in which Dr. J. Allen Hynek, chairman of the Department of Astronomy of Northwestern University and one of the few scientists in the country who had given UFO's serious study, gave the staff the background information he had acquired in his 20 years as scientific consultant for the Air Force. Later, such authorities as Major Keyhoe and Richard Hall 'from NICAP, Maj. Hector

Quintanilla, of the Air Force UFO study, and Dr. James McDonald, physicist at the Institute of Atmospheric Physics and professor in the Department of Meteorology at the University of Arizona, addressed the group. McDonald had carried out an extensive investigation on his own.

After examining the hundreds of well-documented reports of sightings by military and airline pilots, radar operators, police, technical observers and articulate, rational laymen, McDonald rejected as highly unlikely such conventional explanations for UFOs as ball lightning (plasma), hallucinations, hoaxes and misinterpretations of natural phenomena. He concluded that "only abysmally limited scientific competence has been brought to the study of UFO's within Air Force circles in the past 15 years. Unfortunately, during all this time, the scientific community and the public were repeatedly assured that substantial scientific talent was being used...."

From the beginning, the relationship between Dr. McDonald and Robert Low, the project coordinator, was abrasive. Low, who speaks softly, smoothly and guardedly, contrasts sharply with McDonald, who is intense and bluntly articulate.

The relationship between the Colorado group and NICAP was especially important. NICAP was large and well-organized, and could supply information on UFO sightings on a nationwide scale. NICAP hoped that the Colorado group would retain its scientific objectivity by concentrating on the estimated ten percent of "high credibility" cases, such as those Dr. McDonald was investigating.

The first major turbulence in the new project came early in February, 1967. Condon, burdened by heavy responsibilities in many public and educational projects, could not spend much time in the project offices. Low assumed the responsibilities for most of the decision-making. But on January, 25, Condon, known for his breezy, anecdotal style, spoke before a chapter of Sigma Xi, the honorary scientific fraternity. The Elmira, N.Y., *Star-Gazette* reported:

"Unidentified flying objects 'are not the business of the Air Force,' ...Dr. Edward U. Condon said here Wednesday night.... Dr. Condon left no doubt as to his personal sentiments on the matter: 'It is my inclination right now to recommend that the Government get out of this business. My attitude right now is that there's nothing to it.' With a smile, he added, 'but I'm not supposed to reach a conclusion for another year...'"

The. story also quoted Condon as saying: "What we're always reduced to is interviewing persons who claim they've had some kind of experience....I don't know of any cases where the phenomenon was still there after the person reports it... and it seems odd, but these people always seem to wait until they get home before they report what they saw."

Keyhoe knew of cases where "the phenomenon was still there after the person reported it," and where the observer didn't wait to get home before he reported it. He bristled. He knew that Condon had not yet investigated any field cases personally, nor had any members of the staff completed any meaningful research. The project was only three months old. "I have to admit," Keyhoe told David Saunders, a key staff member, "that I'm shocked by these statements. Is this a scientific investigation or isn't it?"

Condon wrote Keyhoe that some of his remarks had been taken out of context. NICAP then issued this statement: "Although we retain some reservations about the impressions of Dr. Condon's attitudes conveyed through some press accounts, we find no reason to go along with the skeptics who interpret the project merely as the latest gambit in an Air Force propaganda campaign. Having met most of the scientists involved, we are generally satisfied with their fair-mindedness and their thorough plans..."

The NICAP cooperation made it possible to establish an Early Warning System, and staff investigators were now being dispatched for field reports. Saunders gave particular attention to field surveys, as well as to the development of a master casebook and staff discussions of major cases. Low was giving the staff members considerable leeway in the approach they were taking. Condon, with his office some distance away, did not appear frequently, and some of the staff felt that it was often frustrating to try to reach him.

During this time, it seemed to some of the staff that several potentially interesting cases were turned down for investigation by Low for what were apparently specious reasons.

Another scientific investigator, Dr. Norman Levine, joined the project and immediately became aware of the strained atmosphere developing between Low and several members of the staff. Condon himself was heard to say that he wished the project could give the money back.

A senior member of the staff who was asked to make a speech before a teachers association began looking for specific details on the origin of the project. He was told that he might find some information in the open- files folder under the heading AIR FORCE CONTRACT AND BACKGROUND. The relaxed open-file system was part of a general overall policy to keep the project out of the cloak-and-dagger category. (In a later memo, Low said:

"The key point to keep in mind, it seems to me, is that our own files are not secure, they are not confidential, they can't be kept confidential, nor should they be....It is inconsistent with the purposes of a university to keep confidential any records of research activity....or any other records for that matter.")

The staff member found most of the material about the contract rather dull going, but one memo, written by Low to university officials on August 9, 1966, contained a few fresh details. The memo, labeled "Some Thoughts on the UFO Project," had been written before the contract was signed. In it, Low said, "..... Our study would be conducted almost exclusively by non- believers who, although they couldn't possibly *prove* a negative result, could and probably would add an impressive body of evidence that there is no reality to the observations. The trick would be, I think, to describe the project so that, to the public, it would appear a totally objective study but, to the scientific community, would present the image of a group of nonbelievers trying their best to be objective, but having an almost zero expectation of finding a saucer. One way to do this would be to stress investigation, not of the physical phenomena, but rather of the people who do the observing - the psychology and sociology of persons and groups who report seeing UFO's. If the emphasis were put here, rather than on examination of the old question of the physical reality of the saucer, I think the scientific community would quickly get the message....I'm inclined to feel at this early stage that, if we set up the thing right and take pains to get the proper people involved and have success in presenting the image we want to present to the scientific community, we could carry the job off to our benefit...."

When Levine read the memo, he was disturbed by the word "trick" and the phrase about making the investigation *"appear* a totally objective study" to the public. Others on the staff had a similar reaction.

Many staff members were also disturbed by the news that Condon had decided to attend the June Congress of "Ufologists" in New York. This was a convention of far-out supporters of undocumented and highly colorful UFO sightings.

On September 18, Condon, Low and Saunders met for the first time in many weeks. As a result of his reading of the memo, Saunders was deeply concerned about the negative approach to the UFO problem. It would be easy, he felt, to concentrate on the nut-and-kook cases and persuasively eliminate any serious consideration of the real problem.

The meeting went on for three hours. Low did most of the talking. Condon seemed tired. Low's position was that Saunders was sticking his nose into something that was none of his business. Condon's position was that he didn't understand what Saunders was talking about.

Saunders was led to believe that if by chance the Extra Terrestrial Intelligence (ETI) hypothesis was substantiated, the announcement would be sent by Condon directly to the Air Force and the President, and never be allowed to go to the public. This troubled him, because Saunders had been given a clear understanding that the report would go first to the National Academy of Sciences, then to the public and Air Force simultaneously. Saunders felt he could not let the problem drop. Another meeting was agreed to.

At this point, Keyhoe suddenly sent word that NICAP was going to take a strong stand against the Condon committee and no longer would supply material and reports. The reason, Keyhoe said, was a new speech made by Condon at the Atomic Spectroscopy Symposium at Gaithersburg, Md., on September 13, 1967. A report of the new Condon speech had already reached Dr. McDonald in a letter from a colleague at the University of Arizona, William S. Bickel, assistant professor of physics on the campus.

"..... Dr. Condon's speech was funny and entertaining," Bickel wrote. "But to me, it was also disappointing and surprising. Dr. Condon emphasized mostly funny things. He told of an offer made to him by a contactee, who, for a sizable sum deposited in the right bank, would introduce him to a UFO crew. ... He told how he tracked the case down and concluded that it was very likely a hoax..... My feelings about UFO's are similar to those of many people - I don't know what they are, I believe people are seeing real things, and I believe a scientific attack on the problem will solve the mystery - whatever they are..... The net effect of Dr. Condon's talk was zero, if not negative...."

In reply to Bickel, McDonald wrote, "..... The crackpots are so immediately recognizable that one need not waste any time at all on them.... I fail to understand why a scientific group should be given an address by any member of the Colorado team on the topic of the crackpot fringe...."

Word came from Keyhoe that he was drafting a long letter to the Colorado study group, and NICAP would reconsider its cooperation only if the answers to a list of questions were satisfactory.

On September 27, the *Rocky Mountain News* (Denver, Cob.) published this headline: **UFO RESEARCH CHIEF AT CU DISENCHANTED.** Condon was quoted as saying: "I'm almost inclined to think such studies ought to be discontinued unless someone comes up with a new idea on how to approach the problem.... The 21st century may die laughing when it looks back on many things we have done. This [the UFO study] may be one."

The majority of the staff began exploring several proposals, including the possibility of the entire staff resigning enmasse or issuing a press release or a minority report. Another proposal was the establishment of an independent scientific group to explore the rational sighting reports and eliminate the crackpot-fringe static. There was general agreement that an objective study of the UFO problem should be made and that accurate and unbiased findings should reach the National Academy of Sciences, the public and the Air Force. A confrontation with Low and Condon was arranged. Condon expressed regret that his statements had appeared in the press. Several members of the staff told of their concern that the content and form of the final report would reflect what they now felt was Condon's and Low's prejudice and would be unjustifiably negative. Staff members speculated that Condon was tired as well as disenchanted. He remained an enigma because the staff saw so little of him.

At an informal meeting in Denver on December 12, 1967, Saunders, Levine, McDonald and Hynek agreed that a new organization might be formed consisting only of professional-level members, designed to assure the continuation of intelligent UFO study regardless of whether the Condon report were negative or positive. After Hynek left, McDonald first became aware of Low's memo, and expressed his shock.

On January 19, 1968, Low phoned McDonald at the University of Arizona. McDonald reminded Low of the clearly negative tone of Condon's public statements over a period of time, including Condon's disturbing preoccupation with the crackpot elements. He also brought up Condon's failure to investigate personally significant field cases or to question any of the working staff who had been making a serious UFO study. McDonald stressed that he was not opposed to negative findings. What bothered him was that negative findings were already being clearly expressed by both Low and Condon. Low hung up in anger. McDonald prepared a long letter to Low to review his complaints. Low did not get around to reading the letter until February 6. In it, McDonald mentioned for the first time his concern about the memo, quoting to Low the phrases about "the trick." "I am rather puzzled by the viewpoints expressed there," McDonald wrote, "but I gather that they seem entirely straightforward to you, else this part of the record would, presumably, not be available for inspection in the open Project files...."

Mrs. Mary Louise Armstrong, who had worked directly with Low as his administrative assistant, was in the office as Low finished reading the letter. Low exploded. He said that whoever gave the memo to McDonald should be fired immediately. Then he seemed to cool down.

On Wednesday, February 7, Saunders was summoned to Condon's office. Low and Condon were present. The questioning focused on the memo. Did Saunders know of it and know where it was kept? Saunders said that the memo was only part of the whole problem. It alone did not seem especially important, he felt. The broader issues of scientific integrity were at stake. Condon, furious that he had not immediately been informed that McDonald knew of the memo, told Saunders, "For an act like that, you ought to be ruined professionally."

Saunders countered by saying that Condon and Low seemed to be treating the symptoms rather than the disease. He reminded them of the efforts of the entire staff to get Low and Condon to modify their intractable stance. He reviewed the long sequence of events and reminded Low that he had blocked the investigation of one particularly startling UFO case. Low protested that the investigation on this was completed. No mention was made of any dissatisfaction with Saunders's work.

Dr. Levine was summoned while Saunders was still in Condon's office. Saunders offered to stay. Low rose from his chair and physically ushered him out the door. Levine was unnerved by the forcible ejection of Saunders. Again, the questioning went straight to the memo. Levine said that he was at the Denver meeting when the memo was given to McDonald. He understood there was nothing whatever confidential about the memo, and did not see anything wrong with the action. Condon asked why Levine had not brought the memo to him, and Levine said that Condon's public and private statements had indicated that there was little likelihood of effective communication. He told Condon that Low had slammed the door in his face when he brought up the handling by Low of an Edwards Air Force Base case, and recalled that Condon himself had suggested that Levine call in sick when he was scheduled to make a talk at Colorado's High Altitude Observatory.

Condon accused him of being disloyal and treacherous, and Levine replied that loyalty to a scientific goal might take precedence over personal loyalty. Condon asked why Levine didn't invite him to come over and investigate the important cases. Levine indicated that he did not feel it was his place to invite the chief scientist of the project over. The questioning lasted about an hour. Condon dismissed Levine abruptly.

Mrs. Armstrong had joined the project at its inception with no convictions whatever about UFO's. By February, 1967, she was convinced that the study was being gravely misdirected. When, on February 7, 1968, Condon told her that he was going to fire Saunders and Levine the next day, Mrs. Armstrong's first impulse was to resign immediately. But she then decided first to confront Condon with what she regarded as clear, unassailable documentation of the factors behind the disagreement and low morale of the staff.

She talked to Condon on February 22, 1968, at his office. She told him frankly that there appeared to be an almost unanimous lack of confidence in the project coordinator and his scientific direction of the project. She pointed out that Low had indicated little interest in talking to those who carried out the investigations or in reading their reports. She said that her long, close association with Low gave strong evidence that he was trying very hard to say as little as possible in the final report, and to say that in the most negative way possible. At Condon's request, she wrote a follow- up letter in which she added that the tone of the memo indicated that Low was not unbiased from the beginning. Condon then wrote her: "My position is that that letter is a confidential matter between the two of us and that for you to disclose it to anyone else would be gravely unethical." But after long consideration, Mrs. Armstrong felt that it was more important to the public interest to state her feelings clearly.

The others who left the project also felt they had an obligation to speak out, and when Condon failed to respond positively to his outspoken letter of criticism, McDonald brought the matter before the executive officers of the National Academy of Sciences in a vigorous written protest. Saunders and Levine cleared their desks at Woodbury Hall and left.

Asked about the near-mutiny in the investigating staff, Condon said that he would make no comment. Low stated that he had absolutely "zero comment" to make about the dismissals. Thurston Manning, vice president and dean of the faculties of the University of Colorado, delivered word through his secretary that he had nothing to say. Scott Tyler, in charge of public relations for the university, said that he had no comment.

The hope that the establishment of the Colorado study brought with it has dimmed. All that seems to be left is the $500,000 trick.

END

The Project Blue Book Research Center presents
About Michael David Hall

Mike Hall

At present Michael Hall is researching all aspects of the Project Blue Book days although he has just completed a book primarily dealing with the very early years of Air Force investigations into UFOs. That book, *Origin of the UFO Phenomenon,* documents many fascinating events long forgotten by today's sound bite generation. It is one of very few books that approaches the subject from a historical perspective.

Michael David Hall has previously authored a biography on Indiana Senator Henry S. Lane. In *The Road To Washington, Rise of an Indiana Politician,* Hall traces the drama that took Lane from the chairmanship of the first national Republican Convention in 1856 to his influence four years later in securing Abraham Lincoln with his party's nomination. Dozens of magazine articles on Indiana history followed that work. Several of those continued Mr. Hall's research on the former Indiana senator, taking him from a congressional legislator who worked with Daniel Webster and Henry Clay, to the founder of the Indiana Republican Party, and then on to a powerful Civil War era senator.

Hall holds a B.A. from Illinois College and an M.A. from Western Illinois University in American History. In 1984 he began a museum career at the Illinois State Museum and since 1987 has served as Executive Director of the Montgomery County Historical Society and its Henry S. Lane Historic Home in Crawfordsville, Indiana.

Currently the author is working on a new book, *A Time To Remember, The UFO Wave of 1952* and a co-authored article with researcher Wendy Connors for the *International UFO Reporter* dealing with legendary Project Sign figure, Alfred Loedding. Soon an expanded version of *Origin of the UFO Phenomenon* will be published, titled *UFOs, A Century of Sightings: The Truth Revealed* -detailing the subject all the way up to present day.

As he pursues his research he finds diversion in aviation history as a part time guide at the United States Air Force Museum in Dayton, Ohio. Hall also has interest in the era of the great steam trains, serving as a director at the Linden, Indiana, Monon-Nickel Plate Railroad Museum and Historical Society. Residing in Lafayette, Indiana, with his wife Teresa and their collection of five pampered stray cats, both Mr. and Mrs. Hall developed interests in that area's rich heritage in transportation history spawned by technological influences from nearby Purdue University. In fact, Mr. Hall has taken advantage of his proximity to Purdue to further his studies in history and plans in the near future to complete his Ph. D. in American History.

Interest in the subject of UFOs began quite by accident while working at Purdue on a paper analyzing the effects of American daylight bombing raids on Germany. Mr. Hall then happened across some obscure UFO accounts filed by allied pilots. Called foo-fighters in those days, the stories he found fascinated him. As he came to realize what a huge volume of primary material existed on UFOs in the nation's archives, Hall knew he had an amazing story to tell.

Project Blue Book 1951-1969

by Michael Hall

September 10th, 1951 marked a series of sightings that would prove to be the impetus for a serious reevaluation of the Air Force investigation into the UFO phenomenon. This would lead directly to the establishment of Project Blue Book.

The incidents began when an Army Signal Corps radar operator at Fort Monmouth, New Jersey, picked up an unknown flying target at 11:10 A.M. moving faster than the automatic setting mode could plot. The UFO followed the coast line, estimated at a speed of 700 miles per hour.

Twenty-five minutes later at 11:35 A.M. a T-33 jet piloted by Lieutenant Wilbert S. Rogers with Major Edward Ballard on board may have encountered that same object. They were flying over Point Pleasant, New Jersey, when Rogers spotted a “dull silver, flat disc-like object.” It appeared far below their aircraft which was then at 20,000 feet. Ballard confirmed the pilot’s observation as both crewmen estimated the craft to be around 30 to 50 feet in diameter. The UFO proceeded to descend toward Sandy Hook as Rogers nosed the jet down to investigate in a 360-degree descending turn. As Rogers executed that maneuver the unknown countered with a 90-degree turn to the left. By then both men knew they were not chasing a balloon. This UFO was not only banking left but was by then out-pacing their jet which Rogers had throttled up to 550 miles per hour! He then attempted to parallel its course from his current altitude of 17,000 feet, but it soon vanished out to sea.

Later that afternoon at 3:15 P.M., Fort Monmouth, New Jersey, radar picked up an object eighteen miles above the earth traveling slowly. Soon ground observers visually confirmed it although they could only see a silver speck. That sighting did later prove to be a balloon, but as a direct result of all of these Fort Monmouth, New Jersey Reports and some other odd radar reports the next day, many senior military leaders became concerned.

So much attention came to bear on the incidents that the Air Force Headquarters Intelligence director at the Pentagon, Major General Cabell, asked Air Technical Intelligence Center chief Harold Watson, in Dayton, Ohio, to look into the matter. Since 1948 the ATIC in Dayton had been responsible for collecting and investigating UFO reports.

Yet even before these incidents took place, General Cabell had come under pressure by many U.S. industrialists and scientists who felt the Air Force should be more forthcoming about UFO reports. They felt a renewed investigation should take place on a scale equal to that of 1948 during the first investigation named Project Sign. Cabell, who had once characterized the later Grudge Project and its report as “the most poorly written piece of unscientific tripe I’ve ever read,” seemed ready himself for a more serious study. That summer Cabell passed the mounting pressure on to Watson at ATIC although after the Fort Monmouth, New Jersey Reports, Cabell sent word down that he was even to be awakened during the middle of the night if he was needed!

Ironically, Watson had such a disdain for UFO sightings that initially he had hesitated to even forward the Fort Mommouth reports to Washington. In fact, when word of the incredible sightings first came into Dayton, the accounts were dismissed by Watson’s head of intelligence analysis, Colonel Bruno Feiling. Feiling completely bypassed Grudge and gave the report directly to James Rodgers who had once been in charge of the Grudge project and was Watson’s right-hand man. Apparently an argument of sorts soon arose within the ATIC offices as the New Jersey incidents gained more and more publicity. Finally, the report was sent to the Pentagon (apparently by some unnamed subordinate going over Watson’s head).

In response, Watson soon found himself in a heated conversation with Cabell. By then Watson knew he had to act fast, so he sent Lieutenant Colonel N.R. Rosengarten to New Jersey to conduct an investigation. Rosengarten then served as chief of Aircraft and Missiles at ATIC and technically had the old Grudge project under his many duties. He took with him intelligence officer Lieutenant Jerry Cummings who had actually taken over the administration of Grudge from James Rodgers. Although Cummings had only recently come to Grudge and, like Edward Ruppelt, had been reactivated with the start of hostilities in Korea. Ruppelt’s opinion of Cummings

was very high, and it is evident from the UFO files that a more serious approach was taken as soon as Cummings was ordered to administer what was left of the Grudge operation. As a matter of fact, both Ruppelt and Cummings had desks in the same building. Ruppelt noticed that when Cummings was given the defunct operation, it had been due to Watson rewarding Rodgers with better duty. Yet during the transition, both Ruppelt and Cummings came to learn the history of Watson and Rodgers' misadministration of Grudge.

Rosengarten and Cummings thus took great interest in their trip to New Jersey because it gave them the chance to finally investigate a really good report without direct interference from Watson and Rodgers. After arriving on the scene via a commercial airliner direct from Dayton, they worked around the clock to interrogate the radar operators and all participating technicians at Fort Monmouth. Following their investigation, Rosengarten and Cummings interrogated the T-33 pilots in New York. After that they headed to Washington to brief Cabell but couldn't get an airliner out of New York in time to catch a scheduled 10:00 A.M. meeting, so they charted a private plane. When they reached the Pentagon they found themselves participating in a very intense briefing with not just Cabell, but other top Pentagon Intelligence officials.

By the start of the meeting it is apparent that Rosengarten and Cummings had not only become impressed with the reports, but decided to take it upon themselves to put an end to Colonel Watson and his anti-UFO policy. We now know that during the meeting Cummings (with approval from Rosengarten) told Cabell all he knew about the behind-the-scenes influences on Project Grudge.

Cabell thus came to the realization that Watson had been deceiving him. He learned that since Watson took charge at ATIC in July of 1949, he had been intentionally downplaying sightings. Watson, he discovered, had been persistently debunking UFOs—even going out of his way to grab publicity to do so. He had even talked with reporters and columnist Bob Considine and branded all those who saw UFOs as "nuts," or "fatigued airline pilots." This greatly insulted U.S. service personnel who had filed many UFO reports themselves. Yet not until this meeting did Cabell fully realize that Watson, along with his confidant and former Grudge project leader James Rodgers, had run Grudge into the ground.

Cabell replaced Watson with Colonel Frank Dunn that very month. Other heads rolled too. Soon anti-UFO men in the Pentagon like Major Jerry Boggs were also out. Cabell then ordered ATIC to reactivate or create a new Project Grudge—hereafter referred to as New Grudge. But as urgent as the orders appeared, no one really seemed to want the added duty. Dunn proceeded to put all the responsibility on Rosengarten who then put it on Cummings, but Cummings soon left the Air Force for an assignment at the California Institute of Technology. So, the task went back up to Rosengarten. On September 16th he passed it on to Lieutenant Edward Ruppelt and Lieutenant Henry Metscher who had worked with Cummings on cases like the famous Lubbock Lights Incidents in Texas.

Ruppelt had been a decorated B-29 bombardier during WWII. In fact, during the war he won five battle stars, two theater combat ribbons, three Air Medals, a Distinguished Flying Cross with Oak Leaf Clusters, and a Presidential Citation. Ruppelt had gone over with the first B-29 squadron to India and followed it to Tinian Island. He remained in the 20th Bomber Command throughout the whole strategic bombing campaign of Japan and even flew on the last conventional raid of the war. After being decommissioned he entered Iowa State College and earned a BS degree in aeronautical engineering by 1950. With the outbreak of war in Korea he received a recall to duty from the Air Force and came into Intelligence at Wright-Patterson AFB. Given work immediately on classified projects, Ruppelt soon gained a reputation at ATIC as a problem solver. Although he would prove to be the best administrator of a UFO project the Air Force would ever have, he did not have the credentials or rank that would normally be drawn upon for what on the surface seemed an important intelligence assignment. Only 28 years old at the time, Ruppelt was not a career officer. Still a lieutenant by that fall, it is very odd that any non-career tracked officer would be put in charge of a project as important as one involving possible aerial intrusions into United States air space.

He had, however, impressed Rosengarten for some work he did on a captured Korean/Soviet Mig jet. Because of the meticulous reports and files Ruppelt kept, he was without doubt highly valued at ATIC during a time that personnel resources were being strained by war in Korea. And as anyone who knew Ruppelt will testify, he became instantly liked by all he served with, winning not only their respect but earning it through a high degree of devotion to duty. In sort, Ruppelt was a team player and sweated the details.

Originally New Grudge existed as a more or less two-man operation, but became a project within an ATIC group in late 1951. By March of 1952 it developed into a full group in ATIC, technically designated the Aerial Phenomena Group. By June 1952 Ruppelt's project became an ATIC section by which time the code name changed from Grudge to Blue Book. Soon promoted to captain, Ruppelt headed these projects

through 1953 with a serious and honest approach, making these years known as “The Age of Ruppelt.”

Ruppelt not only took the job seriously but expected his staff to do so as well. If anyone under him either became too skeptical or too convinced of one particular theory, they soon found themselves off the project. At no time, however, was New Grudge or Blue Book more than fact-finding groups and never regained the serious attention besotted on the early Sign investigation of 1948. Ruppelt’s project was basically a military operation within ATIC and did not have the highly skilled civilian engineers employed by Sign like Alfred Loedding.

Nevertheless, Ruppelt did professionalize the project by using a standardized questionnaire developed by Ohio State University for UFO witnesses to describe their sightings. He sought further scientific help from a preexisting contract with the Battelle Memorial Institute in Ohio. Already code named Project Stork, it assisted in the evaluation of statistical data produced by the Air Force investigations. (Project Stork had originally been set up to evaluate the Soviet Union as a military threat and when UFO analysis was tacked onto their duties, that part of the study became known as Little Stork.) He then secured Dr. Hynek, already an Air Force consultant in astronomy, as chief scientific consultant. Ruppelt contracted the Romeike news clipping service as well, (from May through September, 1952) bringing many UFO reports to ATIC that would have not been reported otherwise. The most visible change Ruppelt made involved a regular series of briefings that he gave to Air Force and military officials around the country. He then moved to implement a suggestion from General Cabell that would put cameras on the Air Defense Command’s more than 30 radar scopes around the country. Inspired by University of California physicist Joseph Kaplan, Ruppelt also attempted to develop special diffraction grid filters for camera lenses that could be used from aircraft or ground stations. Some duel lens models were called Videon cameras. With one of its lenses filtered, Videon cameras would be able to capture an object’s color spectrum and compare it to that of aircraft, stars and meteors, as well as its own unfiltered view. By comparing the two, at least non-anomalous occurrences could be weeded out.

One of Ruppelt’s actions affects us to this day. Prior to 1951 no one used the phrase unidentified flying object. Different combinations of the phrase were mentioned in the Sign project correspondence but as a catch word it did not really exist. Up to that time even stern high-ranking generals commonly talked of discs or saucers. Such phrases made Ruppelt uneasy. Realizing the complexities of the phenomenon, he insisted on popularizing “UFO.” It took several years, but his persistence eventually dissuaded the use of “flying saucer” in serious discussions.

As 1952 dawned, UFO reports began to gradually climb. Ruppelt and ATIC chief Colonel Frank Dunn attended a Pentagon briefing about that time with the new Air Force Intelligence Director, Major General John A. Samford. (Samford had replaced Cabell as head of Air Force Intelligence when Cabell took up the number two position at the CIA.) Samford already seemed very well informed about the UFO problem but soon appointed his Assistant for Production, Brigadier General W.M. Garland, to oversee liaison with ATIC’s New Grudge. Garland had been very close to Samford in the Pentagon and Ruppelt described Garland as a “moderately confirmed believer.” He learned that Garland had once seen a UFO while stationed in Sacramento, California. From the fall of 1952 on, Garland would serve as Ruppelt’s boss.

In the summer 1952 Ruppelt found himself in the middle of the largest UFO wave to date. The excitement caused by that wave led the CIA into the picture because the Truman administration feared a possible hysteria developing over the subject. This in return led to a CIA- sponsored discussion of UFOs known as the Robertson Panel in January of 1953. Stamped “Secret,” the Robertson Panel’s report (formally known as the Scientific Advisory Panel on UFOs) sent its recommendations to the Secretary of Defense, the Director of the Federal Civil Defense Administration, Chairman of the National Resources Board, and former Intelligence Director General Cabell, but not to Ruppelt or his ATIC superior General Garland.

Ruppelt may have been head of Blue Book, but it was not until later that he and Garland were briefed. During their meeting the CIA intentionally lied to them, stating that the panel had actually recommended the expansion of Blue Book and the declassification of its files. Ruppelt left the meeting very excited. He made plans for the utilization of more personnel, the final implementation of the camera surveillance, and media release of more classified files as Air Force press assistant Albert Chop had already done via popular UFO writer Donald Keyhoe. In fact, Keyhoe had just been briefed on the famous Tremonton Movie and eagerly looked forward to a more forthcoming policy from the Air Force. But, it never happened.

While Ruppelt waited for his promised increase in staff and the new projects to be implemented, he received a temporary transfer to non-UFO related duties in Denver. (During that period he attended an advanced intelligence course at Lowry AFB from

April 7, 1953, to July 3, 1953.) Then after a brief return to Blue Book Ruppelt was deactivated with the end of the war in Korea. The increase in staff never came nor did other plans. Fearing that the Air Force's seagull explanation for the Tremonton Movie would not be believed, it remained classified until 1956. General Garland may have then become aware of the true nature of the panel's recommendations because he reframed from speaking out on UFOs until he left the Air Force for a job at Rand. (In late 1953 Garland tried but failed to have Blue Book transferred over to the Air Defense Command.) Ruppelt seemed to have been kept in the dark about the actual magnitude of the Robertson Panel up until the time of his sudden death from a heart attack just seven years later. And, the public as a whole would not learn the full details of the Robertson Panel report until it was declassified in the summer of 1966.

But because of the military's slow bureaucratic nature, the Robertson Panel's recommendations took a great deal of time to be implemented. Through most of the first half of 1953 Ruppelt and his temporary replacement, Lieutenant Bob Olsson, continued operating Blue Book much as it had been the year before. The only major hindrance concerned getting replacements for staff members and of course the fruitless waiting for the increase in staff which never came. After being reduced to only two subordinates, Ruppelt had to become resourceful. He suggested utilizing other intelligence units for field investigations which eventually resulted in the use of the recently activated 4602nd Air Intelligence Service Squadron (or AISS) for that task.

Ruppelt's actual end at Blue Book came with the close of hostilities in Korea in August of 1953, thus ending the most significant period in the project. At the time of his departure only two assistants remained out of what had become a ten-person section. That same year Pentagon liaison Dewey Fournet and Albert Chop left, being the last to openly lean toward the extraterrestrial hypothesis in the "Age of Ruppelt." Chop had actually resigned his post following an accusation by the Air Force that Donald Keyhoe had fraudulently obtained sighting reports for his upcoming book. Yet, Chop had released the reports to him with full permission from Air Force intelligence and produced a signed affidavit to that effect.

For a period, Blue Book fell under the sole authority of one noncommissioned officer, Airman First Class Max Futch. Futch was a hard drinking Coca Cola man who not only kept himself going during the long days of the summer UFO wave of 1952 but served as Ruppelt's right-hand man in the office. Ruppelt placed great confidence in Futch and could always rely on him. But Futch soon left the service along with Bob Olsson—both heading for law school. After that ATIC assisted when needed to investigate reports, but from that point on the project primarily became a repository for files. Most field investigations were turned over to the nineteen scattered 4602nd AISS units of the Air Defense Command.

With Ruppelt's departure from Blue Book, the first significant effects of the Robertson Panel recommendations can be detected. It began with the reissuance of Air Force Regulation 200-2 to all American Air Force bases. This regulation put initial responsibility for investigating UFO sightings back with the commander of the air base closest to the event. Amendments would later state that only the 4602nd should make investigations unless there was not an AISS unit in the vicinity, and then the base commander could send a report to the one nearest him. USAFBs were also warned to treat UFO sightings with a restricted clearance at the very minimum and forbade the release of any information to the public except through Blue Book channels unless the sighting was positively identified. By decreasing attention on investigation and increasing the restriction on public information, the Air Force hoped it could successfully defuse (what the CIA had convinced them was) a growing hysteria over UFOs.

After a brief stint with Ruppelt's former assistants heading up Blue Book, Captain Charles Hardin assumed command of the project in March of 1954 with only a two-man staff at his disposal. Because of Hardin's meager resources, most field investigations by that time were being conducted by the 4602nd AISS. Hardin was assigned the task of concentrating Blue Book on countering public criticism and implementing the CIA's Robertson Panel recommendations which were made known to ATIC sometime by 1956. The 4602nd, however, soon found itself in trouble with the dreaded saucer killer Harold Watson who had regained full reign of ATIC. He felt its men were classifying too many sightings as unidentifieds. Hardin and astronomical advisor to the Air Force, Dr. Hynek (then still more of a UFO debunker than advocate), compiled a field guide known as the UFOB Guide. The UFOB Guide used categories for the 4602nd to more conveniently organize its data into explainable conclusions. Hardin suggested "common sense" as the best way to rule out witnesses' stories that seemed to contain contradictory evidence. Thus, unique or extraordinary details of sightings were not entered into the Blue Book files. As a result, unknowns fell from 60 percent in 1954 to 5.9 percent in 1955 and 0.4 by 1956. Ironically, as the number of unknowns fell, total UFO reports steadily increased.

In April 1956 the zealous debunker Captain George T. Gregory assumed leadership of Blue Book after Captain Hardin transferred to other duty. Other ATIC veterans also

left in 1956, creating a loss of awareness in the project of its own history. During Gregory's tenure UFO reports were carelessly and thoughtlessly classified. For example, if a child reported a UFO, policy dictated it automatically be attributed to an overactive imagination. Any reports coming out of Canada were put into the insufficient data category and overseas sightings were rarely recorded. Gregory, however, was not a poor officer. In Hynek's words, "promotion was the be-all and end-all of existence" to this career-minded man.

That's what Blue Book had become by 1956—a carefully controlled project run by those who could follow orders. No one wanted another Ruppelt who would run off to a comfortable highly paid civilian job and write (what they thought was) a tell-all book. The manner in which Air Force Headquarters required ATIC and thus Blue Book to handle UFO reports was by design, aimed more at public relations than investigation. Blue Book chiefs were made to believe that by dissuading public attention on UFOs, a correlation would result in decreasing numbers of those bothersome sightings. That became a form of results much easier to show to the Pentagon than the more difficult task of conducting expensive investigations into a complex phenomena. It might even mean a promotion and certainly guaranteed every career officer's goal—a paid retirement.

In October 1958 Blue Book received a very needed shot in the arm when Major Robert Friend replaced Captain Gregory as head of the project. His presence significantly bolstered morale because Friend had substantial scientific training and approached his job in a fair and impartial way just as Ruppelt had. But by that time, Blue Book had many limitations Ruppelt never faced. Friend tried very hard to organize a then chaotic project. Fearing many UFO files had been taken as souvenirs just as had been done prior to Ruppelt's time, he proposed microfilming reports. He also suggested cataloging sightings which would create an index to evaluate common characteristics. Both of these plans required funds that Friend was never able to acquire from his superiors, although he did succeed in establishing monthly meetings with an unofficial scientific advisory group chaired by Dr. Hynek to discuss the unexplained cases and hopefully discern trends. (Friend kept in almost daily contact with Hynek throughout his term at Blue Book.) Hynek's panel met with Friend until the end of 1960 and included astronomer L.V. Robinson, public relations expert Theodore J. Hieatt, chaplain Captain R. Pritz, physicist V.J. Handmacher, and psychologist Leroy D. Pigg.

An important suggestion that arose during Friend's tenure urged UFO research to be transferred from ATIC to the more scientifically inclined Air Research and Development Command. ATIC did push for this, but ARDC commander, Lieutenant General Bernard Schriever, apparently did not want the burden of controversy that came with UFOs. In 1961 ATIC became part of the Air Force Foreign Technology Division of the Air Force Systems Command. At that time ATIC again tried to pass off UFO investigations onto other agencies like NASA or the National Science Foundation, but neither wanted the public relations nightmare that came with it.

Friend had so few resources by that late date in the project's history that few cases could be investigated. In February of 1958 the Air Force revised regulation 200-2 for the fifth time. It stated that "Air Force activities must reduce the percentage of unidentified to the minimum." In the wake of this change Blue Book started to look more and more like a mere repository of files with little investigative authority.

Back in July of 1957 ATIC was told that if it deemed further investigation warranted on a particular case, it could assign personnel of the 1006th Air Intelligence Service Squadron or AISS who were to take over the job from the 4602nd —disbanded by the Air Defense Command. By 1958, however, the Air Force cut the AISS's budget, making it impossible to implement effective investigative procedures. By July of 1959 even that system ended when responsibility for follow up investigations was transferred from the 1006th to the 1127th Field Activities Group stationed at Fort Belvoir, Virginia. But the 1127th completed very little work on UFO cases.

In 1963 Friend, by then a Lieutenant Colonel, retired as head of Blue Book—replaced by Major Hector Quintanilla. Quintanilla served merely as a caretaker of the project until it disbanded in 1969. A career-tracked officer, he always stressed the official line of public relations over investigation in strict accordance with orders. Quintanilla had no personal interest in UFOs and as the years went on strained the patience of the more eclectic Dr. Hynek due to his insistence on following Air Force policy at all times.

By 1965 a new UFO wave was well underway, proving to be the largest in history. Reports would flood in from all over the world but prove most numerous in the USSR and the United States. Dreading another onslaught of reports like the 1952 wave, the Air Force considered ways to extricate itself from the whole situation. They still had not overcome the public relations nightmare that UFOs presented and were tired of what they saw as not only an embarrassing problem, but an expensive one as well.

As the USAF continued to downplay sightings, NICAP, a large civilian research and lobbying coalition, became a very vocal critic. But as in the 1952 wave, the military had more on its mind than UFOs. The Cold War remained a real concern as the Robertson Panel's words of forebodings continued to seem just as pertinent as they had been a decade earlier. U.S. involvement in Vietnam escalated in the mid 1960s and civil rights demonstrations continued as America became less and less interested in the mysteries of the universe and more focused on its own problems. Actually the entire Western world entered a period of disillusionment in that decade, spawned not just by European decolonization, but a Third World population explosion, global hunger, and environmental pollution.

Yet even in the midst of that world-wide unrest, The U.S. Congress focused on UFOs but only briefly. Although the Air Force would take considerable heat during the inquiry, they would also learn how to resolve their nagging problem. As the most sensational wave of all time transpired, the Air Force used its authority on the subject to fund a university study into the phenomenon. On the surface it would appear as a purely independent and impartial scientific inquiry. At first it did exactly what the Air Force hoped it would do. NICAP praised the formation of what became known as the Condon Committee and Congress appeared pacified too. As time wore on, however, it became obvious that the committee did not have the desire to enter into a meaningful scientific inquiry. The motivation simply was not there—leading to a poorly organized study, and a very expensive one at that, costing the American taxpayers over a half million dollars. When the committee presented its final report, it recommended the Air Force drop UFO investigations, allowing them to gracefully bring a halt to Project Blue Book in 1969. Because it was published under the respected name of project leader Dr. Edward Condon, the scientific community automatically accepted the conclusions. Most scientists did this without ever reading it let alone even taking the time to pick up a copy of the report.

As America landed men on the moon, the public became even less fascinated with spaceships from other worlds. They now had spaceships of their own and were very proud of them. In connection with the Condon Report, great accomplishments like Apollo made science seem a solution to all of man's problems. This had been a perception since the technological leaps in the 1890s, but prior to the space age, science still seemed a realm full of unlimited magical possibilities. With America's acceleration in education following Sputnik, science lost that mystical veil, becoming a practical tool of even the layman. Yet, out of enlightenment came a hypocrisy which chose to only recognize the scientific laws men were able to utilize at hand.

It is interesting to note however that in 1968 the Committee on Science and Astronautics conducted a symposium at the urging of Representative J. Edward Roush of Indiana. Roush was a confirmed NICAP supporter. He outlined to Congress serious concerns he had developed after talking to Dr. James McDonald about the scientific profundity of the Colorado project. Roush then attracted attention through an interview he gave to the Denver Post, in which he talked about the implications of the Air Force's influence on the Condon committee.

Six distinguished scientists from major universities attended the symposium including sociologist Dr. Robert L. Hall, Dr. Hynek, Dr. Carl Sagan, and Dr. McDonald. Two engineers, Dr. James A. Harder and Dr. Robert M. Baker, also sat on the panel. The committee was prohibited from getting entangled with the Condon committee or criticizing the Air Force as such statements could only have been discussed in a session of the Armed Services Committee.

Dr. Hynek used this as the first public forum to openly indicate that there may indeed be "scientific pay dirt" in the phenomenon. He also freely admitted that the Air Force had little interest in investigating UFO reports after 1953—having come to the conclusion that they did not present a threat to national security. He stressed that a small handful of contactees and pulp magazines had for years made UFOs an illegitimate subject in scientific circles. While he in no way suggested that UFOs were of an extraterrestrial origin, he made it clear that there was no way to even discuss the possibility without generating ridicule. Hynek then suggested the formation of an official "UFO Scientific Board of Inquiry" using the United Nations as a forum for an interchange of sighting reports.

Overall, the conclusions of the committee members stated that UFOs merited serious study and should be given closer and more objective attention. Some, like Sagan and Hall, questioned if UFOs were of an extraterrestrial nature but admitted that it was possible although unlikely. Both agreed with the need to study the subject further and Dr. Hall warned the government that it should release its files on UFOs to defuse concern over the issue. Dr. James Harder of the University of California went so far as to state: "On the basis of the data and ordinary rules of evidence, as would be applied in civil or criminal courts, the physical reality of UFOs has been proved beyond a reasonable doubt." He went on to say that the objects were "interplanetary."

Dr. Robert Baker, a former UCLA professor of astronomy and engineering and editor

of the Journal of the Astronomical Science, concluded—expressing an opinion that the old Newhouse and Mariana Films were most probably of anomalistic objects. He revealed that the Air Defense Command, (which by then could monitor outer space for a possible Soviet missile attack) had produced "a number of anomalistic alarms." Dr. Baker commented that he felt this was the only surveillance system that even had a "slight opportunity" of detecting advanced space visitors. Papers from the long time UFO debunker Dr. Donald Menzel as well as five other scientists with less pessimistic views including Stanton Friedman were then read into the record.

Unfortunately, the symposium's dialogue became completely overshadowed by the release of the Condon Committee's final report in the fall. Its 1,485 page hard back version studied 91 total cases, 61 of which were identified as misperceptions or hoaxes. The rest were classified as unidentified. Some famous UFO cases were reexamined like Major Lewis D. Chase's July 1957 incident in an RB-47. But just as during the Robertson Panel discussions, very few of the thousands of cases available were studied. NICAP had donated some of its best cases and less than one percent were examined. The scientific community, unaware of this, praised the efforts of the Condon report and the press then soon followed with an overall endorsement of its work. The conclusions everyone focused on, especially the Air Force, stated: There has been no advance to science through the study of UFOs in the past, and there likely will be no advance in the future. Consequently, the Air Force should give up its official project. There are, therefore, three main elements to the conclusion:

1. There has been no advance.
2. There almost surely never will be.
3. Project Blue Book should close.

The Air Force, not surprisingly, agreed with the assessments. Condon in fact repeatedly urged in his conclusions that the government as a whole should not be involved with the study of UFOs and agreed with the Air Force's conviction that the phenomenon presented no danger to national security. Condon even went so far as to warn that children in the school system could be "educationally harmed" by studying UFOs—recommending teachers discipline those having interest in the subject! (The Air Force, by the way, was then receiving approximately 3,000 letters per month from children desiring information to assist them in writing papers on UFOs for school projects.)

On December 17th of 1969, virtually a foregone conclusion after the Condon report, the new Secretary of the Air Force, Robert C. Seamans, Jr., announced the termination of Blue Book and all involvement in UFO investigations. The Air Force's justification stated UFOs presented no threat to national security and had no scientific value for study. The dissolution of Blue Book marked the end of an official recognition of the subject. Afterwards, UFOs would occasionally be discussed, but always with the suggestion that they were merely a periodic fad.

Although Blue Book ended in 1969, the speculation continued that the government might still have a secret, high level investigation. The subject was discussed at a meeting at Hynek's home on September 14, 1969, with his close friends affectionately known as the the "Invisible College." Hynek told his friends Jacques Vallee and Bill Powers that there may indeed be another study but that it would undoubtedly have the same data that Blue Book collected. His colleagues, however, disagreed. They felt a real study would go beyond the scope of file clerks. It would have access to radar records that Blue Book was never allowed to see.

After that meeting Vallee made a significant entry in his diary that tells a great deal about the last days of Blue Book and Hynek's association with it. It is so very critical to understanding the hypocrisy of the time:

I have to agree with Fred when he says that the Air Force has kept Hynek around only as long as he was silent. I came to Evanston six years ago and put pressure on him, urging him to change his stance. A string of important cases forced the issue. When he started talking, arguing for a new study, the Air Force simply pushed him aside. First they defused the issue by getting their most vocal opponents to testify before bogus congressional hearings; then they selected Ed Condon, a physicist who was about to retire, and he signed his name to a report which was a travesty of science, yet reassured the establishment. They used that report to bring about the liquidation of Hynek's position, but they were careful not to fire him.

Allen is now fifty-nine years old. He still goes to Dayton regularly and remains on the payroll as a part-time consultant. He never sees Quintanilla, who still works there with a lieutenant and a couple of secretaries. He is received personally by the commander, who hints he might put him on his own list of consultants someday. Colonel Winebrenner, a former military attache with the U.S. Embassy in Moscow and in Prague, takes him to lunch at the officers' club.

'What do you talk about?' asks Fred.

'Oh, we talk about lots of things, ordinary things like the weather,' answers Allen innocently. 'We talk about the places we have both traveled to. Foreign foods, European cuisine. He snaps his fingers and old bottles of Chateau-Latour materialize on the table in front of us. He speaks to me in Czech. He even gave me a copy of a UFO novel, The Fortec Conspiracy.'

Hynek has been charmed and neutralized by the Air Force. That doesn't mean anything, and it especially doesn't mean there is an ongoing secret study. It is highly undesirable for the air force of any country to have the citizenry believe in the reality of a phenomenon against which our jet fighters are powerless.

In the last year of its existence, Blue Book received 146 UFO reports of which only one received the unidentified classification. Virtually all of the cases that came in by that point were civilian sightings. Military personnel no longer reported UFOs—they weren't supposed to. The Air Force claimed UFOs were no longer seen by the military simply because they are trained observers that cannot be fooled by such things. Historically, however, that was not true. For the 22 years that the Air Force investigated UFOs they received 12,750 reports of which 587 were classified as unidentified. (At one time Air Force files listed 701 unidentifieds but today only 587 are noted in the declassified index.)

A significant percentage of those came from trained military observers and pilots. It is also important to remember that the USAF on average only received reports from about ten percent of those seeing UFOs. Many of the sightings they did get were never investigated, but merely filed according to a predetermined category as Blue Book personnel saw fit. And not all of those reports were given case numbers—making the total count of incidents on file closer to 16,000.

These records are now available on microfilm from the National Archives for anyone to view. Other material can be studied at the Air Force Historical Center at Maxwell AFB. In addition, the Air Force has periodically declassified relevant material about UFO investigations. Combined with determined freedom of information requests filed by researchers from many fields of discipline, new information on UFO events since 1947 are still coming to light. In fact, at the time of this writing 240 pages of UFO-related records have been released from the National Security Agency. Several thousand pages of mid-1950s era UFO case files of the 4602nd Air Intelligence Service Squadron have also been released. The National Archives' Records Center in St. Louis, Missouri, despite stating for years that their Air Force intelligence files were destroyed in a fire, have also announced the existence of 910 pages of old Sign and Grudge files including many of the missing cases. What new evidence will these records and future releases tell us? The history of Blue Book is not complete—not without your help.

Project Blue Book "Unknowns"

This list claims 701 UFO reports which represent all of the "unexplained" sightings recorded by the Air Force's Project Blue Book, a seventeen year investigation. The list provides the dates, locations, and Blue Book case numbers for the incidents. However, our count shows only 564. No one I know of has the list of 701 that BB claimed when Blue Book closed down. An updated list with over twice the number (over 1500 incidents) can be found at:

Comprehensive Catalog of 1,500 Project BLUE BOOK UFO Unknowns: Work in Progress (Version 1.7, Dec. 31, 2003) Compiled by Brad Sparks, © 2001-2003

[document begins]

U.S. AIR FORCE PROJECT BLUE BOOK CASES OFFICIALLY LISTED AS "UNKNOWN"

Case No. /Date(s)	Location
12 June 24, 1947	Portland, Oregon
27 July 3, 1947	South Brookville, Maine
34 July 4, 1947	Emmett, Idaho
36 July 6, 1947	Fairfield-Suisan AFB, California
50 July 8, 1947	Muroc AFB, California
69 July 29, 1947	Hamilton Field, California
85 September 3, 1947	Oswego, Oregon
91 October 1947	Dodgeville, Wisconsin
95 October 14, 1947	Phoenix. Arizona
139 April 5, 1948	Holloman AFB, New Mexico
185 July 29, 1948	Indianapolis, Indiana
190 July 31, 1948	Indianapolis, Indiana
191 July-August 1948	Marion, Virginia
208 September 23, 1948	San Pablo, California
218 October 15, 1948	Kyushu, Japan
257 December 3, 1948	Fairfield-Suisan AFB, California
275 January 4, 1949	Hickam Field Hawaii
284 January 27, 1949	Cortex, Florida
319 March 17-18, 1949	Killeen Base, Camp Hood, Texas
358 April 24, 1949	Arrey, New Mexico
361 April 28, 1949	Tucson, Arizona
376 May 5, 1949	Fort Bliss, Texas
379 May 6, 1949	Livermore, California
384 May 9, 1949	Tucson, Arizona
404 May 27, 1949	Southern, Oregon
483 July 24, 1949	Mountain Home, Idaho
496 July 30, 1949	Mount Hood, Oregon
642 February 24, 1950	Albuquerque, New Mexico
645 February 25, 1950	Los Alamos, New Mexico
650 March 3, 1950	Selfridge AFB, Michigan
671 March 20, 1950	Stuttgart, Arkansas
678 March 27, 1950	Motobu, Okinawa
680 March 28, 1950	Santiago, Chile

682	March 29, 1950	Marrowhode Lake, Tennessee
706	April 8, 1950	Kokomo, Indiana
711	April 14, 1950	Fort Monmouth, New Jersey
721	May 7, 1950	East Ely, Nevada
738	June 27, 1950	Texarkana, Texas
758	July 13, 1950	Redstone Arsenal, Georgia
773	August 4, 1950	North Atlantic
793	August 20, 1950	Nicosia, Cyprus
787	August 24, 1950	Air radar, Bermuda
790	August 30, 1950	Sandy Point, Newfoundland
797	September 3, 1950	Spokane, Washington
807	September 20, 1950	Kit Carson, Colorado
809	September 21, 1950	Provincetown, Massachusetts
819	October 15, 1950	Knoxville, Tennessee
821	October 15, 1950	Pope AFB, North Carolina
824	October 23, 1950	Bonlee, North Carolina
829	November 5, 1950	Oak Ridge, Tennessee
845	December 2, 1950	Nanyika, Kenya, Africa
848	December 6, 1950	Fort Meyers, Florida
849	December 11, 1950	Alaska
864	January 8, 1951	South of Fort Worth, Texas
868	January 12, 1951	Fort Benning, Georgia
886	February 1, 1951	Johnson AB, Japan
896	February 26, 1951	Durban, South Africa
897	February 26, 1951	Ladd AFB, Alaska
907	March 13, 1951	McClellan AFB, California
908	March 15, 1951	New Delhi, India
925	May 31, 1951	Niagara Falls, New York
943	July 24, 1951	Portsmouth, New Hampshire
955	August 25, 1951	Albuquerque, New Mexico
962	August 31, 1951	Matador, Texas
964	September 6, 1951	Claremont, California
969	September 13, 1951	Goose AFB, Labrador
980	October 2, 1951	Columbus, Ohio
984	October 3, 1951	Kadena, Okinawa
985	October 9, 1951	Terre Haute, Indiana
989	October 11, 1951	Minneapolis, Minnesota
1011	December 18, 1951	Andrews AFB, Washington, D.C.
1013	December 24,1951	Mankato, Minnesota
1021	December 7, 1951	Oak Ridge, Tennessee
1023	December 7, 1951	Sunbury, Ohio
1037	January 16, 1952	Artesia, New Mexico
1052	February 11, 1952	Pittsburgh, Pennsylvania
1061	February 23, 1952	Sinuiju, North Korea
1074	March 20, 1952	Queen Annes City, Maryland
1076	March 22, 1952	Yakima, Washington
1077	March 24, 1952	Point Conception, California
1082	March 29, 1952	Misawa AFB, Japan
1095	April 5, 1952	Duncanville, Texas
1097	April 5, 1952	Miami, Florida
1099	April 6, 1952	Temple, Texas
1108	April 12, 1952	North Bay, Ontario
1112	April 14, 1952	Memphis, Tennessee
1113	April 14, 1952	La Crosse, Wisconsin
1115	April 15, 1952	Santa Cruz, California
1124	April 17, 1952	Longmeadow, Massachusetts

Bluebook Part 1

THE BLUE BOOK UNKNOWNS

The unexplained UFO reports from the files of the U.S. Air Force's Project Blue Book UFO investigations.

Compiled by Don Berliner, for the Fund for UFO Research.

The conclusions or views expressed in this publication are the views of the author(s) and do not necessarily reflect the opinions of the Fund for UFO Research, Inc.

THE UNEXPLAINED UFO CASES FROM THE PROJECT BLUE BOOK FILES

In January, 1974, I visited the U.S. Air Force Archives at Maxwell AFB, Montgomery, Ala., to review the files of Project Blue Book as the first step toward writing a book on the subject.

In a full week, I read all the "unexplained" cases in the original files and made extensive notes, including the names and other identifying information on all witnesses where given. The cooperation of the staff of the Archives was excellent, and no restrictions were placed on my work.

A few months later, the files were withdrawn from public view so they could be prepared for transfer to the National Archives in Washington, D.C. This process involved making a Xerox copy of almost 30 file drawers of material, blacking out the names and other identifiers of all witnesses, and then microfilming the censored Xerox copy. The microfilm has been available to the public at the National Archives since 1976. The original Project Blue Book files remain under lock and key at the Archives.

On almost every page of the 12,000+ case files, there are big black marks where information that could be used to cross-check Project Blue Book's controversial work has been censored.

This includes the names of witnesses to widely-publicized cases, and even names in newspaper clippings!

As it was perfectly legal for me to copy witness' names when I visited the Air Force Archives, those names can be found in this report of 585 (less 13 missing) unexplained cases. And since the Privacy Act, which motivated the Air Force to censor the files in the first place, does not apply to reporters or anyone else outside the Government, they can be used as the reader pleases.

Inasmuch as the book I planned to write has never progressed beyond the manuscript stage, I see no reason to keep this information under wraps any longer. Perhaps it will encourage others to re-investigate cases and make the results known.

"Unidentified" says a great deal...and it says almost nothing.

Probably the most controversial aspect of the entire Air Force investigation of UFOs was its handling of individual cases.

The means by which one case was determined to be "identified" and another "unidentified" has no doubt fueled more arguments about Project Blue Book than anything else it did.

For many years, Blue Book's most vocal opponents have insisted that the standards by which cases were allegedly explained were grossly unscientific. Blue Book's goal, according to those who held it low esteem, was to attach some explanation to every case, regardless of logic or common sense. Examples of Blue Book saying a violently maneuvering disc was an aircraft, or of blaming a puzzling radar tracking on a supposedly malfunctioning radar set which it never bothered to check out, are numerous in the popular UFO literature.

And they are even more numerous in the files of Project Blue Book. The urgency with which Blue Book officials tagged answers onto cases without having done the proper investigation is obvious, though not proven. But if the Air Force was so eager to label cases "identified", despite the lack of supporting evidence, then those few cases which it labeled "unidentified" presumably withstood every attempt to apply every other kind of label. And so it may be that those cases are truly unidentifiable in familiar terms.

Indeed, the Air Force defines "unidentifiable" cases as those which "apparently contain all pertinent data necessary to suggest a valid hypothesis concerning the lack of explanation of the report, but the description of the object or its motion cannot be correlated with any known object or phenomenon."

To meet such criteria, a report must obviously come from a reputable source, and it must not bear any resemblance to airplanes, balloons, helicopters, spacecraft, birds, clouds, stars, planets, meteors, comets, electrical phenomena, or anything else known to frequent the air, the sky, or nearby space.

Unfortunately, the Air Force failed to stick to its own rules. Some of the "unidentifiable" cases most certainly can be correlated with known objects or phenomena. But most of them cannot. Moreover, many of the so-called "identified" cases cannot honestly be so correlated. But we are primarily concerned here with those cases which Project Blue Book openly admits it tried to explain and failed.

The amount of detail in these cases varies enormously. Some cases - frequently those which were well publicized at the time of the event - contain considerable information, while others are vague and seriously incomplete. Project Blue Book generally placed the blame for such incompleteness on the witnesses, but it should take its own share of the responsibility. 'In thousands of cases, there is no completed questionnaire in the Project files, nor even any indication that one was sent to the witness. And in most of the instances where a questionnaire was filled out, it was never followed up to get more complete answers to questions which the witnesses failed to deal with properly. For much of the life of Project Blue Book and its predecessors, there was no satisfactory questionnaire at all. And one of those used for a lengthy period was so badly organized that a witness should not be held to blame for giving incomplete answers.

Yet, despite all the roadblocks, many reports are sufficiently complete to tell a pretty clear story of a puzzling experience. With this data now available, anyone can look at Project Blue Book's "unidentified"

UFO reports and make up his own mind.

July 3, 1947; Harborside, Maine. 2:30 p.m. EDT. Witness: astronomer John Cole of South Brooksville, Me. Watched 10-15 seconds while ten very light objects, with two dark forms to their left, moved like a swarm of bees to the northwest. A loud roar was heard.

July 4, 1947; over Emmet, Idaho. 8:17 p.m. PDT. Witnesses: United Air Lines Capt. E.J. Smith, First Officer Ralph Stevens, Stewardess Marty Morrow. Watched for 12-15 minutes while four objects with flat bottoms and rough tops moved at varying speeds, with one high and to the right of the others.

July 6, 1947; Fairfield-Suisan Air Base, California. Daytime. Witnesses: Army Air Forces Capt. and Mrs. James Burniston. Watched for 1 minute while one object having no wings or tail rolled from side-to-side three times and then flew away very fast to the southeast.

July 8, 1947; Muroc Air Base, California. 9:30 a.m. PDT. Witnesses: lst Lt. Joseph McHenry, T/Sgt Ruvolo, S/Sgt Nauman, Miss Janette Scotte. Watched for an unstated length of time while two disc-shaped or spherical objects--silver and apparently metallic--flew a wide circular pattern, and then one of them later flew a tighter circle.

July 9, 1947; Meridian, Idaho. 12:17 p.m. PDT. Witness: Idaho statesman aviation editor and former (AAF) B-29 pilot Dave Johnson. Watched for more than 10 seconds from an Idaho Air National Guard AT-6 while a black disc, which stood out against the clouds, made a half-roll and then a stair-step climb.

July 10, 1947; Harmon Field, Newfoundland, Canada. Between 3 and 5 p.m. local time. Witnesses: three ground crewmen, including Mr. Leidy, for Pan American Airways. Watched briefly while one translucent disc- or wheel-shaped object flew very fast, leaving a dark blue trail and then ascended and cut a path through the clouds.

July 29, 1947; Hamilton Air Base, California. 2:50 p.m. PDT. Witnesses: Assistant Base Operations Officer Capt. William Rhyerd, ex-AAF B-29 pilot Ward Stewart. Watched for unknown length of time while two round, shiny, white objects with estimated 15-25 foot diameters, flew 3-4 times the apparent speed of a P-80, also in sight. One object flew straight and level; the other weaved from side-to-side like an escort fighter.

Sept. 3, 1947; Oswego, Oregon. 12:15 p.m. PDT. Witness: housewife Mrs. Raymond Dupui. Watched for unknown length of time as 12-15 round, silver objects flew an unstated pattern.

Oct., 1947; Dodgeville, Wisconsin. 11 unnamed civilian man. Watched for 1 hour while an undescribed object flew counterclockwise circles.

Oct. 14, 1947; 11 mi. NNE of Cave Creek, Arizona. Noon MDT. Witnesses: ex-AAF fighter pilot J.L. Clark, civilian pilot Anderson, third man. Watched 45-60 seconds while one 3-foot "flying wing"-shaped object, which looked black against the white clouds and red against the blue sky, flew straight at an estimated 380 m.p.h., at 8-10,000 feet, from NW to SE.

April 5, 1948; Holloman AFB, New Mexico. Afternoon. Witnesses: Geophysics Lab balloon observers Alsen, Johnson, Chance. Two irregular, round, white or golden objects. One made three loops then rose and disappeared rapidly; the other flew in a fast arc to the west during the 3O^second sighting.

July 29, 1948: Indianapolis, Indiana. 9:88 a.m. witness*: James Toney, Robert Huggins, both employees of a rug cleaning firm. One shiny aluminum object, shaped something like an airplane's propeller, with 10-12 small cups protruding from either blade. Estimated size 6-8' long, 1.5-2' wide. The object glided across the road a few hundred feet in front of their vehicle and apparently went down in a wooded area.

Sighting lasted a few seconds.

July 31, 1948; Indianapolis, Indiana. 8:25 a.m. Witnesses: Mr. and Mrs. Vernon Swigert; he was an electrician. Object was shaped like a cymbal, or domed disc; about 20' across and 6-8' thick, and was white without any shine. It flew straight and level from horizon to horizon in about 10 seconds, shimmering in the sun as if spinning.

July or August, 1948; vicinity of Marion, Virginia. Shortly after sunset. Witness: Max Abbott, flying a Bellanca Cruisair four-passenger private airplane. A single bright white light accelerated and turned up a valley.

Sept. 23, 1948; San Pablo, California. 12 noon. Witnesses: Sylvester Bentham and retired U.S. Army Col. Horace Eakins. Two objects: one, a buff or grey rectangle with vertical lines; the other a translucent "amoeba" with a dark spot near the center. The arms of the "amoeba" undulated. Both objects traveled very fast.

Oct. 15, 1948; Fusuoka, Japan. 11:05 p.m. Witnesses: pilot Halter and radar operator Hemphill of a P-61 "Black Widow" night fighter. Up to six objects tracked on radar, only one seen visually. Dull or dark object shaped like a dirigible with a flat bottom and clipped tail end. Six seen on radar separately Pilot attempted to close on visual object, but it dove away fast.

Dec. 3, 1948; Fairfield-Suisan AFB, California. 8:15 p.m. Witness: USAF Sgt., control tower operator. One round, white light flew for 25 seconds with varying speed, bouncing motion, and finally a rapid erratic climb.

Jan. 4, 1949; Hickam Field, Hawaii. 2 p.m. Witness: USAF pilot Capt. Paul Storey, on ground. one flat white, elliptical object with a matte top circled while oscillating to the right and left, and then sped away.

Jan. 27, 1949; Cortez-Bradenton, Florida. 10:20 p.m. Witnesses: Capt. Sames, acting chief of the Aircraft Branch, Eglin AFB, and Mrs. Sames. They watched for 25 minutes while a cigar-shaped object as long as two Pullman cars and having seven lighted square windows and throwing sparks, descended and then climbed with a bouncing motion at an estimated 400 m.p.h.

March 17, 1949; Camp Hood, Texas. 7:52 p.m. Witnesses: guards of the 2nd Armored Division. While awaiting the start of a flare firing, they watched, for an hour, while eight large, green, red and white flare-like objects flew in generally straight lines.

April 3, 1949; Dillon, Montana. 11:55 a.m. Witnesses: construction company owner Gosta Miller and three other unnamed persons. One object shaped like two plates attached face-to-face; matte bottom, bright aluminum top; 20' diameter, 4-5' thickness. It rocked or rotated in six cycles, descended, rocked, flew, rocked; all this was very fast.

April 4, 1949; Merced, California. 10:20 p.m. witness: William Parrott, former Air Force pilot and major. One generally round object with a curved bottom and dull coloring. The object gave off a clicking sound until overhead. Parrott's dog reacted. 35 seconds.

April 24, 1949; Arrey, New Mexico. l0:30 a.m. Witnesses: General Mills meteorologist and balloon expert C.B. Moore and others on a balloon launch crew. One white, round ellipsoid, about 2.5 times as long as wide.

April 28, 1949; Tucson, Arizona. 5:45 p.m. Witnesses: Howard Hann, Mr. Hubert, Tex Keahey. One bright, sausage-shaped object was observed for 40 minutes while it rolled and flew fast.

May 5, 1949; Ft. Bliss, Texas. 11:40 a.m. Witnesses: Army officers Maj. Day, Maj. Olhausen, Capt. Vaughn. Two oblong white discs, flying at an estimated 200-250 m.p.h., made a shallow turn during the 30-50 second observation.

May 6, 1949; Livermore, California. 9:35 a.m. Witness: C. G. Green. Two shiny, disc-like objects rotated around each other and banked. Then one shot upwards with a grey trail and rejoined the other. The sighting lasted 5 minutes.

May 9, 1949; Tucson, Arizona. 2:30 p.m. Witness: M/Sgt. Troy Putnam. Two round, flat silvery objects, estimated to be 25' in diameter, flew 750-1,000 m.p.h. in a banked but steady manner.

May 27, 1949; South-central Oregon. 2:25 p.m. Witness: Joseph Shell, ferrying SNJ trainer for North American Aviation, from Red Bluff, California, to Burns, Oregon. Five to eight oval objects, twice as long as wide, and 1/5 as thick. They flew in trail formation, with an interval equal to 3-4 times their length, except that the second and third were closer together.

July 24, 1949; Mountain Home, Idaho. 12 noon. Witness: Henry Clark, manager of a flying service, flying a Piper Clipper. Seven delta-shaped objects, 35-55' in span, 20-30' long, 2-5' thick; light colored except for a 12' diameter dark circle at the rear of each. They flew in a tight formation of twos with one behind, and made a perfect, but unbanked, turn. During the 10 minute sighting, they displayed decreasing smooth oscillations. Clark's engine ran rough during the sighting, and upon landing was found to have all its spark plugs burned out.

July 30, 1949; Mt. Hood, Oregon. 9 p.m. Witnesses: Northwest Airlines Capt. Thrush, two Portland control tower operators, and one flying instructor. One object with one white light and two red lights, maneuvered and hovered.

Feb 5, 1950; Teaticket, Massachusetts. 5:10 p.m. Witnesses: Marvin Odom, former U.S. Navy fighter pilot, USAF Lt. Philip Foushee, pilot from Otis AFB, and two others. Two thin, illuminated cylinders, one of which dropped a fireball, maneuvered together and then disappeared high and fast after 5 minutes.

Feb. 24, 1950; Albuquerque, New Mexico. 1:55 p.m. Witnesses: Municipal Airport Weather Observers Luther McDonald, Harrison Manson. One white, slightly elongated oval was watched for 1.5 minutes through a theodolite while it flew straight and level.

Feb. 25, 1950; Los Alamos, New Mexico. 3:55 p.m. Witnesses: Twelve Atomic Energy Commission security inspectors. One cylinder with tapered ends, silver and flashing, flew slow and hen fast, fluttered and oscillated, and changed course. observations by individuals varied from 3 seconds to 2 minutes.

arch 3, 1950; Selfridge AFB, Michigan. 11:05 p.m. Witness: st Lt Frank Mattson. One intense, dull yellowish light descended vertically, then flew straight and level very fast for 4 minutes.

March 20, 1950; Stuggart, Arkansas. 9:26 p.m. Witnesses: Chicago & Southern Airlines Capt. Jack Adams, First Officer G. W. Anderson, Jr. One 100' circular disc with 9-12 portholes along the lower side emitting a soft purple light, and a light at the top which flashed 3 times in 9 seconds, flew at not less than 1,000 m.p.h. It was seen for 25-35 seconds.

March 27, 1980; Motobo, Okinawa. 10:30 a.m. Witness: USAF radar operator Cpl. Bolfango. Tracked on radar for 2 minutes while it was stationary and then moved at 500 m.p.h.. Visual observation not detailed, only mentioned in summary.

March 28, 1950; Santiago, Chile. 3:15 p.m. Witness: M/Sgt. Patterson, of the office of the U.S. Air Attache. One white object observed for 5-10 seconds through binoculars while it flew high and fast,

crossing 30^ of sky.

March 29, 1950; Marrowbore Lake, Tennessee. 7 a.m. Witnesses: real estate salesmen Whiteside and Williams. Six-twelve dark objects shaped like 300-lb. bombs, estimated 5 feet long. Flew 500 m.p.h. and descended, making a noise like wind blowing through the trees.

April 8, 1950; Kokomo, Indiana. 2 a.m. Witness: Earl Baker. One grey metallic disc, 50' in diameter, 15' thick; top-shaped with a "conning tower" at the top and three ports on the rim giving off a blue light. It hovered for 2 minutes, then flew away. Baker aroused from sleep by his dog.

April 14, 1950; Ft. Monmouth, New Jersey. 2:30 p.m. Witness: Army M/Sgt. James. Four rectangular, amber objects, about 3' by 4'. changed speed and direction rapidly; the group of objects rose and fell during the 3-4 minute sighting.

May 7, 1950; Nine miles sough of Ely, Nevada. 6:45 p.m. Witnesses: Mr. and Mrs. George Smith and their grandson. One silvery white object hovered at 100' altitude, moved back and forth for 10 minutes and then flew up and away. Note in case file: "No investigation."

June 27, 1950; Texarkana, Texas. 7:50 a.m. Witnesses: Terrell and Yates, employees of Red River Arsenal. One object, bright, shaped like two dishpans face-to-face, flew straight and level, fast for 4-5 seconds.

July 13, 1950; Redstone Arsenal, Alabama. 5 p.m. Witnesses: two skilled Arsenal employees including Mr. Washburn. one object, shaped like a bowtie, and like polished aluminum. Flew straight and level, then one triangle rotated 1/4 turn in the opposite direction and returned to its original position. The object then made a right-angle turn and accelerated away after at least 30 seconds.

Aug. 4, 1950; approx. 100 mi. SE of New York City (39' 35' N., 72' 24.5' W.). 10 a.m. EDT. Witnesses: Master Nils Lewring, Chief Mate Jacob Koelwyn, Third Mate, of M/V Marcala. One 10' cylindrical object at 50-100' altitude, flying with a churning or rotary motion, accelerated at end of 15 second sighting.

Aug. 20, 1950; Nicosia, Cyprus. 1:30 p.m. Witnesses: USAF MATS liaison officer Lt. William Ghormley, Col. W. V. Brown, Lt. col. L.w. Brauer. One small, round, bright object flew fast, straight and level for 15-20 seconds.

Aug. 25, 1950; approx. 250 mi. SW of Bermuda (29' 40' N., 67* 28' W.). 8 p.m. Witness: B-29 radarman S/Sgt. William Shaffer. Radar observation, plus possible blue streak 3 minutes later. B-29 followed unidentified target, then passed it at l/4-mile distance, target followed for 5 minutes, then passed B-29 and sped away. Total time of tracking: 20 minutes.

Aug. 30, 1950; Sandy Point, Newfoundland, Canada. 1:30 p.m. Witnesses: three local employees, including Kaeel and Alexander, of the Air Force Base. A dark, barrel-shaped object with a pole down from it into the water, flew at 3-5 m.p.h. and 15-20' altitude for 5 minutes.

Sept. 3, 1950; Spokane, Washington. 2 p.m. Witnesses: Maj R.J. Gardiner, Mrs. Gardiner and neighbor (former saw three objects, others saw one). Metallic bronze discs, 20-30' long, 2-6' thick. Moved independently and erratically for 5 minutes.

Sept. 20, 1950; Kit Carson, Colorado. 10:49 a.m. Witness identified only as a "reliable source". Two large, round, glowing objects and three smaller, internally lit objects. Two hovered for 1 minute, moved, and three smaller ones came from behind or within the two larger objects, and all sped upward and away.

Sept. 21, 1950; Provincetown, Massachusetts. 9:52 a.m. Witness: M.I.T. research associate and Air National Guard Maj. M.H. Ligda. Radar tracking of one object during M.I.T tracking of USAF flight of F-84 or F-86 jet fighters. Object speed was 22 miles/minute (l,200 m.p.h.), made turn of 11-12 gs acceleration during 1 minute observation.

Oct. 15, 1950; Oak Ridge, Tennessee. 3:20 p.m. Atomic Energy Commission Trooper Rymer, J. Moneymaker, Capt. Zarzecki. Two shiny silver objects shaped like bullet or bladder. They dove with a smoke trail and one vanished. The other hovered at 5-6, altitude, 50' away, left and returned several times somewhat further away.

Oct. 15, 1950; Pope AFB, North Carolina. Witness: Daniel. Listed as "unidentified" in folder index, but no supporting data could be found.

Oct 15, 1950; Pope AFB, North Carolina. Witness: Woodward. Same as previous observation.

Oct. 23, 1950; Bonlee, North Carolina. 12:42 p.m. Witness: ex-USAF pilot Frank Risher. One aluminum object shaped like a dirigible or Convair C-99 cargo plane, with 3 portholes, arrived from southeast, hovered 3-5 seconds and flew away to the south- south-east at end of 40 second sighting.

Nov. 5, 1950, Oak Ridge, Tennessee. 11:55 a.m. Witness: Fairchild Aircraft illustrator Don Patrick. One translucent object, light grey with dark core, shaped like a pear or bean. Flew for 5-10 minutes with rapid, darting movements.

Dec. 2, 1950; Nanyika, Kenya. 10:50 a.m. Mr. and Mrs. L. Scott. One pearly, iridescent object with a flattened top, spun while hovering and made a sound like bees buzzing. Only data in files was from East African "Standard" newspaper.

Dec. 6, 1950; Ft. Myers, Florida. 5 p.m. Witnesses: former aircraft purchasing agent Harry Lamp and four boys, using lO-power binoculars. One 75' object, 3-4' thick, bubble on top, silver with a red rim having two white and two orange jets along it. The center revolved when the object hovered; then it flew away very fast.

Dec. 11, 1950; l0 mi. NW of Gulcana, Alaska. 10:13 p.m. Witnesses: crew of Northwest Air Lines flight 802. Two white flashes, followed by a dark cloud which rose and split in two.

Jan. 8, 1951; South of Ft. Worth, Texas. 10:45 p.m. Witnesses: Mr. and Mrs. W.J. Boggus, plus unidentified drivers and passengers in other cars stopped to watch. Two groups of red and green lights in triangular formations were stationary and then moved.

Jan. 12, 1951, Ft. Benning, Georgia. 10 p.m. Witness: U.S. Army 2nd Lt. A.C. Hale. One light with a fan-shaped wake remained motionless like a star about 20 minutes and then sped away.

Jan 16, 1951; Artesia, New Mexico. Time unknown. Witnesses: Two members of a balloon project from the General Mills . Aeronautical Research Laboratory, the manger of the Artesia Airport, and three pilots. The balloon crew was observing their 110' balloon at an altitude of 112,000' when a dull white, round object was spotted. It appeared larger than the balloon, but made no movement. Later, the balloon crew and the others saw two objects from the airport; flying side-by-side, they circled the balloon and flew away to the northeast. The second observation lasted about 40 seconds. Note: there is confusion over the date of this case, with some USAF records showing it as 1952; however, 1951 appears to be correct.

Feb. 1, 1951; Johnson Air Base, Japan. 5:10 p.m. Witnesses: pilot and radar operator of F-82 night fighter. One amber light made three or four 360* turns to the right, reversed toward the F-82 and then climbed out of sight.

Feb. 21, 1951; Durban, South Africa. 4:55 a.m. Witnesses: three men in a truck, several other persons, none named. A dark red, torpedo-shaped object with darker center, flew straight and level.

Feb. 26, 1951; Ladd AFB, Alaska. 7:10 a.m. Witness: USAF Sgt. J.B. Sells. One dull grey, metallic object, estimated to be 120' long and 10-12' thick, hovered, puffed smoke and sped away after 1-1.5 minutes. Note: may have been Feb. 25.

Mar. 10, 1951; Chinnampo, Korea. 9:51 a.m. Witnesses: crew of USAF B-29 bomber, including scanners and tail gunner. A large red-yellow glow burst and became blue-white. No further information in files.

Mar. 13, 1951; McClellan AFB, California. 3:20 p.m. Witnesses: USAF lst Lt. B.J. Hastie, Mrs. Rafferty. A cylinder with twin tails, 200' long and 90' wide, turned north and flew at incredible speed. Two minutes.

Mar. 15, 1951; New Delhi, India. 10:20 a.m. Witnesses: 25 members of a flying club, including the chief aerial engineer and his two assistants. One metallic cigar-shaped object with white exhaust which turned black when it accelerated to an estimated 1,000 m.p.h. and made a large loop. Seven minutes.

June 1, 1951; Niagara Falls, New York. 4:20 a.m. Witnesses: M/Sgt H.E. Sweeney, 2 enlisted men. One glowing yellow-orange, saucer-shaped object with arc-shaped wings, flew straight up. Seen for 30-40 seconds.

July 24, 1951; Portsmouth, New Hampshire. 7:10 Witnesses: Hanscom AFB Operations Officer Capt. Cobb, Cpl. Fein. One 100-200' tubular object, 5 times long as it was wide, with fins at one end, and colored greyish with many black spots. Flew 800-1,000 m.p.h. at 1-2,000' altitude, leaving a faint swath. 20 seconds.

Aug. 25, 1951; Albuquerque, New Mexico. 9:58 p.m. Witnesses: Sandia Base Security Guard Hugh Young and wife. A flying wing- shaped craft passed over their heads at an estimated 800-1,000' altitude with no sound. Size estimated at 1.5 times wingspan of B-36 bomber,or 350'. Dark, chordwise stripes on underside, and 6-8 pairs of soft, glowing lights on trailing edge of "wing". Speed estimated at 300-400 m.p.h., object seen for about 30 seconds.

Aug. 31, ; Matador, Texas. 12:45 p.m. Witnesses: Mrs. Tom Tilson, one or two other women, all apparently of excellent reputations. One pear-shaped object with a length of a B-29 fuselage (100'), aluminum or silver with a port or some type of aperture on the side. It moved with smaller end forward, drifting slowly at about 150' altitude, then headed up in a circular fashion and out of sight after a few seconds.

Sept. 6, 1951; Claremont, California. 7:20 p.m. (not really clear). Witnesses: S/Sgt W.T. Smith, M/Sgt L.L. Duel (?). Six orange lights in an irregular formation, flew straight and level into a coastal fog bank after 3-4 minutes.

Sept. 14, 1951; Goose Bay, Labrador, Canada. 9:30 p.m. Witnesses: T/Sgt W.B. Maupin, Cpl. J.W. Green. Three objects tracked on radar. Two were on a collision course, then one evaded to the right upon the request, by radio, of one of the radar operators! No aircraft were known to be in the area. A third unidentified track then joined the first two. More than 15 minutes.

Oct. 2, 1951; Columbus, Ohio. 6 p.m. Witness: Battelle Memorial Institute graduate physicist Howard Cross. One bright oval with a clipped tail flew straight and level, fading into the distance after 1 minute.

Oct. 3, 1951; Kadena, Okinawa. 10:27 p.m. Witnesses: radar operators Sgt. M.W. Watson and Pvt. Gonzales and one other Sergeant. One large, sausage-shaped blip tracked at an estimated 4,800 m.p.h.

Oct. 9, 1951; Terre Haute, Indiana. 1:42 p.m. Witness: CAA Chief Aircraft Communicator Roy Messmore at Hulman Municipal Airport. One round silver object flew directly overhead, reaching the horizon in 15 seconds. Note: a very similar incident happened 3 minutes later near Paris, Illinois (15 miles NW) and was also listed as "unidentified" for several years, but was eventually reclassified.

Oct. 11, 1951; Minneapolis, Minnesota. 6:30 a.m. Witnesses: General Mills balloon researchers, including aeronautical engineer J.J. Kaliszewski, aerologist C.B. Moore, pilot Dick Reilly in the air, and Doug Smith on the ground. The flight crew saw the first object, a brightly glowing one with a dark underside and a halo around it. The object arrived high and fast, then slowed and made slow climbing circles for about two minutes, and finally sped away to the east. Soon they saw another one, confirmed by ground observers using a theodolite, which sped across the sky. Total time first object was seen was 5 minutes, second was a few seconds.

Nov. 18, 1951; Washington, D.C. 3:20 a.m. Witnesses: Crew of Capital Airlines DC-4 Fliqht 610, Andrews AFB Senior air traffic controller Tom Selby. One object with several lights, followed the DC-4 for about 20 minutes and then turned back.

Nov. 24, 1951; Mankato, Minnesota. 33:53 p.m. Witnesses: USAF or ANG pilots W.H. Fairbrother and D.E. Stewart in P-51 Mustangs. One milky white object shaped like Northrop flying wing (broad, slightly swept-back wing with no fuselage or tail). Estimated 8' span. Flew straight and level for 5 seconds.

Dec. 7, 1951; Sunbury, Ohio. 4:30 p.m. Witness: amateur astronomer Carl Loar. One silvery sphere seen through telescope. Two specks sighted at sides, object seemed to explode and was replaced by a dark cloud and many specks. 30 minutes.

Dec. 7, 1951; Oak Ridge, Tennessee. 8:15 a.m. Witness: Atomic Energy Commission guard J.H. Collins. One 20' square object, white-grey but not shiny flew above ridge to clouds and back again twice, taking 30-40 seconds each time.

Feb. 11, 1952; Pittsburgh, Pennsylvania. 3 a.m. Witnesses: Capt. G.P. Arns and Maj. R.J. Gedson flying a Beech AT-ll trainer. One yellow-orange comet-shaped object pulsed flame for 1-2 seconds of a 1 minute straight and level flight.

Feb. 23, 1952; over North Korea. 11:15 p.m. Witness: Captain/B-29 navigator. One bluish cylinder, three times long as wide, with a tail and rapid pulsations, came in high and fast, made several turns and leveled out under B-29 which was evading mild antiaircraft fire. 45 second sighting.

March 20, 1952; Centreville, Maryland. 10:42 p.m. Witnesses: WWl/WW2 veteran A.D. Hutchinson and son. One dull orange-yellow saucer-shaped light flew straight and level very fast for 30 seconds.

March 23, 1952; Yakima, Washington. 6:56 and 7 p.m. Witnesses: pilot and radar operator of F-94 jet interceptor. On either occasion, a red fireball increased in brightness and then faded over 45 second span. Stationary both times. Note: Project Blue Book Status Report #7 (May 31, 1952) says target was also tracked by ground radar at 78 knots (90 m.p.h.) at 22,500' and 25,000' altitude.

Bluebook Part 2

March 24, 1952; 60 miles west of Pt. Concepcion, California. 8:45 a.m. Witnesses: B-29 navigator and radar operator. One target tracked for 20-30 seconds at estimated 3,000 m.p.h.

March 29, 1952; 20 miles north of Misawa AFB, Japan. 11:20 a.m. Witness: Brigham, pilot of AT-6

trainer. One small, very thin, shiny metallic disc flew alongside the AT-6, then made a pass at an F-84 jet fighter, flipped on edge, fluttered 20' from the F-84's fuselage and flipped in the slipstream...all in 10 seconds.

April 4, 1952; Duncanville, Texas. 7:30 p.m. Witnesses: two radar operators of the 147th AC&W Squadron. One object was tracked for one minute by radar at an estimated 2,160 m.p.h.

April 5, 1952; Phoenix, Arizona. l0:40 a.m. Witnesses: Mr. and Mrs. L.G. Ryan, R.L. Stokes, D. Schook. One large, dull grey circular object, followed by two more, flew straight and level at high speed.

April 5, 1952; Miami, Florida. 9:15 p.m. Witnesses: L.E. VanDercar and 9 year old son. Four dark circular objects with mostly fuzzy edges, crossed face of Moon; each was half the apparent diameter of Moon. 2:59 p.m. Witness: H.L. Russell.

April 6, 1952; Temple, Texas. 2:59 p. 50-75 grey-white discs changed position within formation continually, tilted in unison every 12-15 seconds during 3.8 minute sighting.

April 12, 1952; North Bay, Ontario, Canada. 9:30 p.m. Witnesses: Royal Canadian Air Force Warrant Officer E.H. Rossell, Flight Sgt. R. McRae. One round amber object flew fast, stopped, reversed direction, climbed away at 30' angle during a 2 minute observation.

April 14, 1952; LaCrosse, Wisconsin. 12:35 p.m. Witness: unidentified CAL airline pilot. Several light colored objects flew in V-formation. No further details in files.

April 14, 1952; Memphis, Tennessee. 6:34 p.m. Witnesses: U.S. Navy pilots Lt. jg. Blacky, Lt. jg. O'Neil. One inverted bowl, 3' long and 1' high, with vertical slots, flew fast, straight and level, 100 yards from observers' aircraft for 45-60 seconds.

April 15, 1952; Santa Cruz, California. 7:40 p.m. Witness: Mr. Hayes, brother of Master Sergeant. Two faint objects observed flying fast along the horizon for 6-8 seconds, using 20x spotting telescope.

April 17, 1952; Longmeadow, Massachusetts. 8:30 p.m. Witnesses: S.B. Brooks, chemical engineer J.A. Eaton. One round, deep orange object flew fast and erratic, occasionally emitting a shaft of light to the rear during a 40 minute sighting.

April 17, 1952; Yuma, Arizona. 3:05 p.m. Witnesses: group of Army weather observation students, including several graduate engineers. One flat-white, circular object flew with an irregular trajectory and a brief trail, for about 7 seconds.

April 18, 1952; Yuma, Arizona. Time unknown. Witnesses: two Army weather observation students. One flat-white circular object flew for 5-10 seconds in a very erratic manner.

April 18, 1952; Bethesda, Maryland. l1:30 a.m. Witnesses: R. Poerstal and three other men. Seven to nine circular, orange-yellow lights in a 40^ V-formation flew overhead silently for 4-8 seconds, from south to north.

April 18, 1952; Corner Brook, Newfoundland, Canada. l0:l0 p.m. Witness: reporter Chic Shave. One round, yellow-gold object flew south and returned during 1.5 minute sighting.

April 18, 1952; 50 miles northwest of Kyushu, Japan (129* 51' E., 34' 19' N.). Witness: one radar operator. Tracked unidentified target for 1 minute at 2,700 m.p.h.

April 18, 1952; Corner Brook, Newfoundland, Canada. 4 a.m. Witness: janitor C. Hamilton. One yellow-

gold object made a sharp turn and left a short, dark trail during l minute sighting.

April 22, 1952; Naha AFB, Okinawa. 99 p.m. Witnesses: crew of B-29 bomber, on ground. One elliptical object, followed by two and then another two, each with a white light that blinked every 1-2 seconds as they performed erratic maneuvers for 10 minutes.

April 24, 1952; Bellevue Hill, Vermont. 5 a.m. Witnesses: crew of USAF C-124 transport plane. Three circular, bluish objects in loose "fingertip" formation twice flew parallel to airplane during 3-4 minute period.

April 24, 1952; Milton, Massachusetts. 2:30 p.m. Witnesses: three Cambridge Research Center electronics engineers, one named Buruish. Two flat, red squares flew wobbly in level flight, climbed, leveled out during 1.5 minute observation.

April 24, 1952; Clovis, New Mexico. 8:10 p.m. Witness: USAF light Surgeon Maj. E.L. Ellis. Many orange-amber lights, sometimes separate, sometimes fused, behaved erratically. Speed varied from motionless to very fast during 5 minute sighting.

April 27, 1952; Roseville, Michigan. 4:15 p.m. Witnesses: H.A. Freytag and three male relatives, including a minister. One silver oval rolled, descended and stopped. Two silver cigar- shaped objects appeared, one departing to the east and one to the west. A third silver cigar-shaped object flew by at high speed. Sightings lasted 45 minutes.

April 27, 1952; Yuma, Arizona. 8:30 p.m. Witnesses: M/Sgt. and Mrs. G.S. Porter (he was off-duty control tower operator). Bright red or flame-colored discs, appearing as large as fighter planes. Seven sightings of one disc, one of two in formation during 2 hours. All seen below 11,000' overcast.

April 29, 1952; Marshall, Texas. 3:30 p.m. Witness: private pilot R.R. Weidman. One round, white object which flew straight, with a side-to-side oscillation for 1.5 minutes.

April 29, 1952; Goodland, Kansas. 100 p.m. Witness: B-29 bombardier Lt. R.H. Bauer. One white fan-shaped light pulsed 3-4 times per second for 2 seconds.

May 1, 1952; Moses Lake, Washington. 5:32 a.m. Witnesses: Two Atomic Energy Commission employees, Eggan and Shipley. One silver object without wings flew straight and level for 1.5 minutes.

May 1, 1952; George AFB, California. 10:50 a.m. Witnesses: three men on the arms range, plus one Lt. Colonel 4 miles away. Five flat-white discs about the diameter of a C-47's wingspan (95') flew fast, made a 90^ turn in a formation of three in front and two behind, and darted around, for 15-30 seconds.

May 5, 1952; Tenafly, New Jersey. 10:45 p.m. Witness: Mrs. M.M. Judson. Six or seven translucent, cream-yellow objects. One moved in an ellipse, while the others moved in and out.

May 7, 1952; Keesler AFB, Mississippi. 12:15 p.m. Witnesses: Capt. Morris, a Master Sergeant, a Staff Sergeant, and an Airman First Class. Ten times, an aluminum or silver cylindrical object was seen to dart in and out of the clouds during a 5-10 minute period.

May 9, 1952; George AFB, California. 5:20 p.m. Witness: A/lc G.C. Grindeland. One dull white, arrowhead-shaped object flew straight and level for 10 seconds.

May 10, 1952; Ellenton, South Carolina. 10:45 p.m. Witnesses: 4 Dupont employees at the Savannah River nuclear plant. Up to four yellow, disc-shaped objects were seen on five occasions between 10:45 and shortly after 11:15.

May 14, 1952; Mayaquez, Puerto Rico. 7 p.m. Witnesses: Attorney and ex-USAF pilot Mr. Stipes, Sr. Garcia-Mendez. Two shining orange spheres: one was stationary, while the other darted away and back for 30 minutes.

May 20, 1952; Houston, Texas. l0:l0 p.m. Witnesses: USAF pilots Capt. J. Spurgin and Capt. BB. Stephan. One bright or white oval object moved from side-to-side while making a gradual turn for 90 seconds.

May 25, 1952; Walnut Lake, Michigan. 9:15 p.m. Witnesses: seven persons, including John Hoffman, his family and friends. One large white circular object having dark sections on its rim, flew straight and level for 30 minutes, appearing red when behind a cloud.

May 28, 1952; Saigon, French Indo China. 10:30 a.m. Witnesses: many in crowd watching a ceremony. One white-silver disc-shaped object flew straight and fast for 2 minutes.

May 28, 1952; Albuquerque, New Mexico. 1:45-2:40 p.m. Witnesses: two city fire department employees. Two circular objects--one shiny silver and the other orange or light brown-- were seen three times performing fast maneuvers.

May 29, 1952; San Antonio, Texas. 7 p.m. Witness: USAF pilot Maj. D.W. Feuerstein, on ground. One bright tubular object tilted from horizontal to vertical for 8 minutes, then slowly returned to horizontal, again tilted vertical, accelerated, appeared to lengthen and turned red. The entire sighting lasted 14 minutes.

June 1, 1952; Rapid City, South Dakota. 6 p.m. Witnesses: A/lc Beatty and two civilians. At least five long silver objects flew in a neat box formation with a leader for 15-20 seconds.

June 1, 1952; Walla , Washington. 1 p.m. Witness: ex-military pilot Reserve Maj. W.C. Vollendorf. One oval object with a "definite airfoil" performed a fast climb for 7 seconds.

June l, 1952; Soap Lake, Washington. 3+ p.m. Witness: Ray Lottman. Three glimmering objects flew straight and level for 10 minutes.

June 2, 1952; Bayview, Washington. 5:02 p.m. Witness: Larry McWade. One purple object seen for unknown length of time. No further information in files.

June 2, 1952; Fulda, West Germany. Time unknown. Witness: lst Lt. John Hendry, photo-navigator on an RB-26C reconnaissance bomber. One porcelain-white object flew very fast for an unknown length of time.

June 5, 1952; Lubbock, Texas. 11 p.m. Witnesses: Dan Benson, Mr. Bacon. A total of eight yellow circular objects, like large stars, were seen during 45 minutes. The first two were in a trail formation, the others were seen singly.

June 5, 1952; Albuquerque, New Mexico. 6:45 p.m. Witness: S/Sgt T.H. Shorey. One shiny round object flew 5-6 times as fast as an F-86 jet fighter for 6 seconds.

June 5, 1952; Offutt AFB, Omaha, Nebraska. 11 p.m. Witnesses: 2nd Lt. W.R. Soper, a Strategic Air Command top secret control officer and former OSI agent; and two other persons. One bright red object remained stationary for 4.5 minutes before speeding away with a short tail.

June 6, 1952; Kimpo AFB, Korea. Case missing from official files.

June 7, 1952; Albuquerque, New Mexico. 11:18 a.m. Witnesses: crew of B-25 bomber #8840 at 11,500'. One rectangular aluminum object, about 6'x4', flew 250-300' below the B-25.

June 8, 1952; Albuquerque, New Mexico. 10:50 a.m. Witnesses: Mr. and Mrs. J.D. Markland. Four shiny objects flew straight and level in a diamond formation.

June 9, 1952; Minneapolis, Minnesota. Case missing from official files.

June 12, 1952; Ft. Smith, Arkansas. 7:30 p.m. Witnesses: U.S. Army Major and Lt. Colonel, using binoculars. One orange ball with a tail flew with a low angular velocity.

June 12, 1952; Marakesch, Morocco. 11:26 a.m. Witness: T/Sgt. H.D. Adams, operating an SCR-584 radar set. One unidentified blip tracked at 650 kts. (750 m.p.h.) at greater than 60,000' altitude.

June 13, 1952; Middletown, Pennsylvania. 8:45 p.m. Witness: R.S. Thomas, Olmstead AFB employee and former control tower operator. One round, orange object traveled south, stopped for 1 second, turned east, stopped 1 second, and went down.

June 15, 1952; Louisville, Kentucky. 11:50 p.m. Witness: Edward Duke, ex-U.S. Navy radar technician. One large, cigar- shaped object with a blunt front, lit sides and a red stern, maneuvered in a leisurely fashion for 15 minutes.

June 16, 1952; Walker AFB, New Mexico. 8:30 p.m. Witness: USAF maintenance specialist S/Sgt. Sparks. Five or six grayish discs, in a half-moon formation, flew at 500-600 m.p.h. for l minute.

June 17, 1952; McChord AFB, Washington. Between 7:30 and 10:20 p.m. Witnesses: many and varied. From one to five large silver-yellow objects flew erratically, stopped and started for about 15 minutes.

June 17, 1952; Cape Cod, Massachusetts. 1:28 a.m. Witness: pilot of USAF F-94 jet interceptor. A light like a bright star crossed the nose of the airplane while being observed for 15 seconds. No further information in the files.

June 18, 1952; Columbus, Wisconsin. 9 a.m. Witness: R.A. Finger. One crescent-shaped object hovered for several seconds and then sped away.

June 18, 1952; Walnut Lake, Michigan. 10 p.m. Witnesses: Marron Hoffman and four relatives, using 4x binoculars. One orange light was observed zigzagging and then hovering for an unspecified length of time.

June 19, 1952; Goose Bay, Labrador, Canada. 2:37 a.m. Witness: 2nd Lt. A'Gostino and unidentified radar operator. One red light turned white while wobbling. Radar tracked a stationary target during the 1 minute sighting.

June 19, 1952; Yuma, Arizona. 2 p.m. Witness: USAF pilot John Lane. One round, white object flew straight and level for 10 seconds.

June 20, 1952; Central Korea. 3:03 p.m. Witnesses: four Marine Corps Captains and pilots of F4U-4B Corsair fighter planes. One 10-20' white or silver oval object made a left-hand orbit at terrific speed for 60 seconds.

June 21, 1952; Kelly AFB, Texas. 12:30 p.m. Witness: T/Sgt. Howard Davis, flight engineer of B-29 bomber at 8,000' altitude. One flat object with a sharply pointed front and rounded rear; white with a dark blue center and red rim, trailed sparks as it dove past the B-29 at a distance of 500', in l second.

June 22, 1952; Pyungthek, Korea. 10:45 p.m. Witnesses: Two Marine Corps Sergeants. One 4 ft. diameter object dove at a runway shooting red flames, hovered briefly over a hill, turned 180 , flashed twice and was gone.

June 23, 1952; Spokane, Washington. 4:05 p.m. Witness: Airport weather observer Rex Thompson. One round disc with a metallic shine flashed, and fluttered like a flipped coin for 5-7 minutes.

June 23, 1952; McChord AFB, Washington. 9 p.m. Witness: 2nd Lt. K. Thompson. One very large light flew straight and level for 10 minutes. No further information.

June 23, 1952; Kirksville, Missouri. Case missing from official files.

June 23, 1952; Oak Ridge, Tennessee. 3:30 a.m. Witness: secretary Martha Milligan. One bullet-shaped object with burnt-orange exhaust flew straight and level for 30-60 seconds.

June 23, 1952; Owensboro, Kentucky. 10:00 a.m. Witness: National Guard Lt. Col. O. L. Depp. Two objects looking like "giant soap bubbles", reflecting yellow and lavender colors, flew in trail for 5 seconds.

June 23, 1952; Location unknown, but information came via Japan Hq. "CV 4359". 6:08 a.m. Witness: USAF pilot of the l8th Fighter-Bomber Group. One black coin-shaped object, 15-20' in diameter, made an irregular descent.

June 25, 1952; Chicago, Illinois. 8:30 p.m. Witnesses: Mrs. Norbury, Mr. Matheis. One bright yellow-white, egg-shaped object which sometimes had a red tail, made seven circles in 1 1/2 hours.

June 25, 1982; Japan-Korea area. Case missing from official files.

June 26, 1952; Terre Haute, Indiana. 2:45 a.m. Witness: USAF 2nd Lt. C. W. Povelites. Undescribed object flew at 600 m.p.h. and then stopped. No further information in files.

June 26, 1952; Pottstown, Pennsylvania. 11:50 p.m. Witness: assistant manager of airport. Three sightings of flashing lights: two lights separated by 2 miles, with the leader flashing steadily and the other irregularly; two similarly flashing lights, but with l mile separation; finally a single light. Speed estimated at 150-250 m.p.h.. Total of 1/2 hour.

June 27, 1952; Topeka, Kansas. 6:50 p.m. Witnesses: USAF pilot 2nd Lt. K. P. Kelly and wife. One pulsating red object which changed shape from a circular to a vertical oval as it pulsed. Was stationary for about 5 minutes, then went out.

June 28, 1952; Lake Kishkanoug, Wisconsin. 6 p.m. Witness: G. Metcalfe. One silver-white sphere became an ellipse as it turned and climbed away very fast. 10 seconds.

June 28, 1952; Nagoya, Japan. 4:10 p.m. Witness: Capt. T. W. Barger, USAF electronics countermeasures officer. One dark blue elliptical-shaped object with a pulsing border flew straight and level at 700-800 m.p.h..

June 29, 1952; O'Hare Airport, Chicago, Illinois. 5:45 p.m. witnesses: three USAF air policemen. One bright silver, flat oval object surrounded by a blue haze, hovered, then moved very fast to the right and to the left, and up and down for 45 minutes.

July 3, 1952; Selfridge AFB, Michigan. 4:15 a.m. Witnesses not identified. Two big lights, estimated at 20' diameter, flew straight and level at tremendous speed.

July 3, 1952; Chicago, Illinois. 11:50 p.m. Witness: Mrs. J. D. Arbuckle. Two bright pastel green discs flew straight and level very fast for 6 seconds.

July 5, 1952; Norman, Oklahoma. 7:58 p.m. Witness: Oklahoma State Patrolman Hamilton in State Patrol airplane. Three dark discs hovered and then flew away, silhouetted against a dark cloud. 15 seconds.

July 6-12, 1952; Elizabeth, New Jersey. 11:00 p.m. Witness: Charles Muhr. Four pictures taken of some indistinct light which was admittedly not seen visually, but which appeared on the negatives.

July 9, 1952; Colorado Springs, Colorado. 12:45 p.m. Witness: USAF pilot Maj. C. K. Griffin. One object shaped like an airfoil less its trailing edge, luminous white, moved slowly and erratically for 12 minutes.

July 9, 1952; Kutztown, Pennsylvania. 6:30 p.m. Witness: farmer John Mittl. One aluminum, oval-shaped object changed direction and attitude, finally tipping on end and departing after 20 seconds. Case file includes three vague photographs.

July 9, 1952; Rapid City AFB, South Dakota. 3:35 p.m. Witnesses: S/Sgt. D.P. Foster and three other persons. Three times, a single white, disc-shaped object sped by, straight and level, in 5 seconds.

July 12, 1952; Annapolis, Maryland. 3:30 p.m. Witness: insurance company president William Washburn. Four large, elliptical-shaped objects were seen to fly very fast, stop, turn 90* and fly away in 7-8 seconds. .

July 12, 1952; Kirksville, Missouri. 9 p.m. Witnesses: many radar controllers who were military officers. Several big blips tracked on radar at 1,500 kts. (1,700 m.p.h.). There was no visual sighting.

July 14, 1952; Norfolk, Virginia. 8:12 p.m. Witnesses: Pan American Airways First Officer William Nash, Second Officer William Fortenberry. Eight large, round, glowing red objects maneuvered below their airliner, in formation.

July 15, 1952; West Palm Beach, Florida. 10:10 p.m. Witnesses: J. Antoneff and two other persons. One discus-shaped object, grayish, except when hovering, when it appeared muddy. Hovered over Palm Beach International Airport, then followed an SA-l6 twin-engined amphibian and flew away after 40-60 seconds.

July 16, 1952; Beverly, Massachusetts. 9:35 a.m. Witness: U.S. Coast Guard photographer Shell Alpert. Four roughly elliptical blobs of light in formation photographed through window of photo lab.

July 17, 1952; White Plains, New York. 3:10 p.m. Witness: Mrs. Florence Daley. Two round objects, bluish-white with brighter rims, flew in formation, making a sound like bombers, only softer. Note: Later, the witness stated she heard many feminine voices coming from the objects.

July 17, 1952; Lockbourne, Ohio. 11 a.m. Witness: Air National Guard employees. One light like a big star was seen for 3 hours, but disappeared when an aircraft approached. Also seen the night of July 20, 22 and 23.

July 18, 1952; Lockbourne, Ohio. 9:10 p.m. Witnesses: T/Sgt. Mahone, A/3c Jennings. One amber-colored, elliptical-shaped object with a small flame at the rear, periodically increased in brightness. It moved very fast for l 1/2 minutes, giving off a resonant beat sound.

July 18, 1952; Miami, Florida. 11 a.m. Witnesses: E. R. Raymer and daughter. One opaque, silvery bubble flew very fast at a right-angle to the wind direction for 10 seconds.

July 18, 1952; Patrick AFB, Florida. 9:45 p.m. Witnesses: three USAF officers and four enlisted men. Over an hour period, a series of hovering and maneuvering red-orange lights were observed moving in a variety of directions.

July 19, 1952; Williston, North Dakota. 2:55 a.m. Witness: one experienced civilian pilot. One elliptical-shaped object with a light fringe, traveled down fast, made a 360* and then a 180* turn in 5 minutes.

July 19, 1952; Elkins Park, Pennsylvania. 11:35 p.m. Witnesses: USAF pilot Capt. C.J. powley and wife. Two star-like lights maneuvered, hovered and sped for 5-7 minutes.

July 20, 1952; Lavalette, New Jersey. 12:20 a.m. Witness: Seton Hall Univ. chemistry professor Dr. A.B. Spooner. Two large orange-yellow lights with some dull red coloring flew in trail, turned and circled for 5-6 minutes.

July 21, 1952; Weisbaden, West Germany. 6:30 p.m. Witnesses: USAF pilot Capt. E.E. Dougher, WAF Lt. J.J. Stong, situated miles apart. Four bright yellowish lights were seen by Dougher to separate, with two climbing and two flying away level in the opposite direction. Stong watched two reddish lights fly in opposite directions. Sightings lasted about 10-15 minutes.

July 21, 1952; San Marcos AFB, Texas. 10:40 p.m. Witnesses: one Lieutenant, two Staff Sergeants, three airmen. One blue circle with a blue trail was seen to hover and then accelerate to near-sonic speed (700+ m.p.h.) after 1 minute.

July 21, 1952; Converse, Texas. 4:30 p.m. Witness: wife of USAF Capt. J. B. Neal. One elongated, fuselage-shaped object flew straight and level, made a right-angle turn and went out of sight at more than 300 m.p.h., all in 3-5 seconds.

July 21, 1952; Rockville, Indiana. 8:10 p.m. Witnesses: one military officer, two enlisted men. One aluminum, delta-shaped object with a vertical fin, flew straight and level, and then hovered during a 3 minute sighting.

July 22, 1952; Holyoke, Massachusetts. After midnight. Witness: Mrs. A. Burgess. One round, yellow, flashing light went downward. No further information in files.

July 22, 1952; Los Alamos, New Mexico. 10:50 a.m. Witnesses: control tower operator Don Weins, and two pilots for Carco. Eight large, round, bright aluminum objects flew straight and level, then darted around erratically during 25 minutes.

July 22, 1952; Uvalde, Texas. 2:46 p.m. Witness: Don Epperly, Trans Texas Airlines station manager and weather observer. One large, round, silver object flew at more than 1,000 m.p.h. for 45 seconds, while gyrating.

July 22, 1952; between Boston and Provincetown, Massachusetts. 10:47 p.m. Witnesses: pilot and radar operator of USAF F-94 jet interceptor. One round blue light passed F-94, spinning.

July 22, 1952; Trenton, New Jersey. 10:50 p.m. t.o 12:45 a.m., July 23. Witnesses: crews of several USAF F-94 jet interceptors from Dover AFB, Del. Thirteen visual sightings and one radar tracking of blue-white lights during two hours.

July 23, 1952; Pottstown, Pennsylvania. 8:40 a.m. Witnesses: the two-man crews of three USAF F-94 jet interceptors. One large silver object, shaped like a long pear with two or three squares beneath it, flew at 150-180 kts. (170-210 m.p.h.), while a smaller object, delta-shaped or swept back, flew around it at

1,000-1,500 kts. (1,150-1,700 m.p.h.). Seen by crews for 1-4 minutes.

Bluebook Part 3

July 23, 1952; Altoona, Pennsylvania. 12:50 p.m. Witnesses: two-man crews of two USAF F-94 jet interceptors at 35-46,000' altitude. Three cylindrical objects in a vertical stack formation flew at an altitude of 50-80,000'. Seen for 20 minutes.

July 23, 1952; South Bend, Indiana. 11:35 p.m. Witness: USAF pilot Capt. H. W. Kloth. Two bright blue-white objects flew together, then the rear one veered off after about 9 minutes.

July 24, 1952; Carson Sink, Nevada. 3:40 p.m. Witnesses: two USAF Lt. Colonels McGinn and Barton in a B-25 bomber. Three silver, delta-shaped objects, each with a ridge along the top, crossed in front of and above the B-25 at high speed, in 3-4 seconds.

July 26, 1952; Washington, D.C. 8 p.m. until after midnight. Witnesses: radar operators at several airports, airline pilots. Many unidentified blips tracked by radar all over Washington area, at varying speeds. Pilots spotted unidentified lights.

July 26, 1952; Kansas City, Missouri. 12:15 a.m. Witnesses: USAF Capt. H. A. Stone, men in control towers at Fairfax Field and Municipal Airport. One greenish light with red-orange flashes was seen for 1 hour as it descended in the northwest from 40* elevation to 10* elevation.

July 26, 1952; Andrews AFB, Maryland. This was a continuation of the extensive sightings and radar tracking reports reported throughout the Washington, D.C. area, all night long.

July 26, 1952; Kirtland AFB, New Mexico. 12:05 a.m. Witness: Airman lst Class J.M. Donaldson. Eight to ten orange balls in a triangular or V-formation flew very fast for 3-4 seconds.

July 26, 1952; Williams, California. Case missing from official files.

July 27, 1952; Selfridge AFB, Michigan. 10:05 a.m. Witnesses: three B-29 bomber crewmen on ground. Many round, white objects flew straight and level, very fast. Two at 10:05, one at 10:10, one at 10:15, one at 10:20. Each was seen for about 30 seconds.

July 27, 1952; Wichita Falls, Texas. 8:30 p.m. Witnesses: Mr. and Mrs. Adrian Ellis. Two disc-shaped objects, illuminated by a phosphorus light, flew at an estimated l,000 m.p.h. for 15 seconds.

July 28, 1952; Heidelberg, West Germany. 10:20 p.m. Witnesses: Sgt. B.C. Grassmoen, WAC Pfc. A.P. Turner. One saucer-shaped object having an appearance of light metal and giving off shafts of white light, flew slow, made a 90^ turn and climbed away fast after 4-5 minutes.

July 28, 1952; McGuire AFB, New Jersey. 6 a.m. Witness: Ground Control Approach radar operator M/Sgt. W.F. Dees, and persons in the base control tower. Radar tracked a large cluster of very distinct blips. Visual observation was of oblong objects having neither wings nor tail, which made a very fast turn and at one time were in echelon formation. Entire episode lasted 55 minutes.

July 28, 1952; McChord AFB, Washington. 2:15 a.m. Witnesses: T/Sgt. Walstead, S/Sgt. Calkins of the 635th AC&W Squadron. One dull, glowing, blue-green ball,.the size of a dime at arms' length, flew very fast, straight and level.

July 29, 1952; Osceola, Wisconsin. 1:30 a.m. Witnesses: radar operators on ground, pilot of F-5l

Mustang in flight. Several clusters of up to 10 small radar targets and one large target. Small targets moved from southwest to east at 50-60 kts. (60-70 m.p.h.), following each other. The large one moved at 600 kts. (700 m.p.h.). One hour total time. Pilot confirmed one target.

July 29, 1952; Langley AFB, Virginia. 2:30 p.m. Witness: USAF Capt D.G. Moore, of military air traffic control system. One undescribed object flew at an estimated 2,600 m.p.h., below 5,000' altitude, toward the air base for about 2 minutes.

July 29, 1952; Langley AFB, Virginia. 2:50 p.m. Witnesses: Mr. Moore, Gilfillan electronics representative W. Yhope. One radar target tracked moving away, stopped for 2 minutes, again moved very, very fast. Four minutes.

July 29, 1952; Merced, California. 3:44 or 4:35 p.m. Witnesses: Herbert Mitchell and one employee. One dark, discus-shaped object, trailed by a silvery light 2 lengths behind, tipped on its side, dove, hesitated and then circled very fast during the 2 minute sighting.

July 29, 1952; Wichita, Kansas. 12:35 p.m. Witnesses: USAF shop employees Douglas and Hess at Municipal Airport. One bright white circular object with a flat bottom flew very fast, and then hovered 10-15 seconds over the Cessna Aircraft Co. plant, during the 5 minute sighting.

July 29, 1952; Ennis, Montana. 12:30 p.m. Witnesses: USAF persons, alerted that UFOs were coming from the direction of Seattle, Wash. Two to five flat disc-shaped objects: one hovered 3-4 minutes, while the others circled it. Sighting length of 30 minutes not explained further.

July 30, 1952; Albuquerque, New Mexico. 11:02 p.m. Witness: USAF lst Lt. George Funk. One orange light remained stationary for 10 minutes. No further details in files.

July 30, 1952; San Antonio, Texas. 10 a.m. Witnesses: E.E. Nye and one other person. One round, white object flew slow and then sped away after 20-30 minutes.

Aug. 1, 1952; Lancaster, California. 1:14 a.m. Witnesses: sheriff's deputies and other persons, one named Mallette. Two brilliant red lights hovered and maneuvered for 5 minutes.

Aug. 2, 1952; Lake Charles, Louisiana. 3 a.m. Witnesses: USAF lst Lt. W.A. Theil, one enlisted man. One red ball with a blue flame tail flew straight and level for 3-4 seconds.

Aug. 4, 1952; Phoenix, Arizona. 2:20 a.m. Witness: USAF A/3c W.F. Vain. One yellow ball which lengthened and narrowed to plate shape, flew straight and level for 5 minutes.

Aug. 4, 1952; Mt. Vernon, New York. 11:37 a.m. Witnesses: one woman, two children. One object, shaped like a lifesaver or donut, emitted black smoke from its top and made a 15' arc in 1.5 minutes. Observed for 2 hours.

Aug 5. 1952; Haneda AFB, Japan. 11:30 p.m. Witnesses: USAF F-94 jet interceptor pilots lst Lt. W.R. Holder and lst Lt. A.M. Jones, and Haneda control tower operators. Airborne radar tracked a target for 90 seconds. Control tower operators watched 50-60 minutes while a dark shape with a light flew as fast as 330 kts. (380 m.p.h.), hovered, flew curves and performed a variety of maneuvers.

Aug. 6, 1952; Tokyo, Japan. This is a continuation of the Haneda AFB sightings.

Aug. 6, 1952; Port Austin, Michigan. Case missing from official files.

Aug. 7. 1952; San Antonio, Texas. 9:08 a.m. Witness: Mrs. Susan Pfuhl. Four glowing white discs: one

made a 180* turn, one flew straight and level, one veered off, and one circled during the 70 minute sighting.

Aug. 9, 1952; Lake Charles, Louisiana. 10:50 a.m. Witness: USAF A/3c J.P. Raley. One disc-shaped object flew very fast and then hovered for 2 seconds during a 5-6 minute sighting.

Aug. 13, 1952; Tokyo, Japan. 9:45 p.m. Witness: USAF Marine Corps pilot Maj. D. McGough. One orange light flew a left orbit at 8,000' and 230 m.p.h., spiraled down to no more than 1,500', remained stationary for 2-3 minutes and went out. An attempted interception was unsuccessful.

Aug. 18, 1952; Fairfield, California. 12:50 a.m. Witnesses: three policemen. One object changed color like a diamond, and changed directions during the 30 minute sighting.

Aug. 19, 1952; Red Bluff, California. 2:38 p.m. Witness: Ground Observer Corps observer Albert Lathrop. Two objects, shaped like fat bullets, flew straight and level, very fast for 25 seconds.

Aug. 20, 1952; Neffesville, Pennsylvania. 3:10 a.m. Witnesses: Bill Ford and two others. An undescribed object flew at 500' altitude for several minutes. No further data in files.

Aug. 21, 1952; Dallas, Texas. 11:54 p.m. Witness: Jack Rossen, ex-artillery observer. Three blue-white lights hovered then descended; 1.5 minutes later, one of them descended more.

Aug. 23, 1952; Akron, Ohio. 4:10 a.m. Witnesses: USAF 2nd Lt. H.K. Funseth, a ground radar observer, and two U.S. Navy men. One pulsing amber light was seen to fly straight and level for 7 minutes.

Aug. 24, 1952; Hermanas, Mexico. 10:15 a.m. Witness: Georgia Air National Guard F-84G jet fighter pilot Col. G.W. Johnson. Two 6' silver balls in abreast formation, one turned grey rapidly, the other slowly. One changed to long grey shape during a turn. Sighting lasted about 10 minutes.

Aug. 24, 1952; Tucson, Arizona. 5:40 p.m. Witnesses: Mr. and Mrs. George White. One large round, metallic, white light with a vague lower surface, flew slowly, then fast With a dancing, wavering motion, for about 1 minute.

Aug. 24, 1952; Levelland, Texas. 9:30 p.m., 10:30 p.m. Witnesses: Mr. and Mrs. Elmer Sharp. One object, shaped like a spinning top, changing color from red to yellow to blue, and with a fiery tail, hovered for 20 minutes, whistling, then flew away. It, or another like it, returned an hour later.

Aug. 25, 1952; Pittsburg, Kansas. 5:35 a.m. Witness: radio station musician William Squyres. One dull aluminum object, shaped like two meat platters, face to face, estimated at 75' long, 45' wide, and 15' thick. Through a window in the front section shone a blue light; the head and shoulders of a man could be seen. The mid section had numerous windows through which could be seen some kind of regular movement. A series of small propellers were spaced close together along the outer edge of the object, revolving at high speed. The object was hovering about 10' above the ground, 100 yards off the road, with a slight rocking motion. It then ascended vertically with a sound like a large covey of quail starting to fly at the same time. Vegetation showed signs of having been disturbed under the object.

Aug. 25, 1952; Holloman AFB, New Mexico. 3:40 p.m. Witnesses: civilian supervisor Fred Lee, foreman L.A. Aquilar. One round silver object flew south, turned and flew north, made a 360 turn and flew away vertically after 3-5 minutes.

Aug. 26, 1952; Lathrop Wells, Nevada. 12:10 a.m. Witness: USAF Capt. D.A. Woods. One large, round, very bright object with a V-shaped contrail having a dark cone in the center, flew very fast, hovered, made an instantaneous 90 turn, followed by a gentle climb and finally sudden acceleration.

Aug. 28, 1952; Chickasaw and Brookley AFB, Alabama. 9:30 p.m. Witnesses: USAF control tower operators, officer from USAF Office of Special Investigations, and others. Six objects, varying from fiery red to sparkling diamond appearance, hovered, flew erratically up and down for 1 hour and l5minutes.

Aug. 29, 1952; Colorado Springs, Colorado. 8:35 p.m. Witness: pilot C.A. Magruder. Three objects, 50' in diameter, 10' high, aluminum with red-yellow exhaust, flew in trail at estimated 1,500 m.p.h. for 4-5 seconds.

Aug. 29, 1952; west of Thule, Greenland (77' N., 75* 15' W.) 10:50 a.m. Witnesses: two U.S. Navy pilots flying a P4Y-2 patrol plane. Three white disc-shaped or spherical objects hovered, then flew very fast in a triangular formation, in 2-3 minutes.

Sept. l, 1952; Marietta, Georgia. 10:50 p.m. Witness: ex-AAF B-25 gunner. Two large white disc-shaped objects with green vapor trails flew in trail formation, merged, flew away very fast.

Sept. 1, 1952; Marietta, Georgia. 10:30 p.m. Witness: one unidentified person using binoculars. Two large objects shaped like spinning tops and displaying red, blue and green colors, flew side by side, leaving a sparkling trail for 30 minutes.

Sept. 1, 1952; Atlanta, Georgia. 9:43 p.m. Witnesses: Mrs. William Davis and nine other persons. One light, similar to the evening star, moved up and down for a long period of time.

Sept. l, 1952; Marietta, Georgia. 10:30 p.m. Witnesses: Mr. Bowman (ex-artillery officer) and 24 others. A red, white, and blue-green object which spun and shot off sparks for 15 minutes.

Sept. 1, 1952; Yaak, Montana. 4:45 a.m. Witnesses: Visual sighting by two USAF enlisted men, radar tracking seen by three men using AN/FPS-3 radar set. Two small, varicolored lights became black silhouettes at dawn; flew erratically. One hour.

Sept. 2, 1952; Chicago, Illinois. 3 a.m. Witness: radar tracker Turason (ground controlled approach) at Midway Airport. 40 targets flew in miscellaneous directions, up to 175 m.p.h. Two seemed to fly in formation with DC-6 airliner. Total of 8 hours.

Sept. 3, 1952; Tucson, Arizona. 99 a.m. Witnesses: civilian pilots McCraven and Thomas. One shiny, dark ellipse made three broad, curving sweeps in 1.5 minutes.

Sept. 6, 1952; Lake Charles AFB, Louisiana. l:3O'a.m. Witnesses: T/Sgt. J.E. Wilson and two enlisted men. One bright star-like light moved about the sky for 2 hours.

Sept. 6, 1952; Tucson, Arizona. 4:55 p.m. Witnesses: ex- Congresswoman Mrs. Isabella King and Bill McClain. One orange teardrop-shaped object whirled on its vertical axis, descended very fast, stopped, retraced its path upwards, while whirling in the opposite direction. 1.5 minutes.

Sept. 7, 1952; San Antonio, Texas. 10:30 p.m. Witnesses: chemist J.W. Gibson and others. One orange object or light (the color of 2,000' F.) exploded into view. Seen for from 3-20 seconds by various observers.

Sept. 9, 1952; Rabat, French Morocco. 9 p.m. Witness: E.J. Colisimo, a civilian illustrator with USAF Intelligence. One disc with lights along part of its circumference, flew twice as fast as a T-33 jet trainer, in a slightly curved path for 5 seconds.

Sept. 12, 1952; Allen, Maryland. 9:30 p.m. Witnesses: Mr. and Mrs. David Kolb, of the Ground Observer

Corps, using binoculars. One white light with a red trim and streamers flew northeast for 35 minutes.

Sept. 13, 1952; Allentown, Pennsylvania. 7:40 p.m. Witness: private pilot W.A. Hobler, flying a Beech Bonanza. One object, shaped like a fat football, flaming orange-red color, descended and then pulled up in front of the witness' airplane. Seen for 2 seconds.

Sept. 14, 1952; Santa Barbara, California. 8:40 p.m. Witness: USAF C-54 transport pilot Tarbutton. One blue-white light travelled straight and level, then went up. Seen for 30 seconds.

Sept. 14, 1952; North Atlantic, between Ireland and Iceland. Witnesses: military persons from several countries aboard ships in the NATO "Operation Mainbrace" exercise. Among the sightings: one blue-green triangle was observed flying 1,500 m.p.h; three objects in a triangular formation gave off white light exhaust at 1,500 m.p.h.

Sept. 14, 1952; White Lake, South Dakota. 7 p.m. Witness: Ground Observer Corps observer L.W. Barnes, using binoculars. One red, cigar-shaped object, with three puffs behind it, flew west, then south, and then was gone. Seen 30-40 minutes.

Sept. 14, 1952; Ciudad Jaurez, Mexico. 11:30 p.m. to 1:20 a.m., Sept. 15. Witnesses: consulting engineer R. J. Portis and three others. Six groups of 12-15 luminous spheres or discs, which flew in formations varying from arcs to inverted-Y's, very fast.

Sept. 14, 1952; Olmstead AFB, Pennsylvania. Time not known. Witness: pilot of Flying Tiger Airlines airplane N67977. One blue light flew very fast on a collision course with the airliner. Note: the summary card attached to the file showed completely different information.

Sept. 16, 1952; Portland, Maine. 6:22 p.m. Witnesses: crew of U.S. Navy P2V Neptune patrol plane, visually and via radar. A group of five lights was seen at the same time a long, thin blip was being tracked on radar. Note: consideration was given to this being USAF KC-97 airplanes involved in a refueling operation. The sighting involved 20 minutes.

Sept. 16, 1952; Warner-Robbins AFB, Georgia. 7:30 p.m. Witnesses: three USAF officers, two civilians. Two white lights flew abreast, at 100 m.p.h., for 15 minutes.

Sept. 17, 1952; Tucson, Arizona. 11:40 a.m. Witnesses: Mr. and Mrs. Ted Hollingsworth. Two groups of three large, flat, shiny objects flew in tight formations: the first group slow, the second faster. Seen for 2 minutes.

Sept. 23, 1952; Gander Lake, Newfoundland, Canada. No time shown. Witnesses: Pepperell AFB operations officer and seven other campers. One bright white light, which reflected on the lake, flew straight and level at 100 m.p.h. for 10 minutes.

Sept. 24, 1952; Charleston, West Virginia. 3:30 p.m. Witnesses: crew of USAF B-29 bomber. A lot of bright, metallic particles or flashes, up to 3' in length, streamed past the B-29 for 15 minutes.

Sept. 26, 1952; 400 miles NNW of Azores Islands. 11:16 p.m. Witnesses: pilot, copilot, engineer and aircraft commander of USAF C-124 transport plane. Two distinct green lights were seen to the right and slightly above the C-124, and at one time seemed to turn toward it. The lights alternated leading each other during more than 1 hour of observation.

Sept. 27, 1952; Inyokern, California. 10 p.m. Witnesses: two couples, using a 5x telescope. One large, round object, which went through the color spectrum every 2 seconds, was seen to fly straight and level for 15 minutes.

Sept. 29, 1952; Rochester, England. 3:55 p.m. Witnesses unknown, but report came via the Rochester Police Dept. Two flat objects hovered for 3 minutes, and then sped away.

Sept. 29, 1952; Southern Pines, North Carolina. 8:15 p.m. Witnesses: U.S. Army Res. lst Lt. C.H. Stevens and two others. One green ellipse with a long tail orbited for 15 minutes.

Sept. 29, 1952; Aurora, Colorado. 3:15 p.m. Witness: USAF T/Sgt. B.R. Hughes. Five or six circular objects, bright white but not shiny, circled in trail formation for 5-6 minutes.

Oct. 1, 1952; Shaw AFB, South Carolina. 6:57 p.m. Witness: USAF lst Lt. T.J. Pointek, pilot of RF-8O reconnaissance jet. One bright white light flew straight, then vertical, then hovered, and then made an abrupt turn during a 23 minute attempted intercept.

Oct. 1, 1952; Pascagoula, Mississippi. 7:40 p.m. Witnesses: Mr. and Mrs. C.C. McLean and one other person. One round, milky-white object, shaped like a powder puff, hovered for 5-10 minutes then flew away very fast in an arc. A loud blast was heard at the start of the 22 minute sighting.

Oct. 7, 1952; Alamagordo, New Mexico. 8:30 p.m. Witness: USAF Lt. Bagnell. One pale blue oval, with its long axis vertical, flew straight and level for 4-5 seconds, covering 30 in that time.

Oct. 10, 1952; Otis AFB, Massachusetts. 6:30 p.m. Witnesses: USAF S/Sgt., two other enlisted men. One blinking white light moved like a pendulum for 20 minutes, and then shot straight up.

Oct. 17, 1952; Taos, New Mexico. 9:15 p.m. Witnesses: Four USAF officers One round, bright blue light moved from north to northeast at an elevation of 45* for 2-3 seconds and then burned out.

Oct. 17, 1952; Killeen, Texas. 10:15 p.m. Witnesses: Ministers Greenwalt and Kluck. Ten lights, or a rectangle of lights, moved more or less straight and level for 5 seconds.

Oct. 17, 1952; Tierra Amarilla, New Mexico. 11 p.m. Witness: one military person (no detail). One white streamer moved at an estimated 3,000 m.p.h. in an arc for 20 seconds. No further details in files.

Oct. 19, 1952; San Antonio, Texas. 1:30 p.m. Witness: one ex-USAF aircrewman Woolsey. Three circular aluminum objects, one of which was olive-drab colored on the side, flew in a rough V-formation. One object flipped slowly, another object stopped, during the 3-4 minute sighting.

Oct. 19. 1952; 500 miles south of Hawaii. 6:58 p.m. Witnesses: crew of USAF C-50 transport plane. One round yellow light, with a red glowing edge, estimated at 100' in diameter, flew at 300-400 kts. (350-450 m.p.h.) for 20 seconds.

Oct. 21, 1952; Knoxville, Tennessee. No time given. Witnesses: persons at airport weather station. Six white lights flew in a loose formation for 1-2 minutes, and made a shallow dive at a weather balloon.

Oct. 24, 1952; Elberton, Alabama. 8:26 p.m. Witnesses: USAF Lt. Rau, Capt. Marcinko, flying a Beech T-ll trainer. One object, shaped like a plate, with a brilliant front and vague trail, flew with its concave surface forward for 5 seconds.

Oct. 29, 1952; Erding Air Depot, West Germany. 7:50 a.m. Witnesses: USAF S/Sgt. Anderson, A/2c Max Handy. One round object, silhouetted against a cloud, flew straight and level and smooth at 400 m.p.h. for 20 seconds.

Oct. 31, 1952; Fayetteville, Georgia. 7:40 p.m. Witness: USAF Lt. James Allen. One orange, blimp-shaped object, 80' long and 20' high, flew at treetop level, crossed over Allen's car (at which time his

radio stopped playing), then climbed out at 45' and tremendous speed at the end of a 1 minute sighting.

Nov. 3, 1952; Laredo AFB, Texas. 66:29 p.m. Witnesses: two control tower operators, including Lemaster. One long, elliptical, white-grey light flew very fast, paused, and then increased speed during a 3-4 second observation.

Nov. 4, 1952; Vineland, New Jersey. 5:40 p.m. Witness: housewife Mrs. Sprague. Two groups of 2-3 whirling discs of light flew toward the southeast over a period of 30 seconds.

Nov. 12, 1952; Los Alamos, New Mexico. 10:23 p.m. Witness: security inspector. Four red-white-green lights flew slowly over a prohibited area for 15 minutes.

Nov. 13, 1952; Opheim, Montana. 2:20 a.m. Witness: radar tracking by USAF 779th AC&W station. An unexplained track was followed for 1 hour, 28 minutes, at 158,000' altitude (30 miles) and a speed of 240 m.p.h. Radar was FPS/3 (PPI).

Nov. 13, 1952; Glasgow, Montana. 2:43 a.m. Witness: U.S. Weather Bureau observer Earl Oksendahl. Five oval-shaped objects, with lights all around them, flew in a V-formation for about 20 seconds. Each object seemed to be changing position vertically by climbing or diving as if to hold formation. Formation came from the northwest, made a 90* overhead, and flew away to the southwest.

Nov. 15, 1952; Wichita, Kansas. 7:02 a.m. Witnesses: USAF Maj. R.L. Wallander, Capt. Belleman, A/3c Phipps. One orange object (a blue streak?) varied in shape, as it made jerky upward sweeps with 10-15 second pauses during a 3-5 minute sighting.

Nov. 24, 1952; Annandale, Virginia. 6:30 p.m. Witness: L.L' Brettner. One round, glowing object flew very fast, made right angle turns and reversed course during a 1 hour sighting.

Nov. 27, 1952; Albuquerque, New Mexico. 12:10 p.m. Witnesses: pilot and crew chief of UAAF B-26 bomber. A series of black smoke bursts (4-3-3-4-3), similar to antiaircraft fire, was seen over a 20 minute period.C. 12:30 a.m. Witnesses: radar

Nov. 30, 1952; Washington, D.C. l operators at Washington National Airport. Radar trackings similar to those of July 26, 1952.

Dec. 8, 1952; Ladd AFB, Alaska. 8:16 p.m. Witnesses: pilot lst Lt. D. Dickman and radar operator lst Lt. T. Davies in USAF F-94 jet interceptor (s/n 49-2522). One white, oval light which changed to red at higher altitude, flew straight and level for 2 minutes, then climbed at phenomenal speed on an erratic flight path. Sighting lasted 10 minutes.

Dec. 9, 1952; Madison, Wisconsin. 5:45 p.m. Witnesses: Capt. Bridges and lst Lt. Johneon in USAF T-33 jet trainer. Four bright lights, in diamond formation, flew at 400 m.p.h. and were passed by the T-33 at 450 m.p.h. during the 10 minute sighting.

Dec. 28, 1952; Marysville, California. Case missing from official files.

Bluebook Part 4

Jan. 1, 1953; Craig, Montana. 8:45 p.m. Witnesses: Warner Anderson and two women. A silver, saucer-shaped object with a red glowing bottom, flew low over a river and then climbed fast in a horizontal attitude. Ten second sighting.

Jan. 8, 1953; Larson AFB, Washington. 7:15 a.m. Witnesses: men from the 82nd Fighter-Interceptor Squadron, including the squadron commander; all were on the ground. One green, disc- shaped or round object flew southwest for 15 minutes, with a vertically bobbing motion and sideways movements, below clouds.

Jan. 10, 1953; Sonoma, California. 3:45 p.m. or 4 p.m. Witnesses: retired Col. Robert McNab, and Mr. Hunter of the Federal Security Agency. One flat object, like a pinhead, made three 360* right turns in 9 seconds, made abrupt 90* turns to the right and left, stopped, accelerated to original speed and finally flew out of sight vertically after 60-75 seconds.

Jan. 17, 1953; near Guatemala City, Guatemala. 3:55 p.m. Witness: geologist/salesman J.J. Sackett. One brilliant green-gold object, shaped like the Goodyear blimp with its length twice its height, flew 400 m.p.h. straight and level, stopped, then went straight up with one stop. Sighting lasted 22 seconds.

Jan. 28, 1953; Pt. Mugu, California. 1 p.m. Witness: R.W. Love, owner of Love Diving Co., engaged in retrieving radio- controlled drones. An 18-20' white, flat disc flew straight and level, overhead, for 6 minutes.

Jan. 28, 1953; Corona, California. 6:05 p.m. Witness: USAF T/Sgt. George Beyer. Five 25' green spheres flew in V-formation, then changed to trail formation at which time the end objects turned red. Sighting lasted 12 minutes.

Jan. 28, 1953; Albany, Georgia. No time given. Witnesses: radar maintenance personnel. Radar tracked one stationary target for 20 minutes. A visual sighting about the same time was explained. No further information in the files.

Feb. 3, 1953; Keflavik, Iceland. 5:25 p.m. Witnesses: radar operators. Four unidentified targets were tracked for 24 minutes. No further data.

Feb. 4, 1953; Yuma, Arizona. 1:50 p.m. Witness: U.S. Weather Bureau observer Stanley Brown, using a theodolite. One white, oblong object was tracked flying straight up, leveling off and being joined by a second, similar, object. The second twice flew away and returned to the first. After 5 minutes, both were lost to sight behind clouds.

Feb. 17, 1953; Port Austin. Michigan. 10:04 p.m. Witnesses: two officers and three airmen of USAF AC&W squadron, visually and by radar. Visual object appeared to larger and brighter than a star and changed color; it was seen to move slowly for 5 minutes until 10:09 p.m. Radar picked up a target at 10:08 p.m. moving in a similar direction for 17 minutes, at similar speed.

Feb. 20, 1953; Pittsburg-Stockton, California. #1 time unknown; #2, 10:30 p.m. Witnesses: USAF B-25 bomber pilots. #1 was a bright yellow light seen for 8 minutes. #2 was a bright light which flew on a collision course, dimmed and climbed away fast.

Feb. 24, 1953; Sherman, Texas. 7:43 p.m. Witnesses: Warrant Officer and Mrs. Alden. Two bright red, round objects with big halos flew in small circles, climbed and faded during a 3-7 second sighting.

Feb. 27, 1953; Shreveport, Louisiana. 11:58 a.m. Witness: USAF airman/private pilot. Five yellow discs made circular turns, fluttered, three of them vanished, the other two flew erratic square turns for a total of 4 minutes.

March 11, 1953; Hackettstown, New Jersey. 4 a.m. Witness: Mrs. Nina Cook, an experienced private pilot and wife of a Pan Am flight engineer. A large light, blinking at 10-15 times per minute, moved up and down along a mountain range.

March 14, 1953; north of Hiroshima, Japan. 11:45 p.m. Witnesses: radar and visual observation by 10 crew members of U.S. Navy P2V-5 patrol plane. Groups of 5-10 colored lights, totaling 90-100, slowly moved aft off the left side of the airplane, as detected visually and by airborne radar for 5 minutes.

March 21, 1953; Elmira, New York. 3:05 p.m. Witness: Ground Observer Corps observation post. Six discs in a group flew high and fast for a few seconds.

March 25, 1953; San Antonio, Texas. 3:05 p.m. Witnesses: USAF Capt. and Mrs. D.E. Cox. Several lights, some of which moved straight, others which made 360^ turns for 1.5 hours.

March 27, 1953; Mt. Taylor, New Mexico. 7:25 p.m. Witness: pilot of USAF F-86 jet fighter at 600 kts. (700 m.p.h.). One bright orange circle flew at 800 kts. (900 m.p.h.), and executed three fast rolls. Pilot chased object for 4 minutes.

March 29, 1953; Spooner, Wisconsin. 3:45 p.m. Witness: L.C. Gillette. One aluminum, circular object flew high and fast, twice reversing its course. Note: Mr. Gillette saw a similar object in 1938. Fifteen second sighting.

April 8, 1953; Fukuoka, Japan. 7:55 p.m. Witness: lst Lt. D.J. Pichon, pilot of USAF F-94B jet interceptor. One bright blue light descended, accelerated, flew parallel to the F-94, increased its speed and blinked out after 45 seconds.

April 15, 1953; Tucson, Arizona. 5:45 p.m. Witness: S/Sgt. V.A. Locey. Three orange lights were seen for: 3 minutes, 30 seconds, and a few seconds.

May 1, 1953; Goose AFB, Labrador, Canada. 11:35 p.m. Witnesses: pilot and radar operator of USAF F-94 jet interceptor, and control tower operator. One white light evaded interception attempt by F-94 during 30 minute sighting.

May 27, 1953; San Antonio, Texas. 8:30 p.m. Witnesses: many unidentified civilians, including Jacobson. Nine separate meandering lights were seen during 15 minute sighting.

June 21, 1953; Naha, Okinawa. 7 p.m. Witnesses: Nine Japanese and Okinawan weather observers. One unidentified light moved slowly for 20 minutes. No further data in files.

June 22, 1953; Goose AFB, Labrador, Canada. Z:lO a.m. Witnesses: pilot and radar operator of USAF F-94 jet interceptor. One red light, flying at an estimated 1,000 kts. (1,100 m.p.h.) eluded the chasing F-94 after 5 minutes.

June 24, 1953; Iwo Jima, Bonin Islands. 11:30 p.m. Witnesses: crew of USAF KB-29 aerial tanker plane. Radar tracked an unidentified target which twice approached to within .5 miles of the airplane, and once to within 6 miles, during a 2 minute observation.

June 24, 1953; Simiutak, Greenland. 11:30 a.m. Witness: weather observer A/2c R.A. Hill. One red triangle hovered and rotated for 15 seconds, then climbed for 5 minutes.

Aug. 3, 1953; Amarillo, Texas. 12:04 p.m. Witness: Airport control tower chief C.S. Brown. One round and reflective or translucent object flew straight, stopped for 7 seconds, sped along, stopped again, was joined by a similar object and they flew off in different directions, after a total of 56 minutes.

Aug. 20, 1953; near Castle AFB, California. 9:05 p.m. Witnesses: crew of TB-29 bomber/trainer plane. One grayish oval object made four passes at the airplane (three times at 10-20 miles distance), then

dived vertically as if two objects.

Aug. 27, 1953; Greenville, Mississippi. 9:45 p.m. Witnesses: USAF pilot, M/Sgt., others, all on the ground. One meandering light was observed for 50 minutes. No further details in file.

Sept. 2, 1953; Sidi Slimane AFB, French Morocco. 9:14 p.m. Witnesses: Lt. Col. William Moore and lst Lt. J.H. McInnis, Dec. 24, 1953; El Cajon, California. 8:04 a.m. Witnesses: U.S. Navy Lts. J.B. Howard and L.D. Linhard, flying F9F-2 jet fighters. Ten silver, oval objects flew at more than 400 kts. (450 m.p.h.), straight and level, for 5 minutes.

Dec. 28, 1953; Marysville, California. 11:55 a.m. Witness: Yuba County Airport Manager Dick Brandt. One saucer, with a brilliant blue light, reflecting on a nearby building, hovered briefly during the 1.5 minute observation.

Jan. 28, 1954; Rangeley, Maine. 110-10:15 a.m. Witness: Wilhelm Reich. Two bright lights moved into valley, and were seen against the mountain background, for 15 minutes.

Feb. 26, 1954; Newburyport, Massachusetts. 2:30 p.m. Witnesses: architect R.M. Pierce, marine engineer George Avery and one other person. One silver disc, with a white trail, made a loud roar for 30-60 seconds.

March 2, 1954; vicinity of Harrisburg, Pennsylvania. 10 p.m. Witness: research engineer R.C. Swengel. Three objects, each with two lights, flew straight and level at medium speed for an unknown length of time.

March 5, 1954; Nouasseur, French Morocco. 8 p.m. Witnesses: crews of USAF KC-97 aerial tanker planes. One object or light made passes at KC-97s, the other flew straight and level. Sighting duration unknown.

March 12, 1954; Nouasseur, French Morocco. 9:35 a.m. Witness: USAF lst Lt. Robert Johnson, flying an F-86 jet fighter. He chased an object at more than 530 m.p.h. for 30 seconds, but was unable to catch it. It appeared to be the size of a fighter plane but had neither tanks nor trails.

April 8, 1954; Chicago, Illinois. 4:30 p.m. Witness: Lelah Stoker. One white round-topped disc, with a humanoid suspended beneath it, skimmed over the water, landed, and an occupant in a green suit walked around. It then took off very, very fast. Sighting lasted 30 minutes.

April 23, 1954; Pittsfield, Maine. 9:30 a.m. Witnesses: Mr. and Mrs. F.E. Robinson. One silver dollar-shaped object with a dome and a flashing light made a sound like a swarm of bees. It hovered and tilted, flew horizontally, then rose vertically without tilting. Stones underneath it moved. Four minute sighting.

April 24, 1954; Hartland, Maine. 6:10 p.m. Witness: D. Robinson. One large, silver, oblong object with a dome and a flashing light flew straight and level and then straight up. Total of 15 minutes under observation.

April 26, 1954; Athens, Georgia. 7:35 p.m. Witnesses: C. Cartey, Mr. and Mrs. H. Hopkins and their daughter. Fifteen to twenty yellow objects in a V-formation, flew from south to north for 10 seconds.

May 10, 1954; Elsinore, California. 12:40 p.m. Witness: U.S. Marine Corps Squadron Leader D.R. Higgin, flying an F3D-2 jet fighter. One dark gunmetal delta-shaped object, 22' long and 10' wide, with a fin on the top, descended at a 25-30' angle under the lead airplane of a formation, and over the airplane of Higgin. Sighting lasted a few seconds.

May 11, 1954; Washington, D.C. 10:45 p.m. Witnesses: three USAF.air policemen at Washington National Airport. Two bright lights were seen on three occasions to fly straight and level, make 90* turns and fade. Each sighting lasted about 45 seconds.

May 22, 1954; LaPorte, Indiana. 9:15 p.m. Witnesses: highway engineer R.W. Dring, engineer Geert Tibma. One bright light made a shallow climb for 45 seconds.

May 31, 1954; Concord, New Hampshire. 10:15 a.m. Witness: Mrs. L.K. Stevens. One very white, elongated object flew very, very fast, and then blinked out after 8-10 seconds.

June 1, 1954; from 400 miles south to Minneapolis, Minnesota. 9 p.m. Witnesses: crew of USAF B-47 jet bomber at 34,000' altitude. One object with running lights flew at 24-44,000' altitude for 1 hour.

June 8, 1954; Texarkana, Texas. 1 a.m. or 2:30 a.m. (file not clear). Witness: L.T. Prewitt, employee of Red River Arsenal. One golden yellow light flew over his house, making a "shhh" or buzzing sound for 2 minutes. 9:09 p.m. Witness: USAF pilot

June 10, 1954; Estacado, Texas. 9:09 p.m. Witness: USAF pilot Capt. Bill McDonald, in flight. One white light descended at 45^ from great altitude, passed under his aircraft, made two 360' turns and went out after 30 seconds.

June 22, 1954; Miami Beach, Florida. 9 p.m. Witnesses: U.S. Marine Corps Maj. E. Buchser and Maj. J.V. Wilkins. One meteor- like object descended, stopped, and became extremely bright. Sighting lasted 7 minutes.

June 24, 1954; Danvers, Massachusetts. 12:45 p.m. Witness: R.B. Tomer, director of commercial engineering for CBS-Hytron. One white, elliptical-shaped object covered 45^ of sky in 30 seconds.

June 25, 1954; Indian Lake, Ohio. 5:05 p.m. Witnesses: experienced private pilot John Mark, flying Navion light plane; radar at Dayton, Ohio airport, tracked very fast target at same location. One silver or aluminum round object with a flat bottom, raised front edge, inverted cone on top, and a diameter of about 60'. Flew horizontally, hovered, made a high-G pull up and then a steep climb into an overcast. Sighting lasted 3-5 minutes.

July 18, ; Normandy, Missouri. 8:40 p.m. Witness: A.T. Chamblin. One greenish-white disc was seen for 30 minutes.

July 25, 1954; Middle Sister Island, on U.S.-Canadian border in western Lake Erie. 7:12 p.m. Witness: attorney L.B. Tussing. One black cylinder, 12 times long as wide, moved fast along the surface of the lake.

July 30, 1954; Los Angeles, California. 10:15 a.m. Witness: Hughes Aircraft test pilots Englert and Peterson, flying a B-25 bomber. One metallic, pencil-shaped object flew slowly or hovered for an unstated length of time.

Aug. 2, 1954; Westlake, Ohio. 5:17 p.m. Witness: ex-AAF B-17 gunner (19 missions) N.E. Schroeder. One thin, bright ellipse, like polished metal, hovered for 5-8 seconds, dropped down 3,000' in 3 seconds, hovered again and faded out after a total of 20 seconds in view.

Aug' 6, 1954; San Antonio, Texas. 6 p.m. Witness: mechanical engineer L.H. Hormer. One intensely white elliptical light changed to yellow, then orange, then pink, four or five times while flying straight and level for 5 minutes.

Aug. 11, 1954; Yoron Jima, near Okinawa. 8:55 p.m. Witness: P.L. Percharde, electrical engineer and assistant manager of Moeller Shipwrecker Co., of Okinawa. A line of blue lights, underneath. a blue circle with a black center. Flew over ship and climbed, illuminating and agitating the clouds.

Aug. 15, 1954; San Marcos, Texas. 10:20 p.m. Witnesses: USAF Maj. W.J. Davis, Capt. R.D. Sauers, flying a C-47 transport plane. One dark blue oblong object paced the C-47, veered away, then crossed in front of it. Five minute sighting.

Aug. 24, 1954; Egilstadir, Iceland. 8:30 p.m. Witness: one unnamed farmer. A cylinder, 2-2.5' long, 4-5' in diameter, made a loud whizzing sound, flew straight and level fast, then slow, then fell into sandbar.

Aug. 26, 1954; Danville, Virginia. 6:15 a.m. Witness: Rev. W.L. Shelton. Two domed ellipses, 20' long, 8' thick, 10' at ends; glowing silver or orange. Hovered, then climbed side-by- side while getting brighter. Observed for 2 minutes.

Aug. 27, 1954; Dorchester, Massachusetts. 1 p.m. Witness: E.A. Srazdes. Seven large, white, teardrop-shaped objects turned blue. Flew in line formation and increased speed during the 2 minute sighting.

Aug. 29, 1954; Prince Christian, Greenland. 11:05 a.m. Witnesses: lst Officer H.G. Gardner, engineer J.V.D. Whitisy, flying Royal Dutch Airlines DC-4 (PH-DBZ). Three or four dark, lens-shaped objects veered north and changed position in formation during the 10 minute sighting.

Sept. 4, 1954; Butler, Missouri. 3 a.m. Witness: J. Faltemeier, CAA communications specialist. Twenty-thirty lights, as if on a string, flew straight and level for 1.5 minutes.

Sept. 5, 1954; Butler, Missouri. 12:23 a.m. Witness: J. Faltemeier, CAA communications specialist. One silver or white object with a slightly swept-back leading edge and a following exhaust, flew straight and level, then veered southwest to south after 30 seconds.

Sept. 18, 1954; Kimpo Air Base, Japan. 5:55 a.m. Witnesses: two control tower operators, a weather forecaster and a weather observer. One round object, like polished aluminum, flew straight and level for 11-13 minutes.

Sept. 21, 1954; Barstow, California. 1 a.m. Witnesses: two local policemen, four U.S. Marine Corps police, one highway patrolman. One red-orange ball giving off sparks, and a smaller light, made a zigzag descent and then hovered. Total of 20 minutes.

Sept. 21, 1954; Santa Maria, Azores Islands. 9:45 p.m. Witness: airport guard. One 10'x5' light metallic blue, pecan-shaped object with a clear glass or plastic nose having a door, and with poles or aerials on the nose. Humming or whining, it hovered, landed vertically, 50' away. A blond man, 5' 10" tall appeared, spoke in a strange language, patted the guard on the shoulder, got in the object, hooked up his harness, pushed a button, took off with the object's nose pointed up, then leveled off and climbed vertically. Sighting lasted 2-3 minutes.

Sept. 22, 1954; Marshfield, Missouri. 9 a.m. Witnesses: private pilot J.N. Williams, E.J. Ash. A thin, translucent tan asymmetrical boomerang-shaped object revolved, then tumbled down behind some trees. Marks were found in the dirt. Sighting lasted 15 minutes.

Sept. 23, 1954; Gatlinburg, Tennessee. 9:45 a.m. Witness: Dave Owenby. Two bright silver, wheel-shaped objects flew from north to south in trail for 2 minutes.

Oct. 13, 1954; Nouasseur, French Morocco. 10:05 a.m. Witness: weather observer, following a balloon with his theodolite. One round, flat, silver object flew straight and level for 30 seconds.

Oct. 15, 16 and 17, 1954; Kingfisher, Oklahoma. 8:45 p.m. Fifty objects with illuminated bottoms were seen flying in a V-formation, very fast, on successive nights. Only data is on summary card.

Oct. 28, 1954; Miho Air Base, Japan. 5:32 p.m. Witnesses: USAF pilots Lt. Col. O.C. Cook and Lt. J.W. Brown, on ground using 7x50 binoculars. One brilliant white, round-oval object climbed in front of clouds, brightened, turned 90 to the north. Seen for 45 seconds.

Oct. 29, 1954; Terciera Islands, Azores. 9 p.m. Witnesses: four Portuguese nationals. One object, shaped like a stovepipe with a center bulge and short wings (10' long, 3' in diameter, 3' wings) having concave wingtips, and grey colored. Made a gargling sound when hovering, then disappeared in the glare of airplane landing lights. Sighting lasted 4-5 minutes.

Nov. 15, 1954; Augusta, Maine. 44 p.m. Witness: N. Gallant, manager of radio station WFAV. Ten gold, circular objects flew in vertical V-formation, straight and level for 3 minutes.

Nov. 19, 1954; Corvallis, Oregon. 4:15 p.m. Witness: P.J. Gunn, assistant professor of art at Oregon State University and ex-U.S. Navy aviation cadet. One bright white light hovered 8.5-9 minutes, then crossed 20 of sky in 3-3.5 minutes.

Nov. 28, 1954; Manilla, Phillipine Islands. 10:50 a.m. Witness: one anonymous medical doctor. One flat-bottomed, domed object (65-70' across, 18-20' high), bright orange with yellow discs attached and an exhaust trail. Flew north, stopped, reversed its course during 4 minute sighting.

Dec. 3, 1954; Gulfport, Mississippi 12:12 p.m. Witnesses: Mr. and Mrs. S.P. Mellen. One translucent grey, round, flat object rotated on its vertical axis at high r.p.m. for 30 seconds.

Dec. 7, 1954; Cape Province, South Africa. 1:15 p.m. Witness: weather officer, using a theodolite. One white, semi-circular, flat object with a dome flew from west to east, then turned north. Sighting lasted 7 minutes.

Jan, 1, 1955; Cochise, New Mexico. 6:44 a.m. Witnesses: instructor and student pilot in USAF B-25 bomber/trainer. A metallic disc, shaped like two pie pans face-to-face, and 120- 130' in diameter, paced the B-25, showing both its edge and its face, for 5-7 minutes. Only item in case file was summary form.

Jan. 26, 1955; Lakeland, Florida. 6:15 p.m. Witness: J.M. Holland. A black smoke trail made a circle. There was an explosion and some objects fell. No further information in file.

Feb.l, 1955; 20 miles east of Cochise, New Mexico. 7:55 p.m. Witnesses: Instructor Capt. D.F. Ritzdorf, aviation cadet F.W. Miller in TB-25 bomber/trainer. One red and white ball hovered off the left wing of the TB-25 for 5 minutes, then made a very fast climb. Total time of sighting was 8 minutes.

Feb. 2, 1955; Miramar Naval Air Station, California. 11:50 a.m. Witness: USN Cmdr. J.L. Ingersoll. One highly polished sphere, with reddish-brown coloring, fell, then instantly accelerated to 1,000-1,500 m.p.h.

Feb. 10, 1955; Bethesda, Maryland. 10:03 p.m. Witness: E.J. Stein, model maker at U.S. Navy ship design facility. One object, shaped like a small portion of the bottom of the Moon, with a radiant yellow color, hovered for 30 seconds. Its bottom changed to a funnel shape. Total sighting lasted 1.5-2 minutes.

April 30, 1955; Travis County, Texas. 7:30 a.m. Witness USAF Wing Intelligence Officer Maj. L..J. Pagozalski. Four black objects in a cluster made a whooshing sound like a zephyr. Sighting lasted 2-3 seconds.

May 4, 1955; Keflavik, Iceland. 12:38 p.m. Witnesses: Lt. Col. E.J. Stealy, lst Lt. J.W. Burt. About 10 round, white objects, one of which left a brief smoke trail, flew in an irregular formation, some of them making erratic movements during the 5-8 second sighting.

May 23, 1955; Cheyenne, Wyoming. Midnight. Witnesses: USAF Airman/Basic I.J. Shapiro and E.C. Ingber. During a 5 minute period, two slender, vertical rectangles were seen low on the horizon, and two ovals with tops (dark, with dark blue illumination) flew higher.

July 29, 1955; Columbus, Nebraska. 10:45 p.m. Witness: Morrice Raymond. Four orange flashing lights and one whIte flashing light moved up and down like yo-yos for 5-6 minutes.

Aug. 11, 1955; Iceland. 11:45 a.m. Witness: 2nd Lt. E.J. Marlow. Twelve grey objects, from cigar to egg-shaped, varied their formation from elliptical to wavy line to scattered to straight line to trail formation. Speed varied from hover to 1,000 m.p.h. Sighting lasted 3-4 minutes.

Bluebook Part 5

Aug. 23, 1955; Arlington, Virginia. 10:45 a.m. Witness: G.M. Park, using a 400x telescope. Several orange lights moved singly or in groups, circling and stopping during 30 minute sighting.

Sept. 3, 1955; Bellingham, Washington. Witness: observer Saunders for Ground Observer Corps. One white pinhead moved slowly across 30^ of sky in 15 minutes. No further information.

Sept. 7, 1955; Washington, D.C. Witnesses: two photographers, one plate maker for the Army Map Service (one named Smith). One glowing round object flew an arc for 1 minute.

Sept. 9, 1955; near Alcoa, Tennessee. 12 noon. Witness: M.N. Dawkins, using binoculars. One brown, almost square object flew with a circular motion for 10-15 minutes.

Oct. 8, 1955; Loogootee, Indiana. 4:38 p.m. Witnesses: R.D. Prather, H. Ahern. One round, silver or white object flew straight and level at more than 1,000 m.p.h. for an unstated length of time.

Oct. 11, 1955; Pt. Lookout, Maryland. 4 p.m. Witnesses: B. Hale, A. Ostrom. One round object which looked white in the daylight and turned red with sparks toward the end of the 2.5 hour sighting, made a deep roar, unlike an aircraft.

Nov. 17, 1955; St. Louis, Missouri. 6:10 a.m. Witness: J.A. Mapes. Twelve round, flat objects, silver on top and dark on the bottom, flew in 4-deep formation, tipping in pitch and roll, for 45 seconds.

Nov. 20, 1955; Lake City, Tennessee. 5:20 p.m. Witnesses: Operations Officer Capt. B.G. Denkler and five men of the USAF 663rd AC&W Sqdn. Two oblong, bright orange, semi-transparent objects flew at terrific speed and erratically, toward and away from each other. Observed by various persons form 4 to 15 minutes.

Nov. 25, 1955; La Veta, Colorado. 10:30 a.m. Witness: State Senator S.T. Taylor. One dirigible-shaped object (fat front, tapered toward the tail) object, which was luminous green-blue and jellylike, appeared overhead diving at a 45' angle, then reduced angle to 30'. Object seen for 5 seconds.

Dec. 21, 1955; Caribou, Maine. 111 p.m. Witness: Roberta V. Jacobs. One round, very bright gold, domed disc made a short climb, rotated, hovered and then accelerated during the 6-8 minute sighting.

Feb. 12, 1956; Goose Bay, Labrador, Canada. 11:25 p.m. Witnesses: F-89 pilot Bowen, radar observer

Crawford. One green and red object rapidly circled the aircraft while being tracked on radar during 1 minute sighting. No further details.

Feb, 19, 1956; Houston, Texas. 6:07 a.m. Witnesses: crew of Eastern Airlines Super Constellation. One intense white light, moving 4-5 times the speed of the airplane, was evaded by the pilot.

April 4, 1956; McKinney, Texas. 3:15 p.m. Witnesses: Capt. Roy Hall, U.S. Army, ret.; Charles Anderson and others; some observed through a 6" telescope, others through a 55-200x telescope. One fat, oblong object with two lines around its middle, remained stationary for 6 hours.

June 6, 1956; Banning, California. 5:30 a.m. Witness: Mr. Bierman. One thin disc with a small dome, shimmering silver, hovered about 100 yards away for 8-10 seconds, then zoomed up.

Aug. 8, 1956; 20 miles south of Quartsite, Arizona. 11 p.m. Witnesses: attorneys W.B. Buttermore and J.W. Smith. One blue-white pulsating light flew fast, straight and level, for 5-7 minutes.

Aug. 27, 1956; Juniata, Pennsylvania. 9:55 p.m. Witness: Mrs. R.S. Pope. One bright disc with a clear dome flew vertically, then north. A very cold breeze seemed to have been originated by the object during the 3 minute sighting.

Sept. 4, 1956; Dallas, Texas. 9 p.m. Witnesses: U.S. Marine Corps T/Sgt. R.D. Rogers and family. One large star, changing to red color, remained stationary for 20 minutes, then went west at 200 kts. (230 m.p.h.). Sighting lasted 23 minutes.

Sept. 14, 1956; Highland, North Carolina. 1 a.m. Witness: Scaly, N. Car. policeman O.S. Gryman. Fourteen yellow-to-red round objects with tremendous exhaust, flew in a Vague formation from southwest to east to northeast and back again, while swooping up and down. Sighting lasted 1.5 hours.

Nov. 1, 1956; 60 miles east of St. Louis, Missouri, in Illinois. 5:30 p.m. Witness: USAF Capt. W..M. Lyons, Intelligence Division Chief (Aerial Weather Reconnaissance Officer), flying a T-33 jet trainer. One orange light with a blue tinge, flew across the sky for 2 minutes.

Nov. 30, 1956; Charleston AFB, South Carolina. 12:48 p.m. Witness: USAF aerial navigator Maj. D.D. Grimes. One unspecified object flew at an estimated 100' altitude over water for 10 minutes. No further details.

Dec. 31, 1956; Guam. 2:10 a.m. Witness: USAF lst Lt. Ted Brunson, flying an F-86D jet interceptor. One round, white object flew under the F-86D, which was unable to turn as sharply as the object.

April 25, 1957; Ringgold, Louisiana. Military witness Robertson. Case missing from official files.

June 12, ; Milan, Italy. 7:30 p.m. Witness: G.U. Donadio, translator for export-import firm. One object "big as a hen's egg" flew very fast, zigzagged, hovered and revolved, then shot up after 17 minutes.

July 27 or 29, 1957; Longmont, Colorado. Early morning. Witness: J.L. Siverly. One thick disc, ice blue, with a top like honeycomb (interconnected hexagons), hovered and rocked below the hill tops for 10 minutes. Middle band was scalloped, bottom had four kidney-shaped forms.

July 29, 1957; Cleveland, Ohio. 10:31 p.m. Witnesses: Capital Airlines Capt. R.L. Stimley, First Officer F.J. Downing. One large, round, yellow-white object dimmed once, crossed the bow of the airliner, which then gave chase but was unable to catch it. Sighting last 8 minutes.

July 29, 1957; Oldsmar, Florida. 11:45 a.m. Witness: E.E. Henkins. One pale yellow fireball glided into

the water and exploded. Viewed for 1 minute.

Sept. 20, 1957; Kadena AFB, Okinawa. 8 p.m. Witnesses: S/Sgt. H.T. O'Connor, S/Sgt. H.D. Bridgeman. One object, shaped like a coke bottle without the neck, translucent and fluorescent. Made four 5-10 second passes from north to south, with 4-5 minutes between passes.

Oct. 8, 1957; Seattle, Washington. 9:17 a.m. Witnesses: two U.S. Army sergeants. Two flat, round, white objects flew in trail formation along an irregular path, frequently banking during 25-30 seconds.

Nov. 6, 1957; Radium Springs, New Mexico. 10:50 p.m. Witnesses: one Las Cruces policeman, one Dona Ana County Deputy Sheriff. One round object--changing from red to green to blue to white-- rose vertically from a mountain top. Sighting lasted 10 minutes.

Nov. 8, 1957; Merrick, Long Island, New York. l0:10 a.m. Witness: Mrs. L. Dinner. One bar-shaped object, 3.5' long, giving off blue flashes, made a swishing sound. No further data.

Nov. 26, 1957; Robins AFB, Georgia. 10:07 a.m. Witnesses: three control tower operators, one weather observer and four others. One silver, cigar-shaped object suddenly vanished after 8 minutes.

Nov. 30, 1957; New Orleans, Louisiana. 2:11 p.m. Witnesses: three U.S. Coast Guardsmen. One round object turned white, then gold, then separated into three parts and turned red. Sighting lasted 20 minutes.

Dec. 13, 1957; Col Anahuac, Mexico. 9:35 a.m. Witness: R.C. Cano. Fourteen-fifteen circular, tapered discs, very bright, flew in a formation like a stack of coins, then changed to an inverted-V formation. Sighting lasted 20 minutes.

Dec. 17, 1957; near Grand Junction, Colorado. 7:20 p.m. Witness: F.G. Hickman, 17. One round object changed from yellow to white to green to red; red tail was twice as long as the body. It stopped, started, backed up for 45 minutes.

March 14, 1958; Healdsburg, California. 8:45 a.m. Witnesses: Mr. and Mrs. W.F. Cummings and one other. A 3' round, black object touched the ground and then took off. Watched for 2 minutes.

April 14, 1958; Lynchburg, Virginia. 1 p.m. Witness: USAF Maj. D.G. Tilley, flying C-47 transport. One grey-black rectangular object rotated very slowly on its horizontal axis for 4 seconds.

May 9, 1958; Bohol Island, Philippine Islands. 11:05 a.m. Witness: Philippine Airlines pilot. One object with a shiny, metallic surface was falling and spinning for 1.5 minutes.

June 14, 1958; Pueblo, Colorado. 10:46 a.m. Witness: airport weather observer O.R. Foster, using a theodolite. An object shaped like Saturn, less the bottom part; silver with no metallic luster, flew overhead for 5 minutes.

June 20 ,1958; Ft. Bragg, North Carolina. 11:05 p.m. Witness: Battalion Communication Chief SFC A. Parsley. One silver, circular object, its lower portion seen through a green haze, hovered, then oscillated slightly, then moved at great speed. Watched for 10 minutes.

Aug. 17, 1958; Warren, Michigan. 7:05 p.m. Witness: A.D. Chisholm. One extremely bright object shaped first like a bell, then like a saucer, hovered for 5 minutes, flipped over and sped away to the west-south-west. Sighting lasted 6-10 minutes.

Sept. 1, 1958; Wheelus AFB, Libya. 12:15 a.m. Witness: Philco technical representative A.M. Slaton.

One round, blue-white object flew at varying speeds. First sighting lasted 2 minutes, second lasted 1.5 minutes.

Oct. 2, 1958; Stroudsburg, Pennsylvania. 2:30 p.m. Witness: naturalist Ivan Sanderson. One dull-grey object, shaped like a pickle with a flat bottom, flew erratically and made loops for 15 seconds.

Oct. 27, 1958; Lock Raven Dam, Maryland. 10:30 p.m. Witnesses: Phillip Small, Alvin Cohen. One large, flat egg-shaped object affected a car's electrical system and caused a burning sensation on one of its occupants. Sighting lasted 1 minute.

Nov. 3, 1958; Minot, North Dakota. 2:01 p.m. Witness: M/Sgt. William R. Butler, medic. One bright green object, shaped like a 10 cent piece, and one smaller, silver round object. First object exploded, then second object moved toward the location of the first at high speed. Sighting lasted 1 minute.

March 26 or 27, 1959; Corsica, Pennsylvania. 12:45 p.m. Witness: T.E. Clark. One dark red, barrel-shaped object, 20' long, 6-7' high, descended below some trees during the 3 minute sighting.

June 18, 1959; Edmonton, Alberta, Canada. 9:30 p.m. Witnesses: A. Cavelli and R. Blessin, using 7x binoculars. One brown, cigar-shaped object came from below the horizon (close to the witnesses) ascending to 40-50^ above the horizon in 4 minutes.

June 30, 1959; Patuxent River NAS, Maryland. 8:23 p.m. Witness: USN Cdr. D. Connolly. One gold, oblate-shaped object, nine times as wide as it was thick, metallic and with sharp edges, flew straight and level for 20-30 seconds.

July 25, 1959; Irondequoit, New York. 1 p.m. Witness: technical illustrator W.D. Neva. One thin, crescent moon-shaped object with a small white dome in the center, flew at tremendous speed for 5-10 seconds.

Aug. 10, 1959; Goose AFB, Labrador, Canada. 1:28 a.m. Witness: Royal Canadian Air Force pilot Flt. Lt. M.S. Mowat, on ground. One large star-like light crossed 53* of sky in 25 minutes.

Sept. 13, 1959; Gills Rock, Wisconsin. 1:05 a.m. Witness: R.H. Daubner. One round yellow light, with eight blue lights within it, and then five larger red lights, flew very fast vertically while making a pulsating jet noise. Sighting lasted 10 minutes.

Sept. 13, 1959; Bunker Hill AFB, Indiana. 4 p.m. Witnesses: at least two control tower operators and the pilot of a Mooney private airplane. One pear-shaped object, colored white, cream, and metallic, with a trail under it. Object showed little movement during 3 hours. Attempted intercept by USAF T-33 jet trainer failed.

Oct. (3rd or 4th week), 1959; Telephone Ridge, Oregon. 9:15 p.m. Witness: department store manager C.A. Cissman. One bright light approached, hovered about 30 minutes, and then was up and gone in 2 seconds.

Oct. 4, 1959; Quezon, Philippine Islands. 9:25 p.m. Witnesses: USN Lt. C.H. Pogson, CPO K.J. Moore. One large round or oval object, changing from red to red-orange, flew straight and level for 15 minutes.

Oct. 6, 1959; Lincoln, Nebraska. 8:15 p.m. Witnesses: Lt. Col. L. Liggett (Selective Service) and wife. One round, white-yellow light made several abrupt turns and flew very fast for 2 minutes.

Oct. 19. 1959; P]ainvjlle! Kansas. 9:25 p.m. Witness: Capt. F.A. Henney, engineering instructor at USAF Academy, flying a T-33 jet trainer. One bright yellowish light came head-on at the T-33, the pilot avoided it and the light dimmed. Sighting lasted 30 seconds.

Nov. 18, 1959; Crystal Springs, Mississippi. 6:25 p.m. Witness: J.M. Porter. A row of red lights flew slow, then speeded up immensely. Sighting lasted 5-6 minutes.

Feb. 27, 1960; Rome AFB, New York. 6:27 p.m. Witnesses: control tower officer Capt. J. Huey and four other tower operators. One light trailing a white fan shape, made a mild descent for 3-4 minutes. 5:55 p.m. Witness: Charles

March 4, 1960; Dubuque, Iowa. 5:5 Morris. Three elliptical-shaped objects made a slight climb for 4 minutes. Film exposed during sighting showed no images of the objects.

March 23, 1960; Indianapolis, Indiana. 3:35 a.m. Witnesses: Mr. and Mrs. E.I. Larsen. A series of balls, arranged like an "X" with one diagonal line, seen for 3/4 of a minute. Note: little data on the case in the files.

April 12, 1960; LaCamp, Louisiana. 9 p.m. Witness: Monroe Arnold. One fiery-red disc exploded four or five times. Analysis of paint samples from explosion proved inconclusive. Sighting lasted 2-3 seconds.

April 17, 1960; Richards-Gebauer AFB, Missouri. 8:29 p.m. Witnesses: USAF Maj. J.G. Ford and Link representative A. Chapdelaine, using a 48x telescope. One reddish glow made an odd orbit for 2.5 minutes.

April 25, 1960; Shelby, Montana. 7-10 p.m. Witness: Mrs. M. Clark. Five circular objects flew in trail formation, hovered and accelerated and made sharp turns. Case file includes other reports from Mrs. Clark for previous 3 years.

July 19, 1960; St. Louis, Missouri. 8:30 p.m. Witness: T.L. Ochs. One round, bright red light flew overhead, stopped and hovered, and then backed up. Sighting lasted 20 minutes. Note: Ochs reported similar sightings on three following nights.

Aug. 23, 1960; Wichita, Kansas. 3::24 a.m. Witness: Boeing aeronautical engineer C.A. Komiske. One round object with yellow lights coming from what looked like three triangular windows at bottom. Object was dull orange. Flew in an arc for 2 minutes.

Aug. 29, 1960; Crete, Illinois. 4:05 p.m. Witness: farmer Ed Schneeweis. One shiny, round, silver object flew straight up very fast for 18 seconds.

Sept. 10, 1960; Ridgecrest, California. 9:50 p.m. Witnesses: Mr. and Mrs. M.G. Evans. Two light gray glowing objects, saucer or boomerang-shaped, which swished when accelerating. Seen 1-2 seconds each.

Oct. 5, 1960; Mt. Kisko, New York. 7:37 p.m. Witness: E.G. Crossland. One bright, star-like light moved across 120^ of sky in 20 seconds.

Nov. 27, 1960; Chula Vista, California. 7:30 p.m. Witnesses: Mr. and Mrs. L.M. Hart. One orange-red point of light made huge circles and stopped during the 20-30 minute sighting.

Nov. 29, 1960; south of Kyushu, Japan. 6:38 p.m. Witnesses: USAF Lt. Col. R.L. Blwlin (sp?) and Maj. F.B. Brown, flying a T-33 jet trainer. One white light 8lowed and paralleled the course of the T-33 for 10 minutes.

Feb, 27, 1961; Bark River, Michigan. 10:15 p.m. Witness: Mrs. LaPalm. One fiery-red, round object, preceded by light rays, slowed and descended, while her dog howled. Sighting lasted 10 minutes.

Spring, 1961; Kemah, Texas. Case missing from official files.

April 24, 1961; 200 miles SW of San Francisco, California (35' 50' N., 125' 40 W.). 3:34 a.m. Witnesses: aircraft commander Capt. H.J. Savoy and navigator lst Lt. M.W. Rand, on USAF RC-l2lD patrol plane. One reddish-white, round object or light, similar to satellite. Observed for 8 minutes.

May 22, 1961; Tyndall AFB, Florida. 4:30 p.m. Witnesses: Mrs. A.J. Jones and Mrs. R.F. Davis. One big silver dollar disc hovered and revolved, then suddenly disappeared after 15 minutes.

June 2, 1961; Miyako Jima, Japan. 10:17 P.m. Witnesses: lst Lt. R.N. Monahan and Hazeltine Electric Co. technical representative D.W. Mattison. One blue-white light flew erratic course at varying speed, in an arc-like path for 5 minutes.

July 7, 1961; Copemish, Michigan. 11 p.m. Witness: waitress Nannette Hilley. One large ball flew slow, split into four after 45 minutes. Four flew close formation, descended and flew away to the west. Total sighting lasted 1 hour.

July ll, 1961; Springfield, Ohio. 7:45 p.m. Witnesses: ex-air navigator G. Scott, Mrs. Scott, and neighbors. One round, bright light like shiny aluminum, passed overhead in 20 minutes.

July 20, 1961; Houston, Texas. 88 a.m. Witnesses: Trans-Texas Airlines Capt. A.V. Beather, flying DC-3, plus vague report from ground radar. Two very bright white light or objects flew in trail formation for 30 minutes.

Aug. 12, 1961; Kansas City, Kansas. 9 p.m. Witnesses: college seniors J.B. Furkenhoff and Tom Phipps. One very large oval object with a fin extending from one edge to the center; like a sled with lighted car running boards. Hovered at 50' altitude for 3-5 minutes, then flew straight up and east.

Nov. 21, 1961; Oldtown, Florida. 7:30 p.m. Witnesses: C. Locklear and Helen Hatch. One round, red-orange object flew straight up and faded after 3-4 minutes.

Nov. 23, 1961; Sioux City, Iowa. 9:30 p.m. Witness: F. Braunger. One bright red star flew straight and level for 15 minutes.

Dec. 13, 1961; Washington, D.C. 5:05 p.m. Witnesses: C.F. Muncy, ex-U.S. Navy pilot W.J. Myers, and G. Weber. One dark diamond-shaped object with a bright tip flew straight and level for 1-3 minutes.

Feb. 25, 1962; Kotzbue, Alaska. 7:20 p.m. Witnesses: one U.S. Army private, six anonymous civilians. One red light, trailed 30 seconds later by a blue light. Sighting lasted 5 minutes.

March l, 1962; Salem, New York. 10:35 p.m. Witness: Mrs. L. Doxsey, 66. One gold-colored box, 12-14"x3-4", flew straight and level across the horizon for 3-4 minutes. .

March 26, 1962; Ramstein Air Base, West Germany. 1:35 p.m. Witness: USAF Capt. J.M. Lowery, from an unspecified aircraft. One thin, cylindrical object--l/3 snout, 2/3 tail fins--flew at an estimated Mach 2.7 (2,000 m.p.h.) for 5-8 seconds.

March 26, 1962; Naperville, Illinois. 11:40 p.m. Witnesses: Mrs. D. Wheeler, Claudine Milligan. Six or eight red balls, arranged in a rectangular formation, became two objects with lights by the end of the 15 minute sighting.

March 26, 1962; Westfield, Massachusette. 10:45 p.m. Witnesses: many unidentified young people. One large red ball flew or fell down, then went back up during 3-10 minute sighting. Note: May 26?

April 4, 1962; Wurtland, Kentucky. 0150Z. Witnesses: G.R. Wells and J. Lewis, using 117x telescope. One small object changing brightness, gave off smoke but remained stationary like a comet for 6 minutes. Case missing from official files.

June 21, 1962; Indianapolis, Indiana. 4 a.m. Witnesses: Lt. Col. H. King and tail gunner M/Sgt. Roberts, aboard a B-52 heavy jet bomber. Three bright, star-like lights: one seen; 10 seconds later, two more were seen. Total sighting took 3 minutes.

June 30, 1962; Richmond, Virginia. 9 a.m. Witness: 13 year old Meadors. One red, star-like light seen for an unspecified length of time. No further details in files.

July 19, 1962. Bayhead, New Jersey. 9:30 p.m. Witnesses: C.T. Loftus, H. Wilbert. Four or five lights darted about the sky for 7-10 minutes.

July 29, 1962; Ocean Springs, Mississippi. 11:20 p.m. Witnesses: Mr. and Mrs. M.O. Barton. One bright cherry-red, diamond-shaped object flew slow, hovered, made fast 1/2 loops for l0 minutes.

Aug. 18, 1962; Bermuda. 5 p.m. Witnesses: owner M. Sheppard and chief announcer A. Seymour of radio station. Three dull-white, egg-shaped objects wavered as they moved for 20 minutes.

Sept. 21, 1962; WSW of Biloxi, Mississippi, in the Gulf of Mexico. 7:37 p.m. Witness: fishing boat captain S.A. Guthrie. Two objects, red and black with orange streaks, one as big as the Moon, and the other smaller. Arced across the sky for 13 minutes.

Oct. 23, 1962; Farmington, Utah. 3 p.m. Witness: R.O. Christensen. One grey and silver ball, trailing what looked like twine with two knots in it, swerved, and climbed away at a 45' angle, making a sound like a flock of ducks (rushing air). Twenty seconds.

Nov. 17, 1962; Tampa, Florida. 99 p.m. Witness: F.L. Swindale, college graduate and ex-USMC Capt. Three bright star-like lights approached, hovered and bounced, then faded after 11-15 minutes.

May 18, 1953; New Plymouth, New Zealand. 10:30 p.m. Witness: C.S. Chapman, 15. One white, fuzzy, flashing light hovered and darted around for 4 minutes.

May 22, 1963; Pequannock, New Jersey. 10:45 p.m. Witness: Myra Jackson. Four pink wheels spun or rolled very fast from east to west in succession, each taking about 1 second.

June 15, 1963; 200 miles north of Venezuela (14* 27' N., 69* 57' E.). 10:39 a.m. Witness: 3rd Mate R.C. Chamberlin, of S/ Thetis. One luminous disc traveled at 1.5 times the speed of satellite for 3-4 minutes.

Summer, 1963; Middletown, New York. 9:30 or 10 p.m. Witness: Grace Dutcher. Eight-ten lights moved at random, then in an oval formation, then singly, during the 1 minute sighting.

July 1, 1963; Glen Ellyn, Illinois. 8 p.m. Witness: R.B. Stiles, ll, using a theodolite. One light, the size of a match head at arm's length, flashed and moved around the sky for 1.5 hours.

Aug. 11, 1963; Warrenville, Illinois. 10 p.m. Witness: R.M. Boersma. One light moved around the sky for 20 seconds.

Aug. 13, 1963; St. Gallen, Switzerland. 8:04 p.m. Witness: A.F. Schelling. One fireball became a dark object after 4 minutes, and then a bigger glow, a minute later, and finally exploded. Note: same witness had another, undescribed, sighting on Aug. 14

Sept. 14, 1963; Susanville, California. 3:15 p.m. Witness: E.A. Grant, veteran of 37 years training forest fire lookouts for the U.S. Forest Service. One round object intercepted a long object and either attached itself to the latter or disappeared. Sighting lasted l0 minutes.

Sept. 15, 1963; Vandalia, Ohio. 66 p.m. Witness: Mrs. F.E. Roush. Two very bright gold objects--one shaped like a banana and the other like an ear of corn--one remained stationary, the other moved from west to north during 10 minutes,

Oct. 4, 1963; Bedford, Ohio. 3:32 p.m. Witness: R.E. Carpenter, 15. One intense oblong light with tapered ends and surrounded by an aqua haze, flashed and flickered while stationary for 15 seconds.

Bluebook Part 6 (CONCLUSION)

Oct. 23, 1963; Meridian, Idaho. 8:35 p.m. Witnesses: several unnamed students, including Gordon. One object shaped like a circle from below and like a football from the side, hovered low over the observers, making a deep, pulsating, loud, extremely irritating sound, for 6 minutes.

Oct. 24, 1963; Cupar Fife, Scotland. No time given. Witnesses: A. McLean (12) and G. McLean (8). One light moved for an unspecified length of time. No further details in files. Note: Project Blue Book chief Maj. H. Quintanilla told the youngsters, in a letter, that this was "one of the most complete" of the unexplained cases for the year.

Dec. 11, 1963; McMinnville, Oregon. 7 a.m. Witness: W.W. Dolan, professor of mathematics and astronomy, and dean of the faculty of Linfield College. One bright, star-like light hovered, slowed, dimmed and flashed in 1 minute.

Dec. 16, 1963; 800 miles north of Midway Island (40* N., 175* 54' W.). 5:05 p.m. Witness: unspecified persons aboard a military aircraft. One white light blinked 2-3 times per second as it moved very fast across the sky for 15 seconds.

April 3, 1964; Monticello, Wisconsin. 9 p.m. Witnesses: Mr. and Mrs. R. Wold (he was a graduate student in anthropology). Four huge red lights in a rectangular formation, with a white light above, were near the ground, tilted and flew away after 3-4 minutes.

April 11, 1964; Homer, New York. 6:30 p.m. Witnesses: physiotherapist W.B. Ochsner and wife. Two cloud-like objects darkened; one shot away and returned during the 30-45 minute sighting.

April 24, 1964; Socorro, New Mexico. 5:45 p.m. Witness: Socorro policeman Lonnie Zamora. Watched object with flame underneath descend toward the desert. Two small humanoids observed near vertical oval on ground. Later watched object take off with a roar, go silent and fly away. Burning and charred brush found at landing sight.

May 9, 1964; Chicago, Illinois. 10:20 p.m. Witness: J.R. Betz, U.S. District Court reporter. Three light green crescent-shaped objects, about half the apparent size of the Moon, flew very fast in tight formation from east to west, oscillating in size and color for 3 seconds.

May 18, 1964; Mt. Vernon, Virginia. 5:15 p.m. Witness: civil engineer F. Meyers. One small, glowing white oval split twice after moving from the right of the Moon around to the left. Sighting lasted 17 minutes.

May 26, 1964; Cambridge, Massachusetts. 7:43 p.m. Witness: P. Wankowicz, RAF pilot and ex-Smithsonian satellite tracker. One thin, white ellipsoid (3.5 times as long as wide) flew straight and level

for 3-4 seconds.

May 26, 1964; Pleasantview, Pennsylvania. 11 p.m. Witness: Rev. H.C. Shaw. One yellow-orange light, shaped like the bottom of a ball, was spotted in a field and chased down the road for 2 miles.

June 13, 1964; Toledo, Ohio. 9:15 p.m. Witness: B.L. English, announcer for radio station WTOD. Three glowing white spheres, glowing red on their sides, moved slow, hovered and then moved in circles very fast, all the while making a low, rumbling sound.

July 16, 1964; 15 miles south of Houghton Lake, Michigan. 11:15 p.m. Witness: Northern Air Service pilot K. Jannereth. Four white lights in a stepped-up echelon formation, were joined by two more. They closed in on the airplane, then rapidly slowed and flew along with it for a total of 5 minutes.

July 20, 1964; Littleton, Illinois. 4:45 a.m. Witness: J.J. Winkle. One 60' diameter round-topped, flat-bottomed object with a long acetylene-colored flame shooting downward, flew straight and level, made a half loop, then rose up. Sighting lasted l minute.

July 27, 1964; Norwich, New York. 7:30 p.m. Witness: Duabert, engineering supervisor. One aluminum sphere with a luminous ring, remained stationary for 4-5 minutes.

July 27, 1964; Denver, Colorado. 8:20 p.m. Witness: A. Borsa. One white ball of fire, the size of a car, climbed slowly, then speeded up. Sighting lasted 2-3 minutes.

Aug. 10, 1964; Wake Island. 5:16 a.m. Witnesses: aircraft commander Capt. B.C. Jones and navigator lst Lt. H.J. Cavender, in parked USAF C-124 transport plane. One reddish, blinking light approached the runway, stopped and made several reverses during 2 minutes.

Aug. 15, 1964; New York, New York. 1:20 a.m. Witness: S.F. D'Alessandro. One 10'x5' bullet-shaped object with wavy lines on the rounded front part and six pipes along the straight rear portion, made a "whishhh" sound. Witness' dog growled during . sighting.

Aug. 15, 1964; Yosemite National Park, California. 8:15 a.m. Witnesses: E.J. Haug, of the San Francisco Orchestra and the San Francisco Conservatory of Music; and C.R. Bubb, a high school mathematics teacher. Three bright silver, round objects, in a stack formation, flew very fast, changing positions within the formation. The sound of rushing air was heard during the 3-4 second sighting.

Aug. 18, 1964; Atlantic Ocean, 200 miles east of Dover, Delaware. 12:35 a.m. Witnesses: Maj. D.W. Thompson and First Pilot 1st Lt. J.F. Jonke, on a USAF C-124 transport plane. One round, blurred, reddish-white object was on a collision course with the C-124 from ahead and below. The airplane evaded the object. Sighting lasted 2 minutes.

Sept. 10, 1964; Cedar Grove, New Jersey. 7:09 p.m. Witness: chemist P.H. DePaolo. Four white lights, 3-4 apart, were seen to the north, going west for 45 seconds.

Nov. 14, 1964; Menominee Falls, Wisconsin. 9:40 p.m. Witnesses: Dr. G.R. Wagner, MD; and two girls. Three dim, reddish lights flew through a 160^ arc in 5-6 seconds.

Nov. 19, 1964; 1,400 miles east of Tokyo, Japan (34' 55' N., 164* 05' E.). Witnesses: unidentified military persons. One bright white flashing light was traveling from horizon to horizon in 20 seconds.

Jan, 23, 1965; Williamsburg, Virginia. 8:40 a.m. Witness: Mr. T.F. Mains. One mushroom or light bulb-shaped object, 75-80' high, 25' diameter on top and l0' bottom diameter; metallic grey with a red-orange glow on the near side and a blue glow on the far side. The object made a sound like a vacuum cleaner.

The witness' car electrical system was affected as the object moved away at an altitude of 4'. The sighting lasted 25 seconds.

March 4, 1965; Corvallis, Oregon. 9:23 p.m. Witness: W.V. Harrison. Three lights rose from the ground, several seconds apart. The next day, an oily spot was found at the site.

March 8, 1965; Mt. Airy, Maryland. 7:40 p.m. Witness: J.H. Martin, instrument maker for U.S. Bureau of Standards. Six lights flew overhead slowly for 3 minutes.

April 4, 1965; Keesler AFB, Mississippi. 4:05 a.m. Witnesses: USAF A/2c Corum, a weather observer; confirmation by college student R. Pittman not clear from available data. One 40' black, oval object with four lights along the bottom, flew in and out of the clouds for 15 seconds.

May 7, 1965; Oxford, Michigan. 7:30 p.m. Witness: M.E. Marshall. One light, like a satellite, split into two parts, one of which was copperish color, then two more joined up. One object may have been tumbling. Sighting lasted 1 minute.

July 6, 1965; Kiel, Wisconsin. 9:30 p.m. Witness: Mrs. E.R. Hayner. One flashing light, like a satellite, was seen for less than 1 minute. No further data was in the files.

July 25, 1965; Castalia, Ohio. 9:15 p.m. Witness: amateur astronomer M.D. Harris, 16. One bright blue star crossed 90 of sky in 10-15 seconds.

Aug. 4, 1965; Dallas, Texas. 9:30 p.m. Witness: J.A. Carter, 19. One light flew fast, straight and level for 12 seconds. No further data in files.

Aug. 4, 1965; Tinley Park, Illinois. 11:35 p.m. Witnesses: two unnamed 14 year olds. One light moved around the sky for 16-17 seconds. No further data in files.

Aug. 19, 1965; Cherry Creek New York. 8:20 p.m. Witnesses: Mrs. William Butcher, son Harold, 17, and children. A large elliptical object, with a reddish vapor underneath, came close to the ground, then shot straight up into the clouds a few seconds later. Radio drowned out by static, a tractor engine stopped. When the object was on the ground, a steady beeping sound could be heard. Afterwards, a strange odor was noticed, and the next day, a purplish liquid, 2"x2" marks and patches of singed grass were found at the site. A bull bellowed and tried to break its bonds.

Aug. 30, 1965; Urbana, Ohio. 10:30 p.m. Witnesses: M.A. Lilly, N. Smith, T. Nastoff. One white ball, 5-8' in diameter and trailed by a 2-3' light, hit the road 100' in front of the witness' car, bounced and flew away. Sighting lasted 3-4 seconds.

Sept. 3, 1965; Exeter, New Hampshire. 2 a.m. Witnesses: Exeter Patrolmen Eugene Bertrand, Jr. and David Hunt, and Norman Muscarello. One large, dark, elliptical object with a row of red lights around it, moved slowly and erratically around houses and trees, while lights blinked in sequence. Farm animals were very noisy. Sighting lasted about 1 hour.

Sept. 3, 1965; Damon, Texas. 11 p.m. Witnesses: Brazoria County Chief Sheriff's Deputy Billy McCoy and Deputy Robert Goode. One triangular object, 150-200' long, 40-50' thick at middle and dark grey, with a long, bright, pulsing, purple light on the right side and a long blue light on the left side. Came from distance to 150' off highway and 100' in the air. Purple light illuminated ground beneath object and interior of police car. Driver felt heat on his left arm. Initial sighting lasted 5-10 minutes. Second sighting occurred later that night.

Sept. 25, 1965; Chisholm, Minnesota. 9:55 a.m. Witness: Bett Diamon. Five orange lights in a row flew

fast and made an abrupt turn during the 1 minute sighting.

Sept. 25, 1965; Rodeo, New Mexico. 10 p.m. Witnesses: Dr. George Walton, physical chemist, and wife. Two round white objects flew side-by-side, at 30-50' altitude, pacing the witnesses' car for 6 minutes.

Oct. 4, Middletown, Ohio. Witness: Tucker. Case missing from official files.

Feb. 2, 1966; Salisbury, North Carolina. 11:15 p.m. Witnesses: Mr. and Mrs. L.J. Wise. One silver, diamond-shaped object with several balls constantly in very fast motion around it, and much light. Object hovered over the trees for 3-4 minutes, while a dog barked, and then zipped out of sight. Sighting lasted 1 hour.

Feb. 6, 1966; Nederland, Texas. 5:45 a.m. Witnesses: Mr. and Mrs. K.R. Gulley. One yellow, lighted object at 500; altitude and a pulsating red glow on the lawn. The house lights went out, and high frequency bothered the witnesses' ears. Sighting lasted 5-10 minutes.

March 20, 1966; Miami, Florida.. 12:15 a.m. Witness: USAF Res. Maj. K.C. Smith, employee of NASA at Cape Kennedy. One pulsating light which varied from white to intense blue made a jerky ascent and then rapidly accelerated away to the north after 5 minutes.

March 22, 1966; Houston, Texas. 1:30 a.m. Witness: S.J. Musachia. White flashing lights, and the air full of smoke. Lit up witness' apartment. Sound of "yen " heard up close during 4 minute sighting.

March 23, 1966; Temple, Oklahoma. 5:05 a.m. Witness: W.E. Laxson. One large object, like a wingless C-124 transport plane; 75' long, 8' high and 12' wide; with a bubble canopy on top. Sat on highway, a man dressed in military work clothes entered, and it rose after about 40 seconds.

March 26, 1966; Texhoma, Oklahoma. Midnight. Witnesses: Mrs. P.N. Beer and Mrs. E. Smith. One flashing light buzzed their car from the front then hovered. Sighting lasted l0 minutes.

April 5, 1966; Alto, Tennessee. 11:55 p.m. Witness: W. Smith. One oval object with a dark top, appeared cone-shaped when moving. It made a high-frequency noise during the 2.5 hour sighting.

April 5, 1966; Lycoming, New York. 3 a.m. Witness: Lillian Louis. One vapor-like sphere hovered and spun at low altitude, shooting its exhaust onto the ground below. Sighting of 1 minute.

April 30, 1966; Sacramento, California. 3:15 a.m. Witness: Anita Miller. One light moved around the sky for 2.5 hours. No further detail in files.

May 7, 1966; Goodfellow AFB, Texas. 9:55 p.m. Witness: A/3c W.L. Whitehead. One short, cylindrical object with pointed ends and a yellow light at one end and blue light at the other, flew straight and level for 35 seconds.

June 6, 1966; Spooner, Wisconsin. 9:30 p.m. Witness: Dorothy Gray. Two domed discs with sparkling upper surfaces and square windows in their tops, revolved above a lake, apparently causing strange behavior of the lake water during the 25 second sighting.

June 8, 1966; Kansas, Ohio. 6:45 a.m. Witness: Max Baker. One bright silver, cigar-shaped object, as long as an airliner, buzzed the witness' car. Sighting lasted 1 minute.

June 18, 1966; Burnsville, North Carolina. 12:30 a.m. Witnesses: members of a Boy Scout group, including Sterrett. One bell-shaped object with three flashing red lights hovered for 5 hours and was then joined by six others.

June 27, 1966; 400 miles east of Wake Island (19* N., 172* E.). 4 a.m. Witness: Radio Officer Steffen Soresen, of the S/ Mt. Vernon Victory. One "cloud" expanded with a light inside, and then accelerated away after several minutes.

July l1, 1966; Union, Pennsylvania. 7:45 p.m. Witnesses: Carl Wood and Charles Hawthorne. One large (100' wide, 20' high) bright red object with small windows and yellow lights. The object emitted a humming noise, seemingly from the outside, and a grinding noise which seemed to come from inside. Observed for 1 hour.

July 25, 1966; Vanceboro, North Carolina. 1 a.m. Witness: college student James Clark. One object which changed color from orange to red to blue to green and back to orange. Followed witness' car at high speed, then stopped and hovered over the car. Rose and flew up and out of sight in less than 5 seconds. Entire sighting involved about 1 hour.

July 31, 1966; Presque Isle State Park, Pennsylvania. 7:25 p.m. Witnesses: Douglas Tibbetts, 16; Betty Klem, 16; Anita Haifley, 22; and Gerald Labelle, 29. Square or hexagonal object with edges lit or reflecting light, came tumbling down from right to left. Stopped 5-10' above the beach and settled heavily down; circle of spotlights at top were visible when it was on the ground. Sighting lasted 5 minutes. .

Aug. 19, 1966; Donnybrook, North Dakota. 4:50 p.m. Witness: U.S. Border Patrolman Don Flickenger. Round disc with domed top, 30' in diameter and 15' high, colored white, silvery or aluminum. Moved across a valley from the southeast, hovered over a reservoir, appeared to land in a small field, then rose up into clouds very rapidly. Sighting lasted 5 minutes.

Aug. 23, 1966; Columbus, Ohio. 77 p.m. Witnesses: Broomall and Gilpin. One circular, luminous white object split into five objects and all streaked away toward the west. Sighting lasted 15 minutes.

Aug. 26, 1966; Gaylesville, Alabama. 8:50 p.m. Witnesses: Mr. and Mrs. Funk and their three children. A cluster of four small, glowing, orange-yellow lights in a triangular formation, moved from east to west for 4.5 minutes.

Sept. 1, 1966; Willsboro, New York. 2:45 p.m. Witness: T.H. Ridman. One oval object with lights that flashed red and white and occasionally blue, traveled west, then disappeared downward. It returned, several minutes later, at which time a loud noise was heard. The entire sighting lasted 30 minutes.

Sept. 6, 1966; Suffolk County AFB, New York. 6:50 p.m. Witnesses: Stahl and Ladesic. One white cylinder of light came from the east at high speed, stopped and hovered for 3 minutes, and then turned and slowly disappeared. Sighting lasted 8 minutes.

Sept. 9, 1966; Franklin Springs, New York. 9 p.m. Witness: Jacobson. One solid object, larger than an army tank, with lights all around it, made a low humming sound and disappeared into woods at the end of the 30 minute sighting.

Sept. 13, 1966; Gwinner, North Dakota. 7:30 a.m. Witness: Rotenberger. One silvery-grey ellipse with a clear bubble protruding from its top, hovered about a mile away, then landed within 300 yards and took off very fast. It made a low-pitched whine during the 5 minute sighting.

Sept. 28, 1966; Wilmington, Ohio. 3:38 p.m. Witness: Clarke. Three round, oval-shaped, aluminum-colored objects with rotating rings around them. Two remained stationary, while the third varied its altitude during the 90 second sighting.

Oct. 5, 1966; Osceola, Wisconsin. Witnesses: several members of one family. One small, bright orange,

moon-shaped object remained stationary in the northeast for about 20 minutes, then suddenly took off very fast to the WNW.

Oct. 23, 1966; Southhampton, Long Island, New York. 6 p.m. Witness: Mr Acquino. One object with arms in front of it which sparkled like an arc-light. Traveled south along some power lines, then turned southwest. Made a slight humming sound during the 4 minute sighting.

Oct. 26, 1966; Cold Bay Air Force Station, Alaska. No time given. Witness: civilian control tower operator Ralston. One white object approached runway at 50' altitude. Runway lights were then turned on, and object accelerated and climbed away so fast that witness was unable to use binoculars. Sighting lasted 3 seconds.

Nov. 8, 1966; Saginaw, Michigan. At night. Witness: college graduate Annis. A group of lights that flashed and changed color hung stationary, almost touching the road, and would abruptly vanish during the 5 minute sighting.

Dec. 25, 1966; Monroe, Oregon. 33 a.m. Witnesses: civilians and military persons. Three round objects, as large as cars, gave off vapor, then became three bright reddish-orange lights. Blast at beginning of 90 minute sighting pushed one witness against a car.

Feb. 6, 1967; Odessa, Delaware. 8:45 p.m. Witnesses: Donald and Marie Guseman. One large, Saturn-shaped object--5O' in diameter and 20' high--with two bright lights, a green light on one side and a red light on the other. Hovered motionless over the trees, then slowly moved north and suddenly disappeared after 2 minutes.

Feb. 12, 1967; Grand Rapids, Michigan. 3:40 a.m. Witness: Mr. Lou Atkinson. Four fluorescent, football-shaped objects, a dull, almost grey luminous color; flew northeast in a very rigid formation for 4-10 seconds. Made a chirping noise.

Feb. 16, 1967; Stoughton, Wisconsin. 9:11 p.m. Witness: Miss Lynn Marsh. One light with faded edges seemed to follow observer in her car for 5-6 minutes.

Feb. 20, 1967; Oxford, Wisconsin. 3:10 a.m. Witness: USAF veteran/truck driver Stanton Summer. One orange-red object flew parallel to truck for 2 minutes.

Feb. 27, 1967; Grand Haven, Michigan. 8:19 p.m. Witnesses: Sheriff Grysen, wife and others. Large white light, with smaller red and green lights seen to the sides. Made almost instantaneous 90^ turn to left, shot out over road and stopped, moving too fast to follow. Sighting lasted 1 hour, 11 minutes.

March 6, 1967; Benton Harbor, Michigan. 12:01 a.m. Witnesses: Jerome Wolanin, assistant news director of radio station and former policeman, and wife. One round saucer or oval-shaped object with red, green and yellow lights around bottom rim which pulsated red. Flew level, east to west, and was joined by second object from west. First object opened top, second came over and hovered for 30 seconds and disappeared. Sighting lasted more than 40 minutes. Objects made hissing sound.

March 6, 1967; Galesburg-Moline, Illinois. 4:25 a.m. Witness: Deputy Sheriff Frank Courson. One object shaped like a rubber cup which is placed under furniture leg, with a dome set in the cup. Bottom of object spun rapidly, rim pulsated red. Approached witness and passed overhead at low altitude, making a hissing sound.

March 9, 1967; Galesburg, Illinois. 7:10 p.m. Witnesses: two housewives. One object shaped like a pancake with a rounded top; object was pulsating red, with red lights around its rim. Approached witnesses and seemed to explode with a brilliant white light that lasted 10 seconds and almost blinded

them. Then it accelerated to the north and disappeared.

March 9, 1967; Onawa, Iowa. 9:05 p.m. Witness: Jack Lindley. One bright white, saucer-shaped object, as big as a jet airliner, flew straight and fast to the east for 2 minutes.

March 22, 1967; Wapello, Iowa. 10:20 p.m. Witness: Douglas Eutsler, 15. Fluorescent, solid, multicolored lights stood still, then flew away at high speed after 1 minute.

March 24, 1967; Belt, Montana. 99 p.m. Witness: truck driver Ken Williams. One dome-shaped object, emitting a bright light, landed in a ravine. As the witness approached, it took off and settled back, hidden from the highway. Sighting lasted several minutes.

March 26, 1967; New Winchester, Ohio. 4 p.m. Witnesses: man, woman, three boys. One oval object, which looked like copper or brass with the sun shining on it, flew from southeast to northwest with tumbling motion for 30 minutes.

May 17, 1967; Rural Hall, North Carolina. 8:30 p.m. Witness: Red Ledford. One round, orange-colored object, similar in size to a small aircraft, zigzagged back and forth over a jet that was heading northeast for 5 minutes.

June 24, 1967; Austin, Texas. 3:12 a.m. Witness: artist Ray Stanford. One solid, blue-white, elliptical object flew from northwest to northeast and stopped, seemingly in response to flashlight signal, for 1.5 minutes. The object then proceeded along its original path at high speed and disappeared behind clouds. Sighting lasted 9 minutes.

June 29' 1967; Scotch Plains, New Jersey. 1:30 a.m. Witness: truck driver Damon Brown. One oyster-shaped object--2OO' wide, and 25-30' thick--with a huge red light at each end and one on the bottom, and a row of blue lights along the bottom. Circled m n aircraft, hovering then moving rapidly, and then followed the witness' car for about 500', veered south and departed at great speed after 8-10 minutes.

July 10, 1967; Lizelia, Mississippi. 5:50 p.m. Witness: golf pro Harold Washington (Capt, USMC, ret.). One object with a dome, the top colored gunmetal blue, the bottom the color of old lead. Moved east, crossed the highway tilted upward, moved to the right, accelerated and disappeared into the clouds after 3-5 seconds. Object made a swishing sound.

Oct. 18, 1967; Lake Charles, Louisiana. 9 p.m. Witness: John Herbert. One bright, fiery ball flashed four times while moving east, just above the tree tops. Sighting lasted 1 minute.

Feb. 9, 1968; Groveton, Missouri. 4:20 a.m. Witness: Mr. R.W. Bland. One object, 100' in diameter, with concave sides having "portholes" in the center of each gave off yellow-green light. Hovered 25' above ground, then moved rapidly toward the southwest. Gave off pulsating sound, like a length of wire whirled at high speed above the head. Sighting lasted 1-5 minutes.

Sept. 15, 1968; near Ocala, Florida. 9:30 p.m. Witness: missionary pilot Jay Cole, flying a Beech C-45 twin-engined utility plane. One light performed aerobatics for 15 minutes and then vanished. A second light appeared, heading toward them on a collision course, made a 90* turn and disappeared. Later, ground radar told them a target was following them. Sightings lasted 15 minutes.

Nov. 23, 1968. Newton, Georgia. 8:05 p.m. Witness: Mr. Jones, accountant. One oblong light, 120-150' wide. Hovering 75' above the ground, it emitted a beam that lit the ground. Radio gave off static, then car engine stopped. Light flew away vertically and car engine restarted itself. Sighting lasted 3-4 minutes.

Jan. 17, 1969; Crittenden, Virginia. 3:24 a.m. Witness: Mr. Roman Lupton, test facility mechanic. Several

amber lights--one of them blinking--in an elliptical formation, flew forward slowly while moving up and down, then turned and disappeared after 2 minutes. Made a humming sound.

Captain Edward J. Ruppelt

UFO Reports From His Book
The Ruppelt Record - Mock Congressional Hearing - By F. Ridge & J. Washington

A Book by Michael Hall

Origin of the UFO Phenomenon

By Michael Hall

Focusing on possibly the greatest saga of all time, *Origin of the UFO Phenomenon* documents many fascinating events long forgotten by today's sound bite generation. It is one of very few books that approaches the subject from a historical perspective. Casting the story in the aura of the past with the mystery already inherent in the phenomenon, Mr. Hall has produced a true to life science fiction thriller. It's chilling, it's mystifying, and it's amazing because it is a very real part of our history.

The stories comprising the book are taken from the best sources available. The first chapters deal with the period from 1896 to 1946 which contain interesting legends and lore. Those years, however, do produce descriptions of not just the classic image of the "flying saucer," but a whole host of strange aerial phenomena that continues to be seen to this day. When the reader comes to 1947, a very shocking and more contemporary story unfolds. That year started the first large "wave" of UFO sightings. The term UFO, however, was yet to be coined, and in the early years saucers or discs were the catch words after a very famous sighting by Kenneth Arnold on June 24th. The phenomena rocked not only the United States but also the world. Beginning in force by July 4th of that year, shiny discs were being seen by hundreds. During that long Independence Day weekend the sightings dramatically increased in frequency from day to day. By July 6th, saucer reports made the front page of the New York Times and would do so for the next three straight days as the military started flying special "saucer patrols" in an attempt to intercept one of the mysterious discs. Every major city and most small towns around North America had sightings which were followed by similar accounts in other countries. Military men, scientists, doctors, lawyers, politicians, engineers, airline pilots, and just everyday citizens were seeing the strange objects, but what were they? Hall's book takes no position, it simply documents the facts.

The reports climbed to as many as a hundred a day from July 6th until July 11th. Then after the 11th, they suddenly declined. As 1947 progressed, only a few sightings were made, but fortunately in the United States the military had laid the groundwork for a very serious investigation of the incidents. By 1948 UFO activity picked up and accounted for some spectacular "classic" cases with a great many reports coming close together in 1949. From that year through 1951 many notable accounts also came to light but unfortunately were not properly investigated. For some unexplainable reason the Air Force had purged its best aeronautical engineers from the project by that point.

By 1952, the most famous UFO wave unfolded. Incidents became so numerous in the United States that in July the Democratic National Convention had to fight for headline space with the flying saucers-especially after they appeared over the White House. Virtually every American newspaper carried the accounts. Where reporters had previously come to take the subject somewhat lightly, by 1952 serious stories made page one features and portrayed notable public figures expressing concern. Fortunately for historians, Air Force Intelligence was then documenting dozens of reports per day via a revived investigation under the very able administration of Captain Edward J. Ruppelt. Ruppelt popularized the term UFO and served as Chief of Air Force investigations on the phenomenon until mid 1953.

Shortly thereafter the UFO saga in the United States becomes much harder to follow. This came about after the 1952 wave scared the United States government into doing something about the situation. They couldn't stop the sightings, but they did think they could discourage interest in the subject and prevent a possible hysteria - a real concern during that very hot period of the Cold War. Thus the book concludes its survey with the end of 1953.

Michael David Hall has previously authored a biography on Indiana Senator Henry S. Lane. In The Road To Washington, Rise of an Indiana Politician, Hall traces the drama that took Lane from the

chairmanship of the first national Republican Convention in 1856 to his influence four years later in securing Abraham Lincoln with his party's nomination. Dozens of magazine articles on Indiana history followed that work. Several of those continued Mr. Hall's research on the former Indiana senator, taking him from a congressional legislator who worked with Daniel Webster and Henry Clay, to the founder of the Indiana Republican Party, and then on to a powerful Civil War era senator.

Hall holds a B.A. from Illinois College and an M.A. from Western Illinois University in American History. In 1984 he began a museum career at the Illinois State Museum and since 1987 has served as Executive Director of the Montgomery County Historical Society and its Henry S. Lane Historic Home in Crawfordsville, Indiana.

Currently the author is working on a new book, *A Time To Remember, The UFO Wave of 1952* and a co-authored article with researcher Wendy Connors for the *International UFO Reporter* dealing with legendary Project Sign figure, Alfred Loedding. Soon an expanded version of *Origin of the UFO Phenomenon* will be published, titled *UFOs, A Century of Sightings: The Truth Revealed* detailing the subject all the way up to present day.

As he pursues his research he finds diversion in aviation history as a part time guide at the United States Air Force Museum in Dayton, Ohio. Hall also has interest in the era of the great steam trains, serving as a director at the Linden, Indiana, Monon-Nickel Plate Railroad Museum and Historical Society. Residing in Lafayette, Indiana, with his wife Teresa and their collection of five pampered stray cats, both Mr. and Mrs. Hall developed interests in that area's rich heritage in transportation history spawned by technological influences from nearby Purdue University. In fact, Mr. Hall has taken advantage of his proximity to Purdue to further his studies in history and plans in the near future to complete his Ph. D. in American History.

Interest in the subject of UFOs began quite by accident while working at Purdue on a paper analyzing the effects of American daylight bombing raids on Germany. Mr. Hall then happened across some obscure UFO accounts filed by allied pilots. Called foo-fighters in those days, the stories he found fascinated him. As he came to realize what a huge volume of primary material existed on UFOs in the nation's archives, Hall knew he had an amazing story to tell.

MESSAGE SLIP

FI-4 PRELIMINARY REPORT

Date of sighting _____ Time _____ AM PM (Circle One)

City _____ State _____

DESCRIPTION:

Shape_____

Estimated size_____

How many witnesses? _____Sound_____

Distance _____ Altitude_____

How long did you watch it?_____

PHYSICAL CHARACTERISTICS: (Check appropriate boxes)

( ) Light form only
( ) Animal reaction
( ) Psychological event
( ) Electromagnetic event
( ) Humanoid or entity case
( ) Vehicle/device
( ) Physical trace
( ) Physiological event
( ) Landing/touchdown
( ) Time loss/memory loss

FLIGHT CHARACTERISTICS:

( ) Passed overhead
( ) Type 2, Under cloud ceiling
( ) Type 4, Continuous flight
( ) Type 1, Within 200' of ground
( ) Type 3, Change in motion
( ) Type 5, Stationary target

REPORTING PARTY:

Name_____

Address_____

City/State/Zip:_____

Age _____ Home phone _____ Office phone_____

Created by Francis Ridge.

Initial Form/Material Check List

Case ID/Date_____ Witness _____

Based on the Message Slip & preliminary report, this is the list of all forms/materials that is to be used in the investigation. The date and location of each action will be listed in the SIGHTING INVESTIGATION ACTIVITY LOG.

( ) Form 1, General Case

( ) Form 2, Computer Input Form

( ) Form 3, Electrical/Magnetic Case

( ) Form 4, Animal Effect Case

( ) Form 5, Psychological/Physiological Effects

( ) Form 6, Landing Trace Case

( ) Form 7, Entity Case

( ) Form 8, Photographic (or video) Case

( ) Form 9, Radar Case

( ) Form 10, Residual Radiation

( ) Form 11, Aerial Sighting Report

( ) Drawing of object (separate from on Form 1)

( ) Map of region

( ) News clippings

( ) Photos/videos

( ) Recording tape, audio

FINAL REPORT CHECKLIST

Date _____

The report of a claimed event (UFO sighting and/or abduction),

witnessed by _____ on _____ is attached. The current case record is considered complete. Included in this report are the following checked items:

( ) SIGHTING BACKGROUND. A description of the circumstances surrounding the receipt of the initial UFO sighting information or abduction report. Simply attach copy of initial report form or message slip

( ) SIGHTING ACCOUNT. Form 1, General Cases (or signed statement), should include witness notes or brief chronological composite or consolidation of the UFO sighting account. Other Forms needed depending on the type of report attached and noted on the Initial Form/Material Check List.

( ) SIGHTING INVESTIGATION. Activity Log. Simple chronological log by date, time, and place denoting the tasks the FI carried out during the investigation. (Actually, part of the FI Notes).

( ) INTERVIEW AND INTERROGATION. FI Notes. A description of the interview and interrogation. This should include where and how the interview took place (mail, telephone, or onsite).

( ) ADDITIONAL WITNESS CHECK. FI Notes. The circumstances surrounding how, when, and where additional witnesses were located and any subsequent interviews and interrogations including the FI's personal impressions of these witnesses and their home environment, interests, etc.

( ) SOURCE TESTS. A list of what natural or man-made objects were checked in an effort to identify the stimulus for the reported UFO is attached to this report. The reasons for rejecting or suspecting each, as being the stimulus should be clearly noted.

( ) WITNESS BACKGROUND CHECK. FI Notes. A list of the persons checked, their comments about the witness's character and their relationship to the witness. This section should include the FI's impressions of the witness personality, credibility, etc.

OTHER DATA NEEDED. Includes other forms, drawings, as needed for special evidence.
( ) Forms _____
( ) Drawings _____
( ) Other _____

( ) COMMENTS INTERROGATING Fl. (Fl Notes).

Sightings From Aircraft

NICAP Sighting Information Database - Sightings listed as Category 11

Updated: 12/16/2014
There are over 4,000 incidents involving sightings from aircraft which have been documented (Haines). And although this page is under construction, it contains many of the best and most important cases. The more recent events were taken from UFO Evidence II (Hall). Just a few. If you find an important case that is NOT listed, please email me at: nicap@insightbb.com

Incidents involving Distant Encounters (Cat 1), Close Encounters (Cat 2), E-M (Cat 3), Animal Effects (Cat 4), Medical Effects (Cat5), Trace Cases (Cat 6), Entities (Cat 7), Photographs (Cat 8), Radar (Cat 9), and Radiation Cases (Cat 10), are listed on their appropriate pages at Evidence By Categories.

Category 3 - E-M Cases

Electromagnetic Effects

NICAP originally listed 81 primary cases in its June 1960 report. The UFO Evidence (1964) listed 106 cases of E-M Effects. Later, Mark Rodeghier (CUFOS) compiled a list of over 500 incidents. Dr. Richard Haines catalogued 185 involving aircraft, alone.

Other Categories, involving Distant Encounters (Cat 1), other Close Encounters (Cat 2), Animal Effects (Cat 4), Medical Effects (Cat 5), Trace Cases (Cat 6), Entities (Cat 7), Photographs (Cat 8), Radar (Cat 9), Radiation (Cat 10), or Sightings From Aircraft (Cat 11), are listed on their appropriate pages at Evidence by Categories. If you find an important E-M case that is NOT listed, please email me at: skyking42@gmx.com

INCIDENT SUMMARY SHEET

latter part of 47 Incident No. 225

1. Date and Time of Observation: 3 or 4th Nov 48 - 2130 hours & 23 Nov 48 (All sightings occurred approx 2200 hours)
2. Where Sighted: 10 miles east of Vaughn, N. M. - Highway 60 on 3 or 4th Nov 48
3. Observer's Position: ground - while driving (i. e., ground, air, control tower, etc.)
4. Name and Address of Observer: Col W. P. Hayes, Inf., Executive, New Mexico Military District
5. Occupation and/or hobbies: As above
6. Attention Attracted by: N/S
7. Number of Object( ) Seen: 1
8. Size of Object(s): 1 foot in diameter
9. Color of Object(s): bright white changing to bright fiery red color as it exploded
10. Shape (Sketch if Possible) ball
11. Nature of Luminosity: "like miniature sun" (directed beam of light?)
12. Altitude of Object: (estimated) From 500 ft when first observed to 100-200 ft from ground where it burst in a spray of reddish color
13. Estimated Distance of Object from Observer: 40 to 60 yds on one sighting and about 400 yds at another
14. Estimated Speed of Object: Slow descent
15. Time in Sight: N/S - Had time to get out of car and watch object which appeared to explode 40 to 60 yds in front of him at an altitude of 200 ft.
16. Tactics: slow vertical descent
17. Sound Made by Object(s): none - although he was within 40 to 60 yds of obj. & outside of car. See "Details" at Albuquerque, N.M.
18. Direction of Flight of Object(s) Vertical descent
19. Apparent Construction: fireball
20. Effect on Clouds: N/S - weather clear
21. Exhaust Trail Color of): N/S
22. Manner of Disappearance: exploded - fragments assuming a fiery red color which descended toward earth like numerous sparks but extinguished before reaching ground
23. Weather Condition at Time of Sighting: Clear
24. Peculiarities Noted: Noticed always around 2200 hours - in the vicinity of Vaughn - Highway 60
25. Summary of Incident: (over)

SUMMARY OF INFORMATION

The following information has been received from the Fourth Army Intelligence Liaison Officer, Sandia Base, Albuquerque, New Mexico, dated 6 December 1948:

"Colonel W. P. Hayes, Inf., Executive, New Mexico Military District reports as follows:

"'On 3 or 4 November 1948 at approximately 2130 hours, I observed a ball of light, reddish white in color, 1 foot in diameter, falling vertically. The ball burst 100-200 feet from the ground in a spray of reddish color which extinguished before reaching the ground. This occurred about 400 yards north of the road on which I was driving. The location was approximately 10 miles east of Vaughn, New Mexico, on Highway 60. (B-2)

"'On 23 November 1948 at approximately 2130 hours, I was driving west on Highway 60, about 10 miles west of Vaughn, New Mexico. I observed a ball of light, descending vertically, which burst 100-200 feet from the ground. The conditions and appearance were the same as occurred on 3 - 4 November.' (B-2)

"Colonel Hayes stated that he did not report the incidents as he thought they might have been connected with some Air Force exercises. He further stated that he heard no sound or saw no aircraft during either incident, which is understandable as he was travelling in a closed automobile. Weather conditions were clear." (B-2)

THIS PAGE IS UNCLASSIFIED

Incident: 225

Colonel Hayes first observed an unusual aerial phenomena during the latter part of 1947. This occurred in the vicinity of Vaughn, N. M. The phenomena appeared approximately 400-500 ft above the ground when first observed and was descending slowly and steadily in a vertical manner toward the earth. It appeared slightly larger than a basketball, bright white in color like a miniature sun. At a point approximately 200 feet above the surface of the earth, the object appeared to explode although no noise was apparent. By this time the Colonel had stopped his automobile and had gotten out to watch the object. The explosion or disintegration appeared to be taking place some 40 to 60 yards distant and still no noise was noticed. At this time the fragments assumed a fiery red color and descended toward earth like numerous sparks being extinguished before touching the ground. At the time Col Hayes was on Highway 60, near a railroad and separated from the vicinity where the fragments were landing by a fence. He did not cross the fence or investigate further.

On 3 or 4 Nov 48 at approximately 2130 hours he observed a ball of light, reddish white in color, 1 foot in diameter, falling vertically. The ball burst 100-200 feet from the ground in a spray of reddish color which extinguished before reaching the ground - this occurred about 400 yards north of the road on which he was driving - 10 miles east of Vaughn, N. M. - Highway 60.

On 23 Nov 1948 at approximately 2130 hours, Col Hayes was driving west on Highway 60 - approximately 10 miles west of Vaughn, N. M. He again observed a ball of light descending vertically. It burst 100-200 feet from the ground - Conditions and appearance were the same as on 3 and 4th Nov.

Col Hayes

On the last 2 sightings/saw no aircraft and heard no sound which is understandable since he was traveling in a closed automobile. Weather conditions were clear.

EVALUATION B-2.

HEADQUARTERS UNITED STATES AIR FORCE
THE INSPECTOR GENERAL
OFFICE OF SPECIAL INVESTIGATIONS

REPORT OF INVESTIGATION

FILE NO. 24-5 | DATE 13 Dec 48

REPORT MADE BY: CHARLES HAFFNER, Jr.

REPORT MADE AT: DO #17, Kirtland AFB

PERIOD: 6 - 9 December 1948

OFFICE OF ORIGIN: DO #17, Kirtland AFB

STATUS: PENDING

TITLE: UNKNOWN

(Aerial Phenomena)

CHARACTER: SPECIAL INQUIRY

REFERENCE: None, this is an initial report.

SYNOPSIS:

#1 AF Pilot
#2 Civilian Pilot

Investigation requested by District Commander, 17th District OSI.

Telephonic report received from Security Officer at Kirtland Air Force Base, Kirtland Field, New Mexico, on 6 December 1948, advised that an Air Force Pilot had observed an unidentified object similar to a green flare on 5 December 1948, at 2105 hours, west of Las Vegas, New Mexico, and again at 2127 hours on the east slope of the Sandia Mountains near Albuquerque, New Mexico. A commercial pilot reported a similar incident at 2135 hours west of Las Vegas, New Mexico.

Pilot of C-47, AF-9921, is identified as Captain A. GOADE, AO-55463, Captain Pilot of Pioneer Flight No. 63 is identified as Mr. ERNEST VAN LLOYD.

New Mexico State Police, Santa Fe, New Mexico, were contacted and had no information to offer reference unusual aerial phenomena.

Mr. K. D. BLOCK, Forest Supervisor, Santa Fe National Forest, Santa Fe, New Mexico, stated he has received no reports of incidents of this type during the current year. However, in the summer of 1947 a Mrs. MADELINE G. MERCHANT had made numerous reports to him concerning unusual aerial manifestations in the area from Tierra Amarilla to Los Alamos, New Mexico.

SYNOPSIS (Continued)

Chief MATT O'BRIEN, Chief of Police, Las Vegas, New Mexico, stated he had received no prior reports of unusual occurrences of this type.

Patrolman ROLAND UTZ, New Mexico State Police, Las Vegas, New Mexico, stated he had heard a rumor concerning aerial fliers in the neighborhood of Las Vegas.

Mrs. JOSEPH MARSHALL, Office Manager, Las Vegas Flying Service, Las Vegas, New Mexico, stated no night flying conducted from Watson Airport, Las Vegas, and she had heard no rumors concerning aerial flares.

Mr. J. D. MILLER, Chief Aircraft Communicator, CAA Municipal Airport, Las Vegas, New Mexico, stated he had heard of no incident of this nature and, in particular, had received no information from any aircraft on 5 December 1948.

Mr. JOHN J. HERMAN, Mr. K. C. FRANCIS, Mr. C. T. RICH, and Mr. ROY W. TOLLIVER, Aircraft Communicators, CAA, Las Vegas, New Mexico, all stated no previous reports or knowledge of unusual aerial phenomena. These individuals were alerted to report future incidents to the proper investigative agency.

Mr. BILLIE R. WATSON, Manager Pioneer Air Lines, Las Vegas, New Mexico, stated he had heard only a rumor from one of his pilots and knew of no unusual incidents regarding flares or lights in the Las Vegas area. Mr. WATSON stated he would report future incidents to Mr. MILLER of CAA.

Mr. WILLIAM BRAINARD, Manager, Las Vegas, New Mexico, stated he had no knowledge of any incidents of this type and will submit any future reports to Mr. FLOCK in Santa Fe.

Special Agents STAHL and KERF observed an intense green light in the sky at approximately 13,500 feet altitude near Las Vegas, New Mexico, on 5 December 1948. Agents were unable to identify this object and could not estimate distance or size, since no other object was visible on which to base the comparison.

Col. WILLIAM P. HAINES, stated he has observed an unusual phenomena, bright, white in color, similar to a miniature sun somewhat larger, larger than a basketball, on three (3) different occasions in the vicinity of Vaughn, New Mexico. First observation was made late in 1947; second observation on 3 or 4 November 1948; third observation on 25 November 1948.

Dr. LINCOLN LA PAZ, Director, Institute of Meteoritics, University of New Mexico, stated that phenomena being investigated could not be explained by him, nor could they be considered as meteors. Dr. LA PAZ

SYNOPSIS (Continued)

mentioned three (3) previous anomalus incidents, the Memphis, Tennessee, incident of 7 May 1948; the Texas Observers' incident of 1948, 7 January, and the very remarkable "fireball" fall of 1948, 31 May, 3:42 a.m., MST, across the Los Alamos reservation which was probably meteoritic, but from which no meteorites have been secured in spite of careful search. Dr. LINCOLN LA PAZ personally witnessed the occurrence of a similar incident on 12 December 1948, at Las Vegas, N. M. A statement by Dr. LA PAZ is inclosed.

Col. HAROLD A. GUNN, Base Commanding Officer, Kirtland Air Force Base, Kirtland Field, New Mexico, advised that he knew of no maneuvers being conducted within this area.

Major WILLIAM P. GORDON, 4th Army Intelligence Liaison, Sandia Base, Albuquerque, New Mexico, advised that he knew of no maneuvers being conducted within this area.

Mr. JOSEPH M. TOULOUSE, ESO Security, Sandia Base, observed a green flare directly over Sandia Base at 2255 hours, 6 December 1948.

DETAILS:

AT ALBUQUERQUE, NEW MEXICO

1. This investigation predicated upon a verbal request District Commander, 17th District Office of Special Investigations (IG) USAF, Kirtland Air Force Base, Kirtland Field, New Mexico.

2. This is a joint investigation of Special Agents JOHN J. STAHL, Jr., HERMAN E. [redacted], KELVIN E. [redacted], and the writer.

3. On 6 December 1948, Captain JOSEPH HARLEN, Security Officer, Kirtland Air Force Base, Kirtland Field, New Mexico, reported the following incidents:

5 Dec 48 Goade

At 2130 hours, 5 December 1948, a C-47, Number AF-9921, enroute from Lowry Air Force Base, Denver, Colorado, to Williams Air Force Base, Chandler, Arizona, reported his position to the Control Tower, Kirtland Air Force Base, as being approximately ten (10) miles east of Albuquerque. Pilot stated that he had seen a green flare arise from the ground to an altitude of approximately five hundred (500) feet on the east slope of the Sandia Mountains. This incident occurred at about 2127 hours. Pilot stated that he had seen the same type of flare at approximately 2105 hours just west of Las Vegas, New Mexico. No other information was offered by this pilot.

5 Dec 48 Van Lloyd

At 2300 hours, 5 December 1948, the Control Tower, Kirtland Air Force Base, contacted Pioneer Air Flight #63, which had just completed a flight from Tucumcari, New Mexico, to Las Vegas, to Santa Fe, to Albuquerque, New Mexico. Captain of this flight stated he had seen a green light just west of Las Vegas at approximately 2135 hours. Pilot stated he had believed the light to be a shooting star at first, but, upon questioning, stated the opinion that the light was too near the ground to have been a shooting star. Pilot suggested that the light could have been a Very Pistol flare.

5 Dec 48

At 2320 hours, 5 December 1948, Captain VAN LLOYD, pilot of Pioneer Flight #63, reported by telephone to Kirtland Air Force Base Control Tower, stating that when he first saw the light it appeared to be coming straight toward his airplane and added that he had attempted to jerk the airplane from its course to avoid the light. VAN LLOYD said that the light appeared to be coming straight to the ship, then trailed off to the ground. The light was pale green and had a pale green trail. Captain VAN LLOYD said he was hesitant about reporting such incidents since they are generally not accepted.

4. On 6 December 1948, ERNEST VAN LLOYD, Captain and Pilot, JAMES L. SMITH, Co-pilot, and ELIZABETH CONNER, Flight Hostess, all

THIS PAGE IS UNCLASSIFIED

[redacted] UNCLASSIFIED

civilians, Pioneer Flight #63, were interviewed by S/A MELVIN H. HENRY. This interview was conducted at Pioneer Airline Operations, Kirtland Air Force Base, Kirtland Field, New Mexico. VAN LLOYD and SMITH advised that at 2135 hours, 5 December 1948, they were approaching Las Vegas, New Mexico, in a C-47 type airplane at an altitude of 9,000 feet, with a compass heading of 272 degrees. They observed directly ahead and slightly above their altitude, in the vicinity of the Montezuma Mission, a phenomenon which first appeared as a bright white flash, then an object came into view which was described as being a whitish, orange color. This object at first appeared to be coming directly toward their airplane, then arched downward and disappeared from sight. This object was in view for only a few seconds and no estimate could be made of the size or distance of the object. Both VAN LLOYD and SMITH were of the opinion that it would have been impossible for anyone in the passenger compartment to have observed this phenomena. Miss CORNER stated that she did not observe this object and added that to the best of her knowledge all of the passengers were asleep.

NOTE: It is to be noted that there is a discrepancy in the color of Capt. VAN LLOYD's initial report and that obtained by interview.

5. On 9 December 1948, Colonel WILLIAM F. HAYNS, Infantry, Civilian Component Affairs Officer, New Mexico Military District, was interviewed in his office, Building T-25, Kirtland Air Force Base, Kirtland Field, New Mexico. This interview was conducted by S/A JOHN J. SEAEL, Jr., S/A MELVIN H. HENRY, and the writer. Colonel HAYNS advised that he had first observed an unusual aerial phenomena during the latter part of 1947. This occurred in the vicinity of Vaughn, New Mexico. The phenomena appeared to be approximately four or five hundred feet above the ground when first observed and descending slowly and steadily in a vertical manner toward the earth. The object appeared to be slightly larger than a basketball, bright white in color, like a miniature sun. Upon reaching a point approximately two hundred feet above the surface of the earth, the object appeared to explode although no noise was apparent. Colonel HAYNS stopped his automobile and got out to watch the object. At this time the explosion, or disintegration, appeared to be taking place some forty to sixty yards distant, and still no noise was noticed. At this time the fragments assumed a fiery red color and descended toward earth like numerous sparks, being extinguished before touching the ground. Colonel HAYNS stated that he was on Highway #60 at this time, near a railroad and separated from the vicinity where the fragments were landing by a fence. Colonel HAYNS did not cross the fence or investigate further.

6. Colonel HAYNS advised that on either 3 or 4 November 1948, an again on 23 November 1948, he observed two similar phenomena as described previously. These observations were in the same vicinity of the original phenomena on Highway #60, near Vaughn, New Mexico. All three of these incidents occurred at approximately 2200 hours. Col. HAYNS

[redacted] UNCLASSIFIED

also advised that as far as he knew no maneuvers were being held by the National Guard or the Reserve Units in New Mexico.

NOTE: Colonel HAINS did not report any of these incidents, but upon receiving information of similar occurrences having been observed, did volunteer the information contained in this report.

7. On 9 December 1948, Dr. LINCOLN LA PAZ, Director, Institute of Meteoritics, University of New Mexico, Albuquerque, New Mexico, was interviewed in his office by Special Agent MELVIN H. HENN. Dr. LA PAZ produced his credentials which indicated that during the 2nd World War he was Technical Director, Operations Analysis Section, Hq., 2nd Air Force, and is closely associated in an official capacity with Dr. H. B. LANDSBERG, Executive Director, Committee on Geophysics and Geography, Research and Development Board, Pentagon, Washington, D. C. In connection with this capacity he has a secret and a top secret clearance by the Air Material Command, Wright-Patterson Air Force Base, Ohio.

8. Dr. LA PAZ explained the behavior of meteors and stated that those phenomena being investigated could not be explained or be considered as meteors. He advised, in view of the unexplained Memphis, Tennessee, incident, the occurrence at Los Alamos, New Mexico, and the proclaimed meteorites fall in Russia, that has not been explained, that the present phenomena should be investigated and an attempt be made to identify them.

9. On 13 December 1948, Dr. LA PAZ gave a statement concerning an incident, which he witnessed at 9:03 p.m., on 12 December 1948. Dr. LA PAZ's statement is inclosed as Incl. No. 1.

10. On 11 December 1948, Major WILLIAM P. GODSON, 4th Army Liaison Intelligence Officer, Sandia Base, New Mexico, advised S/A M. C. HENN, that there were no maneuvers in this area, and no experiments involving the use of rockets or flares.

11. On 12 December 1948, Col. HAROLD A. GUNN, Base Commander, Kirtland Air Force Base, Kirtland Field, New Mexico, was interviewed by S/A MELVIN H. HENN. Col. GUNN advised that he knows of no aerial maneuvers, and feels that in the event that there were, he would be so advised.

AT CHANDLER, ARIZONA

12. On 7 December 1948, S/A HERMAN H. HUNTER, reported from Williams Air Force Base, Chandler, Arizona, that Air Force C-47, Number AF-9921, was piloted by Captain A. GOADE, AO-55983. The co-pilot was determined to be Major R. M. GARNER, AO-40767, and the Flight Engineer was M/Sgt. R. G. WALKER, AF-299736 - (unknown in its entirety). All of the above personnel were reported to be permanently stationed at Randolph Air Force Base, San Antonio, Texas, and were enroute from San Antonio,

Texas, to Williams Air Force Base, Arizona. Aircraft and crew departed for Mather Air Force Base, California, before an interview could be conducted.

AT SANTA FE, NEW MEXICO

13. On 5 December 1948, Captain K. K. MILLER, New Mexico State Police, State Police Headquarters, Highway 85, Santa Fe, New Mexico, was interviewed reference possible previous reports concerning unusual aerial phenomena, flares, lights in the sky, etc. Captain MILLER stated no reports had been received by his office from any of the State Police stationed throughout the state of New Mexico.

NOTE: Captain MILLER stated that he would report any incidents of this type to the State Police Office in Albuquerque and request that they contact the Office Of Special Investigations, Kirtland Air Force Base, Kirtland Field, New Mexico.

14. On 5 December 1948, Mr. K. D. FLOCK, Forest Supervisor, Santa Fe National Forest, Federal Court House Building, Santa Fe, New Mexico, was interviewed reference possible previous reports concerning unusual aerial phenomena, flares, lights in the sky, etc. Mr. FLOCK stated that he had received no reports of incidents of these types during the current year; however, in the summer of 1947, a woman named MARELINE S. MERCHANT (LNAB) P. O. Box 265, Santa Fe, New Mexico, had reported unusual aerial manifestations to him on numerous occasions. Mrs. MERCHANT, a writer, and her husband were prospecting throughout the State of New Mexico, and on at least five different occasions, during a period of five to six weeks, Mrs. MERCHANT had visited Mr. FLOCK and reported having observed objects which she described as being 'cigar-shaped with a glowing tip' in the sky. No information was available as to the altitude, size, speed, or frequency of these objects. Mrs. MERCHANT stated that she had personally observed these objects from Pierce Amarilla, New Mexico, to Los Alamos, New Mexico. Mrs. MERCHANT is believed to have contacted the military security personnel at Los Alamos Atomic Energy Commission (LAAD) installation, and also to have contacted the Governor of New Mexico reference her observations. It is not believed that Mrs. MERCHANT is now residing at Santa Fe.

15. Mr. FLOCK stated that he had alerted his Forest Rangers to watch for unusual lights or objects in the sky, but to date had received no reports from them. Mr. FLOCK recommended that WILLIAM BRATHARD, Forest Ranger, Las Vegas, be contacted for a report of possible activities of this nature in the Las Vegas area.

NOTE: Mr. FLOCK was unusually cooperative and security-conscious. Mr. FLOCK stated that he would discreetly alert his Rangers again and have them report to him all incidents of this nature immediately. These reports will be transmitted in turn to the Office of Special Investigations, Kirtland Air Force Base, Kirtland Field, New Mexico. Mr. FLOCK stated also that he would be glad to cooperate by permitting members of the Office of Special Investigations to make use of temporarily inactive fire towers, or ranger stations, upon request.

AT LAS VEGAS, NEW MEXICO

1. On 8 December 1948, Mr. Matt O'BRIEN, Chief of Police, Sixth and University, Las Vegas, New Mexico, was interviewed reference reports of unusual aerial phenomenon. Chief O'BRIEN stated that he had received no reports of this nature and added that this was the first he had heard of possible occurrences in the vicinity of Las Vegas. Chief O'BRIEN recommended that NOLAND UTZ, State Police, on duty in Las Vegas, be contacted.

2. On 8 December 1948, Patrolman NOLAND UTZ, New Mexico State Police, San Miguel County Court House (Old Town), Las Vegas, New Mexico, was interviewed reference reports on unusual aerial phenomenon. Mr. UTZ stated he had received no reports of this nature and added that only on one occasion had he overheard a conversation about aerial flares in the neighborhood of Las Vegas. This conversation occurred during a meeting of several enforcement agents and Mr. UTZ stated he had no idea who had mentioned the subject. Mr. UTZ stated if he received reports of this type he would report same to the proper Federal agency. Mr. UTZ said that possibly a man named "HOUSE" who was flying a plane locally and doing advertising with a loud speaker attached to the plane could throw some light on the flares claimed to have been seen in the vicinity of Las Vegas.

3. On 8 December 1948, Mrs JOSEPH MARSHALL, Office Manager, Las Vegas Flying Service, Watson Airport, East County Road, Las Vegas, New Mexico, was interviewed reference reports of flares observed at night in the vicinity of Las Vegas. Mrs. MARSHALL stated that she was the wife of JOSEPH MARSHALL, Owner of Las Vegas Flying Service. Mrs. MARSHALL stated that business was unusually slow at the Watson Airport, due to the near-abolishment of training of student pilots under the G.I. Bill. No flying is conducted at night from this air field. Mrs. MARSHALL added that possibly information could be obtained from the local newspaper office and added that she had heard no reports on flares in the Las Vegas area.

NOTE: Contact was not made with the local newspaper due to a desire of keeping publicity about this investigation to a minimum.

4. On 8 December 1948, Mr. J. D. MILLER, Chief Aircraft Communicator, Department of Commerce, Civil Aeronautics Administration (hereinafter referred to as C.A.A.), Box 1029, Municipal Airport, Las Vegas, New Mexico, was interviewed reference possible previous reports of unusual aerial phenomenon. Mr. MILLER stated he had heard of no incident prior to this interview and added that he was very much interested in events of this nature. Mr. MILLER stated he had received no information from any aircraft on 5 December 1948. A check of the C.A.A. records for this date verified this statement. Mr. MILLER stated that beginning immediately he would alert his Aircraft Communicators to report promptly incidents of this nature to him. These reports would in turn be reported to the Office of Special Investigations, Kirtland AFB, Kirtland Field, New Mexico. If the reports appear to necessitate immediate investigative action, a report will be made to a Federal agent residing in Las Vegas. Mr. MILLER requested that four of

THIS PAGE IS UNCLASSIFIED

UNCLASSIFIED

his six Aircraft Communicators, on duty at time of interview, be interviewed collectively and informed briefly of the type of reports desired and the necessity for reporting such incidents immediately to Mr. MILLER.

5. On 8 December 1948, Mr. JOHN J. NEWMAN, Mr. K. C. FRANCIS, Mr. C. T. RICH, and Mr. ROY W. TOLLIVER, Aircraft Communicators, C.A.A. Municipal Airport, Las Vegas, New Mexico, were interviewed collectively and informed of the investigation being conducted relative to unusual aerial phenomena. None of these men had received previous reports of this nature. All of these men agreed to maintain this information on a discreet basis and to handle the information as being highly classified. Permission was granted to these four communicators to brief the two communicators absent at this time reference the information desired. The two men absent were listed as Mr. IRWIN L. MERICLE and Mr. ROBERT L. BISH. The four communicators interviewed stated that the only night flying at Municipal Airport, Las Vegas, was by the two commercial airlines located there; Pioneer Airlines and Continental Airlines. It was pointed out that a Mr. LLOYD BIBLE, Owner-Manager of a flying school located on Municipal Airport was not licensed to make night flights and was not authorized to permit his students to fly at night. It was further noted that Mr. WOODROW HOUSE, owner of a Piper Super Cruiser used for advertising purposes in the vicinity of Las Vegas, was not licensed to fly at night.

6. On 8 December 1948, Mr. BILLY R. WATSON, Manager, Pioneer Airlines, Municipal Airport, Las Vegas, New Mexico, was interviewed reference reports on unusual aerial phenomenon. Mr. WATSON was interviewed in his home, 816 Fourth Street, Las Vegas, New Mexico, and stated that with the exception of a rumor from one of his Pioneer pilots (Mr. VAN LLOYD) he had heard of no unusual incidents regarding flares or lights in the sky in and around the Las Vegas area. Mr. WATSON stated that he would stay on the alert in an attempt to gather any future information from pilots or crew members of Pioneer Airlines, but added that he did not feel like confiding in his two assistants, since they were very youthful and would undoubtedly disclose information regarding this investigation. Mr. WATSON stated that a Mr. W. R. McGOVERN, home address, 1001 Sixth Street, Las Vegas, Manager of Continental Airlines was presently out of town but was due to return on Friday, 10 December 1948. Mr. WATSON, upon being requested to do so, stated he would discreetly brief Mr. McGOVERN as to the nature of reports desired, and would impress Mr. McGOVERN as to the confidential classification of this investigation. Mr. WATSON concluded by stating that any information he obtained, and information obtained by Mr. McGOVERN, would be reported to Mr. MILLER of C.A.A. for subsequent transmittal to the proper investigative agency.

7. On 8 December 1948, Mr. WILLIAM BRAINARD, Ranger, Santa Fe National Forest Service, Federal Post Office Building, Las Vegas, New Mexico, was interviewed reference possible previous reports of unusual aerial phenomenon. Mr. BRAINARD stated that at no time in the past since his assignment to Las Vegas in February 1948 had he received any report or observed any incident regarding occurrences of this nature. Mr. BRAINARD said he would report any future incidents of this type to Mr. FLOCK in Santa Fe, for subsequent transmittal to the investigative agency concerned.

[redacted] UNCLASSIFIED

AT LAS VEGAS, NEW MEXICO

This is a joint investigation conducted by Special Agents JOHN J. STAHL, Jr. and MELVIN E. NEEF.

At 1745 on 8 December 1948, Special Agents STAHL and NEEF, both rated pilots, took off from Kirtland Air Force Base, Albuquerque, New Mexico, in a T-7 type aircraft. At 1833 while flying at an indicated altitude of 11,500 feet, mean sea level, approximately 5,000 feet above terrain, a strange phenomenon was observed. The exact position of the aircraft at the time of the observation was 35° 31' North - 104° 51' West, approximately twenty (20) miles east of the Las Vegas, New Mexico, radio range station. At the time of the observation the aircraft was flying on a compass course of 90°, the indicated air-speed was one hundred sixty (160) miles per hour and the ground speed was approximately one hundred ninety miles per hour. Special Agent STAHL was flying as pilot and seated on the left side of the cockpit. Special Agent NEEF was flying as co-pilot and was seated on the right side of the cockpit. Special Agent NEEF first observed the phenomenon and a split second later Special Agent STAHL saw it. At an estimated altitude of 2,000 feet higher than the airplane or 13,500 feet above mean sea level a brilliant green light was observed coming toward the airplane at a rapid rate of speed from approximately 30° to the left of course, from 60° ENE, to 240° WSW. The object was similar in appearance to a burning green flare of common use in the Air Forces. However, the light was much more intense and the object appeared to be considerably larger than a normal flare. No estimate can be made of the distance or the size of the object since no other object was visible upon which to base a comparison. The object was definitely larger and more brilliant than a shooting star, meteor or flare. The trajectory of the object when first sighted was almost flat and parallel to the earth. The phenomenon last approximately two (2) seconds at the end of which the object seemed to burn out. The trajectory then dropped off rapidly and a trail of glowing fragments reddish orange in color was observed falling toward the ground. The fragments were visible for less than a second before disappearing. The phenomenon was of such intensity as to be visible from the very moment it ignited and was observed a split second later. It was not possible for the phenomenon to have been visible for longer than a split second before observation.

8 Dec 48 Stahl Neef

Weather at flight altitude was as follows; Ceiling unlimited, visibility, a minimum of seventy-five (75) miles, the wind, 30 miles per hour from 310° . The moon, in the first half, was approximately half way to its zenith and south, or to the right of course. The 1815 weather observation at Las Vegas, New Mexico, was clear, 30 miles visibility, temperature 30°, due point 17° , the wind from the NE at 6 miles per hour, the altimeter setting 30.06 inches of mercury. After the occurrence the aircraft remained in the same vicinity for approximately one and one-half hours but no further phenomena were observed.

On 9 December 1948, Special Agent STAHL accompanied by a crew chief took off from Kirtland Air Force Base at 1635 and flew to the area where the phenomenon had been observed the previous evening. A careful search of the terrain, both where the phenomenon was observed and in the direction from

UNCLASSIFIED

which it had appeared, was made. The terrain is barren and rough, and scarred by numerous dry washes and shallow canyons. Two or three widely separated buildings, apparently small ranch houses were noticed in the area. It appears that the land may be used for limited cattle raising. There are no indications of cultivation. The aircraft remained in the vicinity for several hours after sunset but no further phenomenon was observed. The weather conditions at flight altitude were high scattered cirrus clouds above 25,000 feet and visibility in excess of 40 miles.

On 11 December 1948, Mr. JOSEPH H. TOULOUSE, A.E.C. Security Representative, Sandia Base, gave Special Agent MEKF the following statement:

Statement

At approximately 2255 the evening of 6 December 1948, I observed a definite greenish flare in the sky almost directly overhead at Sandia Base. At the time of the flare I was driving west on D Street and had made the Stop sign at the Main Street. The flare appeared in the upper right hand corner of the windshield of the car slightly to the northwest.

The flare was approximately one-third the diameter of the moon and a slight arch onward falling from east to west. The flaming tail appeared during this arch. The entire phenomenon lasted possibly two to three seconds after which it vanished.

Joseph H. Toulouse

UNDEVELOPED LEADS

DISTRICT OFFICE #17, KIRTLAND AFB

UNCLASSIFIED

AT SANTA FE, NEW MEXICO

Will interview Mrs. MADELINE G. MERCHANT, Box 263, reference reports made by her to Mr. FLOCK, Forest Supervisor, Santa Fe National Forest, during the summer of 1947. Any recent activities concerning aerial phenomenon observed by Mrs. MERCHANT will be obtained.

AT LOS ALAMOS, NEW MEXICO

Will interview the Chief of the Security Section, Los Alamos Atomic Energy Commission installation reference reports made to that organization by Mrs. MADELINE MERCHANT in 1947 and possibly in 1948. Will further ascertain from the Chief of Security if any other reports of unusual aerial phenomenon have been reported to the Los Alamos Atomic Energy Commission installation.

AT WALKER AIR FORCE BASE

Will determine if that base has been engaged in any maneuvers involving the use of any aerial flares or similar devices.

AT HOLLOMAN AIR FORCE BASE

Will determine if that base has been engaged in any maneuvers involving the use of any aerial flares or similar devices.

DISTRICT OFFICE #10, SAN ANTONIO, TEXAS

AT SAN ANTONIO, TEXAS

Will interview Captain Goade, Major Carter and M/Sgt Walton concerning the flares, meteors or phenomenon observed by them at Las Vegas and on the eastern slope of the Sandia Mountains, New Mexico, on 5 December 1948, while enroute from Lowry AFB, Denver, Colorado, to Williams AFB, Chandler, Arizona.

AT EL PASO, TEXAS

Will determine whether or not Biggs AFB has been engaged in aerial maneuvers involving the use of aerial flares or similar devices.

Subject: December 12, 1948, 15 miles south of Las Vegas, NM, OSI Case 13

To: Francis Ridge <nicap@insightbb.com>

Green fireball observed from two separate stations.
Report from Dr. Lincoln La Paz.

Report states: "It is interesting to observe that the baskward extension of the 25-mile path first given passes almost centrally across the Los Alamos reservation."

REPORT OF INVESTIGATION

FILE NO. 24-8 | DATE 4 Jan 49

REPORT MADE BY: JACK L. BOLING

REPORT MADE AT: DO #17, Kirtland AFB, N. M.

PERIOD: 22-24, 29 December 1948

OFFICE OF ORIGIN: DO #17, Kirtland AFB, N. M.

STATUS: PENDING

TITLE: UNKNOWN (Aerial Phenomena)

CHARACTER: SPECIAL INQUIRY

REFERENCE: Report, S/A MAFFZIGER, 17th District OSI, 13 Dec 48 - Report, S/A BOLING, 17th District OSI, 22 Dec 48.

SYNOPSIS:

Additional sightings of "fireballs" reported from Phoenix, Arizona, and Hood River, Oregon. Negative check for reports made south and east of Albuquerque. Concurrent sightings reported from Los Alamos, New Mexico; bearings obtained and ground track plotted. Negative check made with observer on duty at night at Navy Project, Las Cruces, New Mexico. Report made by Dr. LA PAZ giving his findings.

DISTRIBUTION:

UNCLASSIFIED

DETAILS:

1. This is a joint investigation by the writer, S/A MELVIN E. [illegible], EDGAR J. BETHART, and ROBERT R. JOENS.

AT ALBUQUERQUE, NEW MEXICO

2. Letter from Miss ELLEN PETERSON, to Dr. J. HUGH PRUETT, Professor of Astronomy, University of Oregon, dated 3 November 1948, was provided by Dr. LINCOLN LA PAZ. This letter indicates that Miss PETERSON saw a "very strange star or fireball" on the night of 24 October 1948 over Phoenix, Arizona. Description extracted from letter follows:

Color: Green
Course: East to west, with erratic side motions
Speed: Very slow (estimated 75 minutes to cross sky)
Remarks: Seemed to be affected in course and brilliance by stars; moved off course to north and south in zig-zag; faded as it went further west, then flared up and disappeared.

3. Lead sheets were transmitted to Williams Air Force Base Detachment, 17th District OSI, for interview with Miss PETERSON to develope precise details as to course and elevation. (Inclosure #1)

4. Letter from GENE H. BIRD, News Editor, Sun Publishing Company, Hood River, Oregon, to Dr. PRUETT, undated, was provided by Dr. LA PAZ. This letter refers to the sighting of a blue-white flash of light, accompanied by a loud noise, at 1930 hours, 11 December 1948. A summary of the letter from BIRD follows:

At approximately 1930, a brilliant blue-white flash of light was seen from Hood River, Oregon, about five miles south and slightly east. This is nearly directly over Pine Grove, a small Oregon town. Most witnesses said that it might have been lightning, but did not look like any lightning that they had ever seen. It looked more like the rapid burning of a flare. A loud noise, like thunder, accompanied the flash. One witness said that the light moved to the northwest, but no others saw the movement. The center of the flash seemed to be round and white, something like a fluorescent light, or a searchlight, and was concentrated. The weather was cold, with light rain and snow; no lightning or thunder was observed. Radio interference was strong at the time of the flash and for a few seconds later. (Inclosure #2)

5. Lead sheets were transmitted to 20th District OSI for interviews directed toward getting more details from BIRD, and obtaining further statements.

6. The writer made inquiries in the following New Mexico towns on 23 and 24 December, with negative results: Belen, Scholle, Abo, Mountainair, Willard, Encino, Vaughn, Pastura, Santa Rosa, Dilia, and Salina. Several persons contacted had heard of the phenomena near Las Vegas, New Mexico, but no one had seen or heard of any celestial phenomena in the area covered, which lies south of Las Vegas and south and east of Albuquerque.

AT LOS ALAMOS, NEW MEXICO

7. The following two reports were furnished Special Agent MELVIN E. NEFF by Lieut. EARLE D. HIGHTOWER, Atomic Energy Security Service (AESS). Reporting individuals were on jeep patrol and made simultaneous sightings while seated in their jeep. Transit readings were made by Dr. LA PAZ from the position of sighting by WILSON AND TRUETT.

Report by Inspector BUFORD O. TRUETT, AESS:

At about 2054, 20 December 1948, in company with Inspector W. D. WILSON, a falling light was observed at a great height moving toward the earth at a 45-degree angle; this angle decreased as the light fell, until it disappeared on about a 20-degree angle. When first seen the light appeared to be white, but later seemed to be broken, and to have a flat red core, with the broken parts being red; the light trail seemed to be white. It seemed to fly as though under control, and finally disappeared behind Point Eagle. (Inclosure #3)

Report by Inspector WILLIAM D. WILSON, AESS:

At 2054, 20 December 1948, the object described below was seen. It travelled from west to east, maybe a little south. It was in an almost flat trajectory and its decline was at about 20 degrees to the horizon. The angle of elevation was some 30 degrees. It moved at a high speed, finally disappearing behind Point Eagle. Total time of visibility was about one and one-half seconds. The object was an intense blue-white light about the size of a basketball with a faint light trail behind it. Two smaller objects about the size of a baseball, the same color and intensity as the main body, trailed in tandem, at intervals of about three times the diameter of the main body. The size of the main body was about one-fourth the size of the moon. (Inclosure #4)

8. Statements from Lieut. CLIFFORD E. STRANG, AESS (oral), and Mr. GEORGE S. SKIPPER (written), Physical Security Section, Los Alamos, were obtained by Special Agent NEFF and Dr. LA PAZ on 29 December 1948. STRANG and SKIPPER reported concurrent sighting of the phenomena observed by TRUETT and WILSON. Description as to color, speed, trajectory, and distance, as well as time, agreed with report by WILSON above. Transit readings were made by Dr. LA PAZ from location of sighting by STRANG and SKIPPER. A report was prepared by Dr. LINCOLN LA PAZ, meteoriticist, University of New Mexico, who has cooperated in this investigation, giving

his findings and conclusions on the latest sightings. This report provided Special Agent NEHF, 30 December 1948. (Inclosures #5 and #8)

9. Report of Inspector JOHN D. HARDIE, AESS, relative to sighting of fireball on 28 December was provided Special Agent NYWF by [illegible]. This report [illegible] path. It was not falling as fast as a falling star, so HARDIE continued to watch. After several seconds, at an estimated altitude of 6000 feet, the object disappeared with a greenish flash, lighting up a small cloud between itself and HARDIE. Direction of travel was apparently north to south, with perhaps a slight deviation. (Inclosure #7)

AT LAS CRUCES, NEW MEXICO

10. Special Agents EDGAR J. [illegible] and ROBERT R. JOHNS interviewed Mr. PHILLIP S. CARROLL, Las Cruces Auto Court, Las Cruces, New Mexico, on 23 December 1948. CARROLL is connected with Navy Project Task D, Lord 3555, which requires that he and his associate, RICHARD E. McCROSKEY maintain a watch on the skies for about 95% of the time at night. CARROLL denied seeing any unusual phenomena during the period 1-15 December. Arrangements were made for photographs of the night sky taken in connection with CARROLL's work to be furnished 17th District OSI.

Inclosures for Complete Distribution:

INCLOSURE #6

The University of New Mexico

Albuquerque

Institute of Meteoritics

December 30, 1948

To: Lt. Colonel Doyle Rees, Commanding Officer
District No. 17
Office of Special Investigations

From: Lincoln LaPaz, Director
Institute of Meteoritics

Subject: Anomalous luminous phenomena (Third Report)

In the second report of this series, a description was given of the real path through the atmosphere of the green fireball of 1948, December 12, 9h 2m (plus or minus 30m). On the basis of corresponding observations made from one station near Starvation Peak, New Mexico, and a second station near Los Alamos, New Mexico, this fireball was found to have appeared near a point with the coordinates: latitude 35° 50' N, longitude 106° , 40' W, and to have disappeared near a point with the coordinates: latitude 35° 45' N, longitude 107° 05' W, traversing an almost horizontal path, at an elevation of about 10 miles above sea level, with a length of about 25 miles, at a velocity of approximately 10 miles per second. (The minimum path length consistent with the observations was found to be about 11 miles, the corresponding velocity then falling between 3 and 6 miles per second, depending on the duration adopted.)

On the basis of corresponding observations of the greenish-white fireball of 1948, December 20, 8h 54m p.m. made by two pairs of Los Alamos observers, it has now become possible to work out another approximate real path. As will be apparent from the original accounts of the observations made by AESS Inspectors William D. Wilson, Buford G. Truett, Clifford E. Strang, and Physical Security Inspector George S. Skipper, the fireball of 1948, December 20 was observed under less favorable conditions than the green fireball seen by five persons on the night of December 12. However, on the basis of the original accounts of the observers named above, of sketches supplied by these four individuals on December 29 and of transit observations made by Captain M. E. Neef and the undersigned on the same date at the points of observation (viz., 35° 48' .9, 106° 18' .4 for Strang and Skipper and 35° 55' ,106° 23' .7 for Wilson and Truett), it has been possible to establish reasonable concordance between various points on the fireball path as seen by the two groups of observers. Because of the very short baseline (only 8 miles long) between the two points of observation and the difficult conditions under which the fireball of December 20 was observed, it is my opinion that the real path derived from the December 20 observations deserves considerably less weight than that obtained from the December 12 observations.

UNCLASSIFIED

It is found that the fireball doubly observed by Messrs. Wilson, Truett, Strang, and Skipper appeared at a height of at least 10 miles and descended at an angle of about 45° to the vertical (according to Truett's estimate) to a point C at an elevation of only 2.3 miles above the horizontal plane through the point from which Strang and Skipper observed. As the fireball approached the point C, its path levelled off and from C to its point of disappearance, E, the fireball followed a nearly horizontal path approximately 7.5 miles long moving with a velocity of between 3.75 and 7.5 miles per second, depending on the duration estimate adopted. The coordinates of the projection of C on the earth are 35° 56' N, 106° 30' W, and those of the projection of E are 35° 57' N, 106° 23' W. The forward extension of the fireball's trace on the earth, as determined by the above projections, passes some six miles to the north of the town of Los Alamos.

It should be noted that the descending branch of the path of the fireball was observed by Inspector Truett alone, but he was absolutely certain that his observation of this portion of the path was correct. It should also be noted that no sound was heard, although the distance from the observers to the fireball and from the fireball to the earth could have been only a few miles at most. I have no hesitancy in testifying that an object possessing the real path and the other peculiarities observed by Messrs. Wilson, Truett, Strang, and Skipper was not a falling meteorite.

Incident #241, a, b -- Los Alamos, New Mexico -- 20 December 1948

Mr. Lafaz, who has interviewed the various observers of this incident, has stated that the object seen was not a falling meteorite. He had access to more detailed information than is contained in the typed reports offered here, and he is an expert in these matters.

It should be noted, however, that the reports available to this investigator show many contradictions concerning the color and trajectory of the object. One observer gives the angle of fall as 45°; another states that the trajectory was horizontal. Most observers indicate a bluish-white light; only one mentions the color green, which is so predominant in the New Mexico "green flashes."

It is not at all certain that the object observed here belongs to the "green flash" family of incidents.

THIS PAGE IS UNCLASSIFIED

Incident: 241

Buford G. Truett

Atomic Energy Security Service Inspector

At about 2054, 20 December 1948, in company with Inspector W. D. WILSON, a falling light was observed at a great height moving toward the earth at a 45° angle; this angle decreased as the light fell until it disappeared on about a 20° angle. When first seen the light appeared to be white, but later seemed to be broken, and to have a flat red core, with the broken parts being red; the light trail seemed to be white. Its form seemed to grow more concrete and seemed to be something besides just a white unbroken moving light. It appeared to have a flat base leaving a broken red trail on each side. It was now nearer the earth. The angle of glide appeared to be 20° and reminded Truett of an airplane in flight. It seemed to fly thru the air as if controlled and did not fall straight to the earth as an uncontrolled object normally would. It was moving very very swiftly. It finally disappeared behind Point Eagle.

Incident: 24la

William D. Wilson,

Atomic Energy Security Service Inspector

Inspector Wm D. Wilson, AESS, in the company of Inspector Mrxx. Buford O. Truett, AESS, who called his attention to the phenomenon, describes his experience as follows:

"At 2054, 20 Dec 45, we saw the object described below making a path thru the sky. It was travelling in an almost flat trajectory and its decline formed an angle with the horizon of approximately 20°. The angle of elevation from our point of observation was approximately thirty°. The object was moving at a very fast rate of speed and disappeared behind the mountain directly to the northeast of Pt Eagle. Total time of visibility was about one and one-half seconds.

Description:

An intense blue-white light about the size of a basketball. As the object traversed the sky, there was a faint trail of light behind it, and two objects the size of a baseball separated from the main body. These objects were of the same color and intensity as the main body, and trailed behind it directly in its path at even intervals of distance equal to approximately three times the diameter of the main body. The size of the main body was approximately one quarter the size of the moon

Page 2 Incident: 241C

Name and address of informant: George S. Skipper, Jr

Organization and address: Inspector Atomic Energy Security Service
Los Alamos, N. M.

Date and time of interview: [illegible] and name of interviewer:

At approximately 2053, December 20, 1948 while driving over State Route #4, toward the South Gate (Station 390), AESS Inspector Skipper observed what appeared to be at first glance a meteorite travelling from left to right, at right angles to the direction he was moving. The object seemed almost the size of a tennis ball and was a glaring white similar to the color of white-hot steel in a smelting furnace. The ball had a small conical shaped tail that appeared to be pale greenish in color and this tail was not as clearly defined as the ball itself but seemed to be of a gaseous nature.

The object appeared to be travelling on a controlled, level course and was visible approximately a second and a half, disappearing from view behind the trees that bordered the road. As he made a sharp right turn on the road the object again was visible for approximately a second and this time was considerably farther away. During this interval he observed a small light to the right of the object which appeared to be travelling with it. This smaller light was similar in appearance to a running light on an airplane and seemed reddish in color. The object and accompanying light disappeared from view behind the tops of more trees and he was unable to catch another glimpse of it.

Inasmuch as this event occurred at night and due to the terrain over which he was travelling it was difficult to state the exact direction in which the object was travelling. In addition, since he had no way of determining the actual size it was equally difficult to judge the altitude of the object.

Statement (oral) to Special Agent [illegible] and Dr La Paz on 29 Dec 48 was made by AESS Inspector Strang who accompanied Skipper. Description of STRANG & SKIPPER agreed with that of the concurrant sighting by [illegible] WILSON as to color, speed, trajectory and distance as well as time.

DEPARTMENT OF THE AIR FORCE
HEADQUARTERS UNITED STATES AIR FORCE
WASHINGTON

UNCLASSIFIED

THE INSPECTOR GENERAL USAF
17TH DISTRICT OFFICE OF SPECIAL INVESTIGATIONS
KIRTLAND AFB, KIRTLAND FIELD, NEW MEXICO

File No. 24-3 19 January 1949

SUBJECT: [redacted] (Aerial Phenomena)

TO: See Distribution

SUMMARY OF INFORMATION:

1. The present investigation is based on the series of sightings of anomalous luminous phenomena beginning on 5 December 1948. Reports of previously sighted phenomena are included as they are developed in the course of the investigation. Established dates of sightings in the New Mexico area are 5, 6, 7, 8, 11, 12, 13, 14, 20, and 28 December 1948, and 6 January 1949. Sound phenomena, which may or may not be related, are reported on 11 December 1948, and 30 December 1948.

2. In general the descriptions given by witnesses agree in the major features of the fireballs. A summarized description follows:

a. Location - The majority of the observations have been reported from the Las Vegas-Los Alamos area of northern New Mexico. Sightings from other points in the New Mexico area are almost invariable in that the object is seen in the direction of the Las Vegas-Los Alamos area. Ground tracks plotted from concurrent sightings fall in the immediate vicinity of Los Alamos.

Reports from Idaho, Oregon, and Arizona, concerning allied sightings have been received, but definite identity with the phenomena under investigation has not been established.

b. Color - A brilliant green, similar to a green traffic signal or a green "neon" light, is the usual color cited. Some reports indicate that the light began or ended with a red or orange flame. Other reports have given the color as red, white, blue-white, and yellowish green. The trailing lights (covered below) are said to be red.

c. Shape - With one exception the shape is definitely round, not a point of light. Most descriptions say that there is a definite area

UNCLASSIFIED

to the light source. One report gives the shape as that of a diamond, and another indicates that the trailing lights are elongated.

d. Size - The size is usually given as one-fourth (1/4) the diameter of the full moon, when that comparison is suggested. Frequently the size is compared to a basketball, with the trailing lights lights the relative size of a baseball.

e. Course - The course is usually reported as being on an east-west line. Admissible approach sectors calculated by Dr. L. Page indicated the probability that the objects are mostly approaching from the northern quadrant. Plotted ground tracks lie east-west, with one line of flight being east to west and the other almost directly opposite.

f. Trajectory - The trajectory of the objects is almost invariably given as almost horizontal, with occasionally a dip at the terminal end of the path. On two occasions a definite vertical change in course was indicated. In each of these cases, the trailing lights were present.

g. Speed - In most cases the observation period is approximately two seconds, with a large angular distance covered. Measurements of the ground tracks plotted from concurrent sightings give a minimum speed of three (3) miles per second and a maximum of twelve (12) miles per second. If the mean calculated speed be accepted as correct, then a velocity in the order of seven and one-half (7-1/2) miles per second is the result. In this connection, it is to be noted that the velocity required for a projectile to overcome both air resistance and the effect of the earth's gravity field is approximately seven and twenty-eight hundredths miles per second.

h. Altitude - The angular altitude varies with each observation, of course, but the altitude plotted from concurrent sightings is between six and ten miles.

i. Sound - On no occasion has any sound been directly associated with the observation of these phenomena. Unexplained sounds have, however, been reported from Los Alamos. A combined sound-light phenomenon has been reported from Oregon, but has not definitely been identified with the subject under investigation.

j. Multiple Units - On at least two occasions reports definitely show that the main luminous object was followed at a fixed distance by two trailing lights. One report shows these trailers as being the same color as the main body, and another that they were red, while the main body was green. In each of these instances, a sharp course variation in the vertical plane was noted.

UNCLASSIFIED

3. The observers upon whose reports this summary is based include Dr. NICOLE LA PAZ, authority on meteoritics, Special Agents of the OSI, airline pilots, military pilots, Los Alamos Security Inspectors, school teachers, truck drivers, and other assorted vocational groups. The congruency of the reports is all the more remarkable when the wide variation in background of the observers is considered.

4. The calculations as to track, height, and velocity are of necessity rough, as the observations upon which they are based were not scientifically accurate. Whenever possible, accurate transit readings have been taken from the spot where the sighting was made. These readings were based on estimated positions of the objects, however, so are not definitive. No photographs have as yet been obtained.

5. The conclusions reached from this investigation are:

a. Some nine (9) specific differences exist between these phenomena and any known meteoric data.

b. It is possible that they are manifestations of some hitherto unreported natural phenomena.

c. It is possible that they are man made.

Subject: February 17, 1949; Albuquerque, NM. OSI Cases 23 & 24

To: Francis Ridge <nicap@insightbb.com>

Blue Book index has two sightings for February 17, 1949, Albuquerque and Sandia Base.

Brad Sparks:
Cases 23 and 24 are apparently the same object viewed at different or overlapping times on its trajectory. Case 23 is truck driver Herman Wilcox at about 6 PM (actually 5:57) from near Grants, NM, and Case 24 is UNM Prof. Marvin May at 5:57 PM from Albuquerque (who with his training in meteorite tracking with LaPaz has the more accurate time than the truck driver). There were also about 100 guards at Sandia Base including the Officer of the Guard, sighting it at 5:59-6:06 PM evidently.

From: "Jan Aldrich" <project1947@earthlink.net>
To: nicap@INSIGHTBB.COM

Subject: Los Alamos Sighting from NICAP files May, 1949

This sighting is from a collection of Keyhoe letters collected and retyped by Ted Bloecher....Ted bugged Keyhoe to bring in his letters from home and retyped them for the NICAP files. In addition Ted went through the files and retyped any letters he found directed to Keyhoe. Here is one below.

Rebecca LeTourneau retyped this up for us.

Jan Aldrich
Project1947

Copy of Witness' letter to Major Keyhoe, dated Jan. 27, 1961:

> Jan. 27, 1961
>
> Major Donald E. Keyhoe, U.S.M.C., Ret.
> N.I.C.A.P. (Etc.)
>
> Dear Major Keyhoe:
>
> May I say that I believe we have met before. It seems to me that I met you and Mrs. Keyhoe at a social function in Detroit, probably in 1950 or 1951. . . In any event, my object in writing you was to first offer my thanks as an interested and avid fan of yours. I haven't missed an article or release under your name. Secondly, I want to relate my personal sighting of UFO's.
>
> During the period from 1948 to 1950, I was employed as a technician for the Atomic Energy Commission at Los Alamos, New Mexico. During the month of May, 1949, the following event took place. About 10:30 AM, during a week day, my attention was attracted by a group of men outside the laboratory in which I was working. Joining them I looked skyward and at an altitude of approx. 9,000 ft. I observed 13 saucer shaped objects in a perfect straight line formation. During this observation period of about forty five minutes, several of the objects would suddenly leave this formation and with a tremendous burst of speed climb to what I think was about 20,000 ft.
>
> During this sighting, (witnessed by hundreds of residents and workers, also school children) may I add this observance. The atmosphere was clear, not a cloud in the sky and visibility unlimited. Our oldest children who were eleven and twelve at that time, related this event in a school report when we returned to California from this base. They were called liars. Rather than have them ridiculed, I asked them not to mention it again. I have served as Sr. Engineer in charge of static testing the 2nd stage of the "Minute Man" missile besides other programs and I think I have the

technical ability to make such an observation and report it as seen.

Everyone making these observations in the past, including myself, must either be stupid or our military personnel must have very good reasons for their denial of these stories. I feel it is about time that the Air Force should get off the fence and choose sides. Isn't there a solution?

Just couldn't resist dropping you a letter after reading the enclosed article. Please excuse my rusty typing and drop me a line when you have the time.

Sincerely,
E. M. (Ernie) Hunt

Subject; Incident at Datil, NM; Photo Unexplained
February 24 and 25th, 1950

To: CE, SHG, NCP

Sighting No. 175

Photograph of Unknown Aerial Phenomena taken at Datil, New Mexico by Cpl Lertis E. Stanfield, Holloman Air Force Base, New Mexico on 24 and 25 Feb 1950. An analysis of the above photograph was made by Dr. Lincoln LaPaz, Head of the Institute of Meteorics, University of New Mexico, Albuquerque, New Mexico, who reached the following conclusions;

a. The angular diameter of the perfectly round luminous object Stanfield observed was approx imately 1/4 of a degree.

b. The angular velocity of the object in the sky was greater than half a degree per minute.

Dr. LaPaz stated that on the basis of the results (a) and (b) above, the object seen by Stanfield was not the moon (for the angular, diameter is too small), it was not Venus or any other planet (for the angular diameter was too large), and it was not a bright fixed star slightly out of focus (for the observed rate of motion is double that due to the diurnal rotation of the earth).

Immediate Saucer Alert!

The Mystery of December 6, 1950

by Bruce Maccabee

(This article was presented at the Symposium of the MUTUAL UFO NETWORK in July, 1999. The information presented here is also presented in somewhat different format in the book, THE UFO-FBI CONNECTION, by Bruce Maccabee, (Llewellyn Pub., 2000)

ABSTRACT

For an hour the United States military was under a condition of national emergency during the morning of December 6, 1950. Two days later the FBI was informed that the Army's Counter Intelligence Corps had been placed on Immediate High Alert for any information related to flying saucers. Were these two documented events related? This paper contains a discussion of the possibility that a flight of saucers caused the emergency and that the crash of one of them near the Texas-Mexico border on or about December 6, 1950 caused the immediate high alert.

PART 1: NATIONAL EMERGENCY

LOCATION: WHITE HOUSE, WASHINGTON, D.C,
OFFICE OF THE PRESIDENT OF THE UNITED STATES
DATE: DECEMBER 6, 1950
TIME: 10:30 AM

(The President is preparing for a conference with British Prime Minister Clement Attlee. The secure phone rings. It is the Undersecretary of Defense Robert Lovett.)

Mr. President. I don't know whether this is related to the war in Korea, but it might be. Our northern tier radars have picked up a flight of several dozen aircraft approaching our east coast. They are unidentified and do not respond to our signaling. They could be Russian bombers. If they proceed on the present course they will be over Washington D.C. in several hours, having passed over major cities along the East Coast. The Continental Air Command has scrambled and is on high alert. We have begun preparations for a National Emergency and handling of the press. I suggest you take any precautions you think necessary in the event that this is an attack. I'll keep you informed. After I hang up all civilian communications with the Pentagon will be cut off.. I will keep you informed as the situation develops. Good-bye.

Shock! Could this be the realization of his worst nightmare? By resisting the North Korean aggression had President Truman brought on the most-feared consequence, nuclear war with the Soviet Union? Were these Soviet bombers loaded with atomic bombs to drop on Boston, New York and Washington, D.C.? Impossible, he thought as he placed the phone in its cradle. I don't believe it. The CIA has not reported any troop movements or aircraft activity that would suggest the Russians were preparing to attack. And yet, the radar had detected something. It must have been something big to cause this much activity by the Continental Air Command. Despite his apprehension he proceeded to the meeting with Mr. Clement Atlee as if nothing were happening. But, in the back of his mind he knew that some objects were approaching the United States. What were they?

****

What you have just read is partly fiction and partly fact.

Something DID happen that morning, something that has been glossed over in the history books as an accident of the radar. But was it? Read on. What follows is NOT fiction.

PART 2: IMMEDIATE HIGH ALERT FOR FLYING SAUCERS

URGENT. DECEMBER 8. RE: FLYING SAUCERS.

This office very confidentially advised by Army Intelligence, Richmond, that they have been put on immediate high alert for any data whatsoever concerning flying saucers. CIC here states background of instructions not available from Air Force Intelligence, who are not aware of reason for alert locally, but any information whatsoever must be telephoned by them immediately to Air Force Intelligence. CIC advises data strictly confidential and should not be disseminated (sic).

The above teletype message is contained in file 62-83894, the flying disc file of the FBI, the REAL X-Files! (The Truth is In Here!)

How very strange for the Army's Counter Intelligence Corps (CIC) to be put on immediate high alert for any data regarding objects/phenomena/craft which the U. S. Air Force had publicly and repeatedly claimed can all be explained and are no threat to the security of the United States! Are we to presume the CIC has nothing better to do than to run around chasing will o the wisps and similar ethereal things of no consequence to national defense? Of course not! We may imagine that Air Force Intelligence, headquartered in the Pentagon, requested the immediate high alert because something had happened, something related to flying saucers that demanded immediate attention. Evidently whatever had happened was so serious a matter that the CIC was not told the reason for the high alert. Not only that but the high alert condition was confidential and not to be disseminated which suggests that the CIC agent broke security by telling the FBI agent in Richmond.

What had happened? Even today we don't know ... but based on other information we can make a guess.

PART 3: THE COLONELS STORY

In 1977 Retired Air Force Col. Robert Willingham filed a report with NICAP regarding his observation of what he believed to be a Crashed Saucer.

What?

Did he say a Crashed Saucer?

Yes, he did. And here is what happened, according to the affidavit he filed with the National Investigations Committee on Aerial Phenomena (NICAP) and now in the file of the Center for UFO Studies (CUFOS). (NICAP was a civilian UFO research group founded in the latter half of the 1950s. It was the largest such group in the 1960s but it closed in the late 1970s. CUFOS, founded in the early 1970s, still exists in Chicago.) The complete affidavit is presented in A History of UFO Crashes by Kevin Randle (Avon Books, NY, 1995). Supplemental information is in parentheses:

> Down in Dyess Air Force Base in (Abilene) Texas, we were testing what turned out to be the F-94 (Lockheed Starfire, jet fighter, top speed about 600 mph, operational in 1950). They reported on the scope that they had an unidentified flying object at a high speed going to intercept our course. It became visible to us and we wanted to take off after it. Headquarters wouldn't let us go after it and we played around a little bit. We got to watching how it made 90 degree turns at this high speed and everything. We knew it wasn't a missile of any type. So then, we confirmed it with the radar control station on the DEW (Distant Early Warning) line (NORAD - North American Defense Command) and they kept following it and they claimed that it crashed somewhere off between Texas and the Mexico border.
>
> We got a light aircraft, me and my copilot, and we went down to the site. We landed out in the pasture right across from where it hit. We got over there. They told us to leave and everything else and then armed guards came out and they started to form a line around the area. So, on the way back, I saw a little piece of metal so I picked it up and brought it back with me. There were two sand mounds that came down and it looked to me like this thing crashed right between them. But it went into the ground, according to the way people were acting around it. So we never did get up to the site to see what had crashed. But you could see for, oh I'd say, three to five hundred yards where it went across the sand.
>
> It looked to me, I guess from the metal that we found, that it either had a little explosion or it began to disintegrate. Something caused this metal to come apart.

> It looked like something that was made because it was honeycombed. You know how you would make a metal that would cool faster. In a way it looked like magnesium steel but it had a lot of carbon in it. I tried to heat it with a cutting torch. It just wouldn't melt. A cutting torch burns anywhere from 3200 to 3800 degrees Fahrenheit and it would make the metal hot but it wouldn't even start the metal to yield.

According to Willingham, some time later he took the metal to the Marine Corps testing lab in Hagarstown, MD and gave it to some person for testing. When he returned for the results a few days later he was told there was no such person working there. Later was told never to talk about the incident. He signed a secrecy oath (which he apparently broke in 1977).

Todd Zechel, who was active in UFO research in the latter 1970s, investigated Willingham's story. In the middle 1980s Zechel told me some of the information he had learned from his investigation. According to Zechel this crash occurred between Dec. 5 and Dec. 8, 1950. (Randle lists the date as December 6.) It was Zechel's opinion based on Willingham's story and a document (discussed below) that the crash occurred on December 5, the recovery occurred on December 6, a general alert to counterintelligence was sent out on December 7, and the FBI learned about it on December 8. Zechel told this author that in 1978 he and a Japanese TV documentary team chartered a plane and flew, with Col. Willingham, to the location of the crash. It was roughly in the vicinity of Del Rio, Texas (Zechel did not tell me the exact location.). Del Rio is about 230 air miles from Abilene.

According to Zechel, Willingham said that the UFO was at an altitude of about 50,000 ft (nearly the maximum altitude of the F-94) and traveling 3 to 4 times faster than the jet, i.e., several times the speed of sound. It did a right angle turn, then slowed and started wobbling. Then it dropped downward continuously and went out of the pilots sight. Radar in Texas tracked the object until it went off the screen in a manner which suggested a crash. Willingham and the copilot returned to Dyess AFB, landed and got a small civil air patrol plane and flew to the border area where they thought it had crashed. (Depending upon the speed of the small aircraft and the exact location along the border, it could have taken two hours or more from the time the object appeared to crash until Willingham reached the site.) Willingham said that the Mexican military had reached the site before he got there. The Mexican military cordoned off the area and waited for US Air Force personnel to arrive

Zechel further told me that in 1975 he was fortunate to obtain a declassified but formerly Top Secret document which stated that Carswell Air Force Base, Fort Worth, Texas, had recovered some foreign object on December 6 or 7. He said the document referred to a high alert status because of the nature of the recovery, but the document did not specify what had been recovered. (Zechel did not provide me with a copy of this document.)

(For what its worth, the controversial Eisenhower Briefing Document released in 1987 by Timothy Goode and, independently, by William Moore, also claims a crash near the Texas-Mexico border on December 6.)

There is a discrepancy in Willingham's story which probably is a result of faulty memory. He said that the UFO was detected by the radar control station on the DEW (Distant Early Warning) line (NORAD - North American Defense Command) and that the DEW radar kept following it and they claimed that it crashed somewhere off between Texas and the Mexico border. The DEW line was not established until late 1953 and it was located in Alaska and northern Canada, so it could not possibly have tracked an object over Texas. The closest Air Defense Command radar at the time was at Walker AFB at Roswell, NM. However, this was also too far away. On the other hand there were Air Force bases in Texas which probably had radar installations that could have tracked the object reported by Willingham. Dyess AFB at Abilene is more than 200 miles from the Del Rio area of Texas. This is beyond the range of typical radar installations of the time (see discussion below) and so a radar at Dyess would not have been able to determine that an object went below the radar horizon or crashed at the distance of Del Rio. However, a radar installation at Kelly AFB, Brooks AFB or Randolph AFB, all near San Antonio, could have tracked an object to the vicinity of Del Rio without exceeding the range of the radar

PART 4: DISCONNECTED EVENTS?

So far we have three seemingly disconnected events: a documentable (see below) national emergency by the Defense Department on December 6, 1950, a documentable immediate high alert for saucer related information on December 8 and witness testimony about a flying saucer crash near the Texas-Mexico border on or about December 6, 1950. Could these be

related?

The existence of the FBI teletype message raises (at least) two related questions: why an immediate high alert, and why on December 8? Neither of these questions can be definitely answered at the present time because the CIC and Air Force records relating to this simply have not been found, even after a search, at my request, of CIC records by the Army Security agency. However, I can speculate that if a saucer had crashed on December 6 and been retrieved on the 6th or 7th, the Air Force intelligence may well have issued requests for immediate information in order to find out if any sightings had been made or if any other saucers had crashed. The high alert condition could then have been communicated to the FBI in a confidential way a day or so later (i.e., Dec. 8).

Whether the Air Force intelligence or the CIC received any special UFO information is not known. However, there were sightings on December 6 which are in the Blue Book file: one at West Springfield, Massachusetts (near Westover AFB) at 8:16 AM (one object, half-moon shaped, fast, flying in a southerly direction) and one at Fort Myers, Florida at 5 PM (a former aircraft purchasing agent and four boys, using 10-power binoculars, saw a 75' object, 3-4' thick with a bubble on top, silver colored with a red rim and having two white and two orange jets along the side; the center revolved when the object hovered and then it flew away very fast). The first object was identified as a aircraft by Project Blue Book; the second was unidentified. (The next sighting listed in the Blue Book file was in London, England, on December 9. Another of the only about 700 unidentified sightings in the Blue Book collection occurred on December 11 in Alaska.)

PART V: A RADAR EMERGENCY

So, what really happened on December 6 that nearly caused a national emergency?. The full story is not known, but the available information is intriguing. As you read the following discussion keep in mind that the global political situation was hot. There were two wars and two races: a Cold War between the USA and the Soviet Union and a Hot War in Korea, a missile race and an atomic bomb race. Russia and China were becoming potent Communist adversaries of the capitalist democracies. Their states purpose was to overthrow the capitalism. They were investing major portions of their country's resources into armaments and armies. The war in Korea was viewed as the first real military contest between communism and capitalism, and it was not going well for the USA and South Korea. Ever since the beginning of the war in June, 1950, the U. S. government had been worried about the Chinese response to the attempt of the United Nations to preserve the independence of South Korea. These worries increased after General MacArthur landed at Inchon in September and succeeded in driving the North Korean army back across the 38th parallel (the agreed-upon northern boundary of South Korea). In October and November U. N. troops pushed into North Korea under MacArthur's orders to destroy the North Korean army. Finally on November 25 the Chinese counterattacked with about 200,000 men, a number which doubled over the next month. U.N. forces, numbered at about one half the Chinese force, were once again in danger of complete defeat. This was causing a near panic situation in the USA. President Truman was worried about the possibility that the war would widen, even bringing on World War III, which could necessitate a nuclear response and nuclear armageddon. The Joint Chiefs of Staff (the top brass of all the armed services) had sent a warning to U. S. forces commanders throughout the world of a heightened possibility for world war. It was against this background of war jitters that a large group of unidentified aircraft was suddenly detected approaching the USA from the north, from the general direction of the Soviet Union! Was this the feared attack? Some important people were afraid it was!

There are three published versions of what happened during the morning of December 6. The version presented here first comes from the autobiography of Secretary of State, Dean Acheson, Present at the Creation (W.W. Norton Pub., NY; pages 479-480). The second version, published in The Wise Men by Walter Isaacson and Evan Thomas (Simon and Shuster, NY; 1986; pages 544-545) is based in an interview with Mr. Acheson. It differs slightly from Mr. Acheson's own version. The third is in Memoirs of Harry S. Truman: Years of Trial and Hope 1946-1952 (Vol. 2, page 405).

Looking first at Secretary Acheson's autobiography we find that:

> On the morning of December 6, soon after my arrival at the (State) Department, Deputy Secretary of Defense Lovett telephoned a report and an instruction from the President. Our early warning radar system in Canada had picked up formations of unidentified objects, presumably aircraft, headed southeast on a course that could bring them over Washington in two or three hours. All interception and defense forces were alerted. I was to inform but not advise the Prime Minister (Clement Atlee of Britain). The Pentagon telephones would be closed for all but emergency defense purposes and he could not talk again. Before he hung up, I asked whether he believed

> that the objects that were picked up were Russian bombers. He said that he did not. Getting Oliver Franks (the British ambassador) on the telephone I repeated the message. He asked whether the President had canceled the eleven-thirty meeting with Attlee, and was told that he had not. We agreed to meet there. Before ending the talk, he wondered about the purpose of my message. I suggested fair warning and an opportunity for prayer. As we finished, one of our senior officials burst into the room. How he had picked up the rumor I do not know, perhaps from the Pentagon. He wanted to telephone his wife to get out of town, and to have important files moved to the basement. I refused to permit him to do either and gave him the choice of a word-of-honor commitment not to mention the matter to anyone or being put under security detention. He wisely cooled off and chose the former. When we reached the White House, Lovett told us that the unidentified objects had disappeared. His guess was that they had been geese.

There are several important points to keep in mind as you read the following versions of what happened. Acheson said that early warning radar in Canada had detected formations (plural) of unidentified objects, presumably aircraft which were headed southeast in a direction that could put them over Washington, DC in 2 to 3 hours. Using an estimated top speed of 300 mph for Soviet bombers, this would put them a mere 600 - 900 miles from Washington. Acheson's story indicates that President Truman already knew about the unidentified aircraft and wanted Acheson to inform the British ambassador. Acheson ended his story by saying that, after he arrived at the White House, that is, at about 11:30 AM, Defense Undersecretary Lovett told him he guessed that the objects were geese.

The next version of the story, told in The Wise Men, is based on an interview with Mr. Acheson:

For a moment on the morning of December 6, he thought his nightmare (of world war) had come true. At 10:30 AM Bob Lovett called him from the Pentagon and abruptly informed him in his laconic voice: When I finish talking to you, you cannot reach me again. All incoming calls will be stopped. A national emergency is about to be proclaimed. We are informed that there is flying over Alaska at the present moment a formation of Russian planes heading southeast. The President wishes the British ambassador to be informed of this and be told that Mr. Attlee should take whatever measures are proper for Mr. Attlee's safety. I've now finished my message and I'm going to ring off. Acheson cut in, Now wait a minute, Bob, do you believe this? No, Lovett replied, and hung up. Acheson sat in his office and waited. The Air Force scrambled. A senior official burst in asking permission to telephone his wife to get out of town and wondering if he should begin moving files to the basement. Acheson tried to soothe him. A few minutes later Lovett calmly called back. The radar blips were not Soviet bombers after all. They were flocks of geese.

This version makes it seem that the alert period was very short, only a few minutes. However, by combining the information in this version about the beginning time, 10:30 AM, with the information in Acheson's biography about the ending time (after Acheson arrived at the White House), about 11:30 AM, we find that the alert lasted about an hour. This version is more specific as to where the objects were: they were detected over Alaska, which is over 3,000 miles from Washington, D. C. If that were true it would have taken not just two to three hours but much more than 10 hours for the planes to arrive over Washington.

President Truman wrote about the same episode:

> Shortly before we went into that morning meeting, Under Secretary Lovett called from the Pentagon, reporting that the radar screens of some air defense installations in the far north were reporting large formations of unidentified planes approaching. Fighter planes were sent up to reconnoiter and alerts were flashed to air centers in New England and beyond. But about an hour later -- while I was meeting with (Clement) Attlee -- Lovett notified me that the report had been in error. Some unusual disturbance in the Arctic atmosphere had thrown the radar off.

President Truman's version of the event suggests that the objects may have been detected north of the eastern United States rather than over Alaska. The fact that fighter aircraft were scrambled indicates that this alert was treated as a serious event by the Continental Air Command. Truman's explanation is somewhat different from Acheson's. Here we learn that the radar detections were caused by some sort of atmospheric disturbance.

An unpublished version of this event is found in the official transcript of the meeting between Truman and Atlee which is

preserved at the Truman library:

> At this point (in the meeting) Mr. Connelly entered the room and handed the President a report from Deputy Secretary of Defense Lovett. Mr. Lovett was reporting that the alert that had reached the President an hour earlier when it was thought that a large number of unidentified airplanes were approaching the northeast coast of the United States, had now been due to erroneous interpretation of atmospheric conditions. The President informed the Prime Minister that the report of the planes was in error. The Prime Minister expressed relief and gratification.

This version, based on notes made at the time rather than upon memories years afterward, says the unidentified objects were approaching the northeast coast of the United States, clearly contradicting Acheson's assertion that they were detected over Alaska, unless, of course, there were two groups of objects. Furthermore, this version indicates Lovett was the source of the atmospheric effects explanation mentioned by President Truman. But Lovett was also the source of the geese explanation reported by Acheson. So, which explanation was right? Or was neither correct?

A report carried by the International News Service reported yet another explanation:

Washington D.C., 6 December 1950 (INS):

> "A warning of an impending air attack resulted in a false alarm in this capitol city today. No air raid alarms were sounded, but functionaries charged with the Civil Air Defense of Washington were alerted that an unidentified aircraft had been detected off the coast of the State of Maine at mid-day. Later, a spokesman for the Air Force stated that interceptor aircraft had been dispatched , and that the object in question had been identified shortly thereafter as a North American C-47 aircraft which was approaching the continent from Goose Bay, Labrador. The warning was said to have been useful in verifying the efficiency of the Washington Civil Defense System. Civil Defense officials declined to comment on the incident."

This report, supposedly based on an Air Force statement, says the radar target was from a single C-47 (capable of up to 220 mph at altitudes up to 24,000 ft) approaching from Goose Bay, Labrador, a location about 500 miles north-northeast of the northeastern top of Maine. It says nothing about unknown aircraft over Alaska. Detection of planes near or over northeastern Maine (coming from the direction of Goose Bay) would be more compatible with the claim in Acheson's autobiography that the planes were several hours from reaching Washington, DC (the northeastern corner of Maine is about 700 miles from Washington, D.C., 2 1/3 hours at 300 mph).

It appears that this supposed attack did have repercussions in Alaska. The New York Times published a story with a December 7, Anchorage Alaska, dateline which said that All military personnel in Alaska were called on alert tonight (i.e., Dec. 6), but Air Force officials said that the order was purely a precautionary measure. Military police rounded up soldiers and theaters and radio stations made special announcements that troops were to return to their posts. Within a few hours there were no military personnel to be seen on Anchorage streets. Officials at Elmendorf Air Force Base said the alert had been in effect since the outbreak of the fighting in Korea. But they added that the AirFforce had increased its vigilance here in recent days.

Further evidence of the official jitters is in the statement in the Washington Post on December 10 that President Truman is seriously considering declaration of national emergency which could lead to an immediate all-out mobilization.

Over Alaska? Over Labrador? Flocks of Geese? Arctic atmospheric effects? A single C-47 aircraft? Or something else? Not until 1987 was further information on this event released by the Air Force, and sparse information at that! What follows was found by Don Berliner by accident during a search of declassified files of the Office of the Secretary of Defense, Record group 330, July 1, 1950 to December, 1951 (at the National Archives).

THE COLONEL'S MEMORANDUM

On December 6, Air Force Colonel Charles Winkle, Assistant Executive in the Directorate for Plans, wrote a memorandum for Secretary of Defense George Marshall about this event. It confirms the alert:

SUBJECT: Air Alert - 1030 Hours , 6 December 1950

1. The ConAC (Continental Air Command) Air Defense Controller notified the Headquarters USAF Command Post that at 1030 hours a number of unidentified aircraft were approaching the northeast area of the United States and that there was no reason to believe the aircraft were friendly.
2. This information was further amplified at 1040 hours as follows. By radar contact it was determined that approximately 40 aircraft were in flight, at 32,000 feet, on a course of 200 degrees in the vicinity of Limestone, Maine.
3. The emergency alert procedure went into effect immediately.
4. The Office of the President was notified. Brigadier General Landry returned the call and stated that the President had been notified and that:
   a. All information in this matter was to be released by the Department of the Air Force.
   b. Office of the President would release no information.
   c. The substance of a and b above was to be passed to the Office of the Secretary of Defense.
5. At 1104 hours the ConAC Air Defense Controller states that the original track had faded out and it appeared that the flight as originally identified is a friendly flight.
6. ConAC took immediate action to dispatch interceptors on the initial contact.

PART VI: RADAR ANALYSIS

The technical information in this document is sparse, but there are details which, when combined with the known capabilities of radar, call into question all of the previous explanations. In order to understand why, one must learn about the capabilities and locations of early warning radar installations in Maine.

By the beginning of WWII radar technology had developed to the point that aircraft detections at 150 miles were common. After the Japanese attack in December, 1941, the Army deployed, along the east and west coasts of the US, radar sets capable of detecting aircraft at 150 mile range at 20,000 ft elevation. By the late 1940s there were radar sets capable of a 200 mile range at 40,000 ft. The question now becomes, what were the capabilities and locations of the long-range search radar installations in Maine?

A valuable reference in this regard is Searching the Skies; The Legacy of the United States Cold war Defense Radar Program published by the USAF Air Combat Command (David Winkler, June, 1997) which recounts the history of the early warning radar that was set up by the Air Defense Command. These radar installations were dedicated to the detection of incursions into US airspace from the north. Generally they were located at sites where there already were radar installations used for other purposes such as air traffic control of military and civilian aircraft. Of course, there were also search radar installations at civilian airports and Air Force bases. One of these probably was at Loring AFB at Limestone, Maine, or at Presque Isle AFB at Presque Isle, Maine.

According to Searching the Skies,, in December, 1950 there was an AN/CPS-5 and also an AN/TPS-10A radar at Dow AFB near Bangor, Maine. These are Army/Navy (AN) search radars. The CPS-5 was a search radar and the TPS-10A was a height finder. The combination of these radars gave a solid search of up to 60 miles at 40,000 ft but often had success tracking aircraft as far as 210 miles away.

By combining the known radar capabilities with the information in Winkles document one can make a crude estimate of the speed of the objects. If we assume that the initial detection (10:30 AM) was made by the radar at Bangor, at the limit of its detection range, then at that time the objects were about 200 miles north-northeast of Bangor. About 10 minutes later (10:40 AM) the objects were in the vicinity of (over?) Limestone, Maine, which is about 150 miles north-northeast of Bangor. Hence these objects would have traveled about 50 miles in 10 minutes corresponding to a speed of 300 mph, the upper limit for long range bomber aircraft in 1950, but easily attained by fighter aircraft.

This speed calculation is based on the assumption that the initial detection was not made by radar installations that were closer to the northern border of Maine. The only reason for making this assumption is that the existence of a long range radar at Dow AFB is documented. I have no documentation on long range radar installations that may have been at Loring AFB, or at the nearby Presque Isle AFB, both of which are near the northeastern border of Maine. The capabilities of these assumed radars are unknown. However, according to Searching the Skies, there was an AN/TPS-1B long range search

radar that came on line at Loring AFB for use by the Air Defense Command or by ConAC in February, 1951. It is quite likely that this radar or one like it was already operating as an air traffic control radar at the Air Force Base in December, 1950. This type of radar had a capability of detecting aircraft at altitudes up to 10,000 ft at a range of 120 miles. At closer ranges it could detect aircraft at higher altitudes.

If we assume that a radar such as this made the initial detection then the estimated speed will be considerably larger than the 300 mph calculated above. Assume that at the initial detection was made about 100 miles from Loring AFB at Limestone. Then, ten minutes later the objects were in the vicinity of Limestone. Maine. That would mean they had traveled nearly 100 miles in 10 minutes for a speed of 500 - 600 mph, far in excess of anything but the fastest fighter jets of the time. Similarly, if the detection had been made from Loring AFB by a radar with a range of 200 miles, then the initial detection could have occurred when the objects were about 200 miles from Limestone. To travel 200 miles in 10 minutes requires a speed of 1,200 mph.

SNAFU OR SAUCERS? (SNAFU: situation normal, all fouled up)
As the preceding discussion shows, there is not enough information about the radar detections to allow an exact calculation of the speed of the objects. However, it appears that they were traveling at least 300 mph and quite likely twice that and perhaps over 1,000 mph.

The radar operators tracked the objects for ten minutes and determined that there were 40 objects (aircraft) flying at a rather high altitude (32,000 ft) and traveling south-southwestward (a course of 200 degrees). This course would take them over the eastern USA, roughly toward Washington, D.C.

The fact that the Air Force bases scrambled aircraft to intercept and identify the intruders means the radar images were so good that the operators were certain that these objects were real, unidentifiable yet solid targets, presumably aircraft, and not accidents of the radar. This is decidedly different from what the operators would have concluded had the radar showed relatively slow moving geese or atmospheric effects such as a radar mirage due to temperature inversion. Geese and atmospheric effects don't travel at hundreds of miles per hour along continuous tracks for many minutes.

The statement that there was no reason to believe the aircraft were friendly means that the Continental Air Command radar operators were not able to identify the aircraft from a known flight plan, nor were they able to communicate with the aircraft by radio. Had the aircraft been a single C-47 they certainly could have identified it as friendly since it would have responded to the numerous requests to identify itself. Furthermore, it would not have been as high as 32,000 ft, flying as fast as 300 mph and there likely would have been a flight plan. The intruders, on the other hand, were flying high, fast and were radio-silent.

According to Winkles document the radar track faded out at 11:04 AM, or about 24 minutes after the objects were near Limestone. If the objects had continued on the 200 degree course at a speed of 300 mph they would have traveled about 100 miles from Limestone and would have been nearing the limit of a 120 mile radar range. If they had been traveling at 600 mph, they would have been beyond the range of the of Limestone radar which would explain the fading of the track. (One would expect, however, that they would have been tracked by the Dow AFB radar as they continued southward.)

The strangest statement in the document is: it appears that the flight as originally identified is a friendly flight. What does that mean, it appears? Didn't they know for certain? Didn't they track the friendly aircraft until they were positive? Are we to believe that the Continental Air Command scrambled aircraft and put the USA into a state of immediate high alert and then weren't able to positively identify the aircraft?

One would expect if there had been upwards of forty friendly aircraft coming from the north toward the USA border someone would have been aware of it. There would have been a flight plan. At the very least these aircraft would have acknowledged the attempts to contact them by radio, attempts which must have been made numerous times starting with the first detection by radar. Either the flight plan or the radio identification would have been passed to the local commanders of the Continental Air Command aircraft to prevent needless scrambling of aircraft.

If these intruders were group of friendly aircraft why did Undersecretary of Defense Robert Lovett tell Dean Acheson that flocks of geese flying over Alaska caused the radar targets? Why did Undersecretary Lovett tell the President that arctic atmospheric conditions caused the radar targets? Why did the Air Force tell the press that a single C-47 caused the alert?

Presumably these were the explanations offered by the Top Brass after being told the details by the people who were directly involved with the radar detections and the scramble. Were the Top Brass embarrassed by the initial misidentification of a friendly flight and afraid to admit it? (I doubt that. They admitted to the press that it was a single C-47.) Or did the Top Brass, for whatever reason, not tell the President and the Undersecretary of Defense what these targets really were? Or were these people told but, when writing about it years later, they could not recall or could not reveal the exact nature of these objects to anyone else?

There must be other Air Force documents not yet released which clarify this situation. However, based on the information available in this document combined with the fact that CIC was put on immediate high alert for flying saucer information only two days later, I can suggest another explanation: perhaps the radar targets were flying saucers!

Perhaps one of them caused the 5 PM sighting in Ft. Myers, Florida.

And perhaps one of them flew somewhat erratically over Texas and crashed in Mexico. Perhaps. Will we ever know?

ACKNOWLEDGMENTS
I thank Don Berliner, Stanton Friedman, Kevin Randle, Todd Zechel, the FBI, Charles Winkle, Dean Acheson, Harry Truman and approximately forty high-flying aircraft for making this mystery possible.

Radar Inspired National Alert

Northeastern United States
December 6, 1950

From: Bruce Maccabee <brumac@compuserve.com>
Date: Fri, 30 Jan 1998 12:02:20 -0500
Fwd Date: Fri, 30 Jan 1998 12:59:11 -0500
Subject: Re: PROJECT-1947: Ruppelt, Air Defense & UFOs

Bruce Maccabee:
On another matter, regarding the Air defense Command and radar: I have been trying to locate records related to the radar inspired national alert on December 6, 1950 at about 10:30 AM when radar picked up a number of objects approaching the northeastern United States. I have a chapter on this in my book THE UFO-FBI CONNECTION because two days later, according to a message found in the FBI file, the counter-intelligence corps was put on immediate high alert for any information related to flying saucers (Dec. 8). There appear to be NO RECORDS OF THIS EVENT in the files of the Secretary of Defense, other than one document which provides a few details that could only have come from other documents .

Furthermore, it is clear that the SECDEF office was involved in this event which resulted in planes being scrambled AND THE PRESIDENT AND SECRETARY OF STATE BEING ALERTED!

Could this be a real radar detection of a group of UFOs that was effectively covered up by the defense department? Hard to know. Truman comments briefly about this event in his memoirs (Chapt.25, Vol. II). So on Dec. 6, there were no doubt fears of a surprise Soviet air attack. Truman wrote:

< SNIP valuable comments about war jitters regarding the Korean war and the possibility of direct Russian attack, and the implications of "the bomb.">

Truman wrote in his memoirs of the Dec 6 alert:

"Shortly before we went into that morning meeting, Under Secretary Lovett called from the Pentagon, reporting that the radar screens of some air defense installations in the Far North were reporting large formations of unidentified planes approaching. Fighter planes were sent up to reconnoiter and alerts were flashed to air centers in New England and beyond. But about an hour later -- while I was meeting with Attlee --Lovett notified me that the report had been in error. Some unusual disturbance in the Arctic atmosphere had thrown the radar off."

If the Dec. 6 event was indeed caused by an "atmospheric disturbance," then why the CIC high alert two days later for any information on flying saucers?

Was Truman really told it was atmospheric, or was he really told that it wasn't Soviet bombers (the primary concern), but flying saucers instead? It's impossible to know from the scant information that we have.

True it is: we don't have enough information. But what there is paints a picture of confusion:

(a) Truman, in his memoirs, says Lovett (Under Sec of Def. under George Marshal, SECDEF) told him it was atmospheric disturbance (this also appears in the minutes of the meeting)

(b) Secretary of State Dean Acheson was told of the alert by Lovett at about 10:30 AM. Acheson wrote: "Our early warning radar in Canada had picked up formations of unidentified objects, presumably aircraft, headed on a southeast course that would bring them over Washington in two or three hours."

An hour later, during which time Acheson went to the White House, "Lovett told us the unidentified objects had disappeared. His guess was that they had been geese."

(c) International News Service carried a report of the event. After reporting on the alert and scramble. INS wrote, "Later a

spokesman for the Air Force stated that interceptor aircraft had been dispatched and that the object in question had been identified shortly thereafter as a North American C-47 which was approaching the continent from Goose Bay..."

(d) A memorandum written by AF Col. Charles Winkle on dec 6 (afternoon?) entitled "air alert 1030 hours" says that the Continental Air Command Air Defense Controller ...at 1030 hours...(reported) a number of unidentified aircraft..approaching the northeast ....and there was no reason to believe they were friendly." At 1040 hours the information was "further amplified" by radar contact which showed 40 aircraft in flight at 32,000 feet near Limestone, Maine.

The alert procedure went into affect and the President was notified. At 11:04 hours the radar track had "faded out and it appeared that the flight as originally identified is a friendly flight."

"Atmospheric? Geese? One C-47? A friendly flight? Wait a minute. You can bet that the initial 1030 detection was by radar, probably at a distance of about 200 miles (typical for search radar even in those days). Assuming the detection was made by "lashup" radar at Limestone, Maine, then if there were 40 "aircraft" in the vicinity of Limestone only 10 minutes later they must have traveled nearly 200 miles in 10 minutes.... or nearly 600 mph.... FAST for those days.

Also, you can bet that contact signals were repeatedly sent from the ground to these aircraft. Had they been friendly they would have responded. They certainly weren't Russian bombers.... so
WHAT WERE THEY?

Or maybe something else was happening to trigger the Dec. 8 alert. Dec. 6 is also the day of the rumored flying saucer crash in northern Mexico with retrieval by the U.S. military.

NOTE: This is the "Col Willingham" report made first in the late 1970's. However, Willingham never specified said Dec. 6.

This was a date invented by someone (Todd Zechel? Kevin Randle?). Willingham only said 1948-49, perhaps 1950. HE couldn't pin down a date. This is being checked on.

Radar Inspired National Alert

Northeastern United States
December 6, 1950

David Rudiak:
A Blue Book unknown case also occurred that day in Fort Meyer, Florida where a 75 foot saucer was seen through binoculars by a former aircraft purchasing agent. Ruppelt wrote of the first UFO/radiation detection case at Los Alamos in Dec.1950. From Dec. 14-20, FBI memos mention three more UFO reports by radar operators and employees at OAK RIDGE. Two jet intercepts were attempted and on 12/14, "a group of objects blanketed the Radar Scopes..." for 3 hours. These incidents had been preceded by a flurry of 15 such UFO reports back in Oct. over Oak Ridge, also investigated by the FBI. The one that occurred on Oct. 23 is also mentioned by Ruppelt in his UFO radiation chapter. One FBI memo stated "Geiger counters in the vicinity [had] unexplainable readings at about this time."

For all we know, this may only represent a fraction of UFO activity at the time. The UFOs over our atomic installations like Los Alamos and OAK RIDGE must have been the most alarming. Maybe the Dec.6 incident really was a false alarm, but the military in conjunction with the other UFO incidents were concerned that we might not be able to distinguish a genuine Soviet attack from the UFOs that were flying around. Perhaps this triggered the alert on Dec. 8 for any additional information on the UFOs. It could have been fears of an accidental nuclear war with the Soviets at the height of the Korean War.

Jan. 16, 1951; Artesia, New Mexico. Time unknown. Witnesses: Two members of a balloon project from the General Mills . Aeronautical Research Laboratory, the manager of the Artesia Airport, and three pilots. The balloon crew was observing their 110' balloon at an altitude of 112,000' when a dull white, round object was spotted. It appeared larger than the balloon, but made no movement. Later, the balloon crew and the others saw two objects from the airport; flying side-by-side, they circled the balloon and flew away to the northeast. The second observation lasted about 40 seconds. Note: there is confusion over the date of this case, with some USAF records showing it as 1952; however, 1951 appears to be correct.

Subject ; January 16, 1951, Artesia, New Mexico??? Solved?

Re-interview of witnesses verified that the sighting of unconventional aircraft over Artesia, New Mexico was on January 16, 1951, and not January 16, 1952, so states the information copy dated June 3, 1952. See below:

REMARKS SUMMARY OF INFORMATION

1. On 2 Sept 80, SOURCE related on 8 Aug 80, three Security Policemen assigned to 1608 SPS, KAFB, NM, on duty inside the Manzano Weapons Storage Area sighted an unidentified light in the air that traveled from North to South over the Coyote Canyon area of the Department of Defense Restricted Test Range on KAFB, NM. The Security Policemen identified as: SSGT STEPHEN FERENZ, Area Supervisor, ATC MARTIN W. RIST and AMN ANTHONY D. FRAZIER, were later interviewed separately by SOURCE and all three related the same statement; at approximately 2350 hrs., while on duty in Charlie Sector, East Side of Manzano, the three observed a very bright light in the sky approximately 3 miles North-North East of their position. The light traveled with great speed and stopped suddenly in the sky over Coyote Canyon. The three first thought the object was a helicopter, however, after observing the strange aerial maneuvers (stop and go), they felt a helicopter couldn't have performed such skills. The light landed in the Coyote Canyon area. Sometime later, three witnessed the light take off and leave proceeding straight up at a high speed and disappear.

2. Central Security Control (CSC) inside Manzano, contacted Sandia Security, who conducts frequent building checks on two alarmed structures in area. They advised that a patrol was already in the area and would investigate.

3. On 11 Aug 80, RUSS CURTIS, Sandia Security, advised that on 9 Aug 80, a Sandia Security Guard, (who wishes his name not be divulged for fear of harassment), related the following: At approximately 0020 hrs., he was driving east on the Coyote Canyon access road on a routine building check of an alarmed structure. As he approached the structure he observed a bright light near the ground behind the structure. He also observed an object he first thought was a helicopter. But after driving closer, he observed a round disk shaped object. He attempted to radio for backup patrol but his radio would not work. As he approached the object on foot armed with a shotgun, the object took off in a vertical direction at a high rate of speed. The guard was a former helicopter mechanic in the U.S. Army and stated the object he observed was not a helicopter.

4. SOURCE advised on 22 Aug 80, three other security policemen observed the same aerial phenomena described by the first three. Again the object landed in Coyote Canyon. They did not see the object take off.

FREEDOM OF INFORMATION ACT DOCUMENT FILES

CONTINUED FROM COMPLAL FORM 1, DTD 9 Sept 80

5. Coyote Canyon is part of a large restricted test range used by the Air Force Weapons Laboratory, Sandia Laboratories, Defense Nuclear Agency and the Department of Energy. The range was formerly patrolled by Sandia Security, however, they only conduct building checks there now.

6. On 10 Aug 80, a New Mexico State Patrolman sighted an aerial object land in the Manzano's between Belen and Albuquerque, NM. The Patrolman reported the sighting to the Kirtland AFB Command Post, who later referred the patrolman to the AFOSI Dist 17. AFOSI Dist 17 advised the patrolman to make a report through his own agency. On 11 Aug 80, the Kirtland Public Information office advised the patrolman the USAF no longer investigates such sighting unless they occur on a USAF base.

7. WRITER contacted all the agencies who utilized the test range and it was learned no aerial tests are conducted in the Coyote Canyon area. Only ground test are conducted.

8. On 8 Sept 80, WRITER learned from Sandia Security that another Security guard observed a object land near an alarmed structure sometime during the first week of August, but did not report it until just recently for fear of harassment.

9. The two alarmed structures located within the area contain HQ CR 44 material.

REMARKS SUMMARY OF INFORMATION

1. On 13 Aug 80, 1960 COMM Sq Maintenance Officer reported Radar Approach Control equipment and scanner radar inoperative due to high frequency jamming from an unknown cause. Total blackout of entire radar approach system to include Albuquerque Airport was in effect between 1630-2215 hrs. Radar Approach Control back up system also were inoperative.

2. On 13 Aug 80, Defense Nuclear Agency Radio Frequency Monitors determined, by vector analysis, the interference was being sent from an area (V-90 degrees or due East). On DAF map coordinates E-28.6. The area was located NW of Coyote Canyon Test area. It was first thought that Sandia Laboratory, which utilizes the test range was responsible. However, after a careful check, it was later determined that no test were being conducted in the canyon area. Department of Energy, Air Force Weapons Laboratory and DNA were contacted but assured that their agencies were not responsible.

3. On 13 Aug 80, Base Security Police conducted a physical check of the area but because of the mountainous terrain, a thorough check could not be completed at that time. A later foot search failed to disclose anything that could have caused the interference.

4. On 13 Aug 80, at 2216 hrs., all radar equipment returned to normal operation without further incident.

5. CONCLUSION: The presence of hostile intelligence jamming cannot be ruled out. Although no evidence would suggest this, the method has been used in the past. Communication maintenance specialists cannot explain how such interference could cause the radar equipment to become totally inoperative. Neither could they suggest the type or range of the interference signal. DNA frequency monitors reported the interference beam was wide spread and a type unknown to their electronical equipment. Further checks of the area was being conducted by Technical Services, AFOSI.

6. High command interest item. Briefings requested IAW AFOSIR 124-4 be completed at HQ AFOSI/IVOE. HQ CR 44 and 51 items.

Subject Case NR: 8017D93-126 HQ CR 44
1. Subject Negatives/Film were analyzed by HQ IVT and 7602 AINTELG, it and the following results were found:
A. Negative #1: Depicting C-5A aircraft on approach and streaking unidentified aerial object in lower right portion of film. Film found to be unaltered. Size differential was not consistent with size of aircraft. Conclusion: Inconclusive
B. Negative #2: Depicting cylinder shaped unidentified aerial object in upper left portion of photo. Film found to be unaltered. Film showed object to be consistent with field depth and consistent with relative size of fixed objects. Conclusion: Legitimate negative of unidentified aerial

object. Bolton/Reinfeld method did not reveal visible markings on object.
C. Negative #3: Depicting irregular shaped unidentified aerial object in seven frames of 8MM film. Because of the size and apparent speed of object no further classification or conclusion could be drawn. Film shown to be unaltered.
D. 34 inches of 8MM film: Depicting apparent colored object moving in front of still camera. Film found to be unaltered. Spectrography revealed colors to be basic prism features. Depth analysis revealed object to be within 152MM of camera. Object was not consistent with relative size of fixed objects observed for several seconds in film. Conclusion: inconclusive.
E. Original Negative Depicting Unidentified Object: Film found to be unaltered. Because of a lack of fixed objects in the film, no depth analysis could be performed. Bolton, Reinfeld method revealed object to be saucer shaped, approximate diameter 37 feet. Object contained a trilateral insignia on the lower portion of object. Conclusion: Legitimate negative of unidentified aerial object.
2. Ref your request for further information regarding HQ CR 44, the following is provided: Capt. Grace 7602 Aintelg, INS contacted and related following: (S/WINTEL) USAF no longer publicly active in UFO research, however USAF still has interest in all UFO sightings over USAF installation/test ranges. Several other government agencies, lead by NASA, actively investigates legitimate sightings through covert cover. (S/WINTEL/FSA) One such cover is UFO Reporting Center, US Coast and Geodetic Survey, Rockville, MD 20852. NASA filters results of sightings to appropriate military departments with interest in that particular sighting. The official US Government Policy and results of project Aquarius is still classified top secret with no dissemination outside official intelligence channels and with restricted access to "MJ Twelve". Case on Bennewitz is being monitored by NASA, INS, who request all future evidence be forwarded to them thru AFOSI, IVOE.
4. Ref your request for technical assistance. Because of a chance of public disclosure, no knowledgeable personnel with SPA will be provided. Continue to receive assistance from individuals mentioned in your message, Miller, fugate. Because of the sensitivity of case, request they be thoroughly debriefed at regular intervals.

NATIONAL SECURITY AGENCY
CENTRAL SECURITY SERVICE
Fort George G. Meade, Maryland 20755-6000

Serial: J9014C

15 APR 1986

This responds to your letter of 7 March 1986 in which you further narrowed your Freedom of Information Act (FOIA) request for records pertaining to Project Aquarius.

The document located in response to your request as stated in your 7 March letter has been reviewed by this Agency as required by the FOIA and has been found to be currently and properly classified in accordance with Executive Order 12356. This document meets the criteria for classification as set forth in subparagraphs 2, 4, and 8 of section 1.3 and remains classified TOP SECRET as provided in section 1.1 of Executive Order 12356. The document is classified because its disclosure could reasonably be expected to cause exceptionally grave damage to the national security. Because the document is currently and properly classified, it is exempt from disclosure pursuant to the first exemption of the FOIA (5 U.S.C. section 552(b) (1)).

In addition, this Agency is authorized by various statues to protect

certain information concerning its activities. We have determined that such information exists in this document. Accordingly, those portions are also exempt from disclosure pursuant to the third exemption of the FOIA which provides for the withholding of information specifically protected from disclosure by statute. The specific statutes applicable in this case are Title 18 U.S. Code 798; Title 50 U.S. Code 403(d) (3); and Section 6, Public Law 86-36 (50 U.S. Code 402 "note").

No portion of the information is reasonably segregable.

Since your request has been denied, you are hereby advised of this Agency's appeal procedures.

Any person denied access to information may, within 45 days after notification of the denial, file an appeal to the NSA/CSS Freedom of Information Act Appeal Authority. The appeal shall be in writing addressed to the NSA/CSS FOIA Appeal Authority, National Security Agency, Fort George G. Meade, MD 20755-6000. The appeal shall reference the initial denial of access and shall contain, in sufficient detail and particularity, the grounds upon which the requester believes release of the information is required. The NSA/CSS Appeal Authority shall respond to the appeal within 20 working days after receipt.

In your letter, you take exception to the amount requested by this Agency for manpower and computer search fees to process your original request for all information on Project Aquarius. Please be advised that NSA search and duplication fees are computed in accordance with guidance promulgated in sections 6-201 and 6-202 of Dod Directive 5400.7-R

Sincerely,

JULIA B. WETZEL
Director of Policy

OAK RIDGE SIGHTING BY SECURITY PATROL

10/15/50

Date: Wed, 01 Oct 1997
From: Jerry Washington <skyeking@aye.net>

It's been awhile, but I'm back with another case file from Oak Ridge, Tennessee: my hometown. The "Atomic City" has a long and storied history where the UFO phenomenon is concerned, and this is just one account among many that are available for public consumption, thanks to the Freedom of Information Act, and books by guys such as J. Allen Hynek (CUFOS), and Edward J.Ruppelt (Project Blue Book).

Jerry Washington
SD KY/MUFON

The following account is taken from an FBI document (circa 1950) sent by J. Edgar Hoover to Mr. Francis R. Hammock, Acting Director of the Division of Security of the Atomic Energy Commission in Washington, D.C.:

"On 15 October, 1950, Atomic Energy Security Patrol Trooper, Edward D.Rymer, and a caretaker, John Moneymaker, from the University of Tennessee Research Farm, at Oak Ridge, saw an object at about 12,000 to 15,000 feet above Solway Gate of the "Control Zone." This object appeared to be an aircraft which was starting to make an outside loop, trailing smoke behind. Soon these two men realized that the formerly described smoke behind the aircraft was a tail. This object continued to descend in a controlled dive, and when it approached the ground it leveled off and flew slowly, parallel to the ground. This object came within two hundred and ten (210) feet of the two observers and was paralleling the ground at approximately six (6) feet. Trooper Rymer attempted to approach the object but as he approached the object became smaller and started moving in a southeasterly direction. This object is said to have approached a nine (9) foot cyclone chain link fence and made a controlled movement to clear the fence, then a Willow tree, then a telephone post and wire, after which the object gained momentum and altitude and cleared a hill at approximately one (1) mile away. The object appeared to be pear shaped. When this object was over the hill it was still visible as the same object that was observed when only fifty (50) feet away. (The explanation given was that this object grew larger as it gained altitude and speed.)

Approximately five minutes later the object appeared again having reappeared from approximately the same location from which it had disappeared. The object was seen again five minutes later for approximately ten seconds.

During the above happenings, Mr. John Moneymaker had

visual reference of this object during its first [appearance] for approximately seven minutes. Trooper Rymer was interrupted twice during which times he called his headquarters in an attempt to get other observers. Also, during the fantastic flight of this object, Trooper Rymer stopped Mr. E.W. Hightower, who was on the highway in his vehicle, to verify what was being seen. Mr. Hightower's statement substantiates the description as before.

By the time the object appeared the second time, Joe Zarzecki, Captain of the Atomic Energy Commission Security Patrol, was present and also witnessed this phenomenon. Each of the observers describes the object substantially as follows:

a. When the object was first sighted it appeared to be an aircraft trailing smoke, or better described as "smoke writing."

b. When the object was approaching the ground in its descent, it took on the shape of a bullet with a large tail.

c. When the object was sighted on the ground (from app. 210 ft). It appeared to be approximately the size of a 2x5 card {from a distance], with a twenty (20) foot ribbon tail. The object and the tail were alternately moving up and down, and the ribbon appeared to be waving in the breeze. The color was a metallic gray.

d. When Trooper Rymer came within fifty (50) feet of the object he described it similar to the above except that the first two and one-half (2 ½) feet of the tail appeared more solid, but the last seventeen and one-half (17 ½) feet of the tail appeared almost transparent and was glowing, intermittently, in sections. The tail appeared to have four or five sections which would glow intermittently.

Trooper Rymer's record is among the best of the troopers at the Atomic Energy Commission Security Patrol. Mr. John Moneymaker holds badge No.UT-1817, and is employed by the University of Tennessee Agricultural Research Farm as a caretaker for small animals. Mr. E.W. Hightower holds badge No. 6633 and is an employee of the Maxon Construction Company.

The Controller, Capt. W. Akin, of Detachment No. 2…at the Knoxville Airport Radar Site, made a report that he had seen peculiar readings on the radar scopes at approximately 1520 hours. Apparently the radar picture was indefinite, intermittent, and inaccurate, because the objects sighted by radar would only make a short "painting" on the scope and would then disappear only to reappear at another location."

Attached to this Summary are eleven (11) enclosures which tend to clarify information contained in the former two (2) Summaries of Information on SUBJECT. These enclosures are composed of witness statements; background information concerning previous sightings of peculiar objects over Oak Ridge; and radar reports. The most reliable sources available were utilized in the

compilation of this report. The employment records and the Federal Bureau of Investigation reports concerning the witnesses were inspected to ascertain their reliability, integrity, and loyalty to the United States Government.

The opinions of the officials of the Security Division, AEC, Oak Ridge; Security Branch, ??PA [partially unreadable] Division, Oak Ridge: AEC Security Patrol, Oak Ridge; FBI, Knoxville: Air Force Radar and Fighter squadrons, Knoxville; and the OSI, Knoxville, Tennessee, FAIL TO EVOLVE AN ADEQUATE EXPLANATION FOR SUBJECT [emphasis mine] however, the possibilities of practical jokers, mass hysteria, balloons of any description, flights of birds (with or without cobwebs or other objects attached), falling leaves, insect swarms, peculiar weather conditions, reflections, flying kites, objects thrown from the ground, windblown objects, insanity, and many other natural happenings HAVE BEEN REJECTED because of the simultaneous witnessing of the objects with the reported radar sightings; because of the reliability of the witnesses; because of the detailed, similar description of the objects seen by different persons; and BECAUSE OF IMPOSSIBILITY…"

(The previous document was declassified in 1983.)

Objects Over Oak Ridge, October 12, 15, 16, 1950
PROTECTION OF VITAL FACILITIES

Ramytel October 13, 1950

There is being submitted herewith a copy of two reports made by District Representative of the OSI, 8th District, U.S. Air Force, with regard to the detection of unidentified objects by the means of radar, as set forth in referenced teletype. These reports continue to set forth additional reports concerning unidentified objects in the air space are over Oak Ridge, Tennessee, which to date have not been explained.

No investigation is being conducted by the Knoxville Office in this matter, but any further information received from OSI or from CIC representatives will be forwarded immediately.

Incident Report

AEC PATROL

Incident report No. 142-50
Date: October 15, 1950
Time: 3:25 P.M.

Classification	Trooper	Location
Unidentified Flying Object	E. D. Rymer	Kerr Hollow

Person Involved	Address	Badge No.	Company
Trooper E. D. Rymer		206	"D" Troop

Person Involved	Address	Badge No.	Company
Capt. J. J. Zarzecki			

[redacted] 66 [redacted] 66

John Moneymaker stopped at Kerr Hollow gate where I was on duty October 15, 1950, 3:20 P.M. He and I observed what appeared to be a skywriter in the air. He was one-quarter of the way through a letter "O". The object appeared to be 12,000 to 15,000 feet high and east by north of the gate, approximately one mile distance from the gate. At this time, the size appeared to be about the size of a four or five passenger plane. The object had a smoke trail the same crossectional size of its body and about one-quarter of a mile long. The smoke was grayish in color. The color of the body of the object was silver metallic. The object gave off no reflection. It was dull in appearance. When first observed, it was describing an arc toward the ground. When the object failed to complete the outside loop, I went into the gate house to report its appearance. Up till this time I thought it to be a plane doing some skywriting. While I was making the phone call, [redacted] watched the object continue downward to 1,500 feet. At that altitude, a second object was noticed alongside the smoke trail. 66
The second object was the same size and shape and was about 50 feet behind the first object. The second object appeared to be attached to the first object's smoke trail with about an 80 degree forward thrust, yet the second object was moving in the same direction of the first object and not drawing away from the smoke trail of the first object the way it should have been doing according to its angle and direction. At this altitude, both objects changed from a bullet shape to a bladder shape. Also, at 1500 feet both objects began pulling out of the vertical dive. During the entire descent, both objects diminished in size. From 1,500 feet, the angle of descent was about 45 degrees. At about 500 feet, the second or trailing object disappeared. The object continued downward to a point north of the perimeter fence over the roadway about 60 yards from the gatehouse toward Solway bridge. This was where the object was when I came out of the gatehouse. At this time, the object had diminished to about 2x3 inches.

A. L. Rydzewski, Acting Assistant Chief, Security Division

REPORT OF MYSTERIOUS FLYING OBJECT

SYMBOL: S:AIR

Pursuant to receipt of a report from John S. Davis, Chief, Oak Ridge Patrol, indicating that a mysterious flying object was observed in the vicinity of the Kerr Hollow Entrance, [redacted] was interviewed by F. P. Callaghan, Acting Chief, Security Division, AEC, ORO, in the presence of A. L. Rydzewski, Security Division, ORO, and Charles Jones, Security Agent, Maxon Construction Company, at approximately 10:15 p.m., October 15, 1950. Hightower is an electrician employed by the Edenfield Electric Company, which is under subcontract with the Maxon Construction Company, performing work at the K-29 Plant. [redacted] gave the following account of his observations. He was driving to work at approximately 3:15 p.m., October 15, 1950, and upon nearing the Kerr Hollow entrance to the Oak Ridge Controlled Area, he was requested by the guard on duty to stop and observe an object which the guard and another civilian were looking at. He got out of the car and noticed a white spot in the sky. He said it was "awful high" and moved from a position southeast of Kerr Hollow entrance in a westerly direction toward the Plant Areas. He noted that the sky was clear and the object was merely white, not shiny and emitted no trail of smoke and appeared to have no appendages. He observed the object for about 5 minutes and continued on his way to work before the white object disappeared from sight.

b6

When asked what he thought of the object, [redacted] related that his first impression was that it might be a toy ballon, because it looked quite similar to a toy ballon which one of the neighbor-hood girls had released in his presence several weeks ago. [redacted] was not sure of the size of shape of the object, however he indicated by hand gesture that it might have been about 9 inches in diameter and probably was in the shape of a disc or ball.

b6

[redacted] said that the guard and civilian appeared to be excited and told him that when they first saw it, the object was "Quite big" and that it moved along the road at very low altitude and that it suddenly ascended at an angle to the point where they were observing it at the time. He stated that the guard originally asked him to look at the object, just to make sure that he wasn't merely imagining he was seeing things.

The files

16 October 1950

[redacted] stated that as far as he knows his eye-sight is good and that he only had to use glasses for reading purposes. He had his eyes tested about 4 years ago by [redacted], at which time this reading glasses were prescribed. He also had taken a pre-drivers license eye test about 3 weeks ago at the Maxon First Aid Station.

b6

b6 [redacted] stated that the only other person to whom he mentioned seeing the object was a guard stationed at Gate Two to the K-29 Plant.

Note: The Maxon Guard was later identified as being Jack Larton, who was interviewed at approximately 11:15 p.m. Larton stated that a man was driving through the portal shortly after 3:00 p.m. and stopped to chat with him for about 5 minutes. The man [redacted] stated that he had a headache and that he had been observing an object in the sky which was called to his attention by a guard at the Kerr Hollow entrance. According to Larton, the man further related that the object was so high he didn't know what it was, but it looked more or less like a toy ballon. Larton stated that he was not excited by this report; however he did mention something about flying objects to a fellow guard about two hours later when they observed aircraft which they believed were P-38's flying over the plant areas.

b6

Note: Other individuals who had observed the object were identified as AEC Patrolman Edward Dean Rymer and [redacted]

KNOXVILLE DETACHMENT
8th DISTRICT OSI (IG)
PO BOX 401
Knoxville, Tennessee

16 October 1950

SUBJECT: Visual Sightings of Unidentified Flying Objects over Oak Ridge, Tennessee

TO : District Commander
8th District OSI (IG)
Marvell AFB, Ala.

1. At 0830 16 October 1950, Mr. George Rathman, Security Division, Atomic Energy Commission, Oak Ridge, Tennessee, notified the undersigned that visual sightings of an unidentified flying object had been made by several persons at Oak Ridge. Accompanied by W. B. Gray, SAC Knoxville CIC, the undersigned proceeded to Oak Ridge.

2. At the AEC Security Division, Oak Ridge AEC Security Patrol [redacted] was interviewed by Mr. Rathman, Mr. Gray and the undersigned. In substance [redacted] related the following: At about 1525 EST, 15 October 1950 [redacted] was on duty at the Solway entrance to the Oak Ridge controlled area. He was conversing outside the guard house with [redacted], attendant at the University of Tennessee Research Farm Program, Oak Ridge. [redacted] happened to glance in the sky and called [redacted] attention to an object in the sky. The men observed that the object was starting to describe an arc in the sky. They estimated the object to be about twelve to fifteen thousand feet altitude. At this altitude the object resembled a sky-writing plane because smoke appeared to be trailing from the object. After the object described about a quarter of an arc it began to make a controlled descent at a speed estimated at about 100 miles per hour. [redacted] then noticed that the object had no wings and that it appeared to be bullet shaped. By this time the men could observe that what appeared to be smoke coming from the object was an attached tail. At this time [redacted] went in the guard house and called the Captain of the Guard to report a falling object. [redacted] continued to observe the object. When [redacted] came out of the guard house the object had descended to a height of about six (6) feet and was about seventy (70) yards from the two (2) men. By this time the object had assumed the shape of a two (2) by five (5) inch grayish colored card and attached to the object was a ribbon like tail about twenty (20) feet long and an inch wide. The object had no thickness. The tail of the object, which was light gray in color, had a small black line running down through its center. The tail appeared to be waving or rippling and the latter fifteen (15) feet of the tail gave off a pulsating glow intermittently in different section of the fifteen (15) feet. The latter fifteen (15) feet of the tail appeared to be somewhat transparent.

b7C

65-58300-136

ENCLOSURE

[redacted] estimated that the object was traveling about three (3) mile per hour and that the main body of the object was rocking slightly showing the corners and the under and top side. [redacted] advanced on the object to within fifty (50) feet but it did not appear to get any larger. At [redacted] approach the object picked up speed slightly, proceeded across the highway, came to a nine (9) foot chain link fence, rose vertically and parallel with the fence and proceeded over the fence. After clearing the fence it dipped toward the ground for a few feet and then rose sharply to clear a thirty (30) foot willow tree and proceeded in a southeasterly direction at an increased speed to a ridge about a mile away and disappeared over the top of the ridge. The object during the flight to the ridge, changed to a pear shape but the tail continued to be present. While the object was heading for the ridge a car driven by [redacted], employee of the Maxon Construction Company, Oak Ridge, approached the Solway gate. [redacted] called [redacted] attention to the object and he also saw it disappear over the ridge. Shortly after the object disappeared Captain of the AEC Security Patrol [redacted] arrived at the scene. Shortly thereafter another similar object appeared in the sky within sight of the men at a height of about 300 feet, traveling in the same direction as the previous object and it disappeared over the same ridge. The object was visible to the men for about thirty (30) seconds. About five (5) minutes after the second appearance another similar object again was visible at an altitude of about 500 feet for about a ten (10) second interval. b7C

3. After a discussion of the incident Mr. Rathman, Mr. Gray, [redacted] and the undersigned proceeded to Solway Gate, scene of the observation. A check was made of [redacted] estimate of distances and they were found to be substantially accurate. The immediate area around the gate is fairly level with wooded hills and ridges rising around the area. There were no obstructions or hindrances to visibility noticeable. At the direction of Mr. Rathman [redacted] was brought to the scene. He gave substantially the same account as did [redacted] except to add that while [redacted] was phoning and the object had descended to about 1500 feet the object appeared to be pear shaped and another pear shaped object appeared on one side of the object. As it came lower the object assumed the 2" x 5" card shape. b7C

[redacted] b7C

5. At 1400, 16 October Mr. Gray and the undersigned proceeded to the Air Force Radar Station at McGhee-Tyson Airport, Knoxville, Tennessee. Major R. C. Care, Defense Area Commander stated that the radar screen had picked up indistinct, unidentified objects during the afternoon of 15 Oct. Major Care produced the incident report of [redacted], controller; excerpts from his report are as follows: b7C

16 October 1950

Description of object seen by Atomic Energy Commission Security Patrol Trooper Edward D. Rymer; who approached the object as close as Fifty (50) feet, at about 1520 hours on 15 October 1950, is substantially as follows: When first seen at an estimated altitude of twelve (12) to fifteen (15) thousand feet, the object appeared to be an aircraft starting to "skywrite". The "Streamer" left behind is estimated to be approximately one-fourth (¼) of a mile long. The object then started a controlled descent, almost vertical, at a slower speed than an aircraft would dive, and the "tail" followed the object. "It" then appeared to take the shape of a large bullet with a streamer, or ribbon, as thick as the bullet, trailing in the path of the object but connected to it. The object then levelled off parallel to the horizon, decreased its speed, and passed within seventy (70) yards of Rymer and another observer whom Rymer had stopped (John Moneymaker). Rymer had reported via telephone that this object was a "falling object". As the object decreased its speed to less than a mans normal walk, Rymer attempted to approach the object, but when he got within fifty (50) feet of it, the object moved toward the Southeast at about six feet altitude above the terrain; made almost a mechanical maneuver to go over a nine (9) foot cyclone chain link fence; then another similar maneuver to pass over a willow tree and a telephone line; and finally gained altitude and speed and went over a hill about one mile distance.

When Rymer was within fifty (50) feet of the object it appeared to be a two (2) by five (5) card (similar to the ones issued to vehicles entering the "Control Zone" at Oak Ridge) with a twenty (20) foot ribbon tail, the first two feet of which were easily visible and the last eighteen (18) feet of which was almost transparent and divided into several sections. The sections of the tail would pulsate a dim "glow" alternately. Through the entire length of the tail, was a black line which might be described as a "wire". The entire color was bluish-gray similar to the color of the top of a "wood cooking range". The "body" of the object was gently moving up and down, and the tail waved in the breeze like a ribbon or a worm and followed the path of the "body" of the object. There was no breeze at the time! (Knoxville Airport reports a high breeze of eight (8) miles per hour). Further, from fifty (50) feet away, the object looked no bigger than it did from two hundred and ten (210) feet away, and when it disappeared over the hill, one (1) mile away, it still looked the same size that it had appeared at only fifty (50) feet, but the "body" was then "bladder" or "pear-shaped".

When questioned further, Rymer stated that the object had to change size from the time they first observed it until it came near the ground; and it had to get larger as it went over the hill or they would not have been able to see it at such distances.

The object appeared two more times within the next ten (10) minutes and Rymer was able to get two other observers to verify that they could see the same "thing".

The three observers, other than Rymer, [redacted]

(Page # 1 of Inclosure # 3)

b6

65-3-5300-197

[redacted]

and Joe Zarzecki, Captain of the AEC Security Patrol, Oak Ridge, Tennessee. At no time were any noises from this object heard.

AGENTS NOTES: Mr. George Rathman, AEC Security Division, stated that all these persons' description of the object was substantially the same when questioned separately, except that Rymer had been the closest and was the only person to report the transparent portion of the "tail". [redacted] stated substantially the same except that he did not see the transparent portion of the "tail". b6

b6 [redacted] was wearing his glasses at the time and his vision, with glasses, is20/20 in the right eye, and 20/30 in the left eye. Rymer's vision is 20/20 in both eyes without glasses.

Rymer's record indicates that he is one of the "better" and most respected troopers on the AEC Security Patrol. Nothing in his record indicates any weaknesses or peculiar inclinations.

Rymer stated that he would not have reported this incident if there had not been a witness. Moneymaker was reluctant to give information because of the fantastic nature of the incident.

Captain Zarzecki saw the object for only a moment on its third appearance and stated that the object appeared to be round as it crossed the sky at a high rate of speed.

NOTES: The above information was obtained on 16 October 1950 from interviews with Trooper Edward D. Rymer; [redacted], George Rathman, Security Division, Atomic Energy Commission; John S. Davis, Chief of Atomic Energy Commission Security Patrol; and Captain Joe Zarzecki. b6

In addition, the Atomic Energy Commission Security Division took Geiger counters to the scene of the incident but could get no reading.

OBJECTS SIGHTED OVER OAK RIDGE

(Refer: Summary of Information, Subject: as above, dated 15 Oct 1950.)

On 13 October 1950 Atomic Energy Security Patrol Trooper, Edward D. Rymer, and a caretaker, John Moneymaker, from the University of Tennessee Research Farm, at Oak Ridge, saw an object at about 12,000 to 15,000 feet above Soloway Gate of the "Control Zone." This object appeared to be an aircraft which was starting to make an outside loop, trailing smoke behind. Soon these two men realized that the formerly described smoke behind the aircraft was a tail. This object continued to descend in a controlled dive, much slower than an aircraft would dive, and when it approached the ground it levelled off and flew slowly, parallel to the ground. This object came within two hundred and ten (210) feet of the two observers and was paralleling the ground at approximately the speed that a man could walk, at a height of approximately six (6) feet. Trooper Rymer attempted to approach the object but as he approached the object became smaller and started moving in a southeasterly direction. This object is said to have approached a nine (9) foot cyclone chain link fence and made a controlled movement to clear the fence, then a Willow tree, then a telephone post and wire, after which the object gained momentum and altitude and cleared a hill at approximately one (1) mile away. The object appeared to be pear shaped. When this object was over the hill it was still visible as the same sized object that was observed when only fifty (50) feet away. (The explanation given was that this object grew larger as it gained altitude and speed.)

Approximately five minutes later the object appeared again having reappeared from approximately the same location from which it had disappeared. The object was seen again five mintues later for approximately ten second.

During the above happenings, Mr. John Moneymaker had visual reference of this object during its first slight for approximately seven minutes. Trooper Rymer was interrupted twice during which times he called his headquarters in an attempt to get other observers. Also, during the fantastic flight of this object, Trooper Rymer stopped Mr. E. W. Hightower, who was on the highway in his vehicle, to verify what was being seen. Mr. Hightower's statement substantiates the description as before.

By the time the object appeared the second time, Joe Zarzecki, Capt. of the Atomic Energy Commission Security Patrol, was present and also witnessed this phenomenon.

Each of the observers described the object substantially as follows:

a. When the object was first sighted it appeared to be an aircraft, trailing smoke, or better described as "smoke writing."

CIC, FAO # 8, P.O. Box 379, Knoxville, Tennessee

OBJECTS SIGHTED OVER OAK RIDGE

(Refer: Summary of Information, Subject: as above, dated 15 Oct 1950.)

On 13 October 1950 Atomic Energy Security Patrol Trooper, Edward D. Rymer, and a caretaker, John Moneymaker, from the University of Tennessee Research Farm, at Oak Ridge, saw an object at about 12,000 to 15,000 feet above Soloway Gate of the "Control Zone." This object appeared to be an aircraft which was starting to make an outside loop, trailing smoke behind. Soon these two men realized that the formerly described smoke behind the aircraft was a tail. This object continued to descend in a controlled dive, much slower than an aircraft would dive, and when it approached the ground it levelled off and flew slowly, parallel to the ground. This object came within two hundred and ten (210) feet of the two observers and was paralleling the ground at approximately the speed that a man could walk, at a height of approximately six (6) feet. Trooper Rymer attempted to approach the object but as he approached the object became smaller and started moving in a southeasterly direction. This object is said to have approached a nine (9) foot cyclone chain link fence and made a controlled movement to clear the fence, then a Willow tree, then a telephone post and wire, after which the object gained momentum and altitude and cleared a hill at approximately one (1) mile away. The object appeared to be pear shaped. When this object was over the hill it was still visible as the same sized object that was observed when only fifty (50) feet away. (The explanation given was that this object grew larger as it gained altitude and speed.)

Approximately five minutes later the object appeared again having reappeared from approximately the same location from which it had disappeared. The object was seen again five mintues later for approximately ten second.

During the above happenings, Mr. John Moneymaker had visual reference of this object during its first slight for approximately seven minutes. Trooper Rymer was interrupted twice during which times he called his headquarters in an attempt to get other observers. Also, during the fantastic flight of this object, Trooper Rymer stopped Mr. E. W. Hightower, who was on the highway in his vehicle, to verify what was being seen. Mr. Hightower's statement substantiates the description as before.

By the time the object appeared the second time, Joe Zarzecki, Capt. of the Atomic Energy Commission Security Patrol, was present and also witnessed this phenomenon.

Each of the observers described the object substantially as follows:

a. When the object was first sighted it appeared to be an aircraft, trailing smoke, or better described as "smoke writing."

3 cc Headquarters, Third Army
1 cc OSI, Knoxville, Tennessee
1 cc FBI, Knoxville, Tennessee
1 cc to Security Division, AEC, Oak Ridge

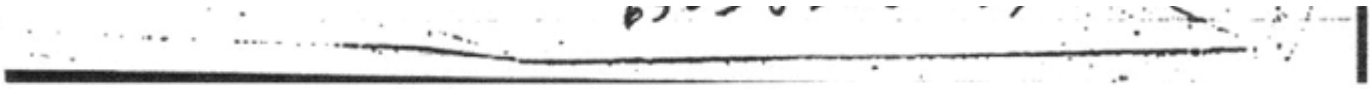
(65-58300-13)



CIC, FAO # 8, P. O. Box 379, Knoxville, Tennessee

OBJECTS SIGHTED OVER OAK RIDGE

b. When the object was approaching the ground in its descent, it took on the shape of a bullett with a large tail.

c. When the object was sighted on the ground (from approximately two hundred and ten (210) feet) it appeared to be approximately the size of a 2x5 card, with a twenty (20) foot ribbon tail. The object and the tail was alternately moving up and down, add the ribbon appeared to be waving in the breeze. The color was a metallic grey.

d. When Trooper Rymer came within fifty (50) feet of the object he described it similar to the above except that the first two and one-half feet of the tail appeared more solid, but the last seventeen and one-half (17½) feet of the tail appeared almost transparent and was glowing, intermittently, in sections. The tail appeared to have four or five sections which would glow intermittently.

Trooper Rymer's record is among the best of the troopers at the Atomic Energy Commission Security Patrol. Mr. JohnMoneymaker holds badge No. UT-1817, and is employed by the University of Tennessee Agricultural Research Farm as a caretaker for small animals. Mr. K. W. Hightower holds badge No. 6633 and is an employee of the Maxon Construction Company.

The Controller, Capt. W. Akin, of Detachment No. 2, 662 AC and W Sqd., McGee-Tyson Airport, P. O. Box 202, Maryville, Tennessee, at the Knoxville Airport Radar Site, made a report that he had seen peculiar readings on the radar scopes at approximately 1520 hours. Apparently the radar picture was indefinite, intermittent, and inaccurate, because the objects sighted by radar would only make a short "painting" on the scope and would then disappear only to reappear at another location.

On 16 October 1950, at approximately 1520 hours, five persons (as yet unknown) sighted objects hovering over the K-25 plant at Oak Ridge, Tennessee. Further information and description is expected from these sources. However, the radar scopes at Knoxville Airport were giving an unintelligible reading. Apparently the Commanding Officer was reluctant to make any statement concerning these readings due to higher Headquarters doubting the event of the past few days.

Nevertheless, a fighter aircraft from the 5th Fighter Sqd. was sent to identify an object which was reported to be hovering over K-25. Upon approaching the area the radar equipment aboard the aircraft got an image on its scope and the pilot pursued this image and identified it as a light type aircraft. Ground

050530
From: Bruce Maccabee
Subject: Oak Ridge Security Guard Reports Spinning Spherical Object, Oct 16, 1950
Distribution: NCP

The next day at about 1:30 PM, John Isabell, a security guard of the Oak Ridge Patrol Force, saw a silver-white spherical object traveling from the southwest to the northeast and passing over the K-25 restricted area at high altitude. It was white or silvery and round like a ball. The second sighting on that day occurred at "exactly 2:55 PM." Mr. Isabell and two other members of the patrol force saw the same round object approaching from the northeast at a lower altitude and speed. The object, while spinning about an axis, traveled in a wide circle toward the southwest and disappeared. In a couple of minutes it reappeared in the southwest at a very high altitude and headed northeast at a high rate of speed. The guard phoned the information on the sighting immediately to headquarters where radar was picking up an indistinct target every third or fourth sweep over the K-25 area. An F-82 was scrambled. The ground witnesses reported that the fighter plane arrived about 15 minutes after the object had disappeared. (The ATIC sighting analysts subsequently decided that this object was a balloon in spite of the decription of spinning amd in spite of the odd flight path.) Later on, during the evening, some of the security guards heard strange, loud noises.

That same day, October 16, the CIC agent decided it was time to review the situation. He wrote a report mentioning the 1947 and 1949 sightings and discussed the recent sightings. The CIC took these sightings very seriously and thoroughly checked the backgrounds of the witnesses by using employment records and FBI reports in order "to ascertain their reliability, integrity and loyalty to the United States Government." The was no reason found to discredit these witnesses, many of whom were professional security guards.

The CIC and the other security agencies discussed the situation and attempted to arrive at some conclusions. The CIC report of these discussions make amusing reading in view of the concerted attempt later on by ATIC to explain the sightings any way possible. One gets the impression from the following document that, when it came to explaining UFO sightings as mundane phenomena, the security officials who were involved in the investigations had "been there, done that" and now they were looking for something new and convincing to explain these sightings:

" The opinions of the officials of the Security Division, AEC, Oak Ridge; Security Branch, NEPA Division, Oak Ridge; AEC Security Patrol, Oak Ridge; FBI Knoxville; Air Force Radar and Fighter Squadrons, Knoxville; and the OSI, Knoxville, Tennessee, fail to evolve an adequate explanation for OBJECTS SIGHTED OVER OAK RIDGE, however the possibilities of practical jokers, mass hysteria, balloons of any description, flights of birds (with or without cobwebs or other objects attached), falling leaves, insect swarms, peculiar weather conditions, reflections, flying kites, objects thrown from the ground, windblown objects, insanity, and many other natural happenings have been rejected because of the simultaneous witnessing of the objects with the reported radar sightings; because of the reliability of the witnesses; because of the detailed, similar description of the objects seen by different persons; and because of impossibility."

"...because of impossibility"? What was that supposed to mean? It meant that all the suggested explanations had been rejected because, in view of the high quality of the witnesses and the descriptive details, these explanations were impossible. So, having rejected mundane explanations, what were these objects? The CIC agent continued:

"The trend of opinions seem to follow three patterns of thought. The first is that the objects are a physical phenomenon which have a scientific explanation; the second is that the objects are experimental objects (from an undetermined source) guided by electronics and the third is similar to the second except that an intended demoralization or harrassment is involved. The fantastic is generally rejected.

These objects have apparently followed only two patterns. The first is that they were sighted at the same hour on two consecutive days and the second is that the time of flight is either to or from the Northeast and Southwest, which directions (are) parallel the terrain ridges in the locality."

The fantastic is generally rejected?

PERSON INVOLVED	ADDRESS	BADGE NO.
Trooper Lendelle Clark		212
PERSON INVOLVED	ADDRESS	BADGE NO.
Trooper Hank N. Briggs		156

REMARKS:

On October 16, 1950, at approximately 2:55 P.M., Trooper Isabell stopped us at this Installation and showed us an object in the north that was traveling toward the northwest. It looked to be about 2,000 feet in the air and a white-silverish looking color, rotating in a counter clockwise manner. It was round in shape and going in a rather fast motion. This object was at a high altitude and seemed to come in sight and then disappear. It looked about the size of a ball and round at every angle we looked at it.

Incident Report No. 1424-50

Date 10-16-50

Time 1:30 p.m.

CLASSIFICATION	TROOPER	LOCATION
Flying Object	John L. Isabell	Blair Gate

PERSON INVOLVED	BADGE NO.
Trooper Lendelle Clark	212
Trooper Hand N. Briggs	156

REMARKS:

At approximately 1:30 P.M., October 16, 1950, while working at Blair Gate, I saw an object in the air over K-25 traveling in a northeast direction from the southwest. It was traveling in a straight line and going very fast. The object was white or silvery in color and round like a ball and was about the size of a baseball as seen at the distance it was from me. It seemed to be very high.

At exactly 2"55 P.M., October 16, 1950, this object reappeared from the northeast at a considerably lower altitude and traveling a lot slower than before. It stopped a car that was coming in the gate in order to have witnesses to what I saw. The occupants of the car were Troopers Lendelle Clark and Hank N. Briggs going in to work. I pointed out the object to Troopers Clark and Briggs and we watched the object for several minutes. This object was slowly circling in a wide circle and spinning very fast, that is, the object itself was spinning around and around. The object drifted toward the southwest and in just a few minutes it reappeared at a very high altitude going back into the northeast and going very fast. We watched the object disappear into the northeast.

This information was phoned in to Headquarters immediately by the undersigned. About fifteen minutes after the object disappeared into the northeast, an F-82 Fighter plane showed up in the area where the object was last seen but appeared to be thousands of feet lower than the object which Troopers Clark, Briggs, and the undersigned saw and reported.

Knoxville, Tenn.

19 October 1950

The "Contract Guards" who guard the building at the MEPA project were warned by the MEPA Security Section to report any peculiarity, regardless of how silly or fantastic it might seem. These guards were unaware of the previous events concerning objects seen over Oak Ridge, but some of the guards had reported peculiar sounds during the evening of 16 October 1950.

Independent reports from different guards were received by the Security Section, MEPA, Oak Ridge. These reports were submitted by Guards S. R. Brown; H. C. Herron; and George R. Davis. They all stated substantially the same and described hearing an intermittant noise resembling the blast of a Jet Fighter Aircraft. Each noise lasted for about three and one half (3½) seconds and would recur frequently between 1956 hours and 2004 hours on 16 October 1950. Each noise would sound like a jet plane which had increased its thrust tremendously. The sounds seemed to leave the vicinity making an ascent almost vertical. None of the guards could see an object in the sky.

On 17 October 1950, Major L. E. Ronniger, Sr. Instructor, ORC Group, Oak Ridge, Tennessee, returned from Nashville, Tennessee, and visited an official of the Security Division, Atomic Energy Commission, Oak Ridge, Tennessee. Major Ronniger was amused when informed of the fantastic sights that some of the persons at Oak Ridge had seen but then he recalled an incident which he thought was not connected to the "Objects Sighted over Oak Ridge." After having been away from Oak Ridge during Monday and Tuesday, the 16th and 17th of October 1950, and without knowledge of the occurrences which had taken place except for the item about which he was being told (which had to do with visual sightings of the object), Major Ronniger stated that he had heard a noise at about 1500 hours on 15 October 1950 which he described exactly as the guards who heard the noise on the night of 16 October 1950. Major Ronniger, accompanied by his daughter, attempted to locate a jet fighter in the sky but could see nothing whatever.

The Radar crew of Detachment # 2, 662nd AC and W Squadron, McGhee-Tyson Airport, Knoxville, Tennessee, did not get an image on their scope during either of these occurrences, according to Major R. C. Care.

NOTES: The above information was obtained on 17 October 1950 from Major L. E. Ronniger; Mr. George Rathman, Security Division, Atomic Energy Commission, and Mr. Gene Caedjon, MEPA, Oak Ridge, Tennessee, and John S. Davis, Atomic Energy Security Patrol/

65-58300-134

https://nicap.org/docs_oakridge/fbi501016doc1.htm[20/10/2021 09:20:14]

[redacted] estimated that the object was traveling about three (3) mile per hour and that the main body of the object was rocking slightly showing the corners and the under and top side. [redacted] advanced on the object to within fifty (50) feet but it did not appear to get any larger. At [redacted] approach the object picked up speed slightly, proceeded across the highway, came to a nine (9) foot chain link fence, rose vertically and parallel with the fence and proceeded over the fence. After clearing the fence it dipped toward the ground for a few feet and then rose sharply to clear a thirty (30) foot willow tree and proceeded in a southeasterly direction at an increased speed to a ridge about a mile away and disappeared over the top of the ridge. The object during the flight to the ridge, changed to a pear shape but the tail continued to be present. While the object was heading for the ridge a car driven by [redacted], employee of the Maxon Construction Company, Oak Ridge, approached the Solway gate. [redacted] called [redacted] attention to the object and he also saw it disappear over the ridge. Shortly after the object disappeared Captain of the AEC Security Patrol [redacted] arrived at the scene. Shortly thereafter another similar object appeared in the sky within sight of the men at a height of about 300 feet, traveling in the same direction as the previous object and it disappeared over the same ridge. The object was visible to the men for about thirty (30) seconds. About five (5) minutes after the second appearance another similar object again was visible at an altitude of about 500 feet for about a ten (10) second interval.

b7C

3. After a discussion of the incident Mr. Rathman, Mr. Gray, [redacted] and the undersigned proceeded to Solway Gate, scene of the observation. A check was made of [redacted] estimate of distances and they were found to be substantially accurate. The immediate area around the gate is fairly level with wooded hills and ridges rising around the area. There were no obstructions or hindrances to visibility noticeable. At the direction of Mr. Rathman [redacted] was brought to the scene. He gave substantially the same account as did [redacted] except to add that while [redacted] was phoning and the object had descended to about 1500 feet the object appeared to be pear shaped and another pear shaped object appeared on one side of the object. As it came lower the object assumed the 2" x 5" card shape.

b7C

[redacted]

b7C

5. At 1400, 16 October Mr. Gray and the undersigned proceeded to the Air Force Radar Station at McGhee-Tyson Airport, Knoxville, Tennessee. Major R. C. Care, Defense Area Commander stated that the radar screen had picked up indistinct, unidentified objects during the afternoon of 15 Oct. Major Care produced the incident report of [redacted], controller; excerpts from his report are as follows:

b7C

[redacted]

"Prior to this report [redacted], we had a reoccurance of targets like Thursday night. We had sent one scramble out and made several good passes at one target which painted very well. It was on a heading of 180 degrees and approx. 4 miles inside the eastern boundary of the area. Our fighter worked from 2500 to 5000 feet, but saw nothing. The speed of these targets varied from 40 to 100 miles per hour. Every characteristic was the same as before except that the speed was slower.

There was nothing on the scope at the location of this strange object.

The strange visitor was reported to [redacted] at Nobody, who carried through to EADF. Their orders were to put a patrol over the area, which was done.

[redacted] operating under my control and later [redacted] saw nothing in the area except one large flock of birds, which we were painting. He estimated their number between 200 and 300. This was at 7000 feet. His patrol up until 1730 EST when I left duty, rangedfrom a low level pass over the gates to 7000 feet.

He was vectored after several well painted targets, but saw nothing."

6. At about 1520 EST 16 October, while the undersigned was present, a report came from the AEC Patrol to the radar station relating that a [redacted] and four civilian employees at Oak Ridge had observed a "silver disk" hovering over the K-25 plant in the controlled area. The radar screen was able to pick up an indistinct target about every three (3) or four (4) sweeps of the indicator. An F-82 fighter plane was sent to attempt an intercept of the object. The airborne radar of the fighter picked up a target which later proved to be a light aircraft. The ground observers reported that the F-82 passed under the "silver disk", while it was in pursuit of the light plane. The crew of the fighter observed nothing unusual. Nothing further was learned of the sightings.

7. Investigation will continue 17 October at which time [redacted] and other witnesses will be interviewed.

WILLIAM M. PRICE
S/A OSI
Detachment Commander

Objects Sighted Over "Control Zone"

Oak Ridge, Tennessee
October 20, 1950

FBI Report:

At 1655 hours, on 20 October 1950, Mr. Larry P. Riordan, AEC Badge No.522, Superintendent of Security at X-10 in the "Control Zone" at Oak Ridge, Tennessee, while enroute from X-10 to the Oak Ridge residential area, on Benton Valley Road, saw an object in the sky which appeared to be directly over the University of Tennessee Agricultural Research Farm. This object gave the general appearance of an aerial balloon which had lost its "basket." In other words, the object was generally round; appeared to come together at the bottom in wrinkles (rather indistinct), and something was hanging below. The balloon was described as being from eight to ten feet long; of a lead pipe or gunmetal color; and seemed to be approximately one-fourth (¼) mile from the observer, at a thirty (30) degree elevation above the horizon. The object was apparently stationary but since the observer was in a moving vehicle, he did not verify that it was stationary. As the vehicle in which he was traveling changed position, and went around a curve, Mr. Riordan noticed that this object appeared to be thinner. He concludes that by reason of his changing position, or the object changing its altitude, he observed another angle of the object which appeared to be thinner than upon his first sighting.

At the time of the observation there was adequate light and the object was plainly visible. Mr. Riordan is a responsible person, as is indicated by his position, and he has been aware of the many instances of reported objects flying in the sky. He is also very familiar with the weather balloons which are sent up hourly each day over Oak Ridge between 6:00 AM of one day until 1:00 AM of the next day. The size of these balloons vary, but generally they are similar to a circus balloon which is about twenty- four (24) inches in diameter. Mr. Riordan is certain that the object was not a weather balloon but his first impression was that this object was an experimental "gab" being utilized by the University of Tennessee Agricultural Research Farm.

Mr. Riordan has been the Security Chief of X-10 since 14 July 1943. His vision is normal except that he has negligible impairment of the right eye. Like many of the Atomic Energy Commission officials, Mr. Riordan has hoped for the opportunity to see one of these objects, and under the circumstances, he visualized it as accurately as possible.

On 20 October 1950, at 1527 hours, aircraft No. AF-409, Pilot Wolf, 5th AW-Fighter Sqd., took off from the Knoxville Airport for a "local patrol." The Radar Unit at Knoxville Airport received readings on their Radar scope and sent the aircraft after these targets. The aircraft pilot was unable to identify any flying object in the vicinity of the said targets. All targets were between eighteen (18) and twenty-five (25) miles from the Airport at 320 degrees. The aircraft was landed at 1713 hours. (Attention is invited to the fact that these targets were sighted at approximately the same time, and locality, that was reported by Mr. Larry Riordan.)

25 October 1950

111th CIC Detachment, FAO # 8, P. O. Box 379, Knoxville, Tennessee

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE

At 1655 hours, on 20 October 1950, Mr. Larry P. Riordan, AEC Badge No. 322, Superintendent of Security at X-10 in the "Control Zone" at Oak Ridge, Tennessee, while enroute from X-10 to the Oak Ridge residential area, on Benton Valley Road, saw an object in the sky which appeared to be directly over the University of Tennessee Agricultural Research Farm. This object gave the general appearance of an aerial balloon which had lost its "basket." In other words, the object was generally round; appeared to come together at the bottom in wrinkles (rather indistinct), and something was hanging below. The balloon was described as being from eight to ten feet long; of a lead pipe or gunmetal color; and seemed to be approximately one-fourth (¼) mile from the observer, at a thirty (30) degree elevation above the horizon. The object was apparently stationary but since the observer was in a moving vehicle, he did not verify that it was stationary. As the vehicle in which he was travelling changed position, and went around a curve, Mr. Riordan noticed that this object appeared to be thinner. He concludes that by reason of his changing position, or the object changing its altitude, he observed another angle of the object which appeared to be thinner than upon his first sighting.

At the time of the observation there was adequate light and the object was plainly visible. Mr. Riordan is a responsible person, as is indicated by his position, and he has been aware of the many instances of reported objects flying in the sky. He is also very familiar with the weather balloons which are sent up hourly each day over Oak Ridge between 6:00 a.m. of one day until 1:00 a.m. of the next day. The size of these balloons vary but, generally, they are similar to a circus balloon which is about twenty-four (24) inches in diameter. Mr. Riordan is certain the object seen was not a weather balloon but his first impression was that this object was an experimental "gab" being utilized by the University of Tennessee Agricultural Research Farm.

Mr. Riordan has been the Security Chief of X-10 since 14 July 1943. His vision is normal except that he has negligible impairment of the right eye. Like many of the Atomic Energy Commission officials, Mr. Riordan has hoped for the opportunity to see one of these objects, and under the circumstances, he visualized it as accurately as possible.

At 1845 hours, on 24 October 1950, Mr. William B. Fry, Assistant Chief of Security, MEPA Division, Oak Ridge, Tennessee, while attending a Drive-in theater with his wife and child, at Oak Ridge, noticed an object in the sky North-Northwest of his position, at a thirty (30) to forty (40) degree,

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE

elevation. This object was moving gently in a horizontal plane, back and forth, within thirty (30) degrees of his line of sight. This object emitted a glow, varying in color from red to green, to blue-green, to blue, and to orange. The variations were checked on the vertical window post of Mr. Fry's vehicle and were witnessed by Mr. Fry's wife. The attention of another observer, the Projectionist at the Drive-in theater, was also called to the object and verification of this sighting was made. The object disappeared from his sight at 1920 hours.

At 1855 hours, on 24 October 1950, an Air Force Major, Lawrence Ballweg, MEPA Division, Oak Ridge, Tennessee, also saw from his residence an object which he described similarly. The object disappeared from the sight of Mr. Ballweg at 1920 hours, which coincides with the time of disappearance of the object from Mr. Fry's sight.

On 20 October 1950, at 1527 hours, aircraft No. AF-409, Pilot Wolf, 9th AW-Fighter Sqd., took off from the Knoxville Airport for a "local patrol". The Radar Unit at Knoxville Airport received readings on their Radar scope and sent the aircraft after these targets. The aircraft Pilot was unable to identify any flying object in the vicinity of the said targets. All targets were between eighteen (18) and twenty-five (25) miles from the Airport at 320 degrees. The aircraft was landed at 1713 hours. (Attention is invited to the fact that these targets were sighted at approximately the same time, and locality, that was reported by Mr. Larry Riordan.)

On 24 October 1950, at 1823 hours, several small, slow targets were seen on the Radar screen at the Knoxville Airport Radar Site. These targets appeared in the Southeast sector of the "Restricted Flying Zone" and over the city of Oak Ridge. These targets moved from the city area to and along the East boundary of the area. At 1826 hours, the fighter aircraft was "scrambled" and proceeded to the area where it was vectored among the targets but the pilot reported no visual contact with said targets. At 1920 hours the targets disappeared from the Radar Screen and the fighter was vectored toward another target believed to be one of three (3) aircraft enroute from Andrews Field to Stewart Field. (Note: 1920 hours is also the time that the object sighted by Mr. Fry and Major Ballweg disappeared from their view).

(Overall evaluation: C-3)

UNIDENTIFIED OBJECT OVER OAK RIDGE, TENNESSEE - 27 October 1950

On the evening of 24 October 1950 at approximately 1855 I heard a plane fly over my home in the Woodland area. Being a curious individual I went outdoors to watch it with my binoculars. While looking for the plane I saw an object in the western sky which appeared at first to be a star but upon closer observation I noticed that it was rapidly changing colors from red to blue to white. When first seen it appeared over a telephone pole about 100 yards from my house and seemed to be moving very slowly in a northwest direction. It was moving relative to the other stars. The object was too small to be able to see any details even with the glasses. It disappeared from sight about 1920. During this period of time my wife also observed the object.

UFO INCIDENT AT OAK RIDGE, TN

10/23/1950

Jan Aldrich: Here is an incident report from Barry Greenwood's Oak Ridge file. I suspect it came from the FBI. Please note the radiation detection.

==========

10 November 1950

On 10 November 1950,----------, Oak Ridge, Tennessee, employee at----------, Oak Ridge, Tennessee was interviewed and he stated substantially as follows: At approximately 1630 hours on 23 October 1950, while driving on the Benton Valley Road, Oak Ridge, Tennessee, he observed an object over the Scarboro School (which is in the control area of Oak Ridge) at a distance of one-quarter to three-eighth of a mile from his position of observations. The object appeared to be between 1000 and 2000 feet in altitude and was described as an "aluminum flash".

It was traveling in a South Southeast direction. The object was dropping fast as it crossed the road and disappeared over a ridge--------heard no noise in connection with this object.

At approximately the time of this observation, a background (Geiger) counter located in the vicinity of this observation registered a reading for Alpha and Beta particles. ---------- with the Health and Research Division of Oak Ridge National Laboratories, has stated that a reading received on this background counter is unexplained.

NPTES: No intentional or accidental releases which would give such a reading were made during month October.

The Radar Station, Knoxville, Tennessee, has not reported a radar sighting on the date and time of this observation.

Created: Sep 23, 1997

2 November 1950

CIC, FAO # 8, P. O. Box 379, Knoxville, Tennessee

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE:

On 25 October 1950, at approximately 500 hours, Col. Edwin W. Thompson, [redacted] 0-340795, Camp Stewart, Georgia, heard a noise which he described as "similar to a Jet aircraft blast". This noise was intermittent and continued for several moments. Col. Thompson was on the turnpike at Oak Ridge for a morning walk at the time, and he believed that this noise was being emitted from a factory in the near vicinity. Although he was aware of some of the facts concerning "Objects Sighted Over Oak Ridge" during the past two weeks, he still did not contribute this as pertinent.

NOTES: Col. Thompson is unfamiliar with Oak Ridge, having arrived for the first time there on 25 October 1950. His description coincides with that of Major L. E. Bonniger who heard a similar noise on 17 October 1950, and also coincides with the description of the noise heard by Guards S. R. Brown, H. C. Harris, George R. Davis; between the hours of 1950 and 2004 hours on 16 October 1950.

On 23 October 1950, at 1630 hours, Mr. F. J. Miller at the K-10 plant, Oak Ridge, Tennessee, saw an object generally referred to as "the flying saucer". He stated that this object was at an altitude of approximately 1000 feet. The speed of the object was not determined.

The following is an article printed in the Clinton Courier-News, dated 26 October 1950:

"Anderson county finally got into the act.

"After two years of reports from all over the nation concerning flying saucers, and after writers have made scads of money arguing the authenticity of flying discs back and forth and up and down, one of the "ships from Mars" has at last been reported as seen in Anderson county.

"This saucer was seen about a week ago in the Oak Ridge area. Just what day no one knows - or will tell. However, the saucer was reported by Jay Moneymaker, an Oak Ridge worker who lives near Edgemoor Bridge, an Oak Ridge guard and another unidentified man. The three men saw it hovering, flying, crouching or something over the area at Oak Ridge, they said.

"Moneymaker isn't talking, however. His family isn't talking. In fact the whole neighborhood is making like a bunch of professional clams. Other than to say he saw "something," he is saying nothing. His family also says he saw "something," but nothing more. The neighbors just say nothing.

"This modesty of Moneymaker, his family and his neighbors is reportedly the result of a visit one night recently from several species of intelligence officers, from heaven knows where.

CIC, [redacted] P. O. Box 379, Knoxville, Tennessee

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE (continued)

"Pre-intelligence-officer reports that leaked out, however, state that the disc was large and that smoke was coming from it. There was no report as to whether the smoke was black, white or lavender blue. The same reports also indicated that the objects came close to the ground and that the men were unmistaken in their identity of it.

"No one will even say whether it was day or night, whether it was raining or the moon was shining when the three men happened to look up. However, Moneymaker works the day shirt."

NOTES: Neither of the incidents mentioned in this summary were verified by Radar screen sightings at McGhee-Tyson Airport, Knoxville, Tennessee.

10 November 1950

On 10 November 1950, [redacted] Oak Ridge, Tennessee, employee at [redacted] Oak Ridge, Tennessee, was interviewed and he stated substantially as follows: At approximately 1630 hours on 23 October 1950, while driving on the Benton Valley Road, Oak Ridge, Tennessee, he observed an object over the Scarboro School (which is in the control area of Oak Ridge) at a distance of one-quarter to three-eighth of a mile from his position of observation. The object appeared to be between 1000 and 2000 feet in altitude and was described as an "aluminum flash". It was traveling in a South-Southeast direction. The object was visible to him for only a few seconds and he could distinguish no shape. The object was dropping fast as it crossed the road and disappeared over a ridge [redacted] heard no noise in connection with this object.

At approximately the time of this observation, a background (Geiger) counter located in the vicinity of this observation registered a reading for Alpha and Beta particles. [redacted] with the Health and Research Division of Oak Ridge National Laboratories, has stated that a reading received on this background counter is unexplained.

NOTES: No intentional or accidental releases which would give such a reading were made during the month of October.

The Radar Station, Knoxville, Tennessee, has not reported a radar sighting on the date and time of this observation.

Subject: Assistant Chief of Security sees UFO; Six hours later radar tracks UFOs
By Bruce Maccabee
Source: UFO FBI Connection, Pages 175-177

During the evening.....there was a "light in the sky" sighting by two witnesses who were at widely separated locations. The first to see it was Mr. William Fry, the Assistant Chief of Security for Project NEPA. He was at a drive-in theater with his family at about 6:45 PM waiting for the movie to begin when he saw the lighted object in the southwest while casually looking around the sky. He reported to the CIC investigator,

"...I observed what I at first thought to be an unusually bright star. The exceptional brilliance caused me to continue to observe it when it suddenly seemed to change color rapidly from a reddish hue to a bright orange and again to a brilliant light blue. (His wife and son also saw it.) ...A few moments later I heard a plane directly overhead making passes over the Oak Ridge area, which was later identified as one of the F-82 fighter planes from the Air Force unit stationed at McGhee-Tyson Airport..

(At this point Mr. Fry went to a phone and called someone to look, but the person could not see it because of the hills and trees.) While returning to my car I met a friend...who stated he had been observing the object. I continued to observe the object with my wife but it seemed to be in a more northerly position which caused me to select a fixed point to determine whether or not the object was changing in either direction or altitude. There seemed to be a deviation from north to south for approximately five to ten degrees. The changing colors were still very evident but the object seemed to be continually getting smaller and smaller as though it was becoming more distant. At approximately 7:18 by my watch it disappeared from view entirely. During these observations my wife continued to report to me the identical things that I was observing. During the entire time the F-82 airplane continued to make passes over the area until approximately 7:15. The weather conditions were excellent; the air was calm; and the sky was cloudless with the exception of a very slight haze over the distant horizon.

The following morning, upon reporting to work I confided my story to...(name censored)...stationed at Oak Ridge with the NEPA project, but I hesitated to go on record as having observed such an unidentified object."

Mr. Fry did go on record because he learned that he was not the only witness. Air Force Major Lawrence Ballweg also saw the light. He reported as follows:

"On the evening of 24 October 1950 at approximately 1855 (6:55 PM) I heard a plane fly over my home in the Woodland area. Being a curious individual I went outdoors to watch it with my binoculars. While looking for the plane I saw an object in the western sky which appeared at first to be a star but upon closer observation I noticed that it was rapidly changing colors from red to blue to white. When first seen it appeared to be moving very slowly in a northwest direction. It was moving relative to the other stars. The object was too small to be able to see any details even with the glasses. It disappeared from sight about 1920 (7:20 PM). During this period of time my wife also observed the object."

Mr. Fry then learned that the radar unit had also detected something. He was told that an unidentified object appeared at 6:30 PM at an altitude of approximately 5,000 feet in the same general vicinity as the

object he saw. The radar target disappeared at 7:20 PM. The complete radar report to the CIC investigator says that targets appeared at 6:23 PM moving over the restricted flight zone and at 6:26 a fighter was scrambled to the area of the targets but failed to see anything.

Considering that the atmosphere can make a star or planet which is within a few degrees of the horizon appear to change color and move very slightly or twinkle, one might be tempted to identify the light as the bright planet Venus or a very bright star seen in the west an hour after sunset, which was at about 6 PM local dayight savings time. However, two elements of the description reject that sort of explanation. First, the light was described by Major Ballweg as moving relative to the stars. Since Major Ballweg used binoculars to view the light it is likely that his description of motion is accurate. Furthermore, it must have been quite large because Mr. Fry, not using binoculars, also detected motion. Second, Major Ballweg said that the light appeared over a telephone pole that was about 100 yards away. That would make the angular elevation greater than 5 degrees. According to the CIC investigator, Mr. Fry indicated that the elevation from his location was 30 to 40 degrees above horizontal. Hence it was so high in angular elevation that atmospheric effects would not make it appear to change color and there would be no noticeable effects other than the normal twinkling which affects stars at any angular elevation. The final reason for rejecting Venus or a bright star is that Venus was below the horizon at the time and there were no excessively bright stars in that sector of the sky at the time. The disappearance of the radar target at the same time as the light suggests that the UFO was a some kind of metallic unknown object hovering in the vicinity of Oak Ridge. This is another Oak Ridge sighting that is not in the Blue Book file, nor are the following October events.

About six hours later, between 2 AM and 3 AM, October 25, the radar unit reported several slowly moving objects such as had been seen previously. On October 26 at 5 AM Col. Edwin Thompson heard an intermittent noise like the blast of a jet, similar to what had been reported on the 15th and 16th. He saw no aircraft associated with the noise. Three days later seven people waiting at the Knoxville Airport “saw an object traveling to the Southwest at a great rate of speed. (name censored), who has considerable flying experience, was extremely excited and stated that this object was not an aircraft. He described it as a circular object, leaving a trail of smoke.”

25 October 1950

111th CIC Detachment, FAO # 8, P. O. Box 379, Knoxville, Tennessee

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE

At 1655 hours, on 20 October 1950, Mr. Larry P. Riordan, AEC Badge No. 322, Superintendent of Security at X-10 in the "Control Zone" at Oak Ridge, Tennessee, while enroute from X-10 to the Oak Ridge residential area, on Benton Valley Road, saw an object in the sky which appeared to be directly over the University of Tennessee Agricultural Research Farm. This object gave the general appearance of an aerial balloon which had lost its "basket." In other words, the object was generally round; appeared to come together at the bottom in wrinkles (rather indistinct), and something was hanging below. The balloon was described as being from eight to ten feet long; of a lead pipe or gunmetal color; and seemed to be approximately one-fourth (¼) mile from the observer, at a thirty (30) degree elevation above the horizon. The object was apparently stationary but since the observer was in a moving vehicle, he did not verify that it was stationary. As the vehicle in which he was travelling changed position, and went around a curve, Mr. Riordan noticed that this object appeared to be thinner. He concludes that by reason of his changing position, or the object changing its altitude, he observed another angle of the object which appeared to be thinner than upon his first sighting.

At the time of the observation there was adequate light and the object was plainly visible. Mr. Riordan is a responsible person, as is indicated by his position, and he has been aware of the many instances of reported objects flying in the sky. He is also very familiar with the weather balloons which are sent up hourly each day over Oak Ridge between 6:00 a.m. of one day until 1:00 a.m. of the next day. The size of these balloons vary but, generally, they are similar to a circus balloon which is about twenty-four (24) inches in diameter. Mr. Riordan is certain the object seen was not a weather balloon but his first impression was that this object was an experimental "gab" being utilized by the University of Tennessee Agricultural Research Farm.

Mr. Riordan has been the Security Chief of X-10 since 14 July 1943. His vision is normal except that he has negligible impairment of the right eye. Like many of the Atomic Energy Commission officials, Mr. Riordan has hoped for the opportunity to see one of these objects, and under the circumstances, he visualized it as accurately as possible.

At 1845 hours, on 24 October 1950, Mr. William B. Fry, Assistant Chief of Security, MEPA Division, Oak Ridge, Tennessee, while attending a Drive-in theater with his wife and child, at Oak Ridge, noticed an object in the sky North-Northwest of his position, at a thirty (30) to forty (40) degree,

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE

elevation. This object was moving gently in a horizontal plane, back and forth, within thirty (30) degrees of his line of sight. This object emitted a glow, varying in color from red to green, to blue-green, to blue, and to orange. The variations were checked on the vertical window post of Mr. Fry's vehicle and were witnessed by Mr. Fry's wife. The attention of another observer, the Projectionist at the Drive-in theater, was also called to the object and verification of this sighting was made. The object disappeared from his sight at 1920 hours.

At 1855 hours, on 24 October 1950, an Air Force Major, Lawrence Ballweg, MEPA Division, Oak Ridge, Tennessee, also saw from his residence an object which he described similarly. The object disappeared from the sight of Mr. Ballweg at 1920 hours, which coincides with the time of disappearance of the object from Mr. Fry's sight.

On 20 October 1950, at 1527 hours, aircraft No. AF-409, Pilot Wolf, 5th AW-Fighter Sqd., took off from the Knoxville Airport for a "local patrol". The Radar Unit at Knoxville Airport received readings on their Radar scope and sent the aircraft after these targets. The aircraft Pilot was unable to identify any flying object in the vicinity of the said targets. All targets were between eighteen (18) and twenty-five (25) miles from the Airport at 320 degrees. The aircraft was landed at 1713 hours. (Attention is invited to the fact that these targets were sighted at approximately the same time, and locality, that was reported by Mr. Larry Riordan.)

On 24 October 1950, at 1823 hours, several small, slow targets were seen on the Radar screen at the Knoxville Airport Radar Site. These targets appeared in the Southeast sector of the "Restricted Flying Zone" and over the city of Oak Ridge. These targets moved from the city area to and along the East boundary of the area. At 1826 hours, the fighter aircraft was "scrambled" and proceeded to the area where it was vectored among the targets but the pilot reported no visual contact with said targets. At 1920 hours the targets disappeared from the Radar Screen and the fighter was vectored toward another target believed to be one of three (3) aircraft enroute from Andrews Field to Stewart Field. (Note: 1920 hours is also the time that the object sighted by Mr. Fry and Major Ballweg disappeared from their view).

(Overall evaluation: C-3)

UNIDENTIFIED OBJECT OVER OAK RIDGE, TENNESSEE - 27 October 1950

On the evening of 24 October 1950 at approximately 1855 I heard a plane fly over my home in the Woodland area. Being a curious individual I went outdoors to watch it with my binoculars. While looking for the plane I saw an object in the western sky which appeared at first to be a star but upon closer observation I noticed that it was rapidly changing colors from red to blue to white. When first seen it appeared over a telephone pole about 100 yards from my house and seemed to be moving very slowly in a northwest direction. It was moving relative to the other stars. The object was too small to be able to see any details even with the glasses. It disappeared from sight about 1920. During this period of time my wife also observed the object.

UNIDENTIFIED OBJECT OVER OAK RIDGE, TENNESSEE - 30 October 1950.

On the evening of October 24, 1950 I was attending a moving picture show at the Oak Ridge out-door drive-in theater. I arrived approximately at 6:45 which was about 15 minutes prior to show time. While sitting in the car with my wife and children I casually glanced skyward towards the southwest and observed what I at first thought to be an unusually bright star. The exceptional brilliance caused me to continue to observe it when it suddenly seemed to change color rapidly from a reddish hue to a bright orange and again to a brilliant light blue. My son noticed that I was observing something and questioned as to what it was at which time I asked him to look at the star and tell me what he saw. At first glance he immediately said that it did not look like a star to him at all because of the change in coloring. My wife also noticed the same phenomena. By now I was certain that I was not merely having an optical illusion. A few moments later I heard a plane directly over head making passes over the Oak Ridge area, which was later identified as one of the F-82 fighter planes from the Air Force unit stationed at the McGhee-Tyson Airport.

I hesitated to approach other vehicles in the theater to witness the object, but managed to reach a telephone at the projection building and called [redacted], NEPA Division, Fairchild Engine and Airplane Corporation, at his home to ask him whether or not he could see in that direction and possibly observe the object. A later check with [redacted] indicated that his home was located in a poor geographical position to observe anything towards the southwest because of hills and other obliterating features of the terrain. He did, however, drive to a higher location but failed to see the object. b7C

While returning to my car I met a friend, [redacted] of Knoxville, to whom I pointed out the object. He stated he had been observing the same object. I continued to observe the object together with my wife but it seemed to be in a slightly more northerly position which caused me to select a fixed point to determine whether or not the object was changing ineither altitude or direction. There seemed to be a deviation from north to south for approximately five to ten degrees. The changing in colors were still very evident but the object seemed to be continually getting smaller and smaller as though it was becoming more distant. At approximately 7:18 by my watch it disappeared from view entirely. During these observations my wife continued to report to me the identical things that I was observing. During the entire time the F-82 airplane continued to make passes over the area until approximately 7:15. The weather conditions were excellent; the air was calm; and the sky was cloudless with the exception of a very slight haze over the distant horizon. b7C

The following morning, upon reporting to work, I confided my story to [redacted] stationed at Oak Ridge with the MEPA Project, but I hesitated [redacted] go on record as having observed such an unidentified object. However, a few hours later Mr. William M. Price of the Knoxville OSI Office visited my office at which time I gave him an off-the-record account of the subject. b7C

In the meantime, I learned that [redacted] had also observed an unidentified object on the prior evening. In the presence of [redacted] and Price, I telephoned [redacted] and asked him to relate what he had seen. [redacted] listened on an auxiliary phone as a witness. [redacted] observations during the prior evening were identical as to the time, location, coloring, etc., with the one exception in which he did not observe any deviation in direction other than the gradual disappearance of the object while it was getting smaller and smaller and finally disappearing from view entirely in the northwest at exactly the same moment that my wife and I had observed. Mr. Price telephoned the radar unit at the McGhee-Tyson Airport and learned that an unidentified object appeared on the screen at 6:30 at an altitude of approximately 5000 feet in the same general vicinity as I had observed and disappeared from the screen at 7:20 the same evening. b7C

Wife of Security Officer Reports "Flat or Disklike" Object
December 5, 1950
Oak Ridge, TN

Bruce Maccabee:
On December 5 and 6 there was a discussion of the technical aspects of the radar sightings with ATIC and intelligence officials. They concluded that the targets were probably “radar angels” which are reflections of objects on the ground which are observed only because of a temperature inversion which bends the radar radiation downward. On the other hand, that did not mean that there were no flying saucers around. At about 12:50 PM, December 5, the wife of one of the security officers saw an unusual object north of her position, flying apparently over the Post Office building in Oak Ridge. It appeared to be a couple of miles away and 500 feet above the ground. It appeared to be made of highly polished aluminum or metal that reflected the sun. Its shape was round and flat or disklike. She saw the object for about a minute as it flew in a direct course eastward. Ten minutes later another lady at a different location observed the same or a similar object heading westward. The OSI agent who investigated this case learned that there was an east wind at 6 mph and a clear sky. No balloons had been launched near that time. He also learned that there were two aircraft airborne at the time, but both were about fourteen miles south of the witnesses. ATIC subsequently claimed that the witnesses saw an aircraft

Although ATIC would eventually claim that most of these events were mundane (radar anomalies, balloons, aircraft) and leave only two of the Oak Ridge sightings unidentified, the local military officials and scientists were not so certain of easy identifications. They planned to begin their own scientific investigation. Lt. Col. John Hood, the AMC Field Engineering Officer, outlined the plan in a December 5 memorandum entitled “Technical Approaches to the Problems of UFOs.” He proposed placing radiation counters over a wide area. After there had been sufficient anomalous object reports to establish a pattern, the data recorded by these counters would then be compared for time and location with the sightings “to see if any change in the background (radiation) occurs with the presence of sighted objects.” He also proposed that portable counters be made available which could be taken to the area of a sighting. Along with the counters he proposed that an aircraft with Geiger counters and also a magnetometer be made available. The magnetometer would indicate any fluctuations in the local magnetic field associated with sightings. He also proposed more accurate radars capable of measuring height as well as range and azimuth. This plan was to begin operating near the end of December.

The next anomalous event in the Oak Ridge area was yet another appearance of radar targets which “blanketed the radar scopes in the area directly over the government Atomic energy Commission projects.....these objects could not be identified from the radar image and a perfect fighter interception met with negative results.”

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE

(In compliance with letter AJACI-360.33 General, dated 15 November 1950. Headquarters, Third Army, Subject; Unconventional Aircraft, the following is submitted.)

A. Location and Time of Sighting: On 1247 hours on 20 December 1950.

B. Weather at Time of Sighting: At 1200 hours on 20 December 1950; Ceiling - 2700 feet; broken overcast; Seven miles visibility; Temperature - 37 degrees F; Dew Point - 31 degrees; and Wind - Calm.

C. Names, Occupations, and Addresses of Witnesses: Personnel of the 663rd AC &C Squadron, and the 5th AN Fighter Squadron, McGhee Tyson Airport, Knoxville, Tennessee

D. Photographs of Objects, if available: None

E. Object Sighted: The radar log of the 663rd AN and C Squadron, McGhee Tyson Airport, Knoxville, Tennessee contained the following entry; "20 December 1950. 1247 hours. Small paint in area (Oak Ridge Controlled Area). Very, very slow. Made perfect intercept (with F-82 Fighter aircraft) and orbit surrounding small smoke cloud."

F. Any other pertinent information: This report is made because of its possible aid in determining the identity of the numerous unidentified objects sighted over Oak Ridge, Tennessee.

SOURCE: Personnel of 663rd AC &W, Squadron, McGhee Tyson, Knoxville, Tennessee, and the log of the 663rd AC&W Squadron.

Washington 25 D.C.

- 1. Reference: Section VIII, paragraph 73b, AR 380-5.
- 2. The following report of unidentified objects by Norman H. Brown, Acting Chief, Review and Analysis Section, AEC, has been received from the Senior Instructor, USAR Instructor Group, Oak Ridge, Tennessee, and is transmitted herewith in accordance with directive cited in paragraph 1, above:

  "At approximately 3:00 P.M. on July 19, 1953, an F-86 aircraft was observed flying over the Oak Ridge residential area, making circles at what appeared to the writer to be approximately 2,500 or 3,500 feet. The F-86 flew over the area in this manner for approximately ten or fifteen minutes. The writer, together with his wife, observed the aircraft through a pair of six power field glasses. After the aircraft flew in what appeared to be the direction of Knoxville, Tennessee, a black object moved out of a high white cloud, directly over the area the F-86 had been flying. This object began to travel, at a tremendous speed, in a large circle. This action on the part of the unknown object continued for at least five minutes. During the circle of this object, it appeared at times to be in the shape of a cigar and at other times round."

  "This object was extremely black in color, having an appearance of a deep black metal exterior with a fine gloss. It did not leave a vapor trail or were there any lights of shine noticed. No sound was heard. The object flew east at a tremendous speed for what appeared to be approximately three miles where it stopped. The object was then joined by two more of these same objects. A formation similar to a spread "V" was formed and the objects, at a tremendous speed flew in an eastward direction."

ACKNOWLEDGMENTS

The opportunity to study Unidentified Flying Objects at all is simply a gift from the witnesses; we would be totally ignorant on this subject without their accounts. I am grateful that many thousands of people who saw something strange in the sky were not afraid to tell somebody about their experiences. I am further indebted to the many researchers who have diligently investigated the individual sightings and shared their findings in various publications. These sources of information are carefully cited throughout the text. The literature on UFOs, however, is so extensive that it has not been possible to pinpoint and credit all authors who may have influenced my thinking. Their contributions must come under a blanket acknowledgment that is equally sincere. No slight is intended to writers who have been ignored, even though their works may be well-known and significant.

I am grateful to the artist, Hal Crawford, for his excellent illustration that is used with the kind permission of Hayden C. Hewes, Director, International UFO Bureau, P.O. Box 1281, Oklahoma City, Oklahoma 73103.

The many frustrations of writing a book in a perplexing field were greatly mollified by Mrs. Judy Vilar whose spirit remained bright as she typed untold numbers of final drafts that, alas, proved to be only preliminary.

Also deserving of thanks are my wife, Carol, grown children, Ann, Kathy, and Nancy, and, rounding out the household while attending college in the U.S., Miss Gunilla Bexar from Finland. They pretended not to notice that the old man went crackers and started talking a lot about flying saucers and other improbable things, even enduring his snippy demeanor when progress was too slow.

CHAPTER SEVEN

The Pentagon Rumbles

On June 25, 1950, the North Korean armies swept down across the 38th parallel and the Korean War was on - the UFO was no longer a news item. But the lady, or gentleman, who first said, "Out of sight is out of mind," had never reckoned with the UFO.

On September 8, 1950, the UFO's were back in the news. On that day it was revealed, via a book entitled Behind the Flying Saucers, that government scientists had recovered and analyzed three different models of flying saucers. And they were fantastic - just like the book. They were made of an unknown super-duper metal and they were manned by little blue uniformed men who ate concentrated food and drank heavy water. The author of the book, Frank Scully, had gotten the story directly from a millionaire oilman, Silas Newton. Newton had in turn heard the story from an employee of his, a mysterious "Dr. Gee," one of the government scientists who had helped analyze the crashed saucers.

The story made news, Newton and "Dr. Gee" made fame, and Scully made money.

A little over two years later Newton and the man who was reportedly the mysterious "Dr. Gee" again made the news. The Denver district attorney's office had looked into the pair's oil business and found that the pockets they were trying to tap didn't contain oil. According to the December 6, 1952, issue of the Saturday Review, the D.A. had charged the two men with a $50,000 con game. One of their $800,000 electronic devices for their oil explorations turned out to be a $4.00 piece of war surplus junk.

Another book came out in the fall of 1950 when Donald Keyhoe expanded his original UFO story that had first appeared in the January 1950 issue of True magazine. Next to Scully's book Keyhoe's book was tame, but it convinced more people. Keyhoe had based his conjecture on fact, and his facts were correct, even if the conjecture wasn't.

Neither the seesaw advances and retreats of the United Nations troops in Korea nor the two flying saucer books seemed to have any effect on the number of UFO reports logged into ATIC, however. By official count, seventy-seven came in the first half of 1950 and seventy-five during the latter half. The actual count could have been more because in 1950, UFO reports were about as popular as sand in spinach, and I would guess that at least a few wound up in the "circular file."

In early January 1951 I was recalled to active duty and assigned to Air Technical Intelligence Center as an intelligence officer. I had been at ATIC only eight and a half hours when I first heard the words "flying saucer" officially used. I had never paid a great deal of attention to flying saucer reports but I had read a few, especially those that had been made by pilots. I'd managed to collect some 2,000 hours of flying time and had seen many odd things in the air, but I'd always been able to figure out what they were in a few seconds. I was convinced that if a pilot, or any crew member of an airplane, said that he'd seen some-

---

thing that he couldn't identify he meant it - it wasn't a hallucination. But I wasn't convinced that

flying saucers were spaceships.

My interest in UFO's picked up in a hurry when I learned that ATIC was the government agency that was responsible for the UFO project. And I was really impressed when I found out that the person who sat three desks down and one over from mine was in charge of the whole UFO show. So when I came to work on my second morning at ATIC and heard the words "flying saucer report" being talked about and saw a group of people standing around the chief of the UFO project's desk I about sprung an eardrum listening to what they had to say. It seemed to be a big deal, except that most of them were laughing. It must be a report of hoax or hallucination, I remember thinking to myself, but I listened as one of the group told the others about the report.

The night before a Mid Continent Airlines DC-3 was taxiing out to take off from the airport at Sioux City, Iowa, when the airport control tower operators noticed a bright bluish white light in the west. The tower operators, thinking that it was another airplane, called the pilot of the DC-3 and told him to be careful since there was another airplane approaching the field. As the DC-3 lined up to take off, both the pilots of the airliner and the tower operators saw the light moving in, but since it was still some distance away the DC-3 was given permission to take off. As it rolled down the runway getting up speed, both the pilot and the copilot were busy, so they didn't see the light approaching. But the tower operators did, and as soon as the DC-3 was airborne, they called and told the pilot to be careful. The copilot said that he saw the light and was watching it. Just then the tower got a call from another airplane that was requesting landing instructions and the operators looked away from the light.

In the DC-3 the pilot and copilot had also looked away from the light for a few seconds. When they looked back, the bluish white light had apparently closed in because it was much brighter and it was dead ahead. In a split second it closed in and flashed by their right wing, so close that both pilots thought that they would collide with it. When it passed the DC-3, the pilots saw more than a light - they saw a huge object that looked like the "fuselage of a B-29."

When the copilot had recovered he looked out his side window to see if he could see the UFO and there it was, flying formation with them. He yelled at the pilot, who leaned over and looked just in time to see the UFO disappear.

The second look confirmed the Mid Continent crew's first impression -

---

the object looked like a B-29 without wings. They saw nothing more, only a big "shadowy shape" and the bluish-white light - no windows, no exhaust.

The tower had missed the incident because they were landing the other airplane and the pilot and the copilot didn't have time to call them and tell them about what was going on. All the tower operators could say was that seconds after the UFO had disappeared the light that they had seen was gone.

When the airliner landed in Omaha, the crew filed a report that was forwarded to the Air Force. But this wasn't the only report that was filed; a full colonel from military intelligence had been a passenger on the DC-3. He'd seen the UFO too, and he was mighty impressed.

I thought that this was an interesting report and I wondered what the official reaction would be. The official reaction was a great big, deep belly laugh.

This puzzled me because I'd read that the Air Force was seriously investigating all UFO reports.

I continued to eavesdrop on the discussions about the report all day since the UFO expert was about

to "investigate" the incident. He sent out a wire to Flight Service and found that there was a B-36 somewhere in the area of Sioux City at the time of the sighting, and from what I could gather he was trying to blame the sighting on the B-36. When Washington called to get the results of the analysis of the sighting, they must have gotten the B-36 treatment because the case was closed.

I'd only been at ATIC two days and I certainly didn't class myself as an intelligence expert, but it didn't take an expert to see that a B-36, even one piloted by an experienced idiot, could not do what the UFO had done - buzz a DC-3 that was in an airport traffic pattern.

I didn't know it at the time but a similar event had occurred the year before. On the night of May 29, 1950, the crew of an American Airlines DC-6 had just taken off from Washington National Airport, and they were about seven miles west of Mount Vernon when the copilot suddenly looked out and yelled, "Watch it - watch it." The pilot and the engineer looked out to see a bluish white light closing in on them from dead ahead. The pilot racked the DC-6 up in a tight right turn while the UFO passed by on the left "from eleven to seven o'clock" and a little higher than the airliner. During this time the UFO passed between the full moon and DC-6 and the crew could see the dark silhouette of a "wingless B-29." Its length was about half the diameter of the full moon, and it had a blue flame shooting out the tail end.

Seconds after the UFO had passed by the DC-6, the copilot looked

---

out and there it was again, apparently flying formation off their right wing. Then in a flash of blue flame it was gone - streaking out ahead of the airliner and making a left turn toward the coast.

The pilot of the DC-6, who made the report, had better than 15,000 hours' flying time.

I didn't hear anything about UFO's, or flying saucers, as they were then known, for several weeks but I kept them in mind and one day I asked one of the old hands at ATIC about them - specifically I wanted to know about the Sioux City Incident. Why had it been sloughed off so lightly? His answer was typical of the official policy at that time. "One of these days all of these crazy pilots will kill themselves, the crazy people on the ground will be locked up, and there won't be any more flying saucer reports."

But after I knew the people at ATIC a little better, I found that being anti saucer wasn't a unanimous feeling. Some of the intelligence officers took the UFO reports seriously. One man, who had been on Project Sign since it was organized back in 1947, was convinced that the UFO's were interplanetary spaceships. He had questioned the people in the control tower at Godman AFB when Captain Mantell was killed chasing the UFO, and he had spent hours talking to the crew of the DC-3 that was buzzed near Montgomery, Alabama, by a "cigar shaped UFO that spouted blue flame." In essence, he knew UFO history from A to Z because he had "been there."

I think that it was this controversial thinking that first aroused my interest in the subject of UFO's and led me to try to sound out a few more people.

The one thing that stood out to me, being unindoctrinated in the ways of UFO lore, was the schizophrenic approach so many people at ATIC took. On the surface they sided with the belly laughers on any saucer issue, but if you were alone with them and started to ridicule the subject, they defended it or at least took an active interest. I learned this one day after I'd been at ATIC about a month.

A belated UFO report had come in from Africa. One of my friends was reading it, so I asked him if I could take a look at it when he had finished. In a few minutes he handed it to me.

When I finished with the report I tossed it back on my friend's desk, with some comment about the whole world's being nuts. I got a reaction I didn't expect; he wasn't so sure the whole world was nuts - maybe the nuts were at ATIC. "What's the deal?" I asked him. "Have they really thoroughly checked out every report and found that there's nothing to any of them?"

He told me that he didn't think so, he'd been at ATIC a long time. He hadn't ever worked on the UFO project, but he had seen many of their reports and knew what they were doing. He just plain didn't buy a lot of their explanations. "And I'm not the only one who thinks this," he added.

"Then why all of the big show of power against the UFO reports?" I remember asking him.

"The powers-that-be are anti flying saucer," he answered about half bitterly, "and to stay in favor it behooves one to follow suit."

As of February 1951 this was the UFO project.

The words "flying saucer" didn't come up again for a month or two. I'd forgotten all about the two words and was deeply engrossed in making an analysis of the performance of the Mig-15. The Mig had just begun to show up in Korea, and finding out more about it was a hot project.

Then the words "flying saucer" drifted across the room once more. But this time instead of belly laughter there was a note of hysteria.

It seems that a writer from Life magazine was doing some research on UFO's and rumor had it that Life was thinking about doing a feature article. The writer had gone to the Office of Public Information in the Pentagon and had inquired about the current status of Project Grudge. To accommodate the writer, the OPI had sent a wire out to ATIC: What is the status of Project Grudge?

Back went a snappy reply: Everything is under control; each new report is being thoroughly analyzed by our experts; our vast files of reports are in tiptop shape; and in general things are hunky-dunky. All UFO reports are hoaxes, hallucinations, and the misidentification of known objects.

Another wire from Washington: Fine, Mr. Bob Ginna of Life is leaving for Dayton. He wants to check some reports.

Bedlam in the raw.

Other magazines had printed UFO stories, and other reporters had visited ATIC, but they had always stayed in the offices of the top brass. For some reason the name Life, the prospects of a feature story, and the feeling that this Bob Ginna was going to ask questions caused sweat to flow at ATIC.

Ginna arrived and the ATIC UFO "expert" talked to him. Ginna later told me about the meeting. He had a long list of questions about reports that had been made over the past four years and every time he asked a question, the "expert" would go tearing out of the room to try to find the file that had the answer. I remember that day people spent a lot of

---

time ripping open bundles of files and pawing through them like a bunch of gophers. Many times, "I'm sorry, that's classified," got ATIC out of a tight spot.

Ginna, I can assure you, was not at all impressed by the "efficiently operating UFO project." People weren't buying the hoax, hallucination, and misidentification stories quite as readily as the Air Force believed.

Where it started or who started it I don't know, but about two months after the visit from Life's representative the official interest in UFO's began to pick up. Lieutenant Jerry Cummings, who had recently been recalled to active duty, took over the project.

Lieutenant Cummings is the type of person who when given a job to do does it. In a few weeks the operation of the UFO project had improved considerably. But the project was still operating under political, economic, and manpower difficulties. Cummings' desk was right across from mine, so I began to get a UFO indoctrination via bull sessions. Whenever Jerry found a good report in the pile - and all he had to start with was a pile of papers and files - he'd toss it over for me to read.

Some of the reports were unimpressive, I remember. But a few were just the opposite. Two that I remember Jerry's showing me made me wonder how the UFO's could be sloughed off so lightly. The two reports involved movies taken by Air Force technicians at White Sands Proving Ground in New Mexico.

The guided missile test range at White Sands is fully instrumented to track high, fast-moving objects - the guided missiles. Located over an area of many square miles there are camera stations equipped with cinetheodolite cameras and linked together by a telephone system.

On April 27, 1950, a guided missile had been fired, and as it roared up into the stratosphere and fell back to earth, the camera crews had recorded its flight. All the crews had started to unload their cameras when one of them spotted an object streaking across the sky. By April 1950 every person at White Sands was UFO conscious, so one member of the camera crew grabbed a telephone headset, alerted the other crews, and told them to get pictures. Unfortunately only one camera had film in it, the rest had already been unloaded, and before they could reload, the UFO was gone. The photos from the one station showed only a smudgy dark object. About all the film proved was that something was in the air and whatever it was, it was moving.

Alerted by this first chance to get a UFO to "run a measured course," the camera crews agreed to keep a sharper lookout. They also got the official O.K. to "shoot" a UFO if one appeared.

The Pentagon Rumbles.89

Almost exactly a month later another UFO did appear, or at least at the time the camera crews thought that it was a UFO. This time the crews were ready - when the call went out over the telephone net that a UFO had been spotted, all of the crews scanned the sky. Two of the crews saw it and shot several feet of film as the shiny, bright object streaked across the sky.

As soon as the missile tests were completed, the camera crews rushed their film to the processing lab and then took it to the Data Reduction Group. But once again the UFO had eluded man because there were apparently two or more UFO's in the sky and each camera station had photographed a separate one. The data were no good for triangulation.

The records at ATIC didn't contain the analysis of these films but they did mention the Data Reduction Group at White Sands. So when I later took over the UFO investigation I made several calls in an effort to run down the actual film and the analysis. The files at White Sands, like all files, evidently weren't very good, because the original reports were gone. I did contact a major who was very cooperative and offered to try to find the people who had worked on the analysis of the film. His report, after talking to two men who had done the analysis, was what I'd expected - nothing concrete except that the UFO's were unknowns. He did say that by putting a correction factor in the

data gathered by the two cameras they were able to arrive at a rough estimate of speed, altitude, and size. The UFO was "higher than 40,000 feet, traveling over 2,000 miles per hour, and it was over 300 feet in diameter." He cautioned me, however, that these figures were only estimates, based on the possibly erroneous correction factor; therefore they weren't proof of anything - except that something was in the air.

The people at White Sands continued to be on the alert for UFO's while the camera stations were in operation because they realized that if the flight path of a UFO could be accurately plotted and timed it could be positively identified. But no more UFO's showed up.

One day Lieutenant Cummings came over to my desk and dropped a stack of reports in front of me. "All radar reports," he said, "and I'm getting more and more of them every day."

Radar reports, I knew, had always been a controversial point in UFO history, and if more and more radar reports were coming in, there was no doubt that an already controversial issue was going to be compounded.

To understand why there is always some disagreement whenever a flying saucer is picked up on radar, it is necessary to know a little bit about how radar operates.

Basically radar is nothing but a piece of electronic equipment that

---

"shouts" out a radio wave and "listens" for the echo. By "knowing" how fast the radio, or radar, wave travels and from which direction the echo is coming, the radar tells the direction and distance of the object that is causing the echo. Any "solid" object like an airplane, bird, ship, or even a moisture laden cloud can cause a radar echo. When the echo comes back to the radar set, the radar operator doesn't have to listen for it and time it because this is all done for him by the radar set and he sees the "answer" on his radarscope - a kind of a round TV screen. What the radar operator sees is a bright dot, called a "blip" or a "return." The location of the return on the scope tells him the location of the object that was causing the echo. As the object moves through the sky, the radar operator sees a series of bright dots on his scope that make a track. On some radar sets the altitude of the target, the object causing the echo, can also be measured.

Under normal conditions the path that the radar waves take as they travel through the air is known. Normal conditions are when the temperature and relative humidity of the air decrease with an increase in altitude. But sometimes a condition will occur where at some level, instead of the temperature and/or relative humidity decreasing with altitude, it will begin to increase. This layer of warm, moist air is known as an inversion layer, and it can do all kinds of crazy things to a radar wave. It can cause part of the radar wave to travel in a big arc and actually pick up the ground many miles away. Or it can cause the wave to bend down just enough to pick up trucks, cars, houses, or anything that has a surface perpendicular to the ground level.

One would immediately think that since the ground or a house isn't moving, and a car or truck is moving only 40, 50, or 60 miles an hour, a radar operator should be able to pick these objects out from a fast-moving target. But it isn't as simple as that. The inversion layer shimmers and moves, and one second the radar may be picking up the ground or a truck in one spot and the next second it may be picking up something in a different spot. This causes a series of returns on the scope and can give the illusion of extremely fast or slow speeds.

These are but a few of the effects of an inversion layer on radar. Some of the effects are well known, but others aren't. The 3rd Weather Group at Air Defense Command Headquarters in Colorado Springs has done a lot of work on the effects of weather on radar, and they have developed

mathematical formulas for telling how favorable weather conditions are for "anomalous propagation," the two-bit words for false radar targets caused by weather.

The first problem in analyzing reports of UFO's being picked up on

---

The Pentagon Rumbles.91

radar is to determine if the weather conditions are right to give anomalous propagation. This can be determined by putting weather data into a formula. If they are, then it is necessary to determine whether the radar targets were real or caused by the weather. This is the difficult job. In most cases the only answer is the appearance of the target on the radar-scope. Many times a weather target will be a fuzzy and indistinct spot on the scope while a real target, an airplane for example, will be bright and sharp. This question of whether a target looked real is the cause of the majority of the arguments about radar detected UFO's because it is up to the judgment of the radar operator as to what the target looked like. And whenever human judgment is involved in a decision, there is plenty of room for an argument.

All during the early summer of 1951 Lieutenant Cummings "fought the syndicate" trying to make the UFO respectable. All the time I was continuing to get my indoctrination. Then one day with the speed of a shotgun wedding, the long overdue respectability arrived. The date was September 12, 1951, and the exact time was 3:04 P.M.

On this date and time a teletype machine at Wright-Patterson AFB began to chatter out a message. Thirty-six inches of paper rolled out of the machine before the operator ripped off the copy, stamped it Operational Immediate, and gave it to a special messenger to deliver to ATIC. Lieutenant Cummings got the message. The report was from the Army Signal Corps radar center at Fort Monmouth, New Jersey, and it was red-hot.

The incident had started two days before, on September 10, at 11:10 A.M., when a student operator was giving a demonstration to a group of visiting brass at the radar school. He demonstrated the set under manual operation for a while, picking up local air traffic, then he announced that he would demonstrate automatic tracking, in which the set is put on a target and follows it without help from the operator. The set could track objects flying at jet speeds.

The operator spotted an object about 12,000 yards southeast of the station, flying low toward the north. He tried to switch the set to automatic tracking. He failed, tried again, failed again. He turned to his audience of VIPs, embarrassed.

"It's going too fast for the set," he said. 'That means it's going faster than a jet!"

A lot of very important eyebrows lifted. What flies faster than a jet?

The object was in range for three minutes and the operator kept trying, without success, to get into automatic track. The target finally went off the scope, leaving the red-faced operator talking to himself.

92.The Report on Unidentified Flying Objects

The radar technicians at Fort Monmouth had checked the weather - there wasn't the slightest indication of an inversion layer.

Twenty-five minutes later the pilot of a T-33 jet trainer, carrying an Air Force major as passenger and flying 20,000 feet over Point Pleasant, New Jersey, spotted a dull silver, disk like object far

below him. He described it as 30 to 50 feet in diameter and as descending toward Sandy Hook from an altitude of a mile or so. He banked the T-33 over and started down after it. As he shot down, he reported, the object stopped its descent, hovered, then sped south, made a 120 degree turn, and vanished out to sea.

The Fort Monmouth Incident then switched back to the radar group. At 3:15 P.M. they got an excited, almost frantic call from headquarters to pick up a target high and to the north - which was where the first "faster-than-a-jet" object had vanished - and to pick it up in a hurry. They got a fix on it and reported that it was traveling slowly at 93,000 feet. They also could see it visually as a silver speck.

What flies 18 miles above the earth?

The next morning two radar sets picked up another target that couldn't be tracked automatically. It would climb, level off, climb again, go into a dive. When it climbed it went almost straight up.

The two-day sensation ended that afternoon when the radar tracked another unidentified slow moving object and tracked it for several minutes.

A copy of the message had also gone to Washington. Before Jerry could digest the thirty-six inches of facts, ATIC's new chief, Colonel Frank Dunn, got a phone call. It came from the office of the Director of Intelligence of the Air Force, Major General (now Lieutenant General) C. P. Cabell. General Cabell wanted somebody from ATIC to get to New Jersey - fast - and find out what was going on. As soon as the reports had been thoroughly investigated, the general said that he wanted a complete personal report. Nothing expedites like a telephone call from a general officer, so in a matter of hours Lieutenant Cummings and Lieutenant Colonel N. R. Rosengarten were on an airliner, New Jersey bound.

The two officers worked around the clock interrogating the radar operators, their instructors, and the technicians at Fort Monmouth. The pilot who had chased the UFO in the T-33 trainer and his passenger were flown to New York, and they talked to Cummings and Rosengarten. All other radar stations in the area were checked, but their radars hadn't picked up anything unusual.

At about 4:00 A.M. the second morning after they had arrived, the investigation was completed, Cummings later told. He and Lieutenant

---

The Pentagon Rumbles.93

Colonel Rosengarten couldn't get an airliner out of New York in time to get them to the Pentagon by 10:00 A.M., the time that had been set up for their report, so they chartered an airplane and flew to the capital to brief the general.

General Cabell presided over the meeting, and it was attended by his entire staff plus Lieutenant Cummings, Lieutenant Colonel Rosengarten, and a special representative from Republic Aircraft Corporation. The man from Republic supposedly represented a group of top U.S. industrialists and scientists who thought that there should be a lot more sensible answers coming from the Air Force regarding the UFO's. The man was at the meeting at the personal request of a general officer.

Every word of the two-hour meeting was recorded on a wire recorder. The recording was so hot that it was later destroyed, but not before I had heard it several times. I can't tell everything that was said but, to be conservative, it didn't exactly follow the tone of the official Air Force releases - many of the people present at the meeting weren't as convinced that the "hoax, hallucination, and misidentification" answer was quite as positive as the Grudge Report and subsequent press releases made out.

Toward the end of the two-hour conference a general asked Lieutenant Cummings to review the activity of the UFO investigation for the past year and a half. Maybe it was just a lack of sleep, or maybe it was just Cummings, but the general got the straight answer - for all practical purposes the project was dead. Then Cummings proceeded to elaborate on the details, the attitude at ATIC, the opposition to his reorganizing the project, and the methods of processing reports. Lieutenant Cummings didn't miss a point. He later told me that all of the generals and about three fourths of the full colonels present at the meeting turned the shade of purple normally associated with rage while a sort of sickly grin graced the faces of the remaining few. Then one of the generals on the purple-faced team glared at the sickly grin team and cut loose.

The first thing the general wanted to know was, "Who in hell has been giving me these reports that every decent flying saucer sighting is being investigated?"

Then others picked up the questioning.

"What happened to those two reports that General sent in from Saudi Arabia? He saw those two flying saucers himself."

"And who released this big report, anyway?" another person added, picking up a copy of the Grudge Report and slamming it back down on the table.

Lieutenant Cummings and Lieutenant Colonel Rosengarten came back to ATIC with orders to set up a new project and report back to General

---

94.The Report on Unidentified Flying Objects

Cabell when it was ready to go. But Cummings didn't get a chance to do much work on the new revitalized Project Grudge - it was to keep the old name - because in a few days he was a civilian. He'd been released from active duty because he was needed back at Cal Tech, where he'd been working on an important government project before his recall to active duty.

The day after Cummings got his separation orders, Lieutenant Colonel Rosengarten called me into his office. The colonel was chief of the Aircraft and Missiles branch and one of his many responsibilities was Project Grudge. He said that he knew that I was busy as group leader of my regular group but, if he gave me enough people, could I take Project Grudge? All he wanted me to do was to get it straightened out and operating; then I could go back to trying to outguess the Russians. He threw in a few comments about the good job I'd done straightening out other foul-up projects. Good old "Rosy." With my ego sufficiently inflated, I said yes.

On many later occasions, when I'd land at home in Dayton just long enough for a clean clothes resupply, or when the telephone would ring at 2:00 A.M. to report a new "hot" sighting and wake up the baby, Mrs. Ruppelt and I have soundly cussed my ego.

I had had the project only a few days when a minor flurry of good UFO reports started. It wasn't supposed to happen because the day after I'd taken over Project Grudge I'd met the ex-UFO "expert" in the hall and he'd nearly doubled up with laughter as he said something about getting stuck with Project Grudge. He predicted that I wouldn't get a report until the newspapers began to play up flying saucers again. "It's all mass hysteria," he said.

The first hysterical report of the flurry came from the Air Defense Command. On September 23, 1951, at seven fifty-five in the morning, two F-86's on an early patrol were approaching Long Beach, California, coming in on the west leg of the Long Beach Radio range. All of a sudden the flight leader called his ground controller - high at twelve o'clock he and his wing man saw an object. It was

in a gradual turn to its left, and it wasn't another airplane. The ground controller checked his radars but they had nothing, so the ground controller called the leader of the F-86's back and told him to go after the object and try to identify it. The two airplanes started to climb.

By this time the UFO had crossed over them but it was still in a turn and was coming back. Several times they tried to intercept, but they could never climb up to it. Once in a while, when they'd appear to be getting close, the UFO would lazily move out of range by climbing

---

slightly. All the time it kept orbiting to the left in a big, wide circle. After about ten minutes the flight leader told the ground controller, who had been getting a running account of the unsuccessful intercept, that their fuel was low and that they'd have to break off soon. They'd gotten a fairly good look at the UFO, the flight leader told the ground controller, and it appeared to be a silver airplane with highly swept back wings. The controller acknowledged the message and said that he was scrambling all his alert airplanes from George AFB. Could the two F-86's stay in the area a few more minutes? They stayed and in a few minutes four more F-86's arrived. They saw the UFO immediately and took over.

The two F-86's with nearly dry tanks went back to George AFB.

For thirty more minutes the newly arrived F-86's worked in pairs trying to get up to the UFO's altitude, which they estimated to be 55,000 feet, but they couldn't make it. All the time the UFO kept slowly circling and speeding up only when the F-86's seemed to get too close. Then they began to run out of fuel and asked for permission to break off the intercept.

By this time one remaining F-86 had been alerted and was airborne toward Long Beach. He passed the four homeward bound F-86's as he was going in, but by the time he arrived over Long Beach the UFO was gone.

All the pilots except one reported a "silver airplane with highly swept back wings." One pilot said the UFO looked round and silver to him.

The report ended with a comment by the local intelligence officer. He'd called Edwards AFB, the big Air Force test base north of Los Angeles, but they had nothing in the air. The officer concluded that the UFO was no airplane. In 1951 nothing we had would fly higher than the F-86.

This was a good report and I decided to dig in. First I had some more questions I wanted to ask the pilots. I was just in the process of formulating this set of questions when three better reports came in. They automatically got a higher priority than the Long Beach Incident.

FOREWORD

This is a book about unidentified flying objects - UFO's - flying saucers." It is actually more than a book; it is a report because it is the first time that anyone, either military or civilian, has brought together in one document all the facts about this fascinating subject. With the exception of the style, this report is written exactly the way I would have written it had I been officially asked to do so while I was chief of the Air Force's project for investigating UFO reports - Project Blue Book.

In many instances I have left out the names of the people who reported seeing UFO's, or the names of certain people who were associated with the project, just as I would have done in an official report. For the same reason I have changed the locale in which some of the UFO sightings occurred. This is especially true in CHAPTER FIFTEEN, the story of how some of our atomic scientists detected radiation whenever UFO's were reported near their "UFO detection stations." This policy of not identifying the "source," to borrow a term from military intelligence, is insisted on by the Air Force so that the people who have co-operated with them will not get any unwanted publicity. Names are considered to be "classified information."

But the greatest care has been taken to make sure that the omission of names and changes in locale has in no way altered the basic facts because this report is based on the facts - all of the facts - nothing of significance has been left out.

It was only after considerable deliberation that I put this report together, because it had to be told accurately, with no holds barred. I finally decided to do it for two reasons. First, there is world-wide interest in flying saucers; people want to know the facts. But more often than not these facts have been obscured by secrecy and confusion, a situation that has led to wild speculation on one end of the scale and an almost dangerously blasé'
attitude on the other. It is only when all of the facts are laid out that a correct evaluation can be made.

Second, after spending two years investigating and analyzing UFO reports, after talking to the people who have seen UFO's - industrialists, pilots, engineers, generals, and just the plain man-on-the-street, and after discussing the subject with many very capable scientists, I felt that I was in a position to be able to put together the complete account of the Air Force's struggle with the flying saucer.

The report has been difficult to write because it involves something that doesn't officially exist. It is well known that ever since the first flying saucer was reported in June 1947 the Air Force has officially said that there is no proof that such a thing as an interplanetary spaceship exists. But what is not well known is that this conclusion is far from being unanimous among the military and their scientific advisers because of the one word, proof; so the UFO investigations continue.

The hassle over the word "proof" boils down to one question: What constitutes proof? Does a UFO have to land at the River Entrance to the Pentagon, near the Joint Chiefs of Staff offices? Or is it proof when a ground radar station detects a UFO, sends a jet to intercept it, the jet pilot sees it, and locks on with his radar, only to have the UFO streak away at a phenomenal speed? Is it proof when a jet pilot fires at a UFO and sticks to his story even under the threat of court-martial? Does this constitute proof?

The at times hotly debated answer to this question may be the answer to the question, "Do the UFO's really exist?"

I'll give you the facts - all of the facts - you decide.

CHAPTER ONE

Project Blue Book and the UFO Story

In the summer of 1952 a United States Air Force F-86 jet interceptor shot at a flying saucer.

This fact, like so many others that make up the full flying saucer story has never before been told.

I know the full story about flying saucers and I know that it has never before been told because I organized and was chief of the Air Force Project Blue Book, the special project set up to investigate and analyze unidentified flying object, or UFO reports. (UFO is the official term that I created to replace the words 'flying saucers.")

There is a fighter base in the United States which I used to visit frequently because, during 1951, 1952, and 1953, it got more than its share of good UFO reports.

The commanding officer of the fighter group, a full colonel and command pilot, believed that UFO's were real. The colonel believed in UFO's because he had a lot of faith in his pilots - and they had chased UFO's in their F-86's. He had seen UFO's on the scopes of his radar sets, and he knew radar.

The colonel's intelligence officer, a captain, didn't exactly believe that UFO's were real, but he did think that they warranted careful investigation. The logic the intelligence officer used in investigating UFO reports - and in getting answers to many of them - made me wish many times that he worked for me on Project Blue Book.

One day the intelligence officer called me at my base in Dayton, Ohio. He wanted to know if I was planning to make a trip his way soon. When I told him I expected to be in his area in about a week, he asked me to be sure to look him up. There was no special hurry, he added, but he had something very interesting to show me.

When we got wind of a good story, Project Blue Book liked to start working on it at once, so I asked the intelligence officer to tell me what

---

he had. But nothing doing. He didn't want to discuss it over the phone. He even vetoed the idea of putting it into a secret wire. Such extreme caution really stopped me, because anything can be coded and put in a wire.

When I left Dayton about a week later I decided to go straight to the fighter base, planning to arrive there in midmorning. But while I was changing airlines my reservations got fouled up, and I was faced with waiting until evening to get to the base. I called the intelligence officer and told him about the mix-up. He told me to hang on right there and he would fly over and pick me up in a T-33 jet.

As soon as we were in the air, on the return trip, I called the intelligence officer on the interphone and asked him what was going on. What did he have? Why all the mystery? He tried to tell me, but the interphone wasn't working too well and I couldn't understand what he was saying. Finally he told me to wait until we returned to his office and I could read the report myself.

Report! If he had a UFO report why hadn't he sent it in to Project Blue Book as he usually did?

We landed at the fighter base, checked in our parachutes, Mae West's, and helmets, and drove over to his office. There were several other people in the office, and they greeted me with the usual question, "What's new on the flying saucer front?" I talked with them for a while, but was getting impatient to

find out what was on the intelligence officer's mind. I was just about to ask him about the mysterious report when he took me to one side and quietly asked me not to mention it until everybody had gone.

Once we were alone, the intelligence officer shut the door, went over to his safe, and dug out a big, thick report. It was the standard Air Force reporting form that is used for all intelligence reports, including UFO reports. The intelligence officer told me that this was the only existing copy. He said that he had been told to destroy all copies, but had saved one for me to read.

With great curiosity, I took the report and started to read. What had happened at this fighter base?

About ten o'clock in the morning, one day a few weeks before, a radar near the base had picked up an unidentified target. It was an odd target in that it came in very fast - about 700 miles per hour - and then slowed down to about 100 miles per hour. The radar showed that it was located northeast of the airfield, over a sparsely settled area.

Unfortunately the radar station didn't have any height finding equipment. The operators knew the direction of the target and its distance from the station but they didn't know its altitude. They reported the target, and two F-86's were scrambled.

Project Blue Book and the UFO Story.3

The radar picked up the F-86's soon after they were airborne, and had begun to direct them into the target when the target started to fade on the radarscope. At the time several of the operators thought that this fade was caused by the target's losing altitude rapidly and getting below the radar's beam. Some of the other operators thought that it was a high flying target and that it was fading just because it was so high.

In the debate which followed, the proponents of the high flying theory won out, and the F-86's were told to go up to 40,000 feet. But before the aircraft could get to that altitude, the target had been completely lost on the radarscope.

The F-86's continued to search the area at 40,000 feet, but could see nothing. After a few minutes the aircraft ground controller called the F-86's and told one to come down to 20,000 feet, the other to 5,000 feet, and continue the search, The two jets made a quick letdown, with one pilot stopping at 20,000 feet and the other heading for the deck.

The second pilot, who was going down to 5,000 feet, was just beginning to pull out when he noticed a flash below and ahead of him. He flattened out his dive a little and headed toward the spot where he had seen the light. As he closed on the spot he suddenly noticed what he first thought was a weather balloon. A few seconds later be realized that it couldn't be a balloon because it was staying ahead of him. Quite an achievement for a balloon, since he had built up a lot of speed in his dive and now was flying almost straight and level at 3,000 feet and was traveling "at the Mach."

Again the pilot pushed the nose of the F-86 down and started after the object. He closed fairly fast, until he came to within an estimated 1,000 yards. Now he could get a good look at the object. Although it had looked like a balloon from above, a closer view showed that it was definitely round and flat saucer shaped. The pilot described it as being "like a doughnut without a hole."

As his rate of closure began to drop off, the pilot knew that the object was picking up speed. But he pulled in behind it and started to follow. Now he was right on the deck.

About this time the pilot began to get a little worried. What should he do? He tried to call his buddy, who was flying above him somewhere in the area at 20,000 feet. He called two or three times but could get no answer. Next he tried to call the ground controller but he was too low for his radio to

carry that far. Once more he tried his buddy at 20,000 feet, but again no luck.

By now he had been following the object for about two minutes and during this time had closed the gap between them to approximately 500

---

4. The Report on Unidentified Flying Objects

yards. But this was only momentary. Suddenly the object began to pull away, slowly at first, then faster. The pilot, realizing that he couldn't catch it, wondered what to do next.

When the object traveled out about 1,000 yards, the pilot suddenly made up his mind - he did the only thing that he could do to stop the UFO. It was like a David about to do battle with a Goliath, but he had to take a chance. Quickly charging his guns, he started shooting. . . . A moment later the object pulled up into a climb and in a few seconds it was gone. The pilot climbed to 10,000 feet, called the other F-86, and now was able to contact his buddy. They joined up and went back to their base.

As soon as he had landed and parked, the F-86 pilot went into operations to tell his story to his squadron commander. The mere fact that he had fired his guns was enough to require a detailed report, as a matter of routine. But the circumstances under which the guns actually were fired created a major disturbance at the fighter base that day.

After the squadron commander had heard his pilot's story, he called the group commander, the colonel, and the intelligence officer. They heard the pilot's story.

For some obscure reason there was a "personality clash," the intelligence officer's term, between the pilot and the squadron commander. This was obvious, according to the report I was reading, because the squadron commander immediately began to tear the story apart and accuse the pilot of "cracking up," or of just "shooting his guns for the hell of it and using the wild story as a cover-up."

Other pilots in the squadron, friends of the accused pilot - including the intelligence officer and a flight surgeon - were called in to "testify." All of these men were aware of the fact that in certain instances a pilot can "flip" for no good reason, but none of them said that he had noticed any symptoms of mental crack-up in the unhappy pilot.

None, except the squadron commander. He kept pounding home has idea - that the pilot was "psycho" - and used a few examples of what the report called "minor incidents" to justify his stand.

Finally the pilot who had been flying with the "accused" man was called in. He said that he had been monitoring the tactical radio channel but that he hadn't heard any calls from his buddy's low flying F-86. The squadron commander triumphantly jumped on this point, but the accused pilot tended to refute it by admitting he was so jumpy that he might not have been on the right channel. But when he was asked if he had checked or changed channels after he had lost the object and before he had finally contacted the other F-86, he couldn't remember.

Project Blue Book and the UFO Story.5

So ended the pilot's story and his interrogation.

The intelligence officer wrote up his report of a UFO sighting, but at the last minute, just before sending it, he was told to hold it back. He was a little unhappy about this turn of events, so he went in to see why the group commander had decided to delay sending the report to Project Blue Book.

They talked over the possible reactions to the report. If it went out it would cause a lot of excitement, maybe unnecessarily. Yet, if the pilot actually had seen what he claimed, it was vitally important to get the report in to ATIC immediately. The group commander said that he would make his decision after a talk with his executive officer. They decided not to send the report and ordered it destroyed.

When I finished reading, the intelligence officer's first comment was, "What do you think?"

Since the evaluation of the report seemed to hinge upon conflicts between personalities I didn't know, I could venture no opinion, except that the incident made up the most fascinating UFO report I'd ever seen. So I batted the intelligence officer's question back to him.

"I know the people involved," he replied, "and I don't think the pilot was nuts. I can't give you the report, because Colonel told me to destroy it. But I did think you should know about it." Later he burned the report.

The problems involved in this report are typical. There are certain definite facts that can be gleaned from it; the pilot did see something and he did shoot at something, but no matter how thoroughly you investigate the incident that something can never be positively identified. It might have been a hallucination or it might have been some vehicle from outer space; no one will ever know. It was a UFO.

The UFO story started soon after June 24, 1947, when newspapers all over the United States carried the first flying saucer report. The story told how nine very bright, disk shaped objects were seen by Kenneth Arnold, a Boise, Idaho, businessman, while he was flying his private plane near Mount Rainier, in the state of Washington. With journalistic license, reporters converted Arnold's description of the individual motion of each of the objects like "a saucer skipping across water"- into "flying saucer," a name for the objects themselves. In the eight years that have passed since Arnold's memorable sighting, the term has become so common that it is now in Webster's Dictionary and is known today in most languages in the world.

For a while after the Arnold sighting the term "flying saucer" was used to describe all disk shaped objects that were seen flashing through the

---

sky at fantastic speeds. Before long, reports were made of objects other than disks, and these were also called flying saucers. Today the words are popularly applied to anything seen in the sky that cannot be identified as a common, everyday object.

Thus a flying saucer can be a formation of lights, a single light, a sphere, or any other shape; and it can be any color. Performance wise, flying saucers can hover, go fast or slow, go high or low, turn 90 degree corners, or disappear almost instantaneously.

Obviously the term "flying saucer" is misleading when applied to objects of every conceivable shape and performance. For this reason the military prefers the more general, if less colorful, name: unidentified flying objects. UFO (pronounced Yoo-foe) for short.

Officially the military uses the term "flying saucer" on only two occasions. First in an explanatory sense, as when briefing people who are unacquainted with the term "UFO": "UFO - you know- flying saucers." And second in a derogatory sense, for purposes of ridicule, as when it is observed, "He says he saw a flying saucer."

This second form of usage is the exclusive property of those persons who positively know that all UFO's are nonsense. Fortunately, for the sake of good manners if for no other reason, the ranks of

this knowing category are constantly dwindling. One by one these people drop out, starting with the instant they see their first UFO.

Some weeks after the first UFO was seen on June 24, 1947, the Air Force established a project to investigate and analyze all UFO reports. The attitude toward this task varied from a state of near panic, early in the life of the project, to that of complete contempt for anyone who even mentioned the words "flying saucer."

This contemptuous attitude toward "flying saucer nuts" prevailed from mid 1949 to mid 1950. During that interval many of the people who were, or had been, associated with the project believed that the public was suffering from "war nerves."

Early in 1950 the project, for all practical purposes, was closed out; at least it rated only minimum effort. Those in power now reasoned that if you didn't mention the words "flying saucers" the people would forget them and the saucers would go away. But this reasoning was false, for instead of vanishing, the UFO reports got better and better.

Airline pilots, military pilots, generals, scientists, and dozens of other people were reporting UFO's, and in greater detail than in reports of the past. Radars, which were being built for air defense, began to pick up some very unusual targets, thus lending technical corroboration to the unsubstantiated claims of human observers.

Project Blue Book and the UFO Story.7

As a result of the continuing accumulation of more impressive UFO reports, official interest stirred. Early in 1951 verbal orders came down from Major General Charles P. Cabell, then Director of Intelligence for Headquarters, U.S. Air Force, to make a study reviewing the UFO situation for Air Force Headquarters.

I had been back in the Air Force about six months when this happened. During the second world war I had been a B-29 bombardier and radar operator. I went to India, China, and later to the Pacific, with the original B-29 wing. I flew two DCF's, and some Air Medals' worth of missions, got out of the Air Force after the war, and went back to college. To keep my reserve status while I was in school, I flew as a navigator in an Air Force Reserve Troop Carrier Wing.

Not long after I received my degree in aeronautical engineering, the Korean War started, and I went back on active duty. I was assigned to the Air Technical Intelligence Center at Wright-Patterson Air Force Base, in Dayton, Ohio. ATIC is responsible for keeping track of all foreign aircraft and guided missiles. ATIC also had the UFO project.

I had just finished organizing a new intelligence group when General Cabell's order to review past UFO reports came down. Lieutenant Colonel Rosengarten, who received the order at ATIC, called me in and wanted to know if I'd take the job of making the review. I accepted.

When the review was finished, I went to the Pentagon and presented my findings to Major General Samford, who had replaced General Cabell as Director of Intelligence.

ATIC soon got the word to set up a completely new project for the investigation and analysis of UFO reports. Since I had made the review of past UFO reports I was the expert, and I got the new job. It was given the code name Project Blue Book, and I was in charge of it until late in 1953. During this time members of my staff and I traveled close to half a million miles. We investigated dozens of UFO reports, and read and analyzed several thousand more. These included every report ever received by the Air Force.

For the size of the task involved Project Blue Book was always under- staffed, even though I did have ten people on my regular staff plus many paid consultants representing every field of science. All of us on Project Blue Book had Top Secret security clearances so that security was no block in our investigations. Behind this organization was a reporting network made up of every Air Force base intelligence officer and every Air Force radar station in the world, and the Air Defense Command's Ground Observer Corps. This reporting net sent Project Blue Book reports on every conceivable type of UFO, by every conceivable type of person.

8.The Report on Unidentified Flying Objects

What did these people actually see when they reported that they had observed a UFO? Putting aside truly unidentifiable flying objects for the present, this question has several answers.

In many instances it has been positively proved that people have reported balloons, airplanes, stars, and many other common objects as UFO's. The people who make such reports don't recognize these common objects because something in their surroundings temporarily assumes an unfamiliar appearance.

Unusual lighting conditions are a common cause of such illusions. A balloon will glow like a "ball of fire" just at sunset. Or an airplane that is not visible to the naked eye suddenly starts to reflect the sun's rays and appears to be a "silver ball." Pilots in F-94 jet interceptors chase Venus in the daytime and fight with balloons at night, and people in Los Angeles see weird lights.

On October 8, 1954, many Los Angeles newspapers and newscasters carried an item about a group of flying saucers, bright lights, flying in a V formation. The lights had been seen from many locations over Southern California. Pilots saw them while bringing their airplanes into Los Angeles International Airport, Air Force pilots flying out of Long Beach saw them, two CBS reporters in Hollywood gave an eyewitness account, and countless people called police and civil defense officials. All of them excitedly reported lights they could not identify. The next day the Air Force identified the UFO's; they were Air Force airplanes, KC-97 aerial tankers, refueling B-47 jet bombers in flight. The reason for the weird effect that startled so many Southern Californians was that when the refueling is taking place a floodlight on the bottom of the tanker airplane lights up the bomber that is being refueled. The airplanes were flying high, and slowly, so no sound was heard; only the bright floodlights could be seen. Since most people, even other pilots, have never seen a night aerial refueling operation and could not identify the odd lights they saw, the lights became UFO's.

In other instances common everyday objects look like UFO's because of some odd quirk in the human mind. A star or planet that has been in the sky every day of the observer's life suddenly "takes off at high speed on a highly erratic flight path." Or a vapor trail from a high flying jet - seen a hundred times before by the observer - becomes a flying saucer.

Some psychologists explain such aberrations as being akin to the crowd behavior mechanism at work in the "bobby sox craze." Teen-agers don't know why they squeal and swoon when their current fetish sways and croons. Yet everybody else is squealing, so they squeal too. Maybe that great comedian, Jimmy Durante, has the answer: "Everybody wants to

---

get into the act." I am convinced that a certain percentage of UFO reports come from people who see flying saucers because others report seeing them.

But this "will to see" may have deeper roots, almost religious implications, for some people.

Consciously or unconsciously, they want UFO's to be real and to come from outer space. These individuals, frightened perhaps by threats of atomic destruction, or lesser fears - who knows what - act as if nothing that men can do can save the earth. Instead, they seek salvation from outer space, on the forlorn premise that flying saucer men, by their very existence, are wiser and more advanced than we. Such people may reason that a race of men capable of interplanetary travel have lived well into, or through, an atomic age. They have survived and they can tell us their secret of survival. Maybe the threat of an atomic war unified their planet and allowed them to divert their war effort to one of social and technical advancement. To such people a searchlight on a cloud or a bright star is an interplanetary spaceship.

If all the UFO reports that the Air Force has received in the past eight years could be put in this "psychological quirk" category, Project Blue Book would never have been organized. It is another class of reports that causes the Air Force to remain interested in UFO's. This class of reports are called "Unknowns."

In determining the identity of a UFO, the project based its method of operation on a well known psychological premise. This premise is that to get a reaction from one of the senses there must be a stimulus. If you think you see a UFO you must have seen something. Pure hallucinations are extremely rare.

For anything flying in the air the stimulus could be anything that is normally seen in the air. Balloons, airplanes, and astronomical bodies are the commoner stimuli. Birds and insects are common also, but usually are seen at such close range that they are nearly always recognized. Infrequently observed things, such as sundogs, mirages, huge fireballs, and a host of other unusual flying objects, are also known stimuli.

On Project Blue Book our problem was to identify these stimuli. We had methods for checking the location, at any time, of every balloon launched anywhere in the United States. To a certain degree the same was true for airplanes. The UFO observer's estimate of where the object was located in the sky helped us to identify astronomical bodies. Huge files of UFO characteristics, along with up-to-the-minute weather data, and advice from specialists, permitted us to identify such things as sun dogs, paper caught in updrafts, huge meteors, etc.

This determination of the stimuli that triggered UFO sightings, while

---

not an insurmountable task, was a long, tedious process. The identification of known objects was routine, and caused no excitement. The excitement and serious interest occurred when we received UFO reports in which the observer was reliable and the stimuli could not be identified. These were the reports that challenged the project and caused me to spend hours briefing top U.S. officials. These were the reports that we called "Unknowns."

Of the several thousand UFO reports that the Air Force has received since 1947, some 15 to 20 per cent fall into this category called unknown. This means that the observer was not affected by any determinable psychological quirks and that after exhaustive investigation the object that was reported could not be identified. To be classed as an unknown, a UFO report also had to be "good", meaning that it had to come from a competent observer and had to contain a reasonable amount of data.

Reports are often seen in the newspapers that say: "Mrs. Henry Jones, of 5464 South Elm, said that 10:00 A.M. she was shaking her dust mop out of the bedroom window when she saw a flying saucer"; or "Henry Armstrong was driving between Grundy Center and Rienbeck last night when he saw a light. Henry thinks it was a flying saucer." This is not a good UFO report.

This type of UFO report, if it was received by Project Blue Book, was stamped "Insufficient Data for Evaluation" and dropped into the dead file, where it became a mere statistic.

Next to the "Insufficient Data" file was a file marked "C.P." This meant crackpot. Into this file went all reports from people who had talked with flying saucer crews, who had inspected flying saucers that had landed in the United States, who had ridden in flying saucers, or who were members of flying saucer crews. By Project Blue Book standards, these were not "good" UFO reports either.

But here is a "good" UFO report with an "unknown" conclusion:

On July 24, 1952, two Air Force colonels, flying a B-25, took off from Hamilton Air Force Base, near San Francisco, for Colorado Springs, Colorado. The day was clear, not a cloud in the sky.

The colonels had crossed the Sierra Nevada between Sacramento and Reno and were flying east at 11,000 feet on "Green 3," the aerial highway to Salt Lake City. At 3:40 P.M. they were over the Carson Sink area of Nevada, when one of the colonels noticed three objects ahead of them and a little to their right. The objects looked like three F-86's flying a tight V formation. If they were F-86's they should have been lower, according to civil air regulations, but on a clear day some pilots don't watch their altitude too closely.

In a matter of seconds the three aircraft were close enough to the B-25

---

to be clearly seen. They were not F-86's. They were three bright silver, delta wing craft with no tails and no pilot's canopies. The only thing that broke the sharply defined, clean upper surface of the triangular wing was a definite ridge that ran from the nose to the tail.

In another second the three deltas made a slight left bank and shot by the B-25 at terrific speed. The colonels estimated that the speed was at least three times that of an F-86. They got a good look at the three deltas as the unusual craft passed within 400 to 800 yards of the B-25.

When they landed at Colorado Springs, the two colonels called the intelligence at Air Defense Comman d Headquarters to make a UFO report. The suggestion was offered that they might have seen three F-86's. The colonels promptly replied that if the objects had been F-86's they would have easily been recognized as such. The colonels knew what F-86's looked like.

Air Defense Command relayed the report to Project Blue Book. An investigation was started at once.

Flight Service, which clears all military aircraft flights, was contacted and asked about the location of aircraft near the Carson Sink area at 3:40 P.M. They had no record of the presence of aircraft in that area.

Since the colonels had mentioned delta wing aircraft, and both the Air Force and the Navy had a few of this type, we double-checked. The Navy's deltas were all on the east coast, at least all of the silver ones were. A few deltas painted the traditional navy blue were on the west coast, but not near Carson Sink. The Air Force's one delta was temporarily grounded.

Since balloons once in a while can appear to have an odd shape, all balloon flights were checked for both standard weather balloons and the big 100 foot diameter research balloons. Nothing was found.

A quick check on the two colonels revealed that both of them were command pilots and that each had several thousand hours of flying time. They were stationed at the Pentagon. Their highly classified assignments were such that they would be in a position to recognize anything that the

United States knows to be flying anywhere in the world.

Both men had friends who had "seen flying saucers" at some time, but both had openly voiced their skepticism. Now, from what the colonels said when they were interviewed after landing at Colorado Springs, they had changed their opinions.

Nobody knows what the two colonels saw over Carson Sink. However, it is always possible to speculate. Maybe they just thought they were close enough to the three objects to see them plainly. The objects might have been three F-86's: maybe Flight Service lost the records. It could be that the three F-86's had taken off to fly in the local area of their base

---

but had decided to do some illegal sight-seeing. Flight Service would have no record of a flight like this. Maybe both of the colonels had hallucinations.

There is a certain mathematical probability that any one of the above speculative answers is correct - correct for this one case. If you try this type of speculation on hundreds of sightings with "unknown" answers, the probability that the speculative answers are correct rapidly approaches zero.

Maybe the colonels actually did see what they thought they did, a type of craft completely foreign to them.

Another good UFO report provides an incident in which there is hardly room for any speculation of this type. The conclusion is more simply, "Unknown," period.

On January 20, 1952, at seven twenty in the evening, two master sergeants, both intelligence specialists, were walking down a street on the Fairchild Air Force Base, close to Spokane, Washington.

Suddenly both men noticed a large, bluish white, spherical shaped object approaching from the east. They stopped and watched the object carefully, because several of these UFO's had been reported by pilots from the air base over the past few months. The sergeants had written up the reports on these earlier sightings.

The object was traveling at a moderately fast speed on a horizontal path. As it passed to the north of their position and disappeared in the west, the sergeants noted that it had a long blue tail. At no time did they hear any sound. They noted certain landmarks that the object had crossed and estimated the time taken in passing these landmarks. The next day they went out and measured the angles between these landmarks in order to include them in their report.

When we got the report at ATIC, our first reaction was that the master sergeants had seen a large meteor. From the evidence I had written off, as meteors, all previous similar UFO reports from this air base.

The sergeants' report, however, contained one bit of information that completely changed the previous picture. At the time of the sighting there had been a solid 6,000-foot-thick overcast at 4,700 feet. And meteors don't go that low.

A few quick calculations gave a rather fantastic answer. If the object was just at the base of the clouds it would have been 10,000 feet from the two observers and traveling 1,400 miles per hour.

But regardless of the speed, the story was still fantastic. The object was no jet airplane because there was no sound. It was not a searchlight because there were none on the air base. It was not an

automobile spotlight

Project Blue Book and the UFO Story.13

because a spotlight will not produce the type of light the sergeants described. As a double check, however, both men were questioned on this point. They stated firmly that they had seen hundreds of searchlights and spotlights playing on clouds, and that this was not what they saw.

Beyond these limited possibilities the sergeants' UFO discourages fruitful speculation. The object remains unidentified.

The UFO reports made by the two colonels and the two master sergeants are typical of hundreds of other good UFO reports which carry the verdict, "Conclusion unknown."

Some of these UFO reports have been publicized, but many have not. Very little information pertaining to UFO's was withheld from the press - if the press knew of the occurrence of specific sightings. Our policy on releasing information was to answer only direct questions from the press. If the press didn't know about a given UFO incident, they naturally couldn't ask questions about it. Consequently such stories were never released. In other instances, when the particulars of a UFO sighting were released, they were only the bare facts about what was reported. Any additional information that might have been developed during later investigations and analyses was not released.

There is a great deal of interest in UFO's and the interest shows no signs of diminishing. Since the first flying saucer skipped across the sky in the summer of 1947, thousands of words on this subject have appeared in every newspaper and most magazines in the United States. During a six-month period in 1952 alone 148 of the nation's leading newspapers carried a total of over 16,000 items about flying saucers.

During July 1952 reports of flying saucers sighted over Washington, D.C., cheated the Democratic National Convention out of precious head- line space.

The subject of flying saucers, which has generated more unscientific behavior than any other topic of modern times, has been debated at the meetings of professional scientific societies, causing scientific tempers to flare where unemotional objectivity is supposed to reign supreme.

Yet these thousands of written words and millions of spoken words - all attesting to the general interest - have generated more heat than light. Out of this avalanche of print and talk, the full, factual, true story of UFO's has emerged only on rare occasions. The general public, for its interest in UFO's, has been paid off in misinformation.

Many civilian groups must have sensed this, for while I was chief of Project Blue Book I had dozens of requests to speak on the subject of UFO's. These civilian requests had to be turned down because of security regulations.

14.The Report on Unidentified Flying Objects

I did give many official briefings, however, behind closed doors, to certain groups associated with the government - all of them upon request.

The subject of UFO's was added to a regular series of intelligence briefings given to students at the Air Force's Command and Staff School, and to classes at the Air Force's Intelligence School.

I gave briefings to the technical staff at the Atomic Energy Commission's Los Alamos laboratory, where the first atomic bomb was built. The theater where this briefing took place wouldn't hold all of the people who tried to get in, so the briefing was recorded and replayed many times. The same thing happened at AEC's Sandia Base, near Albuquerque.

Many groups in the Pentagon and the Office of Naval Research requested UFO briefings. Civilian groups, made up of some of the nation's top scientists and industrialists, and formed to study special military problems, worked in a UFO briefing. Top Air Force commanders were given periodic briefings.

Every briefing I gave was followed by a discussion that lasted anywhere from one to four hours.

In addition to these, Project Blue Book published a classified monthly report on UFO activity. Requests to be put on distribution for this report were so numerous that the distribution had to be restricted to major Air Force Command Headquarters.

This interest was not caused by any revolutionary information that was revealed in the briefings or reports. It stemmed only from a desire to get the facts about an interesting subject.

Many aspects of the UFO problem were covered in these official briefings. I would give details of many of the better reports we received, our conclusions about them, and how those conclusions were reached. If we had identified a UFO, the audience was told how the identification was made. If we concluded that the answer to a UFO sighting was "Unknown," the audience learned why we were convinced it was unknown.

Among the better sightings that were described fully to interested government groups were: the complete story of the Lubbock Lights, including the possible sighting of the same V-shaped light formations at other locations on the same night; the story of a group of scientists who detected mysterious nuclear radiation when UFO's were sighted; and all of the facts behind such famous cases as the Mantell Incident, the Florida scoutmaster who was burned by a "flying saucer," and headline capturing sightings at Washington, D.C.

I showed them what few photographs we had, the majority of which everyone has seen, since they have been widely published in magazines and newspapers. Our collection of photographs was always a disappointment as far as positive proof was concerned because, in a sense, if you've

---

seen one you've seen them all. We had no clear pictures of a saucer, just an assortment of blurs, blotches, and streaks of light.

The briefings included a description of how Project Blue Book operated and a survey of the results of the many studies that were made of the mass of UFO data we had collected. Also covered were our interviews with a dozen North American astronomers, the story of the unexplained green fireballs of New Mexico, and an account of how a committee of six distinguished United States scientists spent many hours attempting to answer the question, "Are the UFO's from outer space?"

Unfortunately the general public was never able to hear these briefings. For a long time, contrary to present thinking in military circles, I have believed that the public also is entitled to know the details of what was covered in these briefings (less, of course, the few items pertaining to radar that were classified "Secret," and the names of certain people). But withholding these will not alter the facts in any way.

A lot has already been written on the subject of UFO's, but none of it presents the true, complete

story. Previous forays into the UFO field have been based on inadequate information and have been warped to fit the personal biases of the individual writers. Well-meaning though these authors may be, the degree to which their books have misinformed the public is incalculable.

It is high time that we let the people know.

The following chapters present the true and complete UFO story, based on what I learned about UFO's while I was chief of Project Blue Book, the Air Force's project for the investigation and analysis of UFO reports. Here is the same information that I gave to Secretary of the Air Force, Thomas K. Finletter, to the Air Force commanders, to scientists and industrialists. This is what the Air Force knows about unidentified flying objects.

You may not agree with some of the official ideas or conclusions - neither did a lot of people I briefed - but this is the story.

Chapter 2: The Era of Confusion Begins, Page 15

NICAP Home Page

CHAPTER TWO

The Era of Confusion Begins

On September 23, 1947, the chief of the Air Technical Intelligence Center, one of the Air Force's most highly specialized intelligence units, sent a letter to the Commanding General of the then Army Air Forces. The letter was in answer to the Commanding General's verbal request to make a preliminary study of the reports of unidentified flying objects. The letter said that after a preliminary study of UFO reports, ATIC concluded that, to quote from the letter, "the reported phenomena were real." The letter strongly urged that a permanent project be established at ATIC to investigate and analyze future UFO reports. It requested a priority for the project, a registered code name, and an over-all security classification. ATIC's request was granted and Project Sign, the forerunner of Project Grudge and Project Blue Book, was launched. It was given a 2A priority, lA being the highest priority an Air Force project could have. With this the Air Force dipped into the most prolonged and widespread controversy it has ever, or may ever, encounter. The Air Force grabbed the proverbial bear by the tail and to this day it hasn't been able to let loose.

The letter to the Commanding General of the Army Air Forces from the chief of ATIC had used the word "phenomena." History has shown that this was not a too well chosen word. But on September 23, 1947, when the letter was written, ATIC's intelligence specialists were confident that within a few months or a year they would have the answer to the question, "What are UFO's?" The question, "Do UFO's exist?" was never mentioned. The only problem that confronted the people at ATIC was, "Were the UFO's of Russian or interplanetary origin?" Either case called for a serious, secrecy shrouded project. Only top people at ATIC were assigned to Project Sign.

Although a formal project for UFO investigation wasn't set up until September 1947, the Air Force had been vitally interested in UFO reports ever since June 24, 1947, the day Kenneth Arnold made the original UFO report.

As Arnold's story of what he saw that day has been handed down by the bards of saucerism, the true facts have been warped, twisted, and changed. Even some points in Arnold's own account of his sighting as published in his book, The Coming 0f The Saucers, do not jibe with what the official files say he told the Air Force in 1947. Since this incident was the original UFO sighting, I used to get many inquiries about it from the press and at briefings. To get the true and accurate story of what did happen to Kenneth Arnold on June 24, 1947, I had to go back through old newspaper files, official reports, and talk to people who had worked on Project Sign. By cross-checking these data and talking to people who had heard Arnold tell about his UFO sighting soon after it happened, I finally came up with what I believe is the accurate story.

Arnold had taken off from Chehalis, Washington, intending to fly to Yakima, Washington. About 3:00 P.M. he arrived in the vicinity of

---

Mount Rainier. There was a Marine Corps C-46 transport plane lost in the Mount Rainier area, so Arnold decided to fly around awhile and look for it. He was looking down at the ground when suddenly he noticed a series of bright flashes off to his left. He looked for the source of the flashes and saw a string of nine very bright disk shaped objects, which he estimated to be 45 to 50 feet in length. They were traveling from north to south across the nose of his airplane. They were flying in a reversed echelon (i.e., lead object high with the rest stepped down), and as they flew along they

weaved in and out between the mountain peaks, once passing behind one of the peaks. Each individual object had a skipping motion described by Arnold as a "saucer skipping across water."

During the time that the objects were in sight, Arnold had clocked their speed. He had marked his position and their position on the map and again noted the time. When he landed he sketched in the flight path that the objects had flown and computed their speed, almost 1,700 miles per hour. He estimated that they had been 20 to 25 miles away and had traveled 47 miles in 102 seconds.

I found that there was a lot of speculation on this report. Two factions at ATIC had joined up behind two lines of reasoning. One side said that Arnold had seen plain, everyday jet airplanes flying in formation. This side's argument was based on the physical limitations of the human eye, visual acuity, the eye's ability to see a small, distant object. Tests, they showed, had proved that a person with normal vision can't "see" an object that subtends an angle of less than 0.2 second of arc. For example, a basketball can't be seen at a distance of several miles but if you move the basketball closer and closer, at some point you will be able to see it. At this point the angle between the top and bottom of the ball and your eye will be about 0.2 of a second of arc. This was applied to Arnold's sighting. The "Arnold-saw-airplanes" faction maintained that since Arnold said that the objects were 45 to 50 feet long they would have had to be much closer than he had estimated or he couldn't even have seen them at all. Since they were much closer than he estimated, Arnold's timed speed was all wrong and instead of going 1,700 miles per hour the objects were traveling at a speed closer to 400 miles per hour, the speed of a jet. There was no reason to believe they weren't jets. The jets appeared to have a skipping motion because Arnold had looked at them through layers of warm and cold air, like heat waves coming from a hot pavement that cause an object to shimmer.

The other side didn't buy this idea at all. They based their argument on the fact that Arnold knew where the objects were when he timed them.

18.The Report on Unidentified Flying Objects

After all, he was an old mountain pilot and was as familiar with the area around the Cascade Mountains as he was with his own living room. To cinch this point the fact that the objects had passed behind a mountain peak was brought up. This positively established the distance the objects were from Arnold and confirmed his calculated 1,700-miles-per-hour speed. Besides, no airplane can weave in and out between mountain peaks in the short time that Arnold was watching them. The visual acuity factor only strengthened the "Arnold-saw-a-flying-saucer" faction's theory that what he'd seen was a spaceship. If he could see the objects 20 to 25 miles away, they must have been about 210 feet long instead of the poorly estimated 45 to 50 feet.

In 1947 this was a fantastic story, but now it is just another UFO report marked "Unknown." It is typical in that if the facts are accurate, if Arnold actually did see the UFO's go behind a mountain peak, and if he knew his exact position at the time, the UFO problem cannot be lightly sloughed off; but there are always "ifs" in UFO reports. This is the type of report that led Major General John A. Samford, Director of Intelligence for Headquarters, Air Force, to make the following comment during a press conference in July 1952: "However, there have remained a percentage of this total [of all UFO reports received by the Air Force], about 20 per cent of the reports, that have come from credible observers of relatively incredible things. We keep on being concerned about them."

In warping, twisting, and changing the Arnold incident, the writers of saucer lore haven't been content to confine themselves to the incident itself; they have dragged in the crashed Marine Corps' C-46. They intimate that the same flying saucers that Arnold saw shot down the C-46, grabbed up the bodies of the passengers and crew, and now have them pickled at the University of Venus Medical School. As proof they apply the same illogical reasoning that they apply to most everything. The military never released photos of the bodies of the dead men, therefore there were no bodies.

There were photographs and there were bodies. In consideration of the families of air crewmen and passengers, photos of air crashes showing dead bodies are never released.

Arnold himself seems to be the reason for a lot of the excitement that heralded flying saucers. Stories of odd incidents that occur in this world are continually being reported by newspapers, but never on the scale of the first UFO report. Occasional stories of the "Himalayan snowmen," or the "Malayan monsters," rate only a few inches or a column on the back pages of newspapers. Arnold's story, if it didn't make the headlines, at least made the front page. I had the reason for this explained to me one day when I was investigating a series of UFO reports in California in the spring of 1952.

The Era of Confusion Begins.19

I was making my headquarters at an air base where a fighter bomber wing was stationed. Through a mutual friend I met one of the fighter- bomber pilots who had known Arnold. In civilian life the pilot was a news paper reporter and had worked on the original Arnold story. He told me that when the story first broke all the newspaper editors in the area were thoroughly convinced that the incident was a hoax, and that they intended to write the story as such. The more they dug into the facts, however, and into Arnold's reputation, the more it appeared that he was telling the truth. Besides having an unquestionable character, he was an excellent mountain pilot, and mountain pilots are a breed of men who know every nook and cranny of the mountains in their area. The most fantastic part of Arnold's story had been the 1,700-miles-per-hour speed computed from Arnold's timing the objects between two landmarks. "When Arnold told us how he computed the speed," my chance acquaintance told me, "we all put a lot of faith in his story." He went on to say that when the editors found out that they were wrong about the hoax, they did a complete about-face, and were very much impressed by the story. This enthusiasm spread, and since the Air Force so quickly denied ownership of the objects, all of the facts built up into a story so unique that papers all over the world gave it front-page space.

There was an old theory that maybe Arnold had seen wind whipping snow along the mountain ridges, so I asked about this. I got a flat "Impossible." My expert on the early Arnold era said, "I've lived in the Pacific Northwest many years and have flown in the area for hundreds of hours. It's impossible to get powder snow low in the mountains in June. Personally, I believe Arnold saw some kind of aircraft and they weren't from this earth." He went on to tell me about two other very similar sightings that had happened the day after Arnold saw the nine disks. He knew the people who made these sightings and said that they weren't the kind to go off "half cocked." He offered to get a T-6 and fly me up to Boise to talk to them since they had never made a report to the military, but I had to return to Dayton so I declined.

Within a few days of Arnold's sighting, others began to come m. On June 28 an Air Force pilot in an F-51 was flying near Lake Mead, Nevada, when he saw a formation of five or six circular objects off his right wing. The time was about three fifteen in the afternoon.

That night at nine twenty, four Air Force officers, two pilots, and two intelligence officers from Maxwell AFB in Montgomery, Alabama, saw a bright light traveling across the sky. It was first seen just above the horizon, and as it traveled toward the observers it "zigzagged," with bursts of high speed. When it was directly overhead it made a sharp 90 degree turn and was lost from view as it traveled south.

20.The Report on Unidentified Flying Objects

Other reports came in. In Milwaukee a lady saw ten go over her house "like blue blazes," heading south. A school bus driver in Clarion, Iowa, saw an object streak across the sky. In a few seconds twelve more followed the first one. White Sands Proving Ground in New Mexico chalked up the first

of the many sightings that this location would produce when several people riding in an automobile saw a pulsating light travel from horizon to horizon in thirty seconds. A Chicago housewife saw one "with legs."

The week of July 4, 1947, set a record for reports that was not broken until 1952. The center of activity was the Portland, Oregon, area. At 11:00 A.M. a carload of people driving near Redmond saw four disk- shaped objects streaking past Mount Jefferson. At 1:05 P.M. a policeman was in the parking lot behind the Portland City Police Headquarters when he noticed some pigeons suddenly began to flutter around as if they were scared. He looked up and saw five large disk shaped objects, two going south and three going east. They were traveling at a high rate of speed and seemed to be oscillating about their lateral axis. Minutes later two other policemen, both ex-pilots, reported three of the same things flying in trail. Before long the harbor patrol called into headquarters. A crew of four patrolmen had seen three to six of the disks, "shaped like chrome hub caps," traveling very fast. They also oscillated as they flew. Then the citizens of Portland began to see them. A man saw one going east and two going north. At four thirty a woman called in and had just seen one that looked like "a new dime flipping around." Another man reported two, one going southeast, one northeast. From Milwaukee, Oregon, three were reported going northwest. In Vancouver, Washington, sheriff's deputies saw twenty to thirty.

The first photo was taken on July 4 in Seattle. After much publicity it turned out to be a weather balloon.

That night a United Airlines crew flying near Emmett, Idaho, saw five. The pilot's report read:

Five "somethings," which were thin and smooth on the bottom and rough appearing on top, were seen silhouetted against the sunset shortly after the plane took off from Boise at 8:04 P.M. We saw them clearly. We followed them in a northeasterly direction for about 45 miles. They finally disappeared. We were unable to tell whether they out sped us or disintegrated. We can't say whether they were "smear like," oval, or anything else but whatever they were they were not aircraft, clouds or smoke.

Civilians did not have a corner on the market. On July 6 a staff sergeant in Birmingham, Alabama, saw several "dim, glowing lights" speeding across the sky and photographed one of them. Also on the sixth the crew

---

of an Air Force B-25 saw a bright, disk shaped object "low at nine o'clock." This is one of the few reports of an object lower than the aircraft. At Fairfield-Suisun AFB in California a pilot saw something travel three quarters of the way across the sky in a few seconds. It, too, was oscillating on its lateral axis.

According to the old hands at ATIC, the first sighting that really made the Air Force take a deep interest in UFO's occurred on July 8 at Muroc Air Base (now Edwards AFB), the super secret Air Force test center in the Mojave Desert of California. At 10:10 A.M. a test pilot was running up the engine of the then new XP-84 in preparation for a test flight. He happened to look up and to the north he saw what first appeared to be a weather balloon traveling in a westerly direction. After watching it a few seconds, he changed his mind. He had been briefed on the high altitude winds, and the object he saw was going against the wind. Had it been the size of a normal aircraft, the test pilot estimated that it would have been at 10,000 to 12,000 feet and traveling 200 to 225 miles per hour. He described the object as being spherically shaped and yellowish white in color.

Ten minutes before this several other officers and airmen had seen three objects. They were similar except they had more of a silver color. They were also heading in a westerly direction.

Two hours later a crew of technicians on Rogers Dry Lake, adjacent to Muroc Air Base, observed another UFO. Their report went as follows:

On the 8 July 1947 at 11:50 we were sitting in an observation truck located in Area #3, Rogers Dry Lake. We were gazing upward toward a formation of two P-82's and an A-26 aircraft flying at 20,000 feet. They were preparing to carry out a seat ejection experiment. We observed a round object, white aluminum color, which at first resembled a parachute canopy. Our first impression was that a premature ejection of the seat and dummy had occurred but this was not the case. The object was lower than 20,000 feet, and was falling at three times the rate observed for the test parachute, which ejected thirty seconds after we first saw the object. As the object fell it drifted slightly north of due west against the prevailing wind. The speed, horizontal motion, could not be determined, but it appeared to be slower than the maximum velocity F-80 aircraft.

As this object descended through a low enough level to permit observation of its lateral silhouette, it presented a distinct oval shaped outline, with two projections on the upper surface which might have been thick fins or knobs. These crossed each other at intervals, suggesting either rotation or oscillation of slow type.

No smoke, flames, propeller arcs, engine noise, or other plausible or visible means of propulsion were noted. The color was silver, resembling an aluminum painted fabric, and did not appear as dense as a parachute canopy.

When the object dropped to a level such that it came into line of vision of the mountain tops, it was lost to the vision of the observers.

It is estimated that the object was in sight about 90 seconds. Of the five people sitting in the observation truck, four observed this object.

The following is our opinion about this object: It was man-made, as evidenced by the outline and functional appearance. Seeing this was not a hallucination or other fancies of sense.

Exactly four hours later the pilot of an F-51 was flying at 20,000 feet about 40 miles south of Muroc Air Base when he sighted a "flat object of a light reflecting nature." He reported that it had no vertical fin or wings. When he first saw it, the object was above him and he tried to climb up to it, but his F-51 would not climb high enough. All air bases in the area were contacted but they had no aircraft in the area.

By the end of July 1947 the UFO security lid was down tight. The few members of the press who did inquire about what the Air Force was doing got the same treatment that you would get today if you inquired about the number of thermonuclear weapons stock-piled in the U.S.'s atomic arsenal. No one, outside of a few high-ranking officers in the Pentagon, knew what the people in the barbed wire enclosed Quonset huts that housed the Air Technical Intelligence Center were thinking or doing.

The memos and correspondence that Project Blue Book inherited from the old UFO projects told the story of the early flying saucer era. These memos and pieces of correspondence showed that the UFO situation was considered to be serious; in fact, very serious. The paper work of that period also indicated the confusion that surrounded the investigation; confusion almost to the point of panic. The brass wanted an answer, quickly, and people were taking off in all directions. Everyone's theory was as good as the next and each person with any weight at ATIC was plugging and investigating his own theory. The ideas as to the origin of the UFO's fell into two main categories, earthly and non earthly. In the earthly category the Russians led, with the U.S. Navy and their XF-5-U-l, the "Flying Flapjack," pulling a not too close second. The desire to cover all leads was graphically pointed up to be a personal handwritten note I found in a file. It was from ATIC's chief to a civilian intelligence specialist. It said, "Are you positive that the Navy junked the XF-5-U-1 project?" The non earthly category ran the gamut of theories, with space animals trailing interplanetary craft about the same distance the Navy was behind the Russians.

This confused speculating lasted only a few weeks. Then the investigation narrowed down to the Soviets and took off on a much more methodical course of action.

The Era of Confusion Begins.23

When World War II ended, the Germans had several radical types of aircraft and guided missiles under development. The majority of these projects were in the most preliminary stages but they were the only known craft that could even approach the performance of the objects reported by UFO observers. Like the Allies, after World War II the Soviets had obtained complete sets of data on the latest German developments. This, coupled with rumors that the Soviets were frantically developing the German ideas, caused no small degree of alarm. As more UFO's were observed near the Air Force's Muroc Test Center, the Army's White Sands Proving Ground, and atomic bomb plants, ATIC's efforts became more concentrated.

Wires were sent to intelligence agents in Germany requesting that they find out exactly how much progress had been made on the various German projects.

The last possibility, of course, was that the Soviets had discovered some completely new aerodynamic concept that would give saucer performance.

While ATIC technical analysts were scouring the United States for data on the German projects and the intelligence agents in Germany were seeking out the data they had been asked for, UFO reports continued to flood the country. The Pacific Northwest still led with the most sightings, but every state in the Union was reporting a few flying saucers.

At first there was no coordinated effort to collect data on the UFO reports. Leads would come from radio reports or newspaper items. Military intelligence agencies outside of ATIC were hesitant to investigate on their own initiative because, as is so typical of the military, they lacked specific orders. When no orders were forthcoming, they took this to mean that the military had no interest in the UFO's. But before long this placid attitude changed, and changed drastically. Classified orders came down to investigate all UFO sightings. Get every detail and send it direct to ATIC at Wright Field. The order carried no explanation as to why the information was wanted. This lack of an explanation and the fact that the information was to be sent directly to a high-powered intelligence group within Air Force Headquarters stirred the imagination of every potential cloak- and- dagger man in the military intelligence system. Intelligence people in the field who had previously been free with opinions now clammed up tight.

The era of confusion was progressing.

Early statements to the press, which shaped the opinion of the public, didn't reduce the confusion factor. While ATIC was grimly expending maximum effort in a serious study, "certain high placed officials" were officially chuckling at the mention of UFO's.

24.The Report on Unidentified Flying Objects

In July 1947 an International News Service wire story quoted the public relations officer at Wright Field as saying, "So far we haven't found anything to confirm that saucers exist. We don't think they are guided missiles." He went on to say, "As things are now, they appear to be either a phenomenon or a figment of somebody's imagination."

A few weeks later a lieutenant colonel who was Assistant to the Chief of Staff of the Fourth Air Force was widely quoted as saying, "There is no basis for belief in flying saucers in the Tacoma area [referring to a UFO sighting in the area of Tacoma, Washington], or any other area."

The "experts," in their stories of saucer lore, have said that these brush offs of the UFO sightings were intentional smoke screens to cover the facts by adding confusion. This is not true; it was merely a lack of coordination. But had the Air Force tried to throw up a screen of confusion, they couldn't

have done a better job.

When the lieutenant colonel from the Fourth Air Force made his widely publicized denunciation of saucer believers he specifically mentioned a UFO report from the Tacoma, Washington, area.

The report of the investigation of this incident, the Maury Island Mystery, was one of the most detailed reports of the early UFO era. The report that we had in our files had been pieced together by Air Force Intelligence and other agencies because the two intelligence officers who started the investigation couldn't finish it. They were dead.

For the Air Force the story started on July 31, 1947, when Lieutenant Frank Brown, an intelligence agent at Hamilton AFB, California, received a long-distance phone call. The caller was a man whom I'll call Simpson, who had met Brown when Brown investigated an earlier UFO sighting, and he had a hot lead on another UFO incident. He had just talked to two Tacoma Harbor patrolmen. One of them had seen six UFO's hover over his patrol boat and spew out chunks of odd metal. Simpson had some of the pieces of the metal.

The story sounded good to Lieutenant Brown, so he reported it to his chief. His chief OK'd a trip and within an hour Lieutenant Brown and Captain Davidson were flying to Tacoma in an Air Force B-25. When they arrived they met Simpson and an airline pilot friend of his in Simpson's hotel room. After the usual round of introductions Simpson told Brown and Davidson that he had received a letter from a Chicago publisher asking him, Simpson, to investigate this case. The publisher had paid him $200 and wanted an exclusive on the story, but things were getting too hot, Simpson wanted the military to take over.

Simpson went on to say that he had heard about the experience off Maury Island but that he wanted Brown and Davidson to hear it firsthand.

He had called the two harbor patrolmen and they were on their way to the hotel. They arrived and they told their story.

I'll call these two men Jackson and Richards although these aren't their real names. In June 1947, Jackson said, his crew, his son, and the son's dog were on his patrol boat patrolling near Maury Island, an island in Puget Sound, about 3 miles from Tacoma. It was a gray day, with a solid cloud deck down at about 2,500 feet. Suddenly everyone on the boat noticed six "doughnut shaped" objects, just under the clouds, headed toward the boat. They came closer and closer, and when they were about 500 feet over the boat they stopped. One of the doughnut shaped objects seemed to be in trouble as the other five were hovering around it. They were close, and everybody got a good look. The UFO's were about 100 feet in diameter, with the "hole in the doughnut" being about 25 feet in diameter. They were a silver color and made absolutely no noise. Each object had large portholes around the edge.

As the five UFO's circled the sixth, Jackson recalled, one of them came in and appeared to make contact with the disabled craft. The two objects maintained contact for a few minutes, then began to separate. While this was going on, Jackson was taking photos. Just as they began to separate, there was a dull "thud" and the next second the UFO began to spew out sheets of very light metal from the hole in the center. As these were fluttering to the water, the UFO began to throw out a harder, rocklike material. Some of it landed on the beach of Maury Island. Jackson took his crew and headed toward the beach of Maury Island, but not before the boat was damaged, his son's arm had been injured, and the dog killed. As they reached the island they looked up and saw that the UFO's were leaving the area at high speed. The harbor patrolman went on to tell how he scooped up several chunks of the metal from the beach and boarded the patrol boat. He tried to use his radio to summon

aid, but for some unusual reason the interference was so bad he couldn't even call the three miles to his headquarters in Tacoma. When they docked at Tacoma, Jackson got first aid for his son and then reported to his superior officer, Richards, who, Jackson added to his story, didn't believe the tale. He didn't believe it until he went out to the island himself and saw the metal.

Jackson's trouble wasn't over. The next morning a mysterious visitor told Jackson to forget what he'd seen.

Later that same day the photos were developed. They showed the six objects, but the film was badly spotted and fogged, as if the film had been exposed to some kind of radiation.

Then Simpson told about his brush with mysterious callers. He said that Jackson was not alone as far as mysterious callers were concerned, the

---

26.The Report on Unidentified Flying Objects

Tacoma newspapers had been getting calls from an anonymous tipster telling exactly what was going on in Simpson's hotel room. This was a very curious situation because no one except Simpson, the airline pilot, and the two harbor patrolmen knew what was taking place. The room had even been thoroughly searched for hidden microphones.

That is the way the story stood a few hours after Lieutenant Brown and Captain Davidson arrived in Tacoma.

After asking Jackson and Richards a few questions, the two intelligence agents left, reluctant even to take any of the fragments. As some writers who have since written about this incident have said, Brown and Davidson seemed to be anxious to leave and afraid to touch the fragments of the UFO, as if they knew something more about them. The two officers went to McChord AFB, near Tacoma, where their B-25 was parked, held a conference with the intelligence officer at McChord, and took off for their home base, Hamilton. When they left McChord they had a good idea as to the identity of the UFO's. Fortunately they told the McChord intelligence officer what they had determined from their interview.

In a few hours the two officers were dead. The B-25 crashed near Kelso, Washington. The crew chief and a passenger had parachuted to safety. The newspapers hinted that the airplane was sabotaged and that it was carrying highly classified material. Authorities at McChord AFB confirmed this latter point, the airplane was carrying classified material.

In a few days the newspaper publicity on the crash died down, and the Maury Island Mystery was never publicly solved.

Later reports say that the two harbor patrolmen mysteriously disappeared soon after the fatal crash.

They should have disappeared, into Puget Sound. The whole Maury Island Mystery was a hoax. The first, possibly the second-best, and the dirtiest hoax in the UFO history. One passage in the detailed official report of the Maury Island Mystery says:

> Both _____ (the two harbor patrolmen) admitted that the rock fragments had nothing to do with flying saucers. The whole thing was a hoax. They had sent in the rock fragments [to a magazine publisher] as a joke. _____ One of the patrolmen wrote to _____ [the publisher] stating that the rock could have been part of a flying saucer. He had said the rock came from a flying saucer because that's what [the publisher] wanted him to say.

The publisher, mentioned above, who, one of the two hoaxers said, wanted him to say that the rock fragments had come from a flying saucer, is the same one who paid the man I called Simpson $200 to investigate the case.

The Era of Confusion Begins.27

The report goes on to explain more details of the incident. Neither one of the two men could ever produce the photos. They "misplaced" them, they said. One of them, I forget which, was the mysterious informer who called the newspapers to report the conversations that were going on in the hotel room. Jackson's mysterious visitor didn't exist. Neither of the men was a harbor patrolman, they merely owned a couple of beat-up old boats that they used to salvage floating lumber from Puget Sound. The airplane crash was one of those unfortunate things. An engine caught on fire, burned off, and just before the two pilots could get out, the wing and tail tore off, making it impossible for them to escape. The two dead officers from Hamilton AFB smelled a hoax, accounting for their short interview and hesitancy in bothering to take the "fragments." They confirmed their convictions when they talked to the intelligence officer at McChord. It had already been established, through an informer, that the fragments were what Brown and Davidson thought, slag. The classified material on the B-25 was a file of reports the two officers offered to take back to Hamilton and had nothing to do with the Maury Island Mystery, or better, the Maury Island Hoax.

Simpson and his airline pilot friend weren't told about the hoax for one reason. As soon as it was discovered that they had been "taken," thoroughly, and were not a party to the hoax, no one wanted to embarrass them.

The majority of the writers of saucer lore have played this sighting to the hilt, pointing out as their main premise the fact that the story must be true because the government never openly exposed or prosecuted either of the two hoaxers. This is a logical premise, but a false one. The reason for the thorough investigation of the Maury Island Hoax was that the government had thought seriously of prosecuting the men. At the last minute it was decided, after talking to the two men, that the hoax was a harmless joke that had mushroomed, and that the loss of two lives and a B-25 could not be directly blamed on the two men. The story wasn't even printed because at the time of the incident, even though in this case the press knew about it, the facts were classed as evidence. By the time the facts were released they were yesterday's news. And nothing is deader than yesterday's news.

As 1947 drew to a close, the Air Force's Project Sign had outgrown its initial panic and had settled down to a routine operation. Every intelligence report dealing with the Germans' World War II aeronautical research had been studied to find out if the Russians could have developed any of the late German designs into flying saucers. Aerodynamicists at ATIC and at Wright Field's Aircraft Laboratory computed the maximum performance

28.The Report on Unidentified Flying Objects

that could be expected from the German designs. The designers of the aircraft themselves were contacted. "Could the Russians develop a flying saucer from their designs?" The answer was, "No, there was no conceivable way any aircraft could perform that would match the reported maneuvers of the UFO's." The Air Force's Aeromedical Laboratory concurred. If the aircraft could be built, the human body couldn't stand the violent maneuvers that were reported. The aircraft structures people seconded this, no material known could stand the loads of the reported maneuvers and heat of the high speeds.

Still convinced that the UFO's were real objects, the people at ATIC began to change their thinking. Those who were convinced that the UFO's were of Soviet origin now began to eye outer space, not because there was any evidence that the UFO's did come from outer space but because they were convinced that UFO's existed and only some unknown race with a highly developed state of technology could build such vehicles. As far as the effect on the human body was concerned, why couldn't these people, whoever they might be, stand these horrible maneuver forces? Why judge

them by earthly standards? I found a memo to this effect was in the old Project Sign files.

Project Sign ended 1947 with a new problem. How do you collect interplanetary intelligence? During World War II the organization that was ATIC's forerunner, the Air Materiel Command's secret "T-2" had developed highly effective means of wringing out every possible bit of information about the technical aspects of enemy aircraft. ATIC knew these methods, but how could this be applied to spaceships? The problem was tackled with organized confusion.

If the confusion in the minds of Air Force people was organized the confusion in the minds of the public was not. Publicized statements regarding the UFO were conflicting.

A widely printed newspaper release, quoting an unnamed Air Force official in the Pentagon, said:

The "flying saucers" are one of three things:
1. Solar reflections on low hanging clouds.
2. Small meteors that break up, their crystals catching the rays of the sun.
3. Icing conditions could have formed large hailstones and they might have flattened out and glided.

A follow-up, which quoted several scientists, said in essence that the unnamed Air Force official was crazy. Nobody even heard of crystallized meteors, or huge, flat hailstones, and the solar reflection theory was absurd.

Life, Time, Newsweek, and many other news magazines carried articles

---

about the UFO's. Some were written with tongue in cheek, others were not. All the articles mentioned the Air Force's mass hysterical induced hallucinations. But a Veterans' Administration psychiatrist publicly pooh-poohed this. "Too many people are seeing things," he said.

It was widely suggested that all the UFO's were meteors. Two Chicago astronomers queered this. Dr. Gerard Kuiper, director of the University of Chicago observatory, was quoted as flatly saying the UFO's couldn't be meteors. "They are probably man-made," he told the Associated Press. Dr. Oliver Lee, director of Northwestern University's observatory, agreed with Dr. Kuiper and he threw in an additional confusion factor that had been in the back of many people's minds. Maybe they were our own aircraft.

The government had been denying that UFO's belonged to the U.S. from the first, but Dr. Vannevar Bush, the world-famous scientist, and Dr. Merle Tuve, inventor of the proximity fuse, added their weight. "Impossible," they said.

All of this time unnamed Air Force officials were disclaiming serious interest in the UFO subject. Yet every time a newspaper reporter went out to interview a person who had seen a UFO, intelligence agents had already been flown in, gotten the detailed story complete with sketches of the UFO, and sped back to their base to send the report to Project Sign. Many people had supposedly been "warned" not to talk too much. The Air Force was mighty interested in hallucinations.

Thus 1947 ended with various sized question marks in the mind of the public. If you followed flying saucers closely the question mark was big, if you just noted the UFO story titles in the papers it was smaller, but it was there and it was growing. Probably none of the people, military or civilian, who had made the public statements were at all qualified to do so but they had done it, their comments had been printed, and their comments had been read. Their comments formed the question mark.

CHAPTER THREE

The Classics

1948 was only one hour and twenty-five minutes old when a gentleman from Abilene, Texas, made the first UFO report of the year. What he saw, "a fan shaped glow" in the sky, was insignificant as far as UFO

---

reports go, but it ushered in a year that was to bring feverish activity to Project Sign.

With the Soviets practically eliminated as a UFO source, the idea of interplanetary spaceships was becoming more popular. During 1948 the people in ATIC were openly discussing the possibility of interplanetary visitors without others tapping their heads and looking smug. During 1948 the novelty of UFO's had worn off for the press and every John and Jane Doe who saw one didn't make the front pages as in 1947. Editors were becoming hardened, only a few of the best reports got any space. Only the "Classics" rated headlines. "The Classics" were three historic reports that were the highlights of 1948. They are called "The Classics," a name given them by the Project Blue Book staff, because: (1) they are classic examples of how the true facts of a UFO report can be twisted and warped by some writers to prove their point, (2) they are the most highly publicized reports of this early era of the UFO's, and (3) they "proved" to ATIC's intelligence specialists that UFO's were real.

The apparent lack of interest in UFO reports by the press was not a true indication of the situation. I later found out, from talking to writers, that all during 1948 the interest in UFO's was running high. The Air Force Press Desk in the Pentagon was continually being asked what progress was being made in the UFO investigation. The answer was, "Give us time. This job can't be done in a week." The press respected this and was giving them time. But every writer worth his salt has contacts, those "usually reliable sources" you read about, and these contacts were talking. All during 1948 contacts in the Pentagon were telling how UFO reports were rolling in at the rate of several per day and how ATIC UFO investigation teams were flying out of Dayton to investigate them. They were telling how another Air Force investigative organization had been called in to lighten ATIC's load and allow ATIC to concentrate on the analysis of the reports. The writers knew this was true because they had crossed paths with these men whom they had mistakenly identified as FBI agents. The FBI was never officially interested in UFO sightings. The writers' contacts in the airline industry told about the UFO talk from V.P.'s down to the ramp boys. Dozens of good, solid, reliable, experienced airline pilots were seeing UFO's. All of this led to one conclusion: whatever the Air Force had to say, when it was ready to talk, would be newsworthy. But the Air Force wasn't ready to talk.

Project Sign personnel were just getting settled down to work after the New Year's holiday when the "ghost rockets" came back to the Scandinavian countries of Europe. Air attaché's in Sweden, Denmark, and

---

Norway fired wires to ATIC telling about the reports. Wires went back asking for more information.

The "ghost rockets," so tagged by the newspapers, had first been seen in the summer of 1946, a year before the first UFO sighting in the U.S. There were many different descriptions for the reported objects. They were usually seen in the hours of darkness and almost always traveling at extremely high speeds. They were shaped like a ball or projectile, were a bright green, white, red, or yellow and

sometimes made sounds. Like their American cousins, they were always so far away that no details could be seen. For no good reason, other than speculation and circulation, the newspapers had soon begun to refer authoritatively to these "ghost rockets" as guided missiles, and implied that they were from Russia. Peenemunde, the great German missile development center and birthplace of the V-2 and V-2 guided missiles, came in for its share of suspicion since it was held by the Russians. By the end of the summer of 1946 the reports were widespread, coming from Denmark, Norway, Spain, Greece, French Morocco, Portugal, and Turkey. In 1947, after no definite conclusions as to identity of the "rockets" had been established, the reports died out. Now in early January 1948 they broke out again. But Project Sign personnel were too busy to worry about European UFO reports, they were busy at home. A National Guard pilot had just been killed chasing a UFO.

On January 7 all of the late papers in the U.S. carried headlines similar to those in the Louisville Courier: "F-51 and Capt. Mantell Destroyed Chasing Flying Saucer." This was Volume I of "The Classics," the Mantell Incident.

At one fifteen on that afternoon the control tower operators at Godman AFB, outside Louisville, Kentucky, received a telephone call from the Kentucky State Highway Patrol. The patrol wanted to know if Godman Tower knew anything about any unusual aircraft in the vicinity. Several people from Maysville, Kentucky, a small town 80 miles east of Louisville, had reported seeing a strange aircraft. Godman knew that they had nothing in the vicinity so they called Flight Service at Wright-Patterson AFB. In a few minutes Flight Service called back. Their air Traffic control board showed no flights in the area. About twenty minutes later the state police called again. This time people from the towns of Owensboro and Irvington, Kentucky, west of Louisville, were reporting a strange craft. The report from these two towns was a little more complete. The towns people had described the object to the state police as being "circular, about 250 to 300 feet in diameter," and moving westward at a "pretty good

---

clip." Godman Tower checked Flight Service again. Nothing. All this time the tower operators had been looking for the reported object. They theorized that since the UFO had had to pass north of Godman to get from Maysville to Owensboro it might come back.

At one forty-five they saw it, or something like it. Later, in his official report, the assistant tower operator said that he had seen the object for several minutes before he called his chiefs attention to it. He said that he had been reluctant to "make a flying saucer report." As soon as the two men in the tower had assured themselves that the UFO they saw was not an airplane or a weather balloon, they called Flight Operations. They wanted the operations officer to see the UFO. Before long word of the sighting had gotten around to key personnel on the base, and several officers, besides the base operations officer and the base intelligence officer, were in the tower. All of them looked at the UFO through the tower's 6 x 50 binoculars and decided they couldn't identify it. About this time Colonel Hix, the base commander, arrived. He looked and he was baffled. At two thirty, they reported, they were discussing what should be done when four F-51's came into view, approaching the base from the south.

The tower called the flight leader, Captain Mantell, and asked him to take a look at the object and try to identify it. One F-51 in the flight was running low on fuel, so he asked permission to go on to his base. Mantell took his two remaining wing men, made a turn, and started after the UFO. The people in Godman Tower were directing him as none of the pilots could see the object at this time. They gave Mantell an initial heading toward the south and the flight was last seen heading in the general direction of the UFO.

By the time the F-51's had climbed to 10,000 feet, the two wing men later reported, Mantell had

pulled out ahead of them and they could just barely see him. At two forty-five Mantell called the tower and said, "I see something above and ahead of me and I'm still climbing." All the people in the tower heard Mantell say this and they heard one of the wing men call back and ask, "What the hell are we looking for?" The tower immediately called Mantell and asked him for a description of what he saw. Odd as it may seem, no one can remember exactly what he answered. Saucer historians have credited him with saying, "I've sighted the thing. It looks metallic and it's tremendous in size.... Now it's starting to climb." Then in a few seconds he is supposed to have called and said, "It's above me and I'm gaining on it. I'm going to 20,000 feet." Everyone in the tower agreed on this one last bit of the transmission, "I'm going to 20,000 feet," but didn't agree on the first part, about the UFO's being metallic and tremendous.

The two wing men were now at 15,000 feet and trying frantically to call Mantell. He had climbed far above them by this time and was out of sight. Since none of them had any oxygen they were worried about Mantell. Their calls were not answered. Mantell never talked to anyone again. The two wing men leveled off at 15,000 feet, made another fruitless effort to call Mantell, and started to come back down. As they passed Godman Tower on their way to their base, one of them said something to the effect that all he had seen was a reflection on his canopy.

When they landed at their base, Standiford Field, just north of Godman, one pilot had his F-51 refueled and serviced with oxygen, and took off to search the area again. He didn't see anything.

At three fifty the tower lost sight of the UFO. A few minutes later they got word that Mantell had crashed and was dead.

Several hours later, at 7:20 P.M., airfield towers all over the Midwest sent in frantic reports of another UFO. In all about a dozen airfield towers reported the UFO as being low on the southwestern horizon and disappearing after about twenty minutes. The writers of saucer lore say this UFO was what Mantell was chasing when he died; the Air Force says this UFO was Venus.

The people on Project Sign worked fast on the Mantell Incident. Contemplating a flood of queries from the press as soon as they heard about the crash, they realized that they had to get a quick answer. Venus had been the target of a chase by an Air Force F-51 several weeks before and there were similarities between this sighting and the Mantell Incident. So almost before the rescue crews had reached the crash, the word "Venus" went out. This satisfied the editors, and so it stood for about a year; Mantell had unfortunately been killed trying to reach the planet Venus.

To the press, the nonchalant, offhand manner with which the sighting was written off by the Air Force public relations officer showed great confidence in the conclusion, Venus, but behind the barbed wire fence that encircled ATIC the nonchalant attitude didn't exist among the intelligence analysts. One man had already left for Louisville and the rest were doing some tall speculating. The story about the tower-to-air talk, "It looks metallic and it's tremendous in size," spread fast. Rumor had it that the tower had carried on a running conversation with the pilots and that there was more information than was so far known. Rumor also had it that this conversation had been recorded. Unfortunately neither of these rumors was true.

Over a period of several weeks the file on the Mantell Incident grew

---

in size until it was the most thoroughly investigated sighting of that time, at least the file was the thickest.

About a year later the Air Force released its official report on the incident. To use a trite term, it was a masterpiece in the art of "weasel wording." It said that the UFO might have been Venus or it could have been a balloon. Maybe two balloons. It probably was Venus except that this is doubtful because Venus was too dim to be seen in the afternoon. This jolted writers who had been following the UFO story. Only a few weeks before, The Saturday Evening Post had published a two-part story entitled "What You Can Believe About flying Saucers." The story had official sanction and had quoted the Venus theory as a positive solution. To clear up the situation, several writers were allowed to interview a major in the Pentagon, who was the Air Force's Pentagon "expert" on UFO's. The major was asked directly about the conclusion of the Mantell Incident, and he flatly stated that it was Venus. The writers pointed out the official Air Force analysis. The major's answer was, "They checked again and it was Venus." He didn't know who "they" were, where they had checked, or what they had checked, but it was Venus. The writers then asked, "If there was a later report they had made why wasn't it used as a conclusion?" "Was it available?" The answer to the last question was "No," and the lid snapped back down This interview gave the definite impression that the Air Force was unsuccessfully trying to cover up some very important information, using Venus as a front. Nothing excites a newspaper or magazine writer more than to think he has stumbled onto a big story and that someone is trying to cover it up. Many writers thought this after the interview with the major, and many still think it. You can't really blame them either.

In early 1952 I got a telephone call on ATIC's direct line to the Pentagon. It was a colonel in the Director of Intelligence's office. The Office of Public Information had been getting a number of queries about all of the confusion over the Mantell Incident. What was the answer?

I dug out the file. In 1949 all of the original material on the incident had been microfilmed, but something had been spilled on the film. Many sections were so badly faded they were illegible. As I had to do with many of the older sightings that were now history, I collected what I could from the file, filling in the blanks by talking to people who had been at ATIC during the early UFO era. Many of these people were still around, "Red" Honnacker, George Towles, Al Deyarmond, Nick Post, and many others. Most of them were civilians, the military had been transferred out by this time.

Some of the press clippings in the file mentioned the Pentagon major

---

and his concrete proof of Venus. I couldn't find this concrete proof in the file so I asked around about the major. The major, I found, was an officer in the Pentagon who had at one time written a short intelligence summary about UFO's. He had never been stationed at ATIC, nor was he especially well versed on the UFO problem. When the word of the press conference regarding the Mantell Incident came down, a UFO expert was needed. The major, because of his short intelligence summary on UFO's, became the "expert." He had evidently conjured up "they" and "their later report" to support his Venus answer because the writers at the press conference had him in a corner. I looked farther.

Fortunately the man who had done the most extensive work on the incident, Dr. J. Allen Hynek, head of the Ohio State University Astronomy Department, could be contacted. I called Dr. Hynek and arranged to meet him the next day.

Dr. Hynek was one of the most impressive scientists I met while working on the UFO project, and I met a good many. He didn't do two things that some of them did: give you the answer before he knew the question; or immediately begin to expound on his accomplishments in the field of science. I arrived at Ohio State just before lunch, and Dr. Hynek invited me to eat with him at the faculty club. He wanted to refer to some notes he had on the Mantell Incident and they were in his office, so we discussed UFO's in general during lunch.

Back in his office he started to review the Mantell Incident. He had been responsible for the weasel worded report that the Air Force released in late 1949, and he apologized for it. Had he known that it was going to cause so much confusion, he said, he would have been more specific. He thought the incident was a dead issue. The reason that Venus had been such a strong suspect was that it was in almost the same spot in the sky as the UFO. Dr. Hynek referred to his notes and told me that at 3:00 P.M., Venus had been south southwest of Godman and 33 degrees above the southern horizon. At 3:00 P.M. the people in the tower estimated the UFO to be southwest of Godman and at an elevation of about 45 degrees. Allowing for human error in estimating directions and angles, this was close. I agreed. There was one big flaw in the theory, however. Venus wasn't bright enough to be seen. He had computed the brilliance of the planet, and on the day in question it was only six times as bright as the surrounding sky. Then he explained what this meant. Six times may sound like a lot, but it isn't. When you start looking for a pinpoint of light only six times as bright as the surrounding sky, it's almost impossible to find it, even on a clear day.

Dr. Hynek said that he didn't think that the UFO was Venus.

36.The Report on Unidentified Flying Objects

I later found out that although it was a relatively clear day there was considerable haze.

I asked him about some of the other possibilities. He repeated the balloon, canopy reflection, and sundog theories but he refused to comment on them since, as he said, he was an astrophysicist and would care to comment only on the astrophysical aspects of the sightings.

I drove back to Dayton convinced that the UFO wasn't Venus. Dr. Hynek had said Venus would have been a pinpoint of light. The people in the tower had been positive of their descriptions, their statements brought that out. They couldn't agree on a description, they called the UFO "a parachute, an ice cream cone tipped with red," "round and white," "huge and silver or metallic," "a small white object," "one fourth the size of the full moon," but all the descriptions plainly indicated a large object. None of the descriptions could even vaguely be called a pinpoint of light.

This aspect of a definite shape seemed to eliminate the sundog theory too. Sundogs, or perihelia, as they are technically known, are caused by ice particles reflecting a diffused light. This would not give a sharp outline. I also recalled two instances where Air Force pilots had chased sundogs. In both instances when the aircraft began to climb, the sundog disappeared. This was because the angle of reflection changed as the airplane climbed several thousand feet. These sundog-caused UFO's also had fuzzy edges.

I had always heard a lot of wild speculation about the condition of Mantell's crashed F-51, so I wired for a copy of the accident report. It arrived several days after my visit with Dr. Hynek. The report said that the F-51 had lost a wing due to excessive speed in a dive after Mantell had "blacked out" due to the lack of oxygen. Mantell's body had not burned, not disintegrated, and was not full of holes; the wreck was not radioactive, nor was it magnetized.

One very important and pertinent question remained. Why did Mantell, an experienced pilot, try to go to 20,000 feet when he didn't even have an oxygen mask? If he had run out of oxygen, it would have been different. Every pilot and crewman has it pounded into him, "Do not, under any circumstances, go above 15,000 feet without oxygen." In high altitude indoctrination during World War II, I made several trips up to 30,000 feet in a pressure chamber. To demonstrate anoxia we would leave our oxygen masks off until we became dizzy. A few of the more hardy souls could get to 15,000 feet, but nobody ever got over 17,000. Possibly Mantell thought he could climb up to 20,000 in a hurry and get back down before he got anoxia and blacked out, but this would be a foolish

chance. This point was covered in the sighting report. A long-time friend of Mantell's went on record as saying that he'd flown with him several years and knew him personally. He couldn't conceive of Mantell's even thinking about disregarding his lack of oxygen. Mantell was one of the most cautious pilots he knew. "The only thing I can think," he commented, "was that he was after something that he believed to be more important than his life or his family."

My next step was to try to find out what Mantell's wing men had seen or thought but this was a blind alley. All of this evidence was in the ruined portion of the microfilm, even their names were missing. The only reference I could find to them was a vague passage indicating they hadn't seen anything.

I concentrated on the canopy reflection theory. It is widely believed that many flying saucers appear to pilots who are actually chasing a reflection on their canopy. I checked over all the reports we had on file. I couldn't find one that had been written off for this reason. I dug back into my own flying experience and talked to a dozen pilots. All of us had momentarily been startled by a reflection on the aircraft's canopy or wing, but in a second or two it had been obvious that it was a reflection. Mantell chased the object for at least fifteen to twenty minutes, and it is inconceivable that he wouldn't realize in that length of time that he was chasing a reflection.

About the only theory left to check was that the object might have been one of the big, 100-foot-diameter, "skyhook" balloons. I rechecked the descriptions of the UFO made by the people in the tower. The first man to sight the object called it a parachute; others said ice cream cone, round, etc. All of these descriptions fit a balloon. Buried deep in the file were two more references to balloons that I had previously missed. Not long after the object had disappeared from view at Godman AFB, a man from Madisonville, Kentucky, called Flight Service in Dayton. He had seen an object traveling southeast. He had looked at it through a telescope and it was a balloon. At four forty five an astronomer living north of Nashville, Tennessee, called in. He had also seen a UFO, looked at it through a telescope, and it was a balloon.

In the thousands of words of testimony and evidence taken on the Mantell Incident this was the only reference to balloons. I had purposely not paid too much attention to this possibility because I was sure that it had been thoroughly checked back in 1948. Now I wasn't sure.

I talked with one of the people who had been in on the Mantell investigation. The possibility of a balloon's causing the sighting had been mentioned but hadn't been followed up for two reasons. Number one

was that everybody at ATIC was convinced that the object Mantell was after was a spaceship and that this was the only course they had pursued. When the sighting grew older and no spaceship proof could be found, everybody jumped on the Venus band wagon, as this theory had "already been established." It was an easy way out. The second reason was that a quick check had been made on weather balloons and none were in the area. The big skyhook balloon project was highly classified at that time, and since they were all convinced that the object was of interplanetary origin (a minority wanted to give the Russians credit), they didn't want to bother to buck the red tape of security to get data on skyhook flights.

The group who supervise the contracts for all the skyhook research flights for the Air Force are located at Wright Field, so I called them. They had no records on flights in 1948 but they did think that the big balloons were being launched from Clinton County AFB in southern Ohio at that time. They offered to get the records of the winds on January 7 and see what flight path a balloon launched

in southwestern Ohio would have taken. In a few days they had the data for me.

Unfortunately the times of the first sightings, from the towns outside Louisville, were not exact but it was possible to partially reconstruct the sequence of events. The winds were such that a skyhook balloon launched from Clinton County AFB could be seen from the town east of Godman AFB, the town from which the first UFO was reported to the Kentucky State Police. It is not unusual to be able to see a large balloon for 50 to 60 miles. The balloon could have traveled west for a while, climbing as it moved with the strong east winds that were blowing that day and picking up speed as the winds got stronger at altitude. In twenty minutes it could have been in a position where it could be seen from Owensboro and Irvington, Kentucky, the two towns west of Godman. The second reports to the state police had come from these two towns. Still climbing, the balloon would have reached a level where a strong wind was blowing in a southerly direction. The jet stream winds were not being plotted in 1948 but the weather chart shows strong indications of a southerly bend in the jet stream for this day. Jet stream or not, the balloon would have moved rapidly south, still climbing. At a point somewhere south or southwest of Godman it would have climbed through the southerly moving winds to a calm belt at about 60,000 feet. At this level it would slowly drift south or southeast. A skyhook balloon can be seen at 60,000.

When first seen by the people in Godinan Tower, the UFO was south of the air base. It was relatively close and looked "like a parachute," which a balloon does. During the two hours that it was in sight, the observers reported that it seemed to hover, yet each observer estimated the time

---

he looked at the object through the binoculars and time wise the descriptions ran "huge," "small," "one fourth the size of a full moon," "one tenth the size of a full moon." Whatever the UFO was, it was slowly moving away. As the balloon continued to drift in a southerly direction it would have picked up stronger winds, and could have easily been seen by the astronomers in Madisonville, Kentucky, and north of Nashville an hour after it disappeared from view at Godman.

Somewhere in the archives of the Air Force or the Navy there are records that will show whether or not a balloon was launched from Clinton County AFB, Ohio, on January 7, 1948. I never could find these records. People who were working with the early skyhook projects "remember" operating out of Clinton County AFB in 1947 but refuse to be pinned down to a January 7 flight. Maybe, they said.

The Mantell Incident is the same old UFO jigsaw puzzle. By assuming the shape of one piece, a balloon launched from southwestern Ohio, the whole picture neatly falls together. It shows a huge balloon that Captain Thomas Mantell died trying to reach. He didn't know that he was chasing a balloon because he had never heard of a huge, 100-foot-diameter skyhook balloon, let alone seen one. Leave out the one piece of the jigsaw puzzle and the picture is a UFO, "metallic and tremendous in size."

It could have been a balloon. This is the answer I phoned back to the Pentagon.

During January and February of 1948 the reports of "ghost rockets" continued to come from air attaches in foreign countries near the Baltic Sea. People in North Jutland, Norway, Denmark, Sweden, and Germany reported "balls of fire traveling slowly across the sky." The reports were very sketchy and incomplete, most of them accounts from newspapers. In a few days the UFO's were being seen all over Europe and South America. Foreign reports hit a peak in the latter part of February and U.S. newspapers began to pick up the stories.

The Swedish Defense Staff supposedly conducted a comprehensive study of the incidents and concluded that they were all explainable in terms of astronomical phenomena. Since this was UFO history, I made several attempts to get some detailed and official information on this report and the

sightings, but I was never successful.

The ghost rockets left in March, as mysteriously as they had arrived.

All during the spring of 1948 good reports continued to come in. Some were just run-of-the-mill but a large percentage of them were good, coming from people whose reliability couldn't be questioned. For example, three scientists reported that for thirty seconds they had watched a round object streak across the sky in a highly erratic flight path near the Army's secret

---

White Sands Proving Ground. And on May 28 the crew of an Air Force C-47 had three UFO's barrel in from "twelve o'clock high" to buzz their transport,

On July 21 a curious report was received from the Netherlands, The day before several persons reported seeing a UFO through high broken clouds over The Hague. The object was rocket shaped, with two rows of windows along the side. It was a poor report, very sketchy and incomplete, and it probably would have been forgotten except that four nights later a similar UFO almost collided with an Eastern Airlines DC-3. This near collision is Volume II of "The Classics."

On the evening of July 24, 1948, an Eastern Airlines DC-3 took off from Houston, Texas. It was on a scheduled trip to Atlanta, with intermediate stops in between. The pilots were Clarence S. Chiles and John B. Whitted. At about 2:45 A.M., when the flight was 20 miles southwest of Montgomery, the captain, Chiles, saw a light dead ahead and closing fast. His first reaction, he later reported to an ATIC investigation team, was that it was a jet, but in an instant he realized that even a jet couldn't close as fast as this light was closing. Chiles said he reached over, gave Whitted, the other pilot, a quick tap on the arm, and pointed. The UFO was now almost on top of them. Chiles racked the DC-3 into a tight left turn. Just as the UFO flashed by about 700 feet to the right, the DC-3 hit turbulent air. Whitted looked back just as the UFO pulled up in a steep climb.

Both the pilots had gotten a good look at the UFO and were able to give a good description to the Air Force intelligence people. It was a B-29 fuselage. The underside had a "deep blue glow." There were "two rows of windows from which bright lights glowed," and a "bright trail of orange red flame" shot out the back.

Only one passenger was looking out of the window at the time. The ATIC investigators talked to him. He said he saw a "strange, eerie streak of light, very intense," but that was all, no details. He said that it all happened before he could adjust his eyes to the darkness.

Minutes later a crew chief at Robins Air Force Base in Macon, Georgia, reported seeing an extremely bright light pass overhead, traveling at a high speed. A few days later another report from the night of July 24 came in. A pilot, flying near the Virginia North Carolina state line, reported that he had seen a "bright shooting star" in the direction of Montgomery, Alabama, at about the exact time the Eastern Airlines DC-3 was "buzzed."

According to the old timers at ATIC, this report shook them worse than the Mantell Incident. This was the first time two reliable sources had been really close enough to anything resembling a UFO to get a good

---

look and live to tell about it. A quick check on a map showed that the UFO that nearly collided with the airliner would have passed almost over Macon, Georgia, after passing the DC-3. It had been

turning toward Macon when last seen. The story of the crew chief at Robins AFB, 200 miles away, seemed to confirm the sighting, not to mention the report from near the Virginia North Carolina state line.

In intelligence, if you have something to say about some vital problem you write a report that is known as an "Estimate of the Situation." A few days after the DC-3 was buzzed, the people at ATIC decided that the time had arrived to make an Estimate of the Situation. The situation was the UFO's; the estimate was that they were interplanetary!

It was a rather thick document with a black cover and it was printed on legal sized paper. Stamped across the front were the words TOP SECRET.

It contained the Air Force's analysis of many of the incidents I have told you about plus many similar ones. All of them had come from scientists, pilots, and other equally credible observers, and each one was an unknown.

The document pointed out that the reports hadn't actually started with the Arnold Incident. Belated reports from a weather observer in Richmond, Virginia, who observed a "silver disk" through his theodolite telescope; an F47 pilot and three pilots in his formation who saw a "silver flying wing," and the English "ghost airplanes" that had been picked up on radar early in 1947 proved this point. Although reports on them were not received until after the Arnold sighting, these incidents all had taken place earlier.

When the estimate was completed, typed, and approved, it started up through channels to higher command echelons. It drew considerable comment but no one stopped it on its way up.

A matter of days after the Estimate of the Situation was signed, sealed, and sent on its way, the third big sighting of 1948, Volume III of "The Classics," took place. The date was October 1, and the place was Fargo, North Dakota; it was the famous Gorman Incident, in which a pilot fought a "duel of death" with a UFO.

The pilot was George F. Gorman, a twenty-five-year-old second lieutenant in the North Dakota Air National Guard.

It was eight thirty in the evening and Gorman was coming into Fargo from a cross-country flight. He flew around Fargo for a while and about nine o'clock decided to land. He called the control tower for landing instructions and was told that a Piper Cub was in the area. He saw the Cub below him. All of a sudden what appeared to be the taillight of

---

another airplane passed him on his right. He called the tower and complained but they assured him that no other aircraft except the Cub were in the area. Gorman could still see the light so he decided to find out what it was. He pushed the F-51 over into a turn and cut in toward the light. He could plainly see the Cub outlined against the city lights below, but he could see no outline of a body near the mysterious light. He gave the '51 more power and closed to within a 1,000 yards, close enough to estimate that the light was 6 to 8 inches in diameter, was sharply outlined, and was blinking on and off. Suddenly the light became steady as it apparently put on power; it pulled into a sharp left bank and made a pass at the tower. The light zoomed up with the F-51 in hot pursuit. At 7,000 feet it made a turn. Gorman followed and tried to cut inside the light's turn to get closer to it but he couldn't do it. The light made another turn, and this time the '51 closed on a collision course. The UFO appeared to try to ram the '51, and Gorman had to dive to get out of the way. The UFO passed over the '51's canopy with only a few feet to spare. Again both the F-51 and the object turned and closed on each other head on, and again the pilot had to dive out to prevent a collision. All of a sudden the light

began to climb and disappeared.

"I had the distinct impression that its maneuvers were controlled by thought or reason," Gorman later told ATIC investigators.

Four other observers at Fargo partially corroborated his story, an oculist, Dr. A. D. Cannon, the Cub's pilot, and his passenger, Einar Neilson. They saw a light "moving fast," but did not witness all the maneuvers that Gorman reported. Two CAA employees on the ground saw a light move over the field once.

Project Sign investigators rushed to Fargo. They had wired ahead to ground the plane. They wanted to check it over before it flew again. When they arrived, only a matter of hours after the incident, they went over the airplane, from the prop spinner to the rudder trim tab, with a Geiger counter. A chart in the official report shows where every Geiger counter reading was taken. For comparison they took readings on a similar airplane that hadn't been flown for several days. Gorman's airplane was more radioactive. They rushed around, got sworn statements from the tower operators and oculist, and flew back to Dayton.

In the file on the Gorman Incident I found an old memo reporting the meeting that was held upon the ATIC team's return from Fargo. The memo concluded that some weird things were taking place.

The historians of the UFO agree. Donald Keyhoe, a retired Marine Corps major and a professional writer, author of The Flying Saucers Are Real and Flying Saucers from Outer Space, needles the Air Force about

---

the Gorman Incident, pointing out how, after feebly hinting that the light could have been a lighted weather balloon, they dropped it like a hot UFO. Some person by the name of Wilkins, in an equally authoritative book, says that the Gorman Incident "stumped" the Air Force. Other assorted historians point out that normally the UFO's are peaceful, Gorman and Mantell just got too inquisitive, "they" just weren't ready to be observed closely. If the Air Force hadn't slapped down the security lid, these writers might not have reached this conclusion. There have been other and more lurid "duels of death."

On June 21, 1952, at 10:58 P.M., a Ground Observer Corps spotter reported that a slow moving craft was nearing the AEC's Oak Ridge Laboratory, an area so secret that it is prohibited to aircraft. The spotter called the light into his filter center and the filter center relayed the message to the ground control intercept radar. They had a target. But before they could do more than confirm the GOC spotter's report, the target faded from the radarscope.

An F-47 aircraft on combat air patrol in the area was vectored in visually, spotted a light, and closed on it. They "fought" from 10,000 to 27,000 feet, and several times the object made what seemed to be ramming attacks. The light was described as white, 6 to 8 inches in diameter, and blinking until it put on power. The pilot could see no silhouette around the light. The similarity to the Fargo case was striking.

On the night of December 10, 1952, near another atomic installation, the Hanford plant in Washington, the pilot and radar observer of a patrolling F-94 spotted a light while flying at 26,000 feet. The crew called their ground control station and were told that no planes were known to be in the area. They closed on the object and saw a large, round, white "thing" with a dim reddish light coming from two "windows." They lost visual contact, but got a radar lock-on. They reported that when they attempted to close on it again it would reverse direction and dive away. Several times the plane altered course itself because collision seemed imminent.

In each of these instances, as well as in the case narrated next, the sources of the stories were trained airmen with excellent reputations. They were sincerely baffled by what they had seen. They had no conceivable motive for falsifying or "dressing up" their reports.

The other dogfight occurred September 24, 1952, between a Navy pilot of a TBM and a light over Cuba.

The pilot had just finished making some practice passes for night fighters when he spotted an orange light to the east of his plane. He checked on aircraft in the area, learned that the object was unidentified,

---

and started after it. Here is his report, written immediately after he landed:

As it [the light] approached the city from the east it started a left turn. I started to intercept. During the first part of the chase the closest I got to the light was 8 to 10 miles. At this time it appeared to be as large as an SNJ and had a greenish tail that looked to be five to six times as long as the light's diameter. This tail was seen several times in the next 10 minutes in periods of from 5 to 30 seconds each. As I reached 10,000 feet it appeared to be at 15,000 feet and in a left turn. It took 40 degrees of bank to keep the nose of my plane on the light. At this time I estimated the light to be in a 10-to-l 5 mile orbit.

At 12,000 feet I stopped climbing, but the light was still climbing faster than I was. I then reversed my turn from left to right and the light also reversed. As I was not gaining distance, I held a steady course south trying to estimate a perpendicular between the light and myself. The light was moving north, so I turned north. As I turned, the light appeared to move west, then south over the base. I again tried to intercept but the light appeared to climb rapidly at a 60 degree angle. It climbed to 35,000 feet, then started a rapid descent.

Prior to this, while the light was still at approximately 15,000 feet, I deliberately placed it between the moon and myself three times to try to identify a solid body. I and my two crewmen all had a good view of the light as it passed the moon. We could see no solid body. We considered the fact that it might be an aerologist's balloon, but we did not see a silhouette. Also, we would have rapidly caught up with and passed a balloon.

During its descent, the light appeared to slow down at about 10,000 feet, at which time I made three runs on it. Two were on a 90 degree collision course, and the light traveled at tremendous speed across my bow. On the third run I was so close that the light blanked out the airfield below me. Suddenly it started a dive and I followed, losing it at 1,500 feet.

In this incident the UFO was a balloon.

The following night a lighted balloon was sent up and the pilot was ordered up to compare his experiences. He duplicated his dogfight - illusions and all. The Navy furnished us with a long analysis of the affair, explaining how the pilot had been fooled.

In the case involving the ground observer and the F-47 near the atomic installation, we plotted the winds and calculated that a lighted balloon was right at the spot where the pilot encountered the light.

In the other instance, the "white object with two windows," we found that a skyhook balloon had been plotted at the exact site of the "battle."

Gorman fought a lighted balloon too. An analysis of the sighting by the Air Weather Service sent to ATIC in a letter dated January 24, 1949, proved it. The radioactive F-51 was decontaminated by a memo from a Wright Field laboratory explaining that a recently flown airplane will be

---

more radioactive than one that has been on the ground for several days. An airplane at 20,000 to 30,000 feet picks up more cosmic rays than one shielded by the earth's ever present haze.

Why can't experienced pilots recognize a balloon when they see one? If they are flying at night, odd things can happen to their vision. There is the problem of vertigo as well as disorientation brought on by flying without points of reference. Night fighters have told dozens of stories of being fooled by lights.

One night during World War II we had just dumped a load of bombs on a target when a "night fighter" started to make a pass at us. Everyone in the cockpit saw the fighter's red-hot exhaust stack as he bore down on us. I cut loose with six caliber-.50 machine guns. Fortunately I missed the "night fighter" - if I'd have shot it I'd have fouled up the astronomers but good because the "night fighter" was Venus.

While the people on Project Sign were pondering over Lieutenant Gorman's dogfight with the UFO - at the time they weren't even considering the balloon angle - the Top Secret Estimate of the Situation was working its way up into the higher echelons of the Air Force. It got to the late General Hoyt S. Vandenberg, then Chief of Staff, before it was batted back down. The general wouldn't buy interplanetary vehicles. The report lacked proof. A group from ATIC went to the Pentagon to bolster their position but had no luck, the Chief of Staff just couldn't be convinced.

The estimate died a quick death. Some months later it was completely declassified and relegated to the incinerator. A few copies, one of which I saw, were kept as mementos of the golden days of the UFO's.

The top Air Force command's refusal to buy the interplanetary theory didn't have any immediate effect upon the morale of Project Sign because the reports were getting better.

A belated report that is more of a collectors' item than a good UFO sighting came into ATIC in the fall of 1948. It was from Moscow. Someone, I could never find out exactly who, reported a huge "smudge like" object in the sky.

Then radar came into the picture. For months the anti saucer factions had been pointing their fingers at the lack of radar reports, saying, "If they exist, why don't they show up on radarscopes?" When they showed up on radarscopes, the UFO won some converts.

On October 15 an F-61, a World War II "Black Widow" night fighter was on patrol over Japan when it picked up an unidentified target on its radar. The target was flying between 5,000 and 6,000 feet and traveling about 200 miles per hour. When the F-61 tried to intercept it would get to within 12,000 feet of the UFO only to have it accelerate to an estimated

---

1,200 miles per hour, leaving the F-61 far behind before slowing down again. The F-61 crew made six attempts to close on the UFO. On one pass, the crew said, they did get close enough to see its silhouette. It was 20 to 30 feet long and looked "like a rifle bullet."

Toward the end of November a wire came into Project Sign from Germany. It was the first report where a UFO was seen and simultaneously picked up on radar. This type of report, the first of many to come, is one of the better types of UFO reports. The wire said:

At 2200 hours, local time, 23 November 1948, Capt. saw an object in the air directly east of this base. It was at an unknown altitude. It looked like a reddish star and was moving in a southerly direction across Munich, turning slightly to the southwest then the southeast. The speed could have been between 200 to 600 mph, the actual speed could not be estimated,

not knowing the height. Capt. called base operations and they called the radar station. Radar reported that they had seen nothing on their scope but would check again. Radar then called operations to report that they did have a target at 27,000 feet, some 30 miles south of Munich, traveling at 900 mph. Capt. reported that the object that he saw was now in that area. A few minutes later radar called again to say that the target had climbed to 50,000 feet, and was circling 40 miles south of Munich.

Capt. - is an experienced pilot now flying F-80's and is considered to be completely reliable. The sighting was verified by Capt. , also an F-80 pilot.

The possibility that this was a balloon was checked but the answer from Air Weather Service was "not a balloon." No aircraft were in the area. Nothing we know of, except possibly experimental aircraft, which are not in Germany, can climb 23,000 feet in a matter of minutes and travel 900 miles per hour.

By the end of 1948, Project Sign had received several hundred UFO reports. Of these, 167 had been saved as good reports. About three dozen were "Unknown." Even though the UFO reports were getting better and more numerous, the enthusiasm over the interplanetary idea was cooling off. The same people who had fought to go to Godman AFB to talk to Colonel Hix and his UFO observers in January now had to be prodded when a sighting needed investigating. More and more work was being pushed off onto the other investigative organization that was helping ATIC. The kickback on the Top Secret Estimate of the Situation was beginning to dampen a lot of enthusiasms. It was definitely a bear market for UFO's.

A bull market was on the way, however. Early 1949 was to bring "little lights" and green fireballs.

The "little lights" were UFO's, but the green fireballs were real.

CHAPTER EIGHT

The Lubbock Lights, Unabridged

When four college professors, a geologist, a chemist, a physicist, and a petroleum engineer, report seeing the same UFO's on fourteen different occasions, the event can be classified as, at least, unusual. Add the facts that hundreds of other people saw these UFO's and that they were photographed, and the story gets even better. Add a few more facts - that these UFO's were picked up on radar and that a few people got a close look at one of them, and the story begins to convince even the most ardent skeptics.

This was the situation the day the reports of the Lubbock Lights arrived at ATIC. Actually the Lubbock Lights, as Project Blue Book calls them, involved many widespread reports. Some of these incidents are known to the public, but the ones that added the emphasis and intrigue to the case and caused hundreds of hours of time to be spent analyzing the reports have not been told before. We collected all of these reports under the one title because there appeared to be a tie-in between them.

The first word of the sightings reached ATIC late in September 1951, when the mail girl dropped letters into my "in" basket. One of the letters was from Albuquerque, New Mexico, one was from a small town in Washington State, where I knew an Air Defense Command radar station was located, and the other from Reese AFB at Lubbock, Texas.

I opened the Albuquerque letter first. It was a report from 34th Air Defense at Kirtland AFB. The report said that on the evening of August 25, 1951, an employee of the Atomic Energy Commission's super secret Sandia Corporation and his wife had seen a UFO. About dusk they were sitting in the back yard of their home on the outskirts of Albuquerque. They were gazing at the night sky, commenting on how beautiful it was, when both of them were startled at the sight of a huge airplane flying swiftly and silently over their home. The airplane had been in sight only a few seconds but they had gotten a good look at it because it was so low. They estimated 800 to 1,000 feet. It was the shape of a "flying wing" and one and a half times the size of a B-36. The wing was sharply swept back, almost like a V. Both the husband and wife had seen B-36's over their

---

home many times. They couldn't see the color of the UFO but they did notice that there were dark bands running across the wing from front to back. On the aft edge of the wings there were six to eight pairs of soft, glowing, bluish lights. The aircraft had passed over their house from north to south.

The report went on to say that an investigation had been made immediately. Since the object might have been a conventional airplane, air traffic was checked. A commercial airlines Constellation was 50 miles west of Albuquerque and an Air Force B-25 was south of the city, but there had been nothing over Albuquerque that evening. The man's back ground was checked. He had a "Q" security clearance. This summed up his character, oddballs don't get "Q" clearances. No one else had reported the UFO, but this could be explained by the fact the AEC employee and his wife lived in such a location that anything passing over their home from north to south wouldn't pass over or near very many other houses. A sketch of the UFO was enclosed in the report.

I picked up the letter from Lubbock next. It was a thick report, and from the photographs that were attached, it looked interesting. I thumbed through it and stopped at the photos. The first thing that struck me was the similarity between these photos and the report I'd just read. They showed a series of lights in a V shape, very similar to those described as being on the aft edge of the "flying wing" that was reported from Albuquerque. This was something unique, so I read the report in detail.

On the night of August 25, 1951, about 9:20 P.M., just twenty minutes after the Albuquerque sighting, four college professors from Texas Technological College at Lubbock had observed a formation of soft, glowing, bluish green lights pass over their home. Several hours later they saw a similar group of lights and in the next two weeks they saw at least ten more. On August 31 an amateur photographer had taken five photos of the lights. Also on the thirty first two ladies had seen a large "aluminum colored," "pear shaped" object hovering near a road north of Lubbock. The report went into the details of these sightings and enclosed a set of the photos that had been taken.

This report, in itself, was a good UFO report, but the similarity to the Albuquerque sighting, both in the description of the object and the time that it was seen, was truly amazing.

I almost overlooked the report from the radar station because it was fairly short. It said that early on the morning of August 26, only a few hours after the Lubbock sighting, two different radars had shown a target traveling 900 miles per hour at 13,000 feet on a northwesterly heading. The target had been observed for six minutes and an F-86 jet interceptor

---

had been scrambled but by the time the F-86 had climbed into the air the target was gone. The last paragraph in the report was rather curt and to the point. It was apparently in anticipation of the comments the report would draw. It said that the target was not caused by weather. The officer in charge of the radar station and several members of his crew had been operating radar for seven years and they could recognize a weather target. This target was real.

I quickly took out a map of the United States and drew in a course line between Lubbock and the radar station. A UFO flying between these two points would be on a northwesterly heading and the times it was seen at the two places gave it a speed of roughly 900 miles per hour.

This was by far the best combination of UFO reports I'd ever read and I'd read every one in the Air Force's files.

The first thing I did after reading the reports was to rush a set of the Lubbock photos to the intelligence officer of the 34th Air Division in Albuquerque. I asked him to show the photos to the AEC employee and his wife without telling them what they were. I requested an answer by wire. Later the next day I received my answer: "Observers immediately said that this is what they saw on the night of 25 August. Details by airmail." The details were a sketch the man and his wife had made of a wing around the photo of the Lubbock Lights. The number of lights in the photo and the number of lights the two observers had seen on the wing didn't tally, but they explained this by saying that they could have been wrong in their estimate.

The next day I flew to Lubbock to see if I could find an answer to all of these mysterious happenings.

I arrived in Lubbock about 5:00 P.M. and contacted the intelligence officer at Reese AFB. He knew that I was on my way and had already set up a meeting with the four professors. Right after dinner we met them.

If a group had been hand-picked to observe a UFO, we couldn't have picked a more technically qualified group of people. They were:

Dr. W. I. Robinson, Professor of Geology.

Dr. A. G. Oberg, Professor of Chemical Engineering.

Professor W. L. Ducker, Head of the Petroleum Engineering Department.

Dr. George, Professor of Physics.

This is their story:

On the evening of August 25 the four men were sitting in Dr. Robinson's back yard. They were discussing micro meteorites and drinking tea. They jokingly stressed this point. At nine twenty a formation of lights streaked across the sky directly over their heads. It all happened so fast that none

---

The Lubbock Lights, Unabridged.99

of them had a chance to get a good look. One of the men mentioned that he had always admonished his students for not being more observant; now he was in that spot. He and his colleagues realized they could remember only a few details of what they had seen. The lights were a weird bluish green color and they were in a semicircular formation. They estimated that there were from fifteen to thirty separate lights and that they were moving from north to south. Their one wish at this time was that the lights would reappear. They did; about an hour later the lights went over again. This time the professors were a little better prepared. With the initial shock worn off, they had time to get a better look. The details they had remembered from the first flight checked. There was one difference; in this flight the lights were not in any orderly formation, they were just in a group.

The professors reasoned that if the UFO's appeared twice they might come back. Come back they did. The next night and apparently many times later, as the professors made twelve more observations during the next few weeks. For these later sightings they added two more people to their observing team.

Being methodical, as college professors are, they made every attempt to get a good set of data. They measured the angle through which the objects traveled and timed them. The several flights they checked traveled through 90 degrees of sky in three seconds, or 30 degrees per second. The lights usually suddenly appeared 45 degrees above the northern horizon, and abruptly went out 45 degrees above the southern horizon. They always traveled in this north-to-south direction. Outside of the first flight, in which the objects were in a roughly semicircular formation, in none of the rest of the flights did they note any regular pattern. Two or three flights were often seen in one night.

They had tried to measure the altitude, with no success. First they tried to compare the lights to the height of clouds but the clouds were never near the lights, or vice versa. Next they tried a more elaborate scheme. They measured off a base line perpendicular to the objects' usual flight path. Friends of the professors made up two teams. Each of the two teams was equipped with elevation measuring devices, and one team was stationed at each end of the base line. The two teams were linked together by two-way radios. If they sighted the objects they would track and time them, thus getting the speed and altitude.

Unfortunately neither team ever saw the lights. But the lights never seemed to want to run the course. The wives of some of the watchers claimed to have seen them from their homes in the city. This later proved to be a clue.

100.The Report on Unidentified Flying Objects

The professors were not the sole observers of the mysterious lights. For two weeks hundreds of other people for miles around Lubbock reported that they saw the same lights. The professors checked many of these reports against the times of the flights they had seen and recorded, and many checked out close. They attempted to question these observers as to the length of time they had seen the lights

and angles at which they had seen them, but the professors learned what I already knew, people are poor observers.

Naturally there has been much discussion among the professors and their friends as to the nature of the lights. A few simple mathematical calculations showed that if the lights were very high they would be traveling very fast. The possibility that they were some natural phenomena was, of course, discussed and seriously considered. The professors did a lot of thinking and research and decided that if they were natural phenomena they were something altogether new. Dr. George, who has since died, studied the phenomena of the night sky during his years as a professor at the University of Alaska, and he had never seen or heard of anything like this before.

This was the professors' story. It was early in the morning when we returned to Reese AFB. I sat up a few more hours unsuccessfully trying to figure out what they had seen.

The next day I again met the intelligence officer and we went to talk to Carl Hart, Jr., the amateur photographer who had taken the pictures of the lights. Hart was a freshman at Texas Tech. His story was that on the night of August 31 he was lying in his bed in an upstairs room of the Hart home. He, like everyone else in Lubbock, had heard about the lights but he had never seen them. It was a warm night and his bed was pushed over next to an open window. He was looking out at the clear night sky, and had been in bed about a half hour, when he saw a formation of the lights appear in the north, cross an open patch of sky, and disappear over his house. Knowing that the lights might reappear as they had done in the past, he grabbed his loaded Kodak 35, set the lens and shutter at f 3.5 and one tenth of a second, and went out into the middle of the back yard. Before long his vigil was rewarded when the lights made a second pass. He got two pictures. A third formation went over a few minutes later and he got three more pictures. The next morning bright and early Hart said he took the roll of unexposed film to a friend who ran a photo finishing shop. He explained that he did all of his film processing in this friend's lab. He told the friend about the pictures and they quickly developed them.

I stopped Hart at this point and asked why he didn't get more excited

---

about what could be the biggest news photos of the century. He said that the lights had appeared to be so dim that he was sure he didn't have anything on the negatives; had he thought that he did have some good pictures he would have awakened his friend to develop the negatives right away.

When he developed the negatives and saw that they showed an image, his friend suggested that he call the newspaper. At first the paper wasn't interested but then they decided to run the photos. I later found out that they had done some checking of their own.

We went with Hart into his back yard to re-enact what had taken place. He described the lights as being the same dull, glowing bluish green color as those seen by the professors. The formation was different, however. The lights Hart saw were always flying in a perfect V. He traced the path from where they appeared over some trees in the north, through an open patch of sky over the back yard, to a point where they disappeared over the house. From the flight path he pointed out, the lights had crossed about 120 degrees of open sky in four seconds. This 30-degree-per-second angular velocity corresponded to the professors' measured angular velocity.

We made arrangements to borrow Hart's negatives, thanked him for his information, and left.

Armed with a list of names of other observers of the mysterious lights, the intelligence officer and I started out to try to get a cross-section account of the other UFO sightings in the Lubbock area. All the stories about the UFO's were the same; various types of formations of dull bluish green lights, generally moving north to south. A few people had variations. One lady saw a flying venetian blind

and another a flying double boiler. One point of interest was that very few claimed to have seen the lights before reading the professors' story in the paper, but this could get back to the old question, "Do people look up if they have no reason to do so?"

We talked to observers in nearby towns. Their stories were the same. Two of them, tower operators at an airport, reported that they had seen the lights on several occasions.

It was in one of these outlying towns, Lamesa, that we talked to an old gentleman, about eighty years old, who gave us a good lead. He had seen the lights and he had identified them. Ever since he had read the story in the papers he had been looking. One evening he and his wife were in their yard looking for the lights. All of a sudden two or three appeared. They were in view for several seconds, then they were gone. In a few minutes the lights did a repeat performance. The man admitted he had been scared. He broke off his story of the lights and launched into

---

his background as a native Texan, with range wars, Indians, and stage coaches under his belt. What he was trying to point out was that despite the range wars, Indians, and stagecoaches, he had been scared. His wife had been scared too. We had some difficulty getting back to the lights but we finally made it. The third time they came around, he said, one of the lights emitted a sound. It said, "Plover." The old gentleman had immediately identified it as a plover, a water bird about the size of a quail. Later that night, and on several other occasions, they had seen the same thing. After a few more hair-raising but interesting stories of the old west Texas, we left.

Our next stop was the federal game warden's office in Lubbock. We got the low-down on plovers. We explained our interest and the warden was very helpful. He had been around west Texas all of his life so he was familiar with wildlife. The oily white breast of a plover could easily reflect light, but plovers usually didn't travel in more than pairs, or three at the most. He had never seen or heard of them traveling in a flock of fifteen to thirty but, of course, this wasn't impossible. Ducks, yes, but probably not plovers. He did say that for some unknown reason there were more than the usual number of plovers in the area that fall.

I was anxious to get the negatives that Hart had lent us back to the photo lab at Wright Field, but I had one more call to make. I wanted to talk to the two ladies who had seen a strange object hovering near their car, but I also wanted to write my report before I left Lubbock. Two Air Force special investigators from Reese AFB offered to talk to the ladies, so I stayed at the air base and finished my report.

That night when the investigators came back, I got the story. They had spent the whole day talking to the ladies and doing a little discreet checking into their backgrounds.

The two ladies, a mother and her daughter, had left their home in Matador, Texas, 70 miles northeast of Lubbock, about twelve thirty P.M. on August 31. They were driving along in their car when they suddenly noticed "a pear shaped" object about 150 yards ahead of them. It was just off the side of the road, about 120 feet in the air. It was drifting slowly to the east, "less than the speed required to take off in a Cub airplane." They drove on down the road about 50 more yards, stopped, and got out of the car. The object, which they estimated to be the size of a B-29 fuselage, was still drifting along slowly. There was no sign of any exhaust blast and they heard no noise, but they did see a "porthole" in the side of the object. In a few seconds the object began to pick up speed and rapidly climb out of sight. As it climbed it seemed to have a tight spiraling motion.

The investigation showed that the two ladies were "solid citizens," with absolutely no talents, or reasons, for fabricating such a story. The daughter was fairly familiar with aircraft. Her husband was an Air Force officer then in Korea, and she had been living near air bases for several years. The ladies had said that the object was "drifting" to the east, which possibly indicated that it was moving with the wind, but on further investigation it was found that it was moving into the wind.

The two investigators had worked all day and hadn't come up with the slightest indication of an answer.

This added the final section to my now voluminous report on the Lubbock affair.

The next morning as I rode to the airport to catch an airliner back to Dayton I tried to put the whole puzzle together. It was hard to believe that all I'd heard was real. Did a huge flying wing pass over Albuquerque and travel 250 miles to Lubbock in about fifteen minutes? This would be about 900 miles per hour. Did the radar station in Washington pick up the same thing? I'd checked the distances on the big wall map in flight operations just before leaving Reese AFB. It was 1,300 miles from Lubbock to the radar site. From talking to people, we decided that the lights were apparently still around Lubbock at 11:20 P.M. and the radar picked them up just after midnight. They would have had to be traveling about 780 miles per hour. This was fairly close to the 900-mile-per-hour speed clocked by the two radars. The photos of the Lubbock Lights checked with the description of what the AEC employee and his wife had seen in Albuquerque. Nobody in Lubbock, however, had reported seeing a "flying wing" with lights. All of this was swimming around in my mind when I stepped out of the staff car at the Lubbock airport.

My plane had already landed so I checked in at the ticket counter, picked up a morning paper, and ran out and got into the airplane. I sat down next to a man wearing a Stetson hat and cowboy boots. I soon found out he was a retired rancher from Lubbock.

On the front page of the paper was an account of a large meteor that had flashed across New Mexico, west Texas and Oklahoma the night before. According to the newspaper account, it was very spectacular and had startled a good many people in Lubbock. I was interested in the story because I had seen this meteor. It was a spectacular sight and I could easily understand how such things could be called UFO's. My seat partner must have noticed that I was reading the story of the meteor because he commented that a friend of his, the man who had brought him to the airport, had seen it. We talked about the meteor. This led to a discussion of other odd happenings and left a perfect opening for him to

---

bring up the Lubbock Lights. He asked me if I'd heard about them. I said that I had heard a few vague stories. I hoped that this would stave off any detailed accounts of stories I had been saturated with during the past five days, but it didn't. I heard all the details all over again.

As he talked on, I settled back in my seat waiting for a certain thing to happen. Pretty soon it came. The rancher hesitated and the tone of his voice changed to a half proud, half apologetic tone. I'd heard this transition many times in the past few months; he was going to tell about the UFO that he had seen. He was going to tell how he had seen the bluish green lights. I was wrong; what he said knocked me out of my boredom.

The same night that the college professors had seen their formation of lights his wife had seen something. Nobody in Lubbock knew about the story, not even their friends. He didn't want anyone to think he and his wife were crazy. He was telling me only because I was a stranger. Just after dark his wife had gone outdoors to take some sheets off the clothesline. He was inside the house reading the paper. Suddenly his wife had rushed into the house, as he told the story, "as white as the sheets

she was carrying." As close as he could remember, he said, this was about ten minutes before the professors made their first sighting. He stopped at this point to tell me about his wife, she wasn't prone to be "flighty" and she "never made up tales." This character qualification was also standard for UFO storytellers. The reason his wife was so upset was that she had seen a large object glide swiftly and silently over the house. She said it looked like "an airplane without a body." On the back edge of the wing were pairs of glowing bluish lights. The Albuquerque sighting! He said he didn't have any idea what his wife had seen but he thought that it was an interesting story.

It was an interesting story. It hit me right between the eyes. I knew the rancher and his wife couldn't have possibly heard the Albuquerque couple's story, only they and a few Air Force people knew about it. The chances of two identical stories being made up were infinitesimal, especially since neither of them fitted the standard Lubbock Light description. I wondered how many other people in Lubbock, Albuquerque, or any where in the Southwest had seen a similar UFO during this period and hesitated to mention it.

I tried to get a few more facts from the rancher but he'd told me all he knew. At Dallas I boarded an airliner to Dayton and he went on to Baton Rouge, never knowing what he'd added to the story of the Lubbock Lights.

On the way to Dayton I figured out a plan of attack on the thousands

---

of words of notes I'd taken. The best thing to do, I decided, was to treat each sighting in the Lubbock Light series as a separate incident. All of them seemed to be dependent upon each other for importance. If the objects that were reported in several of the incidents could be identified, the rest would merely become average UFO reports. The photographs taken by Carl Hart, Jr., became number one on the agenda.

As soon as I reached Dayton I took Hart's negatives to the Photo Reconnaissance Laboratory at Wright Field. This laboratory, staffed by the Air Force's top photography experts, did all of our analysis of photographs. They went right to work on the negatives and soon had a report.

There had originally been five negatives, but when we asked to borrow them Hart could only produce four. The negatives were badly scratched and dirty because so many people had handled them, so it was difficult to tell the actual photographic images from the dust spots and scratches. The first thing that the lab did was to look at each spot on the negatives to see if it was an actual photographic image. They found that the photos showed an inverted V formation of lights. In each photo the individual image of a light was badly blurred due to motion of the camera, but by careful scrutiny of each blurred image they were able to determine that the original lights that Hart had photographed were circular, near pinpoint sources of light. Like a bright star, or a distant light bulb. Next they made enlargements from the negatives and carefully plotted the position of each light in the formation.

In each photograph the individual lights in the formation shifted position according to a definite pattern.

One additional factor that was brought out in the report was that although the photos were taken on a clear night no images of the stars could be found in the background. This proved one thing, the lights, which were overexposed in the photograph, were a great deal brighter than the stars, or the lights affected the film more than the light from the stars.

This was all that the photos showed. It was impossible to determine the size of each image of the group, speed, or altitude.

The next thing was to try to duplicate what Hart said he had done. I enlisted the aid of several friends and we tried to photograph a moving light. When we were talking to Hart in Lubbock, he had taken us to his back yard, where he had shot the pictures. He had traced the flight path of lights across the sky. We had him estimate the speed by following an imaginary flight of lights across the sky. It came out to about four seconds. We had a camera identical to the one that Hart had used and

---

set up a light to move at the same speed as the UFO's had flown. We tried to take photographs. In four seconds we could get only two poor shots. These were badly blurred, much worse than Hart's, due to the one-tenth-of-a-second shutter speed. We repeated our experiment several times, each time with the same results. This made a lot of people doubt the authenticity of Hart's photos.

With the completed photo lab report in my hands, I was still without an The report was intere ting but didn't prove anything. All I could do was opinions from as qualified sources as I could find. A physiologist at the Aeromed boratory knocked out the timing theory immediately by saying that if Ha rt had been excited he could have easily taken three photos in four seconds if we could get two in four seconds in our experiment. Several professional photographers, one of them a top Life photographer, said that if Hart was familiar with his camera and was familiar with panning action shots, his photos would have shown much less blur than ours. I recalled what I heard about Hart's having photographed sporting events for the Lubbock newspaper. This would have called for a good panning technique.

The photographs didn't tally with the description of the lights that the professors had seen; in fact, they were firmly convinced that they were of "home manufacture." The professors had reported soft, glowing lights yet the photos showed what should have been extremely bright lights. Hart reported a perfect formation while the professors, except for the first flight, reported an unorderly group. There was no way to explain this disagreement in the arrangement of the lights. Of course, it wasn't impossible that on the night that Hart saw the lights they were flying in a V formation. The first time the professors saw them they were flying in a semicircle.

The intensity of the lights was difficult to explain. Again I went to the people in the Photo Reconnaissance Laboratory. I asked them if there was any possible situation that could cause this. They said yes. An intensely bright light source which had a color far over in the red end of the spectrum, bordering on infrared, could do it. The eye is not sensitive to such a light, it could appear dim to the eye yet be "bright" to the film. I asked them what kind of a light source would cause this. There were several things, if you want to speculate, they said, extremely high temperatures for one. But this was as far as they would go. We have nothing in this world that flies that appears dim to the eye yet will show bright on film, they said.

This ended the investigation of the photographs, and the investigation ended at a blank wall. My official conclusion, which was later given

---

to the press, was that "The photos were never proven to be a hoax but neither were they proven to be genuine." There is no definite answer.

The emphasis of the investigation was now switched to the professors sighting. The meager amount of data that they had gathered seemed to be accurate but it was inconclusive as far as getting a definite answer was concerned. They had measured two things, how much of the sky the objects had crossed in a certain time and the angle from one side of the formation to the other. These figures

didn't mean a great deal, however, since the altitude at which the formation of lights was flying was unknown. If you assumed that the objects were flying at an altitude of 10,000 feet you could easily compute that they were traveling about 3,600 miles per hour, or five to six times the speed of sound. The formation would have been about 1,750 feet wide. If each light was a separate object it could have been in the neighborhood of 100 feet in diameter. These figures were only a guess since nobody knew if the lights were at, above, or below 10,000 feet. If they had been higher they would have been going faster and have been larger. If lower than 10,000 feet, slower and smaller.

The only solid lead that had developed while the Reese AFB intelligence officer and I were investigating the professors' sightings was that the UFO's were birds reflecting the city lights; specifically plover. The old cowboy from Lamesa had described something identical to what the professors described and they were plover. Secondly, whenever the professors left the vicinity of their homes to look for the lights they didn't see them, yet their wives, who stayed at home, did see them. If the "lights" were birds they would be flying low and couldn't be seen from more than a few hundred feet. While in Lubbock I'd noticed several main boulevards lighted with the bluish mercury vapor lights. I called the intelligence officer at Reese AFB and he airmailed me a city map of Lubbock with the mercury-vapor-lighted streets marked. The place where the professors had made their observations was close to one of these streets. The big hitch in this theory was that people living miles from a mercury-vapor-lighted boulevard had also reported the lights. How many of these sightings were due to the power of suggestion and how many were authentic I didn't know. If I could have found out, it would have been possible to plot the sightings in Lubbock, and if they were all located close to the lighted boulevards, birds would be an answer. This, however, it was impossible to do.

The fact that the lights didn't make any perceivable sound seemed as if it might be a clue. Birds or light phenomena wouldn't make any sound, but how about some object of appreciable size traveling at or above them

---

speed of sound? Jet airplanes don't fly as fast as the speed of sound but they, make a horrible roar. Artillery shells, which are going much faster than aircraft, whine as they go through the air. I knew that a great deal of the noise from a jet is due to the heated air rushing out of the tail pipe, but I didn't know exactly how much of the noise this caused. If a jet airplane with a silent engine could be built, how much noise would it make? How far could it be heard? To get the answer I contacted National Advisory Committee for Aeronautics Laboratory at Langley AFB, a government agency which specializes in aeronautical research. They didn't know. Neither they nor anybody else had ever done any research on this question. Their opinion was that such an aircraft could not be heard 5,000 or 10,000 feet away. Aerodynamicists at Wright Field's Aircraft Laboratory agreed.

I called the Army's Ballistic Research Laboratories at Aberdeen Proving Grounds, Maryland, to find out why artillery shells whine. These people develop and test all kinds of shells so they would have an answer if anybody did. They said that the majority of the whine of an artillery shell is probably caused by the flat back end of the shell. If a perfectly streamlined shell could be used it would not have any perceivable whine.

What I found out, or didn't find out, about the sound of an object moving at several times the speed of sound was typical of nearly every question that came up regarding UFO's. We were working in a field where there were no definite answers to questions. In some instances we were getting into fields far advanced above the then present levels of research. In other instances we were getting into fields where no research had been done at all. It made the problem of UFO analysis one of getting opinions. All we could do was hope the opinions we were getting were the best.

My attempts to reach a definite conclusion as to what the professors had seen met another blank wall. I had no more success than I'd had trying to reach a conclusion on the authenticity of the photographs.

A thorough analysis of the reports of the flying wings seen by the retired rancher's wife in Lubbock and the AEC employee and his wife in Albuquerque was made. The story from the two ladies who saw the aluminum colored pear shaped object hovering near the road near Matador, Texas, was studied, checked, and rechecked. Another blank wall on all three of these sightings.

By the time I got around to working on the report from the radar station in Washington State, the data of the weather conditions that existed on the night of the sighting had arrived. I turned the incident folder over to the electronics specialists at ATIC. They made the analysis

---

and determined that the targets were caused by weather, although it was a borderline case. They further surmised that since the targets had been picked up on two radars, if I checked I'd find out that the two targets looked different on the two radarscopes. This is a characteristic of a weather target picked up on radars operating on different frequencies. I did check. I called the radar station and talked to the captain who was in charge of the crew the night the target had been picked up.

The target looked the same on both scopes. This was one of the reasons it had been reported, the captain told me. If the target hadn't been the same on both scopes, he wouldn't have made the report since he would have thought he had a weather target. He asked me what ATIC thought about the sighting. I said that Captain James thought it was weather. Just before the long-distance wires between Dayton and Washington melted, I caught some comment about people sitting in swivel chairs miles from the closest radarscope. . . . I took it that he didn't agree the target was caused by weather. But that's the way it officially stands today.

Although the case of the Lubbock Lights is officially dead, its memory lingers on. There have never been any more reliable reports of "flying wings" but lights somewhat similar to those seen by the professors have been reported. In about 70 per cent of these cases they were proved to be birds reflecting city lights.

The known elements of the case, the professors' sightings and the photos, have been dragged back and forth across every type of paper upon which written material appears, from the cheapest, coarsest pulp to the slick Life pages. Saucer addicts have studied and offered the case as all conclusive proof, with photos, that UFO's are interplanetary. Dr. Donald Menzel of Harvard studied the case and ripped the sightings to shreds in Look, Time, and his book, Flying Saucers, with the theory that the professors were merely looking at refracted city lights. But none of these people even had access to the full report. This is the first time it has ever been printed.

The only other people outside Project Blue Book who have studied the complete case of the Lubbock Lights were a group who, due to their associations with the government, had complete access to our files. And these people were not pulp writers or wide-eyed fanatics, they were scientists, rocket experts, nuclear physicists, and intelligence experts. They had banded together to study our UFO reports because they were convinced that some of the UFO's that were being reported were interplanetary spaceships and the Lubbock series was one of these reports.

The fact that the formations of lights were in different shapes didn't bother them; in fact, it convinced them all the more that their ideas of how a spaceship might operate were correct.

This group of scientists believed that the spaceships, or at least the part of the spaceship that came relatively close to the earth, would have to have a highly swept back wing configuration. And they believed that for propulsion and control the craft had a series of small jet orifices all around its edge. Various combinations of these small jets would be turned on to get various flight attitudes. The lights that the various observers saw differed in arrangement because the craft was flying in different flight attitudes.

(Three years later the Canadian Government announced that this was exactly the way that they had planned to control the flying saucer that they were trying to build. They had to give up their plans for the development of the saucer like craft, but now the project has been taken over by the U.S. Air Force.)

This is the complete story of the Lubbock Lights as it is carried in the Air Force files, one of the most interesting and most controversial collection of UFO sightings ever to be reported to Project Blue Book. Officially all of the sightings, except the UFO that was picked up on radar, are unknowns.

Personally I thought that the professors' lights might have been some kind of birds reflecting the light from mercury vapor street lights, but I was wrong. They weren't birds, they weren't refracted light, but they weren't spaceships. The lights that the professors saw - the backbone of the Lubbock Light series - have been positively identified as a very commonplace and easily explainable natural phenomenon.

It is very unfortunate that I can't divulge exactly the way the answer was found because it is an interesting story of how a scientist set up complete instrumentation to track down the lights and how he spent several months testing theory after theory until he finally hit upon the answer. Telling the story would lead to his identity and, in exchange for his story, I promised the man complete anonymity. But he fully convinced me that he had the answer, and after having heard hundreds of explanations of UFO's, I don't convince easily.

With the most important phase of the Lubbock Lights "solved" - the sightings by the professors- the other phases become only good UFO reports.

CHAPTER NINE

The New Project Grudge

While I was in Lubbock, Lieutenant Henry Metscher, who was helping me on Project Grudge, had been sorting out the many bits and pieces of information that Lieutenant Jerry Cummings and Lieutenant Colonel Rosengarten had brought back from Fort Monmouth, New Jersey, and he had the answers.

The UFO that the student radar operator had assumed to be traveling at a terrific speed because he couldn't lock on to it turned out to be a 400-mile-an-hour conventional airplane. He'd just gotten fouled up on his procedures for putting the radar set on automatic tracking. The sighting by the two officers in the T-33 jet fell apart when Metscher showed how they'd seen a balloon.

The second radar sighting of the series also turned out to be a balloon. The frantic phone call from headquarters requesting a reading on the object's altitude was to settle a bet. Some officers in headquarters had seen the balloon launched and were betting on how high it was.

The second day's radar sightings were caused by another balloon and weather - both enhanced by the firm conviction that there were some mighty queer goings on over Jersey.

The success with the Fort Monmouth Incident had gone to our heads and we were convinced that with a little diligent digging we'd be knocking off saucers like an ace skeet shooter. With all the confidence in the world, I attacked the Long Beach Incident, which I'd had to drop to go to Lubbock, Texas. But if saucers could laugh, they were probably zipping through the stratosphere chuckling to themselves, because there was no neat solution to this one.

In the original report of how the six F-86's chased the high flying UFO over Long Beach, the intelligence officer who made the report had said that he'd checked all aircraft flights, therefore this wasn't the answer.

The UFO could have been a balloon, so I sent a wire to the Air Force weather detachment at the Long Beach Municipal Airport. I wanted the track of any balloon that was in the air at 7:55 A.M. on September 23, 1951.

112.The Report on Unidentified Flying Objects

While I was waiting for the answers to my two wires, Lieutenant Metscher and I began to sort out old UFO reports. It was a big job because back in 1949, when the old Project Grudge had been disbanded, the files had just been dumped into storage bins. Hank and I now had four filing case drawers full of a heterogeneous mass of UFO reports, letters, copies of letters, and memos.

But I didn't get to do much sorting because the mail girl brought in a copy of a wire that had just arrived. It was a report of a UFO sighting at Terre Haute, Indiana. I read it and told Metscher that I'd quickly whip out an answer and get back to helping him sort. But it didn't prove to be that easy.

The report from Terre Haute said that on October 9, a CAA employee at Hulman Municipal Airport had observed a silvery UFO. Three minutes later a pilot, flying east of Terre Haute, had seen a similar object. The report lacked many details but a few phone calls filled me in on the complete story.

At 1:43 P.M. on the ninth a CAA employee at the airport was walking across the ramp in front of the

administration building. He happened to glance up at the sky - why, he didn't know - and out of the corner of his eye he caught a flash of light on the southeastern horizon. He stopped and looked at the sky where the flash of light had been but he couldn't see anything. He was just about to walk on when he noticed what he described as "a pinpoint" of light in the same spot where he'd seen the flash. In a second or two the "pinpoint" grew larger and it was obvious to the CAA man that something was approaching the airport at a terrific speed. As he watched, the object grew larger and larger until it flashed directly overhead and disappeared to the northwest. The CAA man said it all happened so fast and he was so amazed that he hadn't called anybody to come out of the nearby hangar and watch the UFO. But when he'd calmed down he remembered a few facts. The UFO had been in sight for about fifteen seconds and during this time it had passed from horizon to horizon. It was shaped like a "flattened tennis ball," was a bright silver color, and when it was directly overhead it was "the size of a 50 cent piece held at arm's length."

But this wasn't all there was to the report. A matter of minutes after the sighting a pilot radioed Terre Haute that he had seen a UFO. He was flying from Greencastle, Indiana, to Paris, Illinois, when just east of Paris he'd looked back and to his left. There, level with his airplane and fairly close, was a large silvery object, "like a flattened orange," hanging motionless in the sky. He looked at it a few seconds, then hauled his plane around in a tight left bank. He headed directly toward the UFO,

---

but it suddenly began to pick up speed and shot off toward the northeast. The time, by the clock on his instrument panel, was 1:45 P.M. - just two minutes after the sighting at Terre Haute.

When I finished calling I got an aeronautical chart out of the file and plotted the points of the sighting. The CAA employee had seen the UFO disappear over the northwestern horizon. The pilot had been flying from Greencastle, Indiana, to Paris, Illinois, so he'd have been flying on a heading of just a little less than 270 degrees, or almost straight west. He was just east of Paris when he'd first seen the UFO, and since he said that he'd looked back and to his left, the spot where he saw the UFO would be right at a spot where the CAA man had seen his UFO disappear. Both observers had checked their watches with radio time just after the sightings, so there couldn't be more than a few seconds' discrepancy. All I could conclude was that both had seen the same UFO.

I checked the path of every balloon in the Midwest. I checked the weather - it was a clear, cloudless day; I had the two observers' back-grounds checked and I even checked for air traffic, although I knew the UFO wasn't an airplane. I researched the University of Dayton library for everything on daylight meteors, but this was no good. From the description the CAA employee gave, what he'd seen had been a clear-cut, distinct, flattened sphere, with no smoke trail, no sparks and no tail. A daylight meteor, so low as to be described as "a 50 cent piece held at arm's length," would have had a smoke trail, sparks, and would have made a roar that would have jolted the Sphinx. This one was quiet. Besides, no daylight meteor stops long enough to let an airplane turn into it. Conclusion: Unknown.

In a few days the data from the Long Beach Incident came in and I started to put it together. A weather balloon had been launched from the Long Beach Airport, and it was in the vicinity where the six F-86's had made their unsuccessful attempt to intercept a UFO. I plotted out the path of the balloon, the reported path of the UFO, and the flight paths of the F-86's. The paths of the balloon and the F-86's were accurate, I knew, because the balloon was being tracked by radio fixes and the F-86's had been tracked by radar. At only one point did the paths of the balloon, UFO, and F-86's coincide. When the first two F-86's made their initial visual contact with the UFO they were looking almost directly at the balloon. But from then on, even by altering the courses of the F-86's, I couldn't prove a thing.

In addition, the weather observers from Long Beach said that during the period that the intercept was taking place they had gone outside and

---

looked at their balloon; it was an exceptionally clear day and they could see it at unusually high altitudes. They didn't see any F-86's around it. And one stronger point, the balloon had burst about ten minutes before the F-86's lost sight of the UFO.

Lieutenant Metscher took over and, riding on his Fort Monmouth victory, tried to show how the pilots had seen the balloon. He got the same thing I did - nothing.

On October 27, 1951, the new Project Grudge was officially established. I'd written the necessary letters and had received the necessary endorsements. I'd estimated, itemized, and justified direct costs and manpower. I'd conferred, inferred, and referred, and now I had the money to operate. The next step was to pile up all this paper work as an aerial barrier, let the saucers crash into it, and fall just outside the door.

I was given a very flexible operating policy for Project Grudge because no one knew the best way to track down UFO's. I had only one restriction and that was that I wouldn't have my people spending time doing a lot of wild speculating. Our job would be to analyze each and every UFO report and try to find what we believed to be an honest, unbiased answer. If we could not identify the reported object as being a balloon, meteor, planet, or one of half a hundred other common things that are sometimes called UFO's, we would mark the folder "Unknown" and file it in a special file. At some later date, when we built up enough of these "Unknown" reports, we'd study them.

As long as I was chief of the UFO project, this was our basic rule. If anyone became anti flying saucer and was no longer capable of making an unbiased evaluation of a report, out he went. Conversely anyone who became a believer was through. We were too busy during the initial phases of the project to speculate as to whether the unknowns were spaceships, space monsters, Soviet weapons, or ethereal visions.

I had to let three people go for being too pro or too con.

By the latter part of November 1951 I knew most of what had taken place in prior UFO projects and what I expected to do. The people in Project Sign and the old Project Grudge had made many mistakes. I studied these mistakes and profited by them. I could see that my predecessors had had a rough job. Mine would be a little bit easier because of the pioneering they had done.

Lieutenant Metscher and I had sorted out all of the pre 1951 files, refiled them, studied them, and outlined the future course of the new Project Grudge.

When Lieut. Colonel Rosengarten and Lieutenant Cummings had been at the Pentagon briefing Major General Cabell on the Fort Monmouth

---

Incidents, the general had told them to report back when the new project was formed and ready to go. We were ready to go, but before taking my ideas to the Pentagon, I thought it might be wise to try them out on a few other people to get their reaction. Colonel Frank Dunn, then chief of ATIC, liked this idea. We had many well known scientists and engineers who periodically visited ATIC as consultants, and Colonel Dunn suggested that these people's opinions and comments would be valuable. For the next two weeks every visitor to ATIC who had a reputation as a scientist, engineer,

or scholar got a UFO briefing.

Unfortunately the names of these people cannot be revealed because I promised them complete anonymity. But the list reads like a page from Great Men of Science.

Altogether nine people visited the project during this trial period. Of the nine, two thought the Air Force was wasting its time, one could be called indifferent, and six were very enthusiastic over the project. This was a shock to me. I had expected reactions that ranged from an extremely cold absolute zero to a mild twenty below. Instead I found out that UFO's were being freely and seriously discussed in scientific circles. The majority of the visitors thought that the Air Force had goofed on previous projects and were very happy to find out that the project was being re-established. All of the visitors, even the two who thought we were wasting our time, had good suggestions on what to do. All of them offered their services at any future time when they might be needed. Several of these people became very good friends and valuable consultants later on.

About two weeks before Christmas, in 1951, Colonel Dunn and I went to the Pentagon to give my report. Major General John A. Samford had replaced Major General Cabell as Director of Intelligence, but General Samford must have been told about the UFO situation because he was familiar with the general aspects of the problem. He had appointed his Assistant for Production, Brigadier General W. M. Garland, to ride herd on the project for him.

Colonel Dunn briefly outlined to General Samford what we planned to do. He explained our basic policy, that of setting aside the unknowns and not speculating on them, and he told how the scientists visiting ATIC had liked the plans for the new Project Grudge.

There was some discussion about the Air Force's and ATIC's responsibility for the UFO reports. General Garland stated, and it was later confirmed in writing, that the Air Force was solely responsible for investigating and evaluating all UFO reports. Within the Air Force, ATIC was the responsible agency. This in turn meant that Project Grudge

---

was responsible for all UFO reports made by any branch of the military service. I started my briefing by telling General Samford and his staff about the present UFO situation.

The UFO reports had never stopped coming in since they had first started in June 1947. There was some correlation between publicity and the number of sightings, but it was not an established fact that reports came in only when the press was playing up UFO's. Just within the past few months the number of good reports had increased sharply and there had been no publicity.

UFO's we're seen more frequently around areas vital to the defense of the United States. The Los Alamos-Albuquerque area, Oak Ridge, and White Sands Proving Ground rated high. Port areas, Strategic Air Command bases, and industrial areas ranked next. UFO's had been reported from every state in the Union and from every foreign country. The U.S. did not have a monopoly.

The frequency of the UFO reports was interesting. Every July there was a sudden increase in the number of reports and July was always the peak month of the year. Just before Christmas there was usually a minor peak.

The Grudge Report had not been the solution to the UFO problem. It was true that a large percentage of the reports were due to the "misidentification of known objects"; people were seeing balloons, airplanes, planets, but this was not the final answer. There were a few hoaxes, hallucinations, publicity seekers, and fatigued pilots, but reports from these people constituted less than 1 per cent of the total. Left over was a residue of very good and very "unexplainable" UFO sightings that were

classified as unknown.

The quality of the reports was getting better, I told the officers; they contained more details that could be used for analysis and the details were more precise and accurate. But still they left much to be desired.

Every one of the nine scientists and engineers who had reviewed the UFO material at ATIC had made one strong point: we should give top priority to getting reasonably accurate measurements of the speed, altitude, and size of reported UFO's. This would serve two purposes. First, it would make it easy to sort out reports of common things, such as balloons, airplanes, etc. Second, and more important, if we could get even one fairly accurate measurement that showed that some object was traveling through the atmosphere at high speed, and that it wasn't a meteor, the UFO riddle would be much easier to solve.

I had worked out a plan to get some measured data, and I presented it to the group for their comments.

The New Project Grudge.117

I felt sure that before long the press would get wind of the Air Force's renewed effort to identify UFO's. When this happened, instead of being mysterious about the whole thing, we would freely admit the existence of the new project, explain the situation thoroughly and exactly as it was, and say that all UFO reports made to the Air Force would be given careful consideration. In this way we would encourage more people to report what they were seeing and we might get some good data.

To further explain my point, I drew a sketch on a blackboard. Suppose that a UFO is reported over a fair-sized city. Now we may get one or two reports, and these reports may be rather sketchy. This does us no good - all we can conclude is that somebody saw something that he couldn't identify. But suppose fifty people from all over the city report the UFO. Then it would be profitable for us to go out and talk to these people, find out the time they saw the UFO, and where they saw it (the direction and height above the horizon). Then we might be able to use these data, work out a triangulation problem, and get a fairly accurate measurement of speed, altitude, and size.

Radar, of course, will give an accurate measurement of speed and altitude, I pointed out, but radar is not infallible. There is always the problem of weather. To get accurate radar data on a UFO, it is always necessary to prove that it wasn't weather that was causing the target. Radar is valuable, and we wanted radar reports, I said, but they should be considered only as a parallel effort and shouldn't take the place of visual sightings.

In winding up my briefing, I again stressed the point that, as of the end of 1951 - the date of this briefing - there was no positive proof that any craft foreign to our knowledge existed. All recommendations for the reorganization of Project Grudge were based solely upon the fact that there were many incredible reports of UFO's from many very reliable people. But they were still just flying saucer reports and couldn't be considered scientific proof.

Everyone present at the meeting agreed - each had read or had been briefed on these incredible reports. In fact, two of the people present had seen UFO's.

Before the meeting adjourned, Colonel Dunn had one last question. He knew the answer, but he wanted it confirmed. "Does the United States have a secret weapon that is being reported as a UFO?"

The answer was a flat "No."

In a few days I was notified that my plan had been given the green light. I already had the plan

written up in the form of a staff study so I sent it through channels for formal approval.

118.The Report on Unidentified Flying Objects

It had been obvious right from the start of the reorganization of Project Grudge that there would be questions that no one on my staff was technically competent to answer. To have a fully staffed project, I'd need an astronomer, a physicist, a chemist, a mathematician, a psychologist, and probably a dozen other specialists. It was, of course, impossible to have all of these people on my staff, so I decided to do the next best thing. I would set up a contract with some research organization who already had such people on their staff; then I would call on them whenever their services were needed.

I soon found a place that was interested in such a contract, and the day after Christmas, Colonel S. H. Kirkland, of Colonel Dunn's staff, and I left Dayton for a two-day conference with these people to outline what we wanted. Their organization cannot be identified by name because they are doing other highly secret work for the government. I'll call them Project Bear.

Project Bear is a large, well known research organization in the Midwest. The several hundred engineers and scientists who make up their staff run from experts on soils to nuclear physicists. They would make these people available to me to assist Project Grudge on any problem that might arise from a UFO report. They did not have a staff astronomer or psychologist, but they agreed to get them for us on a subcontract basis. Besides providing experts in every field of science, they would make two studies for us; a study of how much a person can be expected to see and remember from a UFO sighting, and a statistical study of UFO reports. The end product of the study of the powers of observation of a UFO observer would be an interrogation form.

Ever since the Air Force had been in the UFO business, attempts had been made to construct a form that a person who had seen a UFO could fill out. Many types had been tried but all of them had major disadvantages. Project Bear, working with the psychology department of a university, would study all of the previous questionnaires, along with actual UFO reports, and try to come up with as near a perfect interrogation form as possible. The idea was to make the form simple and yet extract as much and as accurate data as possible from the observer.

The second study that Project Bear would undertake would be a statistical study of all UFO reports. Since 1947 the Air Force had collected about 650 reports, but if our plan to encourage UFO reports worked out the way we expected this number could increase tenfold. To handle this volume of reports, Project Bear said that they would set up a complete UFO file on IBM punch cards. Then if we wanted any bit of information from the files, it would be a matter of punching a few buttons on an

---

The New Project Grudge.119

IBM card sorting machine, and the files would be sorted electronically in a few seconds. Approximately a hundred items pertaining to a UFO report would be put on each card. These items included everything from the time the UFO was seen to its position in the sky and the observer's personality. The items punched on the cards would correspond to the items on the questionnaires that Project Bear was going to develop.

Besides giving us a rapid method of sorting data, this IBM file would give us a modus operandi file. Our MO file would be similar to the MO files used by police departments to file the methods of operations of a criminal. Thus when we received a report we could put the characteristics of the reported UFO on an IBM punch card, put it into the IBM machine, and compare it with the characteristics of other sightings that had known solutions. The answer might be that out of the one

hundred items on the card, ninety-five were identical to previous UFO reports that ducks were flying over a city at night reflecting the city's lights.

On the way home from the meeting Colonel Kirkland and I were both well satisfied with the assistance we believed Project Bear could give to Project Grudge.

In a few days I again left ATIC, this time for Air Defense Command Headquarters in Colorado Springs, Colorado. I wanted to find out how willing ADC was to help us and what they could do. When I arrived I got a thorough briefing on the operations of ADC and the promise that they would do anything they could to help solve the UFO riddle.

All of this co-operation was something that I hadn't expected. I'd been warned by the people who had worked on Project Sign and the old Project Grudge that everybody hated the word UFO - I'd have to fight for everything I asked for. But once again they were wrong. The scientists who visited ATIC, General Samford, Project Bear, and now Air Defense Command couldn't have been more co-operative. I was becoming aware that there was much wider concern about UFO reports than I'd ever realized before.

While I traveled around the United States getting the project set up, UFO reports continued to come in and all of them were good. One series of reports was especially good, and they came from a group of people who had had a great deal of experience watching things in the sky - the people who launch the big skyhook balloons for General Mills, Inc. The reports of what the General Mills people had seen while they were tracking their balloons covered a period of over a year. They had just sent them in because they had heard that Project Grudge was being reorganized and was taking a different view on UFO reports. They, like so many other reliable observers, had been disgusted with the previous

---

Air Force attitude toward UFO reports, and they had refused to send in any reports. I decided that these people might be a good source of information, and I wanted to get further details on their reports, so I got orders to go to Minneapolis. A scientist from Project Bear went with me. We arrived on January 14, 1952, in the middle of a cold wave and a blizzard.

The Aeronautical Division of General Mills, Inc., of Wheaties and Betty Crocker fame, had launched and tracked every skyhook balloon that had been launched prior to mid 1952. They knew what their balloons looked like under all lighting conditions and they also knew meteorology, aerodynamics, astronomy, and they knew UFO's. I talked to these people for the better part of a full day, and every time I tried to infer that there might be some natural explanation for the UFO's I just about found myself in a fresh snowdrift.

What made these people so sure that UFO's existed? In the first place, they had seen many of them. One man told me that one tracking crew had seen so many that the sight of a UFO no longer even especially interested them. And the things that they saw couldn't be explained.

For example: On January 16, 1951, two people from General Mills and four people from Artesia, New Mexico, were watching a skyhook balloon from the Artesia airport. They had been watching the balloon off and on for about an hour when one of the group saw two tiny specks on the horizon, off to the northwest. He pointed them out to the others because two airplanes were expected into the airport, and he thought that these might be the airplanes. But as they watched, the two specks began to move in fast, and within a few seconds the observers could see that "the airplanes" were actually two round, dull white objects flying in close formation. The two objects continued to come in and headed straight toward the balloon. When they reached the balloon they circled it once and flew off to the northwest, where they disappeared over the horizon. As the two UFO's circled the balloon, they tipped on edge and the observers saw that they were disk shaped.

When the two UFO's were near the balloon, the observers also had a chance to compare the size of the UFO's with the size of the balloon. If the UFO's were as close to the balloon as they appeared to be they would have been 60 feet in diameter.

After my visit to General Mills, Inc., I couldn't help remembering a magazine article I'd read about a year before. It said that there was not a single reliable UFO report that couldn't be attributed to a skyhook balloon.

I'd been back at ATIC only a few days when I found myself packing up

---

to leave again. This time it was for New York. A high priority wire had come into ATIC describing how a Navy pilot had chased a UFO over Mitchel AFB, on Long Island. It was a good report.

I remember the trip to New York because my train passed through Elizabeth, New Jersey, early in the morning, and I could see the fires caused by an American Airlines Convair that had crashed. This was the second of the three tragic Elizabeth, New Jersey, crashes.

The morning before, on January 21, a Navy pilot had taken off from Mitchel in a TBM. He was a lieutenant commander, had flown in World War II, and was now an engineer at the Navy Special Devices Center on Long Island. At nine fifty he had cleared the traffic pattern and was at about 2,500 feet, circling around the airfield. He was southeast of the field when he first noticed an object below him and "about three runway lengths off the end of Runway 30." The object looked like the top of a parachute canopy, he told me; it was white and he thought he could see the wedges or panels. He said that he thought that it was moving across the ground a little bit too fast to be drifting with wind, but he was sure that somebody had bailed out and that he was looking at the top of his parachute. He was just ready to call the tower when he suddenly realized that this "parachute" was drifting across the wind. He had just taken off from Runway 30 and knew which direction the wind was blowing.

As he watched, the object, whatever it was (by now he no longer thought that it was a parachute), began to gradually climb, so he started to climb, he said, staying above and off to the right of the object. When the UFO started to make a left turn, he followed and tried to cut inside, but he overshot and passed over it. It continued to turn and gain speed, so he dropped the nose of the TBM, put on more power, and pulled in behind the object, which was now level with him. In a matter of seconds the UFO made a 180 degree turn and started to make a big swing around the northern edge of Mitchel AFB. The pilot tried to follow, but the UFO had begun to accelerate rapidly, and since a TBM leaves much to be desired on the speed end, he was getting farther and farther behind. But he did try to follow it as long as he could. As he made a wide turn around the northern edge of the airfield he saw that the UFO was now turning south. He racked the TBM up into a tight left turn to follow, but in a few seconds the UFO had disappeared. When he last saw it, it had crossed the Long Island coast line near Freeport and it was heading out to sea.

When he finished his account of the chase, I asked the commander some specific questions about the UFO. He said that just after he'd

---

decided that the UFO was not a parachute it appeared to be at an altitude of about 200 to 300 feet over a residential section. From the time it took it to cover a city block, he'd estimated that it was traveling about 300 miles an hour. Even when he pulled in behind the object and got a good look, it still looked like a parachute canopy -- dome shaped --white -and it had a dark under surface. It had

been in sight two and a half minutes.

He had called the control tower at Mitchel during the chase, he told me, but only to ask if any balloons had been launched. He thought that he might be seeing a balloon. The tower had told him that there was a balloon in the area.

Then the commander took out an aeronautical chart and drew in his flight path and the apparent path of the UFO for me. I think that he drew it accurately because he had been continually watching landmarks as he'd chased the UFO and was very careful as he drew the sketches on the map.

I checked with the weather detachment at Mitchel and they said that they had released a balloon. They had released it at nine fifty and from a point southeast of the airfield. I got a plot of its path. Just as in the Long Beach Incident, where the six F-86's tried to intercept the UFO, the balloon was almost exactly in line with the spot where the UFO was first seen, but then any proof you might attempt falls apart. If the pilot knew where he was, and had plotted his flight path even semi accurately, he was never over the balloon. Yet he was over the UFO. He came within less than 2,000 feet of the UFO when he passed over it; yet he couldn't recognize it as a balloon even though he thought it might be a balloon since the tower had just told him that there was one in the area. He said that he followed the UFO around the north edge of the airfield. Yet the balloon, after it was launched southeast of the field, continued on a southeast course and never passed north of the airfield.

But the biggest argument against the object's being a balloon was the fact that the pilot pulled in behind it; it was directly off the nose of his airplane, and although he followed it for more than a minute, it pulled away from him. Once you line up an airplane on a balloon and go straight toward it you will catch it in a matter of seconds, even in the slowest airplane. There have been dogfights with UFO's where the UFO's turned out to be balloons, but the pilots always reported that the UFO "made a pass" at them. In other words, they rapidly caught up with the balloon and passed it. I questioned this pilot over and over on this one point, and he was positive that he had followed directly behind the UFO for over a minute and all the time it was pulling away from him.

This is one of the most typical UFO reports we had in our files. It is

---

typical because no matter how you argue there isn't any definite answer. If you want to argue that the pilot didn't know where he was during the chase - that he was 3 or 4 miles from where he thought he was - that he never did fly around the northern edge of the field and get in behind the UFO - then the UFO could have been a balloon.

But if you want to believe that the pilot knew where he was all during the chase, and he did have several thousand hours of flying time, then all you can conclude is that the UFO was an unknown.

I think the pilot summed up the situation very aptly when he told me, "I don't know what it was, but I've never seen anything like it before or since - maybe it was a spaceship."

I went back to Dayton stumped - maybe it was a spaceship.

CHAPTER TEN

Project Blue Book and the Big Build-Up

Just twenty minutes after midnight on January 22, 1952, nineteen and a half hours after the Navy lieutenant commander had chased the UFO near Mitchel AFB, another incident involving an airplane and something unknown was developing in Alaska. In contrast with the unusually balmy weather in New York, the temperature in Alaska that night, according to the detailed account of the incident we received at ATIC, was a miserable 47 degrees below zero. The action was unfolding at one of our northern-most radar outposts in Alaska. This outpost was similar to those you may have seen in pictures, a collection of low, sprawling buildings grouped around the observatory like domes that house the antennae of the most modern radar in the world. The entire collection of buildings and domes are one color, solid white, from the plastering of ice and snow. The picture that the outpost makes could be described as fascinating, something out of a Walt Disney fantasy - but talk to somebody who's been there - it's miserable.

At 0020, twenty minutes after midnight, an airman watching one of the outpost's radarscopes saw a target appear. It looked like an airplane because it showed up as a bright, distinct spot. But it was unusual because it was northeast of the radar site, and very few airplanes ever flew over

---

this area. Off to the northeast of the station there was nothing but ice, snow, and maybe a few Eskimos until you got to Russia. Occasionally a B-50 weather reconnaissance plane ventured into the area, but a quick check of the records showed that none was there on this night.

By the time the radar crew had gotten three good plots of the target, they all knew that it was something unusual - it was at 23,000 feet and traveling 1,500 miles an hour. The duty controller, an Air Force captain, was quickly called; he made a fast check of the targets that had now been put on the plotting board and called to a jet fighter interceptor base for a scramble.

The fighter base, located about 100 miles south of the radar site, acknowledged the captain's call and in a matter of minutes an F-94 jet was climbing out toward the north.

While the F-94 was heading north, the radar crew at the outpost watched the unidentified target. The bright dots that marked its path had moved straight across the radarscope, passing within about 50 miles of the site. It was still traveling about 1,500 miles an hour. The radar had also picked up the F-94 and was directing it toward its target when suddenly the unidentified target slowed down, stopped, and reversed its course. Now it was heading directly toward the radar station. When it was within about 30 miles of the station, the radar operator switched his set to a shorter range and lost both the F-94 and the unidentified target.

While the radar operator was trying to pick up the target again, the F-94 arrived in the area. The ground controller told the pilot that they had lost the target and asked him to cruise around the area to see if he and his radar operator could pick up anything on the F-94's radar. The pilot said he would but that he was having a little difficulty, was low on fuel, and would have to get back to his base soon. The ground controller acknowledged the pilot's message, and called back to the air base telling them to scramble a second F-94.

The first F-94 continued to search the area while the ground radar tried to pick up the target but neither could find it.

About this time the second F-94 was coming in, so the ground radar switched back to long range. In a minute they had both of the F-94's and the unidentified target on their scope. The ground controller called the second F-94 and began to vector him into the target.

The first F-94 returned to its base.

As both the second F-94 and the target approached the radar site, the operator again switched to short range and again he lost the jet and the target. He switched back to long range, but by now they were too close to the radar site and he couldn't pick up either one.

The pilot continued on toward where the unidentified target should have been. Suddenly the F-94 radar operator reported a weak target off to the right at 28,000 feet. They climbed into it but it faded before they could make contact.

The pilot swung the F-94 around for another pass, and this time the radar operator reported a strong return. As they closed in, the F-94's radar showed that the target was now almost stationary, just barely moving. The F-94 continued on, but the target seemed to make a sudden dive and they lost it. The pilot of the jet interceptor continued to search the area but couldn't find anything. As the F-94 moved away from the radar station, it was again picked up on the ground radar, but the unidentified target was gone.

A third F-94 had been scrambled, and in the meantime its crew took over the search. They flew around for about ten minutes without detecting any targets on their radar. They were making one last pass almost directly over the radar station when the radar operator in the back seat of the F-94 yelled over the interphone that he had a target on his scope. The pilot called ground radar, but by this time both the F-94 and the unidentified target were again too close to the radar station and they couldn't be picked up. The F-94 closed in until it was within 200 yards of the target; then the pilot pulled up, afraid he might collide with whatever was out in the night sky ahead of him. He made another pass, and another, but each time the bright spot on the radar operator's scope just stayed in one spot as if something were defiantly sitting out in front of the F-94 daring the pilot to close in. The pilot didn't take the dare. On each pass he broke off at 200 yards.

The F-94 crew made a fourth pass and got a weak return, but it was soon lost as the target seemed to speed away. Ground radar also got a brief return, but in a matter of seconds they too lost the target as it streaked out of range on a westerly heading.

As usual, the first thing I did when I read this report was to check the weather. But there was no weather report for this area that was detailed enough to tell whether a weather inversion could have caused the radar targets.

But I took the report over to Captain Roy James, anyway, in hopes that he might be able to find a clue that would identify the UFO.

Captain James was the chief of the radar section at ATIC. He and his people analyzed all our reports where radar picked up UFO's. Roy had been familiar with radar for many years, having set up one of the first stations in Florida during World War II, and later he took the first aircraft control and warning squadron to Saipan. Besides worrying about

---

keeping his radar operating, he had to worry about the Japs' shooting holes in his antennae.

Captain James decided that this Alaskan sighting I'd just shown him was caused by some kind of freak weather. He based his analysis on the fact that the unknown target had disappeared each time the ground radar had been switched to short range. This, he pointed out, is an indication that the radar was picking up some kind of a target that was caused by weather. The same weather that caused the ground radar to act up must have caused false targets on the F-94's radar too, he continued. After all, they had closed to within 200 yards of what they were supposedly picking up; it was a clear moonlight night, yet the crews of the F-94's hadn't seen a thing.

Taking a clue from the law profession, he quoted a precedent. About a year before over Oak Ridge, Tennessee, an F-82 interceptor had nearly flown into the ground three times as the pilot attempted to follow a target that his radar operator was picking up. There was a strong inversion that night, and although the target appeared as if it were flying in the air, it was actually a ground target.

Since Captain James was the chief of the radar section and he had said "Weather," weather was the official conclusion on the report. But reports of UFO's' being picked up on radar are controversial, and some of the people didn't agree with James's conclusion.

A month or two after we'd received the report, I was out in Colorado Springs at Air Defense Command Headquarters. I was eating lunch in the officers' club when I saw an officer from the radar operations section at ADC. He asked me to stop by his office when I had a spare minute, and I said that I would. He said that it was important.

It was the middle of the afternoon before I saw him and found out what he wanted. He had been in Alaska on TDY when the UFO had been picked up at the outpost radar site. In fact, he had made a trip to both the radar site and the interceptor base just two days after the sighting, and he had talked about the sighting with the people who had seen the UFO on the radar. He wanted to know what we thought about it.

When I told him that the sighting had been written off as weather, I remember that he got a funny look on his face and said, "Weather! What are you guys trying to pull, anyway?"

It was obvious that he didn't agree with our conclusion. I was interested in learning what this man thought because I knew that he was one of ADC's ace radar trouble shooters and that he traveled all over the world, on loan from ADC, to work out problems with radars.

"From the description of what the targets looked like on the radar-

---

scopes, good, strong, bright images, I can't believe that they were caused by weather," he told me.

Then he went on to back up his argument by pointing out that when the ground radar was switched to short range both the F-94 and the unknown target disappeared. If just the unknown target had disappeared, then it could have been weather. But since both disappeared, very probably the radar set wasn't working on short ranges for some reason. Next he pointed out that if there was a temperature inversion, which is highly unlikely in northern Alaska, the same inversion that would affect the ground radar wouldn't be present at 25,000 feet or above.

I told him about the report from Oak Ridge that Captain James had used as an example, but he didn't buy this comparison. At Oak Ridge, he pointed out, that F-82 was at only 4,000 feet. He didn't know how the F-94's could get to within 200 yards of an object without seeing it, unless the object was painted a dull black.

"No," he said, "I can't believe that those radar targets were caused by weather. I'd be much more inclined to believe that they were something real, something that we just don't know about."

During the early spring of 1952 reports of radar sightings increased rapidly. Most of them came from the Air Defense Command, but a few came from other agencies. One day, soon after the Alaskan Incident, I got a telephone call from the chief of one of the sections of a civilian experimental radar laboratory in New York State. The people in this lab were working on the development of the latest types of radar. Several times recently, while testing radars, they had detected unidentified targets. To quote my caller, "Some damn odd things are happening that are beginning to worry me." He went on to tell how the people in his lab had checked their radars, the weather, and everything else they could think of, but they could find absolutely nothing to account for the targets; they could only conclude that they were real. I promised him that his information would get to the right people if he'd put it in a letter and send it to ATIC. In about a week the letter arrived-hand-carried by no less than a general. The general, who was from Headquarters, Air Material Command, had been in New York at the radar laboratory, and he had heard about the UFO reports. He had personally checked into them because he knew that the people at the lab were some of the sharpest radar engineers in the world. When he found out that these people had already contacted us and had prepared a report for us, he offered to hand carry it to Wright-Patterson.

I can't divulge how high these targets were flying or how fast they were going because it would give an indication of the performance of

---

our latest radar, which is classified Secret. I can say, however, that they were flying mighty high and mighty fast.

I turned the letter over to ATIC's electronics branch, and they promised to take immediate action. They did, and really fouled it up. The person who received the report in the electronics branch was one of the old veterans of Projects Sign and Grudge. He knew all about UFO's. He got on the phone, called the radar lab, and told the chief (a man who possibly wrote all of the textbooks this person had used in college) all about how a weather inversion can cause false targets on weather. He was gracious enough to tell the chief of the radar lab to call if he had any more "trouble."

We never heard from them again. Maybe they found out what their targets were. Or maybe they joined ranks with the airline pilot who told me that if a flying saucer flew wing tip to wing tip formation with him, he'd never tell the Air Force.

In early February I made another trip to Air Defense Command Headquarters in Colorado Springs. This time it was to present a definite plan of how ADC could assist ATIC in getting better data on UFO's. I briefed General Benjamin W. Chidlaw, then the Commanding General of the Air Defense Command, and his staff, telling them about our plan. They agreed with it in principle and suggested that I work out the details with the Director of Intelligence for ADC, Brigadier General W. M. Burgess. General Burgess designated Major Verne Sadowski of his staff to be the ADC liaison officer with Project Grudge.

This briefing started a long period of close co-operation between Project Grudge and ADC, and it was a pleasure to work with these people. In all of my travels around the government, visiting and conferring with dozens of agencies, I never had the pleasure of working with or seeing a more smoothly operating and efficient organization than the Air Defense Command. General Chidlaw and General Burgess, along with the rest of the staff at ADC, were truly great officers. None of them were believers in flying saucers, but they recognized the fact that UFO reports were a problem that must be considered. With technological progress what it is today, you can't afford to have anything in the air that you can't identify, be it balloons, meteors, planets or flying saucers.

The plan that ADC agreed to was very simple. They agreed to issue a directive to all of their units explaining the UFO situation and telling specifically what to do in case one was detected. All radar units equipped with radarscope cameras would be required to take scope photos of targets that fell into the UFO category - targets that were not airplanes or known weather phenomena. These photos, along with a completed technical

---

questionnaire that would be made up at ATIC by Captain Roy James, would be forwarded to Project Grudge.

The Air Defense Command UFO directive would also clarify the scrambling of fighters to intercept a UFO. Since it is the policy of the Air Defense Command to establish the identity of any unidentified target, there were no special orders issued for scrambling fighters to try to identify reported UFO's. A UFO was something unknown and automatically called for a scramble. However, there had been some hesitancy on the part of controllers to send airplanes up whenever radar picked up a target that obviously was not an airplane. The directive merely pointed out to the controllers that it was within the scope of existing regulations to scramble on radar targets that were plotted as traveling too fast or too slow to be conventional airplanes. The decision to scramble fighters was still up to the individual controller, however, and scrambling on UFO's would be a second or third priority.

The Air Defense Command UFO directive did not mention shooting at a UFO. This question came up during our planning meeting at Colorado Springs, but, like the authority to scramble, the authority to shoot at anything in the air had been established long ago. Every ADC pilot knows the rules for engagement, the rules that tell him when he can shoot the loaded guns that he always carries. If anything in the air over the United States commits any act that is covered by the rules for engagement, the pilot has the authority to open fire.

The third thing that ADC would do would be to integrate the Ground Observer Corps into the UFO reporting net. As a second priority, the GOC would report UFO's - first priority would still be reporting aircraft.

Ever since the new Project Grudge had been organized, we hadn't had to deal with any large-scale publicity about UFO's. Occasionally someone would bring in a local item from some newspaper about a UFO sighting, but the sightings never rated more than an inch or two column space. But on February 19, 1952, the calm was broken by the story of how a huge ball of fire paced two B-29's in Korea. The story didn't start a rash of reports as the story of the first UFO sighting did in June 1947, but it was significant in that it started a slow build-up of publicity that was far to surpass anything in the past.

This Korean sighting also added to the growing official interest in Washington. Almost every day I was getting one or two telephone calls from some branch of the government, and I was going to Washington at least once every two weeks. I was beginning to spend as much time telling people what was going on as I was doing anything about it. The answer was to get somebody in the Directorate of Intelligence in the

---

Pentagon to act as a liaison officer. I could keep this person informed and he could handle the "branch office" in Washington. Colonel Dunn bought this idea, and Major Dewey J. Fournet got the additional duty of manager of the Pentagon branch. In the future all Pentagon inquiries went to Major Fournet, and if he couldn't answer them he would call me. The arrangement was excellent

because Major Fournet took a very serious interest in UFO's and could always be counted on to do a good job.

Sometime in February 1952 I had a visit from two Royal Canadian Air Force officers. For some time, I learned, Canada had been getting her share of UFO reports. One of the latest ones, and the one that prompted the visit by the RCAF officers, occurred at North Bay, Ontario, about 250 miles north of Buffalo, New York. On two occasions an orange red disk had been seen from a new jet fighter base in the area.

The Canadians wanted to know how we operated. I gave them the details of how we were currently operating and how we hoped to operate in the future, as soon as the procedures that were now in the planning stages could be put into operation. We agreed to try to set up channels so that we could exchange information and tie in the project they planned to establish with Project Grudge.

Our plans for continuing liaison didn't materialize, but through other RCAF intelligence officers I found out that their plans for an RCAF sponsored project failed. A quasi official UFO project was set up soon after this, however, and its objective was to use instruments to detect objects coming into the earth's atmosphere. In 1954 the project was closed down because during the two years of operation they hadn't officially detected any UFO's. My sources of information stressed the word "officially."

During the time that I was chief of the UFO project, the visitors who passed through my office closely resembled the international brigade. Most of the visits were unofficial in the sense that the officers came to ATIC on other business, but in many instances the other business was just an excuse to come out to Dayton to get filled in on the UFO story. Two RAF intelligence officers who were in the U.S. on a classified mission brought six single-spaced typed pages of questions they and their friends wanted answered. On many occasions Air Force intelligence officers who were stationed in England, France, and Germany, and who returned to the U.S. on business, took back stacks of unclassified flying saucer stories. One civilian intelligence agent who frequently traveled between the U.S. and Europe also acted as the unofficial courier for a German group - transporting hot newspaper and magazine articles about UFO's that I'd collected. In return I received the latest information on

---

European sightings - sightings that never were released and that we never received at ATIC through official channels.

Ever since the fateful day when Lieutenant Jerry Cummings dropped his horn rimmed glasses down on his nose, tipped his head forward, peered at Major General Cabell over his glasses and, acting not at all like a first lieutenant, said that the UFO investigation was all fouled up, Project Grudge had been gaining prestige. Lieutenant Colonel Rosengarten's promise that I'd be on the project for only a few months went the way of all military promises. By March 1952, Project Grudge was no longer just a project within a group; we had become a separate organization, with the formal title of the Aerial Phenomena Group. Soon after this step-up in the chain of command the project code name was changed to Blue Book. The word "Grudge" was no longer applicable. For those people who like to try to read a hidden meaning into a name, I'll say that the code name Blue Book was derived from the title given to college tests. Both the tests and the project had an abundance of equally confusing questions.

Project Blue Book had been made a separate group because of the steadily increasing number of reports we were receiving. The average had jumped from about ten a month to twenty a month since December 1951. In March of 1952 the reports slacked off a little, but April was a big month. In April we received ninety-nine reports.

On April 1, Colonel S. H. Kirkland and I went to Los Angeles on business. Before we left ATIC we had made arrangements to attend a meeting of the Civilian Saucer Investigators, a now defunct organization that was very active in 1952.

They turned out to be a well-meaning but Don Quixote-type group of individuals. As soon as they outlined their plans for attempting to solve the UFO riddle, it was obvious that they would fail. Project Blue Book had the entire Air Force, money, and enthusiasm behind it and we weren't getting any answers yet. All this group had was the enthusiasm.

The highlight of the evening wasn't the Civilian Saucer Investigators, however; it was getting a chance to read Ginna's UFO article in an advance copy of Life magazine that the organization had obtained - the article written from the material Bob Ginna had been researching for over a year. Colonel Kirkwood took one long look at the article, sidled up to me, and said, "We'd better get back to Dayton quick; you're going to be busy." The next morning at dawn I was sound asleep on a United Airlines DC-6, Dayton bound.

The Life article undoubtedly threw a harder punch at the American public than any other UFO article ever written. The title alone, "Have

---

We Visitors from Outer Space?" was enough. Other very reputable magazines, such as True, had said it before, but coming from Life, it was different. Life didn't say that the UFO's were from outer space; it just said maybe. But to back up this "maybe," it had quotes from some famous people. Dr. Walter Riedel, who played an important part in the development of the German V-2 missile and is presently the director of rocket engine research for North American Aviation Corporation, said he believed that the UFO's were from outer space. Dr. Maurice Biot, one of the world's leading aerodynamicists, backed him up.

But the most important thing about the Life article was the question in the minds of so many readers: "Why was it written?" Life doesn't go blasting off on flights of space fancy without a good reason. Some of the readers saw a clue in the author's comments that the hierarchy of the Air Force was now taking a serious look at UFO reports. "Did the Air Force prompt Life to write the article?" was the question that many people asked themselves.

When I arrived at Dayton, newspapermen were beating down the door. The official answer to the Life article was released through the Office of Public Information in the Pentagon: "The article is factual, but Life's conclusions are their own." In answer to any questions about the article's being Air Force inspired, my weasel worded answer was that we had furnished Life with some raw data on specific sightings.

My answer was purposely weasel worded because I knew that the Air Force had unofficially inspired the Life article. The "maybe they're interplanetary" with the "maybe" bordering on "they are" was the personal opinion of several very high-ranking officers in the Pentagon - so high that their personal opinion was almost policy. I knew the men and I knew that one of them, a general, had passed his opinions on to Bob Ginna.

Oddly enough, the Life article did not cause a flood of reports. The day after the article appeared we got nine sightings, which was unusual, but the next day they dropped off again.

The number of reports did take a sharp rise a few days later, however. The cause was the distribution of an order that completed the transformation of the UFO from a bastard son to the family heir. The piece of paper that made Project Blue Book legitimate was Air Force Letter 200-5, Subject: Unidentified Flying Objects. The letter, which was duly signed and sealed by the Secretary of the Air

Force, in essence stated that UFO's were not a joke, that the Air Force was making a serious study of the problem, and that Project Blue Book was responsible for the study. The letter stated that the commander of every Air Force

---

installation was responsible for forwarding all UFO reports to ATIC by wire, with a copy to the Pentagon. Then a more detailed report would be sent by airmail. Most important of all, it gave Project Blue Book the authority to directly contact any Air Force unit in the United States without going through any chain of command. This was almost unheard of in the Air Force and gave our project a lot of prestige.

The new reporting procedures established by the Air Force letter greatly aided our investigation because it allowed us to start investigating the better reports before they cooled off. But it also had its disadvantages. It authorized the sender to use whatever priority he thought the message warranted. Some things are slow in the military, but a priority message is not one of them. When it comes into the message center, it is delivered to the addressee immediately, and for some reason, all messages reporting UFO's seemed to arrive between midnight and 4:00 A.M. I was considered the addressee on all UFO reports. To complicate matters, the messages were usually classified and I would have to go out to the air base and personally sign for them.

One such message came in about 4:30 A.M. on May 8, 1952. It was from a io station in Jackso ville, Florida, and had been forwarded over the Flight teletype net. I received the usual telepho ne call from the teletype room at Wright-Patterson, I think I got dressed, and I went out and picked up the message. As I signed for it I remember the night man in the teletype room said, "This is a lulu, Captain."

It was a lulu. About one o'clock that morning a Pan-American airlines DC-4 was flying south toward Puerto Rico. A few hours after it had left New York City it was out over the Atlantic Ocean, about 600 miles off Jacksonville, Florida, flying at 8,000 feet. It was a pitch-black night; a high overcast even cut out the glow from the stars. The pilot and copilot were awake but really weren't concentrating on looking for other aircraft because they had just passed into the San Juan Oceanic Control Area and they had been advised by radio that there were no other air planes in the area. The copilot was turning around to look at number four engine when he noticed a light up ahead. It looked like the taillight of another airplane. He watched it closely for a few seconds since no other airplanes were supposed to be in the area. He glanced out at number four engine for a few seconds, looked back, and he saw that the light was in about the same position as when he'd first seen it. Then he looked down at the prop controls, synchronized the engines, and looked up again. In the few seconds that he had glanced away from the light, it had moved to the right so that it was now directly ahead of the DC-4, and it had increased in size. The copilot reached over and slapped the pilot

---

on the shoulder and pointed. Just at that instant the light began to get bigger and bigger until it was "ten times the size of a landing light of an airplane." It continued to close in and with a flash it streaked by the DC-4's left wing. Before the crew could react and say anything, two more smaller balls of fire flashed by. Both pilots later said that they sat in their seats for several seconds with sweat trickling down their backs.

It was one of these two pilots who later said, "Were you ever traveling along the highway about 70 miles an hour at night, have the car that you were meeting suddenly swerve over into your lane and then cut back so that you just miss it by inches? You know the sort of sick, empty feeling you get when it's all over? That's just the way we felt."

As soon as the crew recovered from the shock, the pilot picked up his mike, called Jacksonville Radio, and told them about the incident. Minutes later we had the report. The next afternoon Lieutenant Kerry Rothstien, who had replaced Lieutenant Metscher on the project, was on his way to New York to meet the pilots when they returned from Puerto Rico.

When Kerry talked to the two pilots, they couldn't add a great deal to their original story. Their final comment was the one we all had heard so many times, "I always thought these people who reported flying saucers were crazy, but now I don't know."

When Lieutenant Rothstien returned to Dayton he triple checked with the CAA for aircraft in the area - but there were none. Could there have been airplanes in the area that CAA didn't know about? The answer was almost a flat "No." No one would fly 600 miles off the coast without filing a flight plan; if he got into trouble or went down, the Coast Guard or Air Rescue Service would have no idea where to look.

Kerry was given the same negative answer when he checked on surface shipping.

The last possibility was that the UFO's were meteors, but several points in the pilots' story ruled these out. First, there was a solid overcast at about 18,000 feet. No meteor cruises along straight and level below 18,000 feet. Second, on only rare occasions have meteors been seen traveling three in trail. The chances of seeing such a phenomenon are well over one in a billion.

Some people have guessed that some kind of an atmospheric phenomenon can form a "wall of air" ahead of an airplane that will act as a mirror and that lights seen at night by pilots are nothing more than the reflection of the airplane's own lights. This could be true in some cases, but to have a reflection you must have a light to reflect. There

---

are no lights on an airplane that even approach being "ten times the size of a landing light."

What was it? I know a colonel who says it was the same thing that the two Eastern Airlines' pilots, Clarence Chiles and John Whitted, saw near Montgomery, Alabama, on July 24, 1948, and he thinks that Chiles and Whitted saw a spaceship.

Reports for the month of April set an all time high. These were all reports that came from military installations. In addition, we received possibly two hundred letters reporting UFO's, but we were so busy all we could do was file them for future reference.

In May 1952 I'd been out to George AFB in California investigating a series of sightings and was on my way home. I remember the flight to Dayton because the weather was bad all the way. I didn't want to miss my connecting flight in Chicago, or get grounded, because I had faithfully promised my wife that we would go out to dinner the night that I returned to Dayton. I'd called her from Los Angeles to tell her that I was coming in, and she had found a baby sitter and had dinner reservations. I hadn't been home more than about two days a week for the past three months, and she was looking forward to going out for the evening.

I reached Dayton about midmorning and went right out to the base. When I arrived at the office, my secretary was gone but there was a big note on my desk: "Call Colonel Dunn as soon as you get in."

I called Colonel Dunn; then I called my wife and told her to cancel the baby sitter, cancel the dinner reservations, and pack my other bag. I had to go to Washington.

While I'd been in California, Colonel Dunn had received a call from General Samford's office. It seems that a few nights before, one of the top people in the Central Intelligence Agency was having a lawn party at his home just outside Alexandria, Virginia. A number of notable personages were in attendance and they had seen a flying saucer. The report had been passed down to Air Force intelligence, and due to the quality of the brass involved, it was "suggested" that I get to Washington on the double and talk to the host of the party. I was at his office before 5:00 P.M. and got his report.

About ten o'clock in the evening he and two other people were standing near the edge of his yard talking; he happened to be facing south, looking off across the countryside. He digressed a bit from his story to explain that his home is on a hilltop in the country, and when looking south, he had a view of the entire countryside. While he was talking to the two other people he noticed a light approaching from the west. He had assumed it was an airplane and had casually watched it, but

---

when the light got fairly close, the CIA man said that he suddenly realized there wasn't any sound associated with it. If it were an airplane it would have been close enough for him to hear even above the hum of the guests' conversations. He had actually quit talking and was looking at the light when it stopped for an instant and began to climb almost vertically. He said something to the other guests, and they looked up just in time to see the light finish its climb, stop, and level out. They all watched it travel level for a few seconds, then go into a nearly vertical dive, level out, and streak off to the east.

Most everyone at the party had seen the light before it disappeared, and within minutes several friendly arguments as to what it was had developed, I was told. One person thought it was a lighted balloon, and a retired general thought it was an airplane. To settle the arguments, they had made a few telephone calls. I might add that these people were such that the mention of their names on a telephone got quick results. Radar in the Washington area said that there had been no airplanes flying west to east south of Alexandria in the past hour. The weather station at Bolling AFB said that there were no balloons in the area, but as a double check the weather people looked at their records of high altitude winds. It couldn't have been a balloon because none of the winds up to 65,000 feet were blowing from west to east - and to be able to see a light on a balloon, it has to be well below 65,000 feet; the man from CIA told me that they had even considered the possibility that the UFO was a meteor and that the "jump" had been due to some kind of an atmospheric distortion. But the light had been in sight too long to be a meteor. He added that an army chaplain and two teetotaler guests had also seen the light jump.

There wasn't much left for me to do when I finished talking to the man. He and his guests had already made all of the checks that I'd have made. All I could do was go back to Dayton, write up his report, and stamp it "Unknown."

Back in March, when it had become apparent that the press was reviving its interest in UFO's, I had suggested that Project Blue Book subscribe to a newspaper clipping. Such a service could provide several things. First, it would show us exactly how much publicity the UFO's were getting and what was being said, and it would give us the feel of the situation. Then it would also provide a lot of data for our files. In many cases the newspapers got reports that didn't go to the Air Force. Newspaper reporters rival any intelligence officer when it comes to digging up facts, and there was always the possibility that they would uncover and print something we'd missed. This was especially true in the few

---

cases of hoaxes that always accompany UFO publicity. Last, it would provide us with material on

which to base a study of the effect of newspaper publicity upon the number and type of UFO reports.

Colonel Dunn liked the idea of the clipping service, and it went into effect soon after the first publicity had appeared. Every three or four days we would get an envelope full of clippings. In March the clipping service was sending the clippings to us in letter sized envelopes. The envelopes were thin - maybe there would be a dozen or so clippings in each one. Then they began to get thicker and thicker, until the people who were doing the clipping switched to using manila envelopes. Then the manila envelopes began to get thicker and thicker. By May we were up to old shoe boxes. The majority of the newspaper stories in the shoe boxes were based on material that had come from ATIC.

All of these inquiries from the press were adding to Blue Book's work load and to my problems. Normally a military unit such as ATIC has its own public information officer, but we had none so I was it. I was being quoted quite freely in the press and was repeatedly being snarled at by someone in the Pentagon. It was almost a daily occurrence to have people from the "puzzle palace" call and indignantly ask, "Why did you tell them that?" They usually referred to some bit of information that somebody didn't think should have been released. I finally gave up and complained to Colonel Dunn. I suggested that any contacts with the press be made through the Office of Public Information in the Pentagon. These people were trained and paid to do this job; I wasn't. Colonel Dunn heartily agreed because every time I got chewed out he at least got a dirty look.

Colonel Dunn called General Samford's office and they brought in General Sory Smith of the Department of Defense, Office of Public Information. General Smith appointed a civilian on the Air Force Press Desk, Al Chop, to handle all inquiries from the press. The plan was that Al would try to get his answers from Major Dewey Fournet, Blue Book's liaison officer in the Pentagon, and if Dewey didn't have the answer, Al had permission to call me.

This arrangement worked out fine because Al Chop had been through previous UFO publicity battles when he was in the Office of Public Information at Wright Field.

The interest in the UFO's that was shown by the press in May was surpassed only by the interest of the Pentagon. Starting in May, I gave on the average of one briefing in Washington every two weeks, and there was always a full house. From the tone of the official comments to the public about UFO's, it would indicate that there wasn't a great deal of

---

interest, but nothing could be further from the truth. People say a lot of things behind a door bearing a sign that reads "Secret Briefing in Progress."

After one of the briefings a colonel (who is now a brigadier general) presented a plan that called for using several flights of F-94C jet interceptors for the specific purpose of trying to get some good photographs of UFO's. The flight that he proposed would be an operational unit with six aircraft - two would be on constant alert. The F-94C's, then the hottest operational jet we had, would be stripped of all combat gear to give them peak performance, and they would carry a special camera in the nose. The squadrons would be located at places in the United States where UFO's were most frequently seen.

The plan progressed to the point of estimating how soon enough airplanes for two flights could be stripped, how soon special cameras could be built, and whether or not two specific Air Force bases in the U.S. could support the units.

Finally the colonel's plan was shelved, but not because he was considered to be crazy. After considerable study and debate at high command level, it was decided that twelve F-94C's couldn't be

spared for the job and it would have been ineffective to use fewer airplanes.

The consideration that the colonel's plan received was an indication of how some of the military people felt about the importance of finding out exactly what the UFO's really were. And in the discussions the words "interplanetary craft" came up more than once.

Requests for briefings came even from the highest figure in the Air Force, K. Finletter, then the Se cretary for Air. On May 8, 1952, Lieutenant Colonel R. J. Taylor of Colonel Dunn's staff and I presented an hour-long briefing to Secretary Finletter and his staff. He listened intently and asked several questions about specific sightings when the briefing was finished. If he was at all worried about the UFO's he certainly didn't show it. His only comment was, "You're doing a fine job, Captain. It must be interesting. Thank you."

Then he made the following statement for the press:

"No concrete evidence has yet reached us either to prove or disprove the existence of the so-called flying saucers. There remain, however, a number of sightings that the Air Force investigators have been unable to explain. As long as this is true, the Air Force will continue to study flying saucer reports."

In May 1952, Project Blue Book received seventy-nine UFO reports compared to ninety-nine in April. It looked as if we'd passed the peak and were now on the downhill side. The 178 reports of the past two

---

months, not counting the thousand or so letters that we'd received directly from the public, had piled up a sizable backlog since we'd had time to investigate and analyze only the better reports. During June we planned to clear out the backlog, and then we could relax.

But never underestimate the power of a UFO. In June the big flap hit - they began to deliver clippings in big cardboard cartons.

CHAPTER ELEVEN

The Big Flap

In early June 1952, Project Blue Book was operating according to the operational plan that had been set up in January 1952. It had taken six months to put the plan into effect, and to a person who has never been indoctrinated into the ways of the military, this may seem like a long time. But consult your nearest government worker and you'll find that it was about par for the red tape course.

We had learned early in the project that about 60 per cent of the reported UFO's were actually balloons, airplanes, or astronomical bodies viewed under unusual conditions, so our operational plan was set up to quickly weed out this type of report. This would give us more time to concentrate on the unknown cases.

To weed out reports in which balloons, airplanes, and astronomical bodies were reported as UFO's, we utilized a flow of data that continually poured into Project Blue Book. We received position reports on all flights of the big skyhook balloons and, by merely picking up the telephone, we could get the details about the flight of any other research balloon or regularly scheduled weather balloon in the United States. The location of aircraft in an area where a UFO had been reported was usually checked by the intelligence officer who made the report, but we double checked his findings by requesting the location of flights from CAA and military air bases. Astronomical almanacs and journals, star charts, and data that we got from observatories furnished us with clues to UFO's that might be astronomical bodies. All of our investigations in this category of report were double checked by Project Bear's astronomer.

Then we had our newspaper clipping file, which gave us many clues. Hydrographic bulletins and Notams (notices to airmen), published by

---

the government, sometimes gave us other clues. Every six hours we received a complete set of weather data. A dozen or more other sources of data that might shed some light on a reported UFO were continually being studied.

To get all this information on balloons, aircraft, astronomical bodies, and what have you, I had to co-ordinate Project Blue Book's operational plan with the Air Force's Air Weather Service, Flight Service, Research and Development Command, and Air Defense Command with the Navy's Office of Naval Research, and the aerology branch of the Bureau of Aeronautics; and with the Civil Aeronautics Administration, Bureau of Standards, several astronomical observatories, and our own Project Bear. Our entire operational plan was similar to a Model A Ford I had while I was in high school - just about the time you would get one part working, another part would break down.

When a report came through our screening process and still had the "Unknown" tag on it, it went to the MO file, where we checked its characteristics against other reports. For example, on May 25 we had a report from Randolph AFB, Texas. It went through the screening process and came out "Unknown"; it wasn't a balloon, airplane, or astronomical body. So then it went to the MO file. It was a flock of ducks reflecting the city lights. We knew that the Texas UFO's were ducks because our MO file showed that we had an identical report from Moorhead, Minnesota, and the UFO's at Moorhead were ducks.

Radar reports that came into Blue Book went to the radar specialists of ATIC's electronics branch.

Sifting through reams of data in search of the answers to the many reports that were pouring in each

week required many hours of overtime work, but when a report came out with the final conclusion, "Unknown," we were sure that it was unknown.

To operate Project Blue Book, I had four officers, two airmen, and two civilians on my permanent staff. In addition, there were three scientists employed full time on Project Bear, along with several others who worked part time. In the Pentagon, Major Fournet, who had taken on the Blue Book liaison job as an extra duty, was now spending full time on it. If you add to this the number of intelligence officers all over the world who were making preliminary investigations and interviewing UFO observers, Project Blue Book was a sizable effort.

Only the best reports we received could be personally investigated in the field by Project Blue Book personnel. The vast majority of the reports had to be evaluated on the basis of what the intelligence officer who had written the report had been able to uncover, or what data we

---

could get by telephone or by mailing out a questionnaire. Our instructions for "what to do before the Blue Book man arrives," which had been printed in many service publications, were beginning to pay off and the reports were continually getting more detailed.

The questionnaire we were using in June 1952 was the one that had recently been developed by Project Bear. Project Bear, along with psychologists from a Midwestern university, had worked on it for five months. Many test models had been tried before it reached its final form - the standard questionnaire that Blue Book is using today.

It ran eight pages and had sixty eight questions which were booby- trapped in a couple of places to give us a cross check on the reliability of the reporter as an observer. We received quite a few questionnaires answered in such a way that it was obvious that the observer was drawing heavily on his imagination.

From this standard questionnaire the project worked up two more specialized types. One dealt with radar sightings of UFO's, the other with sightings made from airplanes.

In Air Force terminology a "flap" is a condition, or situation, or state of being of a group of people characterized by an advanced degree of confusion that has not quite yet reached panic proportions. It can be brought on by any number of things, including the unexpected visit of an inspecting general, a major administrative reorganization, the arrival of a hot piece of intelligence information, or the dramatic entrance of a well stacked female into an officers' club bar.

In early June 1952 the Air Force was unknowingly in the initial stages of a flap - a flying saucer flap - the flying saucer flap of 1952. The situation had never been duplicated before, and it hasn't been duplicated since. All records for the number of UFO reports were not just broken, they were disintegrated. In 1948, 167 UFO reports had come into ATIC; this was considered a big year. In June 1952 we received 149. During the four years the Air Force had been in the UFO business, 615 reports had been collected. During the "Big Flap" our incoming message log showed 717 reports.

To anyone who had anything to do with flying saucers, the summer of 1952 was just one big swirl of UFO reports, hurried trips, midnight telephone calls, reports to the Pentagon, press interviews, and very little sleep.

If you can pin down a date that the Big Flap started, it would probably be about June 1.

It was also on June 1 that we received a good report of a UFO that had been picked up on radar. June 1 was a Sunday, but I'd been at the

142.The Report on Unidentified Flying Objects

office all day getting ready to go to Los Alamos the next day. About 5:00 P.M. the telephone rang and the operator told me that I had a long- distance call from California. My caller was the chief of a radar test section for Hughes Aircraft Company in Los Angeles, and he was very excited about a UFO he had to report.

That morning he and his test crew had been checking out a new late- model radar to get it ready for some tests they planned to run early Monday morning. To see if their set was functioning properly, they had been tracking jets in the Los Angeles area. About midmorning, the Hughes test engineer told me, the jet traffic had begun to drop off, and they were about ready to close down their operation when one of the crew picked up a slow moving target coming across the San Gabriel Mountains north of Los Angeles. He tracked the target for a few minutes and, from the speed and altitude, decided that it was a DC-3. It was at 11,000 feet and traveling about 180 miles an hour toward Santa Monica. The operator was about ready to yell at the other crew members to shut off the set when he noticed something mighty odd - there was a big gap between the last and the rest of the regularly spaced bright spots on the radarscope. The man on the scope called the rest of the crew in because DC-3's just don't triple their speed. They watched the target as it made a turn and started to climb over Los Angeles. They plotted one, two, three, and then four points during the target's climb; then one of the crew grabbed a slide rule. Whatever it was, it was climbing 35,000 feet per minute and traveling about 550 miles an hour in the process. Then as they watched the scope, the target leveled out for a few seconds, went into a high speed dive, and again leveled out at 55,000 feet. When they lost the target, it was heading southeast somewhere near Riverside, California.

During the sighting my caller told me that when the UFO was only about ten miles from the radar site two of the crew had gone outside but they couldn't see anything. But, he explained, even the high flying jets that they had been tracking hadn't been leaving vapor trails.

The first thing I asked when the Hughes test engineer finished his story was if the radar set had been working properly. He said that as soon as the UFO had left the scope they had run every possible check on the radar and it was O.K.

I was just about to ask my caller if the target might not have been some experimental airplane from Edwards AFB when he second guessed me. He said that after sitting around looking at each other for about a minute, someone suggested that they call Edwards. They did, and Edwards' flight operations told them that they had nothing in the area.

The Big Flap.143

I asked him about the weather. The target didn't look like a weather target was the answer, but just to be sure, the test crew had checked. One of his men was an electronics/weather specialist whom he had hired because of his knowledge of the idiosyncrasies of radar under certain weather conditions. This man had looked into the weather angle. He had gotten the latest weather data and checked it, but there wasn't the slightest indication of an inversion or any other weather that would cause a false target.

Just before I hung up I asked the man what he thought he and his crew had picked up, and once again I got the same old answer: "Yesterday at this time any of us would have argued for hours that flying saucers were a bunch of nonsense but now, regardless of what you'll say about what we saw, it was something damned real."

I thanked the man for calling and hung up. We couldn't make any more of an analysis of this report

than had already been made, it was another unknown.

I went over to the MO file and pulled out the stack of cards behind the tab "High Speed Climb." There must have been at least a hundred cards, each one representing a UFO report in which the reported object made a high speed climb. But this was the first time radar had tracked a UFO during a climb.

During the early part of June, Project Blue Book took another jump up on the organizational chart. A year before the UFO project had consisted of one officer. It had risen from the one man operation to a project within a group, then to a group, and now it was a section. Neither Project Sign nor the old Project Grudge had been higher than the project-within-a-group level. The chief of a group normally calls for a lieutenant colonel, and since I was just a captain this caused some consternation in the ranks. There was some talk about putting Lieutenant Colonel Ray Taylor of Colonel Dunn's staff in charge. Colonel Taylor was very much interested in UFO's; he had handled some of the press contacts prior to turning this function over to the Pentagon and had gone along with me on briefings, so he knew something about the project. But in the end Colonel Donald Bower, who was my division chief. decided rank be damned, and I stayed on as chief of Project Blue Book.

The location within the organizational chart is always indicative of the importance placed on a project. In June 1952 the Air Force was taking the UFO problem seriously. One of the reasons was that there were a lot of good UFO reports coming in from Korea. Fighter pilots reported seeing silver colored spheres or disks on several occasions, and radar in Japan, Okinawa, and in Korea had tracked unidentified targets.

144.The Report on Unidentified Flying Objects

In June our situation map, on which we kept a plot of all of our sightings, began to show an ever so slight trend toward reports beginning to bunch up on the east coast. We discussed this build-up, but we couldn't seem to find any explainable reason for it so we decided that we'd better pay special attention to reports coming from the eastern states.

I had this build-up of reports in mind one Sunday night, June 15 to be exact, when the OD at ATIC called me at home and said that we were getting a lot of reports from Virginia. Each report by itself wasn't too good, the OD told me, but together they seemed to mean something. He suggested that I come out and take a look at them - so I did.

Individually they weren't too good, but when I lined them up chronologically and plotted them on a map they took the form of a hot report.

At 3:40 P.M. a woman at Unionville, Virginia, had reported a "very shiny object" at high altitude.

At 4:20 P.M. the operators of the CAA radio facility at Gordonsville, Virginia, had reported that they saw a "round, shiny object." It was southeast of their station, or directly south of Unionville.

At 4:25 P.M. the crew of an airliner northwest of Richmond, Virginia, reported a "silver sphere at eleven o'clock high."

At 4:43 P.M. a Marine pilot in a jet tried to intercept a "round shiny sphere" south of Gordonsville.

At 5:43 P.M. an Air Force T-33 jet tried to intercept a "shiny sphere" south of Gordonsvllle. He got above 35,000 feet and the UFO was still far above him.

At 7:35 P.M. many people in Blackstone, Virginia, about 80 miles south of Gordonsville, reported it. It was a "round, shiny object with a golden glow" moving from north to south. By this time radio

commentators in central Virginia were giving a running account of the UFO's progress.

At 7:59 P.M. the people in the CAA radio facility at Blackstone saw it.

At 8:00 P.M. jets arrived from Langley AFB to attempt to intercept it, but at 8:05 P.M. it disappeared.

This was a good report because it was the first time we ever received a series of reports on the same object, and there was no doubt that all these people had reported the same object. Whatever it was, it wasn't moving too fast, because it had traveled only about 90 miles in four hours and twenty five minutes. I was about ready to give up until morning and go home when my wife called. The local Associated Press man had called our home and she assumed that it was about this sighting. She had just said that I was out so he might not call the base. I decided that I'd better keep working so I'd have the answer in time to keep the

---

story out of the papers. A report like this could cause some excitement. The UFO obviously wasn't a planet because it was moving from north to south, and it was too slow to be an airplane. I called the balloon- plotting center at Lowry AFB, where the tracks of the big skyhook balloons are plotted, but the only big balloons in the air were in the western United States, and they were all accounted for.

It might have been a weather balloon. The wind charts showed that the high altitude winds were blowing in different directions at different altitudes above 35,000 feet, so there was no one flow of air that could have brought a balloon in from a certain area, and I knew that the UFO had to be higher than 35,000 feet because the T-33 jet had been this high and the UFO was still above it. The only thing to do was to check with all of the weather stations in the area. I called Richmond, Roanoke, several places in the vicinity of Washington, D.C., and four or five other weather stations, but all of their balloons were accounted for and none had been anywhere close to the central part of Virginia.

A balloon can travel only so far, so there was no sense in checking stations too far away from where the people had seen the UFO, but I took a chance and called Norfolk; Charleston, West Virginia; Altoona, Pennsylvania; and other stations within a 150 mile radius of Gordonsville and Blackstone. Nothing.

I still thought it might be a balloon, so I started to call more stations. At Pittsburgh I hit a lead. Their radiosonde balloon had gone up to about 60,000 feet and evidently had sprung a slow leak because it had leveled off at that altitude. Normally balloons go up till they burst at 80,000 or 90,000 feet. The weather forecaster at Pittsburgh said that their records showed they had lost contact with the balloon when it was about 60 miles southeast of their station. He said that the winds at 60,000 feet were constant, so it shouldn't be too difficult to figure out where the balloon went after they had lost it. Things must be dull in Pittsburgh at 2:00 A.M. on Monday mornings, because he offered to plot the course that the balloon probably took and call me back.

In about twenty minutes I got my call. It probably was their balloon, the forecaster said. Above 50,000 feet there was a strong flow of air southeast from Pittsburgh, and this fed into a stronger southerly flow that was paralleling the Atlantic coast just east of the Appalachian Mountains. The balloon would have floated along in this flow of air like a log floating down a river. As close as he could estimate, he said, the balloon would arrive in the Gordonsville-Blackstone area in the late afternoon or early evening. This was just about the time the UFO had arrived.

"Probably a balloon" was a good enough answer for me.

The next morning at 8:00 A.M., Al Chop called from the Pentagon to tell me that people were crawling all over his desk wanting to know about a sighting in Virginia.

The reports continued to come in. At Walnut Lake, Michigan, a group of people with binoculars watched a "soft white light" go back and forth across the western sky for nearly an hour. A UFO "paced" an Air Force B-25 for thirty minutes in California. Both of these happened on June 18, and although we checked and rechecked them, they came out as unknowns.

On June 19 radar at Goose AFB in Newfoundland picked up some odd targets. The targets came across the scope, suddenly enlarged, and then became smaller again. One unofficial comment was that the object was flat or disk shaped, and that the radar target had gotten bigger because the disk had banked in flight to present a greater reflecting surface. ATIC's official comment was weather.

Goose AFB was famous for unusual reports. In early UFO history someone had taken a very unusual colored photo of a "split cloud." The photographer had seen a huge ball of fire streak down through the sky and pass through a high layer of stratus clouds. As the fireball passed through the cloud it cut out a perfect swath. The conclusion was that the fireball was a meteor, but the case is still one of the most interesting in the file because of the photograph.

Then in early 1952 there was another good report from this area. It was an unknown.

The incident started when the pilot of an Air Force C-54 transport radioed Goose AFB and said that at 10:42 P.M. a large fireball had buzzed his airplane. It had come in from behind the C-54, and nobody had seen it until it was just off the left wing. The fireball was so big that the pilot said it looked as if it was only a few hundred feet away. The C-54 was 200 miles southwest, coming into Goose AFB from Westover AFB, Massachusetts, when the incident occurred. The base officer-of-the-day, who was also a pilot, happened to be in the flight operations office at Goose when the message came in and he overheard the report. He stepped outside, walked over to his command car, and told his driver about the radio message, so the driver got out and both of them looked toward the south. They searched the horizon for a few seconds; then suddenly they saw a light closing in from the southwest. Within a second, it was near the airfield. It had increased in size till it was as big as a "golf ball at arm's length," and it looked like a big ball of fire. It was so low that both the OD and his driver dove under

---

the command car because they were sure it was going to hit the airfield. When they turned and looked up they saw the fireball make a 90 degree turn over the airfield and disappear into the northwest. The time was 10:47 P.M.

The control tower operators saw the fireball too, but didn't agree with the OD and his driver on how low it was. They did think that it had made a 90 degree turn and they didn't think that it was a meteor. In the years they'd been in towers they'd seen hundreds of meteors, but they'd never seen anything like this, they reported.

And reports continued to pour into Project Blue Book. It was now not uncommon to get ten or eleven wires in one day. If the letters reporting UFO sightings were counted, the total would rise to twenty or thirty a day. The majority of the reports that came in by wire could be classified as being good. They were reports made by reliable people and they were full of details. Some were reports of balloons, airplanes, etc., but the percentage of unknowns hovered right around 22 per cent.

To describe and analyze each report, or even the unknowns, would require a book the size of an unabridged dictionary, so I am covering only the best and most representative cases.

One day in mid June, Colonel Dunn called me. He was leaving for Washington and he wanted me to come in the next day to give a briefing at a meeting. By this time I was taking these briefings as a matter of course. We usually gave the briefings to General Garland and a general from the Research and Development Board, who passed the information on to General Samford, the Director of Intelligence. But this time General Samford, some of the members of his staff, two Navy captains from the Office of Naval Intelligence, and some people I can't name were at the briefing.

When I arrived in Washington, Major Fournet told me that the purpose of the meetings, and my briefing, was to try to find out if there was any significance to the almost alarming increase in UFO reports over the past few weeks.

By the time that everyone had finished signing into the briefing room in the restricted area of the fourth floor "B" ring of the Pentagon, it was about 9:15 A.M. I started my briefing as soon as everyone was seated.

I reviewed the last month's UFO activities; then I briefly went over the more outstanding "Unknown" UFO reports and pointed out how they were increasing in number - breaking all previous records. I also pointed out that even though the UFO subject was getting a lot of publicity, it wasn't the scare type publicity that had accompanied the earlier flaps - in fact, much of the present publicity was anti saucer.

148.The Report on Unidentified Flying Objects

Then I went on to say that even though the reports we were getting were detailed and contained a great deal of good data, we still had no proof the UFO's were anything real. We could, I said, prove that all UFO reports were merely the misinterpretation of known objects if we made a few assumptions.

At this point one of the colonels on General Samford's staff stopped me. "Isn't it true," he asked, "that if you make a few positive assumptions instead of negative assumptions you can just as easily prove that the UFO's are interplanetary spaceships? Why, when you have to make an assumption to get an answer to a report, do you always pick the assumption that proves the UFO's don't exist?"

You could almost hear the colonel add, "O.K., so now I've said it."

For several months the belief that Project Blue Book was taking a negative attitude and the fact that the UFO's could be interplanetary spaceships had been growing in the Pentagon, but these ideas were usually discussed only in the privacy of offices with doors that would close tight.

No one said anything, so the colonel who had broken the ice plunged in. He used the sighting from Goose AFB, where the fireball had buzzed the C-54 and sent the OD and his driver belly whopping under the command car as an example. The colonel pointed out that even though we had labeled the report "Unknown" it wasn't accepted as proof. He wanted to know why.

I said that our philosophy was that the fireball could have been two meteors: one that buzzed the C-54 and another that streaked across the airfield at Goose AFB. Granted a meteor doesn't come within feet of an airplane or make a 90 degree turn, but these could have been optical illusions of some kind. The crew of the C-54, the OD, his driver, and the tower operators didn't recognize the UFO's as meteors because they were used to seeing the normal "shooting stars" that are most commonly seen.

But the colonel had some more questions. "What are the chances of having two extremely

spectacular meteors in the same area, traveling the same direction, only five minutes apart?"

I didn't know the exact mathematical probability, but it was rather small, I had to admit.

Then he asked, "What kind of an optical illusion would cause a meteor to appear to make a 90 degree turn?"

I had asked our Project Bear astronomer this same question, and he couldn't answer it either. So the only answer I could give the colonel was, "I don't know."

The Big Flap.149

I felt as if I were on a witness stand being cross-examined, and that is exactly where I was, because the colonel cut loose.

"Why not assume a point that is more easily proved?" he asked. "Why not assume that the C-54 crew, the OD, his driver, and the tower operators did know what they were talking about? Maybe they had seen spectacular meteors during the hundreds of hours that they had flown at night and the many nights that they had been on duty in the tower. Maybe the ball of fire had made a 90 degree turn. Maybe it was some kind of an intelligently controlled craft that had streaked northeast across the Gulf of St. Lawrence and Quebec Province at 2,400 miles an hour.

"Why not just simply believe that most people know what they saw?" the colonel said with no small amount of sarcasm in his voice.

This last comment started a lively discussion, and I was able to retreat. The colonel had been right in a sense - we were being conservative, but maybe this was the right way to be. In any scientific investigation you always assume that you don't have enough proof until you get a positive answer. I don't think that we had a positive answer - yet.

The colonel's comments split the group, and a hot exchange of ideas, pros and cons, and insinuations that some people were imitating ostriches to keep from facing the truth followed.

The outcome of the meeting was a directive to take further steps to obtain positive identification of the UFO's. Our original idea of attempting to get several separate reports from one sighting so we could use triangulation to measure speed, altitude, and size wasn't working out. We had given the idea enough publicity, but reports where triangulation could be used were few and far between. Mr. or Mrs. Average Citizen just doesn't look up at the sky unless he or she sees a flash of light or hears a sound. Then even if he or she does look up and sees a UFO, it is very seldom that the report ever gets to Project Blue Book. I think that it would be safe to say that Blue Book only heard about 10 per cent of the UFO's that were seen in the United States.

After the meeting I went back to ATIC, and the next day Colonel Don Bower and I left for the west coast to talk to some people about how to get better UFO data. We brought back the idea of using an extremely long focal length camera equipped with a diffraction grating.

The cameras would be placed at various locations throughout the United States where UFO's were most frequently seen. We hoped that photos of the UFO's taken through the diffraction gratings would give us some proof one way or the other.

The diffraction gratings we planned to use over the lenses of the cameras were the same thing as prisms; they would split up the light

---

from the UFO into its component parts so that we could study it and determine whether it was a meteor, an airplane, or balloon reflecting sunlight, etc. Or we might be able to prove that the photographed UFO was a craft completely foreign to our knowledge.

A red-hot, A-1 priority was placed on the camera project, and a section at ATIC that developed special equipment took over the job of obtaining the cameras, or, if necessary, having them designed and built.

But the UFO's weren't waiting around till they could be photographed. Every day the tempo and confusion were increasing a little more.

By the end of June it was very noticeable that most of the better reports were coming from the eastern United States. In Massachusetts, New Jersey, and Maryland jet fighters had been scrambled almost nightly for a week. On three occasions radar equipped F-94's had locked on aerial targets only to have the lockon broken by the apparent violent maneuvers of the target.

By the end of June there was also a lull in the newspaper publicity about the UFO's. The forthcoming political conventions had wiped out any mention of flying saucers. But on July 1 there was a sudden outbreak of good reports. The first one came from Boston; then they worked down the coast.

About seven twenty five on the morning of July 1 two F-94's were scrambled to intercept a UFO that a Ground Observer Corps spotter reported was traveling southwest across Boston. Radar couldn't pick it up so the two airplanes were just vectored into the general area. The F-94's searched the area but couldn't see anything. We got the report at ATIC and would have tossed it out if it hadn't been for other reports from the Boston area at that same time.

One of these reports came from a man and his wife at Lynn, Massachusetts, nine miles northeast of Boston. At seven thirty they had noticed the two vapor trails from the climbing jet interceptors. They looked around the sky to find out if they could see what the jets were after and off to the west they saw a bright silver "cigar shaped object about six times as long as it was wide" traveling southwest across Boston. It appeared to be traveling just a little faster than the two jets. As they watched they saw that an identical UFO was following the first one some distance back. The UFO's weren't leaving vapor trails but, as the man mentioned in his report, this didn't mean anything because you can get above the vapor trail level. And the two UFO's appeared to be at a very high altitude. The two observers watched as the two F-94's searched back and forth far below the UFO's.

Then there was another report, also made at seven thirty. An Air

---

Force captain was just leaving his home in Bedford, about 15 miles northwest of Boston and straight west of Lynn, when he saw the two jets. In his report he said that he, too, had looked around the sky to see if he could see what they were trying to intercept when off to the east he saw a "silvery cigar shaped object" traveling south. His description of what he observed was almost identical to what the couple in Lynn reported except that he saw only one UFO.

When we received the report, I wanted to send someone up to Boston immediately in the hope of getting more data from the civilian couple and the Air Force captain; this seemed to be a tailor-made case for triangulation. But by July 1 we were completely snowed under with reports, and there just wasn't anybody to send. Then, to complicate matters, other reports came in later in the day.

Just two hours after the sighting in the Boston area Fort Monmouth, New Jersey, popped back into

UFO history. At nine thirty in the morning twelve student radar operators and three instructors were tracking nine jets on an SCR 584 radar set when two UFO targets appeared on the scope. The two targets came in from the northeast at a slow speed, much slower than the jets that were being tracked, hovered near Fort Monmouth at 50,000 feet for about five minutes, and then took off in a "terrific burst of speed" to the southwest.

When the targets first appeared, some of the class went outside with an instructor, and after searching the sky for about a minute, they saw two shiny objects in the same location as the radar showed the two unidentified targets to be. They watched the two UFO's for several minutes and saw them go zipping off to the southwest at exactly the same time that the two radar targets moved off the scope in that direction.

We had plotted these reports, the ones from Boston and the one from Fort Monmouth, on a map, and without injecting any imagination or wild assumptions, it looked as if two "somethings" had come down across Boston on a southwesterly heading, crossed Long Island, hovered for a few minutes over the Army's secret laboratories at Fort Monmouth, then proceeded toward Washington. In a way we half expected to get a report from Washington. Our expectations were rewarded because in a few hours a report arrived from that city.

A physics professor at George Washington University reported a "dull, gray, smoky colored" object which hovered north northwest of Washington for about eight minutes. Every once in a while, the professor reported, it would move through an arc of about 15 degrees to the right or left, but it always returned to its original position. While he was watching the UFO he took a 25 cent piece out of his pocket and held it at arm's length

---

so that he could compare its size to that of the UFO. The UFO was about half the diameter of the quarter. When he first saw the UFO, it was about 30 to 40 degrees above the horizon, but during the eight minutes it was in sight it steadily dropped lower and lower until buildings in downtown Washington blocked off the view.

Besides being an "Unknown," this report was exceptionally interesting to us because the sighting was made from the center of downtown Washington, D.C. The professor reported that he had noticed the UFO when he saw people all along the street looking up in the air and pointing. He estimated that at least 500 people were looking at it, yet his was the only report we received. This seemed to substantiate our theory that people are very hesitant to report UFO's to the Air Force. But they evidently do tell the newspapers because later on we picked up a short account of the sighting in the Washington papers. It merely said that hundreds of calls had been received from people reporting a UFO.

When reports were pouring in at the rate of twenty or thirty a day, we were glad that people were hesitant to report UFO's, but when we were trying to find the answer to a really knotty sighting we always wished that more people had reported it. The old adage of having your cake and eating it, too, held even for the UFO.

Technically no one in Washington, besides, of course, Major General Samford and his superiors, had anything to do with making policy decisions about the operation of Project Blue Book or the handling of the UFO situation in general. Nevertheless, everyone was trying to get into the act. The split in opinions on what to do about the rising tide of UFO reports, the split that first came out in the open at General Samford's briefing, was widening every day. One group was getting dead serious about the situation. They thought we now had plenty of evidence to back up an official statement that the UFO's were something real and, to be specific, not something from this earth. This group wanted Project Blue Book to quit spending time investigating reports from the standpoint of trying to

determine if the observer of a UFO had actually seen something foreign to our knowledge and start assuming that he or she had. They wanted me to aim my investigation at trying to find out more about the UFO. Along with this switch in operating policy, they wanted to clamp down on the release of information. They thought that the security classification of the project should go up to Top Secret until we had all of the answers, then the information should be released to the public. The investigation of UFO's along these lines should be a maximum effort, they thought, and their plans called for lining up many top scientists to devote their full time to the project. Someone once said that enthusiasm

---

is infectious, and he was right. The enthusiasm of this group took a firm hold in the Pentagon, at Air Defense Command Headquarters, on the Research and Development Board, and many other agencies throughout the government. But General Samford was still giving the orders, and he said to continue to operate just as we had - keeping an open mind to any ideas.

After the minor flurry of reports on July 1 we had a short breathing spell and found time to clean up a sizable backlog of reports. People were still seeing UFO's but the frequency of the sighting curve was dropping steadily. During the first few days of July we were getting only two or three good reports a day.

On July 5 the crew of a non-scheduled airliner made page two of many newspapers by reporting a UFO over the AEC's super secret Hanford, Washington, installation. It was a skyhook balloon. On the twelfth a huge meteor sliced across Indiana, southern Illinois, and Missouri that netted us twenty or thirty reports. Even before they had stopped coming in, we had confirmation from our astronomer that the UFO was a meteor.

But forty two minutes later there was a sighting in Chicago that wasn't so easily explained.

According to our weather records, on the night of July 12 it was hot in Chicago. At nine forty two there were at least 400 people at Montrose Beach trying to beat the heat. Many of them were lying down looking at the stars, so that they saw the UFO as it came in from the west north west, made a 180 degree turn directly over their heads, and disappeared over the horizon. It was a "large red light with small white lights on the side," most of the people reported. Some of them said that it changed to a single yellow light as it made its turn. It was in sight about five minutes, and during this time no one reported hearing any sound.

One of the people at the beach was the weather officer from O'Hare International Airport, an Air Force captain. He immediately called O'Hare. They checked on balloon flights and with radar, but both were negative; radar said that there had been no aircraft in the area of Montrose Beach for several hours.

I sent an investigator to Chicago, and although he came back with a lot of data on the sighting, it didn't add up to be anything known.

The next day Dayton had its first UFO sighting in a long time when a Mr. Roy T. Ellis, president of the Rubber Seal Products Company, and many other people, reported a teardrop shaped object that hovered over Dayton for several minutes about midnight. This sighting had an interesting twist because two years later I was in Dayton and stopped in at ATIC to see a friend who is one of the technical advisers at the center.

Naturally - the conversation got around to the subject of UFO's, and he asked me if I remembered this specific sighting. I did, so he went on to say that he and his wife had seen this UFO that night but they had never told anybody. He was very serious when he admitted that he had no idea what it could have been. Now I'd heard this statement a thousand times before from other people, but coming from this person, it was really something because he was as anti saucer as anyone I knew. Then he added, "From that time on I didn't think your saucer reporters were as crazy as I used to think they were."

The Dayton sighting also created quite a stir in the press. In conjunction with the sighting, the Dayton Daily Journal had interviewed Colonel Richard H. Magee, the Dayton-Oakwood civil defense director; they wanted to know what he thought about the UFO's. The colonel's answer made news: "There's something flying around in our skies and we wish we knew what it was."

When the story broke in other papers, the colonel's affiliation with civil defense wasn't mentioned, and he became merely "a colonel from Dayton." Dayton was quickly construed by the public to mean Wright- Patterson AFB and specifically ATIC. Some people in the Pentagon screamed while others gleefully clapped their hands. The gleeful handclaps were from those people who wanted the UFO's to be socially recognized, and they believed that if they couldn't talk their ideas into being they might be able to force them in with the help of this type of publicity.

The temporary lull in reporting that Project Blue Book had experienced in early July proved to be only the calm before the storm. By mid July we were getting about twenty reports a day plus frantic calls from intelligence officers all over the United States as every Air Force installation in the U.S. was being swamped with reports. We told the intelligence officers to send in the ones that sounded the best.

The build-up in UFO reports wasn't limited to the United States- every day we would receive reports from our air attaché in other countries. England and France led the field, with the South American countries running a close third. Needless to say, we didn't investigate or evaluate foreign reports because we had our hands full right at home.

Most of us were putting in fourteen hours a day, six days a week. It wasn't at all uncommon for Lieutenant Andy Flues, Bob Olsson, or Kerry Rothstien, my investigators, to get their sleep on an airliner going out or coming back from an investigation. TWA airliners out of Dayton were more like home than home. But we hadn't seen anything yet.

All the reports that were coming in were good ones, ones with no answers. Unknowns were running about 40 per cent. Rumors persist

---

that in mid July 1952 the Air Force was braced for an expected invasion by flying saucers. Had these rumormongers been at ATIC in mid July they would have thought that the invasion was already in full swing. And they would have thought that one of the beachheads for the invasion was Patrick AFB, the Air Force's Guided Missile Long Range Proving Ground on the east coast of Florida.

On the night of July 18, at ten forty five, two officers were standing in front of base operations at Patrick when they noticed a light at about a 45 degree angle from the horizon and off to the west. It was an amber color and "quite a bit brighter than a star." Both officers had heard flying saucer stories, and both thought the light was a balloon. But, to be comedians, they called to several more officers and airmen inside the operations office and told them to come out and "see the flying saucer." The people came out and looked. A few were surprised and took the mysterious light seriously, at the expense of considerable laughter from the rest of the group. The discussion about the light grew livelier and bets that it was a balloon were placed. In the meantime the light had drifted over the base, had stopped for about a minute, turned, and was now heading north. To settle the bet,

one of the officers stepped into the base weather office to find out about the balloon. Yes, one was in the air and being tracked by radar, he was told. The weather officer said that he would call to find out exactly where it was. He called and found out that the weather balloon was being tracked due west of the base and that the light had gone out about ten minutes before. The officer went back outside to find that what was first thought to be a balloon was now straight north of the field and still lighted. To add to the confusion, a second amber light had appeared in the west about 20 degrees lower than where the first one was initially seen, and it was also heading north but at a much greater speed. In a few seconds the first light stopped and started moving back south over the base.

While the group of officers and airmen were watching the two lights, the people from the weather office came out to tell the UFO observers that the balloon was still traveling straight west. They were just in time to see a third light come tearing across the sky, directly overhead, from west to east. A weatherman went inside and called the balloon tracking crew again - their balloon was still far to the west of the base.

Inside of fifteen minutes two more amber lights came in from the west, crossed the base, made a 180 degree turn over the ocean, and came back over the observers.

In the midst of the melee a radar set had been turned on but it couldn't pick up any targets. This did, however, eliminate the possibility of the

---

lights' being aircraft. They weren't stray balloons either, because the winds at all altitudes were blowing in a westerly direction. They obviously weren't meteors. They weren't searchlights on a haze layer because there was no weather conducive to forming a haze layer and there were no searchlights. They could have been some type of natural phenomenon, if one desires to take the negative approach. Or, if you take the positive approach, they could have been spaceships.

The next night radar at Washington National Airport picked up UFO's and one of the most highly publicized sightings of UFO history was in the making. It marked the beginning of the end of the Big Flap.

CHAPTER TWELVE

The Washington Merry-Go-Round

No flying saucer report in the history of the UFO ever won more world acclaim than the Washington National Sightings.

When radars at the Washington National Airport and at Andrews AFB, both close to the nation's capital, picked up UFO's, the sightings beat the Democratic National Convention out of headline space. They created such a furor that I had inquiries from the office of the President of the United States and from the press in London, Ottawa, and Mexico City. A junior sized riot was only narrowly averted in the lobby of the Roger Smith Hotel in Washington when I refused to tell U.S. newspaper reporters what I knew about the sightings.

Besides being the most highly publicized UFO sightings in the Air Force annals, they were also the most monumentally fouled-up messes that repose in the files. Although the Air Force said that the incident had been fully investigated, the Civil Aeronautics Authority wrote a formal report on the sightings, and numerous magazine writers studied them, the complete story has never fully been told. The pros have been left out of the con accounts, and the cons were neatly overlooked by the pro writers.

For a year after the twin sightings we were still putting little pieces in the puzzle.

In some aspects the Washington National Sightings could be classed as a surprise - we used this as an excuse when things got fouled up --- but

---

in other ways they weren't. A few days prior to the incident a scientist, from an agency that I can't name, and I were talking about the build-up of reports along the east coast of the United States. We talked for about two hours, and I was ready to leave when he said that he had one last comment to make - a prediction. From his study of the UFO reports that he was getting from Air Force Headquarters, and from discussions with his colleagues, he said that he thought that we were sitting right on top of a big keg full of loaded flying saucers. "Within the next few days," he told me, and I remember that he punctuated his slow, deliberate remarks by hitting the desk with his fist, "they're going to blow up and you're going to have the granddaddy of all UFO sightings. The sighting will occur in Washington or New York," he predicted, "probably Washington."

The trend in the UFO reports that this scientist based his prediction on hadn't gone unnoticed. We on Project Blue Book had seen it, and so had the people in the Pentagon; we all had talked about it.

On July 10 the crew of a National Airlines plane reported a light "too bright to be a lighted balloon and too slow to be a big meteor" while they were flying south at 2,000 feet near Quantico, Virginia, just south of Washington.

On July 13 another airliner crew reported that when they were 60 miles southwest of Washington, at 11,000 feet, they saw a light below them. It came up to their level, hovered off to the left for several minutes, and then it took off in a fast, steep climb when the pilot turned on his landing lights.

On July 14 the crew of a Pan American airliner enroute from New York to Miami reported eight UFO's near Newport News, Virginia, about 130 miles south of Washington.

Two nights later there was another sighting in exactly the same area but from the ground. At 9:00

P.M. a high ranking civilian scientist from the National Advisory Committee for Aeronautics Laboratory at Langley AFB and another man were standing near the ocean looking south over Hampton Roads when they saw two amber colored lights, "much too large to be aircraft lights," off to their right, silently traveling north. Just before the two lights got abreast of the two men they made a 180 degree turn and started back toward the spot where they had first been seen. As they turned, the two lights seemed to "jockey for position in the formation." About this time a third light came out of the west and joined the first two; then as the three UFO's climbed out of the area toward the south, several more lights joined the formation. The entire episode had lasted only three minutes.

The only possible solution to the sighting was that the two men had seen airplanes. We investigated this report and found that there were several B-26's from Langley AFB in the area at the time of the sighting, but none of the B-26 pilots remembered being over Hampton Roads. In fact, all of them had generally stayed well south of Norfolk until about 10:30 P.M. because of thunderstorm activity northwest of Langley. Then there were other factors - the observers heard no sound and they were away from all city noises, aircraft don't carry just one or two amber lights, and the distance between the two lights was such that had they been on an airplane the airplane would have been huge or very close to the observers. And last, but not least, the man from the National Advisory Committee for Aeronautics was a very famous aerodynamicist and of such professional stature that if he said the lights weren't airplanes they weren't.

This then was the big build-up to the first Washington national sighting and the reason why my friend predicted that the Air Force was sitting on a big powder keg of loaded flying saucers.

When the keg blew the best laid schemes of the mice and men at ATIC, they went the way best laid schemes are supposed to. The first one of the highly publicized Washington national sightings started, according to the CAA's logbook at the airport, at 11:40 P.M. on the night of July 19 when two radars at National Airport picked up eight unidentified targets east and south of Andrews AFB. The targets weren't airplanes because they would loaf along at 100 to 130 miles an hour then suddenly accelerate to "fantastically high speeds" and leave the area. During the night the crews of several airliners saw mysterious lights in the same locations that the radars showed the targets; tower operators also saw lights, and jet fighters were brought in.

But nobody bothered to tell Air Force Intelligence about the sighting. When reporters began to call intelligence and ask about the big sighting behind the headlines, INTERCEPTORS CHASE FLYING SAUCERS OVER WASHINGTON, D.C., they were told that no one had ever heard of such a sighting. In the next edition the headlines were supplemented by, AIR FORCE WON'T TALK.

Thus intelligence was notified about the first Washington national sighting.

I heard about the sighting about ten o'clock Monday morning when Colonel Donald Bower and I got off an airliner from Dayton and I bought a newspaper in the lobby of the Washington National Airport Terminal Building. I called the Pentagon from the airport and talked to Major Dewey Fournet, but all he knew was what he'd read in the

---

papers. He told me that he had called the intelligence officer at Bolling AFB and that he was making an investigation. We would get a preliminary official report by noon.

It was about 1:00 P.M. when Major Fournet called me and said that the intelligence officer from

Bolling was in his office with the preliminary report on the sightings. I found Colonel Bower, we went up to Major Fournet's office and listened to the intelligence officer's briefing.

The officer started by telling us about the location of the radars involved in the incident. Washington National Airport, which is located about three miles south of the heart of the city, had two radars. One was a long-range radar in the Air Route Traffic Control section. This radar had 100 mile range and was used to control all air traffic approaching Washington. It was known as the ARTC radar. The control tower at National Airport had a shorter range radar that it used to control aircraft in the immediate vicinity of the airport. Boiling AFB, he said, was located just east of National Airport, across the Potomac River. Ten miles farther east, in almost a direct line with National and Bolling, was Andrews AFB. It also had a short-range radar. All of these airfields were linked together by an intercom system.

Then the intelligence officer went on to tell about the sighting.

When a new shift took over at the ARTC radar room at National Airport, the air traffic was light so only one man was watching the radarscope. The senior traffic controller and the six other traffic controllers on the shift were out of the room at eleven forty, when the man watching the radarscope noticed a group of seven targets appear. From their position on the scope he knew that they were just east and a little south of Andrews AFB. In a way the targets looked like a formation of slow airplanes, but no formations were due in the area. As he watched, the targets loafed along at 100 to 130 miles an hour; then in an apparent sudden burst of speed two of them streaked out of radar range. These were no airplanes, the man thought, so he let out a yell for the senior controller. The senior controller took one look at the scope and called in two more of the men. They all agreed that these were no airplanes. The targets could be caused by a malfunction in the radar, they thought, so a technician was called in - the set was in perfect working order.

The senior controller then called the control tower at National Airport; they reported that they also had unidentified targets on their scopes, so did Andrews. And both of the other radars reported the same slow speeds followed by a sudden burst of speed. One target was clocked at 7,000 miles an hour. By now the targets had moved into every sector of the

---

scope and had flown through the prohibited flying areas over the White House and the Capitol.

Several times during the night the targets passed close to commercial airliners in the area and on two occasions the pilots of the airliners saw lights that they couldn't identify, and the lights were in the same spots where the radar showed UFO's to be. Other pilots to whom the ARTC radar men talked on the radio didn't see anything odd, at least that's what they said, but the senior controller knew airline pilots and knew that they were very reluctant to report UFO's.

The first sighting of a light by an airline pilot took place shortly after midnight, when an ARTC controller called the pilot of a Capital Airlines flight just taking off from National. The controller asked the pilot to keep watch for unusual lights or anything. Soon after the pilot cleared the traffic pattern, and while ARTC was still in contact with him, he suddenly yelled, "There's one - off to the right - and there it goes." The controller had been watching the scope, and a target that had been off to the right of the Capitaliner was gone.

During the next fourteen minutes this pilot reported six more identical lights.

About two hours later another pilot, approaching National Airport from the south, excitedly called the control tower to report that a light was following him at "eight o'clock level." The tower checked their radar-scope and there was a target behind and to the left of the airliner. The ARTC radar also

had the airliner and the UFO target. The UFO tagged along behind and to the left of the airliner until it was within four miles of touchdown on the runway. When the pilot reported the light was leaving, the two radarscopes showed that the target was pulling away from the airliner.

Once during the night all three radars, the two at Washington and the one at Andrews AFB, picked up a target three miles north of the Riverdale Radio beacon, north of Washington. For thirty seconds the three radar operators compared notes about the target over the intercom, then suddenly the target was gone - and it left all three radarscopes simultaneously.

But the clincher came in the wee hours of the morning, when an ARTC traffic controller called the control tower at Andrews AFB and told the tower operators that ARTC had a target just south of their tower, directly over the Andrews Radio range station. The tower operators looked and there was a "huge fiery orange sphere" hovering in the sky directly over their range station.

Not too long after this excitement had started, in fact just after the

---

technician had checked the radar and found that the targets weren't caused by a radar malfunction, ARTC had called for Air Force interceptors to come in and look around. But they didn't show, and finally ARTC called again - then again. Finally, just about daylight, an F-94 arrived, but by that time the targets were gone. The F-94 crew searched the area for a few minutes but they couldn't find anything unusual so they returned to their base.

So ended phase one of the Washington National Sightings.

The Bolling AFB intelligence officer said he would write up the complete report and forward it to ATIC.

That afternoon things bustled in the Pentagon. Down on the first floor Al Chop was doing his best to stave off the press while up on the fourth floor intelligence officers were holding some serious conferences. There was talk of temperature inversions and the false targets they could cause; but the consensus was that a good radar operator could spot inversion- caused targets, and the traffic controllers who operated the radar at Washington National Airport weren't just out of radar school. Every day the lives of thousands of people depended upon their interpretation of the radar targets they saw on their scopes. And you don't get a job like this unless you've spent a good many years watching a luminous line paint targets on a good many radarscopes. Targets caused by inversions aren't rare - in the years that these men had been working with radar they had undoubtedly seen every kind of target, real or false, that radar can detect. They had told the Bolling AFB intelligence officer that the targets they saw were caused by the radar waves' bouncing off a hard, solid object. The Air Force radar operator at Andrews backed them up; so did two veteran airline pilots who saw lights right where the radar showed a UFO to be.

Then on top of all this there were the reports from the Washington area during the previous two weeks - all good - all from airline pilots or equally reliable people.

To say the least, the sighting at Washington National was a jolt.

Besides trying to figure out what the Washington National UFO's were, we had the problem of what to tell the press. They were now beginning to put on a squeeze by threatening to call a congressman - and nothing chills blood faster in the military. They wanted some kind of an official statement and they wanted it soon. Some people in intelligence wanted to say just, "We don't know," but others held out for a more thorough investigation. I happened to be in this latter category. Many times in the past I had seen what first seemed to be a good UFO report completely fall apart under a thorough

investigation. I was for stalling

---

the press and working all night if necessary to go into every aspect of the sighting. But to go along with the theme of the Washington National Sightings - confusion - there was a lot of talk but no action and the afternoon passed with no further investigation.

Finally about 4:00 P.M. it was decided that the press, who still wanted an official comment, would get an official "No comment" and that I would stay in Washington and make a more detailed investigation.

I called Lieutenant Andy Flues, who was in charge of Project Blue Book while I was gone, to tell him that I was staying over and I found out that they were in a deluxe flap back in Dayton. Reports were pouring out of the teletype machines at the rate of thirty a day and many were as good, if not better, than the Washington incident. I talked this over with Colonel Bower and we decided that even though things were popping back at ATIC the Washington sighting, from the standpoint of national interest, was more important.

Feeling like a national martyr because I planned to work all night if necessary, I laid the course of my investigation. I would go to Washington National Airport, Andrews AFB, airlines offices, the weather bureau, and a half dozen other places scattered all over the capital city. I called the transportation section at the Pentagon to get a staff car but it took me only seconds to find out that the regulations said no staff cars except for senior colonels or generals. Colonel Bower tried - same thing. General Samford and General Garland were gone, so I couldn't get them to try to pressure a staff car out of the hillbilly who was dispatching vehicles. I went down to the finance office - could I rent a car and charge it as travel expense? No - city buses are available. But I didn't know the bus system and it would take me hours to get to all the places I had to visit, I pleaded. You can take a cab if you want to pay for it out of your per diem was the answer. Nine dollars a day per diem and I should pay for a hotel room, meals, and taxi fares all over the District of Columbia. Besides, the lady in finance told me, my travel orders to Washington covered only a visit to the Pentagon. In addition, she said, I was supposed to be on my way back to Dayton right now, and if I didn't go through all the red tape of getting the orders amended I couldn't collect any per diem and technically I'd be AWOL. I couldn't talk to the finance officer, the lady informed me, because he always left at 4:30 to avoid the traffic and it was now exactly five o'clock and she was quitting.

At five one I decided that if saucers were buzzing Pennsylvania Avenue in formation I couldn't care less. I called Colonel Bower, explained my troubles, and said that I was through. He concurred, and I caught the next airliner to Dayton.

When I returned I dropped in to see Captain Roy James in the radar branch and told him about the sighting. He said that he thought it sounded as if the radar targets had been caused by weather but since he didn't have the finer details he naturally couldn't make any definite evaluation.

The good UFO reports that Lieutenant Flues had told me about when I called him from Washington had tripled in number before I got around to looking at them. Our daily take had risen to forty a day, and about a third of them were classified as unknowns.

More amber red lights like those seen on July 18 had been observed over the Guided Missile Long Range Proving Ground at Patrick AFB, Florida. In Uvalde, Texas, a UFO described as "a large, round, silver object that spun on its vertical axis" was seen to cross 100 degrees of afternoon sky in

forty eight seconds. During part of its flight it passed between two towering cumulus clouds. At Los Alamos and Holyoke, Massachusetts, jets had chased UFO's. In both cases the UFO's had been lost as they turned into the sun.

In two night encounters, one in New Jersey and one in Massachusetts, F-94's tried unsuccessfully to intercept unidentified lights reported by the Ground Observer Corps. In both cases the pilots of the radar nosed jet interceptors saw a light; they closed in and their radar operators got a lock-on. But the lock-ons were broken in a few seconds, in both cases, as the light apparently took violent evasive maneuvers.

Copies of these and other reports were going to the Pentagon, and I was constantly on the phone or having teleconferences with Major Fournet.

When the second Washington National Sighting came along, almost a week to the hour from the first one, by a stroke of luck things weren't too fouled up. The method of reporting the sighting didn't exactly follow the official reporting procedures that are set forth in Air Force Letter 200-5, dated 5 April 1952, Subject: Reporting of Unidentified Flying Objects - but it worked.

I first heard about the sighting about ten o'clock in the evening when I received a telephone call from Bob Ginna, Life magazine's UFO expert. He had gotten the word from Life's Washington News Bureau and wanted a statement about what the Air Force planned to do. I decided that instead of giving a mysterious "no comment" I would tell the truth: "I have no idea what the Air Force is doing; in all probability it's doing nothing." When he hung up, I called the intelligence duty officer in the Pentagon and I was correct, intelligence hadn't heard about the sighting. I asked the duty officer to call Major Fournet and ask him if he would go out to the airport, which was only two or three miles from his home. When

---

he got the call from the duty officer Major Fournet called Lieutenant Holcomb; they drove to the ARTC radar room at National Airport and found Al Chop already there. So at this performance the UFO's had an official audience; Al Chop, Major Dewey Fournet, and Lieutenant Holcomb, a Navy electronics specialist assigned to the Air Force Directorate of Intelligence, all saw the radar targets and heard the radio conversations as jets tried to intercept the UFO's.

Being in Dayton, 380 miles away, there wasn't much that I could do, but I did call Captain Roy James thinking possibly he might want to talk on the phone to the people who were watching the UFO's on the radarscopes. But Captain James has a powerful dislike for UFO's- especially on Saturday night.

About five o'clock Sunday morning Major Fournet called and told me the story of the second sighting at Washington National Airport:

About 10:30 P.M. on July 26 the same radar operators who had seen the UFO's the week before picked up several of the same slow moving targets. This time the mysterious craft, if that is what they were, were spread out in an arc around Washington from Herndon, Virginia, to Andrews AFB. This time there was no hesitation in following the targets. The minute they appeared on the big 24 inch radarscope one of the controllers placed a plastic marker representing an unidentified target near each blip on the scope. When all the targets had been carefully marked, one of the controllers called the tower and the radar station at Andrews AFB - they also had the unknown targets.

By 11:30 P.M. four or five of the targets were continually being tracked at all times, so once again a call went out for jet interceptors. Once again there was some delay, but by midnight two F-94's from New Castle County AFB were airborne and headed south. The reporters and photographers were

asked to leave the radar room on the pretext that classified radio frequencies and procedures were being used in vectoring the interceptors. All civilian air traffic was cleared out of the area and the jets moved in.

When I later found out that the press had been dismissed on the grounds that the procedures used in an intercept were classified, I knew that this was absurd because any ham radio operator worth his salt could build equipment and listen in on any intercept. The real reason for the press dismissal, I learned, was that not a few people in the radar room were positive that this night would be the big night in UFO history - the night when a pilot would close in on and get a good look at a UFO and they didn't want the press to be in on it.

But just as the two '94's arrived in the area the targets disappeared

---

from the radarscopes. The two jets were vectored into the areas where the radar had shown the last target plots, but even though the visibility was excellent they could see nothing. The two airplanes stayed around a few minutes more, made a systematic search of the area, but since they still couldn't see anything or pick up anything on their radars they returned to their base.

A few minutes after the F-94's left the Washington area, the unidentified targets were back on the radarscopes in that same area.

What neither Major Fournet nor I knew at this time was that a few minutes after the targets left the radarscopes in Washington people in the area around Langley AFB near Newport News, Virginia, began to call Langley Tower to report that they were looking at weird bright lights that were "rotating and giving off alternating colors." A few minutes after the calls began to come in, the tower operators themselves saw the same or a similar light and they called for an interceptor.

An F-94 in the area was contacted and visually vectored to the light by the tower operators. The F-94 saw the light and started toward it, but suddenly it went out, "like somebody turning off a light bulb." The F-94 crew continued their run and soon got a radar lock-on, but it was broken in a few seconds as the target apparently sped away. The fighter stayed in the area for several more minutes and got two more lock-ons, only to have them also broken after a few seconds.

A few minutes after the F-94 over Newport News had the last lock-on broken, the targets came back on the scopes at Washington National.

With the targets back at Washington the traffic controller again called Defense Command, and once again two F-94's roared south toward Washington. This time the targets stayed on the radarscopes when the airplanes arrived.

The controllers vectored the jets toward group after group of targets, but each time, before the jets could get close enough to see anything more than just a light, the targets had sped away. Then one stayed put. The pilot saw a light right where the ARTC radar said a target was located; he cut in the F-94's afterburner and went after it, but just like the light that the F-94 had chased near Langley AFB, this one also disappeared. All during the chase the radar operator in the F-94 was trying to get the target on his set but he had no luck.

After staying in the area about twenty minutes, the jets began to run low on fuel and returned to their base. Minutes later it began to get light, and when the sun came up all the targets were gone.

Early Sunday morning, in an interview with the press, the Korean veteran who piloted the F-94, Lieutenant William Patterson, said:

166.The Report on Unidentified Flying Objects

I tried to make contact with the bogies below 1,000 feet, but they [the radar controllers] vectored us around. I saw several bright lights. I was at my maximum speed, but even then I had no closing speed. I ceased chasing them because I saw no chance of overtaking them. I was vectored into new objects. Later I chased a single bright light which I estimated about 10 miles away. I lost visual contact with it about 2 miles.

When Major Fournet finished telling me about the night's activity, my first question was, "How about the radar targets, could they have been caused by weather?"

I knew that Lieutenant Holcomb was a sharp electronics man and that Major Fournet, although no electronics specialist, was a crackerjack engineer, so their opinion meant a lot.

Dewey said that everybody in the radar room was convinced that the targets were very probably caused by solid metallic objects. There had been weather targets on the scope too, he said, but these were common to the Washington area and the controllers were paying no attention to them.

And this something solid could poke along at 100 miles an hour or outdistance a jet, I thought to myself.

I didn't ask Dewey any more because he'd been up all night and wanted to get to bed.

Monday morning Major Ed Gregory, another intelligence officer at ATIC, and I left for Washington, but our flight was delayed in Dayton so we didn't arrive until late afternoon. On the way through the terminal building to get a cab downtown, I picked up the evening papers. Every headline was about the UFO's:

FIERY OBJECTS OUTRUN JETS OVER CAPITAL - INVESTIGATION VEILED IN SECRECY FOLLOWING VAIN CHASE

JETS ALERTED FOR SAUCER - INTERCEPTORS CHASE LIGHTS IN D.C. SKIES

EXPERT HERE TO PUSH STUDY AS OBJECTS IN SKIES REPORTED AGAIN

I jokingly commented about wondering who the expert was. In a half hour I found out - I was. When Major Gregory and I walked into the lobby of the Roger Smith Hotel to check in, reporters and photographers rose from the easy chairs and divans like a covey of quail. They wanted

The Washington Merry-Go-Round.167

my secrets, but I wasn't going to tell nor would I pose for pictures while I wasn't telling anything. Newspaper reporters are a determined lot, but Greg ran interference and we reached the elevator without even a "no comment."

The next day was one of confusion. After the first Washington sighting the prevailing air in the section of the Pentagon's fourth floor, which is occupied by Air Force Intelligence, could be described as excitement, but this day it was confusion. There was a maximum of talk and a minimum of action. Everyone agreed that both sightings should be thoroughly investigated, but nobody did anything. Major Fournet and I spent the entire morning "just leaving" for somewhere to investigate "something." Every time we would start to leave, something more pressing would come up.

About 10:00 A.M. the President's air aide, Brigadier General Landry, called intelligence at President

Truman's request to find out what was going on. Somehow I got the call. I told General Landry that the radar target could have been caused by weather but that we had no proof.

To add to the already confused situation, new UFO reports were coming in hourly. We kept them quiet mainly because we weren't able to investigate them right away, or even confirm the facts. And we wanted to confirm the facts because some of the reports, even though they were from military sources, were difficult to believe.

Prior to the Washington sightings in only a very few of the many instances in which radar had picked up UFO targets had the targets themselves supposedly been seen visually. Radar experts had continually pointed out this fact to us as an indication that maybe all of the radar targets were caused by freak weather conditions. "If people had just seen a light, or an object, near where the radar showed the UFO target to be, you would have a lot more to worry about," radar technicians had told me many times.

Now people were seeing the same targets that the radars were picking up, and not just at Washington.

On the same night as the second Washington sighting we had a really good report from California. An ADC radar had picked up an unidentified target and an F-94C had been scrambled. The radar vectored the jet interceptor into the target, the radar operator in the '94 locked-on to it, and as the airplane closed in the pilot and RO saw that they were headed directly toward a large, yellowish orange light. For several minutes they played tag with the UFO. Both the radar on the ground and the radar in the F-94 showed that as soon as the airplane would get almost within gunnery range of the UFO it would suddenly pull away

---

at a terrific speed. Then in a minute or two it would slow down enough to let the F-94 catch it again.

When I talked to the F-94 crew on the phone, the pilot said that they felt as if this were just a big aerial cat-and-mouse game - and they didn't like it - at any moment they thought the cat might have pounced.

Needless to say, this was an unknown.

About midmorning on Tuesday, July 29th, Major General John Samford sent word down that he would hold a press conference that afternoon in an attempt to straighten out the UFO situation with the press.

Donald Keyhoe reports on the press conference and the events leading up to it in detail in his book, Flying Saucers from Outer Space. He indicates that before the conference started, General Samford sat behind his big walnut desk in Room 3A138 in the Pentagon and battled with his conscience. Should he tell the public "the real truth" - that our skies are loaded with spaceships? No, the public might panic. The only answer would be to debunk the UFO's.

This bit of reporting makes Major Keyhoe the greatest journalist in history. This beats wire tapping. He reads minds. And not only that, he can read them right through the walls of the Pentagon. But I'm glad that Keyhoe was able to read the General's mind and that he wrote the true and accurate facts about what he was really thinking because I spent quite a bit of time talking to the General that day and he sure fooled me. I had no idea he was worried about what he should tell the public.

When the press conference, which was the largest and longest the Air Force had held since World War II, convened at 4:00 P.M., General Samford made an honest effort to straighten out the

Washington National Sightings, but the cards were stacked against him before he started. He had to hedge on many answers to questions from the press because he didn't know the answers. This hedging gave the impression that he was trying to cover up something more than just the fact that his people had fouled up in not fully investigating the sightings. Then he had brought in Captain Roy James from ATIC to handle all the queries about radar. James didn't do any better because he'd just arrived in Washington that morning and didn't know very much more about the sightings than he'd read in the papers. Major Dewey Fournet and Lieutenant Holcomb, who had been at the airport during the sightings, were extremely conspicuous by their absence, especially since it was common knowledge among the press that they weren't convinced the UFO's picked up on radars were weather targets.

But somehow out of this chaotic situation came exactly the result

---

that was intended - the press got off our backs. Captain James's answers about the possibility of the radar targets' being caused by temperature inversions had been construed by the press to mean that this was the Air Force's answer, even though today the twin sightings are still carried as unknowns.

The next morning headlines from Bangor to Bogota read:

AIR FORCE DEBUNKS SAUCERS AS JUST NATURAL PHENOMENA

The Washington National Sightings proved one thing, something that many of us already knew: in order to forestall any more trouble similar to what we'd just been through we always had to get all of the facts and not try to hide them. A great deal of the press's interest was caused by the Air Force's reluctance to give out any information, and the reluctance on the part of the Air Force was caused by simply not having gone out to find the answers.

But had someone gone out and made a more thorough investigation a few big questions would have popped up and taken some of the intrigue out of the two reports. It took me a year to put the question marks together because I just picked up the information as I happened to run across it, but it could have been collected in a day of concentrated effort.

There was some doubt about the visual sighting of the "large fiery-orange-colored sphere" that the tower operators at Andrews AFB saw when the radar operators at National Airport told them they had a target over the Andrews Radio range station. When the tower operators were later interrogated they completely changed their story and said that what they saw was merely a star. They said that on the night of the sighting they "had been excited." (According to astronomical charts, there were no exceptionally bright stars where the UFO was seen over the range station, however. And I heard from a good source that the tower men had been "persuaded" a bit.)

Then the pilot of the F-94C changed his mind even after he'd given the press and later told me his story about vainly trying to intercept unidentified lights. In an official report he says that all he saw was a ground light reflecting off a layer of haze.

Another question mark arose about the lights that the airline pilots saw. Months after the sighting I heard from one of the pilots whom the ARTC controllers called to learn if he could see a UFO. This man's background was also impressive, he had been flying in and out of Washington since 1936. This is what he had to say:

The most outstanding incident happened just after a take-off one night from Washington National. The tower man advised us that there was

---

a UFO ahead of us on the take-off path and asked if we would aid in tracking it down. We were given headings to follow and shortly we were advised that we had passed the UFO and would be given a new heading. None of us in the cockpit had seen anything unusual. Several runs were made; each time the tower man advised us we were passing the UFO we noticed that we were over one certain section of the Potomac River, just east of Alexandria. Finally we were asked to visually check the terrain below for anything which might cause such an illusion. We looked and the only object we could see where the radar had a target turned out to be the Wilson Lines moonlight steamboat trip to Mount Vernon. Whether there was an altitude gimmick on the radar unit at the time I do not know but the radar was sure as hell picking up the steamboat.

The pilot went on to say that there is such a conglomeration of lights around the Washington area that no matter where you look you see a "mysterious light."

Then there was another point: although the radars at Washington National and Andrews overlap, and many of the targets appeared in the overlap area, only once did the three radars simultaneously pick up a target.

The investigation brought out a few more points on the pro side too. We found out that the UFO's frequently visited Washington. On May 23 fifty targets had been tracked from 8:00 P.M. till midnight. They were back on the Wednesday night between the two famous Saturday night sightings, the following Sunday night, and again the night of the press conference; then during August they were seen eight more times. On several occasions military and civilian pilots saw lights exactly where the radar showed the UFO's to be.

On each night that there was a sighting there was a temperature inversion but it was never strong enough to affect the radar the way inversions normally do. On each occasion I checked the strength of the inversion according to the methods used by the Air Defense Command Weather Forecast Center.

Then there was another interesting fact: hardly a night passed in June, July, and August in 1952 that there wasn't an inversion in Washington, yet the slow moving, "solid" radar targets appeared on only a few nights.

But the one big factor on the pro side of the question is the people involved - good radar men - men who deal in human lives. Each day they use their radar to bring thousands of people into Washington National Airport and with a responsibility like this they should know a real target from a weather target.

So the Washington National Airport Sightings are still unknowns.

Had the press been aware of some of the other UFO activity in the

---

United States during this period, the Washington sightings might not have been the center of interest. True, they could be classed as good reports but they were not the best that we were getting. In fact, less than six hours after the ladies and gentlemen of the press said "Thank you" to General Samford for his press conference, and before the UFO's could read the newspapers and find out that they were natural phenomena, one of them came down across the Canadian border into Michigan. The incident that occurred that night was one of those that even the most ardent skeptic would have difficulty explaining. I've heard a lot of them try and I've heard them all fail.

At nine forty on the evening of the twenty-ninth an Air Defense Command radar station in central Michigan started to get plots on a target that was coming straight south across Saginaw Bay on Lake Huron at 625 miles an hour. A quick check of flight plans on file showed that it was an unidentified target.

Three F-94's were in the area just northeast of the radar station, so the ground controller called one of the F-94's and told the pilot to intercept the unidentified target. The F-94 pilot started climbing out of the practice area on an intercept heading that the ground controller gave him. When the F-94 was at 20,000 feet, the ground controller told the pilot to turn to the right and he would be on the target. The pilot started to bring the F-94 around and at that instant both he and the radar operator in the back seat saw that they were turning toward a large bluish white light, "many times larger than a star." In the next second or two the light "took on a reddish tinge, and slowly began to get smaller, as if it were moving away." Just then the ground controller called and said that he still had both the F-94 and the unidentified target on his scope and that the target had just made a tight 180 degree turn. The turn was too tight for a jet, and at the speed the target was traveling it would have to be a jet if it were an airplane. Now the target was heading back north. The F-94 pilot gave the engine full power and cut in the afterburner to give chase. The radar operator in the back seat got a good radar lock-on. Later he said, "It was just as solid a lock-on as you get from a B-36." The object was at 4 miles range and the F-94 was closing slowly. For thirty seconds they held the lock-on; then, just as the ground controller was telling the pilot that he was closing in, the light became brighter and the object pulled away to break the lock-on. Without breaking his transmission, the ground controller asked if the radar operator still had the lock-on because on the scope the distance between two blips had almost doubled in one sweep of the antenna. This indicated that the unknown target had almost doubled its speed in a matter of seconds.

172.The Report on Unidentified Flying Objects

For ten minutes the ground radar followed the chase. At times the unidentified target would slow down and the F-94 would start to close the gap, but always, just as the F-94 was getting within radar range, the target would put on a sudden burst of speed and pull away from the pursuing jet. The speed of the UFO - for by this time all concerned had decided that was what it was - couldn't be measured too accurately because its bursts of speed were of such short duration; but on several occasions the UFO traveled about 4 miles in one ten second sweep of the antenna, or about 1,400 miles an hour.

The F-94 was getting low on fuel, and the pilot had to break off the chase a minute or two before the UFO got out of range of the ground radar. The last few plots on the UFO weren't too good but it looked as if the target slowed down to 200 to 300 miles an hour as soon as the F-94 turned around.

What was it? It obviously wasn't a balloon or a meteor. It might have been another airplane except that in 1952 there was nothing flying, except a few experimental airplanes that were far from Michigan, that could so easily outdistance an F-94. Then there was the fact that radar clocked it at 1,400 miles an hour. The F-94 was heading straight for the star Capella, which is low on the horizon and is very brilliant, but what about the radar contacts? Some people said "Weather targets," but the chances of a weather target's making a 180 degree turn just as an airplane turns into it, giving a radar lock-on, then changing speed to stay just out of range of the airplane's radar, and then slowing down when the airplane leaves is as close to nil as you can get.

What was it? A lot of people I knew were absolutely convinced this report was the key - the final proof. Even if all of the thousands of other UFO reports could be discarded on a technicality, this one couldn't be. These people believed that this report in itself was proof enough to officially accept the fact that UFO's were interplanetary spaceships. And when some people refused to believe even this report, the frustration was actually pitiful to see.

As the end of July approached, there was a group of officers in intelligence fighting hard to get the UFO "recognized." At ATIC, Project Blue Book was still trying to be impartial - but sometimes it was difficult.

Chapter 13: Hoax or Horror?, Page 173

NICAP Home Page

CHAPTER THIRTEEN

Hoax or Horror?

To the military and the public who weren't intimately associated with the higher levels of Air Force Intelligence during the summer of 1952 - and few were - General Samford's press conference seemed to indicate the peak in official interest in flying saucers. It did take the pressure off Project Blue Book - reports dropped from fifty per day to ten a day inside of a week - but behind the scenes the press conference was only the signal for an all out drive to find out more about the UFO. Work on the special cameras continued on a high priority basis, and General Samford directed us to enlist the aid of top ranking scientists.

During the past four months we had collected some 750 comparatively well documented reports, and we hoped that something in these reports might give us a good lead on the UFO. My orders were to tell the scientists to whom we talked that the Air Force was officially still very much interested in the UFO and that their assistance, even if it was only in giving us ideas and comments on the reports, was badly needed. Although the statement of the problem was worded much more loosely, in essence it was, "Do the UFO reports we have collected indicate that the earth is being visited by a people from another planet?"

Such questions had been asked of the scientists before, but not in such a serious vein.

Then a secondary program was to be started, one of "educating" the military. The old idea that UFO reports would die out when the thrill wore off had long been discarded. We all knew that UFO reports would continue to come in and that in order to properly evaluate them we had to have every shred of evidence. The Big Flap had shown us that our chances of getting a definite answer on a sighting was directly proportional to the quality of the information we received from the intelligence officers in the field.

But soon after the press conference we began to get wires from intelligence officers saying they had interpreted the newspaper accounts of General Samford's press conference to mean that we were no longer interested in UFO reports. A few other intelligence officers had evidently

---

also misinterpreted the general's remarks because their reports of excellent sightings were sloppy and incomplete. All of this was bad, so to forestall any misconceived ideas about the future of the Air Force's UFO project, summaries of General Samford's press conference were distributed to intelligence officers. General Samford had outlined the future of the UFO project when he'd said:

"So our present course of action is to continue on this problem with the best of our ability, giving it the attention that we feel it very definitely warrants. We will give it adequate attention, but not frantic attention."

The summary of the press conference straightened things out to some extent and our flow of reports got back to normal.

I was anxious to start enlisting the aid of scientists, as General Samford had directed, but before this could be done we had a backlog of UFO reports that had to be evaluated. During July we had been swamped and had picked off only the best ones. Some of the reports we were working on during August had simple answers, but many were unknowns. There was one report that was of special interest because it was an excellent example of how a UFO report can at first appear to be absolutely

insoluble then suddenly fall apart under thorough investigation. It also points up the fact that our investigation and analysis were thorough and that when we finally stamped a report "Unknown" it was unknown. We weren't infallible but we didn't often let a clue slip by.

At exactly ten forty five on the morning of August 1, 1952, an ADC radar near Bellefontaine, Ohio, picked up a high speed unidentified target moving southwest, just north of Dayton. Two F-86's from the 97th Fighter Interceptor Squadron at Wright-Patterson were scrambled and in a few minutes they were climbing out toward where the radar showed the UFO to be. The radar didn't' have any height finding equipment so all that the ground controller at the radar site could do was to get the two F-86's over or under the target, and then they would have to find it visually.

When the two airplanes reached 30,000 feet, the ground controller called them and told them that they were almost on the target, which was still continuing its southwesterly course at about 525 miles an hour. In a few seconds the ground controller called back and told the lead pilot that the targets of his airplane and the UFO had blended on the radar scope and that the pilot would have to make a visual search; this was as close in as radar could get him. Then the radar broke down and went off the air.

But at almost that exact second the lead pilot looked up and there in the clear blue sky several thousand feet above him was a silver colored

---

sphere. The lead pilot pointed it out to his wing man and both of them started to climb. They went to their maximum altitude but they couldn't reach the UFO. After ten minutes of unsuccessful attempts to identify the huge silver sphere or disk - because at times it looked like a disk - one of the pilots hauled the nose of his F-86 up in a stall and exposed several feet of gun camera film. Just as he did this the warning light on his radar gun sight blinked on, indicating that something solid was in front of him - he wasn't photographing a sundog, hallucination, or refracted light.

The two pilots broke off the intercept and started back to Wright- Patterson when they suddenly realized that they were still northwest of the base, in almost the same location they had been when they started the intercept ten minutes before. The UFO had evidently slowed down from the speed that the radar had measured, 525 miles an hour, until it was hovering almost completely motionless.

As soon as the pilots were on the ground, the magazine of film from the gun camera was rushed to the photo lab and developed. The photos showed only a round, indistinct blob - no details - but they were proof that some type of unidentified flying object had been in the air north of Dayton.

Lieutenant Andy Flues was assigned to this one. He checked the locations of balloons and found out that a 20-foot-diameter radiosonde weather balloon from Wright-Patterson had been very near the area when the unsuccessful intercept took place, but the balloon wasn't traveling 525 miles an hour and it couldn't be picked up by the ground radar, so he investigated further. The UFO couldn't have been another airplane because airplanes don't hover in one spot and it was no atmospheric phenomenon. Andy wrote it off as an unknown but it still bothered him; that balloon in the area was mighty suspicious. He talked to the two pilots a half dozen times and spent a day at the radar site at Bellefontaine before he reversed his "Unknown" decision and came up with the answer.

The unidentified target that the radar had tracked across Ohio was a low flying jet. The jet was unidentified because there was a mix-up and the radar station didn't get its flight plan. Andy checked and found that a jet out of Cleveland had landed at Memphis at about eleven forty. At ten forty five this jet would have been north of Dayton on a southwesterly heading. When the ground controller blended the targets of the two F-86's into the unidentified target, they were at 30,000 feet and were looking for the target at their altitude or higher so they missed the low flying jet - but they did see the

balloon. Since the radar went out just as the pilots saw the balloon, the ground controller couldn't see that the

---

176.The Report on Unidentified Flying Objects

unidentified target he'd been watching was continuing on to the south- west. The pilots didn't bother to look around any more once they'd spotted the balloon because they thought they had the target in sight.

The only part of the sighting that still wasn't explained was the radar pickup on the F-86's gun sight. Lieutenant Flues checked around, did a little experimenting, and found out that the small transmitter box on a radiosonde balloon will give an indication on the radar used in F-86 gun sights.

To get a final bit of proof, Lieutenant Flues took the gun camera photos to the photo lab. The two F-86's had been at about 40,000 feet when the photos were taken and the 20 foot balloon was at about 70,000 feet. Andy's question to the photo lab was, "How big should a Biot balloon appear on a frame of 16 mm. movie film when the balloon is 30,000 feet away?"

The people in the photo lab made a few calculations and measurements and came up with the answer, "A 20 foot balloon photographed from 30,000 feet away would be the same size as the UFO in the gun camera photos."

By the middle of August, Project Blue Book was back to normal. Lieutenant Flues's Coca-Cola consumption had dropped from twenty bottles a day in mid July to his normal five. We were all getting a good night's sleep and it was now a rare occasion when my home telephone would ring in the middle of the night to report a new UFO.

But then on the morning of August 20 I was happily taking a shower, getting ready to go to work, when one of these rare occasions occurred and the phone rang - it was the ATIC OD. An operational immediate wire had just come in for Blue Book. He had gone over to the message center and gotten it. He thought that it was important and wanted me to come right out. For some reason he didn't want to read it over the phone, although it was not classified. I decided that if he said so I should come out, so I left in a hurry.

The wire was from the intelligence officer at an air base in Florida. The previous night a scoutmaster and three boy scouts had seen a UFO. The scoutmaster had been burned when he approached too close to the UFO. The wire went on to give a few sketchy details and state that the scoutmaster was a "solid citizen."

I immediately put in a long distance call to the intelligence officer. He confirmed the data in the wire. He had talked briefly to the scoutmaster on the phone and from all he could gather it was no hoax. The local police had been contacted and they verified the story and the fact of the burns. I asked the intelligence officer to contact the scoutmaster and ask

---

177. Hoax or Horror?

if he would submit to a physical examination immediately. I could imagine the rumors that could start about the scoutmaster's condition, and I wanted proof. The report sounded good, so I told the intelligence officer I'd get down to see him as soon as possible.

I immediately called Colonel Dunn, then chief at ATIC, and gave him a brief rundown. He agreed that I should go down to Florida as soon as possible and offered to try to get an Air Force B-25, which would save time over the airlines.

I told Bob Olsson to borrow a Geiger counter at Wright Field, then check out a camera. I called my wife and asked her to pack a few clothes and bring them out to me. Bob got the equipment, ran home and packed a bag, and in two hours he and I and our two pilots, Captain Bill Hoey and Captain David Douglas, were on our way to Florida to investigate one of the weirdest UFO reports that I came up against.

When we arrived, the intelligence officer arranged for the scoutmaster to come out to the air base. The latter knew we were coming, so he arrived at the base in a few minutes. He was a very pleasant chap, in his early thirties, not at all talkative but apparently willing to co-operate.

While he was giving us a brief personal history, I had the immediate impression that he was telling the truth. He'd lived in Florida all of his life. He'd gone to a private military prep school, had some college, and then had joined the Marines. He told us that he had been in the Pacific most of the war and repeated some rather hairy stories of what he'd been through. After the war he'd worked as an auto mechanic, then gone to Georgia for a while to work in a turpentine plant. After returning to Florida, he opened a gas station, but some hard luck had forced him to sell out. He was now working as a clerk in a hardware store. Some months back a local church had decided to organize a boy scout troop and he had offered to be the scoutmaster.

On the night before the weekly scout meeting had broken up early. He said that he had offered to give four of the boys a ride home. He had let one of the boys out when the conversation turned to a stock car race that was to take place soon. They talked about the condition of the track. It had been raining frequently, and they wondered if the track was flooded, so they drove out to look at it. Then they started south toward a nearby town to take another of the boys home. They took a blacktop road about 10 miles inland from the heavily traveled coastal highway that passes through sparsely settled areas of scrub pine and palmetto thickets.

They were riding along when the scoutmaster said that he noticed a light off to his left in the pines. He slowed down and asked the boys if

---

they'd seen it; none of them had. He started to drive on, when he saw the lights again. This time all of the boys saw them too, so he stopped. He said that he wanted to go back into the woods to see what was going on, but that the boys were afraid to stay alone. Again he started to drive on, but in a few seconds decided he had to go back. So he turned the car around, went back, and parked beside the road at a point just opposite where he'd seen the lights.

I stopped him at this point to find out a little bit more about why he'd decided to go back. People normally didn't go running off into palmetto thickets infested with rattlesnakes at night. He had a logical answer. The lights looked like an airplane crashing into the woods some distance away. He didn't believe that was what he saw, but the thought that this could be a possibility bothered him. After all, he had said, he was a scoutmaster, and if somebody was in trouble, his conscience would have bothered him the rest of his life if he hadn't investigated and it had been somebody in need of help.

A fifteen minute radio program had just started, and he told the boys that he was going to go into the woods, and that if he wasn't back by the time the program ended they should run down the road to a farmhouse that they had passed and get help. He got out and started directly into the woods, wearing a faded denim billed cap and carrying machete and two flashlights. One of the lights was a spare he carried in his back pocket.

He had traveled about 50 yards off the road when he ran into a palmetto thicket, so he stopped and

looked for a clear path. But finding none, he started pushing his way through the waist high tangle of brush.

When he stopped, he recalled later, he had first become aware of an odd odor. He couldn't exactly describe it to us, except to say that it was "sharp" or "pungent." It was very faint, actually more like a subconscious awareness at first. Another sensation he recalled after the incident was a very slight difference in temperature, hardly perceivable, like walking by a brick building in the evening after the sun has set. He hadn't thought anything about either the odor or the heat at the time but later, when they became important, he remembered them.

Paying no attention to these sensations then, he pushed on through the brush, looking up occasionally to check the north star, so that he could keep traveling straight east. After struggling through about 30 yards of palmetto undergrowth, he noticed a change in the shadows ahead of him and stopped to shine the flashlight farther ahead of him to find out if he was walking into a clearing or into one of the many ponds that dot that particular Florida area. It was a clearing.

---

179. Hoax or Horror?

The boy scouts in the car had been watching the scoutmaster's progress since they could see his light bobbing around. Occasionally he would shine it up at a tree or across the landscape for an instant, so they knew where he was in relation to the trees and thickets. They saw him stop at the edge of the open, shadowed area and shine his light ahead of him.

The scoutmaster then told us that when he stopped this second time he first became consciously aware of the odor and the heat. Both became much more noticeable as he stepped into the clearing. In fact, the heat became almost unbearable or, as he put it, "oppressively moist, making it hard to breathe."

He walked a few more paces and suddenly got a horrible feeling that somebody was watching him. He took another step, stopped, and looked up to find the north star. But he couldn't see the north star, or any stars. Then he suddenly saw that almost the whole sky was blanked out by a large dark shape about 30 feet above him.

He said that he had stood in this position for several seconds, or minutes - he didn't know how long - because now the feeling of being watched had overcome any power of reasoning he had. He managed to step back a few paces, and apparently got out from under the object, because he could see the edge of it silhouetted against the sky.

As he backed up, he said, the air became much cooler and fresher, helping him to think more clearly. He shone his light up at the edge of the object and got a quick but good look. It was circular shaped and slightly concave on the bottom. The surface was smooth and a grayish color. He pointed to a gray linoleum topped desk in the intelligence officer's room. "Just like that," he said. The upper part had a dome in the middle, like a turret. The edge of the saucer shaped object was thick and had vanes spaced about every foot, like buckets on a turbine wheel. Between each vane was a small opening, like a nozzle.

The next reaction that the scoutmaster recalled was one of fury. He wanted to harm or destroy whatever it was that he saw. All he had was a machete, but he wanted to try to jump up and strike at whatever he was looking at. No sooner did he get this idea than he noticed the shadows on the turret change ever so slightly and heard a sound, "like the opening of a well oiled safe door." He froze where he stood and noticed a small ball of red fire begin to drift toward him. As it floated down it expanded into a cloud of red mist. He dropped his light and machete, and put his arms over his face. As the mist enveloped him, he passed out.

The boy scouts, in the car, estimated that their scoutmaster had been gone about five minutes when they saw him stop at the edge of the clear-

---

ing, then walk on in. They saw him stop seconds later, hesitate a few more seconds, then shine the light up in the air. They thought he was just looking at the trees again. The next thing they said they saw was a big red ball of fire engulfing him. They saw him fall, so they spilled out of the car and took off down the road toward the farmhouse.

The farmer and his wife had a little difficulty getting the story out of the boys, they were so excited. All they could get was something about the boys' scoutmaster being in trouble down the road. The farmer called the Florida State Highway Patrol, who relayed the message to the county sheriff's office. In a few minutes a deputy sheriff and the local constable arrived. They picked up the scouts and drove to where their car was parked.

The scoutmaster had no idea of how long he had been unconscious. He vaguely remembered leaning against a tree, the feeling of wet, dew covered grass, and suddenly regaining his consciousness. His first reaction was to get out to the highway, so he started to run. About halfway through the palmetto thicket he saw a car stop on the highway. He ran toward it and found the deputy and constable with the boys.

He was so excited he could hardly get his story told coherently. Later the deputy said that in all his years as a law enforcement officer he had never seen anyone as scared as the scoutmaster was as he came up out of the ditch beside the road and walked into the glare of the headlights. As soon as he'd told his story, they all went back into the woods, picking their way around the palmetto thicket. The first thing they noticed was the flashlight, still burning, in a clump of grass. Next to it was a place where the grass was flattened down, as if a person had been lying there. They looked around for the extra light that the scoutmaster had been carrying, but it was gone. Later searches for this missing flashlight were equally fruitless. They marked the spot where the crushed grass was located and left. The constable took the boy scouts home and the scoutmaster followed the deputy to the sheriff's office. On the way to town the scoutmaster said he first noticed that his arms and face burned. When he arrived at the sheriff's office, he found that his arms, face, and cap were burned. The deputy called the Air Force.

There were six people listening to his story. Bob Olsson, the two pilots, the intelligence officer, his sergeant, and I. We each had previously agreed to pick one insignificant detail from the story and then requestioning the scoutmaster when he had finished. Our theory was that if he had made up the story be would either repeat the details perfectly or not remember what he'd said. I'd used this many times before, and it was a good indicator

---

of a lie. He passed the test with flying colors. His story sounded good to all of us.

We talked for about another hour, discussing the event and his background. He kept asking, "What did I see?" - evidently thinking that I knew. He said that the newspapers were after him, since the sheriff's office had inadvertently leaked the story, but that he had been stalling them off pending our arrival. I told him it was Air Force policy to allow people to say anything they wanted to about a UFO sighting. We had never muzzled anyone; it was his choice. With that, we thanked him, arranged to pick up the cap and machete to take back to Dayton, and sent him home in. a staff car.

By this time it was getting late, but I wanted to talk to the flight surgeon who had examined the man

that morning. The intelligence officer found him at the hospital and he said he would be right over. His report was very thorough. The only thing he could find out of the ordinary were minor burns on his arms and the back of his hands. There were also indications that the inside of his nostrils might be burned. The degree of burn could be compared to a light sunburn. The hair had also been singed, indicating a flash heat.

The flight surgeon had no idea how this specifically could have happened. It could have even been done with a cigarette lighter, and he took his lighter and singed a small area of his arm to demonstrate. He had been asked only to make a physical check, so that is what he'd done, but he did offer a suggestion. Check his Marine records; something didn't ring true. I didn't quite agree; the story sounded good to me.

The next morning my crew from ATIC, three people from the intelligence office, and the two law officers went out to where the incident had taken place. We found the spot where somebody had apparently been lying and the scoutmaster's path through the thicket. We checked the area with a Geiger counter, as a precautionary measure, not expecting to find anything; we didn't. We went over the area inch by inch, hoping to find a burned match with which a flare or fireworks could have been lighted, drippings from a flare, or anything that shouldn't have been in a deserted area of woods. We looked at the trees; they hadn't been hit by lightning. The blades of grass under which the UFO supposedly hovered were not burned. We found nothing to contradict the story. We took a few photos of the area and went back to town. On the way back we talked to the constable and the deputy. All they could do was to confirm what we'd heard.

We talked to the farmer and his wife - but they couldn't help. The few

---

facts that the boy scouts had given them before they had a chance to talk to their scoutmaster correlated with his story. We talked to the scout master's employer and some of his friends; he was a fine person. We questioned people who might have been in a position to also observe something; they saw nothing. The local citizens had a dozen theories, and we thoroughly checked each one.

He hadn't been struck by lightning. He hadn't run across a still. There was no indication that he'd surprised a gang of illegal turtle butchers, smugglers, or bootleggers. There was no indication of marsh gas or swamp fire. The mysterious blue lights in the area turned out to be a farmer arc-welding at night. The other flying saucers were the landing lights of air- planes landing at a nearby airport.

To be very honest, we were trying to prove that this was a hoax, but were having absolutely no success. Every new lead we dug up pointed to the same thing, a true story.

We finished our work on a Friday night and planned to leave early Saturday morning. Bob Olsson and I planned to fly back on a commercial airliner, as the B-25 was grounded for maintenance. Just after dinner that night I got a call from the sheriff's office. It was from a deputy I had talked to, not the one who met the scoutmaster coming out of the woods, but another one, who had been very interested in the incident. He had been doing a little independent checking and found that our singed UFO observer's background was not as clean as he led one to believe. He had been booted out of the Marines after a few months for being AWOL and stealing an automobile, and had spent some time in a federal reformatory in Chillicothe, Ohio. The deputy pointed out that this fact alone meant nothing but that he thought I might be interested in it. I agreed.

The next morning, early, I was awakened by a phone call from the intelligence officer. The morning paper carried the UFO story on the front page. It quoted the scoutmaster as saying that "high brass" from Washington had questioned him late into the night. There was no "high brass," just four

captains, a second lieutenant, and a sergeant. He knew we were from Dayton because we had discussed who we were and where we were stationed. The newspaper story went on to say that "he, the scout master, and the Air Force knew what he'd seen but he couldn't tell - it would create a national panic." He'd also hired a press agent. I could understand the "high brass from the Pentagon" as literary license by the press, but this "national panic" pitch was too much. I had just about decided to give up on this incident and write it off as "Unknown" until this happened. From all appearances, our scoutmaster was going to make a fast buck on his experience. Just before leaving for Dayton, I called

---

Major Dewey Fournet in the Pentagon and asked him to do some checking.

Monday morning the machete went to the materials lab at Wright- Patterson. The question we asked was, "Is there anything unusual about this machete? Is it magnetized? Is it radioactive? Has it been heated?" No knife was ever tested so thoroughly for so many things. As in using a Geiger counter to check the area over which the UFO had hovered in the Florida woods, our idea was to investigate every possible aspect of the sighting. They found nothing, just a plain, unmagnetized, unradioactive, unheated, common, everyday knife.

The cap was sent to a laboratory in Washington, D.C., along with the scoutmaster's story. Our question here was, "Does the cap in any way (burns, chemicals, etc.) substantiate or refute the story?"

I thought that we'd collected all the items that could be analyzed in a lab until somebody thought of one I'd missed, the most obvious of them all - soil and grass samples from under the spot where the UFO had hovered. We'd had samples, but in the last minute rush to get back to Dayton they had been left in Florida. I called Florida and they were shipped to Dayton and turned over to an agronomy lab for analysis.

By the end of the week I received a report on our ex-Marine's military and reformatory records. They confirmed a few suspicions and added new facts. They were not complimentary. The discrepancy between what we'd heard about the scoutmaster while we were in Florida and the records was considered a major factor. I decided that we should go back to Florida and try to resolve this discrepancy.

Since it was hurricane season, we had to wait a few days, then sneak back between two hurricanes. We contacted a dozen people in the city where the scoutmaster lived. All of them had known him for some time. We traced him from his early boyhood to the time of the sighting. To be sure that the people we talked to were reliable, we checked on them. The specific things we found out cannot be told since they were given to us in confidence, but we were convinced that the whole incident was a hoax.

We didn't talk to the scoutmaster again but we did talk to all the boy scouts one night at their scout meeting, and they retold how they had seen their scoutmaster knocked down by the ball of fire. The night before, we had gone out to the area of the sighting and, under approximately the same lighting conditions as existed on the night of the sighting, had re-enacted the scene - especially the part where the boy scouts saw their scoutmaster fall, covered with red fire. We found that not even by standing on top of the car could you see a person silhouetted in the clearing where the scoutmaster supposedly fell. The rest of their stories fell apart

---

to some extent too. They were not as positive of details as they had been previously.

When we returned to Dayton, the report on the cap had come back. The pattern of the scorch showed that the hat was flat when it was scorched, but the burned holes - the lab found some minute holes we had missed - had very probably been made by an electrical spark. This was all the lab could find.

During our previous visit we repeatedly asked the question, "Was the hat burned before you went into the woods?" and, "Had the cap been ironed?" We had received the same answers each time: "The hat was not burned because we [the boy scouts] were playing with it at the scout meeting and would have noticed the burns," and, "The cap was new; it had not been washed or ironed." It is rumored that the cap was never returned because it was proof of the authenticity of the sighting. The hat wasn't returned simply because the scoutmaster said that he didn't want it back. No secrets, no intrigue; it's as simple as that.

Everyone who was familiar with the incident, except a few people in the Pentagon, were convinced that this was a hoax until the lab called me about the grass samples we'd sent in. "How did the roots get charred?" Roots charred? I didn't even know what my caller was talking about. He explained that when they'd examined the grass they had knocked the dirt and sand off the roots of the grass clumps and found them charred. The blades of grass themselves were not damaged; they had never been heated, except on the extreme tips of the longer blades. These had evidently been bending over touching the ground and were also charred. The lab had duplicated the charring and had found that by placing live grass clumps in a pan of sand and dirt and heating it to about 300 degrees F. over a gas burner the charring could be duplicated. How it was actually done outside the lab they couldn't even guess.

As soon as we got the lab report, we checked a few possibilities ourselves. There were no hot underground springs to heat the earth, no chemicals in the soil, not a thing we found could explain it. The only way it could have been faked would have been to heat the earth from underneath to 300 degrees F., and how do you do this without using big and cumbersome equipment and disturbing the ground? You can't. Only a few people handled the grass specimens: the lab, the intelligence officer in Florida, and I. The lab wouldn't do it as a joke, then write an official report, and I didn't do it. This leaves the intelligence officer; I'm positive that he wouldn't do it. There may be a single answer everyone is over looking, but as of now the charred grass roots from Florida are still a mystery.

Hoax or Horror?185

Writing an official report on this incident was difficult. On one side of the ledger was a huge mass of circumstantial evidence very heavily weighted against the scoutmaster's story being true. On our second trip to Florida, Lieutenant Olsson and I heard story after story about the man's aptitude for dreaming up tall tales. One man told us, "If he told me the sun was shining, I'd look up to make sure." There were parts of his story and those of the boy scouts that didn't quite mesh. None of us ever believed the boy scouts were in on the hoax. They were undoubtedly so impressed by the story that they imagined a few things they didn't actually see. The scoutmaster's burns weren't proof of anything; the flight surgeon had duplicated these by burning his own arm with a cigarette lighter. But we didn't make step one in proving the incident to be a hoax. We thought up dozens of ways that the man could have set up the hoax but couldn't prove one.

In the scoutmaster's favor were the two pieces of physical evidence we couldn't explain, the holes burned in the cap and the charred grass roots.

The deputy sheriff who had first told me about the scoutmaster's Marine and prison record had also said, "Maybe this is the one time in his life he's telling the truth, but I doubt it."

So did we; we wrote off the incident as a hoax. The best hoax in UFO history.

Many people have asked why we didn't give the scoutmaster a lie detector test. We seriously considered it and consulted some experts in this field. They advised against it. In some definite types of cases the lie detector will not give valid results. This, they thought, was one of those cases. Had we done it and had he passed on the faulty results, the publicity would have been a headache.

There is one way to explain the charred grass roots, the burned cap, and a few other aspects of the incident. It's pure speculation; I don't believe that it is the answer, yet it is interesting. Since the blades of the grass were not damaged and the ground had not been disturbed, this one way is the only way (nobody has thought of any other way) the soil could have been heated. It could have been done by induction heating.

To quote from a section entitled "Induction Heating" from an electrical engineering textbook:

A rod of solid metal or any electrical conductor, when subjected to an alternating magnetic field, has electromotive forces set up in it. These electromotive forces cause what are known as "eddy currents." A rise in temperature results from "eddy currents."

Induction heating is a common method of melting metals in a foundry.

Replace the "rod of solid metal" mentioned above with damp sand, an

---

electrical conductor, and assume that a something that was generating a powerful alternating magnetic field was hovering over the ground, and you can explain how the grass roots were charred. To get an alternating magnetic field, some type of electrical equipment was needed. Electricity - electrical sparks - the holes burned in the cap "by electric sparks."

UFO propulsion comes into the picture when one remembers Dr. Einstein's unified field theory, concerning the relationship between electromagnetism and gravitation.

If this alternating magnetic field can heat metal, why didn't everything the scoutmaster had that was metal get hot enough to burn him? He had a flashlight, machete, coins in his pocket, etc. The answer - he wasn't under the UFO for more than a few seconds. He said that when he stopped to really look at it he had backed away from under it. He did feel some heat, possibly radiating from the ground.

To further pursue this line of speculation, the scoutmaster repeatedly mentioned the unusual odor near the UFO. He described it as being "sharp" or "pungent." Ozone gas is "sharp" or "pungent." To quote from a chemistry book, "Ozone is prepared by passing air between two plates which are charged at a high electrical potential." Electrical equipment again. Breathing too high a concentration of ozone gas will also cause you to lose consciousness.

I used to try out this induction heating theory on people to get their reaction. I tried it out one day on a scientist from Rand. He practically leaped at the idea. I laughed when I explained that I thought this theory just happened to tie together the unanswered aspects of the incident in Florida and was not the answer; he was slightly perturbed. "What do you want?" he said. "Does a UFO have to come in and land on your desk at ATIC?"

CHAPTER FOURTEEN

Digesting the Data

It was soon after we had written a finish to the Case of the Scoutmaster that I went into Washington to give another briefing on the latest UFO developments. Several reports had come in during early August that had been read with a good deal of interest in the military and other govern-

---

187. Digesting the Data

mental agencies. By late August 1952 several groups in Washington were following the UFO situation very closely.

The sighting that had stirred everyone up came from Haneda AFB, now Tokyo International Airport, in Japan. Since the sighting came from outside the U.S., we couldn't go out and investigate it, but the intelligence officers in the Far East Air Force had done a good job, so we had the complete story of this startling account of an encounter with a UFO. Only a few minor questions had been unanswered, and a quick wire to FEAF brought back these missing data. Normally it took up to three months to get routine questions back and forth, but this time the exchange of wires took only a matter of hours.

Several months after the sighting I talked to one of the FEAF intelligence officers who had investigated it, and in his estimation it was one of the best to come out of the Far East.

The first people to see the UFO were two control tower operators who were walking across the ramp at the air base heading toward the tower to start the midnight shift. They were about a half hour early so they weren't in any big hurry to get up into the tower - at least not until they saw a large brilliant light off to the northeast over Tokyo Bay. They stopped to look at the light for a few seconds thinking that it might be an exceptionally brilliant star, but both men had spent many lonely nights in a control tower when they had nothing to look at except stars and they had never seen anything like this bright before. Besides, the light was moving. The two men had lined it up with the corner of a hangar and could see that it was continually moving closer and drifting a little off to the right.

In a minute they had run across the ramp, up the several hundred steps to the tower, and were looking at the light through 7x50 binoculars. Both of the men, and the two tower operators whom they were relieving, got a good look at the UFO. The light was circular in shape and had a constant brilliance. It appeared to be the upper portion of a large, round, dark shape which was about four times the diameter of the light itself. As they watched, the UFO moved in closer, or at least it appeared to be getting closer because it became more distinct. When it moved in, the men could see a second and dimmer light on the lower edge of the dark, shadowy portion.

In a few minutes the UFO had moved off to the east, getting dimmer and dimmer as it disappeared. The four tower men kept watching the eastern sky, and suddenly the light began to reappear. It stayed in sight a few seconds, was gone again, and then for the third time it came back, heading toward the air base.

This time one of the tower operators picked up a microphone, called

---

188.The Report on Unidentified Flying Objects

the pilot of a C-54 that was crossing Tokyo Bay, and asked if he could see the light. The pilot didn't see anything unusual.

At 11:45 P.M., according to the logbook in the tower, one of the operators called a nearby radar site and asked if they had an unidentified target on their scopes. They did.

The FEAF intelligence officers who investigated the sighting made a special effort to try to find out if the radar's unidentified target and the light were the same object. They deduced that they were since, when the tower operators and the radar operators compared notes over the telephone, the light and the radar target were in the same location and were moving in the same direction.

For about five minutes the radar tracked the UFO as it cut back and forth across the central part of Tokyo Bay, sometimes traveling so slowly that it almost hovered and then speeding up to 300 miles an hour. All of this time the tower operators were watching the light through binoculars. Several times when the UFO approached the radar station - once it came within 10 miles - a radar operator went outside to find out if he could see the light but no one at the radar site ever saw it. Back at the air base the tower operators had called other people and they saw the light. Later on the tower man said that he had the distinct feeling that the light was highly directional, like a spotlight.

Some of the people who were watching thought that the UFO might be a lighted balloon; so, for the sake of comparison, a lighted weather balloon was released. But the light on the balloon was much more "yellowish" than the UFO and in a matter of seconds it had traveled far enough away that the light was no longer visible. This gave the observers a chance to compare the size of the balloon and the size of the dark, shadowy part of the UFO. Had the UFO been 10 miles away it would have been 50 feet in diameter.

Three minutes after midnight an F-94 scrambled from nearby Johnson AFB came into the area. The ground controller sent the F-94 south of Yokohama, up Tokyo Bay, and brought him in "behind" the UFO. The second that the ground controller had the F-94 pilot lined up and told him that he was in line for a radar run, the radar operator in the rear seat of the F-94 called out that he had a lock-on. His target was at 6,000 yards, 10 degrees to the right and 10 degrees below the F-94. The lockon was held for ninety seconds as the ground controller watched both the UFO and the F-94 make a turn and come toward the ground radar site. Just as the target entered the "ground clutter" - the permanent and solid target near the radar station caused by the radar beam's striking the ground - the lock-on was broken. The target seemed to pull away swiftly from the jet

---

interceptor. At almost this exact instant the tower operators reported that they had lost visual contact with the UFO. The tower called the F-94 and asked if they had seen anything visually during the chase - they hadn't. The F-94 crew stayed in the area ten or fifteen more minutes but couldn't see anything or pick up any more targets on their radar.

Soon after the F-94 left the area, both the ground radar and the tower operators picked up the UFO again. In about two minutes radar called the tower to say that their target had just "broken into three pieces" and that the three "pieces," spaced about a quarter of a mile apart, were leaving the area, going northeast. Seconds later tower operators lost sight of the light.

The FEAF intelligence officers had checked every possible angle but they could offer nothing to account for the sighting.

There were lots of opinions, weather targets for example, but once again the chances of a weather target's being in exactly the same direction as a bright star and having the star appear to move with the false radar target aren't too likely - to say the least. And then the same type of thing had happened twice before inside of a month's time, once in California and once in Michigan.

As one of the men at the briefing I gave said, "It's incredible, and I can't believe it, but those boys in

FEAF are in a war - they're veterans - and by damn, I think they know what they're talking about when they say they've never seen anything like this before."

I could go into a long discourse on the possible explanations for this sighting; I heard many, but in the end there would be only one positive answer - the UFO could not be identified as something we knew about. It could have been an interplanetary spaceship. Many people thought this was the answer and were all for sticking their necks out and establishing a category of conclusions for UFO reports and labeling it spacecraft. But the majority ruled, and a UFO remained an unidentified flying object.

On my next trip to the Pentagon I spent the whole day talking to Major Dewey Fournet and two of his bosses, Colonel W. A. Adams and Colonel Weldon Smith, about the UFO subject in general. One of the things we talked about was a new approach to the UFO problem - that of trying to prove that the motion of a UFO as it flew through the air was intelligently controlled.

I don't know who would get credit for originating the idea of trying to analyze the motion of the UFO's. It was one of those kinds of ideas that are passed around, with everyone adding a few modifications. We'd been talking about making a study of this idea for a long time, but we hadn't had many reports to work with; but now, with the mass of data that we

---

had accumulated in June and July and August, the prospects of such a study looked promising.

The basic aim of the study would be to learn whether the motion of the reported UFO's was random or ordered. Random motion is an unordered, helter-skelter motion very similar to a swarm of gnats or flies milling around. There is no apparent pattern or purpose to their flight paths. But take, for example, swallows flying around a chimney - they wheel, dart, and dip, but if you watch them closely, they have a definite pattern in their movements - an ordered motion. The definite pattern is intelligently controlled because they are catching bugs or getting in line to go down the chimney.

By the fall of 1952 we had a considerable number of well documented reports in which the UFO's made a series of maneuvers. If we could prove that these maneuvers were not random, but ordered, it would be proof that the UFO's were things that were intelligently controlled.

During our discussion Major Fournet brought up two reports in which the UFO seemed to know what it was doing and wasn't just aimlessly darting around. One of these was the recent sighting from Haneda AFB, Japan, and the other was the incident that happened on the night of July 29, when an F-94 attempted to intercept a UFO over eastern Michigan. In both cases radar had established the track of the UFO.

In the Haneda Incident, according to the sketch of the UFO's track, each turn the UFO made was constant and the straight "legs" between the turns were about the same length. The sketch of the UFO's flight path as it moved back and forth over Tokyo Bay reminded me very much of the "crisscross" search patterns we used to fly during World War II when we were searching for the crew of a ditched airplane. The only time the UFO seriously deviated from this pattern was when the F-94 got on its tail.

The Michigan sighting was even better, however. In this case there was a definite reason for every move that the UFO made. It made a 180 degree turn because the F-94 was closing on it head on. It alternately increased and decreased its speed, but every time it did this it was because the F-94 was closing in and it evidently put on speed to pull out ahead far enough to get out of range of the F-94's radar. To say that this motion was random and that it was just a coincidence that the UFO made the 180 degree turn when the F-94 closed in head on and that it was just a coincidence that the UFO

speeded up every time the F-94 began to get within radar range is pushing the chance of coincidence pretty hard.

The idea of the motion analysis study sounded interesting to me, but we were so busy on Project Blue Book we didn't have time to do it. So

---

191. Digesting the Data

Major Fournet offered to look into it further and I promised him all the help we could give him.

In the meantime my people in Project Blue Book were contacting various scientists in the U.S., and indirectly in Europe, telling them about our data, and collecting opinions. We did this in two ways. In the United States we briefed various scientific meetings and groups. To get the word to the other countries, we enlisted the gratis aid of scientists who were planning to attend conferences or meetings in Europe. We would brief these European bound scientists on all of the aspects of the UFO problem so they could informally discuss the problem with their European colleagues.

The one thing about these briefings that never failed to amaze me, although it happened time and time again, was the interest in UFO's within scientific circles. As soon as the word spread that Project Blue Book was giving official briefings to groups with the proper security clearances, we had no trouble in getting scientists to swap free advice for a briefing. I might add that we briefed only groups who were engaged in government work and who had the proper security clearances solely because we could discuss any government project that might be of help to us in pinning down the UFO. Our briefings weren't just squeezed in either; in many instances we would arrive at a place to find that a whole day had been set aside to talk about UFO's. And never once did I meet anyone who laughed off the whole subject of flying saucers even though publicly these same people had jovially sloughed off the press with answers of "hallucinations," "absurd," or "a waste of time and money." They weren't wild eyed fans but they were certainly interested.

Colonel S. H. Kirkland and I once spent a whole day briefing and talking Beacon Hill Group, the co e name for a collection of some of the world's leadingists and industrialists. This group, formed to con ider and analyze the to of military problems, took a very serious interest in our project and gave od advice. At Los Alamos and again at Sandia Base our briefings were given in auditoriums to standing room only crowds. In addition I gave my briefings at National Advisory Committee for Aeronautics laboratories, at Air Research and Development centers, at Office of Naval Research facilities and at the Air Force University. Then we briefed special groups of scientists.

Normally scientists are a cautious lot and stick close to proven facts, keeping their personal opinions confined to small groups of friends, but when they know that there is a sign on a door that says "Classified Briefing in Progress," inhibitions collapse like the theories that explain all the UFO's away. People say just what they think.

192.The Report on Unidentified Flying Objects

I could jazz up this part of the UFO story as so many other historians of the UFO have and say that Dr. So-and-So believes that the reported flying saucers are from outer space or that Dr. Whosita is firmly convinced that Mars is inhabited. I talked to plenty of Dr. So-and-So's who believed that flying saucers were real and who were absolutely convinced that other planets or bodies in the universe were inhabited, but we were looking for proven facts and not just personal opinions.

However, some of the questions we asked the scientists had to be answered by personal opinions because the exact answers didn't exist. When such questions came up, about all we could do was to try to get the largest and most representative cross section of personal opinions upon which to base

our decisions. In this category of questions probably the most frequently discussed was the possibility that other celestial bodies in the universe were populated with intelligent beings. The exact answer to this is that no one knows. But the consensus was that it wouldn't be at all surprising.

All the briefings we were giving added to our work load because UFO reports were still coming in in record amounts. The lack of newspaper publicity after the Washington sightings had had some effect because the number of reports dropped from nearly 500 in July to 175 in August, but this was still far above the normal average of twenty to thirty reports a month.

September 1952 started out with a rush, and for a while it looked as if UFO sightings were on the upswing again. For some reason, we never could determine why, we suddenly began to get reports from all over the southeastern United States. Every morning, for about a week or two, we'd have a half dozen or so new reports. Georgia and Alabama led the field. Many of the reports came from people in the vicinity of the then new super-hush-hush Atomic Energy Commission facility at Savannah River, Georgia. And many were coming from the port city of Mobile, Alabama. Our first thought, when the reports began to pour in, was that the news papers in these areas were possibly stirring things up with scare stories, but our newspaper clipping service covered the majority of the southern papers, and although we kept looking for publicity, none showed up. In fact, the papers only barely mentioned one or two of the sightings. As they came in, each of the sighting reports went through our identification process; they were checked against all balloon flights, aircraft flights, celestial bodies, and the MO file, but more than half of them came out as unknowns.

When the reports first began to come in, I had called the intelligence officers at all of the major military installations in the Southeast unsuc-

---

cessfully trying to find out if they could shed any light on the cause of the sightings. One man, the man who was responsible for UFO reports made to Brookley AFB, just outside of Mobile, Alabama, took a dim view of all of the proceedings. "They're all nuts," he said.

About a week later his story changed. It seems that one night, about the fourth night in a row that UFO's had been reported near Mobile, this man and several of his assistants decided to try to see these famous UFO's; about 10:00 P.M., the time that the UFO's were usually reported, they were gathered around the telephone in the man's office at Brookley AFB. Soon a report came in. The first question that the investigator who answered the phone asked was, "Can you still see it?"

The answer was "Yes," so the officer took off to see the UFO.

The same thing happened twice more, and two more officers left for different locations. The fourth time the phone rang the call was from the base radar station. They were picking up a UFO on radar, so the boss himself took off. He saw the UFO in air out over Mobile Bay and he saw the return of the UFO on the radarscope.

The next morning he called me at ATIC and for over an hour he told me what had happened. Never have I talked to four more ardent flying saucer believers.

We did quite a bit of work on the combination radar visual sighting at Brookley. First of all, radar visual sightings were the best type of UFO sightings we received. There are no explanations for how radar can pick up a UFO target that is being watched visually at the same time. Maybe I should have said there are no proven explanations on how this can happen, because, like everything else associated with the UFO, there was a theory. During the Washington National Sightings several people proposed the idea that the same temperature inversion layer that was causing the radar beam to bend down and pick up a ground target was causing the target to appear to be in the air. They went

on to say that we couldn't get a radar visual sighting unless the ground target was a truck, car, house, or something else that was lighted and could be seen at a great distance. The second reason the Brookley AFB sighting was so interesting was that it knocked this theory cold.

The radar at Brookley AFB was so located that part of the area that it scanned was over Mobile Bay. It was in this area that the UFO was detected. We thought of the theory that the same inversion layer that bent the radar beam also caused the target to appear to be in the air, and we began to do a little checking. There was a slight inversion but, according to our calculations, it wasn't enough to affect the radar. More important was the fact that in the area where the target appeared there were no

---

targets to pick up - let alone lighted targets. We checked and rechecked and found that at the time of the sighting there were no ships, buoys, or anything else that would give a radar return in the area of Mobile Bay in which we were interested.

Although this sighting wasn't as glamorous as some we had, it was highly significant because it was possible to show that the UFO couldn't have been a lighted surface target.

While we were investigating the sighting we talked to several electronics specialists about our radar visual sightings. One of the most frequent comments we heard was, "Why do all of these radar visual sightings occur at night?"

The answer was simple: they don't. On August 1, just before dawn, an ADC radar station outside of Yaak, Montana, on the extreme northern border of the United States, picked up a UFO. The report was very similar to the sighting at Brookley except it happened in the daylight and, instead of seeing a light, the crew at the radar station saw a "dark, cigar shaped object" right where the radar had the UFO pinpointed.

What these people saw is a mystery to this day.

Late in September I made a trip out to Headquarters, ADC to brief General Chidlaw and his staff on the past few months' UFO activity.

Our plans for periodic briefings, which we had originally set up with ADC, had suffered a bit in the summer because we were all busy elsewhere. They were still giving us the fullest co-operation, but we hadn't been keeping them as thoroughly read in as we would have liked to. I'd finished the briefing and was eating lunch at the officers' club with Major Verne Sadowski, Project Blue Book's liaison officer in ADC Intelligence, and several other officers. I had a hunch that something was bothering these people. Then finally Major Sadowski said, "Look, Rupe, are you giving us the straight story on these UFO's?"

I thought he meant that I was trying to spice things up a little, so I said that since he had copies of most of our reports and had read them, he should know that I was giving them the facts straight across the board.

Then one of the other officers at the table cut in, "That's just the point, we do have the reports and we have read them. None of us can understand why Intelligence is so hesitant to accept the fact that something we just don't know about is flying around in our skies - unless you are trying to cover up something big."

Everyone at the table put in his ideas. One radar man said that he'd looked over several dozen radar reports and that his conclusion was that the UFO's couldn't be anything but interplanetary spaceships. He started to give his reasons when another radar man leaped into the conversation.

195. Digesting the Data

This man said that he'd read every radar report, too, and that there wasn't one that couldn't be explained as a weather phenomenon - even the radar visual sightings. In fact, he wasn't even convinced that we had ever gotten such a thing as radar visual sighting. He wanted to see proof that an object that was seen visually was the same object that the radar had picked up. Did we have it?

I got back into the discussion at this point with the answer. No, we didn't have proof if you want to get technical about the degree of proof needed. But we did have reports where the radar and visual bearings of the UFO coincided almost exactly. Then we had a few reports where airplanes had followed the UFO's and the maneuvers of the UFO that the pilot reported were the same as the maneuvers of the UFO that was being tracked by radar.

A lieutenant colonel who had been sitting quietly by interjected a well chosen comment. "It seems the difficulty that Project Blue Book faces is what to accept and what not to accept as proof."

The colonel had hit the proverbial nail on its proverbial head.

Then he went on, "Everyone has a different idea of what proof really is. Some people think we should accept a new model of an airplane after only five or ten hours of flight testing. This is enough proof for them that the airplane will fly. But others wouldn't be happy unless it was flight tested for five or ten years. These people have set an unreasonably high value on the word 'proof.' The answer is somewhere in between these two extremes."

But where is this point when it comes to UFO's?

There was about a thirty second pause for thought after the colonel's little speech. Then someone asked, "What about these recent sightings at Mainbrace?"

In late September 1952 the NATO naval forces had held maneuvers off the coast of Europe; they were called Operation Mainbrace. Before they had started someone in the Pentagon had half seriously mentioned that Naval Intelligence should keep an eye open for UFO's, but no one really expected the UFO's to show up. Nevertheless, once again the UFO's were their old unpredictable selves - they were there.

On September 20, a U.S. newspaper reporter aboard an aircraft carrier in the North Sea was photographing a carrier take-off in color when he happened to look back down the flight deck and saw a group of pilots and flight deck crew watching something in the sky. He went back to look and there was a silver sphere moving across the sky just behind the fleet of ships. The object appeared to be large, plenty large enough to show up in a photo, so the reporter shot several pictures. They were developed right

196.The Report on Unidentified Flying Objects

away and turned out to be excellent. He had gotten the superstructure of the carrier in each one and, judging by the size of the object in each successive photo, one could see that it was moving rapidly.

The intelligence officers aboard the carrier studied the photos. The object looked like a balloon. From its size it was apparent that if it were a balloon, it would have been launched from one of the ships, so the word went out on the TBS radio: "Who launched a balloon?"

The answer came back on the TBS: "Nobody."

Naval Intelligence double checked, triple checked and quadruple checked every ship near the carrier but they could find no one who had launched the UFO.

We kept after the Navy. The pilots and the flight deck crew who saw the UFO had mixed feelings - some were sure that the UFO was a balloon while others were just as sure that it couldn't have been. It was traveling too fast, and although it resembled a balloon in some ways it was far from being identical to the hundreds of balloons that the crew had seen the aerologists launch.

We probably wouldn't have tried so hard to get a definite answer to the Mainbrace photos if it hadn't been for the events that took place during the rest of the operation, I explained to the group of ADC officers.

The day after the photos had been taken six RAF pilots flying a formation of jet fighters over the North Sea saw something coming from the direction of the Mainbrace fleet. It was a shiny, spherical object, and they couldn't recognize it as anything "friendly" so they took after it. But in a minute or two they lost it. When they neared their base, one of the pilots looked back and saw that the UFO was now following him. He turned but the UFO also turned, and again it outdistanced the Meteor in a matter of minutes.

Then on the third consecutive day a UFO showed up near the fleet, this time over Topcliffe Aerodrome in England. A pilot in a Meteor was scrambled and managed to get his jet fairly close to the UFO, close enough to see that the object was "round, silvery, and white" and seemed to "rotate around its vertical axis and sort of wobble." But before he could close in to get a really good look it was gone.

It was these sightings, I was told by an RAF exchange intelligence officer in the Pentagon, that caused the RAF to officially recognize the UFO.

By the time I'd finished telling about the Mainbrace Sightings, it was after the lunch hour in the club and we were getting some get-the-hell-out of-here looks from the waiters, who wanted to clean up the dining room. But before I could suggest that we leave, Major Sadowski repeated his

---

197. Digesting the Data

original question - the one that started the whole discussion- "Are you holding out on us?"

I gave him an unqualified "No." We wanted more positive proof, and until we had it, UFO's would remain unidentified flying objects and no more.

The horizontal shaking of heads illustrated some of the group's thinking. We had plans for getting more positive proof, however, and I said that just as soon as we returned to Major Sadowski's office I'd tell them what we contemplated doing.

We moved out onto the sidewalk in front of the club and, after discussing a few more sightings, went back into the security area to Sadowski's office and I laid out our plans.

First of all, in November or December the U.S. was going to shoot the first H-bomb during Project Ivy. Although this was Top Secret at the time, it was about the most poorly kept secret in history - everybody seemed to know all about it. Some people in the Pentagon had the idea that there were beings, earthly or otherwise, who might be interested in our activities in the Pacific, as they seemed to be in Operation Mainbrace. Consequently Project Blue Book had been directed to get transportation to the test area to set up a reporting net, brief people on how to report, and analyze their reports on the spot.

Secondly, Project Blue Book was working on plans for an extensive system to track UFO's by instruments. Brigadier General Garland, who had been General Samford's Deputy Director for Production and who had been riding herd on the UFO project for General Samford, was now chief at ATIC, having replaced Colonel Dunn, who went to the Air War College. General Garland had long been in favor of trying to get some concrete information, either positive or negative, about the UFO's. This planned tracking system would replace the defraction grid cameras that were still being developed at ATIC.

Thirdly, as soon as we could we were planning to gather together a group of scientists and let them spend a full week or two studying the UFO problem.

When I left ADC, Major Sadowski and crew were satisfied that we weren't just sitting around twiddling our UFO reports.

During the fall of 1952 reports continued to drop off steadily. By December we were down to the normal average of thirty per month, with about 20 percent of these falling into the "Unknown" category.

Our proposed trip to the Pacific to watch for UFO's during the H-bomb test was canceled at the last minute because we couldn't get space on an airplane. But the crews of Navy and Air Force security forces who did

---

go out to the tests were thoroughly briefed to look for UFO's, and they were given the procedures on how to track and report them. Back at Dayton we stood by to make quick analysis of any reports that might come in - none came. Nothing that fell into the UFO category was seen during the entire Project Ivy series of atomic shots.

By December work on the planning phase of our instrumentation program was completed. During the two months we had been working on it we had considered everything from giving Ground Observer Corps spotters simple wooden tracking devices to building special radars and cameras. We had talked over our problems with the people at Wright Field who knew about missile tracking equipment, and we had consulted the camera technicians at the Air Force Aerial Reconnaissance Laboratory. Astronomers explained their equipment and the techniques to use, and we went to Rome, New York, and Boston to enlist the aid of the people who develop the Air Force's electronic equipment.

Our final plan called for visual spotting stations to be established all over northern New Mexico. We'd picked this test location because northern New Mexico still consistently produced more reports than any other area in the U.S. These visual spotting stations would be equipped with a sighting device similar to a gun sight on a bomber. All the operator would have to do would be to follow the UFO with the tracking device, and the exact time and the UFO's azimuth and elevation angles would be automatically recorded. The visual spotting stations would all be tied together with an interphone system, so that as soon as the tracker at one station saw something he could alert the other spotters in the area. If two stations tracked the same object, we could immediately compute its speed and altitude.

This visual spotting net would be tied into the existing radar defense net in the Albuquerque-Los Alamos area. At each radar site we proposed that a long focal length camera be synchronized to the turning radar antenna, so that any time the operator saw a target he could press a button and photograph the portion of the sky exactly where the radar said a UFO was located. These cameras would actually be astronomical telescopes, so that even the smallest light or object could be photographed.

In addition to this photography system we proposed that a number of sets of instruments be set out around the area. Each set would contain instruments to measure nuclear radiation, any disturbances in the earth's magnetic field, and the passage of a body that was giving off heat. The instruments would continually be sending their information to a central "UFO command post," which would also get reports directly from the radars and the visual spotting stations.

199.The Report on Unidentified Flying Objects

This instrumentation plan would cost about $250,000 because we planned to use as much surplus equipment as possible and tie it into existing communications systems, where they already existed. After the setup was established, it would cost about $25,000 a year to operate. At first glance this seemed like a lot of money, but when we figured out how much the UFO project had cost the Air Force in the past and how much it would probably cost in the future, the price didn't seem too bad - especially if we could solve the UFO problem once and for all.

The powers-that-be at ATIC O.K.'d the plan in December and it went to Washington, where it would have to be approved by General Samford before it went to ADC and then back to the Pentagon for higher Air Force official blessing. From all indications it looked as if we would get the necessary blessings.

But the majority of the effort at Project Blue Book during the fall of 1952 had gone toward collecting together all of the bits and pieces of data that we had accumulated over the past year and a half. We had sorted out the best of the "Unknowns" and made studies of certain aspects of the UFO problem, so that when we could assemble a panel of scientists to review the data we could give them the over-all picture, not just a basketful of parts.

Everyone who knew about the proposed panel meeting was eager to get started because everyone was interested in knowing what this panel would have to say. Although the group of scientists wouldn't be empowered to make the final decision, their recommendations were to go to the President if they decided that the UFO's were real. And any recommendations made by the group of names we planned to assemble would carry a lot of weight.

In the Pentagon and at ATIC book was being made on what their recommendations would be. When I put my money down, the odds were 5 to 3 in favor of the UFO.

Chapter 15: The Radiation Story, Page 199

CHAPTER FIFTEEN

The Radiation Story

The idea for gathering together a group of scientists, to whom we referred as our "panel of experts," had been conceived early in 1952 - as soon as serious talk about the possibility that the UFO's might be interplanetary

---

200.The Report on Unidentified Flying Objects

spaceships had taken hold in both military and scientific circles. In fact, when Project Grudge was reorganized in the summer of 1951 the idea had been mentioned, and this was the main reason that our charter had said we were to be only a fact finding group. The people on previous UFO projects had gone off on tangents of speculation about the identity of the UFO's; they first declared that they were spacecraft, then later, in a complete about face, they took the whole UFO problem as one big belly laugh. Both approaches had gotten the Air Force into trouble. Why they did this I don't know, because from the start we realized that no one at ATIC, in the Air Force, or in the whole military establishment was qualified to give a final yes or no answer to the UFO problem. Giving a final answer would require a serious decision - probably one of the most serious since the beginning of man.

During 1952 many highly qualified engineers and scientists had visited Project Blue Book and had spent a day or two going over our reports. Some were very much impressed with the reports - some had all the answers.

But all of the scientists who read our reports readily admitted that even though they may have thought that the reports did or did not indicate visitors from outer space, they would want to give the subject a good deal more study before they ever committed themselves in writing. Consequently the people's opinions, although they were valuable, didn't give us enough to base a decision upon. We still needed a group to study our material thoroughly and give us written conclusions and recommendations which could be sent to the President if necessary.

Our panel of experts was to consist of six or eight of the top scientists in the United States. We fully realized that even the Air Force didn't have enough "pull" just to ask all of these people to drop the important work they were engaged in and spend a week or two studying our reports. Nor did we want to do it this way; we wanted to be sure that we had something worth while before asking for their valuable time. So, working through other government agencies, we organized a preliminary review panel of four people. All of them were competent scientists and we knew their reputations were such that if they recommended that a certain top scientist sit on a panel to review our material he would do it.

In late November 1952 the preliminary review panel met at ATIC for three days.

When the meeting ended, the group unanimously recommended that a "higher court" be formed to review the case of the UFO. In an hour their recommendation was accepted by higher Air Force authorities, and the men proceeded to recommend the members for our proposed panel.

---

201. The Radiation Story

They picked six men who had reputations as being both practical and theoretical scientists and who were known to have no biased opinions regarding the UFO's.

The meeting of the panel, which would be held in Washington, was tentatively scheduled for late December or early January - depending upon when all of the scientists who had been asked to attend would be free. At Project Blue Book activity went into high gear as we made preparations for the meeting. But before we were very far along our preparations were temporarily sidetracked - I got a lead on the facts behind a rumor. Normally we didn't pay attention to rumors, but this one was in a different class.

Ever since the Air Force had become interested in UFO reports, the comment of those who had been requested to look them over and give a professional opinion was that we lacked the type of data "you could get your teeth into." In even our best reports we had to rely upon what someone had seen. I'd been told many times that if we had even one piece of information that was substantiated by some kind of recorded proof - a set of cinetheodolite movies of a UFO, a spectrum photograph, or any other kind of instrumented data that one could sit down and study - we would have no difficulty getting almost any scientist in the world interested in actively helping us find the answer to the UFO riddle.

The rumor that caused me to temporarily halt our preparations for the high level conference involved data that we might be able to get our teeth into.

This is the way it went:

In the fall of 1949, at some unspecified place in the United States, a group of scientists had set up equipment to measure background radiation, the small amount of harmless radiation that is always present in our atmosphere. This natural radiation varies to a certain degree, but will never increase by any appreciable amount unless there is a good reason.

According to the rumor, two of the scientists at the unnamed place were watching the equipment one day when, for no apparent reason, a sudden increase of radiation was indicated. The radiation remained high for a few seconds, then dropped back to normal. The increase over normal was not sufficient to be dangerous, but it definitely was unusual. All indications pointed to equipment malfunction as the most probable explanation. A quick check revealed no obvious trouble with the gear, and the two scientists were about to start a more detailed check when a third member of the radiation crew came rushing into the lab.

Before they could tell the newcomer about the unexplained radiation they had just picked up, he blurted out a story of his own. He had driven

---

to a nearby town, and on his return trip, as he approached the research lab, something in the sky suddenly caught his eye. High in the cloudless blue he saw three silvery objects moving in a V formation. They appeared to be spherical in shape, but he wasn't sure. The first fact that had hit him was that the objects were traveling too fast to be conventional aircraft. He jammed on the brakes, stopped his car, and shut off the engine. No sound. All he could hear was the quiet whir of a generator in the research lab. In a few seconds the objects had disappeared from sight.

After the first two scientists had briefed their excited colleague on the unusual radiation they had detected, the three men asked each other the $64 question: Was there any connection between the two incidents? Had the UFO's caused the excessive radiation?

They checked the time. Knowing almost exactly when the instruments had registered the increased radiation, they checked on how long it took to drive to the lab from the point where the three silver objects had been seen. The times correlated within a minute or two. The three men proceeded to check their radiation equipment thoroughly. Nothing was wrong.

The rumor stopped here. Nothing that I or anyone else on Project Blue Book could find out shed any further light on the source of the story. People associated with projects similar to the research lab that was mentioned in the rumor were sought out and questioned. Many of them had heard the story, but no one could add any new details. The three unknown scientists, at the unnamed lab, in an unknown part of the United States, might as well never have existed. Maybe they hadn't.

Almost a year after I had first heard the UFO radiation story I got a long-distance call from a friend on the west coast. I had seen him several months before, at which time I told him about this curious rumor and expressed my wish to find out how authentic it was. Now, on the phone, he told me he had just been in contact with two people he knew and they had the whole story. He said they would be in Los Angeles the following night and would like very much to talk to me.

I hated to fly clear to the west coast on what might be a wild goose chase, but I did. I couldn't afford to run the risk of losing an opportunity to turn that old recurrent rumor into fact.

Twenty hours later I met the two people at the Hollywood Roosevelt Hotel. We talked for several hours that night, and I got the details on the rumor and a lot more that I hadn't bargained for. Both of my informants were physicists working for the Atomic Energy Commission, and were recognized in their fields. They wanted no publicity and I promised them that they would get none. One of the men knew all the details behind the

---

rumor, and did most of the talking. To keep my promise of no publicity, I'll call him the "scientist."

The rumor version of the UFO radiation story that had been kicking around in Air Force and scientific circles for so long had been correct in detail but it was by no means complete. The scientist said that after the initial sighting had taken place word was spread at the research lab that the next time the instruments registered abnormal amounts of radiation, some of the personnel were to go outside immediately and look for some object in the sky.

About three weeks after the first incident a repetition did occur. While excessive radiation was registering on the instruments in the lab, a lone dark object was seen streaking across the sky. Again the instruments were checked but, as before, no malfunction was found.

After this second sighting, according to the scientist, an investigation was started at the laboratory. The people who made the visual observations weren't sure that the object they had seen couldn't have been an airplane. Someone thought that perhaps some type of radar equipment in the airplane, if that's what the object was, might have affected the radiation- detection equipment. So arrangements were made to fly all types of aircraft over the area with their radar in operation. Nothing unusual happened. All possible types of airborne research equipment were traced during similar flights in the hope that some special equipment not normally carried in aircraft would be found to have caused the jump in radiation. But nothing out of the ordinary occurred during these tests either.

It was tentatively concluded, the scientist continued, that the abnormally high radiation readings were "officially" due to some freakish equipment malfunction and that the objects sighted visually were birds or airplanes. A report to this effect was made to military authorities, but since the conclusion stated that no flying saucers were involved, the report went into some unknown file. Project Blue Book never got it.

Shortly after the second UFO radiation episode the research group finished its work. It was at this time that the scientist had first become aware of the incidents he related to me. A friend of his, one of the men involved in the sightings, had sent the details in a letter.

As the story of the sightings spread it was widely discussed in scientific circles, with the result that the conclusion, an equipment malfunction, began to be more seriously questioned. Among the scientists who felt that further investigation of such phenomena was in order, were the man to whom I was talking and some of the people who had made the original sightings.

204.The Report on Unidentified Flying Objects

About a year later the scientist and these original investigators were working together. They decided to make a few more tests, on their own time, but with radiation detection equipment so designed that the possibility of malfunction would be almost nil. They formed a group of people who were interested in the project, and on evenings and weekends assembled and set up their equipment in an abandoned building on a small mountain peak. To insure privacy and to avoid arousing undue interest among people not in on the project, the scientist and his colleagues told everyone that they had formed a mineral club. The "mineral club" deception covered their weekend expeditions because "rock hounds" are notorious for their addiction to scrambling around on mountains in search for specimens.

The equipment that the group had installed in the abandoned building was designed to be self operating. Geiger tubes were arranged in a pattern so that some idea as to the direction of the radiation source could be obtained. During the original sightings the equipment malfunction factor could not be definitely established or refuted because certain critical data had not been measured.

To get data on visual sightings, the "mineral club" had to rely on the flying saucer grapevine, which exists at every major scientific laboratory in the country.

By late summer of 1950 they were in business. For the next three months the scientist and his group kept their radiation equipment operating twenty-four hours a day, but the tapes showed nothing except the usual background activity. The saucer grapevine reported sightings in the general area of the tests, but none close to the instrumented mountain top.

The trip to the instrument shack, which had to be made every two days to change tapes, began to get tiresome for the "rock hounds," and there was some talk of discontinuing the watch.

But persistence paid off. Early in December, about ten o'clock in the morning, the grapevine reported sightings of a silvery, circular shaped object near the instrument shack. The UFO was seen by several people.

When the "rock hounds" checked the recording tapes in the shack they found that several of the Geiger tubes had been triggered at 10:17 A.M. The registered radiation increase was about 100 times greater than the normal background activity.

Three more times during the next two months the "mineral club's" equipment recorded abnormal radiation on occasions when the grapevine reported visual sightings of UFO's. One of the visual sightings was substantiated by radar.

---

205. The Radiation Story

After these incidents the "mineral club" kept its instruments in operation until June 1951, but nothing more was recorded. And, curiously enough, during this period while the radiation level remained normal, the visual sightings in the area dropped off too. The "mineral club" decided to concentrate on determining the significance of the data they had obtained.

Accordingly, the scientist and the group made a detailed study of their mountain top findings. They

had friends working on many research projects throughout the United States and managed to visit and confer with them while on business trips. They investigated the possibility of unusual sunspot activity, but sunspots had been normal during the brief periods of high radiation. To clinch the elimination of sunspots as a cause, their record tapes showed no burst of. radiation when sunspot activity had been abnormal.

The "rock hounds" checked every possible research project that might have produced some stray radiation for their instruments to pick up. They found nothing. They checked and rechecked their instruments, but could find no factor that might have induced false readings. They let other scientists in on their findings, hoping that these outsiders might be able to put their fingers on errors that had been overlooked.

Now, more than a year after the occurrence of the mysterious incidents that they had recorded, a year spent in analyzing their data, the "rock hounds" had no answer.

By the best scientific tests that they had been able to apply, the visual sightings and the high radiation had taken place more or less simultaneously.

Intriguing ideas are hard to kill, and this one had more than one life, possibly because of the element of mystery which surrounds the subject of flying saucers. But the scientific mind thrives on taking the mystery out of unexplained events, so it is not surprising that the investigation went on.

According to my friend the scientist, a few people outside the laboratory where the "rock hounds" worked were told about the activities of the "mineral club," and they started radiation detection groups of their own.

For instance, two graduate astronomy students from a southwestern university started a similar watch, on a modest scale, using a modified standard Geiger counter as their detection unit. They did not build a recorder into their equipment, however, and consequently were forced to man their equipment continuously, which naturally cut down the time they were in operation. On two occasions they reportedly detected a burst of high radiation.

Although the veracity of the two astronomers was not doubted, the scientist felt that the accuracy of their readings was poor because of the rather low quality of their equipment.

The scientist then told me about a far more impressive effort to verify or disprove the findings of the "mineral club." Word of the "rock hounds" and their work had also spread to a large laboratory in the East. An Air Force colonel, on duty at the lab, told the story to some of his friends, and they decided to look personally into the situation.

Fortunately these people were in a wonderful spot to make such an investigation. At their laboratory an extensive survey of the surrounding area was being made. An elaborate system of radiation detection equipment had been set up for a radius of 100 miles around the lab. In addition, the defenses of the area included a radar net.

Thanks to the flashing of silver eagles, the colonel's group got permission to check the records of the radiation survey station and to look over the logs of the radar stations. They found instances where, during the same period of time that radiation in the area had been much higher than normal, radar had had a UFO on the scope. These events had occurred during the period from January 1951 until about June 1951.

Upon learning of the tentative but encouraging findings that the colonel's group had dug out of their

past records, people on both the radiation survey crews and at the radar sites became interested in co-operating for further investigation. A tie-in with the local saucer grapevine established a three way check.

One evening in July, just before sunset, two of the colonel's group were driving home from the laboratory. As they sped along the highway they noticed two cars stopped ahead of them. The occupants were standing beside the road, looking at something in the sky.

The two scientists stopped, got out of their car, and scanned the sky too. Low on the eastern horizon they saw a bright circular object moving slowly north. They watched it for a while, took a few notes, then drove back to the lab.

Some interesting news awaited them there. Radar had picked up an unidentified target near the spot where the scientists in the car had seen the UFO, and it had been traveling north. A fighter had been scrambled, but when it got into the proper area, the radar target was off the scope. The pilot glimpsed something that looked like the reported UFO, but before he could check further he had to turn into the sun to get on an interception course, and he lost the object.

Several days passed before the radiation reports from all stations could be collected. When the reports did come in they showed that

---

207. The Radiation Story

stations east of the laboratory, on an approximate line with the radar track, had shown the highest increase in radiation. Stations west of the lab showed nothing.

The possible significance of this well covered incident spurred the colonel's group to extend and refine their activities. Their idea was to build a radiation detection instrument in an empty wing tank and hang the tank on an F-47. Then when a UFO was reported they would fly a search pattern in the area and try to establish whether or not a certain sector of the sky was more radioactive than other sectors. Also, they proposed to build a highly directional detector for the F-47 and attempt actually to track a UFO.

The design of such equipment was started, but many delays occurred. Before the colonel's group could get any of the equipment built, some of the members left the lab for other jobs, and the colonel, who sparked the operation, was himself transferred elsewhere. The entire effort collapsed.

The scientist was not surprised that I hadn't heard the story of the colonel's group. All the people involved, he said, had kept it quiet in order to avoid ridicule. The scientist added that he would be glad to give me all the data he had on the sightings of his "mineral club," and he told me where to get the information about the two astronomers and the colonel's group.

Armed with the scientist's notes and recorder tapes, I left for my office at Wright-Patterson Air Force Base, Dayton.

With the blessings of my chief, I started to run down the rest of the radiation information. The data we had, especially that from the scientist's "mineral club," had been thoroughly analyzed, but we thought that since we now had access to more general data something new and more significant might be found.

First I contacted the government agency for which all of the people involved in these investigations had been working, the scientists who recorded the original incident, the scientist and his "mineral club," the colonel's group, and the rest.

The people in the agency were very co-operative but stressed the fact that the activities I was investigating were strictly the extracurricular affairs of the scientists involved, had no official sanction, and should not be tied in with the agency in any way, shape, or form. This closed door reaction was typical of how the words "flying saucer" seem to scare some people.

They did help me locate the report on the original incident, however, and since it seemed to be the only existing copy, I arranged to borrow it.

208.The Report on Unidentified Flying Objects

About this same time we located the two graduate astronomy students in New Mexico. Both now had their Ph.D.'s and held responsible jobs on highly classified projects. They repeated their story, which I had first heard from the scientist, but had kept no record of their activities.

On one occasion, just before dawn on a Sunday morning, they were on the roof, making some meteorological observations. One of them was listening to the Geiger counter when he detected a definite increase in the clicking.

Just as the frequency of the clicks reached its highest peak - almost a steady buzz - a large fireball, described by them as "spectacular," flashed across the sky. Both of the observers had seen several of the green fireballs and said that this object was similar in all respects except that the color was a brilliant blue white.

With the disappearance of the fireball, the counter once more settled down to a steady click per second. They added that once before they had detected a similar increase in the frequency of the clicks but had seen nothing in the sky.

In telling their story, both astronomers stressed the point that their data were open to a great deal of criticism, mainly because of the limited instrumentation they had used. We agreed. Still their work tended to support the findings of the more elaborate and systematic radiation investigations.

The gods who watch over the UFO project were smiling about this time, because one morning I got a call from a colonel on Wright-Patterson Air Force Base. He was going to be in our area that morning and planned to stop in to see me.

He arrived in a few minutes and turned out to be none other than the colonel who had headed the group which had investigated UFO's and radiation at the eastern laboratory. He repeated his story. It was the same as I had heard from the scientist, with a few insignificant changes. The colonel had no records of his group's operations, but knew who had them. He promised to get a wire off to the person immediately, which he did.

The answer was a bit disappointing. During the intervening months the data had been scattered out among the members of the colonel's group, and when the group broke up, so did its collection of records.

So all we had to fall back on was the colonel's word, but since he now was heading a top priority project at Wright, it would be difficult not to believe him.

After obtaining the colonel's story, we collected all available data concerning known incidents in which there seemed to be a correlation

---

209. The Radiation Story

between the visual sighting of UFO's and the presence of excess atomic radiation in the area of the sightings.

There was one last thing to do. I wanted to take the dates and times of all the reported radiation increases and check them against all sources of UFO reports. This project would take a lot of leg work and digging, but I felt that it would offer the most positive and complete evidence we could assemble as to whether or not a correlation existed.

Accordingly, we dug into our files, ADC radar logs, press wire service files, newspaper morgues in the sighting area, and the files of individuals who collect data on saucers. Whenever we found a visual report that correlated with a radiation peak we checked it against weather conditions, balloon tracks, astronomical reports, etc.

As soon as the data had all been assembled, I arranged for a group of Air Force consultants to look it over. I got the same old answer - the data still aren't good enough. The men were very much interested in the reports, but when it came time to putting their comments on paper they said, "Not enough conclusive evidence." If in some way the UFO's could have been photographed at the same time that the radiation detectors were going wild, it would have been a different story, they later told me, but with the data I had for them this was the only answer they could give. No one could explain the sudden bursts of radiation, but there was no proof that they were associated with UFO's.

The board's ruling wrote finish to this investigation. I informed the colonel, and he didn't like the decision. Later I passed through the city where the scientist was working. I stopped over a few hours to brief him on the board's decision. He shook his head in disbelief.

It is interesting to note that both the colonel and the scientist reacted in the same way. We're not fools - we were there - we saw it - they didn't. What do they want for proof?

Chapter 16: The Hierarchy Ponders, Page 209

NICAP Home Page

CHAPTER SIXTEEN

The Hierarchy Ponders

By early January 1953 the scientists who were to be members of our panel of experts had been contacted and had agreed to sit in judgment of the UFO. In turn, we agreed to give them every detail about the UFO.

210.The Report on Unidentified Flying Objects

We had our best reports for them to read, and we were going to show them the two movies that some intelligence officers considered as the "positive proof" - the Tremonton Movie and the Montana Movie.

When this high court convened on the morning of January 12, the first thing it received was its orders; one of three verdicts would be acceptable:

1. All UFO reports are explainable as known objects or natural phenomena; therefore the investigation should be permanently discontinued.

2. The UFO reports do not contain enough data upon which to base a final conclusion. Project Blue Book should be continued in hopes of obtaining better data.

3. The UFO's are interplanetary spacecraft.

The written verdict, the group was told, would be given to the National Security Council, a council made up of the directors of all U.S. intelligence agencies, and thence it would go to the President of the United States - if they should decide that the UFO's were interplanetary spacecraft.

Because of military regulations, the names of the panel members, like the names of so many other people associated with the UFO story, cannot be revealed. Two of the men had made names for themselves as practical physicists - they could transform the highest theory for practical uses. One of these men had developed the radar that pulled us out of a big hole at the beginning of World War II, and the other had been one of the fathers of the H-bomb. Another of the panel members is now the chief civilian adviser to one of our top military commanders, and another was an astronomer whose unpublished fight to get the UFO recognized is respected throughout scientific circles. There was a man who is noted for his highly theoretical physics and mathematics, and another who had pioneered operations research during World War II. The sixth member of the panel had been honored by the American Rocket Society and the International Astronautical Federation for his work in moving space travel from the Buck Rogers realm to the point of near reality and who is now a rocket expert.

It was an impressive collection of top scientific talent.

During the first two days of the meeting I reviewed our findings for the scientists. Since June 1947, when the first UFO report had been made, ATIC had analyzed 1,593 UFO reports. About 4,400 had actually been received, but all except 1,593 had been immediately rejected for analysis. From our studies, we estimated that ATIC received reports of only 10 per cent of the UFO sightings that were made in the United States, therefore in five and a half years something like 44,000 UFO sightings had been made.

---

211. The Hierarchy Ponders

Of the 1,593 reports that had been analyzed by Project Blue Book, and we had studied and evaluated every report in the Air Force files, we had been able to explain a great many. The actual breakdown was like this:

Balloons

Known	1.57%
Probable	4.99%
Possible	11.95%
Total	18.51%

Aircraft

Known	0.98%
Probable	7.74%
Possible	3.04%
Total	11.76%

Astronomical Bodies

Known	2.79%
Probable	4.01%
Possible	7.40%
Total	14.20%

Other: 4.21%

i.e. Searchlights on clouds, birds, blowing paper, inversions, reflections, etc.

Hoaxes: 1.66%

Reports with insufficient data to evaluate: 22.72%

(In addition to those initially eliminated)

Unknowns: 26.94%

By using the terms "Known," "Probable," and "Possible," we were able to differentiate how positive we were of our conclusions. But even in the "Possible" cases we were, in our own minds, sure that we had identified the reported UFO.

And who made these reports? Pilots and air crews made 17.1 per cent from the air. Scientists and engineers made 5.7 per cent, airport control tower operators made an even 1.0 per cent of the reports, and 12.5 per cent of the total were radar reports. The remaining 63.7 per cent were made by military and civilian observers in general.

The reports that we were interested in were the 26.94 per cent or 429 "Unknowns," so we had studied them in great detail. We studied the reported colors of the UFO's, the shapes, the directions they were traveling, the times of day they were observed, and many more details,

---

but we could find no significant pattern or trends. We did find that the most often reported shape was elliptical and that the most often reported color was white or "metallic." About the same number of UFO's were reported as being seen in daytime as at night, and the direction of travel equally covered the sixteen cardinal headings of the compass.

Seventy per cent of the "Unknowns" had been seen visually from the air; 12 per cent had been seen visually from the ground; 10 per cent had been picked up by ground or airborne radar; and 8 per cent

were combination visual radar sightings.

In the over-all total of 1,593 sightings women made two reports for every one made by a man, but in the "Unknowns" the men beat out women ten to one.

There were two other factors we could never resolve, the frequency of the sightings and their geographical distribution. Since the first flurry of reports in July of 1947, each July brought a definite peak in reports; then a definite secondary peak occurred just before each Christmas. We plotted these peaks in sightings against high tides, world-wide atomic tests, the positions of the moon and planets, the general cloudiness over the United States, and a dozen and one other things, but we could never say what caused more people to see UFO's at certain times of the year.

Then the UFO's were habitually reported from areas around "technically interesting" places like our atomic energy installations, harbors, and critical manufacturing areas. Our studies showed that such vital military areas as Strategic Air Command and Air Defense Command bases, some A-bomb storage areas, and large military depots actually produced fewer reports than could be expected from a given area in the United States. Large population centers devoid of any major "technically interesting" facilities also produced few reports.

According to the laws of normal distribution, if UFO's are not intelligently controlled vehicles, the distribution of reports should have been similar to the distribution of population in the United States - it wasn't.

Our study of the geographical locations of sightings also covered other countries. The U.S. by no means had a curb on the UFO market

In all of our "Unknown" reports we never found one measurement of size, speed, or altitude that could be considered to be even fairly accurate. We could say only that some of the UFO's had been traveling pretty fast.

As far as radar was concerned, we had reports of fantastic speeds - up to 50,000 miles an hour - but in all of these instances there was some doubt as to exactly what caused the target. The highest speeds reported

---

for our combination radar visual sightings, which we considered to be the best type of sighting in our files, were 700 to 800 miles an hour.

We had never picked up any "hardware" - any whole saucers, pieces, or parts - that couldn't be readily identified as being something very earthly. We had a contract with a materials testing laboratory, and they would analyze any piece of material that we found or was sent to us. The tar covered marble, aluminum broom handle, cow manure, slag, pieces of plastic balloon, and the what-have-you that we did receive and analyze only served to give the people in our material lab some practice and added nothing but laughs to the UFO project.

The same went for the reports of "contacts" with spacemen. Since 1952 a dozen or so people have claimed that they have talked to or ridden with the crews of flying saucers. They offer affidavits, pieces of material, photographs, and other bits and pieces of junk as proof. We investigated some of these reports and could find absolutely no fact behind the stories.

We had a hundred or so photos of flying saucers, both stills and movies. Many were fakes some so expert that it took careful study by photo interpreters to show how the photos had been faked. Some were the crudest of fakes, automobile hub caps thrown into the air, homemade saucers suspended by

threads, and just plain retouched negatives. The rest of the still photos had been sent in by well meaning citizens who couldn't recognize a light flare of flaw in the negative, or who had chanced to get an excellent photo of a sundog or mirage.

But the movies that were sent in to us were different. In the first place, it takes an expert with elaborate equipment to fake a movie. We had or knew about four strips of movie film that fell into the "Unknown" category. Two were the cinetheodolite movies that had been taken at White Sands Proving Ground in April and May of 1950, one was the Montana Movie and the last was the Tremonton Movie. These latter two had been subjected to thousands of hours of analysis, and since we planned to give the panel of scientists more thorough reports on them on Friday, I skipped over their details and went to the next point I wanted to cover - theories.

Periodically throughout the history of the UFO people have come up with widely publicized theories to explain all UFO reports. The one that received the most publicity was the one offered by Dr. Donald Menzel of Harvard University. Dr. Menzel, writing in Time, Look, and later in his Flying Saucers, claimed that all UFO reports could be explained as various types of light phenomena. We studied this theory thoroughly because it did seem to have merit. Project Bear's physicists studied it. ATIC's scientific consultants studied it and discussed it with several

---

leading European physicists whose specialty was atmospheric physics. In general the comments that Project Blue Book received were, "He's given the subject some thought but his explanations are not the panacea."

And there were other widely publicized theories. One man said that they were all skyhook balloons, but we knew the flight path of every skyhook balloon and they were seldom reported as UFO's. Their little brothers, the weather balloons, caused us a great deal more trouble.

The Army Engineers took a crack at solving the UFO problem by making an announcement that a scientist in one of their laboratories had duplicated a flying saucer in his laboratory. Major Dewey Fournet checked into this one. It had all started out as a joke, but it was picked up as fact and the scientist was stuck with it. He gained some publicity but lost prestige because other scientists wondered just how competent the man really was to try to pass off such an answer.

All in all, the unsolicited assistance of theorists didn't help us a bit, I told the panel members. Some of them were evidently familiar with the theories because they nodded their heads in agreement.

The next topic I covered in my briefing was a question that came up quite frequently in discussions of the UFO: Did UFO reports actually start in 1947? We had spent a great deal of time trying to resolve this question. Old newspaper files, journals, and books that we found in the Library of Congress contained many reports of odd things being seen in the sky as far back as the Biblical times. The old Negro spiritual says, "Ezekiel saw a wheel 'way up in the middle of the air." We couldn't substantiate Ezekiel's sighting because many of the very old reports of odd things observed in the sky could be explained as natural phenomena that weren't fully understood in those days.

The first documented reports of sightings similar to the UFO sightings as we know them today appeared in the newspapers of 1896. In fact, the series of sightings that occurred in that year and the next had many points of similarity with the reports of today.

The sightings started in the San Francisco Bay area on the evening of November 22, 1896, when hundreds of people going home from work saw a large, dark, "cigar shaped object with stubby wings" traveling northwest across Oakland.

Within hours after the mystery craft had disappeared over what is now the northern end of the Golden Gate Bridge, the stories of people in other northern California towns began to come in on the telegraph wires. The citizens of Santa Rosa, Sacramento, Chico, and Red Bluff- several thousand of them saw it.

I tried to find out if the people in these outlying communities saw the

---

215. The Hierarchy Ponders

UFO before they heard the news from the San Francisco area or afterward, but trying to run down the details of a fifty-six-year-old UFO report is almost hopeless. Once while I was on a trip to Hamilton AFB I called the offices of the San Francisco Chronicle and they put me in touch with a retired employee who had worked on a San Francisco paper in 1896. I called the old gentleman on the phone and talked to him for a long time. He had been a copy boy at the time and remembered the incident, but time had canceled out the details. He did tell me that he, the editor of the paper, and the news staff had seen "the ship," as he referred to the UFO. His story, even though it was fifty six years old, smacked of others I'd heard when he said that no one at the newspaper ever told anyone what they had seen; they didn't want people to think that they were "crazy."

On November 30 the mystery ship was back over the San Francisco area and those people who had maintained that people were being fooled by a wag in a balloon became believers when the object was seen moving into the wind.

For four months reports came in from villages, cities, and farms in the West; then the Midwest, as the airship "moved eastward." In early April of 1897 people in Iowa, Nebraska, Missouri, Wisconsin, Minnesota, and Illinois reported seeing it. On April 10 it was reported to be over Chicago. Reports continued to come in to the newspapers until about April 20; then it, or stories about it, were gone. Literally thousands of people had seen it before the last report clicked in over the telegraph wires.

A study of the hundreds of newspaper accounts of this sighting that rocked the world in the late 1890's was interesting because the same controversies that arose then exist now. Those who hadn't seen the stubby winged, cigar shaped "craft" said, "Phooey," or the nineteenth- century version thereof. Those who had seen it were almost ready to do battle to uphold their integrity. Some astronomers loudly yelled, "Venus," "Jupiter," and "Alpha Orionis" while others said, "We saw it." Thomas Edison, the man of science of the day, disclaimed any knowledge of the mystery craft. "I prefer to devote my time to objects of commercial value," he told a New York Herald reporter. "At best airships would only be toys."

Thomas - you goofed on that prediction.

I had one more important point to cover before I finished my briefing and opened the meeting to a general question-and-answer session.

During the past year and a half we had had several astronomers visit Project Blue Book, and they were not at all hesitant to give us their opinions but they didn't care to say much about what their colleagues were thinking, although they did indicate that they were thinking. We decided

---

216.The Report on Unidentified Flying Objects

that the opinions and comments of astronomers would be of value, so late in 1952 we took a poll. We asked an astronomer, whom we knew to be unbiased about the UFO problem and who knew every outstanding astronomer in the United States, to take a trip and talk to his friends. We asked him not to make a point of asking about the UFO but just to work the subject into a friendly conversation.

This way we hoped to get a completely frank opinion. To protect his fellow astronomers, our astronomer gave them all code names and he kept the key to the code.

The report we received expressed the detailed opinions of forty five recognized authorities. Their opinions varied from that of Dr. C, who regarded the UFO project as a "silly waste of money to investigate an even sillier subject," to Dr. L, who has spent a great deal of his own valuable time personally investigating UFO reports because he believes that they are something "real." Of the forty five astronomers who were interviewed, 36 per cent were not at all interested in the UFO reports, 41 per cent were interested to the point of offering their services if they were ever needed, and 23 per cent thought that the UFO's were a much more serious problem than most people recognized.

None of the astronomers, even during a friendly discussion, admitted that he thought the UFO's could be interplanetary vehicles. All of those who were interested would only go so far as to say, "We don't know what they are, but they're something real."

During the past few years I have heard it said that if the UFO's were really "solid objects" our astronomers would have seen them. Our study shed some light on this point - astronomers have seen UFO's. None of them has ever seen or photographed anything resembling a UFO through his telescope, but 11 per cent of the forty five men had seen something that they couldn't explain. Although, technically speaking, these sightings were no better than hundreds of others in our files as far as details were concerned, they were good because of the caliber of the observer. Astronomers know what is in the sky.

It is interesting to note that out of the representative cross section of astronomers, five of them, or 11 per cent, had sighted UFO's. For a given group of people this is well above average. To check this point, the astronomer who was making our study picked ninety people at random - people he met while traveling - and got them into a conversation about flying saucers. These people were his "control group," to borrow a term from the psychologists. Although the percentage of people who were interested in UFO's was higher for the control group than for the group of astronomers, only 41 per cent of the astronomers were interested while 86 per cent of the control group were interested; 11 per cent of the

---

astronomers had seen UFO's, while only about 1 per cent of the control group had seen one. This seemed to indicate that as a group astronomers see many more UFO's than the average citizen.

When I finished my briefing, it was too late to start the question- and- answer session, so the first day's meeting adjourned. But promptly at nine o'clock the next morning the group was again gathered, and from the looks of the list of questions some of them had, they must have been thinking about UFO's all night.

One of the first questions was about the results of photography taken by the pairs of huge "meteorite patrol" cameras that are located in several places throughout North America. Did they ever photograph a UFO? The cameras, which are in operation almost every clear night, can photograph very dim lights, and once a light is photographed its speed and altitude can be very accurately established. If there were any objects giving off light as they flew through our atmosphere, there is a chance that these cameras might have photographed them. But they hadn't.

At first this seemed to be an important piece of evidence and we had just about racked this fact up as a definite score against the UFO when we did a little checking. If the UFO had been flying at an altitude of 100 miles, the chances of its being picked up by the cameras would be good, but the chances of photographing something flying any lower would be less.

This may account for the fact that while our "inquiring astronomer" was at the meteorite patrol camera sites, he talked to an astronomer who had seen a UFO while operating one of the patrol cameras.

Many people have asked why our astronomers haven't seen anything through their big telescopes. They are focused light years away and their field of vision is so narrow that even if UFO's did exist and littered the atmosphere they wouldn't be seen.

Another question the panel had was about Orson Welles' famous War of the Worlds broadcast of October 1938, which caused thousands of people to panic. Had we studied this to see if there were any similarities between it and the current UFO reporting?

We had.

Our psychologist looked into the matter and gave us an opinion - to make a complete study and get a positive answer would require an effort that would dwarf the entire UFO project. But he did have a few comments. There were many documented cases in which a series of innocent circumstances triggered by the broadcast had caused people to completely lose all sense of good judgment - to panic. There were some similar reports in our UFO files.

But we had many reports in which people reported UFO's and obviously

---

hadn't panicked. Reports from pilots who had seen mysterious lights at night and, thinking that they might be a cockpit reflection, had turned off all their cockpit lights. Or the pilots who turned and rolled their airplanes to see if they could change the angle of reflection and get rid of the UFO. Or those pilots who climbed and dove thousands of feet and then leveled out to see if the UFO would change its relative position to the airplane. Or the amateur astronomer who made an excellent sighting and before he reluctantly reported it as a UFO had talked to a half dozen professional astronomers and physicists in hopes of finding an explanation. All of these people were thinking clearly, questioning themselves as to what the sightings could be; then trying to answer their questions. These people weren't panicked.

The question-and-answer period went on for a full day as the scientists dug into the details of the general facts I had given them in my briefing.

The following day and a half was devoted to reviewing and discussing fifty of our best sighting reports that we had classed as "Unknowns."

The next item on the agenda, when the panel had finished absorbing all of the details of the fifty selected top reports, was a review of a very hot and very highly controversial study. It was based on the idea that Major Dewey Fournet and I had talked about several months before - an analysis of the motions of the reported UFO's in an attempt to determine whether they were intelligently controlled. The study was hot because it wasn't official and the reason it wasn't official was because it was so hot. It concluded that the UFO's were interplanetary spaceships. The report had circulated around high command levels of intelligence and it had been read with a good deal of interest. But even though some officers at command levels just a notch below General Samford bought it, the space behind the words "Approved by" was blank - no one would stick his neck out and officially send it to the top.

Dewey Fournet, who had completed his tour of active duty in the Air Force and was now a civilian, was called from Houston, Texas, to tell the scientists about the study since he had worked very closely with the group that had prepared it.

The study covered several hundred of our most detailed UFO reports. By a very critical process of elimination, based on the motion of the reported UFO's, Fournet told the panel how he and any previous analysis by Project Blue Book had been disregarded and how those reports that could have been caused by any one of the many dozen known objects - balloons, airplanes, astronomical bodies, etc., were sifted out. This sifting took quite a toll, and the study ended up with only ten or twenty reports that fell into the "Unknown" category. Since such critical methods of

---

219. The Hierarchy Ponders

evaluation had been used, these few reports proved beyond a doubt that the UFO's were intelligently controlled by persons with brains equal to or far surpassing ours.

The next step in the study, Fournet explained, was to find out where they came from. "Earthlings" were eliminated, leaving the final answer - spacemen.

Both Dewey and I had been somewhat worried about how the panel would react to a study with such definite conclusions. But when he finished his presentation, it was obvious from the tone of the questioning that the men were giving the conclusions serious thought. Fournet's excellent reputation was well known.

On Friday morning we presented the feature attractions of the session, the Tremonton Movie and the Montana Movie. These two bits of evidence represented the best photos of UFO's that Project Blue Book had to offer. The scientists knew about them, especially the Tremonton Movie, because since late July they had been the subject of many closed door conferences. Generals, admirals, and GS-16's had seen them at "command performances", and they had been flown to Kelly AFB in Texas to be shown to a conference of intelligence officers from all over the world. Two of the country's best military photo laboratories, the Air Force lab at Wright Field and the Navy's lab at Anacostia, Maryland, had spent many hours trying to prove that the UFO's were balloons, airplanes, or stray light reflections, but they failed - the UFO's were true unknowns. The possibility that the movie had been faked was considered but quickly rejected because only a Hollywood studio with elaborate equipment could do such a job and the people who filmed the movies didn't have this kind of equipment.

The Montana Movie had been taken on August 15, 1950, by Nick Mariana, the manager of the Great Falls baseball team. It showed two large bright lights flying across the blue sky in an echelon formation. There were no clouds in the movie to give an indication of the UFO's speed, but at one time they passed behind a water tower. The lights didn't show any detail; they appeared to be large circular objects.

Mariana had sent his movies to the Air Force back in 1950, but in 1950 as no interest in the UFO so , after a quick viewing, Project Grudge had written them off as "the reflections from two F-94 jet fighters that were in the area."

In 1952, at the request of the Pentagon, I reopened the investigation of the Montana Movie. Working through an intelligence officer at the Great Falls AFB, I had Mariana reinterrogated and obtained a copy of his movie, which I sent to the photo lab.

220.The Report on Unidentified Flying Objects

When the photo lab got the movie, they had a little something to work with because the two UFO's had passed behind a reference point, the water tower. Their calculations quickly confirmed that the objects were not birds, balloons, or meteors. Balloons drift with the wind and the wind was not

blowing in the direction that the two UFO's were traveling. No exact speeds could be measured, but the lab could determine that the lights were traveling too fast to be birds and too slow to be meteors.

This left airplanes as the only answer. The intelligence officer at Great Falls had dug through huge stacks of files and found that only two airplanes, two F-94's, were near the city during the sighting and that they had landed about two minutes afterwards. Both Mariana and his secretary, who had also seen the UFO's, had said that the two jets had appeared in another part of the sky only a minute or two after the two UFO's had disappeared in the southeast. This in itself would eliminate the jets as candidates for the UFO's, but we wanted to double check. The two circular lights didn't look like F-94's, but anyone who has done any flying can tell you that an airplane so far away that it can't be seen can suddenly catch the sun's rays and make a brilliant flash.

First we studied the flight paths of the two F-94's. We knew the landing pattern that was being used on the day of the sighting, and we knew when the two F-94's landed. The two jets just weren't anywhere close to where the two UFO's had been. Next we studied each individual light and both appeared to be too steady to be reflections.

We drew a blank on the Montana Movie - it was an unknown.

We also drew a blank on the Tremonton Movie, a movie that had been taken by a Navy Chief Photographer, Warrant Officer Delbert C. Newhouse, on July 2, 1952.

Our report on the incident showed that Newhouse, his wife, and their two children were driving to Oakland, California, from the east coast on this eventful day. They had just passed through Tremonton, Utah, a town north of Salt Lake City, and had traveled about 7 miles on U.S. Highway 30S when Mrs. Newhouse noticed a group of objects in the sky. She pointed them out to her husband; he looked, pulled over to the side of the road, stopped the car, and jumped out to get a better look. He didn't have to look very long to realize that something highly unusual was taking place because in his twenty one years in the Navy and 2,000 hours' flying time as an aerial photographer, he'd never seen anything like this. About a dozen shiny disk like objects were "milling around the sky in a rough formation."

Newhouse had his movie camera so he turned the turret around to a 3 inch telephoto lens and started to photograph the UFO's. He held the camera still and took several feet of film, getting all of the bright objects

---

in one photo. All of the UFO's had stayed in a compact group from the time the Newhouse family had first seen them, but just before they disappeared over the western horizon one of them left the main group and headed east. Newhouse swung his camera around and took several shots of it, holding his camera steady and letting the UFO pass through the field of view before it disappeared in the east.

When I received the Tremonton films I took them right over to the Wright Field photo lab, along with the Montana Movie, and the photo technicians and I ran them twenty or thirty times. The two movies were similar in that in both of them the objects appeared to be large circular lights - in neither one could you see any detail. But, unlike the Montana Movie, the lights in the Tremonton Movie would fade out, then come back in again. This fading immediately suggested airplanes reflecting light, but the roar of a king-sized dogfight could have been heard for miles and the Newhouse family had heard no sound. We called in several fighter pilots and they watched the UFO's circling and darting in and out in the cloudless blue sky. Their unqualified comment was that no airplane could do what the UFO's were doing.

Balloons came under suspicion, but the lab eliminated them just as quickly by studying the kind of a reflection given off by a balloon - it is a steady reflection since a balloon is spherical. Then, to further scuttle the balloon theory, clusters of balloons are tied together and don't mill around. Of course, the lone UFO that took off to the east by itself was the biggest argument against balloons.

Newhouse told an intelligence officer from the Western Air Defense Forces that he had held his camera still and let this single UFO fly through the field of view, so the people in the lab measured its angular velocity. Unfortunately there were no clouds in the sky, nor was he able to include any of the ground in the pictures, so our estimates of angular velocity had to be made assuming that the photographer held his camera still. Had the lone UFO been 10 miles away it would have been traveling several thousand miles an hour.

After studying the movies for several weeks, the Air Force photo lab at Wright Field gave up. All they had to say was, "We don't know what they are but they aren't airplanes or balloons, and we don't think they are birds."

While the lab had been working on the movies at Wright Field, Major Fournet had been talking to the Navy photo people at Anacostia; they thought they had some good ideas on how to analyze the movies, so as soon as we were through with them I sent them to Major Fournet and he took them over to the Navy lab.

The Navy lab spent about two months studying the films and had just

---

completed their analysis. The men who had done the work were on hand to brief the panel of scientists on their analysis after the panel had seen the movies.

We darkened the room and I would imagine that we ran each film ten times before every panel member was satisfied that he had seen and could remember all of the details. We ran both films together so that the men could compare them.

The Navy analysts didn't use the words "interplanetary spacecraft" when they told of their conclusions, but they did say that the UFO's were intelligently controlled vehicles and that they weren't airplanes or birds. They had arrived at this conclusion by making a frame-by-frame study of the motion of the lights and the changes in the lights' intensity.

When the Navy people had finished with their presentation, the scientists had questions. None of the panel members were trying to find fault with the work the Navy people had done, but they weren't going to accept the study until they had meticulously searched for every loophole. Then they found one.

In measuring the brilliance of the lights, the photo analysts had used an instrument called a densitometer. The astronomer on the panel knew all about measuring the density of an extremely small photographic image with a densitometer because he did it all the time in his studies of the stars. And the astronomer didn't think that the Navy analysts had used the correct technique in making their measurements. This didn't necessarily mean that their data were all wrong, but it did mean that they should recheck their work.

When the discussion of the Navy's report ended, one of the scientists asked to see the Tremonton Movie again; so I had the projectionists run it several more times. The man said that he thought the UFO's could be sea gulls soaring on a thermal current. He lived in Berkeley and said that he'd seen gulls high in the air over San Francisco Bay. We had thought of this possibility several months before because the area around the Great Salt Lake is inhabited by large white gulls. But the speed of

the lone UFO as it left the main group had eliminated the gulls. I pointed this out to the physicist. His answer was that the Navy warrant officer might have thought he had held the camera steady, but he could have "panned with the action" unconsciously. This would throw all of our computations way off. I agreed with this, but I couldn't agree that they were sea gulls.

But several months later I was in San Francisco waiting for an airliner to Los Angeles and I watched gulls soaring in a cloudless sky. They were "riding a thermal," and they were so high that you couldn't see them until they banked just a certain way; then they appeared to be a bright white

---

flash, much larger than one would expect from sea gulls. There was a strong resemblance to the UFO's in the Tremonton Movie. But I'm not sure that this is the answer.

The presentation of the two movies ended Project Blue Book's part of the meeting. In five days we had given the panel of scientists every pertinent detail in the history of the UFO, and it was up to them to tell us if they were real - some type of vehicle flying through our atmosphere. If they were real, then they would have to be spacecraft because no one at the meeting gave a second thought to the possibility that the UFO's might be a super secret U.S. aircraft or a Soviet development. The scientists knew everything that was going on in the U.S. and they knew that no country in the world had developed their technology far enough to build a craft that would perform as the UFO's were reported to do. In addition, we were spending billions of dollars on the research and development and the procurement of airplanes that were just nudging the speed of sound. It would be absurd to think that these billions were being spent to cover the existence of a UFO type weapon. And it would be equally absurd to think that the British, French, Russians or any other country could be far enough ahead of us to have a UFO.

The scientists spent the next two days pondering a conclusion. They reread reports and looked at the two movies again and again, they called other scientists to double check certain ideas that they had, and they discussed the problem among themselves. Then they wrote out their conclusions and each man signed the document. The first paragraph said:

We as a group do not believe that it is impossible for some other celestial body to be inhabited by intelligent creatures. Nor is it impossible that these creatures could have reached such a state of development that they could visit the earth. However, there is nothing in all of the so-called "flying saucer" reports that we have read that would indicate that this is taking place.

The Tremonton Movie had been rejected as proof but the panel did leave the door open a crack when they suggested that the Navy photo lab redo their study. But the Navy lab never rechecked their report, and it was over a year later before new data came to light.

After I got out of the Air Force I met Newhouse and talked to him for two hours. I've talked to many people who have reported UFO's, but few impressed me as much as Newhouse. I learned that when he and his family first saw the UFO's they were close to the car, much closer than when he took the movie. To use Newhouse's own words, "If they had been the size of a B-29 they would have been at 10,000 feet altitude." And the Navy man and his family had taken a good look at the objects - they

---

looked like "two pie pans, one inverted on the top of the other!" He didn't just think the UFO's were disk shaped; he knew that they were; he had plainly seen them. I asked him why he hadn't told this to the intelligence officer who interrogated him. He said that he had. Then I remembered that I'd sent the intelligence officer a list of questions I wanted Newhouse to answer. The question "What did the

UFO's look like?" wasn't one of them because when you have a picture of something you don't normally ask what it looks like. Why the intelligence officer didn't pass this information on to us I'll never know.

The Montana Movie was rejected by the panel as positive proof because even though the two observers said that the jets were in another part of the sky when they saw the UFO's and our study backed them up, there was still a chance that the two UFO's could have been the two jets. We couldn't prove the UFO's were the jets, but neither could we prove they weren't.

The controversial study of the UFO's' motions that Major Fournet had presented was discarded. All of the panel agreed that if there had been some permanent record of the motion of the UFO's, a photograph of a UFO's flight path or a photograph of a UFO's track on a radarscope, they could have given the study much more weight. But in every one of the ten or twenty reports that were offered as proof that the UFO's were intelligently controlled, the motions were only those that the observer had seen. And the human eye and mind are not accurate recorders. How many different stories do you get when a group of people watch two cars collide at an intersection?

Each of the fifty of our best sightings that we gave the scientists to study had some kind of a loophole. In many cases the loopholes were extremely small, but scientific evaluation has no room for even the smallest of loopholes and we had asked for a scientific evaluation.

When they had finished commenting on the reports, the scientists pointed seriousness of the decisi n they had been asked to make. They said that th tried hard to be objective and not to be picayunish but actually all we had wasstantial evidence. Good circumstantial evidence, to be sure, but we had othcrete, no hardware, no photos showing any detail of a UFO, no measured speedsdes, or siz es - nothing in the way of good, hard, cold, scientific facts. To stake the future course of millions of lives on a decision based upon circumstantial evidence would be one of the gravest mistakes in the history of the world.

In their conclusions they touched upon the possibility that the UFO's might be some type of new or yet undiscovered natural phenomenon. They explained that they hadn't given this too much credence; however, if the

---

225. The Hierarchy Ponders

UFO's were a new natural phenomenon, the reports of their general appearance should follow a definite pattern - the UFO reports didn't.

This ended the section of the panel's report that covered their conclusions. The next section was entitled, "Recommendations." I fully expected that they would recommend that we as least reduce the activities of Project Blue Book if not cancel it entirely. I didn't like this one bit because I was firmly convinced that we didn't have the final answer. We needed more and better proof before a final yes or no could be given.

The panel didn't recommend that the activities of Blue Book be cut back, and they didn't recommend that it be dropped. They recommended that it be expanded. Too many of the reports had been made by credible observers, the report said, people who should know what they're looking at - people who think things out carefully. Data that was out of the circumstantial - evidence class was badly needed. And the panel must have been at least partially convinced that an expanded effort would prove something interesting because the expansion they recommended would require a considerable sum of money. The investigative force of Project Blue Book should be quadrupled in size, they wrote, and it should be staffed by specially trained experts in the fields of electronics, meteorology, photography, physics, and other fields of science pertinent to UFO investigations. Every effort should be made to set up instruments in locations where UFO sightings are frequent, so that data could be measured and

recorded during a sighting. In other locations around the country military and civilian scientists should be alerted and instructed to use every piece of available equipment that could be used to track UFO's.

And lastly, they said that the American public should be told every detail of every phase of the UFO investigation - the details of the sightings, the official conclusions, and why the conclusions were made. This would serve a double purpose; it would dispel any of the mystery that security breeds and it would keep the Air Force on the ball - sloppy investigations and analyses would never occur.

When the panel's conclusions were made known in the government, they met with mixed reactions. Some people were satisfied, but others weren't. Even the opinions of a group of the country's top scientists couldn't overcome the controversy that had dogged the UFO for five years. Some of those who didn't like the decision had sat in on the UFO's trial as spectators and they felt that the "jury" was definitely prejudiced - afraid to stick their necks out. They could see no reason to continue to assume that the UFO's weren't interplanetary vehicles.

Chapter 17: What Are UFO's?, Page 226

NICAP Home Page

CHAPTER SEVENTEEN

What Are UFO's?

While the scientists were in Washington, D.C., pondering over the UFO, the UFO's weren't just sitting idly by waiting to find out what they were - they were out doing a little "lobbying" for the cause - keeping the interest stirred up.

And they were doing a good job, too.

It was just a few minutes before midnight on January 28, 1953, when a message flashed into Wright-Patterson for Project Blue Book. It was sent "Operational Immediate," so it had priority handling; I was reading it by 12:30 A.M.. A pilot had chased a UFO.

The report didn't have many details but it did sound good. It gave the pilot's name and said that he could be reached at Moody AFB. I put in a long distance call, found the pilot, and flipped on my recorder so that I could get his story word for word.

He told me that he had been flying an F-86 on a "round robin" navigation flight from Moody AFB to Lawson AFB to Robins AFB, then back to Moody - all in Georgia. At exactly nine thirty five he was at 6,000 feet, heading toward Lawson AFB on the first leg of his flight. He remembered that he had just looked down and had seen the lights of Albany, Georgia; then he'd looked up again and seen this bright white light at "ten o'clock high." It was an unusually bright light, and he said that he thought this was why it was so noticeable among the stars. He flew on for a few minutes watching it as he passed over Albany. He decided that it must be an extremely bright star or another airplane - except it just didn't look right. It had too much of a definitely circular shape.

It was a nice night to fly and he had to get in so much time anyway, so he thought he'd try to get a little closer to it. If it was an airplane, chances were he could close in and if it was a star, he should be able to climb up to 30,000 feet and the light shouldn't change its relative position. He checked his oxygen supply, increased the r.p.m. of the engine, and started to climb. In three or four minutes it was obvious that he was getting above the light, and he watched it; it had moved in relation to the

---

stars. It must be an airplane then, he'd decided - an airplane so far away that he couldn't see its red and green wing tip lights.

Since he'd gone this far, he decided that he'd get closer and make sure it was an airplane; so he dropped the nose of the F-86 and started down. As the needle on the machmeter nudged the red line, he saw that he was getting closer because the light was getting bigger, but still he couldn't see any lights other than the one big white one. Then it wasn't white any longer; it was changing color. In about a two second cycle it changed from white to red, then back to white again. It went through this cycle two or three times, and then before he could realize what was going on, he told me, the light changed in shape to a perfect triangle. Then it split into two triangles, one above the other. By this time he had leveled off and wasn't closing in any more. In a flash the whole thing was gone. He used the old standard description for a disappearing UFO: "It was just like someone turning off a light - it's there, then it's gone."

I asked him what he thought he'd seen. He'd thought about flying saucers, he said, but he "just couldn't swallow those stories." He thought he had a case of vertigo and the more he thought about it, the surer he was that this was the answer. He'd felt pretty foolish, he told me, and he was glad that he was alone.

Up ahead he saw the sprawling lights of Fort Benning and Lawson AFB, his turning point on the flight, and he'd started to turn but then he'd checked his fuel. The climb had used up quite a bit, so he changed his mind about going to Robins AFB and started straight back to Moody.

He called in to the ground station to change his flight plan, but before he could say anything the ground radio operator asked him if he'd seen a mysterious light.

Well - he'd seen a light.

Then the ground operator proceeded to tell him that the UFO chase had been watched on radar. First the radar had the UFO target on the scope, and it was a UFO because it was traveling much too slowly to be an airplane. Then the radar operators saw the F-86 approach, climb, and make a shallow dive toward the UFO. At first the F-86 had closed in on the UFO, but then the UFO had speeded up just enough to maintain a comfortable lead. This went on for two or three minutes; then it had moved off the scope at a terrific speed. The radar site had tried to call him, the ground station told the F-86 pilot, but they couldn't raise him so the message had to be relayed through the tower.

Rack up two more points for the UFO - another unknown and another confirmed believer.

228.The Report on Unidentified Flying Objects

Two or three weeks after the meeting of the panel of scientists in Washington I received word that Project Blue Book would follow the recommendations that the panel had made. I was to start implementing the plan right away. Our proposal for setting up instruments had gone to the Pentagon weeks before, so that was already taken care of. We needed more people, so I drew up a new organizational cable that called for more investigators and analysts and sent it through to ATIC's personnel section.

About this time in the history of the UFO the first of a series of snags came up. The scientists had strongly recommended that we hold nothing back - give the public everything. Accordingly, when the press got wind of the Tremonton Movie, which up until this time had been a closely guarded secret, I agreed to release it for the newsmen to see. I wrote a press release which was O.K.'d by General Garland, then the chief of ATIC, and sent it to the Pentagon. It told what the panel had said about the movies, "until proved otherwise there is no reason why the UFO's couldn't have been sea gulls." Then the release went on to say that we weren't sure exactly what the UFO's were, the sea gull theory was only an opinion. When the Pentagon got the draft of the release they screamed, "No!" No movie for the press and no press release. The sea gull theory was too weak, and we had a new publicity policy as of now - don't say anything.

This policy, incidentally, is still in effect. The January 7, 1955, issue of the Air Force Information Services Letter said, in essence, people in the Air Force are talking too much about UFO's - shut up. The old theory that if you ignore them they'll go away is again being followed.

Inside of a month the UFO project took a few more hard jolts. In December of 1952 I'd asked for a transfer. I'd agreed to stay on as chief of Blue Book until the end of February so that a replacement could be obtained and be broken in. But no replacement showed up. And none showed up when Lieutenant Rothstien's tour of active duty ended, when Lieutenant Andy Flues transferred to the Alaskan Air Command, or when others left. When I left the UFO project for a two month tour of temporary duty in Denver, Lieutenant Bob Olsson took over as chief. His staff consisted of Airman First Class Max Futch. Both men were old veterans of the UFO campaign of '52, but two people can do only so much.

When I came back to ATIC in July 1953 and took over another job, Lieutenant Olsson was just

getting out of the Air Force and Al/c Futch was now it. He said that he felt like the President of Antarctica on a non expedition year. In a few days I again had Project Blue Book, as an additional duty this time, and I had orders to "build it up."

---

229. What Are UFO's?

While I had been gone, our instrumentation plan had been rejected. Higher headquarters had decided against establishing a net of manned tracking stations, astronomical cameras tied in with radars, and our other proposed instrumentation. General Garland had argued long and hard for the plan, but he'd lost. It was decided that the cameras with diffraction gratings over the lenses, the cameras that had been under development for a year, would suffice.

The camera program had started out as a top priority project, but it had lost momentum fast when we'd tested these widely publicized instruments and found that they wouldn't satisfactorily photograph a million candle power flare at 450 yards. The cameras themselves were all right, but in combination with the gratings, they were no good. However, Lieutenant Olsson had been told to send them out, so he sent them out.

The first thing that I did when I returned to Project Blue Book was to go over the reports that had come in while I was away. There were several good reports but only one that was exceptional. It had taken place at Luke AFB, Arizona, the Air Force's advanced fighter bomber school that is named after the famous "balloon buster" of World War I, Lieutenant Frank Luke, Jr. It was a sighting that produced some very interesting photographs.

There were only a few high cirrus clouds in the sky late on the morning of March 3 when a pilot took off from Luke in an F-84 jet to log some time. He had been flying F-51's in Korea and had recently started to check out in the jets. He took off, cleared the traffic pattern, and started climbing toward Blythe Radio, about 130 miles west of Luke. He'd climbed for several minutes and had just picked up the coded letters BLH that identified Blythe Radio when he looked up through the corner glass in the front part of his canopy - high at about two o'clock he saw what he thought was an airplane angling across his course from left to right leaving a long, thin vapor trail. He glanced down at his altimeter and saw that he was at 23,000 feet. The object that was leaving the vapor trail must really be high, he remembered thinking, because he couldn't see any airplane at the head of it. He altered his course a few degrees to the right so that he could follow the trail and increased his rate of climb. Before long he could tell that he was gaining on the object, or whatever was leaving the vapor trail, because he was under the central part of it. But he still couldn't see any object. This was odd, he thought, because vapor trails don't just happen; something has to leave them. His altimeter had ticked off another 12,000 feet and he was now at 35,000. He kept on climbing, but soon the '84 began to mush; it was as high as it would go. The pilot dropped down 1,000 feet and continued on - now he was below

---

230.The Report on Unidentified Flying Objects

the front of the trail, but still no airplane. This bothered him too. Nothing that we have flies over 55,000 feet except a few experimental airplanes like the D-558 or those of the "X" series, and they don't stray far from Edwards AFB in California. He couldn't be more than 15,000 feet from the front of the trail, and you can recognize any kind of an airplane 15,000 feet away in the clear air of the sub stratosphere. He looked and he looked and he looked. He rocked the F-84 back and forth thinking maybe he had a flaw in the Plexiglas of the canopy that was blinking out the airplane, but still no airplane. Whatever it was, it was darn high or darn small. It was moving about 300 miles an hour because he had to pull off power and "S" to stay under it.

He was beginning to get low on fuel about this time so he hauled up the nose of the jet, took about 30

feet of gun camera film, and started down. When he landed and told his story, the film was quickly processed and rushed to the projection room. It showed a weird, thin, forked vapor trail - but no airplane.

Lieutenant Olsson and Airman Futch had worked this one over thoroughly. The photo lab confirmed that the trail was definitely a vapor trail, not a freak cloud formation. But Air Force Flight Service said, "No other airplanes in the area," and so did Air Defense Command, because minutes after the F-84 pilot broke off contact, the "object" had passed into an ADIZ - Air Defense Identification Zone - and radar had shown nothing.

There was one last possibility: Blue Book's astronomer said that the photos looked exactly like a meteor's smoke trail. But there was one hitch:

the pilot was positive that the head of the vapor trail was moving at about 300 miles an hour. He didn't know exactly how much ground he'd covered, but when he first picked up Blythe Radio he was on Green S airway, about 30 miles west of his base, and when he'd given up the chase he'd gotten another radio bearing, and he was now almost up to Needles Radio, 70 miles north of Blythe. He could see a lake, Lake Mojave, in the distance.

Could a high altitude jet stream wind have been blowing the smoke cloud? Futch had checked this - no. The winds above 20,000 feet were the usual westerlies and the jet stream was far to the north.

Several months later I talked to a captain who had been at Luke when this sighting occurred. He knew the F-84 pilot and he'd heard him tell his story in great detail. I won't say that he was a confirmed believer, but he was interested. "I never thought much about these reports before," he said, "but I know this guy well. He's not nuts. What do you think he saw?"

I don't know what he saw. Maybe he didn't travel as far as he thought he did. If he didn't, then I'd guess that he saw a meteor's smoke trail. But if he did know that he'd covered some 80 miles during the chase, I'd say

---

that he saw a UFO - a real one. And I find it hard to believe that pilots don't know what they're doing.

During the summer of 1953, UFO reports dropped off considerably. During May, June, and July of 1952 we'd received 637 good reports. During the same months in 1953 we received only seventy six. We had been waiting for the magic month of July to roll around again because every July there had been the sudden and unexplained peak in reporting; we wanted to know if it would happen again. It didn't - only twenty one reports came in, to make July the lowest month of the year. But July did bring new developments.

Project Blue Book got a badly needed shot in the arm when an unpublicized but highly important change took place: another intelligence agency began to take over all field investigations.

Ever since I'd returned to the project, the orders had been to build it up - get more people - do what the panel recommended. But when I'd asked for more people, all I got was a polite "So sorry." So, I did the next best thing and tried to find some organization already in being which could and would help us. I happened to be expounding my troubles one day at Air Defense Command Headquarters while I was briefing General Burgess, ADC's Director of Intelligence, and he told me about his 4602nd Air Intelligence Squadron, a specialized intelligence unit that had recently become operational. Maybe it could help - he'd see what he could work out, he told me.

Now in the military all commitments to do something carry an almost standard time factor. "I'll expedite it," means nothing will happen for at least two weeks. "I'll do it right away," means from a month to six weeks. An answer like, "I'll see what I can work out," requires writing a memo that explains what the person was going to see if he could work out, and sealing it in a time capsule for preservation so that when the answer finally does come through the future generation that receives it will know how it all started. But I underestimated the efficiency of the Air Defense Command. Inside of two weeks General Burgess had called General Garland, they'd discussed the problem, and I was back in Colorado Springs setting up a program with Colonel White's 4602nd.

The 4602nd's primary function is to interrogate captured enemy airmen during wartime; in peacetime all that they can do is participate in simulated problems. Investigating UFO reports would supplement these problems and add a factor of realism that would be invaluable in their training. The 4602nd had field teams spread out all over the United States, and these teams could travel anywhere by airplane, helicopter, canoe, jeep, or skis on a minute's notice. The field teams had already established a

---

working contact with the highway patrols, sheriffs' offices, police, and the other military in their respective areas, so they were in an excellent position to collect facts about a UFO report. Each member of the field teams had been especially chosen and trained in the art of interrogation, and each team had a technical specialist. We couldn't have asked for a better ally.

Project Blue Book was once more back in business. Until the formal paper work went through, our plan was that whenever a UFO report worth investigating came in we would call the 4602nd and they would get a team out right away. The team would make a thorough investigation and wire us their report. If the answer came back "Unknown," we would study the details of the sighting and, with the help of Project Bear, try to find the answer.

A few weeks after the final plans had been made with the 4602nd, I again bade farewell to Project Blue Book. In a simple ceremony on the poop deck of one of the flying saucers that I frequently have been accused of capturing, before a formation of the three-foot-tall green men that I have equally as frequently been accused of keeping prisoner, I turned my command over to Al/c Max Futch and walked out the door into civilian life with separation orders in hand.

The UFO's must have known that I was leaving because the day I found out that officers with my specialty, technical intelligence, were no longer on the critical list and that I could soon get out of the service, they really put on a show. The show they put on is still the best UFO report in the Air Force files.

I first heard about the sighting about two o'clock on the morning of August 13, 1953, when Max Futch called me from ATIC. A few minutes before a wire had come in carrying a priority just under that reserved for flashing the word the U.S. has been attacked. Max had been called over to ATIC by the OD to see the report, and he thought that I should see it. I was a little hesitant to get dressed and go out to the base, so I asked Max what he thought about the report. His classic answer will go down in UFO history, "Captain," Max said in his slow, pure Louisiana drawl, "you know that for a year I've read every flying saucer report that's come in and that I never really believed in the things." Then he hesitated and added, so fast that I could hardly understand him, "But you should read this wire." The speed with which he uttered this last statement was in itself enough to convince me. When Max talked fast, something was important.

A half hour later I was at ATIC - just in time to get a call from the Pentagon. Someone else had gotten out of bed to read his copy of the wire.

233. What Are UFO's?

I used the emergency orders that I always kept in my desk and caught the first airliner out of Dayton to Rapid City, South Dakota. I didn't call the 4602nd because I wanted to investigate this one personally. I talked to everyone involved in the incident and pieced together an amazing story.

Shortly after dark on the night of the twelfth, the Air Defense Command radar station at Ellsworth AFB, just east of Rapid City, had received a call from the local Ground Observer Corps filter center. A lady spotter at Black Hawk, about 10 miles west of Ellsworth, had reported an extremely bright light low on the horizon, off to the northeast. The radar had been scanning an area to the west, working a jet fighter in some practice patrols, but when they got the report they moved the sector scan to the northeast quadrant. There was a target exactly where the lady reported the light to be. The warrant officer, who was the duty controller for the night, told me that he'd studied the target for several minutes. He knew how weather could affect radar but this target was "well defined, solid, and bright." It seemed to be moving, but very slowly. He called for an altitude reading, and the man on the height finding radar checked his scope. He also had the target - it was at 16,000 feet.

The warrant officer picked up the phone and asked the filter center to connect him with the spotter. They did, and the two people compared notes on the UFO's position for several minutes. But right in the middle of a sentence the lady suddenly stopped and excitedly said, "It's starting to move - it's moving southwest toward Rapid."

The controller looked down at his scope and the target was beginning to pick up speed and move southwest. He yelled at two of his men to run outside and take a look. In a second or two one of them shouted back that they could both see a large bluish white light moving toward Rapid City. The controller looked down at his scope - the target was moving toward Rapid City. As all three parties watched the light and kept up a steady cross conversation of the description, the UFO swiftly made a wide sweep around Rapid City and returned to its original position in the sky.

A master sergeant. who had seen and heard the happenings told me that in all his years of duty - combat radar operations in both Europe and Korea - he'd never been so completely awed by anything. When the warrant officer had yelled down at him and asked him what he thought they should do, he'd just stood there. "After all," he told me, "what in hell could we do - they're bigger than all of us."

But the warrant officer did do something. He called to the F-84 pilot he had on combat air patrol west of the base and told him to get ready for an intercept. He brought the pilot around south of the base and gave him a course correction that would take him right into the light, which

234.The Report on Unidentified Flying Objects

was still at 16,000 feet. By this time the pilot had it spotted. He made the turn, and when he closed to within about 3 miles of the target, it began to move. The controller saw it begin to move, the spotter saw it begin to move and the pilot saw it begin to move - all at the same time. There was now no doubt that all of them were watching the same object.

Once it began to move, the UFO picked up speed fast and started to climb, heading north, but the F-84 was right on its tall. The pilot would notice that the light was getting brighter, and he'd call the controller to tell him about it. But the controller's answer would always be the same, "Roger, we can see it on the scope."

There was always a limit as to how near the jet could get, however. The controller told me that it was just as if the UFO had some kind of an automatic warning radar linked to its power supply. When

something got too close to it, it would automatically pick up speed and pull away. The separation distance always remained about 3 miles.

The chase continued on north - out of sight of the lights of Rapid City and the base - into some very black night.

When the UFO and the F-84 got about 120 miles to the north, the pilot checked his fuel; he had to come back. And when I talked to him, he said he was damn glad that he was running out of fuel because being out over some mighty desolate country alone with a UFO can cause some worry.

Both the UFO and the F-84 had gone off the scope, but in a few minutes the jet was back on, heading for home. Then 10 or 15 miles behind it was the UFO target also coming back.

While the UFO and the F-84 were returning to the base - the F-84 was planning to land - the controller received a call from the jet interceptor squadron on the base. The alert pilots at the squadron had heard the conversations on their radio and didn't believe it. "Who's nuts up there?" was the comment that passed over the wire from the pilots to the radar people. There was an F-84 on the line ready to scramble, the man on the phone said, and one of the pilots, a World War II and Korean veteran, wanted to go up and see a flying saucer. The controller said, "O.K., go."

In a minute or two the F-84 was airborne and the controller was working him toward the light. The pilot saw it right away and closed in. Again the light began to climb out, this time more toward the northeast. The pilot also began to climb, and before long the light, which at first had been about 30 degrees above his horizontal line of sight, was now below him. He nosed the '84 down to pick up speed, but it was the same old story - as soon as he'd get within 3 miles of the UFO, it would put on a burst of speed and stay out ahead.

Even though the pilot could see the light and hear the ground controller

---

telling him that he was above it, and alternately gaining on it or dropping back, he still couldn't believe it - there must be a simple explanation. He turned off all of his lights - it wasn't a reflection from any of the airplane's lights because there it was. A reflection from a ground light, maybe. He rolled the airplane - the position of the light didn't change. A star - he picked out three bright stars near the light and watched carefully. The UFO moved in relation to the three stars. Well, he thought to himself, if it's a real object out there, my radar should pick it up too; so he flipped on his radar ranging gun sight. In a few seconds the red light on his sight blinked on - something real and solid was in front of him. Then he was scared. When I talked to him, he readily admitted that he'd been scared. He'd met MD 109's, FW 190's and ME 262's over Germany and he'd met MIG-21's over Korea but the large, bright, bluish white light had scared him - he asked the controller if he could break off the intercept.

This time the light didn't come back.

When the UFO went off the scope it was headed toward Fargo, North Dakota, so the controller called the Fargo filter center. "Had they had any reports of unidentified lights?" he asked. They hadn't.

But in a few minutes a call came back. Spotter posts on a southwest- northeast line a few miles west of Fargo had reported a fast moving, bright bluish white light.

This was an unknown - the best.

The sighting was thoroughly investigated, and I could devote pages of detail on how we looked into every facet of the incident; but it will suffice to say that in every facet we looked into we saw nothing. Nothing but a big question mark asking what was it.

When I left Project Blue Book and the Air Force I severed all official associations with the UFO. But the UFO is like hard drink; you always seem to drift back to it. People I've met, people at work, and friends of friends are continually asking about the subject. In the past few months the circulation manager of a large Los Angeles newspaper, one of Douglas Aircraft Company's top scientists, a man who is guiding the future development of the super secret Atlas intercontinental guided missile, a movie star, and a German rocket expert have called me and wanted to get together to talk about UFO's. Some of them had seen one.

I have kept up with the activity of the UFO and Project Blue Book over the past two years through friends who are still in intelligence. Before Max Futch got out of the Air Force and went back to law school he wrote to me quite often and a part of his letters were always devoted to the latest about the UFO's.

Then I make frequent business trips to ATIC, and I always stop in to

---

see Captain Charles Hardin, who is now in charge of Blue Book, for a "What's new?" I always go to ATIC with the proper security clearances so I'm sure I get a straight answer to my question.

Since I left ATIC, the UFO's haven't gone away and neither has the interest. There hasn't been too much about them in the newspapers because of the present Air Force policy of silence, but they're with us. That the interest is still with us is attested to by the fact that in late 1953 Donald Keyhoe's book about UFO's, Flying Saucers From Outer Space, immediately appeared on best seller lists. The book was based on a few of our good UFO reports that were released to the press. To say that the book is factual depends entirely upon how one uses the word. The details of the specific UFO sightings that he credits to the Air Force are factual, but in his interpretations of the incidents he blasts way out into the wild blue yonder.

During the past two years the bulk of the UFO activity has taken place in Europe. I might add here that I have never seen any recent official UFO reports or studies from other countries; all of my information about the European Flap came from friends. But when these friends are in the intelligence branches of the U.S. Air Force, the RAF, and the Royal Netherlands Air Force, the data can be considered at least good.

The European Flap started in the summer of 1953, when reports began to pop up in England and France. Quality wise these first reports weren't too good, however. But then, like a few reports that occurred early in the stateside Big Flap of 1952, sightings began to drift in that packed a bit of a jolt. Reports came in that had been made by personal friends of the brass in the British and French Air Forces. Then some of the brass saw them. Corners of mouths started down.

In September several radar sites in the London area picked up unidentified targets streaking across the city at altitudes of from 44,000 to 68,000 feet. The crews who saw the targets said, "Not weather," and some of these crews had been through the bloody Battle of Britain. They knew their radar.

In October the crew of a British European Airways airliner reported that a "strange aerial object" had paced their twin-engined Elizabethan for thirty minutes. Then on November 3, about two thirty in the afternoon, radar in the London area again picked up targets. This time two Vampire jets were scrambled and the pilots saw a "strange aerial object" The men at the radar site saw it too; through

their telescope it looked like a "flat, white-colored tennis ball."

The flap continued into 1954. In January those people who officially keep track of the UFO's pricked up their ears when the report of two

---

237. What Are UFO's?

Swedish airline pilots came in. The pilots had gotten a good look before the UFO had streaked into a cloud bank. It looked like a discus with a hump in the middle.

On through the spring reports poured out of every country in Europe. Some were bad, some were good.

On July 3, 1954, at eight fifteen in the morning, the captain, the officers and 463 passengers on a Dutch ocean liner watched a "greenish colored, saucer shaped object about half the size of a full moon" as it sped across the sky and disappeared into a patch of high clouds.

There was one fully documented and substantiated case of a "landing" during the flap. On August 25 two young ladies in Mosjoen, Norway, made every major newspaper in the world when they encountered a "saucer- man." They said that they were picking berries when suddenly a dark man, with long shaggy hair, stepped out from behind some bushes. He was friendly; he stepped right up to them and started to talk rapidly. The two young ladies could understand English but they couldn't understand him. At first they were frightened, but his smile soon "disarmed" them. He drew a few pictures of flying saucers and pointed up in the sky. "He was obviously trying to make a point," one of the young ladies said.

A few days later it was discovered that the man from "outer space" was a lost USAF helicopter pilot who was flying with NATO forces in Norway.

As I've always said, "Ya gotta watch those Air Force pilots - especially those shaggy haired ones from Brooklyn."

The reporting spread to Italy, where thousands of people in Rome saw a strange cigar shaped object hang over the city for forty minutes. Newspapers claimed that Italian Air Force radar had the UFO on their scopes, but as far as I could determine, this was never officially acknowledged.

In December a photograph of two UFO's over Taormina, Sicily, appeared in many newspapers. The picture showed three men standing on a bridge, with a fourth running up with a camera. All were intently watching two disk shaped objects. The photo looked good, but there was one flaw, the men weren't looking at the UFO's; they were looking off to the right of them. I'm inclined to agree with Captain Hardin of Blue Book - the photographer just fouled up on his double exposure.

Sightings spread across southern Europe, and at the end of October, the Yugoslav Government expressed official interest. Belgrade newspapers said that a "thoughtful inquiry" would be set up, since reports had come from "control tower operators, weather stations and hundreds of farmers." But the part of the statement that swung the most weight was, "Scientists in astronomical observatories have seen these strange objects with their own eyes."

238.The Report on Unidentified Flying Objects

During 1954 and the early part of 1955 my friends in Europe tried to keep me up-to-date on all of the better reports, but this soon approached a full time job. Airline pilots saw them, radar picked them up, and military pilots chased them. The press took sides, and the controversy that had plagued the

U.S. since 1947 bloomed forth in all its confusion.

An ex-Air Chief Marshal in the RAF, Lord Dowding, went to bat for the UFO's. The Netherlands Air Chief of Staff said they can't be. Herman Oberth, the father of the German rocket development, said that the UFO's were definitely interplanetary vehicles.

In Belgium a senator put the screws on the Secretary of Defense - he wanted an answer. The Secretary of Defense questioned the idea that the saucers were "real" and said that the military wasn't officially interested. In France a member of parliament received a different answer - the French military was interested. The French General Staff had set up a committee to study UFO reports.

In Italy, Clare Boothe Luce, American Ambassador to Italy, said that she had seen a UFO and had no idea what it could be.

Halfway around the world, in Australia, the UFO's were busy too. At Canberra Airport the pilot of an RAAF Hawker Sea Fury and a ground radar station teamed up to get enough data to make an excellent radar visual report.

In early 1955 the flap began to die down about as rapidly as it had flared up, but it had left its mark - many more believers. Even the highly respected British aviation magazine, Aeroplane, had something to say. One of the editors took a long, hard look at the over-all UFO picture and concluded, "Really, old chaps- I don't know."

Probably the most unique part of the whole European Flap was the fact that the Iron Curtain countries were having their own private flap. The first indications came in October 1954, when Rumanian newspapers blamed the United States for launching a drive to induce a "flying saucer psychosis" in their country. The next month the Hungarian Government hauled an "expert" up in front of the microphone so that he could explain to the populace that UFO's don't really exist because, "all 'flying saucer' reports originate in the bourgeois countries, where they are invented by the capitalist warmongers with a view to drawing the people's attention away from their economic difficulties."

Next the U.S.S.R. itself took up the cry along the same lines when the voice of the Soviet Army, the newspaper Red Star, denounced the UFO's as, you guessed it, capitalist propaganda.

In 1955 the UFO's were still there because the day before the all important May Day celebration, a day when the Soviet radio and TV are

---

normally crammed with programs plugging the glory of Mother Russia to get the peasants in the mood for the next day, a member of the Soviet Academy of Sciences had to get on the air to calm the people's fears. He left out Wall Street and Dulles this time - UFO's just don't exist.

It was interesting to note that during the whole Iron Curtain Flap, not one sighting or complimentary comment about the UFO's was made over the radio or in the newspapers; yet the flap continued. The reports were obviously being passed on by word of mouth. This fact seems to negate the theory that if the newspaper reporters and newscasters would give up the UFO's would go away. The people in Russia were obviously seeing something.

While the European Flap was in progress, the UFO's weren't entirely neglecting the United States. The number of reports that were coming into Project Blue Book were below average, but there were reports. Many of them would definitely be classed as good, but the best was a report from a photo reconnaissance B-29 crew that encountered a UFO almost over Dayton.

About 11:00 A.M. on May 24, 1954, an RB-29 equipped with some new aerial cameras took off from Wright Field, one of the two airfields that make up Wright-Patterson AFB, and headed toward the Air Force's photographic test range in Indiana. At exactly twelve noon they were at 16,000 feet, flying west, about 15 miles northwest of Dayton. A major, a photo officer, was in the nose seat of the '29. All of the gun sights and the bombsight in the nose had been taken out, so it was like sitting in a large picture window - except you just can't get this kind of a view anyplace else. The major was enjoying it. He was leaning forward, looking down, when he saw an extremely bright circular shaped object under and a little behind the airplane. It was so bright that it seemed to have a mirror finish. He couldn't tell how far below him it was but he was sure that it wasn't any higher than 6,000 feet above the ground, and it was traveling fast, faster than the B-29. It took only about six seconds to cross a section of land, which meant that it was going about 600 miles an hour.

The major called the crew and told them about the UFO, but neither the pilot nor the copilot could see it because it was now directly under the B-29. The pilot was just in the process of telling him that he was crazy when one of the scanners in an aft blister called in; he and the other scanner could also see the UFO.

Being a photo ship, the RB-29 had loaded cameras - so the logical thing to do would be to take a picture, but during a UFO sighting logic sometimes gets shoved into the background. In this case, however, it

---

didn't, and the major reached down, punched the button on the intervalometer, and the big vertical camera in the aft section of the airplane clicked off a photo before the UFO sped away.

The photo showed a circular shaped blob of light exactly as the major had described it to the RB-29 crew. It didn't show any details of the UFO because the UFO was too bright; it was completely overexposed on the negative. The circular shape wasn't sharp either; it had fuzzy edges, but this could have been due to two things: its extreme brightness, or the fact that it was high, close to the RB-29, and out of focus. There was no way of telling exactly how high it was but if it were at 6,000 feet, as the major estimated, it would have been about 125 feet in diameter.

Working with people from the photo lab at Wright-Patterson, Captain Hardin from Project Blue Book carried out one of the most complete investigations in UFO history. They checked aircraft flights, rephotographed the area from high and low altitude to see if they could pick up something on the ground that could have been reflecting light, and made a minute ground search of the area. They found absolutely nothing that could explain the round blob of light, and the incident went down as an unknown.

Like all good "Unknown" UFO reports, there are as many opinions as to what the bright blob of light could have been as there are people who've seen the photo. "Some kind of light phenomenon" is the frequent opinion of those who don't believe. They point out that there is no shadow of any kind of a circular object showing on the ground - no shadow, nothing "solid." But if you care to take the time you can show that if the object, assuming that this is what it was, was above 4,000 feet the shadow would fall out of the picture.

Then all you get is a blank look from the light phenomenon theorists.

With the sighting from the RB-29 and the photograph, all of the other UFO reports that Blue Book has collected and all of those that came out of the European Flap, the big question - the key question - is: What have the last two years of UFO activity brought out? Have there been any important developments?

Some good reports have come in and the Air Force is sitting on them. During 1954 they received some 450 reports, and once again July was the peak month. In the first half of 1955 they had 189. But I can assure you that these reports add nothing more as far as proof is concerned. The quality of the reports has improved, but they still offer nothing more than the same circumstantial evidence that we presented to the panel of scientists in early 1953. There have been no reports in which the speed or altitude of a UFO has been measured, there have been no reliable

---

241. What Are UFO's?

photographs that show any details of a UFO, and there is no hardware. There is still no real proof.

So a public statement that was made in 1952 still holds true: "The possibility of the existence of interplanetary craft has never been denied by the Air Force, but UFO reports offer absolutely no authentic evidence that such interplanetary spacecraft do exist."

But with the UFO, what is lacking in proof is always made up for in opinions. To get a qualified opinion, I wrote to a friend, Frederick C. Durant. Mr. Durant, who is presently the director of a large Army Ordnance test station, is also a past president of the American Rocket Society and president of the International Astronautical Federation. For those who are not familiar with these organizations, the American Rocket Society is an organization established to promote interest and research in space flight and lists as its members practically every prominent scientist and engineer in the professional fields allied to aeronautics. The International Astronautical Federation is a world-wide federation of such societies.

Mr. Durant has spent many hours studying UFO reports in the Project Blue Book files and many more hours discussing them with scientists the world over - scientists who are doing research and formulating the plans for space flight. I asked him what he'd heard about the UFO's during the past several years and what he thought about them. This was his reply:

This past summer at the Annual Congress of the IAF at Innsbruck, as well as previous Congresses (Zurich, 1953, Stuttgart, 1952, and London, 1951), none of the delegates representing the rocket and space flight societies of all the countries involved had strong feelings on the subject of saucers. Their attitude was essentially the same as professional members of the American Rocket Society in this country. In other words, there appear to be no confirmed saucer fans in the hierarchy of the professional societies.

I continue to follow the subject of UFO's primarily because of my being requested for comment on the interplanetary flight aspects. My personal feelings have not changed in the past four years, although I continue to keep an objective outlook.

There are many other prominent scientists in the world whom I met while I was chief of Project Blue Book who, I'm sure, would give the same answer - they've not been able to find any proof, but they continue to keep an objective outlook. There are just enough big question marks sprinkled through the reports to keep their outlook objective.

I know that there are many other scientists in the world who, although they haven't studied the Air Force's UFO files, would limit their comment to a large laugh followed by an "It can't be." But "It can't be's"

242.The Report on Unidentified Flying Objects

are dangerous, if for no other reason than history has proved them so. Not more than a hundred years ago two members of the French Academy of Sciences were unseated because they supported the idea

that "stones had fallen from the sky." Other distinguished members of the French Academy examined the stones, "It can't be - stones don't fall from the sky," or words to that effect. "These are common rocks that have been struck by lightning."

Today we know that the "stones from the sky" were meteorites.

Not more than fifty years ago Dr. Simon Newcomb, a world famous astronomer and the first American since Benjamin Franklin to be made an associate of the Institute of France, the hierarchy of the world science, said, "It can't be." Then he went on to explain that flight without gas bags would require the discovery of some new material or a new force in nature.

And at the same time Rear Admiral George W. Melville, then Chief Engineer for the U.S. Navy, said that attempts to fly heavier-than-air vehicles was absurd.

Just a little over ten years ago there was another "it can't be." Ex President Harry S. Truman recalls in the first volume of the Truman Memoirs what Admiral William D. Leahy, then Chief of Staff to the President, had to say about the atomic bomb. "That is the biggest fool thing we have ever done," he is quoted as saying. "the bomb will never go off, and I speak as an expert in explosives."

Personally, I don't believe that "it can't be." I wouldn't class myself as a "believer," exactly, because I've seen too many UFO reports that first appeared to be unexplainable fall to pieces when they were thoroughly investigated. But every time I begin to get skeptical I think of the other reports, the many reports made by experienced pilots and radar operators, scientists, and other people who know what they're looking at. These reports were thoroughly investigated and they are still unknowns. Of these reports, the radar visual sightings are the most convincing. When a ground radar picks up a UFO target and a ground observer sees a light where the radar target is located, then a jet interceptor is scrambled to intercept the UFO and the pilot also sees the light and gets a radar lock on only to have the UFO almost impudently outdistance him, there is no simple answer. We have no aircraft on this earth that can at will so handily outdistance our latest jets.

The Air Force is still actively engaged in investigating UFO reports, although during the past six months there have been definite indications that there is a movement afoot to get Project Blue Book to swing back to the old Project Grudge philosophy of analyzing UFO reports - write

---

them all off, regardless. But good UFO reports cannot be written off with such answers as fatigued pilots seeing a balloon or star, "green" radar operators with only fifteen years' experience watching temperature inversion caused blips on their radarscopes; or "a mild form of mass hysteria or war nerves." Using answers like these, or similar ones, to explain the UFO reports is an expedient method of getting the percentage of unknowns down to zero, but it is no more valid than turning the hands of a clock ahead to make time pass faster. Twice before the riddle of the UFO has been "solved," only to have the reports increase in both quantity and quality.

I wouldn't want to hazard a guess as to what the final outcome of the UFO investigation will be, but I am sure that within a few years there will be a proven answer. The earth satellite program, which was recently announced, research progress in the fields of electronics, nuclear physics, astronomy, and a dozen other branches of the sciences will furnish data that will be useful to the UFO investigators. Methods of investigating and analyzing UFO reports have improved a hundred fold since 1947 and they are continuing to be improved by the diligent work of Captain Charles Hardin, the present chief of Project Blue Book, his staff, and the 4602nd Air Intelligence Squadron. Slowly but surely these people are working closer to the answer - closer to the proof.

Maybe the final proven answer will be that all of the UFO's that have been reported are merely

misidentified known objects. Or maybe the many pilots, radar specialists, generals, industrialists, scientists, and the man on the street who have told me, "I wouldn't have believed it either if I hadn't seen it myself," knew what they were talking about. Maybe the earth is being visited by interplanetary spaceships.

Only time will tell.

Report - May 10, 1952; South Carolina; UFO Incident at Savannah River (AEC) Plant

Albuquerque, New Mexico
28 May 1952
1:45-2:40 p.m.
Witnesses: Two city fire department employees. Two circular objects--one shiny silver and the other orange or light brown-- were seen three times performing fast maneuvers.

Albuquerque, New Mexico
5 June 1952
6:45 p.m.
Witness: S/Sgt T.H. Shorey.
One shiny round object flew 5-6 times as fast as an F-86 jet fighter for 6 seconds.

Albuquerque, New Mexico
7 June 1952
11:18 a.m.
Witnesses: Crew of B-25 bomber #8840 at 11,500'. One rectangular aluminum object, about 6'x4', flew 250-300' below the B-25.

Albuquerque, New Mexico
8 June 1952
10:50 a.m.
Witnesses: Mr. and Mrs. J.D. Markland.
Four shiny objects flew straight and level in a diamond formation.

The Nuclear Connection

1958-1966

In 1958, the U.S. agreed to a moratorium on nuclear testing. The resulting limitations on determining weapons effects inspired efforts by the Special Weapons Center and Sandia Corporation to develop methods of simulating nuclear effects with nonnuclear techniques. In the wake of the full-scale tests and signing of the test ban treaty, the Air Force Weapons Laboratory was created from elements of the Special Weapons Center. The Weapons Laboratory built facilities during the 1960s to simulate nuclear effects such as transient radiation, X-rays, and electromagnetic pulse. To study the latter, the Trestle, the largest simulation facility ever built, was completed on the east side of Kirtland during the late 1970s.

FARMLANDS

Kirtland Air Force Base, New Mexico
8 August 1980
2350 MST

Three Security Policemen on duty in Charlie Sector, East Side of Manzano Weapons Storage Area, observed a very bright light that traveled with great speed and stopped suddenly in the sky over Coyote Canyon. They at first thought the object was a helicopter, but after observing the object perform unusual aerial maneuvers, they felt it could not be a helicopter. The light was
observed to land in the Coyote Canyon area. Sometime later they observed the light take off again and proceed straight up at a high speed until it was no longer visible.

9 August, 1980
0020 MST

A Sandia Security Guard was driving east on the Coyote Canyon access road on a routine building check of an alarmed structure. As he approached the structure, he observed a bright light near the ground behind the structure. He also observed an object that he at first thought was a helicopter. As he came closer, he observed that it was not a helicopter, but a round disk shaped object. When he attempted to radio for backup, he found that his radio was not functioning. He approached the object on foot armed with a shotgun, and the object thereupon took off in a vertical direction at high speed.

22 August, 1980

Three other unnamed Security Guards observed a light over Coyote Canyon that behaved in a similar manner as the one seen on 8 August. Coyote Canyon is part of a large restricted test range used by the Air Force Weapons Laboratory, Sandia Laboratories, the Defense Nuclear Agency, and the Department of Energy.

In late 1980, the Aerial Phenomena Research Organization (APRO), received an anonymous letter from which the following is excerpted:

On July 16, 1980, at between 10:30 and 10:45 AM, Craig R. Weitzel...a Civil Air Patrol Cadet from Dobbins AFB... visiting Kirtland AFB, NM, observed a dull metallic colored UFO flying... near Pecos, New Mexico...WEITZEL was with ten other individuals, including USAF active duty airmen, and all witnessed the sightings. Weitzel took some pictures of the object. Weitzel ...observed the UFO land in a clearing approximately 250 yds. NNW of the training area. Witzel observed an individual dressed in a metallic suit depart the craft and walk a few feet away. The individual was outside the craft for just a few minutes. When the individual returned the craft took off toward the NW.

The letter went on to claim that Weitzel had been visited the next day by a man in a dark suit with black hair and sunglasses who claimed to be from Sandia Laboratories and who told Weitzel that he had seen something he shouldn't have seen - a secret craft from Los Alamos. The "man in black" demanded all of the photographs that Weitzel had taken, but Weitzel told him that they were no longer in his possession, that one of the airmen that had been with him now had them. Wetzel was warned not to tell anyone what he had seen. The letter stated that Weitzel called Kirtland AFB and made a report of the incident to the Security Police. They referred him to the Air Force Office of Special Investigations, and an AFOSI special agent, Mr. Dody (actually Sgt. Richard C. Doty), took a statement from Weitzel along with the photographs. The letter closed by saying that the writer had information that the USAF was storing a UFO at Manzano that had been recovered at Roswell, New Mexico. The letter writer said that he had to remain anonymous for his own protection.

In 1985, a researcher named Benton Jamison located Craig Weitzel, who confirmed that he had indeed sighted a UFO and had made a report to Sgt. Richard C. Doty, but that he had not seen the object land or seen an occupant, and that no "man in black" had visited him. In 1989, a civilian researcher named Robert Hastings stated that he had compared the typewritten anonymous letter that APRO had received with the OSI UFO report form that Doty had completed on Weitzel's sighting and had found that both were typed on the same typewriter.(Revelations p 47-48)

NCP-06: The Oak Ridge Mini-Flap

Lawrence Fawcett & Barry Greenwood:
(Clear Intent, 171-175)

A flurry of reports suddenly burst into FBI files from Oak Ridge, Tennessee, during the fall of 1950. A few interesting events preceded this. A summary of these events follows

June 1947
Mr. W. R. Pressley photographed a flying object at Oak Ridge, Tennessee. The street in the foreground has been identified as Illinois Avenue, Oak Ridge, Tenn.

20 June 1949
At 1900 hours Mr. and Mrs. E. H. Anderson and Mrs. John A. White sighted three objects at Oak Ridge, Tennessee, similar to SUBJECT.

1-6 March 1950
Mr. Stuart Adcock reported peculiar readings on his "Ham" Radar Scope. These objects reappeared at approximately the same time of day which is similar to SUBJECT. (Refer: Summary of Information, Subject: Unidentified Objects Over Oak Ridge Vicinity, dated 6 March 1950.)

12 October 1950
2325 hours. Knoxville Airport Radar Unit indicated a series of unidentified targets over the "Restricted Zone" at Oak Ridge.

2347. Fighter aircraft was at the position of the radar target and made three perfect interceptions but could see nothing.

13 October 1950
0000-0100 hours. Additional Radar plots as before.

15 October 1950
Approximately 1400 hours. Major L. E. Ronniger, accompanied by his daughter, heard intermittent noises.

151? hours. Fighter plane made unsuccessful passes at a good radar target four (4) miles from the East Boundary (Kerr Hollow Gate).

1520 hours. SUBJECT seen at Kerr Hollow Gate by Troopers Rymer and Zarzecki, Mr. Hightower, and Mr. Moneymaker.

1520 hours. Radar scopes at McGhee-Tyson Airport indicate unidentified targets.

16 October 1950
1455 to 1530 hours. Objects seen by Troopers Isabell, Briggs, and Clark.

1520 hours. Radar scopes at McGhee-Tyson Airport giving unintelligible readings.

1956 to 2004 hours. NEPA Guards, Brown, Herron, and Davis report peculiar sounds.

20 October 1950
1655 hours. Visual sightings by Larry P. Riordan, Security Chief, X-10 Plant.

23 October 1950
1630 hours. Visual sightings made by Francis J. Miller. (Geiger counters in the vicinity had unexplainable readings at about this time.)

24 October 1950
1855 to 1900 hours. Visual sightings of a light by Major Dallveg, Mr. Frey, and the Radar Station.

1823 to 1920 hours. Several small, slow targets appeared on radar scope.

26 October 1950
Robert W. Lassell and five others sighted objects from the Knoxville Airport, Knoxville, Tennessee.

5 November 1950
1155 to 1200 hours. Visual sighting by Don Patrick.

25 May 1950
In the vicinity of Louden, Tennessee, a flat, metallic object, accompanied by "a flapping noise," was seen by five people living in that area.

Certainly something big was going on. Oak Ridge was the site of the old Atomic Energy Commission's testing facilities. Unauthorized aerial craft in this area would amount to a major security breach of very great concern to the military.

A memo dated October 25, 1950 provided some details:

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE

At 1655 hours, on 20 October 1950, Mr. Larry P. Riordan, AEC Badge No.522, Superintendent of Security at X-10 in the "Control Zone" at Oak Ridge, Tennessee, while enroute from X-10 to the Oak Ridge residential area, on Benton Valley Road, saw an object in the sky which appeared to be directly over the University of Tennessee Agricultural Research Farm. This object gave the general appearance of an aerial balloon which had lost its "basket." In other words, the object was generally round; appeared to come together at the bottom in wrinkles (rather indistinct), and something was hanging below. The balloon was described as being from eight to ten feet long; of a lead pipe or gunmetal color; and seemed to be approximately one-fourth (¼) mile from the observer, at a thirty (30) degree elevation above the horizon. The object was apparently stationary but since the observer was in a moving vehicle, he did not verify that it was stationary. As the vehicle in which he was travelling changed position, and went around a curve, Mr. Riordan noticed that this object appeared to be thinner. He concludes that by reason of his changing position, or the object changing its altitude, he observed another angle of the object which appeared to be thinner

than upon his first sighting.

At the time of the observation there was adequate light and the object was plainly visible. Mr. Riordan is a responsible person, as is indicated by his position, and he has been aware of the many instances of reported objects flying in the sky. He is also very familiar with the weather balloons which are sent up hourly each day over Oak Ridge between 6:00 **AM** of one day until 1:00 **AM** of the next day. The size of these balloons vary, but generally they are similar to a circus balloon which is about twenty- four (24) inches in diameter. Mr. Riordan is certain that the object was not a weather balloon but his first impression was that this object was an experimental "gab" being utilized by the University of Tennessee Agricultural Research Farm.

Mr. Riordan has been the Security Chief of X-10 since 14 July 1943. His vision is normal except that he has negligible impairment of the right eye. Like many of the Atomic Energy Commission officials, Mr. Riordan has hoped for the opportunity to see one of these objects, and under the circumstances, he visualized it as accurately as possible.

At 1845 hours, on 24 October 1950, Mr. William B. Fry, Assistant Chief of Security, NEPA Division, Oak Ridge, Tennessee, while attending a Drive- in theater with his wife and child, at Oak Ridge, noticed an object in the sky North-Northwest of his position, at a thirty (30) to forty (40) degree elevation. This object was moving gently in a horizontal plane, back and forth, within thirty (30) degrees of his line of sight. This object emitted a glow, varying in color from red to green, to blue-green, to blue, and to orange. The variations were checked on the vertical window post of Mr. Fry's vehicle and were witnessed by Mr. Fry's wife. The attention of another observer, the Projectionist at the Drive-in theater, was also called to the object and verification of this sighting was made. The object disappeared from his sight at 1920 hours.

At 1855 hours, on 24 October, 1950, an Air Force Major, Lawrence Ballweg, NEPA Division, Oak Ridge, Tennessee, also saw from his residence an object which he described similarly. The object disappeared from the sight of Mr. Ballweg at 1920 hours, which coincides with the time of disappearance of the object from Mr. Fry's sight.

On 20 October 1950, at 1527 hours, aircraft No. AF-409, Pilot Wolf, 5th AW-Fighter Sqd., took off from the Knoxville Airport for a "local patrol." The Radar Unit at Knoxville Airport received readings on their Radar scope and sent the aircraft after these targets. The aircraft pilot was unable to identify any flying object in the vicinity of the said targets. All targets were between eighteen (18) and twenty-five (25) miles from the Airport at 320 degrees. The aircraft was landed at 1713 hours. (Attention is invited to the fact that these targets were sighted at approximately the same time, and locality, that was reported by Mr. Larry Riordan.)

On 24 October 1950, at 1823 hours, several small, slow targets were seen on the Radar screen at the Knoxville Airport Radar Site. These targets appeared in the Southeast sector of the "Restricted Flying Zone" and over the city of Oak Ridge. These targets moved from the city area to and along the East boundary of the area. At 1826 hours, the fighter aircraft was "scrambled" and proceeded to the area where it was vectored among the targets but the pilot reported no visual contact with said targets. At 1920 hours the targets disappeared from the Radar Screen and the fighter was vectored toward another target believed to be one of three (3) aircraft enroute from Andrews Field to Steward Field. (Note: 1920 hours is also the time that the object sighted by Mr. Fry and Major Ballweg disappeared from their view).

Sightings continued into December 1950 around Oak Ridge. On December 14, the following information was reported.

A. Location and Time of Sighting: From 1605 hours for about three (3) hours, on 14 December 1950, on the Radar Scopes of the 663rd AC and W Squadron, McGhee Tyson Airport, Knoxville, Tennessee.

B. Weather at the Time: At 1600 hours on 14 December 1 950-"Ceiling- 2100 feet; Broken overcast; Seven (7) miles visibility; temperature, 37 degrees F.; and Wind-Southwest at thirteen (13) miles per hour.

C. Names, Occupations, and Addresses of Witnesses: Personnel of the 663rd AC and W Squadron, 30th Air Division, McGhee Tyson Airport, Knoxville, Tennessee, who were on duty at the time. Their occupations are Radar operators, Supervisors and experts.

D. Photographs of Objects, if available: No photographs taken. See "F" below.

E. Objects Sighted: A group of targets blanketed the Radar Scopes in the area directly over the government Atomic Energy Commission projects at Oak Ridge, Tennessee. These objects could not be identified from the radar image and a perfect fighter interception met with negative results.

F. Any other pertinent information: Lt. Robinson of the 663rd AC and W Squadron, McGhee-Tyson Airport, Knoxville, Tennessee took photographs of the scope readings with a personal, four (4) by five (5) Speed Graphic Camera, using Plus-X civilian procured film, a lens opening of F-2.5, and a shutter speed varying from twenty (20) to forty-five (45) seconds. The negatives were printed and forwarded to the 30th Air Division, Selfridge Air Force Base, Michigan, which installation printed the negatives and sent copies thereof to the 663rd AC and W squadron. The numerous targets can be readily identified from the permanent radar echos by comparing the photographs.

The Army sent a report to the FBI on a sighting by employees of the Nuclear Energy for Propulsion of Aircraft project (NEPA) at Oak Ridge:

On December 18,1950, at sometime between 0820 and 0830, the following NEPA employees were riding in a vehicle on the Turnpike within the Controlled Area toward the NEPA Project approximately one mile short of the "Y" cutoff to White Wing entrance. The passengers, with the exception of . . . who did not attempt to participate in the viewing, observed a light emanating in the shape of a circle, of an intensity much greater than that of a bright moon, through the windshield of the vehicle. The viewers had the impression that there was form in connection with the light rather than merely a point source. The light was white in appearance and did not show any signs of refraction into a band or continuous spectrum. It appeared to be from 15 to 30 degrees elevated above the horizontal and on an azimuth between west and northwest, and appeared to be traveling in a northwesterly direction. The impression of it traveling is due to the fact that the object appeared to diminish considerably in size during the approximate thirty seconds during which it was viewed. The vehicle remained in motion and in following the course of the road, changed its relative position so that the object was viewed during the last few seconds from the side windows. As the vehicle proceeded down the road a nearby ridge obstructed the view of the object, and although the vehicle completed the turn toward K-25 at the "Y" intersection and the passengers had a relatively clear view at points along the road, the object was not viewed again. The observers were unable to estimate approximate size, speed, or vertical elevation; and, therefore, were not certain whether the object was over the Controlled Area or a considerable distance away. There was no vapor trail or any other visible condition within the vicinity of the object and there were no clouds which could have obscured it. The observers were unable to identify the object in terms of mass or shape, other than the circular appearance of the light. However, the circular area appeared to darken, starting at

approximately 7:00 to 9:00 o'clock along the perimeter and continuing to darken along the perimeter and inner area until the light was concentrated in approximately 1:00 to 3:00 o'clock position of a very small diameter, at which point it appeared somewhat similar to a large star.

The observers were not in complete agreement as to whether the object was moving at a speed which caused it to diminish in size or actually was diminishing in size without any great velocity of travel due to the darkening effect described above.

Another radar report was received on December 20 as follows:

Object sighted: The radar log of the 663rd AN and C Squadron, McGhee Tyson Airport, Knoxville, Tennessee contained the following entry: "20 December 1950.1247 hours. Small paint in area (Oak Ridge Controlled Area). Very very slow. Made perfect intercept (with F-82 Fighter aircraft) and orbit surrounding small smoke cloud.

A very cryptic teletype appears here as the final entry for 1950. Whether it relates to the activity at Oak Ridge or elsewhere remains to be explained. No other file has been found relevant to the information contained in it. It is dated December 3, 1950.

RE: flying saucers. This office very confidentially advised by Army Intelligence, Richmond, that they have been put on immediate high alert for any data whatsoever concerning flying saucers. CIC (Counter Intelligence Corps) here states background of instructions not available from Air Force Intelligence, who are not aware of the reason for alert locally, but any information whatsoever must be telephoned by them immediately to Air Force Intelligence. CIC advises data strictly confidential and should not be disseminated.

So, flying saucers, once again, upset the military to such an extreme that an *"Immediate High Alert"* must be declared. This is hardly what to expect from an illusion.

Most UFO information in the FBI files from this point on is sporadic in nature. A number of unusual reports appear, however. This teletype is dated May 26, 1952.

RE Flying Saucers, information concerning. Three women saw strange objects floating in sky over Ashland, KY. At eight fifty PM**,** EST, May twenty- five last for two or three minutes. Objects described as looking like large oysters with fishtails floating low like a cloud. They were oval in shape and according to observers could have been balloons. They came in over Ashland from the north, circled and went back in the opposite direction. Above information for Bureau. No action here.

An important admission is made in the first paragraph of this July 29, 1952 memo:

SUBJECT: FLYING SAUCERS

Purpose:

To advise at the present time the Air Force has failed to arrive at any satisfactory conclusion in its research regarding numerous reports of flying saucers and flying discs sighted throughout the United States.

UFOs CONTINUE TO VISIT NUCLEAR ENERGY SITES

by GEORGE D. FAWCETT

Looking back over the years during the 40th anniversary of UFOs in modern times (JUNE 24,1987) it is interesting to note that UFOs have been seen and recorded near various atomic energy locations in this country and overseas. This link was first noticed by Captain Edward Ruppelt in 1952 and reported in a LOOK magazine article (JUNE 24,1952) titled "Hunt For The Flying Saucer." Captain Ruppelt, who directed the U.S. Air Force Project Blue Book at that time, when viewing a folder of 63 mystifying UFO reports that had been plotted on a map of the United States discovered that it showed "an ominous correlation" with the location of various atomic energy installations. LOOK magazine learned that some high ranking officers had taken note of this fact and had then held a Pentagon conference to discuss these numerous strange concentrations that have continued to this day.

Such incidents at the Savannah River, Hanford, Los Alamos, Oak Ridge, McGuire , Cherokee and Indian Point nuclear and atomic plants are of continued vital interest and concern to scientific, military, civilian and governmental observers everywhere.

These UFO encounters raise such serious questions as: Are UFOs monitoring our atomic and nuclear energy sites and if so, why? Why has the AEC (now NRC) had representatives on most of all the major government UFO investigative projects? Why do guards at some AEC installations report their UFO encounters directly to the AEC?

The questions continue -- What have AEC studies using air samplers, radioactive background counters, portable counters, magnetometers, oscilloscopes, cameras, radar and other devices revealed? That types of radiation increases have been discovered? What do they make of the increasing numbers of individuals who have suffered "radioactive" injuries of one sort or another alleged to have occurred during UFO incidents in many states in the United States and other global countries?

In essence, what have been the major discoveries and perhaps hidden secrets of the AEC-UFO link since the late 1940's?

Let's examine some of these often reported events. On May 10, 1952 four employees of the DuPont Company, employed at the Savannah River Plant saw eight "disc-shaped" objects approach the Ellenton, South Carolina plant. The objects varied from a yellow to gold in color, moved south to north at a "high rate" of speed. The eight UFOs approached the area at such a low altitude that they

had to rise to pass over some tall tanks in the area. The noiseless UFOs weaved from left to right and moved from side to side as they departed at a 90 degree angle. " The AEC in Washington was advised."

On July 5, 1952 four Florida pilots reported a flying saucer hovering above the Hanford atomic works, a sensitive scientific installation at Richlands ,Washington. Captain John Baldwin, Captain George Robertson and pilots D. Shanbel and Steven Summers stated that the UFO was round and flat. After hovering over the atomic plant, it gained speed, reversed its course and then disappeared quickly. Two yellow globes of fiery appearance were reported over the Hanford plant seven days later, confirmed by Air Force investigators. Two years earlier on April 17, 1950 more than fifteen persons at the secret atomic energy project at Los Alamos, New Mexico reported they saw a UFO on the eastern horizon. One of the observers, a scientist from the University of California Personnel Division watched one of the three objects thru a telescope and said that it looked flat, metallic and was roughly circular and about nine feet in diameter. The UFO appeared to be about 2,000 feet high and moved ".. faster than any known conventional aircraft." It was seen for about 20 minutes and put on quite a show. Dozens of excellent UFO sightings have been reported by countless eyewitnesses at Los Alamos over the years.

On 4 June 21, 1952 brought an interesting case of a UFO that trespassed prohibited airspace at the AEC's Oak Ridge Laboratory in Tennessee at 10:58 pm. The UFO was observer by Ground Observer Corps volunteers and also detected by radar. The UFO was pursued by a F-47 aircraft on combat patrol from a 10,000 to 27,000 foot altitude. During the aerial dogfight, the UFO attempted to ram the F-47 on several occasions, before leaving the area. UFO encounters have become quite commonplace at this AEC site.

In October 1965 Philip Parker on an aerial photography mission was flying with pilot H.T. Mayhew near the Perth Church Road Lake Norman crossing. Their plane was flying at about 1,000 feet as they circled the lake near the McGuire Nuclear Station, when they noticed three "bright objects" to their right. Pilot Mayhew gave his plane full throttle and they rose barely high enough to escape the UFOs, which were flying in formation 100 feet below them. Unnerved, as he was Parker was able to take one photograph of the three circular UFOs above Lake Norman, which is bordered by the Catawba, Lincoln, Gaston, Mecklenburg and Iredell counties in North Carolina.

In past years several other photographs of UFOs flying above Lake Norman were taken by different photographers. One of the photographs of an early morning UFO was captured near the Sun on the film. In the photo, the UFO moved from the 4 to the 6 o'clock position from 90 to 20 degrees over a short period of time.

In the late summer of 1968 at 2 a.m. a married couple (names confidential on file) reported seeing a dome-topped UFO with "windows" and odd-colored lights (yellow, blue and red fixed together) flying near their Lake Norman home. The UFO was about two to three car lengths wide and made a soft humming sound. A "metal rod" came from the bottom edge of the UFO, as it moved down nearby power lines, almost touching the wires as it followed the power lines. The eyewitnesses ran the rest of the way home and were badly frightened by their experience. 7

In July or August, 1972 at 9:30 p.m. businessman Robert P. Sartin, who lives near the Lake Norman Airport and Duke Power Plant's 150 high Cowans Ford Dam spotted a UFO. His attention to the UFO came when he heard children fishing from a nearby pier, who were shouting about an object in the sky. Four other persons became eyewitnesses to the UFO, which was seen about four miles East of the Marshall Steam Plant near Terrell.

The UFO, appeared to be about the size of a basketball court and had a thickness, one-half its width. The object looked like "one saucer inverted on top of another and had a row of flashing windows through its middle."

It had red, white and yellow lighted windows and hovered in the area overhead for about 10 minutes, before it flew sideways, then moved up and away at an unbelievable speed as it disappeared in the sky. 8

In March, 1975 at Lexington, South Carolina Mr. and Mrs. Jim Richardson were driving near the Lake Murray Hydroelectric Plant's Saluda Dam, when a brilliant "spotlight" came on and illuminated the interior of their car. They noticed the UFO looked "like two pie pans" put together and had a dome on top.

It flew about 40 to 50 feet above their car and it had red and blue lights on its ends and its dome was "brilliant white." The bottom of the UFO was octagonal in shape or like a stop sign. The Lake Murray area has been the scene of many UFO encounters over the years. 9

On October 27,1975 a UFO was reported by Staff Sgt. Danny K. Lewis near the Loring Air Force Base, Maine. The UFO began to circle the nuclear weapons storage area to within 300 yards of the facility. Finally, it hovered 150 feet above the ground. The base was placed on a major alert status. Radar tracked its maneuvers in the area for over 40 minutes. The reddish-orange UFO later moved to within five feet of the ground. Security personnel said the UFO was "like a stretched-out football in the air" as it hovered nearby. They described the object as about four car lengths long. It shut off its lights and rapidly left the area from near ground level. 10

On November 22, 1975 Pilot Frank Auman, Jr. and UFO

investigator Arlan Keith Andrews were flying in a private plane near the Savannah, Georgia Nuclear Plant. They saw a bright white UFO maneuvering in the area for four or five minutes. It made a "slight wobble" and then a hard turn, before it flew away. Jacksonville Control Center personnel at Jacksonville, Florida confirmed three UFO sightings(either radar or visuals) by pilots at the site. 11

Arlan K. Andrews is a MUFON Consultant and State Director in Indiana.

On March, 1978 several persons described seeing two "milky white" UFOs flying side by side at treetop level at the McGuire Nuclear Station near Triangle, North Carolina. 12

April 24, 1980 at 9 p.m. brought another UFO report from the Lake Norman area. Pete Link and Jeff Schlatter, two Rutherford County carpenters, while working on a house roof observed a bright yellow UFO that rose up vertically from Lake Norman, made a loop and then disappeared while moving rapidly away. 13

Lake Norman is a large lake and is surrounded by Highway 16, Highway 73, Highway 150 and Highway 21. The lake is surrounded by many towns and cities, among them Mooresville, Lincolnton, Lowesville, Denver, Triangle, Iron Station, Stanley, Davidson and Sherrills Ford. These communities have been a "hotbed of UFO sightings" over the past four decades.

One of the more intriguing UFO sightings was reported at 7:30 a.m. on October 18,1982. Gary Fortenberry and Jimmy Bumgarner, two employees at the McGuire Nuclear Station on Lake NOrman were driving to work on Highway 73 at the Catawba River(Lincoln County) when they encountered an unknown.

They watched a dull silver oval UFO with "four legs" above a nearby fogbank. During the daylight encounter, they first mistook it for a water tank, but later in the day when they returned home from work, the fog had lifted and no water tank was to be seen anywhere in the area. They did notice that high voltage lines from the power plants were in the general area of the earlier sightings. When first seen the UFO was about 250 feet above the ground The eyewitnesses had worked at McGuire for six years without experiencing anything unusual. Several months before, when UFOs again visited the same location, the power fluctuated, before the UFOs left the area. Security guards, when questioned by me on the phone, told me that such UFO incidents were to be made directly to AEC headquarters. 14

On October 13, 1983 at 12:30 a.m. Mr. and Mrs. Wayne Ruppe of Gaffney, South Carolina were disturbed from their sleep by a siren-like sound (like something taking off). They looked out of their house windows in time to see a glowing

oval-shaped UFO about 20 feet above their neighbor's home.

The neighborhood dogs were barking in a frenzy. The UFO, described as "about the size of a Winnebago travel-trailer" had two "beams of lights" on the bottom of the object.

It was orange-yellow in color and made a high-pitched sound as it crossed the power lines and moved east in direction of the Cherokee Nuclear Station. The UFO was seen for approximately five minutes and was estimated to be about 20 feet long and 8 to 10 feet in height. 15

On June 24,1984 from 10:30 to 10:45 p.m. security guards at the Indian Point Nuclear Power Plant near Peekskill, New York reported seeing UFO over the plant for approximately 15 minutes. It was roughly 30 stories above the exhaust funnel of one of the plant's three nuclear reactors.

UFO investigator Philip J. Imbrogno for the Dr. J. Allen Hynek's Center for UFO Studies (CUFOS) in Chicago, Illinois interviewed six of the twelve security guards who saw the UFO.

The UFO, according to the witnesses was huge in size, diamond-shaped and approximately 450 feet in length. It was first white, then changed to blue to red to green to amber in color. Local police in Peekskill received numerous UFO sightings during the same evening. One of them, Sgt. Karl Hoffman said the UFO he observed included a "dozen white lights" in V-formation that slowly moved towards the power plant at Indian Point. 16

In the case of the UFO reported by security guards at the Indian Point Nuclear Plant at Peekskill investigators uncovered some interesting information.

As the UFO approached the nuclear plant it flew to within 30 feet of its Reactor Number Three. When it did the plant's security systems, shut down as did all of its alarm systems and communication systems.

Security guards were issued shotguns and were waiting for the final word to shoot at the UFO. A request was also made for an armed helicopter to come and shoot down the UFO, but before the command was given, the UFO moved away and left the area.

Carl Patrick of the plant's information office, when questioned by investigators about the UFO had this to say, "I can neither confirm or deny that the guards fired upon it, but they did what was necessary to protect the plant. 17

UFO reports continued to be concentrated near various atomic energy locations in the late 1980s by reliable eyewitnesses.

We are reminded of a statement made by General Nathan F. Twining of the Army Air Forces (the original UFO study Project Sign) in 1947 forty years ago. General Twining said, "all pertinent data would be made available to the Atomic Energy Commission (AEC)."

Perhaps answers to the many question posed at the beginning of this article were furnished to the Atomic Energy Commission, but they have yet to see the light of day in the public sector through 1987.

Perhaps in the not to distant future, the truth behind the UFO-AEC link will be fully revealed to the public.

The Nuclear Connection

20 Mishaps That Might Have Started Accidental Nuclear War

by Alan F. Philips, M.D.

Original page with very important and useful links

Ever since the two adversaries in the Cold War, the U.S.A. an the U.S.S.R., realized that their nuclear arsenals were sufficient to do disastrous damage to both countries at short notice, the leaders and the military commanders have thought about the possibility of a nuclear war starting without their intention or as a result of a false alarm. Increasingly elaborate accessories have been incorporated in nuclear weapons and their delivery systems to minimize the risk of unauthorized or accidental launch or detonation. A most innovative action was the establishment of the "hot line" between Washington and Moscow in 1963 to reduce the risk of misunderstanding between the supreme commanders.

Despite all precautions, the possibility of an inadvertent war due to an unpredicted sequence of events remained as a deadly threat to both countries and to the world. That is the reason I am prepared to spend the rest of my life working for abolition of nuclear weapons. One way a war could start is a false alarm via one of the warning systems, followed by an increased level of nuclear forces readiness while the validity of the information was being checked. This action would be detected by the other side, and they would take appropriate action; detection of the response would tend to confirm the original false alarm; and so on to disaster. A similar sequence could result from an accidental nuclear explosion anywhere. The risk of such a sequence developing would be increased if it happened during a period of increased international tension.

On the American side many "false alarms" and significant accidents have been listed , ranging from trivial to very serious, during the Cold War . Probably many remain unknown to the public and the research community because of individuals' desire to avoid blame and maintain the good reputation of their unit or command. No doubt there have been as many mishaps on the Soviet Side.

Working with any new system, false alarms are more likely. The rising moon was misinterpreted as a missile attack during the early days of long-range radar. A fire at a broken gas pipeline was believed to be enemy jamming by laser of a satellite’s infrared sensor when those sensors were first deployed.

The risks are illustrated by the following selection of mishap. If the people involved had exercised less caution, or if some unfortunate coincidental event had occurred, escalation to nuclear war can easily be imagined. Details of some of the events differ in different sources: where there have been disagreements, I have chosen to quote those from the carefully researched book, The Limits of Safety by Scott D. Sagan. Sagan gives references to original sources in all instances.

The following selections represent only a fraction of the false alarms that have been reported on the American side. Many probably remain unreported, or are hidden in records that remain classified. There are likely to have been as many on the Soviet Side which are even more difficult to access.

1) November 5, 1956: Suez Crisis Coincidence
British and French Forces were attacking Egypt at the Suez Canal;. The Soviet Government had suggested to the U.S. that they combine forces to stop this by a joint military action, and had warned the British and French governments that (non-nuclear) rocket attacks on London and Paris were being considered. That night NORAD HQ received messages that:

(i) unidentified aircraft were flying over Turkey and the Turkish air force was on alert
(ii) 100 Soviet MIG-15's were flying over Syria
(iii) a British Canberra bomber had been shot down over Syria
(iv) the Soviet fleet was moving through the Dardanelles.

It is reported that in the U.S.A. General Goodpaster himself was concerned that these events might trigger the NATO operations plan for nuclear strikes against the U.S.S.R.
The four reports were all shown afterwards to have innocent explanations. They were due, respectively, to:

(i) a flight of swans
(ii) a routine air force escort (much smaller than the number reported) for the president of Syria, who was returning from a visit to Moscow
(iii) the Canberra bomber was forced down by mechanical problems
(iv) the Soviet fleet was engaged in scheduled routine exercises.

2) November 24, 1961: BMEWS Communication Failure
On the night of November 24, 1961, all communication links went dead between SAC HQ and NORAD. The communication loss cut off SAC HQ from the three Ballistic Missile Early Warning Sites (BMEWS) at Thule (Greenland,) Clear (Alaska,) and Fillingdales (England,). There were two possible explanations facing SAC HQ: either enemy action, or the coincidental failure of all the communication systems, which had redundant and ostensibly independent routes, including commercial telephone circuits. All SAC bases in the United States were therefore alerted, and B-52 bomber crews started their engines, with instructions not to to take off without further orders. Radio communication was established with an orbiting B-52 on airborne alert, near Thule. It contacted the BMEWS stations by radio and could report that no attack had taken place.

The reason for the "coincidental" failure was the redundant routes for telephone and telegraph between NORAD and SAC HQ all ran through one relay station in Colorado. At that relay station a motor had overheated and caused interruption of all the lines.

3) August 23, 1962: B-52 Navigation Error
SAC Chrome Dome airborne alert route included a leg from the northern tip of Ellesmore Island, SW across the Arctic Ocean to Barter Island, Alaska. On August 23, 1962, a B-52 nuclear armed bomber crew made a navigational error and flew 20 degrees too far north. They approached within 300 miles of Soviet airspace near Wrangel island, where there was believed to be an interceptor base with aircraft having an operational radius of 400 miles.

Because of the risk of repetition of such an error, in this northern area where other checks on Navigation are difficult to obtain, it was decided to fly a less provocative route in the future. However, the necessary orders had not been given by the time of the Cuban missile crisis in October 1962, so throughout that crisis the same northern route was being flown 24 hours a day.

4) August-October, 1962: U2 Flights into Soviet Airspace
U2 high altitude reconnaissance flights from Alaska occasionally strayed unintentionally into Soviet airspace. One such episode occurred in August 1962. During the Cuban missile crisis on October of 1962, the U2 pilots were ordered not to fly within 100 miles of Soviet airspace.

On the night of October 26, for a reason irrelevant to the crisis, a U2 pilot was ordered to fly a new route, over the north pole, where positional checks on navigation were by sextant only. That night the aurora prevented good sextant readings and the plane strayed over the Chukotski Peninsula. Soviet MIG interceptors took off with orders to shoot down the U2. The pilot contacted his U.S. command post and was ordered to fly due east towards Alaska. He ran out of fuel while still over Siberia. In response to his S.O.S., U.S. F102-A fighters were launched to escort him on his glide to Alaska, with orders to prevent the MIG's from entering U.S. airspace. The U.S. interceptor aircraft were armed with nuclear missiles. These could have been used by any one of the F102-A pilots at his own

discretion.

5) October 24, 1962- Cuban Missile Crisis: A Soviet Satellite Explodes
On October 24, a Soviet satellite entered its own parking orbit, and shortly afterward exploded. Sir Bernard Lovell, director of the Jodrell Bank observatory wrote in 1968: "the explosion of a Russian spacecraft in orbit during the Cuban missile crisis... led the U.S. to believe that the USSR was launching a massive ICBM attack." The NORAD Command Post logs of the dates in question remain classified, possibly to conceal reaction to the event. Its occurrence is recorded, and U.S. space tracking stations were informed on October 31 of debris resulting from the breakup of "62 BETA IOTA."

6) October 25, 1962- Cuban Missile Crisis: Intruder in Duluth
At around midnight on October 25, a guard at the Duluth Sector Direction Center saw a figure climbing the security fence. He shot at it, and activated the "sabotage alarm." This automatically set off sabotage alarms at all bases in the area. At Volk Field, Wisconsin, the alarm was wrongly wired, and the Klaxon sounded which ordered nuclear armed F-106A interceptors to take off. The pilots knew there would be no practice alert drills while DEFCON 3 was in force, and they believed World War III had started.

Immediate communication with Duluth showed there was an error. By this time aircraft were starting down the runway. A car raced from command center and successfully signaled the aircraft to stop. The original intruder was a bear.

7) October 26, 1962- Cuban Missile Crisis: ICBM Test Launch
At Vandenburg Air Force Base, California, there was a program of routine ICBM test flights. When DEFCON 3 was ordered all the ICBM's were fitted with nuclear warheads except one Titan missile that was scheduled for a test launch later that week. That one was launched for its test, without further orders from Washington, at 4a.m. on the 26th.

It must be assumed that Russian observers were monitoring U.S. missile activities as closely as U.S. observers were monitoring Russian and Cuban activities. They would have known of the general changeover to nuclear warheads, but not that this was only a test launch.

8) October 26, 1962- Cuban Missile Crisis: Unannounced Titan Missile Launch
During the Cuba crisis, some radar warning stations that were under construction and near completion were brought into full operation as fast as possible. The planned overlap of coverage was thus not always available.

A normal test launch of a Titan-II ICBM took place in the afternoon of October 26, from Florida to the South Pacific. It caused temporary concern at Moorestown Radar site until its course could be plotted and showed no predicted impact within the United States. It was not until after this event that the potential for a serious false alarm was realized, and orders were given that radar warning sites must be notified in advance of test launches, and the countdown be relayed to them.

9) October 26, 1962- Cuban Missile Crisis: Malstrom Air Force Base
When DEFCON 2 was declared on October 24, solid fuel Minuteman-1 missiles at Malmstrom Air Force Base were being prepared for full deployment. The work was accelerated to ready the missiles for operation, without waiting for the normal handover procedures and safety checks. When one silo and missile were ready on October 26 no armed guards were available to cover transport from the normal separate storage, so the launch enabling equipment and codes were all placed in the silo. It

was thus physically possible for a single operator to launch a fully armed missile at a SIOP target.

During the remaining period of the Crisis the several missiles at Malstrom were repeatedly put on and off alert as errors and defects were found and corrected. Fortunately no combination of errors caused or threatened an unauthorized launch, but in the extreme tension of the period the danger can be well imagined.

10) October, 1962- Cuban Missile Crisis: NATO Readiness
It is recorded on October 22, that British Prime Minister Harold Macmillan and NATO Supreme Commander, General Lauris Norstad agreed not to put NATO on alert in order to avoid provocation of the U.S.S.R. When the U.S. Joint Chiefs of Staff ordered DEFCON 3 Norstad was authorized to use his discretion in complying. Norstad did not order a NATO alert. However, several NATO subordinate commanders did order alerts to DEFCON 3 or equivalent levels of readiness at bases in West Germany, Italy, Turkey, and United Kingdom. This seems largely due to the action of General Truman Landon, CINC U.S. Air Forces Europe, who had already started alert procedures on October 17 in anticipation of a serious crisis over Cuba.

11) October, 1962- Cuban Missile Crisis: British Alerts
When the U.S. SAC went to DEFCON 2, on October 24, Bomber Command (the U.K.) was carrying out an unrelated readiness exercise. On October 26, Air Marshall Cross, CINC of Bomber Command, decided to prolong the exercise because of the Cuba crisis, and later increased the alert status of British nuclear forces, so that they could launch in 15 minutes.

It seems likely that Soviet intelligence would perceive these moves as part of a coordinated plan in preparation for immediate war. They could not be expected to know that neither the British Minister of Defense nor Prime Minister Macmillian had authorized them.

It is disturbing to note how little was learned from these errors in Europe. McGeorge Bundy wrote in Danger and Survival (New York: Random House 1988), "the risk [of nuclear war] was small, given the prudence and unchallenged final control of the two leaders."

12) October 28, 1962- Cuban Missile Crisis: Moorestown False Alarm
Just before 9 a.m., on October 28, the Moorestown, New Jersey, radar operators informed the national command post that a nuclear attack was under way. A test tape simulating a missile launch from Cuba was being run, and simultaneously a satellite came over the horizon.

Operators became confused and reported by voice line to NORAD HQ that impact was expected 18 miles west of Tampa at 9:02 a.m. The whole of NORAD was reported, but before irrevocable action had taken place it was reported that no detonation had taken place at the predicted time, and Moorestown operators reported the reason for the false alarm.

During the incident overlapping radar's that should have confirmed or disagreed were not in operation . The radar post had not received routine information of satellite passage because the facility carrying out that task had been given other work for the duration of the crisis.

13) October 28, 1962- Cuban Missile Crisis: False Warning Due to Satellite
At 5:26 p.m. on October 28, the Laredo radar warning site had just become operational. Operators misidentified a satellite in orbit as two possible missiles over Georgia and reported by voice line to NORAD HQ. NORAD was unable to identify that the warning came from the new station at Laredo and believed it to be from Moorestown, and therefore more reliable. Moorestown failed to intervene and contradict the false warning. By the time the CINC, NORAD had been informed, no impact had

been reported and the warning was "given low credence."

14) November 2, 1962: The Penkovsky False Warning
In the fall of 1962, Colonel Oleg Penkovsky was working with the Soviets as a double agent for the (U.S.) C.I.A. He had been given a code by which to warn the CIA if he was convinced that a Soviet attack on the United States was imminent. He was to call twice, one minute apart, and only blow into the receiver. Further information was then to be left at a "dead drop" in Moscow.

The pre-arranged code message was received by the CIA on November 2, 1962.

It was known at the CIA that Penkovsky had been arrested on October 22. Penkovsky knew he was going to be executed. It is not known whether he had told the KGB the meaning of the code signal or only how it would be given, nor is it known exactly why or with what authorization the KGB staff used it. When another CIA agent checked the dead drop he was arrested.

15) November, 1965: Power Failure and Faulty Bomb Alarms
Special bomb alarms were installed near military facilities and near cities in the U.S.A., so that the locations of nuclear bursts would be transmitted before the expected communication failure. The alarm circuits were set up to display a red signal at command posts the instant that the flash of a nuclear detonation reached the sensor and before the blast put it out of action. Normally the display would show a green signal, and yellow if the sensor was not operating or was out of communication for any other reason.

During the commercial power failure in the NE United States, in November 1965, displays from all the bomb alarms for the area should have shown yellow. In fact, two of them from different cities showed red because of circuit errors. The effect was consistent with the power failure being due to nuclear weapons explosions, and the Command Center of the Office of Emergency Planning went on full alert. Apparently the military did not.

16) January 21, 1968: B-52 Crash near Thule
Communication between NORAD HQ and the BMEWS station at Thule had 3 elements:

1. Direct radio communication.
2. A "bomb alarm" as described above.
3. Radio Communication relayed by a b-52 bomber on airborne alert.

On January 21, 1968, a fire broke out in the b-52 bomber on airborne alert near Thule. The pilot prepared for an emergency landing at the base. However the situation deteriorated rapidly, and the crew had to bale out. There had been no time to communicate with SAC HQ, and the pilotless plane flew over the Thule base before crashing on the ice 7 miles miles offshore. Its fuel and high explosive component of its nuclear weapons exploded, but there was no nuclear detonation.

At that time, the "one point safe" condition of the nuclear weapons could not be guaranteed, and it is believed that a nuclear explosion could have resulted form accidental detonation of the high explosive trigger. Had there been a nuclear detonation even at 7 miles distant, and certainty much nearer the base, all three communication methods would have given an indication consistent with a successful nuclear attack on both the base and the B-52 bomber. The bomb alarm would have shown red, and the other two communication paths would have gone dead. It would hardly have been anticipated that the combination could have been caused by accident, particularly as the map of the routes for B-52 airborne flights approved by the President showed no flight near to Thule. The route had been apparently changed without informing the White House.

17) October 24-25, 1973: False Alarm During Middle East Crisis
On October 24, 1973, when the U.N. sponsored cease fire intended to end the Arab-Israeli war was in force, further fighting stared between Egyptian and Israeli troops in the Sinai desert. U.S. intelligence reports and other sources suggested that the U.S.S.R. was planning to intervene to protect the Egyptians. President Nixon was in the throes of Watergate episode and not available for a conference, so Kissinger and other U.S. officials ordered DEFCON 3. The consequent movements of aircraft and troops were of course observed by Soviet intelligence. The purpose of the alert was not to prepare for war, but to warn the U.S.S.R. not to intervene in the Sinai. However, if the following accident had not been promptly corrected then the Soviet command might have had a more dangerous interpretation.

On October 25, while DEFCON 3 was in force, mechanics were repairing one of the Klaxons at Kinchole Air Force Base, Michigan, and accidentally activated the whole base alarm system. B-52 crews rushed to their aircraft and started the engines. The duty officer recognized the alarm was false and recalled the crews before any took off.

18) November 9, 1979: Computer Exercise Tape
At 8:50 a.m. on November 9, 1979, duty officers at 4 command centers (NORAD HQ, SAC Command Post, The Pentagon National Military Command Center, and the Alternate National Military Command Center) all saw on their displays a pattern showing a large number of Soviet Missiles in a full scale attack on the U.S.A. During the next 6 minutes emergency preparations for retaliation were made. A number of Air Force planes were launched, including the President's National Emergency Airborne Command Post, though without the President! The President had not been informed, perhaps because he could not be found.

No attempt was made to use the hot line either to ascertain the Soviet intentions or to tell the Soviets the reasons for U.S. actions. This seems to me to have been culpable negligence. The whole purpose of the "Hot Line" was to prevent exactly the type of disaster that was threatening at that moment.

With commendable speed, NORAD was able to contact PAVE PAWS early warning radar and learn that no missiles had been reported. Also, the sensors on the satellites were functioning that day and had detected no missiles. In only 6 minutes the threat assessment conference was terminated.

The reason for the false alarm was an exercise tape running on the computer system. U.S. Senator Charles Percy happened to be in NORAD HQ at the time and is reported to have said there was absolute panic. A question was asked in Congress. The General Accounting Office conducted an investigation, and an off-site testing facility was constructed so that test tapes did not in the future have to be run on a system that could be in military operation.

19) June , 1980: Faulty Computer Chip
The Warning displays at the Command Centers mentioned in the last episode included windows that normally showed 0000 ICBMs detected 0000 SLBMs detected

At 2:25 a.m. on June 3, 1980, these displays started showing various numbers of missiles detected, represented by 2's in place of one or more 0's. Preparations for retaliation were instituted, including nuclear bomber crews staring their engines, launch of Pacific Command's Airborne Command Post, and readying of Minutemen missiles for launch. It was not difficult to assess that this was a false alarm because the numbers displayed were not rational.

While the cause of that false alarm was still being investigated 3 days later, the same thing happened and again preparations were made for retaliation. The cause was a single faulty chip that was failing in a random fashion. The basic design of the system was faulty, allowing this single failure to cause a deceptive display at several command posts.

The following incident is added to illustrate that even now, when the Cold War has been over for 8 years errors can still cause concern. This particular one could have hardly brought nuclear retaliation.; but there are still 30,000 nuclear weapons deployed, and two nuclear weapon states could get into a hostile adversarial status again.

20) January, 1995: Russian False Alarm
On January 25, 1995, the Russian early warning radar's detected an unexpected missile launch near Spitzbergen. The estimated flight time to Moscow was 5 minutes. The Russian President, the Defense Minister and the Chief of Staff were informed. The early warning and the control and command center switched to combat mode. Within 5 minutes, the radar's determined that the missile's impact would be outside the Russian borders.

The missile was Norwegian, and was launched for scientific measurements. ON January 16, Norway had notified 35 countries including Russia that the launch was planned. Information had apparently reached the Russian Defense Ministry, but failed to reach the on-duty personnel of the early warning system.

See article in Scientific American by Bruce G. Blair, Harold A. Feiveson and Frank N. von Hippel at

http://www.sciam.com/1197issue/1197vonhippel.html

Comment and Note On Probability

The probability of actual progression to nuclear war on any one of the occasions listed may have been small, due to planned "fail-safe" features had failed. However, the accumulation of small probabilities of disaster from a long sequence of risks add up to serious danger.

There is no way of telling what the actual level of risk was in these mishaps but if the chance of disaster in every one of the 20 incidents had been only 1 in 100, it is mathematical fact that the chance of surviving al 20 would have been 82%, i.e. about the same as the chance of surviving a single pull of the trigger at Russian roulette played with a 6 shooter. With a similar series of mishaps on the Soviet side: another pull of the trigger. If the risk in some of the events had been as high as 1 in 10, then the chance of surviving just seven such events would have been less than 50:50.

Acronyms

BMEWS: Ballistic Missile Early Warning Site
CIA: Central Intelligence Agency
CINC: Commander in Chief
DEFCON: Defense Readiness Condition (DEFCON 5 is the peacetime state; DEFCON 1 is a maximum war readiness).
HQ: Headquarters
ICBM: Intercontinental Ballistic Missile (land based)
KGB: Soviet Secret Police and Intelligence
NORAD: North American Air Defense Command
PAVE PAWS: Precision Acquisition of Vehicle Entry Phased-Array Warning System
SAC: Strategic Air Command
SIOP: Single Integrated Operational Plan
SLBM: Submarine Launched Ballistic Missile

Bush Developing Military Policy Of Striking First

New Doctrine Addresses Terrorism

By Thomas E. Ricks and Vernon Loeb

Washington Post Staff Writers
Monday, June 10, 2002; Page A01

The Bush administration is developing a new strategic doctrine that moves away from the Cold War pillars of containment and deterrence toward a policy that supports preemptive attacks against terrorists and hostile states with chemical, biological or nuclear weapons.

The new doctrine will be laid out by President Bush's National Security Council as part of the administration's first "National Security Strategy" being drafted for release by early this fall, senior officials said.

One senior official said the document, without abandoning containment and deterrence, will for the first time add "preemption" and "defensive intervention" as formal options for striking at hostile nations or groups that appear determined to use weapons of mass destruction against the United States.

Bush hinted at the new doctrine in his State of the Union address in January, when he labeled Iraq, Iran and North Korea an "axis of evil" and warned that he would not allow them to threaten the United States with weapons of mass destruction. The president articulated the doctrine for the first time June 1 in a commencement address at West Point.

By adopting the doctrine as part of its formal national security strategy, the administration will compel the U.S. military and intelligence community to implement some of the biggest changes in their histories, officials said. That is already touching off heated debates within the administration and among defense commentators about what changes need to be made and whether a doctrine of preemption is realistic.

But there is general agreement that adopting a preemption doctrine would be a radical shift from the half-century-old policies of deterrence and containment that were built around the notion that an adversary would not attack the United States because it would provoke a certain, overwhelming retaliatory strike.

Administration officials formulating the new doctrine said the United States has been forced to move beyond deterrence since Sept. 11 because of the threat posed by terrorist groups and hostile states supporting them. "The nature of the enemy has changed, the nature of the threat has changed, and so the response has to change," said a senior official, noting that terrorists "have no territory to defend. . . . It's not clear how one would deter an attack like we experienced."

The administration's embrace of the new doctrine has triggered an intense debate inside the Pentagon and among military strategists about the feasibility and wisdom of preemptive strikes against shadowy terrorist networks or weapons storage facilities.

It has aroused concern within NATO as well. Defense Secretary Donald H. Rumsfeld told the United States' 18 NATO allies in Brussels last Thursday that the alliance could no longer wait for "absolute proof" before acting against terrorist groups or threatening countries with chemical, biological or nuclear weapons.

NATO Secretary General George Robertson, reacting to Rumsfeld's remarks, said NATO remained a defensive alliance. He added, "We do not go out looking for problems to solve."

Some defense analysts said preemption carries the risk of causing a crisis to escalate quickly by increasing pressure on both sides to act sooner rather than later -- forcing them, in the parlance of the nuclear chess game, to "use it or lose it."

"Preemption is attractive on the surface," said defense analyst Harlan Ullman. But he added: "As one gets deeper, it gets more and more complicated and dangerous."

Critics also note that a botched attack that blew chemicals, biological spores or radioactive material into the atmosphere would risk killing thousands of people, not only in the target nation, but in neighboring countries.

Even proponents of preemption inside and outside the government concede that this more aggressive strategic doctrine requires far better and far different intelligence than the U.S. government gathers -- at a time when the abilities of the CIA and the FBI to fulfill their current duties are under scrutiny.

Michele Flournoy, a former Pentagon proliferation expert now at the Center for Strategic and International Studies, said that to be effective, the United States will need to strike preemptively before a crisis erupts to destroy an adversary's weapons stockpile. Otherwise, she said, the adversary could erect defenses to protect those weapons, or simply disperse them.

But Flournoy said she favors moving toward a doctrine of preemption given the proliferation of chemical, biological and nuclear weapons among states supporting terrorists. She said the policy may offer the best of a series of bad choices.

"In some cases, preemptive strikes against an adversary's [weapons of mass destruction] capabilities may be the best or only option we have to avert a catastrophic attack against the United States," she said.

Under the doctrine, nuclear first strikes would be considered weapons of last resort, especially against biological weapons that can be best destroyed by sustained exposure to the high heat of a nuclear blast, Pentagon officials said. But the focus of the effort is finding new ways of using conventional weapons to detect and destroy weapons arsenals, and especially the missiles used to deliver them.

To do that, the Pentagon is studying how to launch "no warning" raids that go far beyond quick airstrikes. The key tool to execute that mission is a new "Joint Stealth Task Force" that pulls in the least detectable elements of every part of the armed forces, including radar-evading aircraft, Special Operations troops and ballistic submarines being converted to carry those troops and to launch cruise missiles.

Beyond changes in weapons, doctrine and organization, Rumsfeld and his top aides are trying to alter the U.S. military mind-set. "Preemption . . . runs completely against U.S. political and strategic culture," defense expert Frank Hoffman said in an essay published this year by the Center for Defense Information.

In the past, the United States has viewed surprise or "sneak" attacks as dishonorable, the kind of thing inflicted on the American people, not initiated by them, analysts have noted.

One senior defense official responded that 21st century security threats can no longer be assessed in terms of the past. "In the world in which we live, it's not enough to deter," the official said. "You need more capability, more flexibility, more nuanced options and choices."

Defense scientists and war planners are hard at work developing new weapons and capabilities to give Bush "options different than those he may have had in the past," the official said.

At the Defense Threat Reduction Agency, a $1.1 billion defense agency created in 1998 to counter the threat of weapons of mass destruction, scientists are studying how to attack and destroy hardened and deeply buried bunkers containing chemical, biological and radiological weapons with advanced conventional bombs, low-yield nuclear devices and even high-yield nuclear weapons.

"There was a time during which we really didn't know what phase we were in, so we called it the 'post-Cold War phase,' " said Stephen M. Younger, the agency's director. "And it wasn't clear what kind of weapons we were going to need for the conflicts of the future. September 11 clarified that. And we are getting a better understanding of the types [of threat] we may face in the future and the types of weaponry that will be required [to counter] them."

Younger said his agency is working on advanced conventional explosives with hardened warheads that could penetrate underground concrete bunkers and destroy biological agents with a sustained level of extremely high heat.

"We want to use the minimum force to achieve the military objective, if at all possible, with a conventional weapon," Younger said. "We do not want to cross the nuclear threshold unless it is an example of extreme national emergency."

But there are some bunkers that are "so incredibly hard," Younger said, "that they do require high-yield nuclear weapons." Low-yield nuclear warheads could be useful in certain scenarios, he said, but they run the risk of spreading biological agents across the countryside.

Rumsfeld's Nuclear Posture Review, completed at the end of last year, stated that "new capabilities must be developed to defeat emerging threats such as hard and deeply buried targets." It also said "several nuclear weapons options" that could be useful in attacking such facilities include "improved earth penetrating weapons."

But senior administration officials said the tactical use of nuclear weapons is being studied, not actively contemplated. "There is no one anxious to think about the employment of tactical nuclear weapons," a senior defense official said. "That's not what we are trying to do."

What the Pentagon is most focused on, the official said, is a method of "advanced conventional strike."

Inside the Pentagon, some officials suspect that the new doctrine may be acted upon sooner rather than later.

"I think the president is trying to get the American people ready for some kind of preemptive move" against Iraq, said a Pentagon consultant. He said it would not necessarily be against Iraqi weapons sites but might instead involve a seizure of Iraqi oil fields.

But a senior administration official dismissed the idea of a "bolt from the blue" attack on Iraq. "I want to caution that [the president] was not making an announcement about imminent action" in his West Point address, the official said. "Some people have quite frankly said, 'Oh, this must have been about Iraq.' He was not making an announcement about imminent action, but this was a doctrinal statement."

Rumsfeld may have captured this situation best when he declined to discuss preemption last week. Asked in an interview whether the U.S. government is contemplating preemptive moves against other nations' weapons of mass destruction, he replied: "Why would anyone answer that question if they were contemplating it?"

Subject: Re: UFOs follow 509th?

From: joel carpenter <imagery@covad.net>
To: NCP Team

Actual (seriously) unit patch from the 509th Bomb Wing used during flight testing of the B-2 Stealth Bombers that it now flies. It shows a Grey about to eat a B-2, superimposed over a radar scope, along with a knife and fork. The caption reads CLASSIFIED FLIGHT TEST/GUSTATUS SIMILIS PULLUS" ("Tastes like chicken")

I kid you not. This comes from a very reliable source.

Apparently the Roswell legend is well known in 509th lore.

I'm not exactly sure _what_ tastes like chicken, but there you have it.

Joel

Fran -

One little ironic thing about Whiteman is that it's the _current_ home of the 509th Bomb Wing of Roswell fame. :) It wasn't in 1957, but the 509th was stationed at Pease AFB, NH in the mid-60s while the nearby famous Exeter, NH case was going on. The UFOs seem to follow the 509th.

As far as I can tell it was just a B-47 base in 1957.

U.S. Air Force: Israel has 400 nukes, building naval force

SPECIAL TO WORLD TRIBUNE.COM
Thursday, July 4, 2002
A United States Air Force report asserts that Israel is building a nuclear naval force meant to respond to any nuclear strike by such countries as Iran or Iraq.

It is the first time a U.S. military institution has stated that Israel has produced a hydrogen bomb. The number of purported Israeli nuclear weapons cited in the report is double that of previous assessments.

The report, sponsored by the air force's Counterproliferation Center, asserts that the navy can deploy any of what it asserts is Israel's 400 atomic and hydrogen weapons, Middle East Newsline reported. The center is located in the Maxwell Air Force Base in Alabama.

In a report entitled "The Third Temple's Holy of Holies: Israel's Nuclear Weapons," U.S. Army Col. Warner Farr said Israel's nuclear arsenal has grown from an estimated 13 nuclear bombs in 1967 to 400 nuclear and thermonuclear weapons. Farr said Israel's navy could deploy nuclear weapons on the fleet of three German-built Dolphin-class diesel submarines.

"Israel will then have a second strike capability with nuclear cruise missiles, and this capability could well change the nuclear arms race in the Middle East," the report, which Farr said is based on unclassified sources, read. "Israeli rhetoric on the new submarines labels them 'national deterrent' assets."

The report said these nuclear missiles could have a range of 350 kilometers. Israel would try to base its nuclear naval force near Oman, with which Israel has informal relations, the September 1999 report, which was recently published by the center, said.

"The first basing options for the new second-strike force of nuclear missile capable submarines include Oman, an Arab nation with unofficial Israeli relations, located strategically near Iran," the report said.

The U.S. Air Force Counterproliferation Center was established in 1998. The center is meant to help prepare air force commanders counter the threat from weapons of mass destruction. The report did not deem Israel's purported nuclear arsenal as a direct threat to the United States.

The report said Israel's Defense Ministry has requested from the government of Prime Minister Ariel Sharon authorization for a retaliatory nuclear strike. Israel could also use Jordanian air space for a nuclear strike on Iran, which the report said could produce a nuclear warhead as early as 2004.

Subject: DOD ANNOUNCES MERGER OF U.S. SPACE AND STRATEGIC COMMANDS

Date: Wed, 26 Jun 2002 20:18:43 -0400

NEWS RELEASE from the United States Department of Defense

No. 331-02
(703)697-5131(media)
IMMEDIATE RELEASE
June 26, 2002
(703)428-0711(public/industry)

DOD ANNOUNCES MERGER OF U.S. SPACE AND STRATEGIC COMMANDS

As part of the ongoing initiative to transform the U.S. military into a 21st century fighting force, Secretary of Defense Donald H. Rumsfeld today announced the intention to merge two unified commands whose missions include control of America's nuclear forces, military space operations, computer network operations, strategic warning and global planning. The intended merger of U.S. Space Command (SpaceCom) and U.S. Strategic Command (StratCom) will improve combat effectiveness and speed up information collection and assessment needed for strategic decision-making.

"The missions of SpaceCom and StratCom have evolved to the point where merging the two into a single entity will eliminate redundancies in the command structure and streamline the decisionmaking process," said Rumsfeld.

U.S. Strategic Command, located at Offutt Air Force Base in Neb., is the command and control center for U.S. nuclear forces. U.S. Space Command in Colorado Springs, Colo., commands military space operations, information operations, computer network operations and space campaign planning. Both commands are charged with countering the proliferation of weapons of mass destruction.

"StratCom and SpaceCom have successfully provided the capabilities to meet the nation's defense needs for many years," said Rumsfeld. "The merged command will be responsible for both early warning of and defense against missile attack as well as long-range conventional attacks."

The intended merger is scheduled to take place in October 2002, and the preferred location for the command headquarters is Offutt Air Force Base, Neb.

Subject: 1953 Greenland cases

Updated 20170124

I'd like to read this into the record - an amazing collection of mystery aircraft reports mixed with UFO reports from Greenland, from official AF unit records for 1953. Note that even some of the airplanes reported are doing things that airplanes couldn't do. And the reports that sound most like UFOs are said by natives to have begun around the time the US air base was constructed. From a page at

http://www.homestead.com/argumentsandfacts/files/Archives.htm#_Hlk470270707 ER GREENLAND (1953)

[Note: This was at the beginning of American "bomber gap" concerns, and also at the height of the UFO craze. There was near certainty that Soviet aircraft were overflying North America. The DEW line defense line was being formulated, and the Ground Observer Corps had been established in the States. At this time, CIRVIS (suspicious activities) reporting was being solicited of all travelers in the Arctic. Some of the reports here are obviously uncorrelated Allied aircraft, whereas others are quite puzzling, and the flying light bulbs leave one truly amazed…) See the text version of the bad link below, *, all of which is worth a look.

Joel Carpenter

(Fran Ridge: The link above no longer works, but I found several documents on UFO activity at Greenland that year in the microfilms. Take a look at these, then skim down to the text file Joel thoughtfully provided before the site went down. It starts out with a Jan 22, 1953 incident not mentioned in the report. NARA-PBB85-812, 860, NARA-PBB1-97, NARA-PBB85-905, NARA-PBB1-99, 106, NARA-PBB86-382. 1953_Greenland.pdf

TEXT VERSION OF LINK CONTENT

REPORT FROM SONDRESTROM AB OF UNIDENTIFIED FLYING OBJECTS OVER GREENLAND (1953)

[Note: This was at the beginning of American "bomber gap" concerns, and also at the height of the UFO craze. There was near certainty that Soviet aircraft were overflying North America. The DEW line defense line was being formulated, and the Ground Observer Corps had been established in the States. At this time, CIRVIS (suspicious activities) reporting was being solicited of all travelers in the Arctic. Some of the reports here are obviously uncorrelated Allied aircraft, whereas others are quite puzzling, and the flying light bulbs leave one truly amazed.\

The first report of the year was information received from Grondal, Greenland, stating that an unidentified aircraft overflew Cape Tobin, 7024N 2158W on 5 January 1953. Two hours and five minutes later, aircraft overflew Aputiteq 6700N 3205W headed in a southerly direction. Aircraft was of the twin-engine type flying low in each instance. Negative information was our reply.

An unidentified aircraft overflew Angmagssalik, 6535N-3745W, on 24 Jan 53. Aircraft approached from the west and disappeared in an easterly direction.

On 26 February 53, Thule AB reported an unidentified GCA sighting. Negative reply was submitted.

A radio message received from Frobisher Bay, reported four vapor trails over Resolute on 1 Mar 53, direction north to south. Negative information was dispatched from this station.

Again on 1 Mar 53, contrails were sighted over Simiutak, Greenland.

Contrails were moving northwest to southeast. On 11 Mar 53, Sondrestrom AB, reported unidentified contrails which curved south, approximately 50 miles southwest of this base.

It was reported that on 27 Mar 53, by late information from Harmon AFB, that an unidentified object was cited by two civilians in a wooded area near Harmon. The men entered the woods to haul plywood. The area became light, and an object shaped like a light bulb, about six inches long, went past them and put out the lantern that they were carrying. No estimate of speed was given and the object disappeared over the mountains. The object came from a northwest direction. In the same area on 18 Apr 53, Mrs. Anthony Young, observed the same type of glow over her barn. An object described as above came into view and disappeared over the sea. Mrs. Young stated that objects have been observed many times since last fall but never before that time. All objects were noiseless and all traveled at a high rate of speed. No action was taken.

On 8 Apr 53, Sondrestrom reported sighting of an unidentified white light, by pilot and co-pilot of a MATS aircraft enroute from Goose AB to Sondrestrom AB, at 6600N-5330W, approximately 110 miles south of base. Received negative reply from other stations.

Reports received this station on 12 Apr 53, of an unidentified B-29 type aircraft two miles south of Torbay Airport, Newfoundland, at an altitude of 200 feet above the terrain. The Director of Intelligence, NEAC, evaluated this sighting to be an uncorrelated friendly aircraft.

A jet aircraft was sighted by Capt. R.L. Emberry, pilot, and 1st Lt. J.R. Morin, radar observer, F-94 aircraft of the 59th Fighter Interceptor Squadron, approximately 10 miles south of Goose AB, Labrador, on 2 May 53. The aircraft was approximately 10,000 feet below F-94 which was flying at 24,000 feet. Both aircraft climbed to 40,000 feet. The unidentified aircraft continued to climb until out of sight with a speed well in excess of F-94. The pilot declared aircraft was similar to F-94 with afterburner but further stated it was unlike any USAF aircraft. Negative report from this headquarters.

Another report of sighting from Angmagssalik, Greenland, on 2 May 53, if unidentified aircraft was observed from the ground by observers of unknown experience, flying from northwest to southeast at a very high altitude. NEAC evaluates aircraft as friendly. Check of flight plans showed USAF, C-54, number 2689, was over this area at approximate time of sighting.

On 4 May 53, an unidentified flying object was visually sighted by a Canadian National female civilian (at Goose Bay). The object was reflected in the beam of a rotating beacon. This object was travelling south at low altitude and high speed and was the color of light metal, with a shape of a football. It made noise similar to pieces of tin striking each other. The object disappeared in low stratus over the base. NEAC evaluated this as an unidentified object.

Information received this headquarters from Narssarssuaq AB, stated that an unidentified aircraft was sighted through an overcast over Aputiteq, Greenland, on 9 May 53. The aircraft was flying southwest with no identifying markings visible. The Commander of Iceland Defense Force states Iceland Defense Force PBY was in this area and is of the opinion that subject PBY was aircraft sighted at Aputiteq, Greenland.

A report of an unidentified airborne sighting by airborne radar 39 miles NW of Goose AB, Labrador, on 13 May 53. This sighting was made by Lt. D.C. Rogers, pilot, and Lt. J.A. Lane, radar observer who attempted interception but the object was lost before visual contact could be made. Radar presentation was that of a multi-engine aircraft. No information from this
station.

On 21 May 53, RCAF airways at Resolute Bay reported that an unidentified aircraft flew over Resolute site at approximately 400 feet altitude in a north to south direction. Due to the low ceiling, the aircraft was not visually sighted. Resolute states that the aircraft must have let down on Resolute beacon to make a low fly path. Negative reply was given from this station pertaining to this sighting. NEAC evaluates this incident as a possible Soviet aerial reconnaissance mission.

The aircraft that overflew Pond Inlet, 7242N-7813W, heading NW at a high altitude and was heard through an overcast, and first believed to be RCAF Lancaster, VC-212, temporarily based at Frobisher on photo reconnaissance missions, is erroneous. Message from Thule AB, Greenland, indicated the unidentified aircraft can be correlated with MATS C-124, which departed Thule AB at 23/0811Z May 53, enroute to McChord via Churchill.

Possible correlation of aircraft sighted over Port Harrison on 29 May 53, is believed to be RCAF Lancaster that departed Rockcliffe. Another report of twin-engine single tail aircraft was reported over Whale River Area, 5120N-7800W, on the 30th of May 53. A preliminary evaluation from Headquarters, Northeast Air Command, stated same aircraft as Lancaster over Port Harrison.

Approximately 25 single blips unidentified flying objects, was sighted by GCA screen radar in the vicinity of Goose Air Base, during the period 0334Z to 0600Z on the 11th of June 1953. Blips represented aircraft with speed of 30-100 knots. Altitudes were unidentifiable. No specific pattern was indicated in.[unreadable]

An unidentified object was sighted 12 June 53, in the vicinity of Goose Air Base, by fighter pilot W.C. Nicholas, on combat patrol. Object appeared to be jet aircraft with afterburner. Object appeared to put on speed and climb through overcast. The pilot followed and saw object through clouds but could not follow because of low fuel.

On 20 June 53, an aircraft was heard but not sighted above clouds over Mint Julep project. The aircraft was identified as friendly by report from AACS, saying that a SAC aircraft was in that area. Again on 22 June 53, Mint Julep reported that an unidentified contrail was sighted over the cap site at an altitude of approximately 25,000 feet, flying northward at a very high rate of speed. SC-47 at Sondrestrom was dispatched to check for possible identification but was unable to procure additional information. A negative report was received from other stations.

An object collided with and disintegrated a weather balloon at 18,000 feet over Simiutak, Greenland, on 24 June 53. This object was observed through a theodolite by A/2C Richard Hill, weather observer, with three and one half years experience. Object was travelling in southeast to northwest direction at varied speeds. Object described as red, rotating in a circular motion with shape as either delta or circular. Object hovered after collision, rotating in a circular motion for 15 seconds, then rapidly departed into the wind, direction, 300 degrees. Observers stated object was three times the size of the weather balloon. Negative information reported from this station.

An unidentified aircraft was observed over Tingmiarmiut, Greenland, 6230N-4206W, by **** settlement for approximately ten minutes on 28 June 53. The aircraft disappeared in a westerly direction at an estimated altitude of 9,000 feet. This station had no information of aircraft in that area.

Subject: Re: UFOs & Alert Scare, April 1952

Date: Fri, 28 Jun 2002 09:05:37 -0400

By the spring of 1952, Air Defense Command was in a near-frenzied state over the potential of a Soviet sneak attack. Its eyes and ears, the Lashup radar network and the GOC, had proven discouragingly unreliable, and, lacking credible intelligence on Soviet capabilities and intentions, it had no real basis for assessing the nature of the threat. As one air defense expert pointed out in a speech at the Air War College on April 1, attacking Soviet bombers "might come in at a high altitude or low altitude. They might come in many different ways as far as whether they exploit saturation tactics or try to sneak through the defenses or so on. And since we don't know anything really about their doctrine of strategic air, we have a tremendous gamut of possibilities to worry about ... we always have to look at the worst possibility."

Little more than two weeks later, the worst possibility seemed to have come true.

On April 16, Air Force Intelligence warned Col Burgess, at ADC Headquarters, Ent AFB, that a classified source (possibly an electronic intercept) had provided an "indication" of ominous Soviet military activity. Burgess directed his staff to be ready for anything out of the ordinary. Around 10:30 PM Colorado time, observers at a remote US installation on Nunivak Island in the Bering Sea spotted what looked like four vapor trails heading east-southeast toward the continental US. They reported the sighting to their control center at Elmendorf AFB, near Anchorage, which relayed the information to McChord AFB in Tacoma. McChord, in turn, transmitted the warning to Hamilton AFB, in California, which finally passed it to ADC Headquarters just after midnight local time. Burgess immediately contacted the Royal Canadian Air Force, notified the various ADC subdivisions, and ordered perimeter radar stations to take extreme precautions. When Ent attempted to call Elmendorf for confirmation, the line went dead, leaving Headquarters in a state of frustrated anger. Around 2:30, the Ent Combat Operations Center woke General Frederick H. Smith, Vice Commander of ADC, and informed him that they had "something hot." Smith rushed back to take charge. He was reluctant to call an alert, which would activate the entire network of fighters and antiaircraft artillery, on such slim evidence. As he and his officers debated the problem, an aide came running up with an urgent notice from Eastern Air Defense Forces: radar at Presque Isle, Maine, had reported five incoming Unknowns. It was a haunting replay of the December 6, 1950 scare. With the simultaneous appearance of two waves of unidentified targets, there was no alternative. At 3:10 AM, Smith ordered America's first nationwide Air Defense Readiness alert.

Within seconds, the Air Force began winding up toward warfighting capability. ADC commander General Benjamin Chidlaw raced back to Ent to assume command. General LeMay was notified by hotline of the alert, and his Strategic Air Command prepared for an order to launch its bombers. The Pentagon, and probably the White House, were informed. Regional ADC centers called in personnel. Interceptor crews raced to their aircraft as backup

fighters were brought up to ready status. Tactical Air Command and reserve units prepared to turn over their fighters to ADC control. The Ent COC was a bedlam of chattering teletypes and ringing telephones as bases all over the country reported in. Within thirty minutes, Army antiaircraft artillery sites were ordered to man their weapons and mobile guns began preparing to move out. Interceptors screamed toward the Unknowns in the east.

Somewhere over Maine, the fighters closed in on three of the Unknowns. One by one, as the objects loomed out of the darkness, the interceptor pilots were able to discern that they were conventional aircraft -- in fact, they were ordinary airliners. As the situation clarified, Eastern Air Defense Force determined that the airliners -- a Pan Am ship, a British flight, and an Air France plane -- had gone off course or off schedule for one reason or another and had routinely reported their deviations to Canadian air traffic control centers. But the deviation reports had never been passed on to Presque Isle. The stray airliners, unregistered on the US radar center's logs, became potentially hostile Unidentified Flying Objects. Just before 6:00 AM, Chidlaw rescinded the alert.

The Air Staff in the Pentagon was highly critical of the action, charging that ADC had "panicked" and overreacted. "Tell 'em if the situation occurs again I'll do the same thing," Chidlaw said as he stalked back to bed. Later, he told General Vandenberg that he hoped the April 17 alert had made "more of our top Air Force people ... aware of the very thin margin of evidence on which we too frequently must base our decisions." Newspaper accounts of the Alaska contrail sighting made it into Flying Saucer Review and on into popular UFO literature as saucer reports, without, of course, any description of the ADC alert.

Air Defense Command was desperate. Its confidence in the ability of its fighters to defeat a Soviet attack was at an all-time low. There was a growing concern about a strange aspect of the realities of Soviet tactics: because of the limited range of Soviet Tu-4 bombers -- near-identical copies of the B-29 -- any Soviet attackers would of necessity be unable to return to their homeland after making their bombing runs (midair refueling had yet to be widely employed). If a Soviet surprise attack came, American defenses would therefore be confronted by suicidally determined foes.

On April 23, ADC urgently requested that the Air Force archives at Maxwell AFB, Alabama locate "all material extant" on Japanese and German attempts to destroy bombers by ramming them with fighters. Its Operations and Training Directorate Fighter-Interceptor Division considered the ramming study a "red-hot major project," but planned to "release validated information to the Defense Forces in a discreet manner so as not to adversely affect the morale of combat personnel or leave the ADC open to criticism by civilian agencies." Studies began on the possibility of actually smashing F-94s into B-29s (presumably unmanned drones) to test the effects of the potentially suicidal tactic.

Alphabetical List and Histories of All Nuclear SAC Bases by State or Country

SAC was established on March 21, 1946 as one of three commands of the US Army Air Forces. Initially under General George Kenny at Bolling Field, Washington, D.C., SAC headquarters settled at Offutt AFB near Omaha, Nebraska under the command of General Curtis LeMay In October of 1948. The new separate Air Force was born September 18, 1947. Part of the SAC Mission certainly was to provide “long range offensive operations in any part of the world” in the form of a nuclear reach as a deterrent to future aggression.

The Alphabetical Review is a list of bases, air stations, and airports that the United States Air Force has occupied since 1947. Many bases have had name changes, so each separate name has been listed.

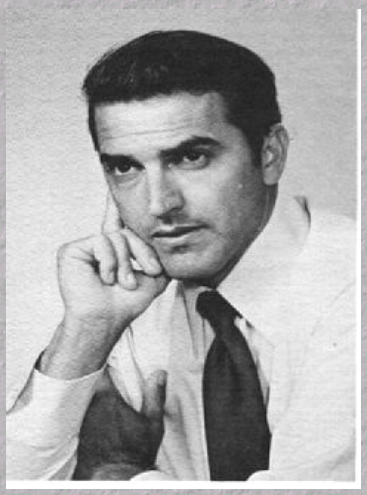
Nuclear Connection Project

NCP Papers

NCP-01: Some Early Patterns



Loren Gross

The Winter of 1948-49 was much more important to the UFO mystery than most students of UFO history realize. Although there are many gaps to our story, it is hoped that some discussion of certain salient points will aid in the understanding of the more detailed text. Also, this is an opportunity to include some new information and speculation. We will address three questions:

1.) Why did strange aerial lights appear over the U.S. Southwest in the Winter of 1948-49?

2.) Why was President Truman worried about the Russians and what did this worry have to do with the UFO riddle?

3.) Why did project SIGN become project GRUDGE?

Question #1: Why the aerial lights?

--The two-week flap of the summer of 47 was described by skeptics as a psychological phenomenon that suddenly appeared and them ran its course.

--On the other hand, persons like Donald Keyhoe, a believer in visitors from space, interpreted the same 47 flap as a nation-wide reconnaissance.

Whichever explanation one chooses, one has to explain the pattern of reports that took place for the next 2½ years. The skeptics would have to be puzzled by the persistence of sporadic reports, and the "believers" would have be wondering what the visitors were going to do. No striking pattern to UFO activity was evident with one exception --some marked activity in the U.S. southwest in late 1948 on through 1949. What was so special about that area?

After World War II President Truman was determined to use the atomic bomb to safeguard the nation and to strengthen the hand of American negotiators during that turbulent period. On December 31,1946, Truman authorized the establishment of the Atomic Energy Commission to manage the nuclear weapons program. Several months later the AEC submitted a status report to the Chief Executive on what the group found after assuming control. Truman was shocked by what the commission discovered. The test explosions of nuclear devices at Bikini the previous summer had been a show for "strategic purposes" and the advanced bombs meant for warfare remained untested and were not even assembled. What's more, the number of bombs was trifling. Nuclear bombs were put together by highly skilled civilians and most had scattered after the war, leaving low paying government service for lucrative positions with private industry. Military personnel were urgently needed to do the bomb assembly, and these people had to be trained and the bombs simplified so it would not take a Ph.D. to do the job. Also, another headache was serious questions about the supply of raw uranium. A drastic increase in the amount of the material was needed to built a realistic bomb stockpile. It seems that the vast majority of raw uranium came from mines in the Elisabethville District of the Belgian Congo in Africa (note: UFO sighting reports in March, 1952) and production was shared with Great Britain on a SO/SO basis by treaty. The arrangement was clearly inadequate in view of American plans so late in 1947 discussions were begun with London with the aim of making the treaty more advantageous. By January 1948 talks resulted in the U.S. getting all of the uranium from the Congo for the next two years, 1948-49, plus an option on uncommitted ore that had already been shipped to Britain. This generous settlement was achieved by allowing British scientists access to a number of nuclear secrets.

Sandia National Laboratories in New Mexico, which provided the engineering expertise for the Los Alamos theorists, geared up to build bombs in earnest as the people, designs, and raw material became available. The Joint Chiefs of Staff ordered that 400 bombs be built by 1951. After becoming a true bomb factory, Sandia shipped assembled bombs to Fort Hood, Texas, where there was a secure storage site guarded by the 12th Armored Infantry Battalion under the command of the Fourth Army.

Due to the difficulties previously mentioned, it wasn't until the spring of 1949 that the U.S. manufactured enough bombs to have a "stockpile." It is suggested that the "green fireballs" that appeared over Sandia in late 1948 bear a direct relationship to a sudden ramp-up of American nuclear weapon production. Also, later, in March,1949, when strange "flares" appeared around the "Q" area at Fort Hood, it is suggested that this interest by the UFOs was triggered by the recent arrival of the first shipment of atomic bombs which was stored as America's first nuclear bomb stockpile.

Question #2: Why worry about the Russians?

To explore this question there is some references to the year 1948. Page numbers given refer to pages in the booklet: UFOs A History: 1948.

Trouble with the Russians

The last thing President Truman wanted in the year 1948 was any kind of showdown with Russia. Did the Russians have any inkling the Americans were bluffing about having a nuclear deterrent?

In Europe, the critical part of the world, there was political turmoil, economic chaos, and disruptive masses of displaced persons. The battle- tested divisions of the Kremlin were poised in mid Europe and Moscow's propaganda machine was in high gear. The Communists were pushing hard and their agents were everywhere. Hungary, Poland, and

Czechoslovakia, yielded to the pressure. Even a country not occupied by the Red Army, Finland, gave in after being "invited" to sign a "pact of friendship," a document that crippled its independence. Winston Churchill, surveying the dismal scene, remarked: "Only the bomb keeps the Russians back."

In January 1948, as previously mentioned, an all-out effort to create an American nuclear bomb stockpile was underway.

In this same month U.S. Air Force Intelligence learned of some sightings of mysterious missiles with "green tails" over Scandinavia, reportedly coming from Russian-occupied Peenemunde on the north German Baltic coast. (Remember this mention of the color green) U.S. Air Force Intelligence felt that the sightings signaled: ".. a revival of another series of alleged flying phenomena." (See pp. 5-6) The reference here was to the Swedish "ghost rockets" of 1946-47 some believed were Russian flying bombs but were never proved to be a Moscow device.

The future of Europe hinged on Germany and the focus of the East-West struggle was Germany's capital, the city of Berlin. The city was under joint occupation of the four war-time allies, France, Britain, Russia, and the United States. The country of Germany was itself divided in zones, each occupied by one of the aforementioned powers. The rub was that Berlin was deep inside the Russian zone and thus at the mercy of Moscow.

The end of March, 1948, the Russian authorities progressively became less tractable in their relationship over the occupation of the German capital. The Communists began to harass traffic and personnel moving through their zone going to great lengths to inspect freight and personal baggage on its way to Berlin. Anyone who complained was turned back.

April 5, 1948, some UFOs exhibiting violent maneuvers appeared very high above Holloman AFB, New Mexico. It was an impressive case and received a lot of attention by Air Force Intelligence. (See pp. 24-27)

Lt. Col. James Beam and civilian advisor Alfred Loedding, made a special visit to the home of saucer photographer William Rhodes in early April because the military had a high opinion of the man's pictures taken back in the Summer of 1947. Questioning the fellow, Beam and Loedding learned something new. Rhodes claimed he saw a "vent" across the trailing edge of the horseshoe-shaped object. This detail helped the theory that the Air Force was dealing with a kind of conventional aircraft. (See p. 24)

This same month highway, rail, and river traffic to Berlin was choked off by Russian authorities because of what they called "technical difficulties." Only the air lanes remained open.

A U.S. military Intelligence agent reported from Moscow on June 10th that the Soviet Central Party Committee was conducting a "secret study of American flying saucer and Swedish ghost rocket reports." (See p. 107)

By June 25th the city of Berlin was effectively blockaded putting the Western powers in a precarious position. Truman had to acknowledge the unpleasant fact that if the U.S. desired to stay in the city it had to show the firm resolve to do so, but that meant a risk of war. The President sent General Clay to Europe to size up the situation and when the General returned on July 22nd and reported to Truman and the National Security Council, he said that if Berlin was abandoned it would be a calamity for American security. After conferring about the matter, the President and the NSC authorized a massive airlift to supply Berlin, but did so over the objections of Air Force General Hoyt Vandenberg who pointed out that if war did break out most of the allied and American air transport, vital to Western defense,

would be in an exposed position and would be caught and destroyed.

Two days after the important airlift decision, the Chiles-Whitted "sky monster" UFO encounter rocked Air Force Intelligence. Many at project SIGN were convinced by this case that UFOs were real machines. (See pp.34-45) The main question then was: "whose machine?"

To ease tensions, Truman sent representatives to Moscow on August 2nd to have face-to-face talks with Molotov and Stalin about Berlin.

On August 3rd a Western military agent reported seeing a strange cigar-like UFO flying over Moscow. (See p.48)

On August 5th a top secret "Estimate of the Situation" by project SIGN was circulated in Air Force Intelligence and rejected by Air Force Chief of Staff Hoyt Vandenberg. The "Estimate" suggested that the UFOs were interplanetary visitors. Unknown to researchers of UFO history was the General's opinion of the Russian secret weapon theory. (See p.50)

During the summer of 1948 the Air Force's "Nuclear Energy for the Propulsion of Aircraft Project" (NEAP) came under review. Some 45 engineers, metallurgists, aeronautics specialists, and physicists, gathered at Lexington, Massachusetts, for a secret brainstorming session. Some of the experts wanted to terminate the project as being impractical but the U.S. Air Force pushed for a continuation and won a narrow vote. Months later, a military engineer, who had an interest in the success of the NEAP project, played a role in the UFO story in early 1949 by generating rumors that the Russians were experimenting with atomic-powered craft.

The same day General Vandenberg rejected the "Estimate," August 5th, a routine UFO report from Columbia, South Carolina, carried the following official remark on the military paperwork: "... in the interest of national defense, all publicity surrounding this investigation is to be stringently avoided." (See p.51)

In the transcript of the February 16, 1949, fireball conference (detailed in this booklet) Dr. La Paz, civilian meteor expert, confirms that it was he that helped investigate the Four Corners meteor fall back on October 30, 1947. He states that within hours of the fall he and a government search team arrived in the Four Corners region and tried to locate the object. Exhaustive ground searches were conducted. According to Dr. La Paz this was the first time he: "... detected a bit of interest on the part of the military (in meteor falls)." The team found nothing so they went back time and again. Apparently it was La Paz and this search team that visited the C. Weafer's homestead on the Navajo Reservation in August, 1948 (See p.107 of the booklet: UFOs A History: 1948) and made careful transit measurements. Mr. Weafer claims that the scientists and military men on the team were agreed that the object that fell was not a meteor but a:".. .guided object, probably from the military establishment of a foreign power." (Again see p.107)

The ninth of September the National Security Council, chaired by Truman, was informed that the Berlin airlift was succeeding but that negotiations with the Russians were failing. Tension reached a new high level. Communist- led riots rocked the western sectors of Berlin and the Russian Air Force announced that its jet fighters would be conducting "air exercises" in the same air lanes used by the Berlin airlift transports. In the days following there were a number of close encounters between the transports and the jets. Some people in the U.S. urged Truman to break diplomatic relations with the Russians but the President felt that the only alternative to negotiations was war.

October 1st the impressive George Gorman UFO case took place. Gorman's plane was

checked for radiation that might have come from the UFO. Gorman's commanding officer talked too freely to the press and was threatened with court- martial. (See p.52)

That Fall, in another example of being security conscious, the U.S. Air Force's Office of Special Investigations (OSI), consulted the "Harper-Knowles" file, a civilian subversive list, during the investigation of a San Francisco, California, UFO case. (See p. 52)

A second report by General Clay to Truman and the NSC on October 22nd was more hopeful than his first. The Berlin airlift continued to be successful and the German people were closing ranks behind the Western powers. The struggle over the city had become one of endurance.

Two days after General Clay's report, a strange green fireball was visible for 75 minutes in the sky over Phoenix, Arizona. Air Force Intelligence was convinced the phenomenon was not a meteor due to the time factor. (See p.68)

Another secret activity at this time was the use of the big 100-foot Skyhook balloons by the Americans to spy on the Russians. The balloons were suppose to drift over Russia and snap pictures of areas unreachable by any other means. A UFO report in Air Force files dated November 3, 1948, states that a long, plastic-like "intestine" was seen floating high over the U.S. East Coast, clearly a Skyhook not yet fully inflated. A notation on the report said the report was "secret" and suggested that the message be destroyed. One is tempted to ask: "If the Americans were doing secret aerial reconnaissance, why not the Russians?" (See p.69)

And then, on December 5th, a number of strange green fireballs flashed over New Mexico. In the days following more of the fireballs were seen. Air Force OSI agents questioned CAA officials stationed at the Las Vegas, New Mexico , Municipal Airport about the fireballs and then warned the civilians about the:".. confidential classification of the investigation." (See p.76)

In a letter to the local Air Force OSI unit, Dr. La Paz mentioned that requests from the news media concerning the December 5th manifestations were not disseminated due to: "....pressure from other agencies also investigating this occurrence." (See p.79)

On December 12th, Dr. La Paz, in the company of Air Force Intelligence officers and Atomic Energy Commission security agents, personally witnessed the appearance of a green fireball that:".. passed almost centrally across the Los Alamos reservation." (See p. 80)

Due to the quality of the witnesses to the December 12th incident, it seems to be much more than a coincidence that project SIGN got a new mane on December 16th. The new name was "GRUDGE."

In mid December the "visitors from space" theory got a strong vote of no confidence from an Air Force advisor, a RAND Corporation expert, Dr. J.F. Lipp. His view was probably the basis of General Vandenberg's August 5th rejection of the "Estimate of the Situation." A few, more or less "pro- extraterrestrial" opinions by him, were outweighed by the negative ones. One should read his "guesses" carefully and ponder their validity. (See pp. 91-92) On December 10th an official report on UFOS was issued. See below.

In contrast, one should notice the big play given in the Top Secret Air Intelligence Report No. 100-203-79 to the Russian secret weapon theory. In that section titled: "facts and discussion" the Air Force even suggested a possible aircraft, a Model Horten XIII, with a regiment of the planes reportedly based near the city of Irkutsk to guard an atomic plant there. (See pp. 98-99) The most fascinating thing about the document is that it is so ready to accept evidence that points to the material existence of an aerial intruder in the skies of

America.

An Atomic Energy Commission security agent observed a green fireball passage on December 20th and when he reported his experience he hastened to add: "It might damage some of our Atomic Installations eventually if it is not a natural thing and man-controlled." (See p.82)

Dr. La Paz wrote Dr. H.E. Landsberg, executive director of the RDB committee on geophysics and geography, on December 28 that in regards to the green fireballs New Mexico authorities:".. .are deeply concerned." (See p.87)

The year ended with a December 29th message being put on file that discussed the reappearance of "ghost rockets" over Scandinavia of which:".. no proof has been obtained to confirm such flights." (See p.89) In other words, these "rockets" which were thought by some to be Russian and akin to aerial objects being seen in the U.S., were proving a disappointing source of evidence for the Russian theory.

1949 January-June

During the first six months of 1949 covered by this booklet, trouble with the Russians dissipated, while the mystery of unexplained aerial phenomena appearing over the U.S. Southwest became stranger than ever. In odd contras, Project GRUDGE's actions do not reflect the growing strangeness of the UFO riddle.

A diamond-shaped white light swept over Kirtland AFB, New Mexico, Ordinance area on January 6th. (See p.5)

Four days later FBI chief J. Edgar Hoover received a dispatch from one of his agents stationed at Knoxville, Tennessee, which detailed the claims of an Army engineer only identified as a "Mr. E" who asserted that the Air Force regarded the aerial objects that were reported over Oak Ridge atomic facility in 1947 as man-made missiles and not natural phenomena. The Army engineer suggested that the objects were "atomic energy missiles" of possible Russian manufacture. (See pp.6-10)

After January 30th a big effort to investigate the meteors was contemplated and we learn:"... local commanders were perturbed by implications of the phenomena." (See p.15)

The next day the FBI issued a document. entitled: "Protection of Vital Installations" and stated in the paper that the Army and the Air Force considered flying discs and "balls of fire" top secret subject matter and it suggested that the Swedish ghost rockets might have been of Russian origin. The paper also told about the Chiles-Whitted report terming the object seen by the pilot a "windowed aircraft of an unconventional type." Furthermore, the green fireballs were mentioned and described as "unexplained phenomena." (See pp.16-17)

Apparently to head off this surge of interest, on February 11th the change from SIGN to GRUDGE became official. One of the first bit of business by GRUDGE was to advised the FBI that the Air Force felt that UFOs "ultimately would be determined to have a natural explanation." (See p.21)

In spite of GRUDGE, a conference on the green fireballs was convened at Los Alamos on February 16th. No Air Force Intelligence people were present.

With Dr. La Paz as the principle speaker, there was considerable discussion about meteors and how the green fireballs were a different type of phenomenon. There was talk about light intensity, velocity, kinetic energy, color, trajectory, shock waves, composition,

periodicities, etc. (This conference laid the groundwork for project TWINKLE) (See pp. 23-53)

March 1, 1949 the Russians indicated they were sincere about ending the Berlin problem and it looked like the crisis would he over in the near future.

In contrast to the good news in Europe, a very ominous development took place in the U.S. Truman now had his nuclear bomb stockpile, in storage at Fort Hood, Texas, but the "Q" area was being visited by some mysterious aerial "flares." These strange lights seemed to be smaller cousins of the fireballs zooming over New Mexico. (See pp. 56-59, 66-67,82)

Reports of "flares" around the "Q" area at Fort Hood peaked between April 27th-28th. (See p.66)

Project GRUDGE was busy all this time, but evidently it wasn't busy checking out the green fireballs and mysterious "flares." A big two-part UFO debunking article written with GRUDGE cooperation appeared in the April 29th and May 7th issues of the Saturday Evening Post. The prime message was that UFOs were not Russian or visitors from the stars and that a wave of UFO hysteria could hit the U.S. at the same time as an international crisis overloading the Air Force's Intelligence channels.

On May 12th the Russians finally ended the Berlin blockade. Truman hailed the event as a victory for the Western powers.

On May 18th the Air Force issued Air Force Regulation 205-6 prohibiting the: "....disclosure of the nature, sources, or existence of investigative information to unauthorized persons." (See p.75)

Reuters news service reported more strange flying bodies over Scandinavia, this time eastern Finland near the border with Russia. (See p.75)

May 21st a UFO is seen and detected on radar over the Hanford, Washington, atomic works (apparently now operating at capacity to refine raw uranium) (See p.76)

The army unit guarding the "Q" area at Fort Hood requested scientific help, equipment, to investigate the "flares" on June 15th. (See p.82)

On June 22nd a strange UFO sailed over the center of Oak Ridge, Tennessee, atomic works (which was, one assumes, also now operating at capacity to refine raw uranium) (See p.84)

Question #3: Why did SIGN become GRUDGE?

If the reader has studied this writer's UFO history booklet covering the year 1948, he would have noted that a "big change" was taking place within Wright Field's UFO investigation during the winter of 1948-49. It is suggested by this writer that the change had to do with the High Command's concern about the security of America's ramp-up production of nuclear bombs. The "seeming inquisitiveness" of the green fireballs about Sandia, and the phenomena's seeming ability to detect the increase in bomb manufacturing, was seen as a potential threat, the first such indication that there was something unexplained in the heavens that might pose a real danger.

Those in New Mexico responsible for the security of the atomic labs: the FBI, the Army, and Atomic Energy Security agents, were of course very worried about the sky lights and took steps to understand them, but it is quite possible no one in those organizations knew the significance of the timing of the "sky spies'" appearance. Top secret documents available to

President Truman that had figures relating to the quantity of atomic bombs, had the numbers deleted. These numbers were converted into code, put on another piece of paper, and kept in a separate room.

The first indication of a change in Project SIGN was a notification that the project's name would be changed from SIGN to "GRUDGE." This occurred on December 16, 1948. Speculation about GRUDGE has centered on its "debunking" but another reason for the existence of GRUDGE is the fact that it came into being just weeks after the green fireballs began to zoom over New Mexico. The series of December 5th sightings was particularly impressive. A Fourth Army source gives us an interesting clue to the origin and the reason for GRUDGE when he mentioned that GRUDGE replaced SlGN because GRUDGE was to cover both UFOs and the fireballs. To make this plain, evidently, the Air Force informed the Army on February 11, 1949, that the Air Force would be the "gathering and reporting agency of the fireball incidents" (This didn't stop the Army, however, from conducting inquiries into the mystery). There was a good reason to do this because up to that time UFOs more or less implied physical machines but the green fireballs were thought by some to be possible "geomagnetic manifestations." As Dr. Lincoln La Paz put it, the fireball phenomenon..... apparently ignores air resistance and gravity and goes blissfully on its way." (See p.42) This explanation seems to have been a favorite with the scientists advising the military although they had trouble dealing with the localized nature of the phenomenon's appearances. In fact, when the FBI began to nose around after being urged to take UFOs seriously by a "Mr. E," the Air Force dissuaded Hoover by an unjustified flat declaration that:"... it was believed that ultimately it would be found that the phenomena in question has a natural explanation." (See p.21)

If the green fireballs caused concern, it can be surmised that the "flares" startled more than a few people. When the flares appeared around the "Q" area at Fort Hood, the bomb stockpile site, it would be asking too much to consider the "flares" a natural phenomenon that happened to appear in a "circular pattern around the storage area." (See p.57) After the Fort Hood manifestations, some people in the High Command must have been convinced of something.

Once GRUDGE had assumed official jurisdiction over both UFOs and the fire balls, the result was a continuous debunking. Why this was is explained by the Air Force. Major General C.P. Cabell, USAF, Director of Intelligence, Office of Deputy Chief of Staff, Operations, wrote a Brig. General Moore of the Directorate of Intelligence, DCS/O, on November 30, 1948, just prior to the establishment of GRUDGE, that the Air Force was having difficulties with the news media and was concerned about reactions by the public to the UFO subject:

"At the present time evaluation of these reports has progressed only to the extent that we must accept that some type of flying objects have been observed although their identification and origin are not yet discernible. We therefore conclude that insufficient data is available to date to warrant any further action except continuing attempts to determine the nature and origin of these objects.

"There is increasing pressure on the part of the U.S. Press to publicize 'flying saucer' incidents. The Director of Intelligence, USAF, has attempted to dissuade the Press from publishing articles of this nature. It has been pointed out to the Press that these articles would necessarily be speculative in nature and would probably result in a flood of reports, making the problem of analysis and evaluation... increasingly difficult....

"RECOMMENDATION
"(1) That inquiring agencies be informed that the Air Force is investigating carefully all

valid reports of flying objects.
"(2) That the attached memorandum to Mr. Forrestal. . request mg authority to assist the Press, upon request, in the preparation of such articles, be signed." 1.

The policies of GRUDGE would be carried over to a later Air Force UFO investigative effort, Project BLUE BOOK. BLUE BOOK would last until 1969. A secret Air Force document, obtained through the Freedom of Information Act, said of BLUE BOOK that the project was a "program" which had a certain "primary purpose." The document stated:

"..... the primary purpose of the program was to allay hysteria by systematically squelching rumors and illusions. Reassuring the public mind that no tangible evidence existed to support fears of an 'invasion from outer space,' or that 'radical technological advances and developments by the enemy' do not exist, was imperative." 2.

As the reader will see in this booklet, the unusual (unprecedented?) move by the Air Force of requesting the Secretary of Defense Forrestal to authorize military Intelligence to "assist the press" was evidently ap proved because it wasn't long before a big two-part article appeared in the Saturday Evening-Post, telling the UFO story in a manner acceptable to official policy.

This "guidance of the press," however, backfired. Ken Purdy, editor of True Magazine, developed a notion something was terribly wrong with the Post article and the Air Force's attitude. Purdy then got investigator-journalist Donald Keyhoe interested. For Keyhoe it marked the beginning of a decades-long struggle between him and the military, and a safe bet is that when the last word is written about the UFO mystery, historians will agree: "Keyhoe was right."

1. "Highlights of Air Force Intelligence Files." Focus, The Monthly Newsletter of the Fair-Witness Project, Inc., William Moore. 4219 West Olive St., Suite 247, Burbank, CA, 9150S. Vol.1, No.6, August 31, 1985. p.4.

2. "Blue Book's Purpose: "To Allay Hysteria By.. .Squelching Rumors And Illusions." Focus, The Monthly Newsletter of the Fair-Witness Project, Inc., Ed.Jimmy Ward ~ William Moore. 4219 West Olive St., Suite 247, Burbank, CA, 91505. Vol.1, No.11, January 31, 1986. pp.1,4.

Loren Loren, born 1938. Mr. Gross became interested in UFOs as a teenager when he was a member of the civilian Ground Observer Corps in the 195Os. After graduation from high school, he served four years in the U.S. Air Force as a radar operator with the Air Defense Command. In 1966 he received his B.A. degree in social science from the University of California at Chico and has since completed postgraduate work in physical science, history, and art. Mr. Gross is the author of many booklets on the early history of the UFO problem: The UFO Wave of 1896 (1974), The Mystery of the Ghost Rockets (1974), and Charles Fort, The Fortean Society, and Unidentified Flying Objects (1976). His most well-known works are the UFOs: A History series of booklets

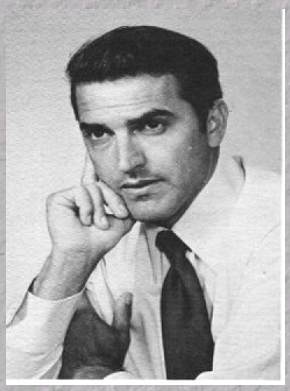
Nuclear Connection Project

NCP Papers

NCP-02: The NEPA and UFOs



Loren Gross

In General Twining's famous "Flying Saucers Are Real" letter of September 1947, he directed that information collected about the phenomenon be sent to a number of agencies, with one of them being the NEPA project or "Nuclear Energy for the Propulsion of Aircraft."

The possibility of proving that a nuclear-powered aircraft of some sort existed would have been a powerful motivation to certain people in their quest for information about UFOs. Any of the persons involved in the Fairchild Engine and Airplane Corporation NEPA division situated at Oak Ridge, Tennessee, for example, would have a lot to gain if it could be proved atomic engines were feasible, be they Russian or Martian, The budgetary hassles with Congress would be put to rest. Jobs would become secure in the case of civilians, and in the case of the military the prestige invested would not be lost. With that in mind, it is not surprising that Colonel John Hood of the Air Material Command Field Engineering Office, Oak Ridge, whose pet project was apparently the Air Force's proposed atomic plane, led the effort to investigate strange radiation readings at the Tennessee facility.

A brief history of the NEPA project:

In October, 1945, Congressional hearings initiated a controversy that persisted for years and cost hundreds of millions in tax dollars.

Senator Homer Ferguson asked: "Do you see a future for atomic power in an airplane?"

J. Carlton Ward, Jr., President of Fairchild Engine & Airplane Corporation, testifying on Capital Hill, replied: "The whole tactical concept of war will change to the nation that first solves that problem."

The next day the Chicago Tribune headlined: "PREDICTS ATOM WILL END LIMIT ON PLANE RANGE."

Many experts, however, did not find the answer so clear cut. "Hogwash," snorted atomic scientist J. Robert Oppenheimer. "Too dangerous," roared nuclear expert Edward Teller. Other detractors, senior engineers, exclaimed: "slow, expensive, complicated, and possibly useless."

The United States Army Air Force, desperate to establish itself as a separate service branch so it could drop the word "Army" from its title, saw in Carlton Ward's words a possible salvation, for without a very long range bomber the Air Force would forever be tied to the Army in a support role. A nuclear powered plane would in theory have almost unlimited range and would dominate the globe, exciting thoughts for Air Force Generals. The High Command obtained funding and eventually 14,000 people in seven states were hard at work on a futuristic bomber. A commitment of money did not, however, give the project respectability in the eyes of many in the Atomic Energy Commission. For example, Oak Ridge National Laboratory in Tennessee had its nuclear aircraft team assigned to a dilapidated building behind the power plant.

In 1947 the Pentagon's Scientific Advisory Committee, headed by J. Robert Oppenheimer and Harvard University President James Conant, recommended termination of research on the atomic powered plane since the radiation shielding problem seemed insurmountable (and not helping matters any was that veterans of the Manhattan Project resented the Air Force's intrusive behavior). This rebuff to the Air Force's ambitions was not calmly received, especially when the United States Navy's atomic-powered submarine plans were going forward quickly without serious technical difficulties. There's no love lost between the Air Force and the Navy in the competition for the most advanced weapon systems.

Vigorous lobbying in Congress won for the Air Force a review of the atomic bomber project before termination was implemented. In the summer of 1948 some 45 engineers, metallurgists, aeronautics specialists, and physicists, gathered at Lexington, Massachusetts, for a secret brainstorming session. After extensive talks the Air Force managed a narrow victory and the project was allowed to continue on the recommendation of the experts.

The attraction of an atomic powered bomber to the Air Force almost seemed to border on the unreasonable. A more rational solution to the Air Force's problem of achieving a long range capability was in-flight refueling of conventional bombers (A solution pushed by the Air Force's think tank RAND and one that was eventually adopted), but the in-flight concept was intentionally ignored.

It might be asked: "What about rockets?" Here the problem was again one of range. The only thing available was improved versions of the Nazi V-2 brought to the U.S. after the war in Europe and the range of that missile was only some 250 miles, hardly making it the intercontinental weapon system the Air Force wanted.

Besides design difficulties involved in the problem of increasing range, there was heated debate among the services about which one should be in charge of rocket warfare. Many felt missiles should be considered a kind of artillery therefore the gunnery experts of the Army and the Navy were encouraged to seek exclusive control of what was asserted to be basically a ballistic weapon. Missiles, it was argued, did not "fly" so why give them to the Air Force? The Air Force put up a half-hearted fight since it did not look forward to being "silo-sitters," the soul of that service imbued with the romance of flight. Air Force Chief of Staff Curtis Le May typified the mood. He allocated meager funds for Air Force missile research, and to a critic of his missile prejudice Le May snapped: "Sir, a missile has neither loyalty nor discrimination."

Of course the Air Force would have had no trouble at all with their atomic plane plans if it

could be proved the Russians had already developed a similar craft that could travel to North America, maneuver, and then return to Asia. Le May could have had a blank check from Congress.

Here something else enters the picture. The Air Force had an enormous amount of verbal Intelligence that indicated the possible existence of an aircraft of foreign manufacture that did have extreme range capabilities, while displaying powers of maneuverability that were on the same level of amazement as atomic energy. This verbal Intelligence was of a most extraordinary character. The Air Force was receiving hundreds of "flying saucer" reports.

It was probably no accident that James Conant of Harvard was the chief of the Air Force's first UFO investigative effort, project SIGN. At the time of project SIGN, Conant, serving on the Pentagon's scientific advisory committee, was under great pressure to evaluate whether the atomic bomber was a rational concept. There were just too many questions and no assurance how much time and money it would take answer them.

This view of events shows how concerned the Air Force was about the possibility "flying saucers" were atomic powered aircraft. It also shows that there was a very substantial reason for censorship of UFO material other than the "aliens from space" idea pushed so hard by Keyhoe.

Although the atomic powered aircraft plan was scrapped some years ago (it was a billion dollar bust) much information concerning the work is still classified and those files might well contain a number of interesting documents pertaining to the UFO mystery.

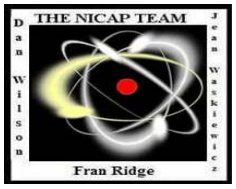
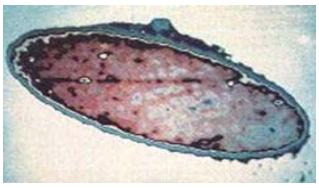
The Nuclear Connection





Nuclear Connection Project

NCP Paper

NCP-04: A Project is Born

A Nuclear Connection

Francis Ridge
Coordinator, NCP

Updated: 6/26/2002

In 1945, in southern New Mexico, at Los Alamos Laboratories, scientists were developing and testing the first nuclear weapons in great secrecy. The need for extensive flight support and test facilities reasonably near Los Alamos became apparent, and during September 1945, units of the Z Division of Los Alamos Laboratory were moved to Sandia Base at Albuquerque. The unit was the predecessor of Sandia Corporation, which was organized in 1949. It became, and (as Sandia National Laboratories) remains, the largest resident unit on Kirtland and has consistently been involved with development and testing of special weapons and energy sources and systems. Today this includes LASER weapons, particle beams, and plasma weapons - "Star Wars" weapons.

Other nuclear-related units were formed at Sandia Base and nearby Kirtland AFB, as the west side was redesignated in 1947. The Armed Forces Special Weapons Project (later the Defense Atomic Support Agency, then the Defense Nuclear Agency) operated Sandia Base and provided support to the Secretary of Defense, Joint Chiefs of Staff, and military departments in matters concerning nuclear weapons, nuclear effects, and testing. In addition, the Air Force Special Weapons Command was established at Kirtland in 1949 and was redesignated the Air Force Special Weapons Center in 1952 to help develop advanced nuclear weapons.

During the 1940s and 1950s, air defense, weather, and atomic test squadrons operated form Kirtland, and people from both bases took part in the nuclear test series conducted in Nevada and the Pacific.

These facilities in the southwest, including Kirtland, were very important to us, and apparently, to someone else. On November 4, 1957, an incident occurred at Kirtland AFB (Ref. 1) that for years got lost in the shuffle and was "explained away" by Air Force Project Blue Book. Even the Condon Committee wrote it off. Then along came a dedicated researcher, Dr. James E. McDonald from the University of Arizona. He found that no one had really interrogated the witnesses and that literally everyone had missed a very important close encounter with something we still don't have in the U.S. inventory, an egg-shaped craft that has been seen many times before to fly with its longer axis in a vertical position.

There are three principal types of objects that eventually belong to this group of "small" UFOs. One of them is a type "a"; an egg-shaped machine about 6- to 8-ft long that flies with the long axis vertical, comparable in size to a compact sedan. Manned or unmanned, this was not a conventional aircraft that just happened to wander into Kirtland's restricted airspace. It ha hovered over the "Drumhead Area" for about a minute, just yards NE of the Weapons Storage Area bunkers, and was very close to the area where the B-58 "Hustler" operated, which was just beginning its nuclear qualification testing at the time. And the object had come in from the east and must have passed just north of the main WSA at Manzano Mountain..

1947

My interest in the "nuclear connection" began in the 1980's, but my desire to pursue it further began just a few years ago while writing my book (Ref. 2).. I am well-versed in UFO military history, in particular, and I've always been impressed with the first major sighting wave in the United States, which was in the summer of 1947. Two years before, in August of 1945, we were forced to drop two atomic bombs on Japan (Hiroshima and Nagasaki) and almost 200,000 civilians perished. Without any stretch of the imagination, it is now easy to see that an "outsider" who had good intelligence information at the end of the second World War, would have been able to predict that these weapons of mass destruction, already used by one of the most civilized countries on Planet Earth, would probably be used again. With 150 different tribes of people that existed on the planet, all of which had tribal warfare as their number one pastime, this must have seemed likely. In 1947 those weapons and those delivery systems were being tested in the same region as the massive UFO activity: the Southwest.

The first major sighting wave occurred in the United States in the summer of 1947 with over 800 reports in six weeks, half of which were sightings of "daylight discs" or ""flying saucers"? The sightings peaked and ceased within days of a reported crash of an object at Roswell, New Mexico, the HQ for the 509th Bomb Group, the only atomic bomb group in the world. A more technically interesting and potentially-threating area on the face of the Earth did not exist in the summer of 1947.

1948

The "green fireballs", which were a piece of the UFO puzzle that I had always avoided because they were very much like meteors, and very much unlike "flying saucers", began to fit into the puzzle. These strange objects were not meteors or foreign missiles, and they had high selectivity for nuclear installations. A lot of people were concerned; some were worried.

More Reports

UFO sightings near atomic power plants and other nuclear installations were already on record. Project Blue Book's, Captain Edward Ruppelt, in his 1956 book (The Report on Unidentified Flying Objects) stated that "UFO's were habitually reported from areas around "technically interesting" places like our atomic energy installations, harbors, and critical manufacturing areas. Our studies showed that such vital military areas as Strategic Air Command and Air Defense Command bases, some A-bomb storage areas, and large military depots actually produced fewer reports than could be expected from a given area in the United States. Large population centers devoid of any major 'technically interesting' facilities also produced few reports." Whether he didn't know, or couldn't say, the incidents near and over areas with a nuclear connection were prevalent. There were over 193 incidents! There were many, detailed reports, where objects had violated airspace over atomic installations and caused major concern, ten years before the one at Kirtland (1957) mentioned earlier, and they continued after that up until one of the most dangerous times in world history, 1962.

Cuban Missile Crisis (1962)

I was the Director of the UFO Filter Center at Mt. Vernon, Indiana, from 1973 to 1995 and operated the MADAR (UFO detection) Project at the same time. Whenever I would get on-going sightings referred to me from law enforcement or the Evansville airport control tower, I would contact one of our volunteer spotters close to the sighting area to check the sky sector. One of our SKYNET spotters (who had always maintained a low profile because of his former occupation) had been a defense radarman. Several of his hair-raising accounts had to be kept confidential until after his death. When he passed away I filed his reports with CUFOS and MUFON, and later, posted them on the NICAP site. The most disturbing one was regarding a jet scramble mission over New York during the Cuban Missile Crisis. The UFO was being pursued by AF jets with nuclear tipped missiles.

1967

Five years later we were still not being "invaded" by ET. There had to be some other purpose behind the surveillance. In March of 1967, unknown objects had caused eight Minuteman One, nuclear-tipped missiles, all of which were on different electrical circuits, to go into a "no-go" condition, meaning that they could not be launched. This incident was of extreme concern to SAC headquarters and Boeing, because they couldn't explain it. At first this seemed like an isolated event. Was someone testing our defenses and showing our vulnerabilities? Did they favor the United States? Or was this a warning? Were we about to do something rash and was stopped, or was this timed for some other reason or purpose? We still don't know, but it happened again in 1975.

1975

When the Freedom Of Information Act documents began to circulate in the mid-80's, I studied the 1975 northern tier SAC base over flights, and started taking more interest in similar events. At about the same time as I was going over my set of the cleared FOIA documents, I had participated as the sole guest on a two-hour call-in radio talk show for WGBF in Evansville, Indiana. One of the "callers" was a former AF security team member at NORAD in November of 1975, and he reported an incident that must have been part of something much bigger going on in the United States that winter. I was later contacted by the anonymous caller and was able to fully investigate the incident, which involved a total "lock-down" of Cheyenne Mountain after defense radarmen tracked UFOs. So there were SAC base over flights on the northern tier and at NORAD HQ, all at the same time. It is interesting to note that the Travis Walton abduction occurred at about the same time.

Late 90's

By April, 2000, my interest had reached a more serious level, and I began getting incidents and people together. I began to form a special working group I dubbed the Nuclear Connection Project. At about the same time I obtained a DVD called "Trinity & Beyond: The Atomic Bomb Movie". While viewing this film, narrated by William Shatner, I became extremely uneasy. It shouldn't have bothered me at all because I had been in Civil Defense in the late 50's as a radiological monitor and had even begun training as a Radiological Defense Officer. I had shown some of the same films in some of my training classes. And in the military I was a CBR Specialist. The only difference was my new perspective after almost forty years of UFO research involving military incidents, and our recent brush with a potential nuclear threat in the Middle East. The distinct impression I got was remarkably similar to the world's dealings with Iraq.

BTW, most people would find it hard to believe that there has been over 2300 actual or putative atomic tests conducted on Planet Earth, and some in space!!! And there are rumors that at least once or twice, nuclear weapons were fired at the Moon!!!!

The suspicions about a nuclear connection and certain UFO incidents was already strong. It was time to organize and go to work. And this time the work would be done without the controversy and

limitations of communication with other email lists, which were always loaded with "skeptibunkers" and weirdoes that would waste what little precious time we had. The work would be done confidentially, with occasional help from the "outside" lists.

My forty-plus years experience in UFO investigation and research began with my chairing Indiana's first NICAP investigation subcommittee in 1960. My seven-man team for the National Investigations Committee on Aerial Phenomena took part in some of the most interesting investigations of the early years and was selected to support the University of Colorado's investigation and check on the Air Force Project Blue Book. I later became State Director for the Mutual UFO Network and a Field Investigator for the J. Allen Hynek Center for UFO Studies. I operated the MADAR (Multiple Anomaly Detection & Automated Recording) station near Evansville, Indiana, for 21 years. I began work on the NICAP Public Information Website on Dec 15, 1997.

Some of the other members of the NCP Working Group had provided some very interesting information and had submitted reports.

Loren Gross was a perfect candidate for the Project with his knowledge and meticulous records of the most important years in UFO research, the late 40's and early 50's. His series of booklets, "UFOs: A History", provided vital and important information. In one booklet (Reference 4 is an extract from one) he states:

> "No striking pattern to UFO activity was evident with one exception --some marked activity in the U.S. southwest in late 1948 on through 1949. What was so special about that area?" Later in the report he gets more specific: "Due to the difficulties previously mentioned, it wasn't until the spring of 1949 that the U.S. manufactured enough bombs to have a 'stockpile.' It is suggested that the 'green fireballs' that appeared over Sandia in late 1948 bear a direct relationship to a sudden ramp-up of American nuclear weapon production. Also, later, in March,1949, when strange 'flares' appeared around the 'Q' area at Fort Hood, it is suggested that this interest by the UFOs was triggered by the recent arrival of the first shipment of atomic bombs which was stored as America's first nuclear bomb stockpile."

The connection began to get better and our NCP Working Group began to grow in number. I wanted a select, but small and well-versed group. One of the first to join, and one of the first to mention a possible nuclear connection, was Richard Hall.

Richard Hall was former Assistant Director and Acting Director of the National Investigations Committee on Aerial Phenomena (NICAP) in Washington, DC and is now my chief consultant on the NICAP Public Information Web Site. Richard has over 40 years of experience, including extensive work on scientific publications. He was a consultant to the University of Colorado UFO Project, sponsored by the Air Force Office of Scientific Research. He is the author of, just to name a few books: the "UFO Evidence" (1964), "Uninvited Guests" (1988), and the latest - "Volume II: The UFO Evidence" (2001). Richard was thinking about a nuclear connection about the same time as I was. Here's what he had to say:

> "It was not until I began reviewing reams of literature while doing research for The UFO Evidence, Volume II, in the mid-1990s that a more obvious pattern began to emerge: a strong correlation of sightings with nuclear weapons." (See Reference 5).

Larry Hatch, an early member of the NCP Working Group, had something the Project needed really bad: a database of sightings. Our group needed a checklist of UFO cases involving a potential or possible nuclear connection already on-record. After we digested those we would start looking for

more incidents. To our surprise, we found that his "U" Database already had 193 cases "flagged" with a nuclear connection. This list is growing as we proceed in our NCP research. To see the current detailed list, click on Reference 3.

Wendy Connors, who continues to research the modern history of the unidentified flying object phenomenon, never ceases to amaze us with her findings. It's going to be hard to beat her to the "smoking gun" we are all looking for. For the last seven years she has worked on bringing to the field of Ufology an illustrative historical perspective of Project SIGN. She also operates and maintains the Faded Discs Archive. Her most recent work, is entitled: Anatomy of a Project – An Illustrated History of Project SIGN.

Jerry Washington was born and raised in Oak Ridge, Tennessee, site of the Manhattan Project, birthplace of the atomic bomb. He is an author and scriptwriter whose autobiographical tale, "Evacuation Road", chronicles the oddities of growing up in the Atomic City. An extremely close encounter near the "bomb factory awakened me to the reality of the UFO phenomenon". One of our earliest members, this man lived near one of the hottest UFO areas in the world, Oak Ridge, Tennessee. Jerry wrote several papers about his experiences there. See Reference 7.

Our most recent additions to the Project are Steven Dunn, Joel Carpenter, Robert Duvall and Bruce Maccabee.

Steven Dunn, after receiving a BA in Physics from The Lincoln University located near Oxford, PA in 1974, joined the U. S. Navy, obtaining his Surface Warfare Officer qualification. He served as an officer in the U. S. Navy from 1976 to 1986. Since leaving the Navy, he has worked in the ASW field for various government contractors, specializing in software test and evaluation. He is now concentrating on the Indian subcontinent for NCP-related sightings, using open sources.

Joel Carpenter's father was stationed at a Strategic Air Command base in the midwest at the height of 1960s Cold War tensions. An avid collector of documentation and photographs on aircraft, spacecraft and missiles, Joel is interested in the relationship between post WWII experimental aerospace projects and the UFO phenomenon. He holds degrees in history and industrial design. It was Joel who pointed out two nuclear connections with the 1957 Kirtland incident. With the help of an informant I was able to verify certain information and found another "connection", making this one of the best NC cases so far on record.

Robert Duvall has been in the aerospace electronics field performing mechanical packaging design for 20 plus years. At the urging of a fellow researcher from Japan, he became familiar with the history of nuclear weapons development globally and in 1999 began applying that military/political history to nuclear sighting data to search for correlation. He is now dedicating all efforts to studying and documenting this apparent correlative activity in an attempt to understand intent around the nuclear weapons issue. For example, most people are not aware that there were serious nuclear bomber training missions from an aircraft carrier in the Vietnam region the summer before the famous Northeast Power Grid Failure of November 9, 1965. The correlation between actual UFO sightings and blackouts has been pretty well confirmed (See Power Outages & UFOS). And that on July 16, 1952, just three days before the Washington National Sightings, the joint chiefs made the recommendation for a first strike on Red China utilizing atomic weapons. There is much more. Click on Reference 9.

Bruce Maccabee, a "seasoned" UFO investigator and well-known researcher, has expertise within the NCP and will be valuable with his skills as a photo analyst and his knowledge concerning important UFO events and government involvement. Bruce investigated the 1980 Kirtland landing near the Manzano Weapons Storage area.

The NCP Team, along with its demanding workload, is proceeding very well. The UFO community and the public, will be advised of our findings at an appropriate time. The work is just beginning to

pay off, even though the Project is already over two years old.

Nuclear Connection Project

NCP Paper

NCP-05: UFOs Continue to Visit Nuclear Energy Sites

by George Fawcett

Looking back over the years during the 40th anniversary of UFOs in modern times (JUNE 24,1987) it is interesting to note that UFOs have been seen and recorded near various atomic energy locations in this country and overseas. This link was first noticed by Captain Edward Ruppelt in 1952 and reported in a LOOK magazine article (JUNE 24,1952) titled "Hunt For The Flying Saucer." Captain Ruppelt, who directed the U.S. Air Force Project Blue Book at that time, when viewing a folder of 63 mystifying UFO reports that had been plotted on a map of the United States discovered that it showed "an ominous correlation" with the location of various atomic energy installations. LOOK magazine learned that some high ranking officers had taken note of this fact and had then held a Pentagon conference to discuss these numerous strange concentrations that have continued to this day.

Such incidents at the Savannah River, Hanford, Los Alamos, Oak Ridge, McGuire , Cherokee and Indian Point nuclear and atomic plants are of continued vital interest and concern to scientific, military, civilian and governmental observers everywhere.

These UFO encounters raise such serious questions as: Are UFOs monitoring our atomic and nuclear energy sites and if so, why? Why has the AEC (now NRC) had representatives on most of all the major government UFO investigative projects? Why do guards at some AEC installations report their UFO encounters directly to the AEC?

The questions continue -- What have AEC studies using air samplers, radioactive background counters, portable counters, magnetometers, oscilloscopes, cameras, radar and other devices revealed? That types of radiation increases have been discovered? What do they make of the increasing numbers of individuals who have suffered "radioactive" injuries of one sort or another alleged to have occurred during UFO incidents in many states in the United States and other global countries?

In essence, what have been the major discoveries and perhaps hidden secrets of the AEC-UFO link since the late 1940's? Let's examine some of these often reported events. On May 10, 1952 four employees of the DuPont Company, employed at the Savannah River Plant saw eight "disc-shaped" objects approach the Ellenton, South Carolina plant. The objects varied from a yellow to gold in color, moved south to north at a "high rate" of speed. The eight UFOs approached the area at such a low altitude that they had to rise to pass over some tall tanks in the area. The noiseless UFOs weaved from left to right and moved from side to side as they departed at a 90 degree angle. " The AEC in Washington was advised."

On July 5, 1952 four Florida pilots reported a flying saucer hovering above the Hanford atomic works, a sensitive scientific installation at Richlands ,Washington. Captain John Baldwin, Captain George Robertson and pilots D. Shanbel and Steven Summers stated that the UFO was round and flat. After hovering over the atomic plant, it gained speed, reversed its course and then disappeared quickly. Two yellow globes of fiery appearance were

reported over the Hanford plant seven days later, confirmed by Air Force investigators. Two years earlier on April 17, 1950 more than fifteen persons at the secret atomic energy project at Los Alamos, New Mexico reported they saw a UFO on the eastern horizon. One of the observers, a scientist from the University of California Personnel Division watched one of the three objects through a telescope and said that it looked flat, metallic and was roughly circular and about nine feet in diameter. The UFO appeared to be about 2,000 feet high and moved ".. faster than any known conventional aircraft." It was seen for about 20 minutes and put on quite a show. Dozens of excellent UFO sightings have been reported by countless eyewitnesses at Los Alamos over the years.

On 4 June 21, 1952 brought an interesting case of a UFO that trespassed prohibited airspace at the AEC's Oak Ridge Laboratory in Tennessee at 10:58 pm. The UFO was observer by Ground Observer Corps volunteers and also detected by radar. The UFO was pursued by a F-47 aircraft on combat patrol from a 10,000 to 27,000 foot altitude. During the aerial dogfight, the UFO attempted to ram the F-47 on several occasions, before leaving the area. UFO encounters have become quite commonplace at this AEC site.

In October 1965 Philip Parker on an aerial photography mission was flying with pilot H.T. Mayhew near the Perth Church Road Lake Norman crossing. Their plane was flying at about 1,000 feet as they circled the lake near the McGuire Nuclear Station, when they noticed three "bright objects" to their right. Pilot Mayhew gave his plane full throttle and they rose barely high enough to escape the UFOs, which were flying in formation 100 feet below them. Unnerved, as he was Parker was able to take one photograph of the three circular UFOs above Lake Norman, which is bordered by the Catawba, Lincoln, Gaston, Mecklenburg and Iredell counties in North Carolina.

In past years several other photographs of UFOs flying above Lake Norman were taken by different photographers. One of the photographs of an early morning UFO was captured near the Sun on the film. In the photo, the UFO moved from the 4 to the 6 o'clock position from 90 to 20 degrees over a short period of time.

In the late summer of 1968 at 2 a.m. a married couple (names confidential on file) reported seeing a dome-topped UFO with "windows" and odd-colored lights (yellow, blue and red fixed together) flying near their Lake Norman home. The UFO was about two to three car lengths wide and made a soft humming sound. A "metal rod" came from the bottom edge of the UFO, as it moved down nearby power lines, almost touching the wires as it followed the power lines. The eyewitnesses ran the rest of the way home and were badly frightened by their experience. 7

In July or August, 1972 at 9:30 p.m. businessman Robert P. Sartin, who lives near the Lake Norman Airport and Duke Power Plant's 150 high Cowans Ford Dam spotted a UFO. His attention to the UFO came when he heard children fishing from a nearby pier, who were shouting about an object in the sky. Four other persons became eyewitnesses to the UFO, which was seen about four miles East of the Marshall Steam Plant near Terrell. The UFO, appeared to be about the size of a basketball court and had a thickness, one-half its width. The object looked like "one saucer inverted on top of another and had a row of flashing windows through its middle." It had red, white and yellow lighted windows and hovered in the area overhead for about 10 minutes, before it flew sideways, then moved up and away at an unbelievable speed as it disappeared in the sky. 8

In March, 1975 at Lexington, South Carolina Mr. and Mrs. Jim Richardson were driving near the Lake Murray Hydroelectric Plant's Saluda Dam, when a brilliant "spotlight" came on and illuminated the interior of their car. They noticed the UFO looked "like two pie pans" put together and had a dome on top. It flew about 40 to 50 feet above their car and it

had red and blue lights on its ends and its dome was "brilliant white." The bottom of the UFO was octagonal in shape or like a stop sign. The Lake Murray area has been the scene of many UFO encounters over the years. 9

On October 27,1975 a UFO was reported by Staff Sgt. Danny K. Lewis near the Loring Air Force Base, Maine. The UFO began to circle the nuclear weapons storage area to within 300 yards of the facility. Finally, it hovered 150 feet above the ground. The base was placed on a major alert status. Radar tracked its maneuvers in the area for over 40 minutes. The reddish -orange UFO later moved to within five feet of the ground. Security personnel said the UFO was "like a stretched-out football in the air" as it hovered nearby. They described the object as about four car lengths long. It shut off its lights and rapidly left the area from near ground level. 10

On November 22, 1975 Pilot Frank Auman, Jr. and UFO investigator Arlan Keith Andrews were flying in a private plane near the Savannah, Georgia Nuclear Plant. They saw a bright white UFO maneuvering in the area for four or five minutes. It made a "slight wobble" and then a hard turn, before it flew away. Jacksonville Control Center personnel at Jacksonville, Florida confirmed three UFO sightings (either radar or visuals) by pilots at the site. 11 Arlan K. Andrews is a MUFON Consultant and State Director in Indiana.

On March, 1978 several persons described seeing two "milky white" UFOs flying side by side at treetop level at the McGuire Nuclear Station near Triangle, North Carolina. 12

April 24, 1980 at 9 p.m. brought another UFO report from the Lake Norman area. Pete Link and Jeff Schlatter, two Rutherford County carpenters, while working on a house roof observed a bright yellow UFO that rose up vertically from Lake Norman, made a loop and then disappeared while moving rapidly away. 13

Lake Norman is a large lake and is surrounded by Highway 16, Highway 73, Highway 150 and Highway 21. The lake is surrounded by many towns and cities, among them Mooresville, Lincolnton, Lowesville, Denver, Triangle, Iron Station, Stanley, Davidson and Sherrills Ford. These communities have been a "hotbed of UFO sightings" over the past four decades.

One of the more intriguing UFO sightings was reported at 7:30 a.m. on October 18,1982. Gary Fortenberry and Jimmy Bumgarner, two employees at the McGuire Nuclear Station on Lake NOrman were driving to work on Highway 73 at the Catawba River (Lincoln County) when they encountered an unknown. They watched a dull silver oval UFO with "four legs" above a nearby fog bank. During the daylight encounter, they first mistook it for a water tank, but later in the day when they returned home from work, the fog had lifted and no water tank was to be seen anywhere in the area. They did notice that high voltage lines from the power plants were in the general area of the earlier sightings. When first seen the UFO was about 250 feet above the ground The eyewitnesses had worked at McGuire for six years without experiencing anything unusual. Several months before, when UFOs again visited the same location, the power fluctuated, before the UFOs left the area. Security guards, when questioned by me on the phone, told me that such UFO incidents were to be made directly to AEC headquarters. 14

On October 13, 1983 at 12:30 a.m. Mr. and Mrs. Wayne Ruppe of Gaffney, South Carolina were disturbed from their sleep by a siren-like sound (like something taking off). They looked out of their house windows in time to see a glowing oval-shaped UFO about 20 feet above their neighbor's home. The neighborhood dogs were barking in a frenzy. The UFO, described as "about the size of a Winnebago travel-trailer" had two "beams of lights" on the bottom of the object. It was orange-yellow in color and made a high-pitched sound as it

crossed the power lines and moved east in direction of the Cherokee Nuclear Station. The UFO was seen for approximately five minutes and was estimated to be about 20 feet long and 8 to 10 feet in height. 15

On June 24,1984 from 10:30 to 10:45 p.m. security guards at the Indian Point Nuclear Power Plant near Peekskill, New York reported seeing UFO over the plant for approximately 15 minutes. It was roughly 30 stories above the exhaust funnel of one of the plant's three nuclear reactors. UFO investigator Philip J. Imbrogno for the Dr. J. Allen Hynek's Center for UFO Studies (CUFOS) in Chicago, Illinois interviewed six of the twelve security guards who saw the UFO. The UFO, according to the witnesses was huge in size, diamond-shaped and approximately 450 feet in length. It was first white, then changed to blue to red to green to amber in color. Local police in Peekskill received numerous UFO sightings during the same evening. One of them, Sgt. Karl Hoffman said the UFO he observed included a "dozen white lights" in V-formation that slowly moved towards the power plant at Indian Point. 16

In the case of the UFO reported by security guards at the Indian Point Nuclear Plant at Peekskill investigators uncovered some interesting information. As the UFO approached the nuclear plant it flew to within 30 feet of its Reactor Number Three. When it did the plant's security systems, shut down as did all of its alarm systems and communication systems. Security guards were issued shotguns and were waiting for the final word to shoot at the UFO. A request was also made for an armed helicopter to come and shoot down the UFO, but before the command was given, the UFO moved away and left the area. Carl Patrick of the plant's information office, when questioned by investigators about the UFO had this to say, "I can neither confirm or deny that the guards fired upon it, but they did what was necessary to protect the plant. 17

UFO reports continued to be concentrated near various atomic energy locations in the late 1980s by reliable eyewitnesses.

We are reminded of a statement made by General Nathan F. Twining of the Army Air Forces (the original UFO study Project Sign) in 1947 forty years ago. General Twining said, "all pertinent data would be made available to the Atomic Energy Commission (AEC)."

Perhaps answers to the many question posed at the beginning of this article were furnished to the Atomic Energy Commission, but they have yet to see the light of day in the public sector through 1987. Perhaps in the not to distant future, the truth behind the UFO-AEC link will be fully revealed to the public.

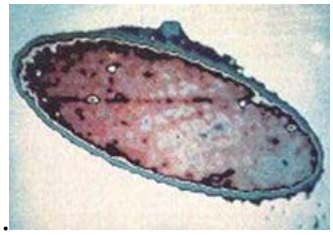
The Nuclear Connection



Nuclear Connection Project

NCP

NCP-07: The Radiation Story

By Captain Edward J. Ruppelt

The idea for gathering together a group of scientists, to whom we referred as our "panel of experts," had been conceived early in 1952 - as soon as serious talk about the possibility that the UFO's might be interplanetary spaceships had taken hold in both military and scientific circles. In fact, when Project Grudge was reorganized in the summer of 1951 the idea had been mentioned, and this was the main reason that our charter had said we were to be only a fact finding group. The people on previous UFO projects had gone off on tangents of speculation about the identity of the UFO's; they first declared that they were spacecraft, then later, in a complete about face, they took the whole UFO problem as one big belly laugh. Both approaches had gotten the Air Force into trouble. Why they did this I don't know, because from the start we realized that no one at ATIC, in the Air Force, or in the whole military establishment was qualified to give a final yes or no answer to the UFO problem. Giving a final answer would require a serious decision - probably one of the most serious since the beginning of man.

During 1952 many highly qualified engineers and scientists had visited Project Blue Book and had spent a day or two going over our reports. Some were very much impressed with the reports - some had all the answers.

But all of the scientists who read our reports readily admitted that even though they may have thought that the reports did or did not indicate visitors from outer space, they would want to give the subject a good deal more study before they ever committed themselves in writing. Consequently the people's opinions, although they were valuable, didn't give us enough to base a decision upon. We still needed a group to study our material thoroughly and give us written conclusions and recommendations which could be sent to the President if necessary.

Our panel of experts was to consist of six or eight of the top scientists in the United States. We fully realized that even the Air Force didn't have enough "pull" just to ask all of these people to drop the important work they were engaged in and spend a week or two studying our reports. Nor did we want to do it this way; we wanted to be sure that we had something worth while before asking for their valuable time. So, working through other government agencies, we organized a preliminary review panel of four people. All of them were competent scientists and we knew their reputations were such that if they recommended that a certain top scientist sit on a panel to review our material he would do it.

In late November 1952 the preliminary review panel met at ATIC for three days.

When the meeting ended, the group unanimously recommended that a "higher court" be formed to review the case of the UFO. In an hour their recommendation was accepted by higher Air Force authorities, and the men proceeded to recommend the members for our proposed panel. They picked six men who had reputations as being both practical and theoretical scientists and who were known to have no biased opinions regarding the UFO's.

The meeting of the panel, which would be held in Washington, was tentatively scheduled for late

December or early January - depending upon when all of the scientists who had been asked to attend would be free. At Project Blue Book activity went into high gear as we made preparations for the meeting. But before we were very far along our preparations were temporarily sidetracked - I got a lead on the facts behind a rumor. Normally we didn't pay attention to rumors, but this one was in a different class.

Ever since the Air Force had become interested in UFO reports, the comment of those who had been requested to look them over and give a professional opinion was that we lacked the type of data "you could get your teeth into." In even our best reports we had to rely upon what someone had seen. I'd been told many times that if we had even one piece of information that was substantiated by some kind of recorded proof - a set of cinetheodolite movies of a UFO, a spectrum photograph, or any other kind of instrumented data that one could sit down and study - we would have no difficulty getting almost any scientist in the world interested in actively helping us find the answer to the UFO riddle.

The rumor that caused me to temporarily halt our preparations for the high level conference involved data that we might be able to get our teeth into.

This is the way it went:

In the fall of 1949, at some unspecified place in the United States, a group of scientists had set up equipment to measure background radiation, the small amount of harmless radiation that is always present in our atmosphere. This natural radiation varies to a certain degree, but will never increase by any appreciable amount unless there is a good reason.

According to the rumor, two of the scientists at the unnamed place were watching the equipment one day when, for no apparent reason, a sudden increase of radiation was indicated. The radiation remained high for a few seconds, then dropped back to normal. The increase over normal was not sufficient to be dangerous, but it definitely was unusual. All indications pointed to equipment malfunction as the most probable explanation. A quick check revealed no obvious trouble with the gear, and the two scientists were about to start a more detailed check when a third member of the radiation crew came rushing into the lab.

Before they could tell the newcomer about the unexplained radiation they had just picked up, he blurted out a story of his own. He had driven to a nearby town, and on his return trip, as he approached the research lab, something in the sky suddenly caught his eye. High in the cloudless blue he saw three silvery objects moving in a V formation. They appeared to be spherical in shape, but he wasn't sure. The first fact that had hit him was that the objects were traveling too fast to be conventional aircraft. He jammed on the brakes, stopped his car, and shut off the engine. No sound. All he could hear was the quiet whir of a generator in the research lab. In a few seconds the objects had disappeared from sight.

After the first two scientists had briefed their excited colleague on the unusual radiation they had detected, the three men asked each other the $64 question: Was there any connection between the two incidents? Had the UFO's caused the excessive radiation?

They checked the time. Knowing almost exactly when the instruments had registered the increased radiation, they checked on how long it took to drive to the lab from the point where the three silver objects had been seen. The times correlated within a minute or two. The three men proceeded to check their radiation equipment thoroughly. Nothing was wrong.

The rumor stopped here. Nothing that I or anyone else on Project Blue Book could find out shed any further light on the source of the story. People associated with projects similar to the research lab that was mentioned in the rumor were sought out and questioned. Many of them had heard the story, but no one could add any new details. The three unknown scientists, at the unnamed lab, in an

unknown part of the United States, might as well never have existed. Maybe they hadn't.

Almost a year after I had first heard the UFO radiation story I got a long-distance call from a friend on the west coast. I had seen him several months before, at which time I told him about this curious rumor and expressed my wish to find out how authentic it was. Now, on the phone, he told me he had just been in contact with two people he knew and they had the whole story. He said they would be in Los Angeles the following night and would like very much to talk to me.

I hated to fly clear to the west coast on what might be a wild goose chase, but I did. I couldn't afford to run the risk of losing an opportunity to turn that old recurrent rumor into fact.

Twenty hours later I met the two people at the Hollywood Roosevelt Hotel. We talked for several hours that night, and I got the details on the rumor and a lot more that I hadn't bargained for. Both of my informants were physicists working for the Atomic Energy Commission, and were recognized in their fields. They wanted no publicity and I promised them that they would get none. One of the men knew all the details behind the rumor, and did most of the talking. To keep my promise of no publicity, I'll call him the "scientist."

The rumor version of the UFO radiation story that had been kicking around in Air Force and scientific circles for so long had been correct in detail but it was by no means complete. The scientist said that after the initial sighting had taken place word was spread at the research lab that the next time the instruments registered abnormal amounts of radiation, some of the personnel were to go outside immediately and look for some object in the sky.

About three weeks after the first incident a repetition did occur. While excessive radiation was registering on the instruments in the lab, a lone dark object was seen streaking across the sky. Again the instruments were checked but, as before, no malfunction was found.

After this second sighting, according to the scientist, an investigation was started at the laboratory. The people who made the visual observations weren't sure that the object they had seen couldn't have been an airplane. Someone thought that perhaps some type of radar equipment in the airplane, if that's what the object was, might have affected the radiation- detection equipment. So arrangements were made to fly all types of aircraft over the area with their radar in operation. Nothing unusual happened. All possible types of airborne research equipment were traced during similar flights in the hope that some special equipment not normally carried in aircraft would be found to have caused the jump in radiation. But nothing out of the ordinary occurred during these tests either.

It was tentatively concluded, the scientist continued, that the abnormally high radiation readings were "officially" due to some freakish equipment malfunction and that the objects sighted visually were birds or airplanes. A report to this effect was made to military authorities, but since the conclusion stated that no flying saucers were involved, the report went into some unknown file. Project Blue Book never got it.

Shortly after the second UFO radiation episode the research group finished its work. It was at this time that the scientist had first become aware of the incidents he related to me. A friend of his, one of the men involved in the sightings, had sent the details in a letter.

As the story of the sightings spread it was widely discussed in scientific circles, with the result that the conclusion, an equipment malfunction, began to be more seriously questioned. Among the scientists who felt that further investigation of such phenomena was in order, were the man to whom I was talking and some of the people who had made the original sightings.

About a year later the scientist and these original investigators were working together. They decided to make a few more tests, on their own time, but with radiation detection equipment so designed that

the possibility of malfunction would be almost nil. They formed a group of people who were interested in the project, and on evenings and weekends assembled and set up their equipment in an abandoned building on a small mountain peak. To insure privacy and to avoid arousing undue interest among people not in on the project, the scientist and his colleagues told everyone that they had formed a mineral club. The "mineral club" deception covered their weekend expeditions because "rock hounds" are notorious for their addiction to scrambling around on mountains in search for specimens.

The equipment that the group had installed in the abandoned building was designed to be self operating. Geiger tubes were arranged in a pattern so that some idea as to the direction of the radiation source could be obtained. During the original sightings the equipment malfunction factor could not be definitely established or refuted because certain critical data had not been measured.

To get data on visual sightings, the "mineral club" had to rely on the flying saucer grapevine, which exists at every major scientific laboratory in the country.

By late summer of 1950 they were in business. For the next three months the scientist and his group kept their radiation equipment operating twenty-four hours a day, but the tapes showed nothing except the usual background activity. The saucer grapevine reported sightings in the general area of the tests, but none close to the instrumented mountain top.

The trip to the instrument shack, which had to be made every two days to change tapes, began to get tiresome for the "rock hounds," and there was some talk of discontinuing the watch.

But persistence paid off. Early in December, about ten o'clock in the morning, the grapevine reported sightings of a silvery, circular shaped object near the instrument shack. The UFO was seen by several people.

When the "rock hounds" checked the recording tapes in the shack they found that several of the Geiger tubes had been triggered at 10:17 A.M. The registered radiation increase was about 100 times greater than the normal background activity.

Three more times during the next two months the "mineral club's" equipment recorded abnormal radiation on occasions when the grapevine reported visual sightings of UFO's. One of the visual sightings was substantiated by radar.

After these incidents the "mineral club" kept its instruments in operation until June 1951, but nothing more was recorded. And, curiously enough, during this period while the radiation level remained normal, the visual sightings in the area dropped off too. The "mineral club" decided to concentrate on determining the significance of the data they had obtained.

Accordingly, the scientist and the group made a detailed study of their mountain top findings. They had friends working on many research projects throughout the United States and managed to visit and confer with them while on business trips. They investigated the possibility of unusual sunspot activity, but sunspots had been normal during the brief periods of high radiation. To clinch the elimination of sunspots as a cause, their record tapes showed no burst of. radiation when sunspot activity had been abnormal.

The "rock hounds" checked every possible research project that might have produced some stray radiation for their instruments to pick up. They found nothing. They checked and rechecked their instruments, but could find no factor that might have induced false readings. They let other scientists in on their findings, hoping that these outsiders might be able to put their fingers on errors that had been overlooked.

Now, more than a year after the occurrence of the mysterious incidents that they had recorded, a

year spent in analyzing their data, the "rock hounds" had no answer.

By the best scientific tests that they had been able to apply, the visual sightings and the high radiation had taken place more or less simultaneously.

Intriguing ideas are hard to kill, and this one had more than one life, possibly because of the element of mystery which surrounds the subject of flying saucers. But the scientific mind thrives on taking the mystery out of unexplained events, so it is not surprising that the investigation went on.

According to my friend the scientist, a few people outside the laboratory where the "rock hounds" worked were told about the activities of the "mineral club," and they started radiation detection groups of their own.

For instance, two graduate astronomy students from a southwestern university started a similar watch, on a modest scale, using a modified standard Geiger counter as their detection unit. They did not build a recorder into their equipment, however, and consequently were forced to man their equipment continuously, which naturally cut down the time they were in operation. On two occasions they reportedly detected a burst of high radiation.

Although the veracity of the two astronomers was not doubted, the scientist felt that the accuracy of their readings was poor because of the rather low quality of their equipment.

The scientist then told me about a far more impressive effort to verify or disprove the findings of the "mineral club." Word of the "rock hounds" and their work had also spread to a large laboratory in the East. An Air Force colonel, on duty at the lab, told the story to some of his friends, and they decided to look personally into the situation.

Fortunately these people were in a wonderful spot to make such an investigation. At their laboratory an extensive survey of the surrounding area was being made. An elaborate system of radiation detection equipment had been set up for a radius of 100 miles around the lab. In addition, the defenses of the area included a radar net.

Thanks to the flashing of silver eagles, the colonel's group got permission to check the records of the radiation survey station and to look over the logs of the radar stations. They found instances where, during the same period of time that radiation in the area had been much higher than normal, radar had had a UFO on the scope. These events had occurred during the period from January 1951 until about June 1951.

Upon learning of the tentative but encouraging findings that the colonel's group had dug out of their past records, people on both the radiation survey crews and at the radar sites became interested in co-operating for further investigation. A tie-in with the local saucer grapevine established a three way check.

One evening in July, just before sunset, two of the colonel's group were driving home from the laboratory. As they sped along the highway they noticed two cars stopped ahead of them. The occupants were standing beside the road, looking at something in the sky.

The two scientists stopped, got out of their car, and scanned the sky too. Low on the eastern horizon they saw a bright circular object moving slowly north. They watched it for a while, took a few notes, then drove back to the lab.

Some interesting news awaited them there. Radar had picked up an unidentified target near the spot where the scientists in the car had seen the UFO, and it had been traveling north. A fighter had been scrambled, but when it got into the proper area, the radar target was off the scope. The pilot glimpsed something that looked like the reported UFO, but before he could check further he had to

turn into the sun to get on an interception course, and he lost the object.

Several days passed before the radiation reports from all stations could be collected. When the reports did come in they showed that stations east of the laboratory, on an approximate line with the radar track, had shown the highest increase in radiation. Stations west of the lab showed nothing.

The possible significance of this well covered incident spurred the colonel's group to extend and refine their activities. Their idea was to build a radiation detection instrument in an empty wing tank and hang the tank on an F-47. Then when a UFO was reported they would fly a search pattern in the area and try to establish whether or not a certain sector of the sky was more radioactive than other sectors. Also, they proposed to build a highly directional detector for the F-47 and attempt actually to track a UFO.

The design of such equipment was started, but many delays occurred. Before the colonel's group could get any of the equipment built, some of the members left the lab for other jobs, and the colonel, who sparked the operation, was himself transferred elsewhere. The entire effort collapsed.

The scientist was not surprised that I hadn't heard the story of the colonel's group. All the people involved, he said, had kept it quiet in order to avoid ridicule. The scientist added that he would be glad to give me all the data he had on the sightings of his "mineral club," and he told me where to get the information about the two astronomers and the colonel's group.

Armed with the scientist's notes and recorder tapes, I left for my office at Wright-Patterson Air Force Base, Dayton.

With the blessings of my chief, I started to run down the rest of the radiation information. The data we had, especially that from the scientist's "mineral club," had been thoroughly analyzed, but we thought that since we now had access to more general data something new and more significant might be found.

First I contacted the government agency for which all of the people involved in these investigations had been working, the scientists who recorded the original incident, the scientist and his "mineral club," the colonel's group, and the rest.

The people in the agency were very co-operative but stressed the fact that the activities I was investigating were strictly the extracurricular affairs of the scientists involved, had no official sanction, and should not be tied in with the agency in any way, shape, or form. This closed door reaction was typical of how the words "flying saucer" seem to scare some people.

They did help me locate the report on the original incident, however, and since it seemed to be the only existing copy, I arranged to borrow it.

About this same time we located the two graduate astronomy students in New Mexico. Both now had their Ph.D.'s and held responsible jobs on highly classified projects. They repeated their story, which I had first heard from the scientist, but had kept no record of their activities.

On one occasion, just before dawn on a Sunday morning, they were on the roof, making some meteorological observations. One of them was listening to the Geiger counter when he detected a definite increase in the clicking.

Just as the frequency of the clicks reached its highest peak - almost a steady buzz - a large fireball, described by them as "spectacular," flashed across the sky. Both of the observers had seen several of the green fireballs and said that this object was similar in all respects except that the color was a brilliant blue white.

With the disappearance of the fireball, the counter once more settled down to a steady click per second. They added that once before they had detected a similar increase in the frequency of the clicks but had seen nothing in the sky.

In telling their story, both astronomers stressed the point that their data were open to a great deal of criticism, mainly because of the limited instrumentation they had used. We agreed. Still their work tended to support the findings of the more elaborate and systematic radiation investigations.

The gods who watch over the UFO project were smiling about this time, because one morning I got a call from a colonel on Wright-Patterson Air Force Base. He was going to be in our area that morning and planned to stop in to see me.

He arrived in a few minutes and turned out to be none other than the colonel who had headed the group which had investigated UFO's and radiation at the eastern laboratory. He repeated his story. It was the same as I had heard from the scientist, with a few insignificant changes. The colonel had no records of his group's operations, but knew who had them. He promised to get a wire off to the person immediately, which he did.

The answer was a bit disappointing. During the intervening months the data had been scattered out among the members of the colonel's group, and when the group broke up, so did its collection of records.

So all we had to fall back on was the colonel's word, but since he now was heading a top priority project at Wright, it would be difficult not to believe him.

After obtaining the colonel's story, we collected all available data concerning known incidents in which there seemed to be a correlation between the visual sighting of UFO's and the presence of excess atomic radiation in the area of the sightings.

There was one last thing to do. I wanted to take the dates and times of all the reported radiation increases and check them against all sources of UFO reports. This project would take a lot of leg work and digging, but I felt that it would offer the most positive and complete evidence we could assemble as to whether or not a correlation existed.

Accordingly, we dug into our files, ADC radar logs, press wire service files, newspaper morgues in the sighting area, and the files of individuals who collect data on saucers. Whenever we found a visual report that correlated with a radiation peak we checked it against weather conditions, balloon tracks, astronomical reports, etc.

As soon as the data had all been assembled, I arranged for a group of Air Force consultants to look it over. I got the same old answer - the data still aren't good enough. The men were very much interested in the reports, but when it came time to putting their comments on paper they said, "Not enough conclusive evidence." If in some way the UFO's could have been photographed at the same time that the radiation detectors were going wild, it would have been a different story, they later told me, but with the data I had for them this was the only answer they could give. No one could explain the sudden bursts of radiation, but there was no proof that they were associated with UFO's.

The board's ruling wrote finish to this investigation. I informed the colonel, and he didn't like the decision. Later I passed through the city where the scientist was working. I stopped over a few hours to brief him on the board's decision. He shook his head in disbelief.

It is interesting to note that both the colonel and the scientist reacted in the same way. We're not fools - we were there - we saw it - they didn't. What do they want for proof?

Nuclear Connection Project

NCP Paper

NCP-08: The Nuclear Connection

By Richard H. Hall

In my book Uninvited Guests (Aurora Press, 1988) I devoted a chapter to analysis of what we could decipher about the purposes of the UFO pilots from the accumulated evidence. Therein I discussed a seeming interest in human energy sources, especially petroleum, and briefly touching on nuclear energy. Table 6, "UFO Displays and World History," mentions seeming associations of UFO sightings with atomic bomb tests and with our space programs. Later I conducted a "strategic correlation" study showing an apparent association of close-range sightings with nuclear generating plants, which was published in a popular newsstand UFO magazine.

It was not until I began reviewing reams of literature while doing research for The UFO Evidence, Volume II, in the mid-1990s that a more obvious pattern began to emerge: a strong correlation of sightings with nuclear weapons. Once the pattern became clear, one of its implications struck me: could the aliens (or "beings from elsewhere") actually have intervened in earthly affairs to help end the dangerous Cold War nuclear confrontation? Debunkers, of course, will consider this an entirely crackpot notion; nothing but wishful thinking and a desire for "saviors from space." But they never bother to study the data and so are oblivious to the many emerging patterns.

Section II ("Military Witnesses") of The UFO Evidence, Volume II (Scarecrow Press, 2001) reports much of the data that led me to this suspicion. It includes the 1967 ICBM base cases in Montana and North Dakota and the 1975 SAC base overflights reported by Ray Fowler and Fawcett & Greenwood, and also the 1978 McGuire AFB "alien encounter" case and the 1980 Bentwaters AFB case. I had extensive face-to-face interviews with the primary witnesses in the latter two cases, and both involved UFOs in the close vicinity of nuclear weapons storage sites.

With 20-20 hindsight, other cases such as the 1957 Army jeep patrol case in New Mexico and a number of incidents reported by Ed Ruppelt also had a "nuclear connection."

Interestingly, my mentor and friend, Donald E. Keyhoe, who was way ahead of everybody in his perceptions about the significance of UFOs first raised this suspicion in The Flying Saucers Are Real (Fawcett, 1950): "[UFO visits which had occurred sporadically in the past] suddenly increased in 1947, following the series of A-bomb explosions begun in 1945" (p. 174).

Clearly the study of patterns in UFO sightings holds a lot of promise for increasing our knowledge about the nature and meaning of UFO visitations. Larger scale and more sophisticated statistical analyses would be highly desirable.

NCP-09: Oak Ridge Native Speak - An Introduction

Jerry Washington:
Regretfully, any contribution I make to the Nuclear Connection Project is going to be purely anecdotal. My only qualification is scarcely more than an accident of birth – having been hatched and reared in the original "Atomic City": Oak Ridge, Tennessee.

A sleepy little burgh tucked discreetly away in the rolling hills between the Cumberland and Great Smoky Mountain ranges, Oak Ridge has always appeared deceptively normal on the surface. Only when you peeked behind the façade of plutonium and privilege – and you had to know where to look – did you glimpse the town's true nature.

Beyond the designer dachas of the nuclear bourgeoisie, out past the abandoned guard tower relics of an earlier era, lay the vast no-man's land we called the "Restricted Zone" ("we" meaning the Mensa set's prodigal offspring).

The Oak Ridge "Reservation" encompasses many hundreds of square miles. However, the town itself – the residential area – occupies only a small percentage of that acreage. The rest has always been under the purview of the Federal Government; Atomic Energy Commission (AEC); Union Carbide; Martin Marietta, or whoever holds the reigns of power these days.

The Oak Ridge City cops lacked the authority to cross over into "the zone," a fact taken full advantage of by me and my fellow delinquents. With too much time and money on our hands, we sought to relieve our boredom through frequent incursions into "the zone," where we'd party hearty in the shadow of K-25, Y-12, or X-10, the three resident nuke facilities.

We sure-as-hell weren't worried about AEC Security showing up. Those guys were an absolute joke! Even at the height of the Cold War, we were able to carouse "the zone" with impunity. We could've been Russian spies or worse, and nobody would've known.

Ringed with "DANGER: RADIOACTIVE" signs, we went about our business with the fatalism borne by Oak Ridgers, and nurtured throughout our formative years. Field trips to the Oak Ridge National Laboratory (X-10) only served to reinforce that posture, as we gazed down into the luminous depths of the Heavy Water tank used to cool spent reactor rods. Years later I would learn that that otherworldly glow had a name: Cerenkov Radiation. As with the radioactive dimes that we took home as souvenirs and promptly liberated from their plastic casings, it was probably best that we didn't know too much back then. What you don't know can't hurt you, or so the theory goes…

That was certainly the disposition with which I approached any mention of UFOs at the time, whether in a periodical, TV show, or even Baby Huey cartoons! The subject made me extremely uncomfortable. When Time or Life Magazine (I don't remember which) came out with a special UFO issue featuring a full-color glossy of an alleged UFO on the front cover, my adolescent self went utterly apoplectic. I repeatedly flipped over the issue displayed on our coffee table, so as not to have to look at the thing.

Of course, I was weaned – like most of my generation – on a steady diet of B-Movies bearing titles

like “It Came From Outer Space” and “Invaders from Mars.” And while they also made me uncomfortable, it was the notion of TV’s “The Invaders,” that really made me squirm; those glowing hands…the dissonant music…the opening sequence with the saucer landing. The notion of something so totally outside of my “zone” of reference ran contrary to the ideals that I held dear: My yearning for a reasonable life, where cause begets effect, and stuff makes sense.

I have set the stage for the following account. It is through the contextual prism of life in the Atomic City, as I’ve described it, that these “anecdotes” should be viewed…

too-close encounter

When I invited my buddy, Robert, over to cruise for chicks and beer on his first weekend home from college, UFOs were the very last thing on my mind – they weren’t even on the radar screen. Bob was a fellow hedonist, and, while I was still adrift in a sea of uncertainty about my future after high school, he had seized the bull by the horns and enrolled in the University of Tennessee in Knoxville.

He picked me up in the beat up, old Corvair that he’d inherited from his older brother. I was a little heftier than Bob and, although it took some doing, I squeezed my bulk into the passenger seat. Off we went – Laurel and Hardy – into the balmy, autumn evening, headed due west towards the Restricted Zone.

Truthfully, Bob and I weren’t all that close. We'd never really hung out together, however, rumor had it that he had spent his entire first semester at UT racking up one sexual conquest after another, and I was anxious to hear him dish the dirt. My ears were purt near burnin’ as he regaled me with a play-by-play account of his sexploits, a goodly percentage of which could have been hyperbole; Bob wouldn’t be the first young man who’s inflated his statistics.

Still, Bob was a pretty rational guy, not given to too many flights of fancy. An honor student at Oak Ridge High, a school that churned out National Merit Finalists like Y-12 turned out nuclear triggers, he'd had the prettiest girlfriend in school. In other words, he really didn’t need to exaggerate very much.

“Let’s cruise the plants,” I suggested, and Bob agreed.

“I haven’t had my fix of radiation in a while,” he quipped, only half in jest. “We’ll take the grand tour, then come back by the liquor store and buy some beer.”

Onward, toward K-25 we trekked, penetrating deep into the Restricted Zone, Bob, all the while, keeping a running commentary going about his collegiate conquests. Basically, it was just your typical dude’s night out – two local boys cruisin’ the nuke plants, hoping to stumble upon some action.

Eventually, we found ourselves on Bearcreek Road, the curvy, two-lane road that leads to Y-12. A shift change was due at the facility in half an hour, but for the time being, we had the thoroughfare to ourselves. It was a moonless night, so Robert had to drive with extra care. Although quite familiar with the route, the lack of streetlights or other vehicles only added to the challenges of negotiating its numerous twists and turns on such a caliginous night.

And then it happened. We were driving along, shootin’ the breeze, listening to the A.M. radio, when off to our right, a bright, fully illuminated object appeared out of nowhere. It was descending at a 30-degree angle, following the topography of the hillside next to the road, when it abruptly leveled out, stopped, and hovered no more than twenty feet above the road. Exhibiting every sign of being intelligently controlled, simply by the ultra-precise manner in which it maneuvered, the UFO seemed to be daring us to approach it and drive underneath it.

The object was disk-shaped, radiant, metallic, the size of an eighteen-wheeler, and utterly silent. I know, because at the moment it first appeared in my field of vision, I reached over to turn off the radio. I don't know why, exactly, but that enabled me to hear whatever ambient noises were present, and other than the air passing by the open car window, there were none – other than the pounding of our hearts, of course.

"Oh, God," I cried, " what do we do?"

"I don't know," Robert replied meekly.

The fear, the greatest we had ever known, was robbing us of the ability to speak. Reacting on instinct, Bob put the pedal-to-the-metal, but this was a Corsair remember, a rickety ol' relic that had long seen its day.

The object awaited us, only a hundred feet or so up ahead. Even at the modest speed we were travelling, there was no way we could stop – not in so short a distance. The laws of physics were indeed committing us to pass right underneath the intruder.

I glanced away, but its otherworldly luminescence still managed to burn its image into my psyche. Robert wasn't so lucky. He was forced to keep his eyes trained on the road, and it was he who noticed the prismatic effect that the object exhibited. As though a rainbow were contained within, the UFO pulsed with an unnatural light.

Passing beyond the "contact point," all I could think of in my panicked state was the possibility that the UFO was toying with us, and I suffered another panic attack. Suddenly, a diffuse light appeared on the distant horizon.

"Could that be?" I wondered.

"I hope so," Bob replied.

What we were seeing were the first familiar signs of humankind: the lights from the western boundary of the miles long Y-12 plant. It was only a couple of kilometers away.
For the next few minutes we hoped and prayed with every bit of fervor a couple of irreverent teens could muster that we'd make it back to civilization without another run-in with the mystery craft. "Just a little further…just a little further," I chanted – a rather different mantra from my usual call-of-the-wild.

"Thank God…thank God," I intoned in unparalleled relief, once we reached the outer limits of the "bomb factory." It's ironic how something so alien as Y-12, with its enormous electromagnets (largest on the planet) and cutting edge technologies, could produce such a warm-fuzzy deep within me. A true baby boomer, I was home…

(postscripts)

Oddly enough, Robert and I never discussed our encounter again. I tried to get him to talk about it once, several months after the fact when I happened upon him in a pizza joint, but he refused. The very mention of it made the blood drain from his face and his knees go wobbly. Quasi-hostile, he strong-armed me to the side and warned me to never bring the subject up again. And so it remained – that silence between us – up until his death of AIDS complications in 1990. In a subsequent conversation with our mutual best friend, I learned that Bob had given him a detailed description of the events of that night, and that all of the pertinent details matched up with my recollections. It was a relief to know that I wasn't just passing swamp gas…

I once queried Stanton Friedman and John Carpenter, two men who've made it their life's work to study the UFO phenomenon, what their take on such a close encounter was, and both replied that it fit the alien abduction profile. "Any encounter that close, usually involves a missing time and/or an abduction component," was their consensus. Both found Robert's apoplexy when cornered in the pizza joint a particularly telling constituent. I was completely unaware of both phenomena – alien abduction and missing time – at the time the event occurred. Not until I assumed the State Directorship of both Kentucky/MUFON and Skywatch did I become aware of just how much Bob and I fit the profile of likely abductees.

Growing up in the Atomic City you learn a lot about its history, about its birth during World War II, its top-secret mission, its chief export – weapons grade uranium – and about the role it played in bringing the war to a rapid conclusion. You never hear about its lengthy and well-documented history of UFO surveillance or about the folks, like Bob and me, who put a human face on the startling statistics. That discovery would also come later.

In October of 1973, a "flap" occurred during which UFOs were seen all over the East Coast, from Louisiana in the south, to Michigan in the north. Oak Ridge, too, had its share of sightings, as her skies were suddenly adorned with amber ovals, red BOLs (balls of light), and multi-colored whatnots. (See "Red Balls of…Light," and "To Have or Have-Not," for a personal account.)

I feel I'm keeping lofty company to have my tales of the strange-but-true included among the likes of researchers of such impressive caliber and credentials. Admittedly, my evidence for the status of Oak Ridge, Tennessee, as a UFO hotspot is anecdotal, but hey – in the beginning was the word…

Nuclear Connection Project

NCP Paper

NCP-10: Nuclear Historical Correlative Research

by Robert Duvall

Robert Duvall

Do UFO respond to our political will in the arena of nuclear weapons? It is inevitable to compare the onset of prolific UFO activity of the last 60 or so years to our acquiring nuclear weapons capability. In making that comparison it is essential to realize the possibility that an historical relationship could exist, and to at least perform a study to make that determination. This paper's primary goal is the introduction of the historical correlative concept and represents a small sample of such a study. This paper also provides topic organizational structure allowing the data to be collected in a fashion that is easily applied to historical research. Although much progress has been made towards firming this approach, not all topics have received correlative attention as of this writing.

Why choose military sighting data? The significance of military sightings is imbedded in the high quality of the observation and documentation, the consistency of the types of activity, and most important, the notice taken by the chain of command. Engaging the military of a state is the most direct way of getting attention – all the way to the top. It is apparent that direct contact with leaders of states today is rare or probably nonexistent. Any sighting at or near to a state's capital should therefore be treated as extremely significant. Most normal UFO activity occurs in fashions not meant to attract attention, such as in the guise of night or in remote areas, or so brief in length as to make it nearly impossible to ascertain anything from the sighting. When discovered, UFO usually end any observation by leaving quickly. Yet military engagement is direct, specific in type and location, often having duration indicating the intent to acquire full attention. Repetition of specific activities related to military could very well be attempts to relate or demonstrate clear superiority, concern over policy/decisions, and, with the more aggressive activity, a conveyance of warnings. That cannot be ignored as a distinct possibility. This is the case with UFO activity related directly to nuclear technology, weaponry and the associated political prowess.

What does this have to do with a possible historical relationship? Evidence supports this relationship. The location and the timing of many of these sightings are coincident with historical events within the related realm, whether that is conventional conflict or specific

aspects of nuclear policy and militarization. This does not apply just to the US. There is much to be learned by applying an orderly study of this relationship both in conventional military conflict and nuclear militarization globally.

Introducing this historical relational concept in a convincing manner to the general populace would require a fairly extensive set of consistent examples. When looking at the complex history of the last 60 years, the task becomes daunting. However, setting specific categories and building examples for each with consideration of pertinent global military actions helps simplify this significantly. The separation between “conventional” and “nuclear” strategy/decisions during the various conflicts must be maintained at all times. The “conventional” military actions have related UFO activities which likely carry with them an agenda differing from that of “nuclear” related UFO activities.

While the results from each category may not stand firm statistically, applied together the composition with their patterns of behavior become more revealing. Over time a sense is acquired of the types of nuclear related policies/decisions/events and the kinds/timing of UFO activity these elicit.

Loren Gross has written about the Berlin crisis of 1948 in an historical relational manner (NCP-01: Some Early Patterns). There are many more nuclear historical manifestations to draw from. Although we lay claim to being the first to detonate atomic weapons, the events that we are studying here in the US are not peculiar to the US - Britain, France, the former Soviet Union (and now, Russia), China, Israel, Pakistan, India, and probably South Africa, all likely have had similar types of activity. The focus of this study has only included the first five. Of those, China and France have yielded little information thus far.

Actions of UFO related to nuclear technology and its utilization border on predictable.

The following list represents known categories for UFO event/nuclear historical correlative study:

* **Weapons Development and Manufacture** – Atomic and thermonuclear - research facilities (Los Alamos, Sandia Labs, Lawrence Livermore) and other developmental locations. This category seems straight-forward in that sightings at these locations could be related to activity at these facilities at the time of the sighting. It could even be as simple as status checks or demonstrating concern through repeated presence at facilities. More study is needed in this category to determine if any historical significance exists in these incursions.

*** Fuel Processing Facilities** (initially Oak Ridge Tennessee then Hanford Washington -in my backyard). Hanford was the second facility built to support the Manhattan Project. The fuel for the weapons used in Japan came from this facility. It would be an obvious target for surveillance and demonstration. An event occurred at this facility on or around the date of the Trinity Test.

Hanford, WA: Radar picked up a fast moving oval object the size of three aircraft carriers side by side which then began to hover over N-Plant at 65,000 ft altitude. Six F6F's were scrambled to the object but reached a maximum altitude of 42,000 ft, 5,000 ft above the rated ceiling of the F6F. The pilots were forced to go back as their engines began to fail and fuel became dangerously low. The object then disappeared as quickly as it came. At least twenty minutes elapsed during the event. The object was described as "very streamlined like a stretched-out egg and

pinkish in color" and emitting vapor from the outer edges. The date of the occurrence was described by Rolan Powell, one of the pilots, as "six weeks before the Japanese surrendered aboard the Battleship Missouri in Tokyo Bay on September 2, 1945." This places the sighting in the middle of July. Living On The Edge: An American war hero's daring feats as a navy fighter pilot, civilian test pilot, and CIA mercenary by Byron D. Varner, privately published. Also interviews with the author and principal, Rolan D. Powell by Walt Andrus. Thanks to Francis Ridge – NICAP Web Site.

Long duration sightings at or near these facilities close to such important dates can interpreted as demonstrations. The timing of these demonstrations often occur about significant atomic/nuclear related events. Do they want our leaders to be cognizant of these incursions and their importance? It is as if they are applying pressure. The sighting over the Oak Ridge facility September 18 of 1944 occurred on the same day as the Hyde Park Accord, a secret accord between the US and Britain [F. D. Roosevelt and W. Churchill] deciding atomic bombing of Japan. There are many events that have occurred over the weapons material manufacturing facilities and much opportunity to learn the historical significance.

A side note:
In a search for information relating UFO to Hanford, documents relating to the cleanup efforts at Hanford turned up with information on a waste dump area officially titled "UFO Landing Area." It is in one of the oldest dump areas of the reservation and adjacent to the main security facilities. It appears, based on another person's review of recent aerial photos, that the cleanup is complete at that location. That was an interesting find. The titles of these various cleanup areas do not show a theme of humor or sarcasm. The underground plume of contaminants at the reservation is slowly working its way toward the Columbia River. At this time, there is not much we can do to halt this progression.

*** Weapons Testing** – have test dates and locations, Space Tests-EMP Moon N-test? (US, Britain, France and Russia) It is likely that appearances were made at a majority of the tests. There is film footage from the DoD that looks suspiciously like a UFO applying surveillance during a test. Many of these tests are available on video. Some of these tests were demonstrations themselves for the sake of applying pressure to the former USSR. These would be likely candidates for demonstration activity from the UFO.

One test in particular that either was or wasn't attempted, was a demonstration test that was slated to occur on the Moon. There are two accounts – one that says the Air Force shut the project down and another that says it was launched, intercepted and destroyed by UFO. Tests did actually take place in space, however, in 1958 and again in 1962 after the test moratorium was over. These were executed to realize the results of ionizing the Van Allen belt with radiation. As it turned out in a test from Johnston Island, radar, radio communications and power were all knocked out in a large area. This EMP (electro-magnetic pulse) affect is known to be a useful tool in knocking out the enemies' ability to retaliate. The possibility of an enemy's use of EMP has become an important driver in having missile defense capability.

Another attempted test on Johnston resulted in destruction of the rocket on the pad and resulting plutonium contamination of a large area around the launch facility. Deaths have been attributed to exposure following the accident.

Its unimaginable that we would have continued to get away with sending these weapons into space. Between the US and the USSR there were at least 20 tests. These were cut off due to the danger posed to space assets, astronauts and cosmonauts, and the population as a whole (not to mention UFO). An Outer Space Treaty was drawn up in response to keep nuclear weapons out of space for detonation or targeting from space. There is a good video called “Nukes in Space” (Peter Kuran – Goldhil Home Media International) and more information on the space tests available on the Internet.

Delivery of fissile materials via naval vessel for these tests had UFO fly-overs. It is also likely the USS Indianapolis and its ill-fated mission delivering the fissile material unescorted for the Hiroshima and Nagasaki bombings had visits by UFO. There are survivors from that sinking, but It seems unjustifiable interviewing them about possible sightings during their voyage after hearing their personal accounts of the hell they lived through.

*** Rocket/Missile Development** (White Sands, Australia, Russia).
It would be consistent for UFO to monitor rocket development both as future delivery vehicles for nuclear weapons and for our space purposes. Accounts exist to support this observation. Further work is needed to provide examples.

*** Nuclear Threat or Standoff Conditions** - dates of US decisions or military command recommendations to pursue the use of nuclear weapons during various conflicts and standoffs.

It is this category that would include incursions over Washington D.C. and other capitals throughout the world. There are many examples to draw from. The demonstrations in these instances would be more bold, pointed at leadership and persistent in duration. The 1952 flap holds many secrets. At that time we were in the midst of the Korean war, were on schedule with development of the hydrogen bomb, had many complex issues to consider regarding the Soviets with their nuclear weapons development and China. China’s involvement in the Korean War had pushed our military command towards recommending the use of atomic weapons at least once. This instance had taken place in the first months of 1951. In 1952 we had new developments involving China over the situation in the Indo-China region. China was once again aiding in a growing conflict that would eventually oust the French colonial government and persist to become the Vietnam War. An article researched and printed in a prominent Japanese newspaper Asahi on September 16, 1984, states that according to documents retrieved through the FOIA, on July 16, 1952, the joint chiefs made the recommendation to take on China utilizing atomic weapons. Excerpts from the article as translated to English:

“The United States Department of State announced on the 14th [September, 1984] that in its diplomatic documents, the United States Armed Forces were concerned with the French gradually losing in its frontline battle in the Indo-China War. The United States was contemplating cutting resources to the League for Vietnamese independence (The Vietnamese army led by Ho Chi Minh), and to use nuclear weapons against China to prevent their descending south.

It is known from the diplomatic documents released last year [1983], that nuclear weapons considered for use against China by the United States when entering the Korean War. But this is the first time that the consideration for the use of nuclear weapons in the first Indo-China war was made public.

According to those documents, the first time that a nuclear strike against China was considered, was on January 11, 1952 at the conference held by military representatives from the United States, France, and England. Chairman Bradley of the Joint Chiefs of Staffs. He suggested that, in order to halt the southern advance of China in the Indo-China war, they warn China about the use of nuclear weapons as being one of their options. But, telling the method that they would use in a retaliatory attack was considered unwise, and the suggestion was dropped.

In the same year, on July 16, at the strategic military conference held by the Department of State and the Joint Chiefs of Staff, Chairman Bradley stated that it would be difficult to halt the southern advance of China without paralyzing their transportation systems with nuclear weapons. It is not known at this time what the view of President Truman was concerning this topic."

There is evidence to support that strong connections exist between political/military considerations of the use of nuclear weapons and the appearance of UFO at the capitol or other important government facilities. Of the conflicts since WWII, the Vietnam War has provided the largest number of nuclear scenarios beginning in 1949, when the Chinese began supplying arms to Ho Chi Minh. Certainly all of the nuclear threats and standoffs have to be studied to look for consistent patterns before passing judgement on the 1952 D.C. correlation indicated above.

*** Deployment of Nuclear Bomber and Missile Wings** - US and overseas, increased activity as a result of. (over bombers on alert status, weapons storage, harassing bombers on training missions, etc…) (most US locations were bases left over from WWII).

Deployment historical documents for the US and overseas are being utilized. Although this category is not documented yet, many examples have been collected over the years to suggest that correlation of activity with deployment is a sure thing. This will be backed with data as this effort continues. The primary purpose of covering this topic is to indicate a strong statistical relationship. If UFO are truly interested in and concerned over our nuclear components as the evidence supports, this would in itself be the motivation for the different incursions over these bases. Monitoring weapon types, movement and deployment would surely be the activities they would engaged in. Another aspect this topic uncovers is the treatment generally of our military planes. UFO tend to engage our military aircraft directly and boldly.

*** Nuclear False Alerts -** bomber fleet attacks or missile launches indicated by early warning radar installations or satellites-occurring in the US or USSR (with consideration of specific nuclear related action or deployment by a country, increasing political tensions).

This is one hot topic. Of course there have been many false alerts that were of our own accord, whether equipment malfunction, inadequate equipment design, or technology infancy. Then there are some that probably fall completely out of our hands, and its interesting to note what was going on when these occurred. As an example, in the mid 1970's, European NATO countries were reformulating defense policy. It made little sense to have large numbers of ground troops in the face of a nuclear threat from the USSR. What really made sense both economically and strategically, was to have Eastern Europe defended by a theater of medium range nuclear tipped missiles. The only problem was that the location

of the missiles only gave Moscow six minutes response time. Comparing that with what the US had left a clear imbalance. Deployment of the Pershing II missiles began in the early eighties. Many articles about false alerts during this period indicate the number of false alerts through 1985 is surely in the thousands. This is difficult to verify. Equally difficult to verify is the source of these alerts. There are the same few explanations repeated over and over. While this accounts for a few, what of the rest? The true depth of the issue of false nuclear alerts is not explored or exposed for reasons likely having to do with public confidence. If UFO have had a role in keeping our defense apparatus off balance with these staged scenarios, who in the defense department would ever admit this?

Going back to December of 1950, about a year after Russia had detonated its first atomic bomb, we had an alert that looked like Russian bombers headed towards our Northeastern coast. This was probably our first alert. The bombers faded out on the radar screens before any detrimental action was taken. Its interesting to note that a year after the first detonation would have provided the Russians enough time to assemble the weapons and to get the bombers ready for the task.

This is a difficult topic to get good data on. But it would be consistent that UFO would engage the US and the Soviets in such a fashion. If anyone reading this is aware of examples, please pass them along.

*** Missile Wing Interference** (nondestructive and limited scope demonstrations/warnings) -with missile launch readiness or missile trajectory change, or with test launches curtailing dummy warhead trajectory, all demonstrating highly advanced capability we are unable to anticipate and design to. (Both US and USSR. What else do they have up their sleeve?) At some point we passed the line separating the possibility and the probability of utilizing ICBM weapons. This is a discussion worth engaging in because it will likely reveal that military and political will somehow changed in the early 1960's to elicit the bold UFO activity experienced at the various missile bases. It is no secret to most individuals who have read the various publications discussing military related UFO activity that launch capability of limited numbers of missiles were taken offline on a few occasions, and that launch coordinates were altered at least once.

There was also a test launch of an Atlas ICBM with a dummy warhead out over the Pacific in September of 1964 (Deliberate Deception: The Big Sur UFO Filming – Bob Jacobs). This test was filmed and, upon review of the film, officials in the airforce found a disk entering into the frames, circling the warhead, shooting a laser like beam at four separate locations on the warhead, and exiting the frames. The dummy warhead then tumbled out of its trajectory. There are many other instances including an individual silo in Russia where the controls indicated to the operator for a harrowing 15 seconds that the launch sequence was initiated and the missile was about to launch. A massive UFO hovered outside of the silo control facility. The top officials were aware of this event. Why did these kinds of activity occur? One assessment is that we were being shown a superior capability. For what purpose? Here are some possible reasons:

Indicating to our military command that we do not have the control over these assets that would have to be in place in order to utilize them.

Allowing that we may not know whether our equipment is malfunctioning or that the source is external.

Allowing that in a real scenario, we will not have certainty that interference wouldn't occur again.

Uncertainty seems to play an important role. With thousands of nuclear weapons ready to go at any time and with the predictions of the outcome uncertainty has no place. No permanent damage was incurred by these activities and our national security was minimally compromised. The people at the top were well aware of these events.

*** Nuclear Military Exercises** (US and joint).
This is another category that is worth filling in with some research. If pressure was being applied using these other areas for demonstration, likely nuclear exercises would have had them as well.

*** Nuclear Accidents** (research, reactor, weapons test, weapons lost, vessels sunk).

There was one purported incident in Canada where a small nuclear-tipped cruise missile was fired from a US military aircraft at a UFO, missing it, of course. Although that may not be considered an accident, it is not stated whether the missile was recovered after the incident.

There were many occasions when bombs were lost, nuclear submarines loaded with missiles sank, and accidents occurred at nuclear fuel processing plants and nuclear power plants. A limited search for activity at Three Mile Island in Pennsylvania turned up dry. There may have been some related activity after the event. It will take more work.

Chernobyl was a different case. UFO Activity occurred prior to and after the accident there. Readings before and after a sphere descended over the facility just after the accident indicated that the level in that area had been reduced by over 2/3, according to Paul Stonehill in "The Soviet UFO Files".

*** Mining Raw Uranium** – what better place to make a statement than the mines.

There is documented activity over uranium mines in Africa. It is likely that data will support mine-related sightings in Wyoming. And here's a fascinating event that occurred in Texas:

The summer of 1971, I was working the night shift for Conoco Oil Co. at an open pit uranium mine west of Karnes City, Tx. I was one of 6 people operating Caterpillar 657B earth movers. We were down to about 210 feet deep when this incident happened. It was about 11:10 PM , just after shift change we were getting ready to crank our machines, when the 85 acre pit lit up as if it was daylight. The light was so bright that I had to squint because it hurt my eyes. I remember hearing a high pitched hissing noise and the hair on my arms stood on end. I was so scared, I fell to the ground and started praying. I remember trying to look up, but the light was so bright I couldn't. After about 2 minutes, the light started getting dimmer and I could finally look up at it. What I saw amazed me. The object was round and the bright light was coming from the center of the bottom of the UFO. Around the perimeter of the craft was hundreds of penlight size light beams that alternated in all colors of the spectrum. Now I know they were laser beams. The UFO was rising up slowly at first and then went straight up out of sight in about 10 seconds. I was crying and shaking and so was everyone else. The other shift workers thought we were crazy when we told them what had

happened. But we got the last laugh. This is how we proved it actually happened. There is a vein of uranium ore that runs from George West Texas to almost Texarkana Texas. When determining where to place a mine, the following steps are accomplished: (1) A geologist with a geiger counter flies over the area and finds the highest radiation reading. (2) Drilling trucks are sent out and core samples are drilled to determine the highest concentration of uranium ore. These core samples are drilled in a grid pattern and every core sample is given a tracking number and logged in showing the concentration and amount of uranium present. (3) The open pit mine is then laid out according to these core samples. When this UFO incident happened, we were about 2 feet away from a layer of hard rock called the "tap rock" that laid directly on top of the uranium ore. The uranium ore varied in depth from 6 to 18 inches and had about the same brown color as low grade coal. Two days after this incident, the tap rock was removed to expose the uranium ore. We were astounded to find that the uranium ore was now a chalky white substance that had NO radioactivity at all! There was a 250 foot diameter circle of this chalky material in the center of the pit. Outside of the circle, the uranium ore was still as potent as before the incident. Core samples don't lie. This chalky material was uranium before this incident. Many a night I have laid in my bed thinking about what happened. I think the UFO needed the uranium for some reason.

NUFORC
Occurred : 6/15/1971 23:10 (Entered as : 6/15/71 23:10)
Reported : 5/27/1999 21:18
Posted : 6/23/1999
Location : Karnes County, TX
Shape : Circle UFO sighting over open pit uranium mine.

Interpretation of this event is that a demonstration was made regarding the use of uranium. If UFO needed raw or processed uranium, certainly given the advanced capabilities displayed, they could have taken as much as they wanted from any source. If that were the intent you would see much more of that kind of activity around these mines and likely we would be dealing with losses at facilities where processed material is stored, which is simply not supported by the sighting data available. In this case however what we have is a known quality and quantity of raw material that is days away from being extracted. Right in front of the workers this UFO comes down and renders the uranium worthless in an area large enough to get attention. There are no other events on subsequent days. Just this one. This surely got the attention of any engineering personnel working on the project. It is likely that the information was forwarded to the AEC or another government agency. Another event was probably noted by the government for its specificity in dealing with nuclear technology. The pressure was maintained.

*** Weapons Component and Chemical Manufacturing Facilities**
There were likely events occurring over plants that may have been involved in materials used in processing weapons fuel. More work is needed for this category.

*** Weapons Dismantling Facility** (Pantex, Texas)
This should provide some recent activity if they are monitoring our progress.

*** Power Outage Events** – conflict related? Nuclear related? (Vietnam – many events)

Is it possible that the power outage events of the 1960's and 1970's were responses to political/military actions? The many articles and books indicate the immense depth of political turmoil brought on by the Vietnam War. The controversy over the courses of action and the lack of a clear plan based on sound intelligence and analysis brought the public in on the political fray. These sentiments were shared by the public of allied countries as well. From the controversial Tonkin Gulf Resolution (possible UFO involvement in this incident) on we were in over our heads. Documentation from several government sources reveal that discussions to utilize nuclear weapons came up on several occasions. Early in 1965, President Johnson had initiated a massive bombing campaign in Vietnam that continued throughout the year. What happened towards November of that year? If indeed the Northeastern US power outage of that year was initiated by UFO, what was the message? What prompted that action? Was Johnson initiating a nuclear option? There were serious nuclear bomber training missions from an aircraft carrier in the Vietnam region the summer of that year. A clear picture has not yet emerged and further historical research is needed to look for the correlative relationship. The other outage events have to be evaluated as well.

*** Hiroshima and Nagasaki**

iates have shed much light on these events. It importance and horrific nature to set in whe is common knowledge among some of those he bomb ing that UFO wer present weeks and after, there is little known evidence to supp g there wer efforts to study the affects fferent disciplines. Film and camera crews ccompanied them documenting every aspect of these affects. Included in the photographic records are probably hundreds of pictures and film footage of the UFO present on a daily basis. While a few pictures are posted on the Internet that appear to include UFO, a more robust photographic record will be needed to set the record straight. Additionally, there are probably some written accounts of the UFO surveillance. There can be no doubt that there was much outward interest and concern displayed during this unique and horrific time in human history.

*** Naval Nuclear Launch Submarines**

Deployment of submarines is unique due to the ability to close in to specific locations. Many of these sightings involve UFO submerging in and exiting the oceans.

*** Treaties and Their Role**

Is it possible that related UFO activity had a small influence on treaties? It is hard to ignore the distinct possibility that UFO have pressured our governments indirectly.

Today researchers are in a unique position. A plethora of nuclear historical information is available from many sources. Thanks to the hard work of many individuals, large numbers of sightings at sensitive installations have been documented and put into databases for study. The time is right to put new efforts into understanding the historical significance of these military UFO sightings. If indeed, these events are as relational as it now seems, we may begin to understand their role. Imagine that!

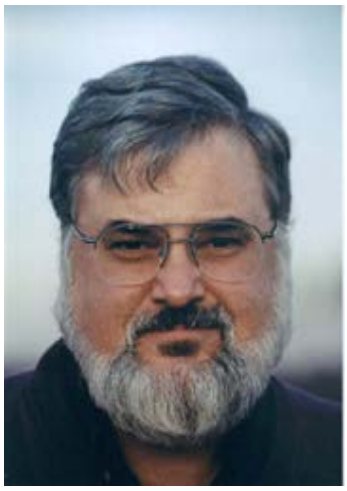
NCP-11: Do Nuclear Facilities Attract UFOs?



by Donald A Johnson, PhD
Sun River Research
Bow, NH
Original Link
ufocat@cufos.org

On numerous occasions, UFOs have been reported over nuclear power plants as well as nuclear research facilities and nuclear weapons storage bunkers at military bases. (1) A good percentage of these reports occurred at highly restricted government research and production facilities, such as Los Alamos, Oak Ridge, Hanford AEC, and Savannah River AEC. Highly trained government scientists and military personnel, who had been granted top-secret military clearances, made many of these reports.

In a well-documented series of incidents in early November 1975, nocturnal lights and unidentified “mystery helicopters” visited a wide spectrum of American military bases and missile sites across the northern tier of this country. Between October 27 and November 10, reports of UFOs over nuclear weapons storage sites were repeatedly made at Loring AFB in northern Maine, Wurtsmith AFB in Michigan, Grand Forks and Minot Air Force Bases in North Dakota, and Malmstrom AFB in Montana. F-106 interceptors were scrambled out of Malmstrom AFB near Great Falls, Montana in response to multiple reports of UFO visits to nearby missile sites near Moore, Harlowton, Lewistown, and several missile sites around Malmstrom AFB. (2)

A similar rash of incursions occurred in December 1948 (Los Alamos), December 1950 (Oak Ridge), July 1952 (Hanford AEC, Savannah River AEC, and Los Alamos), August 1965 (Warren AFB near Cheyenne, WY), March 1967 (Minot AFB, Malmstrom AFB, and Los Alamos), August 1968 (Ellsworth AFB in South Dakota), August 1980 (Warren AFB, Sandia Labs and Kirtland AFB, NM), December 1980 (Benwaters RAFB, Suffolk, England), and October 1991 (Chernobyl, Ukraine and Arkhangel’sk Missile Base, Russia).

These reports led some to speculate that the intelligences behind UFOs have an interest in nuclear

weapons and nuclear power. One feature of these reports suggesting a direct link deals with light rays or energy beams being focused on nuclear materials.(3) Multiple independent accounts state that beams of light were directed downward from the UFOs onto the nuclear storage bunkers and underground missile silos, perhaps penetrating them beneath the surface. (4) (5) In addition, there have been unsubstantiated rumors from enlisted men that the telemetry of the weapons at some sites had been changed or that other weapons had been rendered inoperative.(6) (7)

Some researchers have suggested that the occupants of UFOs have a deep concern about the safety of nuclear power, and our proliferation of nuclear weapons, and are therefore keeping a close scrutiny of these sites. During the Chernobyl nuclear power plant disaster on April 26, 1986, technicians reported that they observed a fiery sphere, similar in color to brass, within 1,000 feet of the damaged Unit 4 reactor during the height of the fire, about three hours after the initial explosion. Two bright red rays shot out from the UFO and were directed at the reactor. It hovered in the area for about three minutes, then the rays vanished and the UFO moved slowly away to the northwest. Radiation levels taken just before the UFO appeared read 3,000 milliroentgens/hour, and after the rays the readings showed 800 milliroentgens/hour. Apparently the UFO had brought down the radiation level.(8)

Is there any statistical evidence that indicates a heightened attention to nuclear sites? In an effort to determine this, we applied the techniques of epidemiology to the UFO evidence accumulated since World War II. Table 1 below was developed from the UFOCAT 2002 database. It compares 164 counties with nuclear facilities to a control group of 164 US counties without nuclear facilities. Nuclear facilities include those plants involved in the storage or manufacturer of nuclear materials, including military bases where nuclear weapons are deployed and commercial or research nuclear power plants. A nuclear facility might be a small commercial nuclear power plant such as Vermont Yankee in Windham County, Vermont; or it might be a nuclear production plant such as Rocky Flats in Jefferson County, Colorado; or it might be a nuclear submarine base such as Bangor Naval Base in Kitsap County, Washington.

The control group counties were selected on the basis of the closest match in population, with an attempt to also match the same region of the country (Northeast, Midwest, South, Mountain, West Coast) as the county with a nuclear facility, and with an attempt to exclude control group counties with military bases that might have held nuclear weapons at one time. The results suggest that there is an important association between the presence of a nuclear facility and the rates of both UFO sightings and close encounters (CE). This association tends to increase with those counties with smaller populations, so the results are further stratified by five population categories:

(a) counties with populations over 500,000;
(b) counties with populations between 225,000 and 500,000;
(c) counties with populations between 101,000 and 225,000;
(d) counties with populations between 50,000 and 101,000; and
(e) counties with populations under 50,000.

For US counties with populations between 50,000 and 101,000 the rate of UFO reports peaks at 37.03 per 100,000 people for those counties with nuclear facilities, and this rate is 2.61 times higher than for similar counties without nuclear facilities. Overall, the rate of UFO sighting reports is 13.84 for nuclear site counties and 9.59 for non-nuclear counties, for a relative risk of 1.44. In other words, they are 1.44 times more likely to occur in these counties. For close encounter reports, the rate is 2.58 per 100,000 compared to 1.79 per 100,000 in non-nuclear counties, for a relative risk of 1.44. Ninety-two of the nuclear site counties are considered UFO “hotspots,” having had four or more UFO close encounters, while only 70 of the non-nuclear counties are rated as UFO hotspots.

The answer about whether nuclear facilities attract UFOs appears to be “yes.” There is an excess

of 3,051 UFO reports for nuclear site counties above what would have been predicted based on the non-nuclear counties. For close encounters, there is an excess of 568 close encounter reports over what should have been expected based on other UFO reporting dynamics.

In a previous study using US county data, education was found to be positively correlated with UFO reporting. Those counties with a higher percentage of residents possessing a high school degree were found to produce larger numbers of UFO reports. (9) So it is important to check if there is a large imbalance in educational level between the nuclear-site and non-nuclear counties selected for this study.

From 1960 US Census data, the average percentage of those adults (over age 25) possessing a high school degree across the 164 nuclear-site counties was 43.7%. This compares to a rate of 38.9% for the 164 non-nuclear counties. In general, it can be stated that nuclear facilities tend to require a more highly educated work force, and this fact may account for the small difference noted between the two groups. Whether this small difference in educational level could explain all of the excess in UFO reports and close encounters seems doubtful.

So we are left with a somewhat troubling finding. Apparently UFO reports do occur more frequently in the vicinity of nuclear sites, after controlling for population and the region of the country. Given that the motives of the intelligences behind UFOs, assuming that UFOs are intelligently controlled, are not well known, we should be concerned. Given the long history of UFO incursions at sensitive, highly-restricted nuclear facilities; and given that the events of September 11, 2001 have drawn attention to the vulnerability of nuclear power plants to terrorist acts, it would seem to behoove national security agencies to re-direct some attention to the issue of UFOs entering restricted air space over nuclear facilities. No matter how possibly benign the motives of the UFO occupants may be, were I the new Director of Homeland Security I would certainly be paying attention to this matter.

(1) The UFOCAT 2002 database lists 289 reports at sites coded as “Missile” or “Nuclear” facilities. These reports date from March 1944, an aerial encounter near Yakima, Washington not far from the huge WWII plutonium production plant at Hanford, to another aerial encounter in October 2001 over a nuclear power plant in Kent, England. At least 52 of these cases are close-encounter reports.

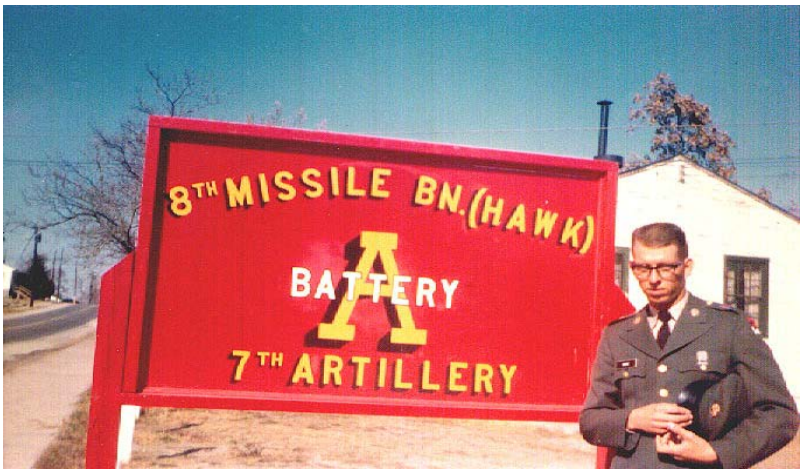
NCP-15
The Cuban Missile Crisis & UFOs?



Francis Ridge
NCP Coordinator

First, watch this scary video clip of our M280

Premier Khrushchev authorized his Soviet field commanders in Cuba to launch their tactical nuclear weapons if invaded by U.S. forces.

8/21/2008, updated 4/23/2019

Since November of 1960 I had been an authorized FI & Subcommittee Chairman/team leader for the National Investigations Committee on Aerial Phenomena. In September of 1963, as head of Indiana Unit #1, I was asked to give a briefing to the 1127th Air Reserve Squadron at Vincennes, Indiana. My briefing covered the key points of the concern about serious UFO reports, including the possibility of accidental war from misinformed air defense radar men mistaking UFOs for Soviet missiles during dangerous alert periods.

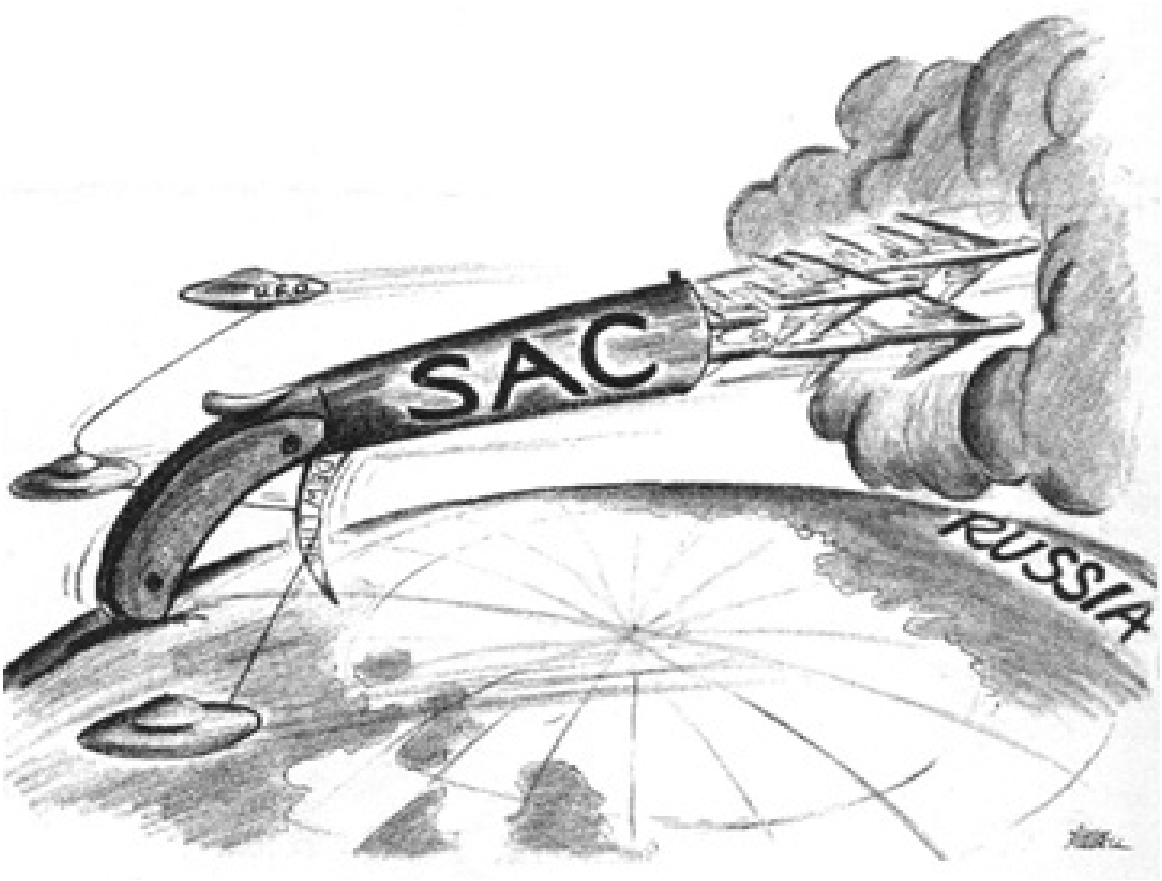
In October of 1961, two years earlier, one of NICAP's newsletters explained the dangers: "In a recent statement, Vice President Johnson declared: 'The western allies must be prepared for every possible eventuality- - deliberate or accidental.' Three weeks prior to that, the Vice President sent the Senate Preparedness Subcommittee an urgent NICAP report on one increasing hazard: The danger of mistaking UFOs for Soviet bombers or missiles. The NICAP newsletter also mentioned that there was an equal danger that Russia might fatally mistake UFOs for a U.S. attack. If our Government would spotlight this risk, it might cause the Kremlin to take similar steps to end confusion over UFOs." How this ties into the Cuban Missile Crisis will be discussed very shortly.

I began database work on UFOs in 1986. The idea was to track UFOs in databases as they move from one location to another, actually crossing state lines. Close encounters and radar cases adding credibility to even distant daylight and nighttime sightings. But this was an extreme rarity: Database

research showed UFOs apparently left the scene vertically, or at least that's what they appeared to do in many instances. I settled down with a six-state region, covering and listing sightings from Missouri to Ohio and Indiana to Tennessee. After looking for correlations in the printouts I noticed something unusual, but I didn't give it much thought at the time.

In 1997 I began work on the new NICAP web site to collect and post all the massive evidence from the NICAP files. Soon I would elicit the help of what would become the A-Team, about 25 people who could help me conduct this huge effort. One of the jobs we had was to update the old chronologies (prior 1947 to 1995) and create the new ones (1996 to date). In that process we posted the 1962 chrono in April of 2006. What I thought was unusual also showed up in the updated chrono.

Because of my years-long interest in the possibility of a UFO/nuclear connection, in July of 2003 I established the Nuclear Connection Project (NCP) to look for nuclear connection cases and post them, along with related material. I got together a team of specialists and went to work. The main focus of the NCP was to look for connections, correlations.



In the earlier years we were more concerned with UFOs triggering accidental nuclear war. Declassified government documents show that unexplained objects with extraordinary technical capabilities pose challenges to military activity around the globe. U.S. fighter jets have been scrambled to pursue UFOs, according to North American Aerospace Defense Command (NORAD) logs and U.S. Air Force documents. Peruvian and Iranian Air Force planes attempted to shoot down unexplained objects during air encounters, and Belgium F-16's equipped with automatically guided missiles pursued UFO's in 1990 .In those earlier decades, such concerns were openly discussed among American government officials. In 1960, for example, Representative Leonard G. Wolf of Iowa entered an "urgent warning" from former CIA Director Vice Admiral R.H. Hillenkoetter (one of our NICAP's members) into the Congressional Record that "certain dangers are linked with unidentified flying objects." Wolf cited Gen. L.M. Chassin, NATO coordinator of Allied Air

Service, warning that "if we persist in refusing to recognize the existence of the UFOs, we will end up, one fine day, by mistaking them for the guided missiles of an enemy - and the worst will be upon us."

So what happened in 1962? If we consider only the Cuban Missile Crisis, that was bad enough. 1962 was one of the most dangerous years in history, if not THE most dangerous. It is nothing short of a miracle that we are here today talking about this. What you are about to read will astound you.

One of the papers I posted on the Nuclear Connection Project site is one called, "20 Mishaps That Might Have Started Accidental Nuclear War", by Alan F. Philips, M.D. TWELVE those incidents occurred in 1962!!!!

1) B-52 Navigation Error. A SAC Chrome Dome airborne alert route included a leg from the northern tip of Ellesmore Island, SW across the Arctic Ocean to Barter Island, Alaska. On August 23, 1962, a B-52 nuclear armed bomber crew made a navigational error and flew 20 degrees too far north. They approached within 300 miles of Soviet airspace near Wrangel island, where there was believed to be an interceptor base with aircraft having an operational radius of 400 miles. Because of the risk of repetition of such an error, in this northern area where other checks on Navigation are difficult to obtain, it was decided to fly a less provocative route in the future. However, the necessary orders had not been given by the time of the Cuban missile crisis in October 1962, so throughout that crisis the same northern route was being flown 24 hours a day.

2) U2 Flights into Soviet Airspace. U2 high altitude reconnaissance flights from Alaska occasionally strayed unintentionally into Soviet airspace. One such episode occurred in August 1962. During the Cuban missile crisis on October of 1962, the U2 pilots were ordered not to fly within 100 miles of Soviet airspace. On the night of October 26, for a reason irrelevant to the crisis, a U2 pilot was ordered to fly a new route, over the north pole, where positional checks on navigation were by sextant only. That night the aurora prevented good sextant readings and the plane strayed over the Chukotski Peninsula. Soviet MIG interceptors took off with orders to shoot down the U2. The pilot contacted his U.S. command post and was ordered to fly due east towards Alaska. He ran out of fuel while still over Siberia. In response to his S.O.S., U.S. F102-A fighters were launched to escort him on his glide to Alaska, with orders to prevent the MIG's from entering U.S. airspace. The U.S. interceptor aircraft were armed with nuclear missiles. These could have been used by any one of the F102-A pilots at his own discretion.

3) A Soviet Satellite Explodes. On October 24, a Soviet satellite entered its own parking orbit, and shortly afterward exploded. Sir Bernard Lovell, director of the Jodrell Bank observatory wrote in 1968: "the explosion of a Russian spacecraft in orbit during the Cuban missile crisis... led the U.S. to believe that the USSR was launching a massive ICBM attack." The NORAD Command Post logs of the dates in question remain classified, possibly to conceal reaction to the event. Its occurrence is recorded, and U.S. space tracking stations were informed on October 31 of debris resulting from the breakup of "62 BETA IOTA."

4) Intruder in Duluth. At around midnight on October 25, a guard at the Duluth Sector Direction Center saw a figure climbing the security fence. He shot at it, and activated the "sabotage alarm." This automatically set off sabotage alarms at all bases in the area. At Volk Field, Wisconsin, the alarm was wrongly wired, and the Klaxon sounded which ordered nuclear armed F-106A interceptors to take off. The pilots knew there would be no practice alert drills while DEFCON 3 was in force, and they believed World War III had started. Immediate communication with Duluth showed there was an error. By this time aircraft were starting down the runway. A car raced from command center and successfully signaled the aircraft to stop. The original intruder was a bear.

5) ICBM Test Launch. At Vandenburg Air Force Base, California, there was a program of routine ICBM test flights. When DEFCON 3 was ordered all the ICBM's were fitted with nuclear warheads

except one Titan missile that was scheduled for a test launch later that week. That one was launched for its test, without further orders from Washington, at 4 a.m. on the 26th. It must be assumed that Russian observers were monitoring U.S. missile activities as closely as U.S. observers were monitoring Russian and Cuban activities. They would have known of the general changeover to nuclear warheads, but not that this was only a test launch.

6) Unannounced Titan Missile Launch. During the Cuba crisis, some radar warning stations that were under construction and near completion were brought into full operation as fast as possible. The planned overlap of coverage was thus not always available. A normal test launch of a Titan-II ICBM took place in the afternoon of October 26 (same day as the California Titan launch!!!), from Florida to the South Pacific. It caused temporary concern at Moorestown Radar site until its course could be plotted and showed no predicted impact within the United States. It was not until after this event that the potential for a serious false alarm was realized, and orders were given that radar warning sites must be notified in advance of test launches, and the countdown be relayed to them.

7) Malmstrom Air Force Base. When DEFCON 2 was declared on October 24, solid fuel Minuteman-1 missiles at Malmstrom Air Force Base were being prepared for full deployment. The work was accelerated to ready the missiles for operation, without waiting for the normal handover procedures and safety checks. When one silo and missile were ready on October 26 no armed guards were available to cover transport from the normal separate storage, so the launch enabling equipment and codes were all placed in the silo. It was thus physically possible for a single operator to launch a fully armed missile at a SIOP target. During the remaining period of the Crisis the several missiles at Malmstrom were repeatedly put on and off alert as errors and defects were found and corrected. Fortunately no combination of errors caused or threatened an unauthorized launch, but in the extreme tension of the period the danger can be well imagined.

8) NATO Readiness. It is recorded on October 22, that British Prime Minister Harold Macmillan and NATO Supreme Commander, General Lauris Norstad agreed not to put NATO on alert in order to avoid provocation of the U.S.S.R. When the U.S. Joint Chiefs of Staff ordered DEFCON 3 Norstad was authorized to use his discretion in complying. Norstad did not order a NATO alert. However, several NATO subordinate commanders did order alerts to DEFCON 3 or equivalent levels of readiness at bases in West Germany, Italy, Turkey, and United Kingdom. This seems largely due to the action of General Truman Landon, CINC U.S. Air Forces Europe, who had already started alert procedures on October 17 in anticipation of a serious crisis over Cuba.

9) British Alerts. When the U.S. SAC went to DEFCON 2, on October 24, Bomber Command (the U.K.) was carrying out an unrelated readiness exercise. On October 26, Air Marshall Cross, CINC of Bomber Command, decided to prolong the exercise because of the Cuba crisis, and later increased the alert status of British nuclear forces, so that they could launch in 15 minutes. It seems likely that Soviet intelligence would perceive these moves as part of a coordinated plan in preparation for immediate war. They could not be expected to know that neither the British Minister of Defense nor Prime Minister Macmillian had authorized them.

10) Moorestown False Alarm. Just before 9 a.m., on October 28, the Moorestown, New Jersey, radar operators informed the national command post that a nuclear attack was under way. A test tape simulating a missile launch from Cuba was being run, and simultaneously a satellite came over the horizon. Operators became confused and reported by voice line to NORAD HQ that impact was expected 18 miles west of Tampa at 9:02 a.m. The whole of NORAD was reported, but before irrevocable action had taken place it was reported that no detonation had taken place at the predicted time, and Moorestown operators reported the reason for the false alarm. During the incident overlapping radar's that should have confirmed or disagreed were not in operation . The radar post had not received routine information of satellite passage because the facility carrying out that task had been given other work for the duration of the crisis.

11): False Warning Due to Satellite. At 5:26 p.m. on October 28, the Laredo radar warning site had just become operational. Operators misidentified a satellite in orbit as two possible missiles over Georgia and reported by voice line to NORAD HQ. NORAD was unable to identify that the warning came from the new station at Laredo and believed it to be from Moorestown, and therefore more reliable. Moorestown failed to intervene and contradict the false warning. By the time the CINC, NORAD had been informed, no impact had been reported and the warning was "given low credence."

12) November 2, 1962: The Penkovsky False Warning. In the fall of 1962, Colonel Oleg Penkovsky was working with the Soviets as a double agent for the (U.S.) C.I.A. He had been given a code by which to warn the CIA if he was convinced that a Soviet attack on the United States was imminent. He was to call twice, one minute apart, and only blow into the receiver. Further information was then to be left at a "dead drop" in Moscow. The pre-arranged code message was received by the CIA on November 2, 1962. It was known at the CIA that Penkovsky had been arrested on October 22. Penkovsky knew he was going to be executed. It is not known whether he had told the KGB the meaning of the code signal or only how it would be given, nor is it known exactly why or with what authorization the KGB staff used it. When another CIA agent checked the dead drop he was arrested.

It is hard to imagine that out of 20 mishaps that could have led to a nuclear war, 12 of them occurred in 1962, most of them during the Cuban missile Crisis. But it gets worse....

THE CRISIS WAS WORSE THAN WE THOUGHT

This was discovered in 1992: Unknown to U.S. intelligence for 30 years, the Soviet Union had sneaked about 100 small tactical nuclear weapons into Cuba at the time of the 1962 missile crisis, in addition to its more powerful strategic missiles.

The Soviet leader Nikita Khrushchev had authorized his field commanders in Cuba to launch their tactical nuclear weapons if invaded by U.S. forces.

But Khrushchev, horrified that Castro had urged him to launch strategic nuclear missiles against the United States at the height of the crisis, ordered that all the tactical weapons be swiftly removed. The crisis ended and the last of the tactical warheads was reported returned to the Soviet Union in December 1962, according to documents found by Western and Russian researchers in once-secret Soviet archives.

"In retrospect, it shows the crisis was more dangerous than thought," said George Washington University professor Jim Hershberg, an expert on the crisis. "If we had invaded Cuba (the Joint Chiefs of Staff at the Pentagon had urged President Kennedy to invade Cuba immediately, before the Soviets' missiles were fully operational) and they had used some of these [tactical] weapons, it would have been awful." The Soviet archives showed that the CIA's failure to spot the tactical nukes led to a potentially catastrophic underestimation of the threat that Cuba posed as President Kennedy was considering invading the island to knock out the strategic missiles.

Robert Hastings: "To his everlasting credit, Kennedy pushed back. Still stinging from the poor advice he had earlier received from the military and CIA, when they eagerly advocated the ill-fated Bay of Pigs invasion by anti-Castro Cubans, Kennedy wanted to explore other military options before actually invading Cuba. Hence a sea blockade was implemented, intended as a barrier to further Soviet shipments of missiles to its Cuban allies. Only decades later did the enormity of Kennedy's decision become known." (UFOs and Nukes, Hastings, Page 124).

At a 1992 academic seminar in Havana on the missile crisis, Gen. Anatoly Gribkov, of the former Soviet armed forces general staff, blurted out that Moscow had sent to Cuba, in addition to the 24

medium range nuclear missiles, nine nuclear warheads for ground-to-ground Luna rockets, also known as FROGs, in 1962. With a range of 30 miles and 2-kiloton warheads -- the Hiroshima bomb was 14 kilotons -- Lunas are considered tactical ``battlefield'' weapons, unlike strategic missiles with a 1,000-mile-plus range and warheads of one or more megatons. These nine weapons were under the authority of local Soviet field commanders. In event of war, those could have been launched at the officers' discretion, without prior authorization from Moscow. Gribkov said that had President Kennedy ordered an invasion, it was the Soviet commanders' intention to use the tactical nukes against U.S. forces as they landed on Cuban beaches.

The world has long known about Moscow's deployment in Cuba of the 24 SS4 and SS5 missiles. With that one stroke, Khrushchev hoped to double the number of Soviet missiles capable of hitting the U.S. heartland, while extending his nuclear defensive umbrella to Cuba. They included 80 FKR cruise missiles armed with 12-kiloton warheads. The FKR was essentially a scaled-down, pilotless version of a MiG jet, with a target guidance system good out to 100 miles, although it could fly much farther. It was designed to defend the Cuban coastline and the land around the U.S. Naval Base at Guantanamo Bay from any U.S. invasion attempt.

The Soviet freighter Indigirka, carrying 45 SS4 and SS5 warheads, 36 of the FKR warheads and all of the Luna and Il-28 nuclear warheads, left the Soviet Union on Sept. 15 and arrived in the Cuban port of Mariel on Oct. 4, three weeks before the crisis erupted. The Aleksandrovsk, carrying 24 strategic warheads and 44 FKR warheads, docked in the north-central port of La Isabela on Oct. 23 -- the day before the U.S. blockade of Cuba's shipping lanes went into effect. The hot part of the crisis essentially ended that Oct. 28 when Khrushchev agreed to withdraw the SS4s and SS5s in exchange for a public Kennedy promise not to invade Cuba and a secret vow to remove U.S. nuclear missiles from Turkey.

Perhaps most alarmingly, at the time of the crisis, no one in Washington, including the Joint Chiefs of Staff—who were urging Kennedy to send troops into Cuba as soon as possible—knew of the tactical missiles' presence. Decades later, while referring to General Gribkov's dramatic revelations, Kennedy's Secretary of Defense, Robert McNamara, said of the proposed invasion, "Had we carried out that attack, there would have been [tactical] nuclear war [in Cuba] and where that would have lead nobody knows."

With all that was going wrong in 1962 it was a miracle the human race still thrives on Planet Earth.

But there's more. I recently became aware of the following incident.

Vasili Alexandrovich Arkhipov (Russian) was a Soviet Navy officer. During the CUBAN Missile Crisis, he prevented the launch of a nuclear torpedo and thereby prevented a nuclear war.

In July 1961, Arkhipov was appointed deputy commander or executive officer of the new Hotel-class ballistic missile submarine K-19. During its nuclear accident, he backed Captain Nikolai Vladimorovich Zateyev during the potential mutiny. While assisting with engineering work to deal with the overheating reactor, he was exposed to a harmful level of radiation. This incident is depicted in the American film K-19, The Widowmaker.

On 27 October 1962, during the Cuban Missile Crisis, a group of eleven United States Navy destroyers and the aircraft carrier USS Randolph located the diesel-powered nuclear-armed Soviet Foxtrot-class submarine B-59 near Cuba being in international waters, the Americans started dropping practice depth charges, explosives intended to force the submarine to come to the surface for identification. There had been no contact from Moscow for a number of days and, although the submarine's crew had earlier been picking up U.S. civilian radio broadcasts, once B-59 began attempting to hide from its U.S. Navy pursuers, it was too deep to monitor any radio traffic, so those on board did not know whether war had broken out. The captain of the submarine, Valentin

Grigorievitch Savitsky, believing that a war might already have started, wanted to launch a nuclear torpedo.

Unlike the other subs in the flotilla, on board the B-59 three officers had to agree unanimously to authorize the launch: Captain Savitsky; the political officer Ivan Semonovich Maslennikov; and the second-in-command Arkhipov. Typically, Russian submarines that were armed with the "Special Weapon" only required the captain to get authorization from the political officer if he felt it was necessary to launch the nuclear torpedo, but due to Arkhipov's position as flotilla commander, the B-59's captain was also required to gain Arkhipov's approval. An argument broke out among the three, in which only Arkhipov was against the launch.

Although Arkhipov was only second-in-command of submarine B-59, he was commander of the entire flotilla of submarines, including B-4, B-36 and B-130, and equal in rank to Captain Savitsky. According to author Edward Wilson, the reputation Arkhipov gained from his courageous conduct in the previous year's Soviet submarine K-19 incident also helped him prevail in the debate. Arkhipov eventually persuaded Savitsky to surface the submarine and await orders from Moscow. This action effectively averted the nuclear warfare which most likely would have ensued had the torpedo been fired. The submarine's batteries had run very low and the air-conditioning had failed, so it was forced to surface amidst its U.S. pursuers and head home. Washington's message that practice depth charges were being used to signal the submarine to surface never reached B-59, and Moscow claims it has no record of receiving it either.

There are probably many other things that went on that year that will never see the light of day.

On any given day during any crisis, the introduction of a bonafied UFO on somebody's radar screen could mean accidental war. We have come close many times.According to two studies I conducted, there was a conspicuous lack of UFO reports during the crisis. UFO incidents happen when people do normal things, go to work, come home from work, etc. Even with a crisis on and people glued to the TV and radio, they have to do things that put them into the UFO environment. There were almost no reports. One would also expect military cases with misidentifications. There was a lack of those too.

Robert Hastings: "According to published sighting report data bases, they were decidedly conspicuous by their absence. Based on declassified U.S. government documents and the ufological literature, it appears that UFO activity during those ominous days of October 1962 was at a rather low level worldwide. This fact had always struck me as odd. Given other clusters of UFO activity at nuclear weapons laboratories and storage areas, or during periods of intense atomic testing in Nevada and the Pacific (and, later on, at U.S. Air Force ICBM sites outside various Strategic Air Command bases) one might predict that a UFO presence would be in evidence, in one form or another, during the planet's closest brush with nuclear catastrophe."

There were six good radar cases BEFORE the crisis. Item # 4 (620418) was extremely interesting. It was a National Defense Alert case:

On April 18th the Air Defense Command was alerted after an object was tracked by NORAD and ground witnesses as it traveled for 32-minutes from Oneida, New York across the midwest, through Kansas & Colorado, Utah, and the disappeared from Nellis AFB radar at 10,000 feet. Jets had been scrambled from two locations. Power outages were reported and the object made a turn toward the east and landed. There is quite a bit of information from numerous sources concerning this major incident, including Project Blue Book documents. It is very interesting that every one of these states except Utah, has or was in the process of obtaining ICBM Bases: New York, Plattsburg AFB; Kansas, Forbes AFB, McConnell AFB; Utah, Minuteman production at Air Force Plant 77 at Hill AFB; Idaho, Mountain Home AFB; Montana, Malmstrom AFB; New Mexico, Walker AFB; Wyoming, F. E. Warren AFB; Arizona, Davis Monthan AFB; California, Beale AFB.

The most hair-raising incident I'm aware of occurred right before the Crisis. I found out from a close friend that an incident, triggered by a UFO over U.S. airspace at the time, had occurred. I was told that I could release this report once my friend had passed away. Here is Harold Hartig's story.

nicap.org/6210XXcmc_dir.htm

October, 1962; Palermo AFS, New Jersey
The entire U.S., Canada, and Alaska were on a top Security Option 5 alert. In NORAD Region 21 something slower than an incoming missile, but faster than our jet interceptors, was violating airspace all the way from New Jersey, Pennsylvania, New York, on into Canada and Alaska, and we were ready to use tactical nuclear weapons, if necessary, to stop it. A friend of mine was a radar expert and a defense radar operator at that time. Years before he died he told me of this incident during the Cuban Missile Crisis which fully illustrates the seriousness of the situation, plus gives us an insight into who was, or was not, the intelligence behind the UFO phenomena.

There were eight good radar cases that year. The last one occurred after the Crisis.

November 10, 1962; North Star Bay, Greenland
At 2:15 a.m. local time, a fast moving target was observed on ground radar on a magnetic bearing 280 inbound. A CIRVIS REPORT was made. Airway notified Thule ACC. Target lost in ground clutter. Two F-102 aircraft and an L-20 aircraft searched the area without results.

But by and large it looks as if somebody, who knew what was going on, made the smart decision to keep a low profile. They might have been able to do something else had we attacked Cuba, but in any case, by 1967 they had disabled nuclear missiles at Malmstrom AFB in Montana. And even before that, in 1964 they were apparently able to disable an Atlas D warhead at Big Sur in California..

8/27/2008

If things are as they seemed, to many of those interested in UFOs and believe they exist, eventually the truth will come out, or UFOs will provide the answers at their own choosing and at a time they choose. If things were as the Air Force has always said they are, the subject of UFOs will eventually die and the stories will become part of the world's urban legends. No problems with national security. In either case, no problem to be concerned about and no need for cover-ups or any projects like Blue Book. But there IS a problem: Things are NOT as they seem. Even the picture of what what many people thought was going on is wrong. The nuclear connection with UFOs is now well established, and the number of incidents that have leaked out is far greater than any of us even imagined. UFOs have observed nuclear bomb material being made and shipped, weapons built and tested and stored. UFOs have been observed to monitor missile and warhead upgrading at missile sites, have shut down missiles in their silos, have changed (even erased) targeting tapes. UFOs have even caused nuclear-tipped missiles, already aimed at key Russian targets, to go into launch mode!!! The amount of evidence is now staggering, and much of what we thought we knew about UFOs and how the Air Force wanted to get out of the UFO "business" takes on a whole new meaning.

In 1956, former Project Blue Book Director, Captain Edward J. Ruppelt, published his book, "The Report on Unidentified Flying Objects". On page 212 it he states:

> There were two other factors we could never resolve, the frequency of the sightings and their geographical distribution. Since the first flurry of reports in July of 1947, each July brought a definite peak in reports; then a definite secondary peak occurred just before each Christmas. We plotted these peaks in sightings against high tides, **world-wide atomic tests**, the positions of the moon and planets, the general cloudiness over the United States, and a dozen and one other things, but we could never say what caused more people to see UFO's at certain times of the year.
>
> Then the UFO's were habitually reported from areas around "technically interesting" places like our atomic energy installations, harbors, and critical manufacturing areas. Our studies showed that such vital military areas as Strategic Air Command and Air Defense Command bases, some A-bomb

> storage areas, and large military depots actually produced fewer reports than could be expected from a given area in the United States. Large population centers devoid of any major "technically interesting" facilities also produced few reports.

Ruppelt was right about where UFOs were being reported. The data now grapically illustrates what UFOs were concerned with. And Dan Wilson, one of our NCP staff members and researchers has uncovered evidence of UFO interest in nuclear tests and even radioactive fallout.

Researcher & NCP member, Jan Aldrich notes:

> In a 1952 LOOK article, Ruppelt mentions a file of 63 cases of UFOs over nuclear installations, but such a file is not in currently-declassified Blue Book files.

The lies continued up to and beyond the closing of the official Air Force project whose job it was to investigate and screen UFO reports from the military and civilians. In December of 1969, Project Blue Book ceased operations. This is what the final report said.

> 1) No UFO reported, investigated, and evaluated by the Air Force has ever given any indication of threat to our national security.
> 2) There has been no evidence submitted to or discovered by the Air Force that sightings categorized as "unidentified" represent technological developments or principles beyond the range of present-day scientific knowledge.
> 3) There has been no evidence indicating that sightings categorized as "unidentified" are extraterrestrial vehicles.

Most researchers knew that all of this was untrue. In fact, most people suspected that this was just another in a series of lies. One of the questions always asked by the media, and pondered by anyone remotely interested in the UFO subject, is, "If UFOs are what they appear to be, why would the government want this surpressed?" With general knowledge about UFOs most enthusiasts would only consider the information readily available in books, magazines, and TV and radio programs. Aside from the over-blown abduction scare reports, based on available information, and even much of the Project Blue Book files, there was nothing to be concerned about. If this is all real, we were simply not alone. Maybe we are simply the "new kids on the block". No need for a cover-up, at least now, after over a half a century of non-hostility. But in the last decade or so research has turned up some vital information that gives us reasons to reconsider many things we thought we knew about UFOs.

In the 1970's, one question raised after Project Blue Book closed down, was, where did the important UFO reports go? And, why were so many well-known, good reports not in Blue Book files?

Researcher, Robert Todd obtained the release of the Bolender memo in Jan 1979. The implications from this memo, issued just before the shutdown of Project Blue Book, is clear, and is found on page 2: " reports of unidentified flying objects which could affect national security are made in accordance with JANAP 146 or Air Force Manual 55-11, and are not part of the Blue Book system."

The Bolender Memo was the first whiff from the cover-up's smoking gun. There would be more, a lot more, in the years to come. It amounted to confirmation of a long-standing suspicion: Project Blue Book served as a front for a classified project that handled the truly sensitive reports. The memo was prepared on October 20, 1969 by Brig. Gen. C. H. Bolender, the Air Force's Deputy Director of Development. And 16 pages attached to this memo, which presumably would have shed some light on this curious assertion, are missing from the Air Force files.

Researcher, Todd Zechel's paper, The CIA's Most Secret UFO Counterintelligence Project: The Condon Committee, is interesting reading. What it shows is that the Condon Project was no accident. It certainly was not just a way to get the Air Force out of the embarrassing UFO business. More serious things were

going on that involved just what the Air Force claimed wasn't an issue, national security. And it wasn't the UFO reports we had all read about many times before that concerned the CIA the most. There were many almost worthless civilian reports and there were good ones. There were many good military reports, many of which repose in the Blue Book files to this day. Raised from the 741 unknowns picked from over 13,000 sightings on file, researchers James E. McDonald and Brad Sparks were able to double that figure. But it wasn't those reports either. It was the ones you won't find in the BB files; the ones involving nuclear weapons and their launch vehicles, that are obviously indicative of very serious problems with our national security. What we had thought was a small part of the picture turns out to be a much larger portion, a much more serious group of incidents.

In 2003, I established the Nuclear Connection Project, whose purpose it was/is to catalog and detail the many nuclear connection cases to see how widespread they were and if there were any specific patterns. Others before me had concerns about NC cases. My concern was raised about the same time Richard Hall expressed his, in his book, "Uninvited Guests" (1988). Then there were books by Ray Fowler, Barry Greenwood & Larry Fawcett, and others. At the start of the project, valuable leads as to NC motives were expressed by Loren Gross.

We've learned a lot in the last five years, but the recent publication of a new book, UFOs and Nukes", by non-member, Robert Hastings, is the definitive body of evidence supporting, not only the nuclear connection, but the reasons behind most of the questions raised about UFOs for many years. What it graphically illustrates is that the nuclear connection is far greater than we had thought even five years ago. The UFO appearance during WWII and subsequent presence is a nuclear-related one. Project Blue Book may have been kept out of the loop, but an agency higher up not only recognized the threat, but took over the investigation.

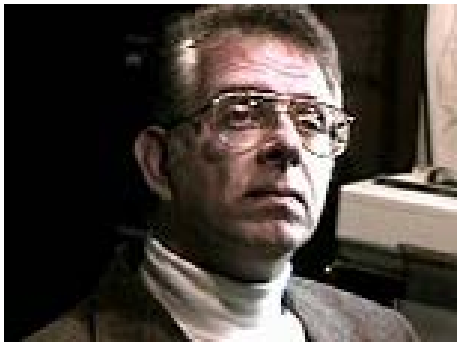
Pandora's Box - What Have We Done?



Francis Ridge
NCP Coordinator

1/10/2009

The year is 1946 and "flying saucers" are not yet a household word. And "flying discs" and Roswell won't become headline national news until a year later. What is an alien race, that had been doing routine observations of activities on planet Earth for decades, thinking, after witnessing two devastating world wars, one ending with two atomic bombs dropped on Japanese civilians in August of 1945? And now, in July of 1946, a fleet of 71 surplus and captured ships are anchored in the Bikini Atoll lagoon in the Marshall Islands. Maybe the aliens knew; maybe they didn't, but these ships are being used as targets. A support fleet of more than 150 ships are providing quarters, experimental stations, and workshops for most of the 42,000 healthy young men.

July 25, 1946; 8:35 AM
A standard Fat Man type Mk 3A fission bomb (and only a mere 23 kilotons, not 50-100 megatons) is used in this test. The bomb is encased in a watertight steel caisson, and suspended beneath landing ship LSM-60. The closest ship to surface zero is the USS Saratoga. Photographs of the Baker shot are unique among nuclear detonation pictures. The blinding flash that usually obscures the target area takes place underwater and is barely seen. The clear image of ships in the foreground and background gives a sense of scale. The large Wilson cloud and the vertical water column are distinctive Baker shot features, making the pictures easily identifiable. The most famous scene in the video shows the 27,000 ton battleship, Arkansas, 562 ft (171 m) long, upended to near vertical, with two-thirds of its length in the air, silhouetted against the north face of the water column.

http://www.youtube.com/watch?v=5JMfkMQXybM&feature=channel_page

Eight ships were sunk or capsized, eight more were severely damaged. Sunk vessels were the USS Saratoga, USS Arkansas, the Nagato, LSM-60 (obviously), the submarines USS Apogon and USS Pilotfish, the concrete dry dock ARDC-13, and the barge YO-160. 42,000 healthy young men, who were never warned of radiation hazards, were exposed to these tests, washed (decontaminated) the damaged ships with radioactive water, drank radioactive water, swam in radioactive water.

Recapping:
Operation Crossroads was an atmospheric nuclear weapon test series conducted in the summer of 1946.
1. ABLE was detonated at an altitude of 520 feet (158 meters) on 1 July

2. BAKER was detonated 90 feet (27 meters) underwater on 25 July.
3. CHARLIE was..... canceled.

Such tests would never be conducted for the peaceful uses of atomic energy after two devastating world wars and the use of two weapons that killed over 200,000 civilians. And the monitoring of the movement and testing of captured German V-2's (similar to our intelligence activities and the U-2 flights right before the Cuban Missile Crisis), was missile delivery of weapons of mass destruction the next phase? All this being done by the peaceful nations who stood out among the other 150 tribes on Planet Earth.. Does it come as a surprise that the famous "Ghost Rockets", which shook up the Pentagon brass, exploded on the scene that same year and in July of 1946?

It gets scarier.

May 25, 1953
If you were watching a relatively warlike race of beings and saw this, what would you think? Seven years after the Baker blast you just saw, and many tests later, the potential use of tactical nuclear weapons is becoming more possible. This is the first test of a nuclear artillery shell (Grable for "gun") - the 280 mm AFAP (artillery fired atomic projectile). The shot was an artillery delivered airburst. The shell traveled 11,000 yards before detonation which occurred 86 feet west, 137 feet south, and 24 feet above the designated burst point. The predicted yield was 14 kt. The Mk-9 280 mm (11.02 inch) shell was 54.4 inches long, weighed 803 lb, and used oralloy as the fissile material. Air burst detonation was arranged by a time fuze. The Mk-9 was fired by an enormous 85 ton artillery piece. The gun had a muzzle velocity of 2060 ft/sec, and a range of up to 20 miles.

http://www.youtube.com/watch?v=XT5jo7aZzTw&feature=channel_page

Russian field commanders had these (and pilotless drones), loaded with tactical nuclear weapons, plus the authority to use them on an invading U.S. ground attack force if the American Joint Chiefs would have had their way during the Cuban Missile Crisis in October of 1963. Kennedy's decision to try something else prevented WWIII. The whole world was watching. And somebody else, too.

August 27, 1958; 2:30 AM
Three Lockheed X-17A three-stage missiles, each modified to carry a 1.7-kiloton W-25 plutonium warhead, were fired from the USS Norton Sound in the south Atlantic near the Falkland Islands, a remote locale chosen for its windswept winter, which assured there would be no activity in the vicinity. A third-stage failure resulted in a nuclear detonation at a lower altitude than planned, but the explosion seven minutes later was high enough to partially confirm the Christofilos effect. The Task Force 88 team watched in awe as a brilliant flash spread across the horizon, and a pale red glow transformed into an eerie, greenish-blue aurora high above, forming glowing streamers along the direction of magnetic north and south.

http://www.youtube.com/watch?v=CvSBiHDHOk8&feature=channel_page

Two more launches followed on August 30 and September 6, while the latest U.S. satellite, Explorer 4, probed the results. Explorer 4 had been launched just before Argus began publicly to further investigate the Van Allen radiation belts but secretly to also analyze the Argus experiments. James Van Allen's instruments, along with measurements from ships, airplanes, and sounding rockets, confirmed Christofilos' predictions. The Argus explosions had indeed created artificial radiation belts around Earth.

Besides detonating nuclear weapons all over Planet Earth like kids shooting off fireworks on the 4th of July, we were now polluting the upper atmosphere and space with nuclear radiation. We knew that none of us was up there, but we weren't sure if "anybody else" was. But we did it anyway.

July 9, 1962
Operation Dominic was a series of 105 nuclear test explosions conducted in 1962 and 1963 by the United States. On this day in July of 1962, at 0900 Zulu, a THOR missilel lifted off Johnston Island and roared to an altitude of 248 miles where the W-49 warhead/MK-4RV were released and detonated. The test was quite spectacular with impressive light displays from an artificial aurora lasting up to seven minutes. The electromagnetic pulse (EMP) from the test sent power line surges

throughout Oahu (800 miles away) knocking out street lighting, blowing fuses and circuit breakers, and triggering burglar alarms. This was the highest altitude test and second largest warhead detonated during the Johnston Island portion of Operation Dominic and was probably the one that lead to newspaper headlines which read, "It Was High Noon at 11:00 PM Today."

http://www.youtube.com/watch?v=EmdBFoQtVvU&feature=channel_page

We had no International Space Station or orbiting spacecraft in orbit at that time, nor did anyone else on Earth. But what about "somebody else"?

There have been well over 2,000 atomic tests on this planet. If these tests were not dangerous to ET, they at least told a grim story: Mankind, even the peaceful ones, were planning for what many defense people thought was just a matter of time. Nuclear war.

It is not surprising that UFOs touched off a series of warnings, that began with the shutdown of 18 missiles at Malmstrom AFB, Montana, in March of 1967.

Moon Tests - Nuclear

Date: Sat, 08 Jun 2002 12:52:44 -0400
Subject: Re: Any credibility?
From: joel carpenter <imagery@covad.net>

I lurk on an email list for international space projects that's frequented by a number of space journalists and government experts (I just lurk!! :)) and over the course of the last couple of years there have been several exchanges between the members about claims of secret deep-space nuclear detonations during the early space race era. One member is a former NSA analyst (after seeing his website and postings I believe him) and claims that he was privy to intercepted communications about these tests (presumably Soviet but he won't elaborate since it's all still classified). Other members of the list publicly doubt the story but he insists this occurred and he saw reports.

I doubt an actual moon shot occurred, since it would be pretty hard to conceal if it was done secretly.

FWIW.
Joel

The Nuclear Connection

Extraterrestrial Psychology

Copyright 1988, Reproduced by permission from Richard Hall

Richard Hall

If we suppose that UFOs carry visitors from elsewhere (extraterrestrial intelligences, or ETIs for convenient shorthand), why are they here? Does the accumulated data provide any clues as to their interests or purposes? Seeking answers may be akin to tea-leaf reading, but we now have 40 years of descriptive information. If we analyze the circumstances of UFO sightings it might be possible to discern some patterns that reveal something about ETI psychology.

We know that the long history of visitation has produced little evidence of overt hostility. Some aircraft accidents and bothersome physiological effects could be evidence of accidental harm or of self-defense. Maybe the ETIs are to us as we are to ants, and if we interfere with their picnic they stomp on us. From the obvious high technology displayed it is possible to infer that if their goal were to destroy us or take us over, this could have been done long ago.

Watching UFO events over a period of decades, you get the feeling of a detached or long-term program of some sort that at times of UFO sighting waves seems about to reach a culmination, but never does. Sudden spurts of confrontational behavior and direct intercession in human activities, as if some final contact or communication were imminent, give way to long lull periods during which the waves are forgotten until next time. The waves usually are sufficiently spectacular to make international headlines, but do not penetrate our cultural inertia to the point of upsetting the routines of society, or even to the point of stimulating a larger scale scientific study.

People react and internalize the events, maintaining a high awareness of UFOs as shown by Gallup polls, but governments do not. The few times that governments have reacted and initiated investigations, the inquiries have floundered in a sea of confusion about what to believe and how to go about a study. Busy scientists have half-heartedly looked at the subject and, noting its ebbs and flows, assumed it must have something to do with mass psychology.

Almost everyone knows about UFOs, and that they might be extraterrestrial in origin, but this is taken to be a popular belief rather than a serious theory justified by things seen. So society marches on undisturbed by the ghostly apparitions, through petroleum crises, Middle East war, crippled economies, and assorted forms of human violence and riots.

If the ETIs wanted to raise our consciousnesses without upsetting world governments, they couldn't adopt a better plan than the manner in which they have manifested themselves to us so far.

The major displays that constitute UFO waves (see Table 6) typically include episodes of blatant interactions with humans and their vehicles. This blatancy factor embedded in UFO waves alternates with periods in which UFO behavior seems more subtle, even furtive. During the lull periods when conventional news media lose interest in the subject, sighting information is difficult to obtain and is only slowly and painfully reconstructed by UFOlogists using their own limited resources. When the information is in, we learn that startling events have continued to occur but, for reasons unknown, they have not attracted the same degree of attention. Human reactions to UFO sightings perhaps are more cyclical than the sightings themselves.

As indicated in Table 6, each wave period has corresponded roughly to major historical events. A far more comprehensive study of such historical correlations is needed before too much significance is attached to them. Something about the nature of news reporting of crises and earth-shaking events may incidentally zero in on UFO reports. But a certain rationale for ETI interest in the rapidly exploding development of human aerospace technology also can be read into the apparent coincidences.

By repeated manifestations in specific contexts of human affairs, UFOs have shown apparent interest in --

* Vehicles

* Warfare

* Strategic technology

* Energy

* Human physiology

In addition to the vehicle encounter cases reported in chapters 1 and 2, some of the earliest significant UFO sightings on record involve aircraft and rocket pacings at such test ranges as White Sands Proving Grounds, New Mexico, and later at Cape Canaveral, Florida. The ETIs, it could be argued, have displayed curiosity about all forms of human propulsion, from piston engines to jets and rockets.

Every major war in modern times has included UPO sightings at the scene of combat. The "foo-fighters" of World War II were the first widely reported UFOs of the 20th Century.

William D. Leet, late Arkansas State Director for the Mutual UFO Network, was a bomber pilot during World War II. On a "lone wolf" bombing mission over Klagenfurt, Austria, November 24, 1944, he and his B-17 crew were on their bomb run when the plane suddenly was caught in a blinding light for 2-3 seconds, and Leet felt a sensation of heat. If it had been searchlights, the Germans would not have broken off contact. They completed the bomb run safely, encountering no flak, and turned to scurry back to their home airfield in Amendola, Italy.

All at once a round, amber light appeared off the left wing of the B-17, showing a perfectly circular outline, and paced alongside the plane for about 45 minutes before abruptly vanishing. During debriefing, Leet was informed that no searchlights were known to be at Klagenfurt. The intelligence officer suggested that the amber disc was a new German fighter or remote control device radioing position information to antiaircraft guns, but Leet replied that the object did not fire on them, nor had they encountered any flak.

"Foo-fighters" also were seen in the Asian Theater. On August 10, 1944, Capt. Alvah M.

Reida was piloting a B-29 on a bombing mission over Sumatra. After leaving the target area he and his crew saw an orange spherical object with a halo effect that paced off the starboard wing. Reida took evasive action, but the UFO followed every maneuver for about 8 minutes. "When it left;" he said, "it made an abrupt 90 degree turn, up and accelerating rapidly;"

Wayne Thomas, Jr, a former group intelligence officer for B-29's stationed on Tinian also has confirmed that "foo fighter" reports were common in the Asian Theater. They would typically move along with the bombers for several minutes at a time before breaking off.

A number of very similar Korean War UFO sightings appear in the records of the Air Force Project Blue Book, now on microfilm in the National Archives. In Project Grudge Report No.4 (Grudge was the immediate predecessor of Blue Book) is the following report:

"On the night of 29 January 1952, 30 miles WSW of Wonson, Korea, three members of a B-29 crew ... observed a light orange colored sphere for a period of five minutes. The object was on a parallel course to the B-29 at 8 o'clock level. The color of the object was further described as being the color of the sun with an occasional bluish tint. The outer edge of the object appeared to be fuzzy and it seemed to have an internal churning movement like flames or fiery gases.

The object closed in on the B-29 to an undetermined distance, and then faded away in the distance:'

The bomber was at 22,500 feet in CAVU weather (clear and visibility unlimited) at 2300 hours local time. At 2324 hours, another B-29 crew observed an identical object near Sunchon.

During his testimony at the 1968 Congressional UFO Symposium, Dr. Robert L. Hall recounted the following experience:

"When I was on the faculty at the University of Minnesota, a student came to me, having heard that I had some interest in this question. He informed me that his father, a colonel, an artillery colonel in Korea ... had flown over a hill in Korea in his observer plane, and found (right next to him virtually) a characteristic unidentified flying object with the usual kind of configuration. It had promptly retreated upwards. It had frightened him, but he was an experienced and trained observer, so he took notes on it ... . When he returned he was so ridiculed and laughed at for a long period of time that he completely gave up trying to have this taken seriously. He refused to talk about it:"

During October 1973 when UFOs were once again making headlines after a long lull, Gen. George S. Brown, Air Force Chief of Staff, said at a press conference: "I don't know if this story has ever been told, but UFOs plagued us in Vietnam during the war!" He cited an incident in early summer of 1968 when a series of sightings set off quite a battle (with) an Australian destroyer taking a hit;' and another in 1969 that resulted in "some shooting."

A spectacular sighting occurred in June 1966 at Nha Trang, an active base on the coastline of South Vietnam. About 9:45 p.m. there was a flash of light and a UFO approached, descended in plain view of numerous soldiers, and hovered a few hundred feet off the ground, its glow illuminating the entire area. The base generator failed and the base was blacked out. Idling aircraft engines, bulldozers, trucks, everything (including some diesel engines) failed for about 4 minutes. The UFO finally "went straight up" and rapidly disappeared from view.

Colonel Robert M. Tirman, an Air Force flight surgeon, was among those who observed a

"huge" cylindrical UFO over southeast Asia on March 14, 1969. Tirman was a passenger on a KC-135 whose pilots and crew also saw the object. The cylinder hovered in a vertical orientation about 2 miles from the plane at about 15,000 feet altitude. When they tried to circle for a closer look, the UFO disappeared. Jet interceptors also were scrambled but could not locate the UFO.

STRATEGIC TECHNOLOGY

During large-scale NATO maneuvers ("Operation Mainbrace") in the North Sea in September 1952, UFOs were sighted for over a week by ships and aircraft of the fleet. Color photographs were taken from the deck of the U.S. aircraft carrier *Franklin D. Roosevelt* of an unidentified silvery spherical object moving at high speed. No technical analyses of the photographs or other sightings have ever been released.

Air Force and CIA documents obtained by lawyer Peter Cersten under the Freedom of Information Act reflect the fact that by the early 1950s the U.S. Government was concerned about the pattern of UFOs being sighted at strategic locations. (Gersten, reference A, bibliography)

On May 25, 1950, the Kirtland, New Mexico, district office of the Air Force Office of Special Investigations (OSI) reported a series of UFO sightings by scientists, pilots, security personnel, and others to the OSI Director, expressing concern about "...the continued occurrence of unexplained phenomena of this nature in the vicinity of sensitive installations ..."

In a memo dated December 2, 1952 (on the heels of the major UFO wave of that year) the CIA Assistant Director of Scientific Intelligence alerted CIA Director Walter B. Smith to the pattern of sightings at strategic locations: "Sightings of unexplained objects at great altitudes and traveling at high speeds in the vicinity of major U.S. defense installations are of such nature that they are not attributable to natural phenomena or known types of aerial vehicles."

During the 1952 wave, including the Washington, D.C., radar-visual sightings, Air Force intelligence had received a steady flow of reports from jet interceptor pilots who had been scrambled to chase unidentified objects detected by radar. Time after time the pilots obtained visual sightings of the UFOs, often locked onto them with airborne radar, but could not catch them. The UFOs sometimes played a cat-and-mouse game, fleeing just out of range of the fighter aircraft, then turning and following the plane as it returned to base.

Several times during the Washington, D.C., sightings, interceptors were scrambled from Dover AFB, Delaware, and roared into the skies over Washington. Just as they arrived the UFOs would vanish off the radar scopes. Later research in the morgue of a Maryland eastern shore newspaper turned up references to UFOs showing up there, some 70 miles southeast of Washington, moments after they disappeared in Washington.

An exception was reported in one case when an F-94 pilot from Dover did intercept a group of UFOs when vectored to them by radarmen. A group of civilian and military aviation experts at National Airport watched on radar as the UFOs surrounded the F-94. The terrified pilot was heard on the intercom meekly asking permission to break off contact and return to base. His personal testimony, which has never been released, would make a fascinating addition to the record. What did he see and experience?

The eerie truth is that the UFOs have reacted differently to armed military interceptors than they have to civilian aircraft. In 1952 they literally followed airliners as they approached Washington National Airport, sometimes hovering in plain sight of them. But they usually

stayed out of the way of military jets, behaving almost as if testing their capabilities, or taunting them.

The CIA case files for 1952, once maintained by the Physics and Electronics Division, have never been released to the public. Do they contain reports of effects on the intercepting aircraft or other odd occurrences? In the widely publicized September 19, 1976, Iranian jet case, American-built F-4's were scrambled to chase UFOs which displayed an "inordinate amount of maneuver- ability!" They also displayed an ability to defend themselves; when one F-4 pilot attempted to fire at a UFO, his weapons control panel abruptly became "inoperable." Another pilot experienced total instrument failure as he closed in on a UFO. A Defense Intelligence Agency evaluation labeled this "an outstanding report."

These reports border on proof that the ETIs know what our weapons are, perhaps even know when we are getting ready to use them. Another indication of weapons awareness is the SAC base reports also belatedly known to the public through FOIA lawsuits. Quoting lawyer Peter Gersten (Reference B, bibliography):

> "DOD, USAF, and CIA documents reveal that during October, November, and December of 1975, reliable military personnel repeatedly sighted unconventional aerial objects in the vicinity of nuclear weapons storage areas, aircraft alert areas, and nuclear missile control facilities at Loring AFB, Maine; Wurtsmith AFB, Michigan; Malmstrom AFB, Montana; Minot AFB, North Dakota; and Canadian Air Forces Station, Ontario. Many of the sightings were confirmed by radar. At Loring AFB, the interloper 'demonstrated a clear intent on the weapons storage areas' ...
> An Air Force document says that 'Security Option III' was implemented and that security measures were coordinated with 15 Air Force bases from Guam to Newfoundland!'

Many other examples could be cited from UFO history to demonstrate an apparent pattern of the ETIs "watching" our technological development, especially our propulsion (delivery) capabilities, our actions in warfare, our nuclear technology ... and our reaching out into space. Wherever they come from, it may be that we are beginning to pose a threat to them because (a) we can now send space vehicles to the outer planets and beyond, (b) we are warlike, and (c) we have nuclear weapons.

(Table 5, World-Wide Record of Successful Space Launches, not show here).

As early as 1958 a Yale University social scientist, Dr. Harold D. Lasswell, in discussing space travel, suggested:

> 'The implications of the unidentified flying objects (UFOS) may be that we are already viewed with suspicion by more advanced civilizations and that our attempts to gain a foothold elsewhere may be rebuffed as a threat to other systems of public order."

ENERGY

That ETIs would be interested in our sources and applications of energy follows logically from their interest in our strategic technology, but it is difficult to establish any clear correlation. My private studies convince me that an interest has been displayed in atomic energy facilities and petroleum-related activities. Map plotting shows a significant

concentration of sightings in New Mexico, counter to population trends. New Mexico is extraordinarily high in both strategic facilities and mineral production.

Another State with a significant number of close-range UFO sightings in comparison to its population (see Table 7*)* is Missouri. A separate study by Ted Phillips of 2,108 CE II physical trace cases shows that Missouri ranks third in number of such reports while ranking 13th in population. Missouri contains major aerospace activities, a leading weapons production facility, and is a significant producer of strategic metals and minerals. For the most part, as Table 7 illustrates, sighting frequency tends to reflect population.

Vehicle encounter cases, taken as a whole, could be interpreted as showing an interest in our uses of energy, what makes our vehicles tick. So can the numerous cases of aircraft and rocket pacings.

A possible progression of interest with time is intriguing, but remains only an intuition. During the 1940s and 1950s UFOs were particularly observed around aircraft and rockets. During the 1960s automobile encounter cases came to the fore. Also during the 1960s, when our space program reached the stage of lunar rockets and deep space probes, major waves of UFO sightings occurred after a lull of 7 years. Then, in the 1970s, the "petroleum connection" began to emerge.

It was almost as if the ETIs gradually figured out the motive power of our vehicles, monitoring the sites of advanced propulsion technology (White Sands, Cape Canaveral), checking our energy resources, and tracing our peculiar dependence on fossil fuels to the U.S. oil fields of the West and Southwest (e.g., Levelland and Damon, Texas sightings), and to the Arab nations of the Middle East. Whether a similar pattern has evolved in other countries is unknown.

At any rate, the 1973 UFO wave coincided with the OPEC embargo and the beginning of the U.S. petroleum supply crisis, and the 1978 Eastern Hemisphere wave (largely unreported in the U.S.) was focused in the oil-rich Arab nations. Was this only coincidence?

A series of UFO sightings occurred in Kuwait starting on November 9, 1978. As reported by P. G. Jacob, a marine biologist employed by the Kuwait Institute for Scientific Research, "All the sightings occurred in the oil fields of Kuwait Oil Company, the major oil producing concern in Kuwait:" The final sighting was November 21 over the Al Sabriyah oil field near the Iraqi border, and the UFO was photographed as it flew over a 20-foot water tower and hovered in the area for 30 minutes.

At one point Kuwait Oil Company technicians observed the landing and take-off of a soundless domed UFO which had a flashing red body light. Telecommunications were interrupted during the sighting, and an electrically operated oil pumping station near the landing site ceased to function. Similar E-M effects were noted during the other sightings.

From November 1978 through January 1979, UFOs were seen and photographed from several Arab nations over a wide area near the Persian Gulf coast opposite Iran. During the same time frame there were widespread sightings in Australia and New Zealand, including the famous New Zealand movie films taken from an aircraft in December. The movies received international news media attention, but the Arab oil field sightings and landing did not, at least not in the United States.

Early in 1979 a UFO landing also was reported at a major Argentine oil field. On May 1, engineers of the YPF government oil fields at Vizcacheras, in a remote area accessible only to company employees, were awakened at 4:00 a.m. from the noise made by goats in a

corral. When they went outside to investigate, they saw a UPO hovering silently about 70 meters from the encampment and 20 meters above the ground. They waved a lantern and the UFO seemed to respond by blinking a light, then slowly landed nearby. More light signals were exchanged, then the UFO took off and disappeared toward the Andes mountains at 4:35 a.m.

The group went to inspect the landing spot and found a large circle in which the sand had been petrified or hardened into chunks. Soil samples were taken to a Professor Corradi for analysis. Corradi, identified as Director of the Institute for Extrahuman Studies, said the samples were being analyzed by the Office of Mining. He noted that after the sighting, the goats (about 1,500) refused to return to their corral.

Corradi also noted a strategic connection that other South American investigators have commented upon in the past:

> "I have been noticing for some time that the permanent presence of the UFOs over the uranium mines of La Pintada and Cuesta de los Terneros in San Rafael and now in Vizcacheras, is not a coincidence."

Earlier, on March 10, 1977, crew members of two oil tankers anchored a mile apart in the offshore Anuna oil field of Indonesia at 7:40 p.m. saw a large dark object with a red body light, and emitting yellowish-white beams of light. The UFO approached from the west beneath a 1,000 foot cloud cover, circled the oil field twice, and flew away to the east.

The "petroleum connection" may or may not be significant. The possibility exists that the ETIs have been conducting a broad survey of human technology that, among other things, has touched on petroleum as well as other energy- related factors. The survey might be of such broad scope, so comprehensive, that no particular pattern would emerge from our large scale data analysis and UFO sightings would correlate with almost everything under the sun. But if the skeptical assumption is made, no science is done and we are left only with speculation. The effort to seek out such patterns in the data seems well worthwhile.

Meanwhile, the attempt to analyze extraterrestrial psychology remains a speculative art that necessarily involves critical assumptions at various points. The scenario presented here amounts to an educated guess and a survey of reasonable possibilities. We are not likely to have any final answers until the full resources of science are applied to the problem ... or the ETIs reveal their purposes.

TABLE 6
UFO Displays and World History

1939-1946: World War II; German rocket and jet technology advances; Bikini atoll atomic tests; Hiroshima and Nagasaki A-bombs, 1945-46.

1944-1946: UFOs ("foo-fighters") observed by Allied and Axis pilots.

1947: V-2 and other rocket/missile tests; Nevada A- bomb tests; flight of X-1, first supersonic aircraft.

1947: First major wave of UFO sightings in U.S. initially focused in Northwest.

June 25, 1950-July 26, 1953: Korean War; first American H-bomb detonated Nov 1, 1952.

1952: Major UFO wave June-December, including radar-visual, pilot sightings, jet interceptor chase cases; September NATO sightings during North Sea maneuvers.

1954: Bikini atoll H-bomb test March 1 injures Japanese fishermen with radioactive fallout; height of Cold War struggle over fate of Germany; maturation of ICBMs due to improved inertial guidance systems; Algerian War begins, Nov. 1.

1954: Major UFO sighting wave September-October, primarily in Europe, including numerous humanoid sightings for first time.

1957: British H-bomb test May 15 at Christmas Island; first Soviet ICBM successfully launched Aug. 26; Sputnik I, first earth satellite launch, Oct. 4; Sputnik II (carrying dog) launched Nov. 3.

1957: Major UFO wave October-December, primarily focused in southwest and Midwest United States.

October 1958-September 1961: Moratorium by major powers on further nuclear testing; Sept.-Oct. 1959 Soviet lunar flights, including Lunik II impact on Moon, Sept.13; Soviet Venus probe launched Feb.12, 1961; Soviet nuclear testing resumed Aug. 29, 1961.

Apr.12, 1961-June 16, 1963: First manned Earth-orbital flights, 12 in 26 months; British and American nuclear testing resumed Feb. 7, 1962; Ranger IV impacts on Moon April 26, 1962; Mariner 2 Venus probe launched Aug.27, 1962; American-Cuban crisis Sept- Nov.1962.

Fall 1963: Nuclear test ban treaty signed Aug. 5; President John F Kennedy assassinated Nov.22.

1959-1963: Significant lull period in reported UFO sightings.

1964-67: Lunar landings and deep space probes; multiple-manned Earth-orbital flights, 13 between Oct.1964 and April 1967; Middle East war; height of U.S. involvement in Vietnam War.

1964: Ranger VII impacts on Moon July 31; Communist Chinese explode nuclear bomb for first time Oct.16; Mariner 4 Mars probe launched Nov.28.

1965: Ranger VIII launched Feb.17 for lunar impact; Ranger IX launched Mar.21 for lunar impact; Soviet Venus probe launched Nov.12.

1966: Soviet Union first successful lunar "soft landing" Feb. 3; Soviet probe impacts on Venus Mar 1; Soviet Luna 10 placed in lunar orbit March 31; Chinese H-bomb detonated May 9; Surveyor 1 launched May 30, lunar landing; Soviet Luna 13 Moon landing Dec.24.

1967: Surveyor 3 Moon landing Apr 19; third Israeli-Arab war begins June 5; Soviet Venera 4 launched, "soft landing" on Venus; Mariner 5 passes near Venus Oct.19.

1964-67: Renewal of UFO sightings after 7-year lull; largest volume sighting wave in UFO history 1966-67; Congressional hearings and Colorado UFO Project formed, 1966.

August 24, 1968: First French H-bomb test.

July 20, 1969: U.S. lands men on Moon.

1973: OPEC oil embargo, petroleum crisis and political turmoil in U.S., Agnew resignation; Israeli-Arab war Oct. 6-21.

1973: Major UFO wave October-November after 4-5 year lull, featuring numerous humanoid sightings and Hickson-Parker abduction.

1978: Continuing Middle East crises, petroleum short age, OPEC price rises.

1978: Sighting wave October-December in Middle East and Australasia (little publicized in U.S.), including Arab Nation sightings and oil field landing.

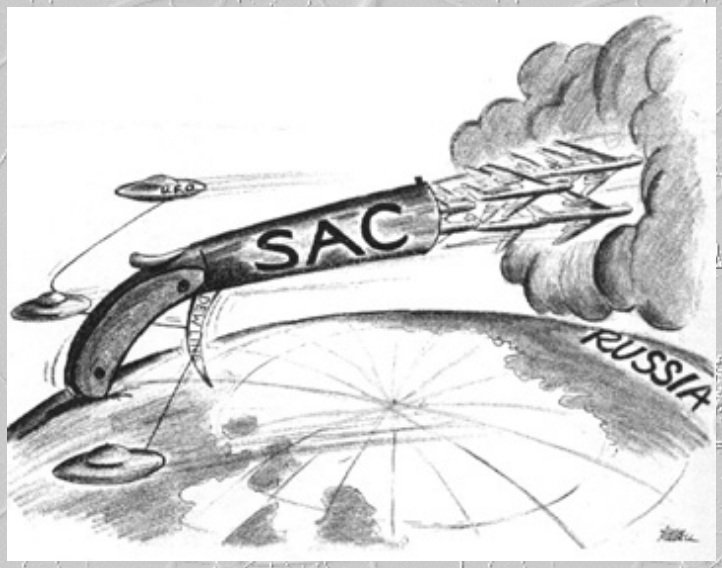
The Nuclear Connection

Accidental-War Danger Increasing

UFOI, October 1961



In a recent statement, Vice President Johnson declared:

"The western allies must be prepared for every possible eventuality- - deliberate or accidental."

Three weeks ago, the Vice President sent the Senate Preparedness Subcommittee an urgent NICAP report on one increasing hazard: The danger of mistaking UFOs for Soviet bombers or missiles.

There is an equal danger that Russia might fatally mistake UFOs for a U.S. attack. If our Government spotlighted this risk, it might cause the Kremlin to take similar steps to end confusion over UFOs.

The following steps show how UFOs might trigger World War III:

1. U.S.-Canada radar picks up un known, high-speed flying objects heading for this continent. Many defense-radar personnel fully accept denials that UFOs exist; when all radars show such solid objects in large formation or groups. obviously under intelligent control, these operators are likely to conclude: Probable Soviet attack. SAC (Strategic Air Command) bombers are launched. By AF admission. this situation has already occurred.

2. Soviet agents near SAC bases see the launchings, secretly radio Moscow. Soviet bombers are launched, missile bases alerted.

3. As SAC bombers head toward Russia, checks are swiftly made to confirm or disprove the alarm. Intelligence has no word of sudden Soviet preparations. But, because of the Berlin crisis, Russia is known to be in at least partial war-readiness. This could be a surprise attack.

4. At a certain point, SAC pilots are prepared to turn back unless they receive coded signals that the President has ordered attack. Presumably, the Soviet has a similar system. By now, both U.S. and Soviet radar have picked up the other side's bombers. This would not make

war certain -- realizing that mutual disaster was inevitable, both fleets might warily circle, well out of range, then return to their bases. But; if high-speed UFOs were tracked, heading for either country, it could cause a fateful decision. Several UFOs have been tracked at missile speeds--one at 18.000 m.p.h., by Navy scientists at White Sands, two at over 9,000 m.p.h. (Goose Bay AFB, and by an AF B-29 radar.) If either side mistook UFOs for H-bomb missiles aimed at their cities and bases, war would be almost inevitable.

The risk is there, and growing. Even if it is only a tiny fraction of 1%, it is still too great.

"The confusion about UFOs among our defense personnel should be ended promptly." warns the NICAP Board. "All available information, including methods of distinguishing UFOs from ordinary missiles or aircraft, should be released at once."

Many members already are backing NICAP's attempts to reduce UFO secrecy dangers. But the average American still does not realize the risk of accidental war from mistaking UFOs for Soviet missiles or bombers. This danger has been greatly increased by Khrushchev's threats and ruthless Soviet efforts to intimidate the United States. We urge all members to help spread word of this hazard- -not just as a patriotic duty, but to increase our chance of survival as Communist-inspired tension menaces the free world,

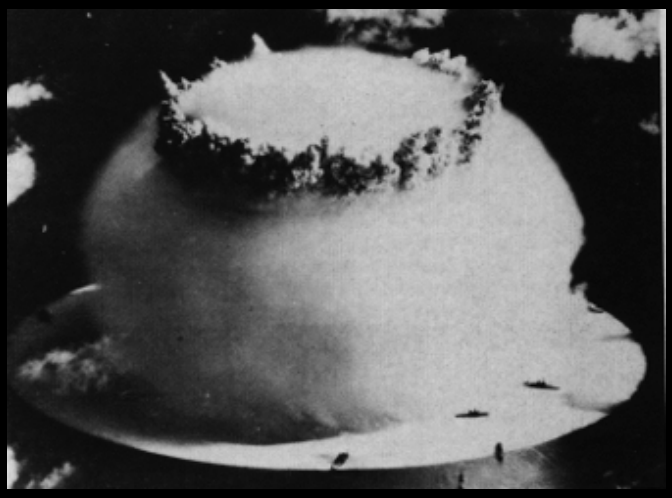
The Nuclear Connection

Another Estimate of the Situation

FLYING SAUCERS: 1950

Maj. Donald E. Keyhoe



Francis Ridge:
Although this scenario was presented over 50 years ago in a book entitled, "Flying Saucers Are Real", by Donald Keyhoe (several years before NICAP was launched) the basic contention is still uncannily possible. The report below is Chapter XIV, devoid of only the first opening line.

==========

What were they like? And what were they doing here?

From the long record of sightings, it was possible to get an answer to the second question. Observation of the earth followed a general pattern. According to the reports, Europe, the most populated area, had been more closely observed than the rest of the globe until about 1870. By this time, the United States, beginning to rival Europe in industrial progress, had evidently become of interest to the space-ship crews.

From then on, Europe and the Western Hemisphere, chiefly North America, shared the observers' attention. The few sightings reported at other points around the world indicate an occasional check-up on the earth in general. Apparently World War I had not greatly concerned the space observers. One reason might be that our aerial operations were still at a relatively low altitude.

But World War II had drawn more attention, and this had obviously increased from 1947 up to the present time. Our atomic-bomb explosions and the V-2 high-altitude experiments might be only coincidence, but I could think of no other development that might seriously concern dwellers on other planets.

It was a strange thing to think of some far-off race keeping track of the earth's progress. If Redell was right, it might even have started in prehistoric time; a brief survey, perhaps once a century or even further spaced, then gradually more frequent observation as cities appeared on the earth.

Somewhere on a distant planet there would be records of that long survey. I wondered how our development would appear to that far-advanced race. They would have seen the slow sailing ships, the first steamships, the lines of steel tracks that carried our first trains.

Watching for our first aircraft, they would see the drifting balloons that seemed an aerial miracle when the Montgolfiers first succeeded. More than a century later, they would have noted the slow, clumsy airplanes of the early 1900's. From our gradual progress to the big planes and bombers of today, they could probably chart our next steps toward the stratosphere--and then space.

During the last two centuries, they would have watched a dozen wars, each one fiercer than the last, spreading over the globe. Adding up all the things they had seen, they could draw an accurate picture of man, the earth creature, and the increasingly fierce struggle between the earth races.

The long survey held no sign of menace. If there had been a guiding purpose of attack and destruction, it could have been carried out years ago. It was almost certain that any planet race able to traverse space would have the means for attack.

More than once, during this investigation, I had been asked: "If the saucers are interplanetary, why haven't they landed here? Why haven't their crews tried to make contact with us?"

There was always the possibility that the planet race or races could not survive on earth, or that their communications did not include the methods that we used. But I found that hard to believe. Such a superior race would certainly be able to master our radio operations, or anything else that we had developed, in a fairly short time. And it should be equally simple to devise some means of survival on earth, just as we were already planning special suits and helmets for existence on the moon. During a talk with a former Intelligence officer, I got a key to the probable explanation.

"Why don't you just reverse it--list what we intend to do when we start exploring space? That'll give you the approximate picture of what visitors to the earth would be doing."

Naturally, all the details of space plans have not been worked out, but the general plan is clear. After the first successful earth satellites, we will either attempt a space base farther out or else launch a moon rocket. Probably many round trips to the moon will be made before going farther in space. Which planet will be explored first, after the moon?

According to Air Force reports, it is almost a certainty that planets outside the solar system are inhabited. But because of the vast distances involved, expeditions to our neighboring planets may be tried before the more formidable journeys. More than one prominent astronomer believes that life, entirely different from our own, may exist on some solar planets. Besides Mars, Jupiter, and Venus, there are five more that, like the earth, revolve around the sun.

One of the prominent authorities is Dr. H. Spencer Jones, Astronomer Royal. In his book *Life on Other Worlds*, Dr. Jones points out that everything about us is the result of changing processes, begun millenniums ago and still going on. We cannot define life solely in our own terms; it can exist in unfamiliar forms.

"It is conceivable," Dr. Jones states in his book, "that we could have beings, the cells of whose bodies contained silicon instead of the carbon which is an essential constituent of our cells and of all other living cells on the earth. And that because of this essential difference between the constitution of those cells and the cells of which animal and plant life on the earth are built up, they might be able to exist at temperatures so high that no terrestrial types of life could survive."

According to Dr. Jones, then, life could be possible on worlds hotter and drier than ours; it could also exist on a very much colder one, such as Mars.

Even if a survey of the sun's planets proved fruitless, it would decide the question of their being populated. Also, it would provide valuable experience for the much longer journeys into space.

No one expects such a survey until we have a space vehicle able to make the round trip. One-way trips would tell us nothing, even if volunteers offered to make such suicidal journeys.

The most probable step will be to launch a space vehicle equipped with supplies for a long time, perhaps a year or two, within the solar system. Since Mars has been frequently mentioned as a source of the flying saucers, let's assume it would be the first solar-system planet to be explored from the earth.

As the space ship neared Mars, it could be turned to circle the planet in an orbit, just like our planned earth satellite vehicle. Once in this orbit, it could circle indefinitely without using fuel except to correct its course.

From this space base, unmanned remote-control "observer" units with television "eyes" or other transmitters would be sent down to survey the planet at close range. If it then seemed fairly safe, a manned unit could be released to make a more thorough check-up.

Such preliminary caution would be imperative. Our explorers would have no idea of what awaited them. The planet might be uninhabited. It might be peopled by a fiercely barbarous race unaware of civilization as we know it. Or it might have a civilization far in advance of ours.

The explorers would first try to get a general idea of the whole planet. Then they would attempt to examine the most densely populated areas, types of armature, any aircraft likely to attack them. Combing the radio spectrum, they would pick up and record sounds and signals in order to decipher the language.

As on earth, they might hear a hodgepodge of tongues. The next step would be to select the most technically advanced nation, listen in, and try to learn its language, or record it for deciphering afterward on earth.

Our astronomers already have analyzed Mars's atmosphere, but the explorers would have to confirm their reports, to find out whether the atmosphere at the surface would support their lungs if they landed. The easiest way would be to send down manned or unmanned units with special apparatus to scoop in atmosphere samples. Later analysis would tell whether earthlings would need oxygen-helmet suits such as we plan to use on the moon.

But before risking flight at such low altitudes, the explorers would first learn everything possible about the planet's aircraft, if any. They would try to determine their top ceiling, maximum speed, maneuverability, and if possible their weapons. Much of this could be done by sending down remote-control "observer" disks, or whatever type we decide to use. A manned unit might make a survey at night, or in daytime with clouds nearby to shield it. By hovering over the planet's aircraft bases, the explorers could get most of the picture, and also decide whether the bases were suitable for their own use later.

It might even be necessary to lure some Martian aircraft into pursuit of our units, to find out their performance. But our explorers would above all avoid any sign of hostility; they would hastily. withdraw to show they had no warlike intentions.

If the appearance of our observer units and manned craft caused too violent reactions on the planet, the explorers would withdraw to their orbiting space vehicle and either wait for a lull or else start the long trip back home. Another interplanetary craft from the earth might take its place later to resume periodic surveys.

In this way, a vast amount of information could be collected without once making contact with the strange race. If they seemed belligerent or uncivilized, we would probably end our survey and check on the next possibly inhabited planet. If we found they were highly civilized, we would undoubtedly attempt later contact. But it might take a long time, decades of observation and analysis, before we were ready for that final step.

We might find a civilization not quite so advanced as ours. It might not yet have developed radio and television. We would then have no way of getting a detailed picture, learning the languages, or communicating with. the Martians. Analysis of their atmosphere might show a great hazard to earthlings, one making it impossible to land or requiring years of research to overcome. There might be other obstacles beyond our present understanding.

This same procedure would apply to the rest of the solar-system planets and to more distant systems. Since Wolf 359 is the nearest star outside our system that is likely to have inhabited planets, one of these planets would probably be listed as the first to explore in far-distant space. It would be a

tremendous undertaking, unless the speed of light can be exceeded in space. Since Wolf 359 is eight light-years from the earth, even if a space ship traveled at the theoretical maximum--just under 186,000 miles a second--it would take over sixteen years for the round trip. Detailed observation of the planet would add to this period.

If we assume half that speed--which would still be an incredible attainment with our present knowledge--our space explorers would have to dedicate at least thirty-two years to the hazardous, lonely round trip. However, there has never been a lack of volunteers for grand undertakings in the history of man.

It is quite possible that in our survey of the solar-system planets we would find some inhabited, but not advanced enough to be of interest to us. Periodically, we might make return visits to note their progress. Meantime, our astronomers would watch these planets, probably developing new, higher powered telescopes for the purpose, to detect any signs of unusual activity. Any tremendous explosion on a planet would immediately concern us.

Such an explosion, on Mars, was reported by astronomers on January 16, 1950. The cause and general effects are still being debated. Sadao Saeki, the Japanese astronomer who first reported it at Osaka, believes it was of volcanic nature.

The explosion created a cloud over an area about seven hundred miles in diameter and forty miles high. It was dull gray with a yellowish tinge and a different color from the atmospheric phenomena customarily seen near Mars. Saeki believes the blast might have destroyed any form of life existing on the planet, but even though the telescopic camera recorded a violent explosion, other authorities do not believe the planet was wrecked. The canals first discovered on Mars by Giovanni Schiaparelli, about 1877, are still apparent on photographs.

Mars is now being carefully watched by astronomers. If there are more of the strange explosions, the planet will be scanned constantly for some clue to their nature.

If a mysterious explosion on Mars, or any other planet, were found of atomic origin, it would cause serious concern on earth. Suppose for a moment that it happened many years from now, when we will have succeeded in space explorations. At this time, let us assume our explorers have found that Mars is experimenting with high-altitude rockets; some of them have been seen, rising at tremendous speed, in the upper atmosphere of Mars.

Then comes this violent explosion. A scientific analysis of the cloud by astrophysicists here on earth proves it was of atomic origin.

The first reaction would undoubtedly be an immediate resurvey of Mars. As quickly as possible, we would establish an orbiting space base--out of range of Martian rockets--and try to find how far they had advanced with atomic bombs.

Samples of the Martian atmosphere would be collected and analyzed for telltale radiation. Observer units would be flown over the planet, with instruments to locate atom-bomb plants and possibly uranium deposits. The rocket-launching bases would also come under close observation. We would try to learn how close the scientists were to escaping the pull of gravity. Since Mars's gravity is much less than the earth's, the Martians would not have so far to progress before succeeding in space travel.

The detailed survey by our space-base observers would probably show that there was no immediate danger to the earth. It might take one hundred years--perhaps five hundred--before the Martians could be a problem. Eventually, the time would come when Mars would send out space-ship explorers. They would undoubtedly discover that the earth was populated with a technically advanced civilization. Any warlike ideas they had in mind could be quickly ended by a show of our superior space craft and our own atomic weapons--probably far superior to any on Mars. It might even be

possible that by then we would have finally outlawed war; if so, a promise to share the peaceful benefits of our technical knowledge might be enough to bring Martian leaders into line.

Regardless of our final decision, we would certainly keep a lose watch on Mars--or any other planet that seemed a possible threat.

Now, if our space-exploration program is just reversed, it will give a reasonable picture of how visitors from space might go about investigating the earth. Such an investigation would tie in with the general pattern of authentic flying-saucer reports:

1. World-wide sightings at long intervals up to the middle of the nineteenth century.

2. Concentration on Europe, as the most advanced section of the globe, until late in the nineteenth century.

3. Frequent surveys of America in the latter part of the nineteenth century, as we began to develop industrially, with cities springing up across the land.

4. Periodic surveys of both America and Europe during the gradual development of aircraft, from the early 1900's up to World War II.

5. An increase of observation during World War II, after German V-2's were launched up into the stratosphere.

6. A steadily increasing survey after our atomic-bomb explosions in New Mexico, Japan, Bikini, and Eniwetok.

7. A second spurt of observations following atom-bomb explosions in Soviet Russia.

8. Continuing observations of the earth at regular intervals, with most attention concentrated on the United States, the present leader in atomic weapons. (Saucers have been reported seen over the Soviet Union, but the number is unknown. There is some evidence that Russia has an investigative unit similar to Project "Saucer.")

There are other points of similarity to the program of American space exploration that I have outlined. Most of the extremely large saucers have been at high altitudes, some of them many miles above the earth. At that height, a space ship would be in no danger from our planes and antiaircraft guns and rockets. The smaller disks and the mystery lights have been seen at low altitudes. Occasionally a larger saucer has been seen to approach the earth briefly, as at Lockbourne Air Force Base, at Bethel, Alabama, at Macon and Montgomery, and other places. It has been suggested that this was for the purpose of securing atmospheric samples. It could also be to afford personal observation by the crews.

The numerous small disks seen in the first part of the scare, in 1947, fit the pattern for preliminary and close observation by remote-controlled observer units. As the scare increased, the daytime sightings decreased for a while, and mystery lights began to be seen more often. This apparent desire to avoid unfavorable attention could have been caused by our pilots' repeated attempts to chase the strange flying objects.

Authentic reports have described sightings; over the following Air Force bases: Chanute, Newark, Andrews, Hickam, Robbins, Godman, Clark, Fairfield Suisan, Davis-Monthan, Harmon, Wright-Patterson, Holloman, Clinton County Air Force Base, and air bases in Alaska, Germany, and the Azores. Saucers have also been sighted over naval air stations at Dallas, Alameda, and Key West, and from the station at Seattle. They have been reported maneuvering over the White Sands Proving Ground, over areas containing atomic developments, above the Muroc Air Base testing area, and over

the super-secret research base near Albuquerque.

Several times saucers have paced both military and civil aircraft; their actions strongly indicate deliberate encounters to learn our planes' speed and performance.

It seems obvious that both the planes and the bases were being observed, and in some cases photographed by remote-control units or manned space ships.

Although I thought it improbable that the location of our uranium deposits would be of interest to space men, a Washington official told me it would be relatively simple to detect the ore areas with airborne instruments.

"The Geological Survey has already developed special Geiger counters for planes," he told me. "They had a little trouble from cosmic-ray noise. They finally had to cover the Geigers with lead shields. Whenever an important amount of radiation is present in the ground, the plane crew gets a signal, and they spot the place on their map. It's a quick way of locating valuable deposits."

When I told him what I had in mind, he suggested an angle I had not considered.

"Mind you," he said, "I'm not completely sold on the interplanetary answer. But assuming it's correct that we're being observed, I can think of a stronger reason than fear of some distant attack. Some atomic scientists say that a super-atomic bomb, or several set off at once, could knock the earth out of its orbit. It sounds fantastic, but so is the A-bomb. It's just possible that some solar-planet race discovered the dangers long ago. They would have good reason to worry if they found we were on that same track. There may be some other atomic weapon we don't suspect, even worse than the A-bomb, one that could destroy the earth and seriously affect other planets."

At the time, I thought this was just idle speculation. But since then, several atomic scientists have confirmed this official's suggestion. One of these was Dr. Paul Elliott, a nuclear physicist who worked on the A-bomb during the war.

According to Dr. Elliott, if several hydrogen bombs were exploded simultaneously at a high altitude, it could speed up the earth's rotation or change its orbit. He based his statement on the rate of energy the earth receives from the sun, a rate equal to some four pounds of hydrogen exploded every second. Still other atomic scientists have said that H-bomb explosions might even knock a large chunk out of the earth, with unpredictable results.

A dramatic picture of what might happen if the earth were forced far out of its orbit is indicated in the much-discussed book *Worlds in Collision*, by Dr. Immanuel Velikovsky, recently published by Macmillan. After many years of research, Dr. Velikovsky presents strong evidence that the planet Venus, when still a comet resulting from eruption from a larger planet, moved erratically about the sky and violently disturbed both the earth and Mars.

When the comet approached the earth, our planet was forced out of its orbit, according to Worlds in Collision. For a time, the world was on the brink of destruction. Quoting many authentic ancient records, including the Quiché manuscript of the Mayas, the Ipuwer papyrus of the Egyptians, and the Visiddhi-Magga of the Buddhists, Dr. Velikovsky describes the cataclysm that took place. "The face of the earth changed," he writes in his book. The details, reinforced by the Zend-Avesta of the Persians, tell of tremendous hurricanes, of a major upheaval in the earth's surface, of oceans rushing over many parts of the land, while rivers were driven from their beds. Some of the events in this period are mentioned in the Bible.

Professor Horace M. Kallen, former dean of the New School of Social Research, strongly endorses Dr. Velikovsky's statements: "It is my belief that Velikovsky has supported his theses with substantial evidence and made an effective and persuasive argument."

Many other authorities endorse this work, which is documented with impressive references. But even if this particular account is not accepted, all astronomers agree that the effect of a comet passing near the earth would be appalling. *Worlds in Collision* states that Mars, like the earth, was pulled out of its orbit by the comet's erratic passage. It may be that this near disaster to the earth and Mars is known on other solar planets, or remembered on Mars itself, if the planet is inhabited.

The possibility of super-bomb explosions on the earth understandably disturb any dwellers on other solar-system planets.

This may be what was back of the Project "Saucer" statement on the probable motives of any visitors from space. I mentioned this Air Force statement in an earlier chapter, but it may be of interest to repeat it at this time. The comment appeared in a confidential analysis of Intelligence reports, in the formerly secret Project "Saucer" document, "Report on Unidentified Aerial and Celestial Objects." It reads as follows:

"Such a civilization might observe that on earth we now have atomic bombs and are fast developing rockets. In view of the past history of mankind, they should be alarmed. We should therefore expect at this time above all to behold such visitations.

"Since the acts of mankind most easily observed from a distance are A-bomb explosions, we should expect some relation to obtain between the time of the A-bomb explosions, the time at which the space ships are seen, and the time required for such ships to arrive from and return to home base."

Great Balls Of...Light

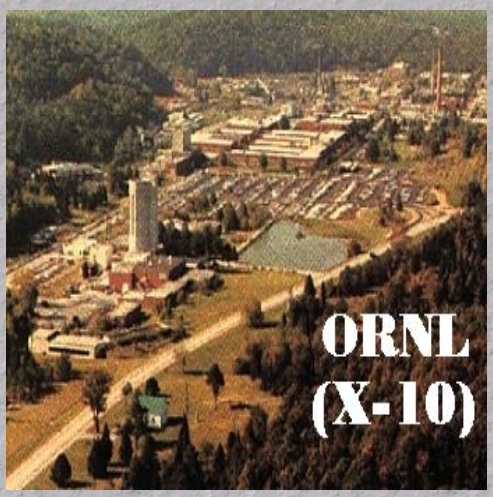
Excerpted from "EVACUATION ROAD"
by JERRY WASHINGTON

In this excerpt from "Evacuation Road" Jerry tells of his encounters with what have come to be known as red BOLs (Balls of Light), back in his hometown of Oak Ridge, Tennessee; which along with Los Alamos, NM, and Hanford, Washington, was one of a trio of cities involved in the "Manhattan Project" - the top secret effort to build the first atomic bomb back in the 1940s. With their long and well-documented history of UFO surveillance, the "unholy" trinity certainly made for a unique place to grow up.

The following excerpt begins with Jerry and Astrid, his Norwegian girlfriend, walking along minding their own business when the strangeness begins:

Astrid and I observed several other oddities together in the restricted skies over the Atomic City during the late 1970s. One of these sightings took place as she walked me home one evening, after hitching a ride over to her place to show her dad a copy of the Hindu text, the Sama Vedas. In Vedantic literature, which predates the Bible by thousands of years, there are numerous mentions of vimanas - flying objects that supposedly visited earth and tooled around our solar system in antiquity.

I wanted to prove to her dad that UFOs had been around for a long time and that other folks had espied them besides me. We'd debated the subject often with Lars holding firm to his belief that UFOs were either misidentifications of conventional objects, or the imaginings of uneducated minds. Lars had a maddening habit of thinking he was right all the time, an unappealing trait made even more so by his unflappable Nordic cool. He was employed out at the Oak Ridge National
Laboratory (X-10), so he was bedeviled with a physicist's need for hard evidence.



"You have no proof," he'd say to me with that smug little smirk on his face, "and until you do, I'm afraid your saucers will belong in the realm of science fiction." This annoyed me to the point that I often fantasized about stuffing a wedge of Yjetost, a cloying, sweet variety of Norwegian goat-cheese, down his patronizing throat. But I never did, content in the knowledge that I was doing the "big nasty" with his lovely daughter right underneath his self-satisfied nose, and the ol' fart was clueless...

He did appear to be somewhat intrigued by the text. I don't know if it's true of most

Scandinavians, but Lars viewed religion in much the same way Karl Marx did - as an "opiate of the masses." The Vedas, however, with their detailed descriptions of what twentieth-century Man would come to know of as spaceships, piqued his interest a bit. It didn't sway his opinion on the subject fundamentally, but at least he didn't dismiss it out of hand.

I had triumphed, so to speak, and to the victors go the spoils, so I asked Astrid to drive me home figuring that we might make a little "detour" along the way. She suggested that we walk, however, ever the practical one.

Astrid, a Scandinavian beauty with eyes the color of jade, had dual citizenship, spoke five languages, and I was seriously in lust. Just being with her warmed the "cockles" of my heart, which the balmy mid-October temperatures only magnified. I was certainly not thinking about UFOs as we made our way along Robertsville Road, Sama Vedas in hand, about a mile from my house. A third of the way home, I was basking in my true love's presence when suddenly, from behind a nearby ridge, a glowing sphere of luminous red light appeared seemingly headed in our direction. As I watched in wonder, the object approached us, then abruptly disappeared.

"Did you see that?" I queried Astrid excitedly.

"Yes," she replied, sounding decidedly unimpressed.

"What do you think it was?"

"Nothing," she replied, "it's just one of those things."

"One of what things?" I demanded to know as we echoed a conversation Richard Dreyfuss and Terri Garr have in the movie "Close Encounters of the 3rd Kind."

"Nothing for you to concern yourself with," she replied as she shot me one of those withering looks that said, "If you persist with this line of questioning then you will not get your reward." So I quickly dropped the subject and we continued on our way.

About two-thirds of the way home, we took a little detour up to the Linden School playground for that extra-curricular activity I was hoping for. Reclining in a patch of grass near the swing sets, we had a window on the world and the privacy we were seeking. Wasting no time, we were well on our way to "effecting a merger" when the damned thing happened again. As before, a ball of luminous red light emerged from behind the exact same ridge seemingly headed in our direction. Then that object disappeared, just like the first. I don't know much about triangulation, but if you used the ridge as its apex, the points of the two sightings if diagrammed out would form an equilateral triangle. Of course, I didn't make a big deal out of it this time either. I'd learned my lesson...

Brother James and I would have another sighting of the red balls-of-light only a few nights later. Out for a walk, we'd just crested the top of our hilly street when we observed one of the crimson-red curiosities passing lazily and silently over our "crib." Flying at no higher than tree-top level, the object didn't appear to be attached to anything else as it bobbed slowly up-and-down. Continuing on around the block, we watched as the light meandered across Montana Avenue and the next ridge over before disappearing out of sight.

Excited, but hardly new to the UFO phenomenon by that time, Jamey and I kept walking until we reached a clearing that afforded us an unfettered view of the ridge that serves as the de facto demarcation line between the restricted and residential sectors of Oak Ridge - only about a quarter of a mile away. And no sooner had we arrived than we noticed a string of

little red lights flying in a train-like formation over that same ridge. Following the topography precisely, the lights flew back and forth just feet above the treetops, reversing course at will and even dividing in half at one point. That was something to see. As I focused in on the lights through a pair of binoculars we'd brought along just in case, one of the little unknowns split in two, its two halves flying off in opposite directions.

Eventually the activity died down as the BOLs flew off in a westerly direction, towards K-25, the Uranium Enrichment Facility.

Show over, we figured as we started to head for home. At that very moment, however, we suddenly caught sight of a "luxury cruiser," a much larger and longer object approaching at a leisurely pace from the direction of K-25. Resplendent with a row of green lights running down its mid-section, and a bright red light on each end, the object reached a point directly opposite us, behind that defacto demarcation line, where it hovered motionlessly for a few minutes before descending ever-so-slowly out of sight...

It sure was a "hot" night in the ol' Atomic City that night!

The Nuclear Connection

To Have Or Have Not

Excerpted from "EVACUATION ROAD"
by Jerry Washington

In the following excerpt from Jerry Washington's upcoming book "Evacuation Road," he tells of a couple of UFO sightings he had in the 1970s back in his hometown of Oak Ridge, Tennessee (the "Manhattan Project"). A city that along with Los Alamos, New Mexico, and Hanford, Washington, served as the birthplace of the atomic bomb. And while it may not constitute "Best Evidence" per se, it does illustrate how common the UFO presence has often been in the "Atomic City."

It begins with Jerry and his Norwegian girlfriend Astrid, steaming up the windows of his car while parked in a graveyard bordering the restricted (government) zone. Oblivious to anything but each other at the time, that was just about to change. As Jerry tells it:

Try as I might, it was hard for me to ignore the amber-colored, oval-shaped object that had suddenly intruded upon our awareness, gliding silently through the sky above the adjoining pastureland. We watched it as it scooted from left-to-right across our field of vision, then disappeared behind the neighboring ridge. Then, after only a few moments, the object reappeared, moving in the opposite direction.

Astrid, who was very much her father's daughter when it came to such matters, dismissed the sighting as irrelevant despite its high-strangeness factor. While I was much more intrigued by it, undoubtedly due to the close encounter of the extreme kind I'd had two years earlier. The amber light she and I were looking at clearly had no business being there. The skies over Oak Ridge were (and still are) highly restricted and very closely monitored. A prudent policy, I'd say, under the circumstances...

That's how brother James, and my buddy Greg and I felt as we made a speedy exit out of town one afternoon as Melvin, a local boy of the African-American persuasion, was threatening to crash the 727 he'd just hijacked into the Y-12 Nuclear Facility, otherwise known as the "Bomb Factory." Demanding to be flown to Cuba, Melvin had apparently been in contact with Fidel Castro who had helped him hatch the hijack plot. The plan was for "Nervous Melvin" to commandeer the plane, demand a million dollars ransom, and force the pilot to return to McGhee-Tyson airport in Knoxville, where Melvin was to collect the money. Then he'd fly to Cuba where Fidel would welcome him as a hero of the Revolution.

Melvin swung into action as soon as the plane took off on its regular route. Brandishing a pistol, he immediately secured the cockpit. The co-pilot thought he was bluffing, though, and refused to play along. So Melvin shot him in the leg to convince him otherwise. It worked, and the pilot was soon on the radio to the Knoxville tower relaying Melvin's list of demands to the authorities. The pilot also began to fly in circles over the "Bomb Factory," as instructed. Whenever the negotiations bogged down, Melvin would renew his threat to crash the plane into the facility.

Headed for Knoxville to party, the three of us couldn't help but feel a little safer the further we ventured from home. But our destination lay only twenty-five miles away, which would have made scant difference had Melvin actually followed through on his threat.

We kept our A.M. dial tuned to the local black radio station, in transit, because it was the only one airing a play-by-play account of the drama. And every now and then, in his velvety smooth, ultra-hip disc jockey voice, the radio announcer would express his solidarity with "Brotha Melvin," while fielding telephone calls doing the same. I wonder if Melvin's supporters were hip to the fact that a nuclear chain-reaction triggered by the idiot would have been an equal opportunity apocalypse?

Fortunately, it never came to that. Melvin got his money and a one-way ticket to Cuba, and East Tennessee got a reprieve.

Upon his arrival in Cuba, our hometown boy was in for a rude surprise. Instead of being hailed as a hero, Castro confiscated the money and tossed Melvin's ebony ass into a six-by-six-by-six prison cell. And there he would remain until the Mariel boatlift of 1980, when Fidel would send him home and into the waiting arms of the Feds, who locked him up and threw away the key. "Viva la libertad!"

Obviously, a "no-fly" zone over Oak Ridge wasn't going to keep out every undesirable. Nor did it deter those pesky amber-colored ovals, of which I observed a number that autumn. It also didn't stop the object my friend Greg spotted one evening, as he went from being a "have-not" to a "have" as far as a sighting was concerned...

It was late night, around 1:00 a.m. in the morning, and James and I were still up toying with the hapless katydid we'd snatched off the top of my air-conditioning unit after putting up with the creature's annoying cadences for several hours. Playing God, we were toying with our prey, contemplating its fate.

Suddenly, in the midst of this conceit, there came a loud, insistent pounding on the window that jolted James and I right out of our skins. Greg had shown up and was imploring us to get our butts outdoors to see something strange in the sky.

Outside, I found Greg in the front yard gesturing towards the horizon while mumbling something about never doubting me again. Anxious to see what had him so excited, I focused my gaze in the direction he was pointing but all I could see was a star. A bright, rather colorful star perhaps, but a star nonetheless.

Earlier that evening, Greg had been parked up at one of the scenic overlooks that afford the citizens of Oak Ridge a panoramic view of the Atomic City, when he spotted a UFO hovering over K-25, the Uranium Enrichment Facility. Rushing home immediately to pick up his brother Jeff, the two of them then made a beeline for my place (I was Mr. Flying Saucer, after all).

He knew I'd had a close encounter, the truth of which I was certainly not shy about spreading. A typical scenario: A bunch of us delinquent types would pile into the deluxe motor-home my stepmother had so thoughtfully parked in our backyard, a joint or some liquid refreshment would get passed around, then, with my captive audience suitably primed, I'd launch into my "we are not alone" sermonette. The funny thing is, I'd always assumed that everybody took me at my word, especially Greg. We'd been best friends for years and I trusted him above all others to give me the benefit of the doubt. But as his remarks clearly indicated, this was not the case. Turns out he wanted to believe, but he was the very essence of a "have-not."

This time the tables were turned. While Greg kept insisting that we were observing the same object he'd seen from the overlook, I was skeptical. It didn't fit his original description of that object (multiple lights, enormous size) and it was stationary, whereas the earlier one was seen both hovering and ascending. I didn't doubt for a second that he'd actually sighted a UFO over K-25. With Oak Ridge's long and storied history of UFO "surveillance," what else was new? Instead, I figured he'd inadvertently lost sight of the original object somewhere between his house and mine. And so, after several valiant hours of trying to convince me that they were one and the same, Greg (and James) reluctantly gave up and headed indoors. And that's when it happened. As his brother Jeff and I prepared to follow suit, one of those pesky, amber-colored ovals suddenly appeared in the eastern sky.

After watching it glide silently across the horizon for a few moments, Jeff, a professional diver by trade and a cynical son-of-a-bitch not usually given to genuflection, suddenly dropped to his knees and starting praying like crazy for a quick deliverance. "Help me Jesus," he chanted repeatedly as I hollered for the other guys to get their asses back outside. Spilling out the doors like "johns" during a raid, Greg and James arrived in time to see the object stop dead in its tracks, then zip in an instant back a quarter arc across the sky. Aligning itself up with the so-called star, the two objects appeared to effect some kind of energy transference for a brief time. Indeed, it put on quite a show for us as we watched in slack-jawed amazement. I also couldn't shake the impression that the object was toying with

us, much as James and I were "toying" with the katydid. Finally, as the object resumed its trek, we were suddenly enveloped in a warm and gentle breeze, on what had been a still night up until then...

The Nuclear Connection

Lake Titicaca from space, May 1985.

The origin of the name Titicaca is unknown. It has been translated as "Rock Puma", allegedly because of its resemblance to the shape of a puma hunting a rabbit, combining words from the local languages Quechua and Aymara, and as "Crag of Lead". Locally, the lake goes by several names.

Because the southeast quarter of the lake is separated from the main body by the Strait of Tiquina, the Bolivians call this smaller part *Lago Huiñaymarca* and the larger part *Lago Chucuito*. In Peru, these smaller and larger parts are referred to as *Lago Pequeño* and *Lago Grande*, respectively.

Centuries' Old UFO Coin Remains Mystery

Fri Jan 28, 2005 4:24 pm

An unidentified flying object on a 17th century French coin continues to mystify rare coin experts.

Colorado Springs, CO (PRWEB) January 28, 2005 -- After decades of seeking possible answers about a mysterious UFO-like design on a 17th century French copper coin, a prominent numismatic expert says it remains just that: an unidentified flying object. After a half-century of research, the design has defied positive identification by the numismatic community.

"It was made in the 1680s in France and the design on one side certainly looks like it could be a flying saucer in the clouds over the countryside," said Kenneth E. Bressett of Colorado Springs, Colorado, a former President of the 32,000-member American Numismatic Association and owner of the curious coin.

"Is it supposed to be a UFO of some sort, or a symbolic representation of the Biblical Ezekiel's wheel? After 50 years of searching, I've heard of only one other example of it, and nothing to explain the unusual design."

Bressett said the mysterious piece is not really a coin, but a "jeton," a coin-like educational tool that was commonly used to help people count money, or sometimes used as a money substitute for playing games. It is about the size of a U.S. quarter-dollar and similar to thousands of other jetons with different religious and educational designs that were produced and used in Europe during the 16th and 17th centuries.

"The design on this particular piece could be interpreted as showing either a UFO or Ezekiel's wheel, but little else. Some people think the Old Testament reference to Ezekiel's wheel may actually be a description of a long-ago UFO," he explained.

"The legend written in Latin around the rim is also mystifying. 'OPPORTUNUS ADEST' translates as 'It is here at an opportune time.' Is the object in the sky symbolic of needed rainfall, or a Biblical reference or visitors from beyond? We probably will never know for certain," said Bressett.

"It is part of the lure of numismatics that makes coin collecting so intriguing."

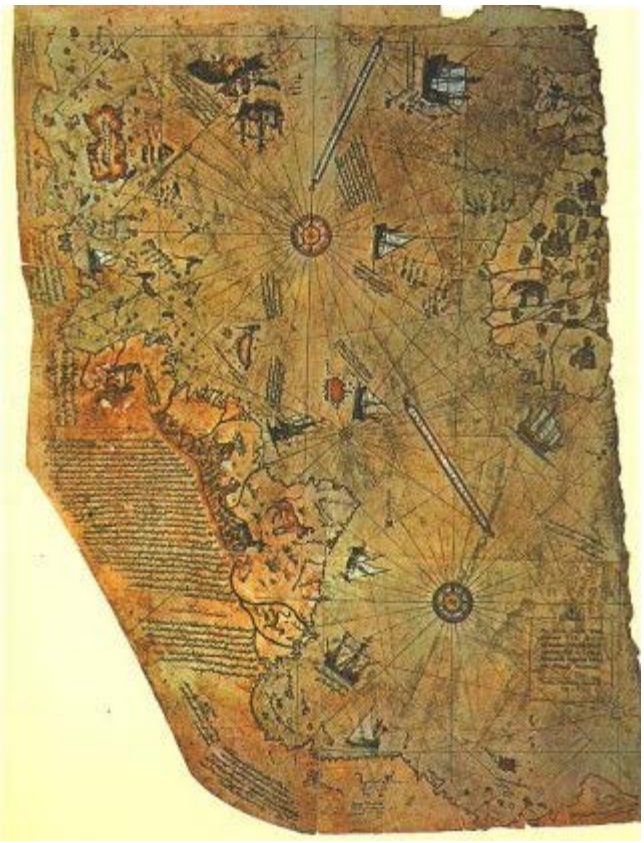
THE PIRI REIS MAP



Piri Reis was a famous Turkish admiral in the sixteenth century who had a passionate interest in his collection of old maps. When the admiral's flagship tied up in some new port, Piri Reis and his aides scoured the bazaars for ancient charts and maps. During a now-forgotten sea battle, the admiral captured several enemy sailors. One of the captives boasted of sailing with Columbus on his three voyages to the new world.

Reis, ever on the lookout for new information and maps, questioned the man, who turned out to be one of Columbus's pilots. Reis asked if Columbus was mad, or if he knew that there was land across the ocean. The pilot said he knew, that he had maps, and that the pilot still had the maps!

The admiral's eyes scanned the yellowed charts. The tracings on the parchment were precise. Using his collection of antique charts, Admiral Piri Reis compiled a world map in 1513. In 1929, a group of historians, poking around in the harem section of the Palace of Topkapi in Constantinople, found the Piri Reis map in a pile of rubble. These scholars were astonished to discover that the map showed the coastal outlines of South and North America. It also included precise data on the southern polar continent, Antarctica, supposedly not discovered until 1818.

Arlington T. Mallerey, an authority on ancient maps, eventually came into possession of these documents. He was puzzled to find that the geographical data on the map was not in the correct position. Assisted by the U.S. Navy Hydrographic Bureau, Mallerey made a grid and transferred the Piri Reis map onto a globe. The map was totally accurate.

Later, studies by Professor Charles H. Hapgood and Richard W. Strachan revealed that the originals of the Piri Reis charts may have been aerial pictures snapped at a great height. The rivers, mountain ranges, islands, desserts, and plateaus, were drawn with unusual accuracy. As an example, Greenland was represented as being two separate islands. This was confirmed just recently by a French polar expedition; their seismic soundings beneath the surface indicated ice covers the space between the two islands.

In Antarctica, an exploratory profile was made by seismic soundings. It revealed mountains and valleys beneath the ice cap that matched the markings on the Piri Reis map. In the January, 1966, issue of Fate magazine, Professor Charles H. Hapgood explained the sensational discovery.

"Now this was extraordinary. In the first place, nobody is supposed to have discovered Antarctica until 1818, three hundred years after Piri Reis, and it is regarded as unthinkable that the Greeks, Romans, Babylonians or Phoenicians could have sailed that far. In the second place, the ice cap in Antarctica is supposed to be millions of years old, and therefore to have been in existence long before man evolved on earth. Mallerey's suggestion (that someone had mapped the south polar continent before the ice cap originated) appeared outrageous and scientists in general refused to concern themselves with it."

It seems incredible that ancient cartographers had maps that were more accurate than the best charts produced today. Yet, Captain Mallerey stated that "it was evident that there was very little ice then, at either pole. But, secondly, they had a record, for example, of every mountain range in Northern Canada and Alaska, including some ranges that the Army Map Service did not have. The U.S. Army has since found them! Just how they were able to do it, we do not know. But, you will probably recall that the Greeks had the legend of an airplane. We don't know how they could map so accurately without an airplane. But, map it they did. Not only that, but they knew their longitude correctly, something we could not do until two hundred years ago."

FRESCO IN TURKEY HINTS AT PILOTED CRAFT

The fresco is on the wall behind an alter in a church in Turkey, I believe. The 'pilot' is looking back and around the curved painting to the other side where another craft with a different being in it is looking at the occupant of the craft in the picture.

Unfortunately my UFO Library is in storage at the moment as Sue and I separated a couple of months ago and my current space is too small for most of my 'stuff' and I don't have access to the book to get a scan of the other craft.

Subject: No Genuine Airships in 1897

To: Francis Ridge <nicap@insightbb.com>

Hi Fran,

Good to hear from you again. I've come to the conclusion that there are no genuine UFOs among the 1897 airships, though the matter is more complicated that just hoaxes. Many honest and reliable people reported a light in the sky, but their description of how the light sank slowly toward the horizon makes it clear that they were looking at Venus or some other heavenly body. Other honest people reported a structured object with lights, moving in a manner and direction no heavenly body could manage, but these people were the victims of a hoax. What they saw was a fire balloon (hot air), a sort of device popular as a form of 4th of July "firework" but available in drug stores (the Targets and Wal-Marts of the day) all year 'round. A follow-up of airship sightings in a town often revealed who the jokesters were, or reported the burnt-out carcass of the fire balloon had landed in some farmer's field, now and then starting a fire. Then we have the out-and-out hoaxes. Fakery was an accepted form of newspaper entertainment in those days, with snake stories and ghosts being popular and credited to the "snake editor." Airships opened a new opportunity and the newspapers welcomed it. The local correspondent, paid by the column inch, could buy the groceries by cranking out an elaborate airship story. One town could play a joke on a neighboring town by attributing airship sightings to it and then commenting on its lapse from temperance. Tall-tale tellers could regale their audiences with a good airship yarn, and practical jokers could contrive wood-and-sheet-metal contraptions and claim that it crashed. In a day when people knew their neighbors face to face, affidavits meant little and airship lies left no blemish on a man's reputation--witness Alexander Hamilton's calfnapping airship and support of him by the prominent people of the county, all of whom were in on the joke as members of a local liars' club.

I was sorry to see the Aurora crash come back to life recently, since it was effectively killed off long ago. In the first place, only one newspaper story reported it. The Dallas Morning News account was repeated in other newspapers, but no other reporter went to the scene for independent confirmation. This contrasts with a Waterloo, Iowa, hoax where the jokers left a model airship in a field and many papers covered the story, also many people came to town or took a look while passing through, then commented on what they had seen when they returned home. None of this happened with Aurora. Local histories, one of them written only ten years or so after 1897, fail to mention the crash even though it would have been the most sensational event in the history of the town. Most old residents knew nothing of the crash when it became popular in the mid-1970s, and those who claimed that the story was true had ulterior motives or a fanciful disposition. The real motive behind the story seems to have been an attempt to attract some attention to a town that had suffered the recent disappointment of being bypassed by the railroad. In any case, for a long list of reasons, Aurora was a hoax.

And so it goes: The reliable airship stories are not spectacular and the spectacular airship stories are not reliable. This pattern repeats throughout the two thousand or more reports until there is nothing left that I would want to stand up and defend as a genuine UFO. There are some impressive UFOs pre-1947, but they are not to be found in the various sightings waves of UFO prehistory.

Best regards,
Eddie Bullard

Form: Analysis
Date: 24 Dec 2006
From: Brad Sparks
Subject: Analysis: Amateur Astronomer (Medical Doctor) Sighting, April 15, 1897 St Louis, MO

St. Louis Post-Dispatch of April 16, 1897, pp.1-2 [Credit: Thomas Bullard.]

Airship Viewed by Telescope /
Dr. Leo Caplan Watched the Aerial Visitor /
Distinctly Saw the Car....

The airship visited St. Louis again Thursday night. This time the bright searchlight was not only seen by thousands but the object was observed through a telescope and the outlines of the craft were seen.

[The observer was a medical doctor.]

Dr. Caplan is a dabbler in astronomy and frequently gazes at the heavenly bodies. He knows that he did not see a star....

"I was walking to my home on Washington avenue last night about 7:45...when I saw a bright light almost overhead. It was northwest of the zenith...

"But the moment I saw this light I realized it was something unusual and I hastened home, ran to the roof and brought my telescope to bear on the object. Before taking a sight I noticed the light was swaying from side to side. The effect was exactly that of a searchlight that was being manipulated.

"The moment I looked through the glass I discovered a long black body behind the light. It was exactly the cigar shape that has been described.

"I thought something must be the matter with the lens and I turned the telescope on different stars and planets. There was no unnatural effect evident and I brought the glass to bear again on the mysterious visitor. At first I could not locate the light, then I found that it had moved several degrees to the north. When I caught it again I once more made out the cigar-shaped craft.

"The airship...moved over considerable space in five minutes, and I followed it all the time. It took a northwesterly course, then veered to the West and finally to North. Then it darted off in that direction and was lost to sight. I had the light in view fully ten minutes from the time I first saw it on the street....

"It could not have been a star?"

"No sir. I looked at Venus, at Sirius and other bright stars several times, then back at the mysterious object. Besides, through my glass the object behind the light was distinctly visible."

ANALYSIS

This is a fairly impressive sighting by someone who was obviously technically trained, as an MD and familiar with astronomy and astronomical terms and concepts (zenith, degrees, etc.), equipped with a telescope actually used in the sighting. Dr. Caplan has time, date, duration, location, directional data, and states he did control checks of stars and planets, naming Sirius and Venus and excluding them. The UFO he saw was NW of Zenith when first seen, moved several degrees to the N, then seemed to head NW then W then N when it "darted off" to the N out of sight after a total of 10 minutes. In the telescope he saw a "cigar shape" "long black body behind the light" that had been "swaying" like a searchlight.

In fact Sirius was indeed up in the SW sky at azimuth 222 degs elevation 23 degs at 7:45 PM in St Louis that night of April 15, 1897. Venus was low on the horizon in the WNW at 294 degs azimuth, elevation 7 degs, dropping to 5 degs by the end of the sighting at 7:55 PM. Venus was nowhere near the Zenith (which is 90 degs elevation) and did not set until about 8:30 PM, still in the WNW (now at 301 degs azimuth).

Is there any reason to doubt this account? This would seem to go a long ways towards establishing the reality of a UFO phenomenon in the 1897 wave, including "cigar shape" dark body behind a brilliant white light. I would definitely like to see more amateur astronomer accounts.

I am having real trouble seeing how Dr Caplan's sighting can possibly be explained by a fire balloon carrying a Japanese lantern, as has been suggested. The fundamental characteristic of a "fire balloon" is FIRE. Caplan did not report 2 lights (fire balloon and Japanese lantern), only one light. If the Japanese lantern suspended below the fire balloon was what was "swaying" like a searchlight then Caplan should have seen the fire in the fire balloon as well. Moreover he reports no color let alone multicolors of a Japanese lantern, evidently it was white light.

Caplan reported a "cigar-shaped" "long black body behind the light" when viewing through his telescope, which does not at all seem like a Japanese lantern, designed to be lit up ("lantern") not be dark. He should have been able to resolve the fine details of the Japanese lantern construction through his telescope. He did not report seeing flames or flame coloration to the one and only light, which should have been obvious when viewed through his telescope, to say nothing of seeing an obvious Japanese lantern shape in the scope had it been such.

Subject: Early Airship in Vincennes Sky, April 16, 1897

Source: The Valley Advance, Vincennes, Indiana, March 18, 1980 Vol. 16, No. 28,
Cat: 1

UFOs and the Media
Vincennes Morning Commercial
April 16, 1897

Unidentified flying objects are nothing new for the people of Vincennes. In 1897 a mysterious airship passed over the city twice on the night of Friday, April 16. According to the Vincennes Morning Commercial, the airship first appeared about nine oclock, traveling along the extreme eastern portion of the horizon: A sphere of golden light was first seen in the vicinity of the Union Depot, from down in the city. Those near the ship claimed they could clearly see the dark lines of its car, although no passengers were observed.

Many reputable citizens witnessed the flight. From his home on Burnetts Heights, Sam Judah said he could plainly see the ship with its fluttering wings, its movements resembling a side wheeler steam-boat, sailing through the air with incredible velocity.

From his doorway, where he had gone to look at his thermometer, Col. Ewing saw the light, which he at first thought was a falling star, but as it moved so slowly, soon became convinced that it was the inevitable airship. Ewing watched it for about four minutes.

Anton Simon noticed a ball of fire, moving in a north-westerly to southeasterly course, which he later realized was an airship.

Victor Schonfeld, somewhat of an expert observer, having made airships and balloons, a life-long study, and having even made several ascensions in his time, testified that this was a genuine airship.

Among many others who saw the airship were Col. M.P. Ghee, Thomas Eastham, Judge DeWolf, Will Mason, Scott Emison, Jesse Foulks, all highly reputable witnesses.

The airship first passed rapidly overhead in a southwesterly direction. An hour and a half later, it was seen again, passing over the northern portion of the city, traveling in a northwesterly direction:

The last time it seemed to pass directly over the fairgrounds (present-day Gregg Park) and traveled more slowly than in its first swift passage straight over the city.

It is thought that the navigator turned his flying machine around and started back, or that the ship landed near the city and started back.

Some say voices could be heard in the airship, and one gentleman, who saw it from Burnetts Heights says he could see a man moving about in the ship and that he appeared to be adjusting the machinery.

The Commercial concluded: Other cities have seen the airship and now Vincennes is strictly up to date'.

In fact, the Vincennes encounter was only one of some 200 sightings made by thousands of people in 19 states, during our nations first UFO flap of 1896-1897.

In his article, Close Encounters of the Earliest Kind, in the December, 1979 issue of American Heritage magazine, Ron Genini described the beginning of the flap in (where else?) California, in November of 1896. There were elements of hoax in some of the accounts, but many people believed they saw something. Many of the eyewitness accounts agreed that a traveling light or airship moved against the wind at an altitude of from 50 to 2,000 feet. It was cigar- or egg-shaped, with wing-like propellers or fan-like wheels revolving rapidly . . . and a doubly powerful arc light at its bottom center.

Soon, hoaxters got into the act, claiming to have ridden the flying machine, or to have talked with its crew, or even to have invented it. When some of these hoaxes were exposed, newspapers became skeptical, questioning the veracity or sobriety of witnesses, and making the airship the butt of jokes. After the excitement died down on the West Coast, the airship reappeared in the skies of the Midwest and South in April, 1897. In the first chapter of his book The UFO Controversy in America, David Michael Jacobs details the many sightings over Chicago, St. Louis, Milwaukee, Omaha, Kansas City, Dallas, and many other cities and towns.

Colored or intensely bright white lights were the most characteristic feature of the airship descriptions; in many other particulars the descriptions agreed with those from California--a cylindrical, or cigar-shaped body with a propeller or propellers.

As Jacobs points out, the first modern airship or dirigible was built in France in 1898, but there is no record of any American inventor producing an airship at this time. And the speeds attributed to the mysterious airship--estimated at up to 200 miles per hour--far exceeded anything possible at the time. Again, there were some hoaxters, and again the newspapers were skeptical.

In Vincennes, the evening Western Sun, having been scooped by the morning paper, wrote a kind of tongue-in-cheek parody:

The Air Ship Sails the Azure Depths like a Tongue of Light; It Floats through Space Leaving Multitudes of Worshipping People on the Earth Beneath-- Supposed to Contain Five Passengers and to be Enroute to Jacksonville, Fla.
The Sun described the effects upon the supposed superstitious inhabitants of that aristocratic colored suburb known as Idaho,who were scared to death.

A few days later the airship lent itself to advertising:

The airship seems to be an assured fact. But it is not attracting so much attention as the slashing prices that are being made on hardware and bicycles at Scott & Sons. Millers Drug Store on Main Street used the airship to draw attention to its ice cream and sodas.

There was not another sighting flap until 1946.

The chief difference was that while people in 1896-7 thought that the UFOs were man-made objects, in the modern ear the tendency is to believe that they are not of this earth.

A winged ship in the sky was how the San Francisco Call described a mysterious airship seen at Sacramento on Nov. 17, 1896. The illustration closely matches the description of one seen over Vincennes in April, 1897.

FLYING MATTRESS? -- With wings like mattress ticking, a California airship is depicted shining its light earthward. Also shown is a four-man crew in a canopied cockpit. Singing to the accompaniment of a phonograph supposedly could be heard coming from the craft.

OAK RIDGE SIGHTING BY SECURITY PATROL

10/15/50

Date: Wed, 01 Oct 1997
From: Jerry Washington <skyeking@aye.net>

It's been awhile, but I'm back with another case file from Oak Ridge, Tennessee: my hometown. The "Atomic City" has a long and storied history where the UFO phenomenon is concerned, and this is just one account among many that are available for public consumption, thanks to the Freedom of Information Act, and books by guys such as J. Allen Hynek (CUFOS), and Edward J.Ruppelt (Project Blue Book).

Jerry Washington
SD KY/MUFON

The following account is taken from an FBI document (circa 1950) sent by J. Edgar Hoover to Mr. Francis R. Hammock, Acting Director of the Division of Security of the Atomic Energy Commission in Washington, D.C.:

"On 15 October, 1950, Atomic Energy Security Patrol Trooper, Edward D.Rymer, and a caretaker, John Moneymaker, from the University of Tennessee Research Farm, at Oak Ridge, saw an object at about 12,000 to 15,000 feet above Solway Gate of the "Control Zone." This object appeared to be an aircraft which was starting to make an outside loop, trailing smoke behind. Soon these two men realized that the formerly described smoke behind the aircraft was a tail. This object continued to descend in a controlled dive, and when it approached the ground it leveled off and flew slowly, parallel to the ground. This object came within two hundred and ten (210) feet of the two observers and was paralleling the ground at approximately six (6) feet. Trooper Rymer attempted to approach the object but as he approached the object became smaller and started moving in a southeasterly direction. This object is said to have approached a nine (9) foot cyclone chain link fence and made a controlled movement to clear the fence, then a Willow tree, then a telephone post and wire, after which the object gained momentum and altitude and cleared a hill at approximately one (1) mile away. The object appeared to be pear shaped. When this object was over the hill it was still visible as the same object that was observed when only fifty (50) feet away. (The explanation given was that this object grew larger as it gained altitude and speed.)

Approximately five minutes later the object appeared again having reappeared from approximately the same location from which it had disappeared. The object was seen again five minutes later for approximately ten seconds.

During the above happenings, Mr. John Moneymaker had

visual reference of this object during its first [appearance] for approximately seven minutes. Trooper Rymer was interrupted twice during which times he called his headquarters in an attempt to get other observers. Also, during the fantastic flight of this object, Trooper Rymer stopped Mr. E.W. Hightower, who was on the highway in his vehicle, to verify what was being seen. Mr. Hightower's statement substantiates the description as before.

By the time the object appeared the second time, Joe Zarzecki, Captain of the Atomic Energy Commission Security Patrol, was present and also witnessed this phenomenon. Each of the observers describes the object substantially as follows:

a. When the object was first sighted it appeared to be an aircraft trailing smoke, or better described as "smoke writing."

b. When the object was approaching the ground in its descent, it took on the shape of a bullet with a large tail.

c. When the object was sighted on the ground (from app. 210 ft). It appeared to be approximately the size of a 2x5 card {from a distance], with a twenty (20) foot ribbon tail. The object and the tail were alternately moving up and down, and the ribbon appeared to be waving in the breeze. The color was a metallic gray.

d. When Trooper Rymer came within fifty (50) feet of the object he described it similar to the above except that the first two and one-half (2 ½) feet of the tail appeared more solid, but the last seventeen and one-half (17 ½) feet of the tail appeared almost transparent and was glowing, intermittently, in sections. The tail appeared to have four or five sections which would glow intermittently.

Trooper Rymer's record is among the best of the troopers at the Atomic Energy Commission Security Patrol. Mr. John Moneymaker holds badge No.UT-1817, and is employed by the University of Tennessee Agricultural Research Farm as a caretaker for small animals. Mr. E.W. Hightower holds badge No. 6633 and is an employee of the Maxon Construction Company.

The Controller, Capt. W. Akin, of Detachment No. 2…at the Knoxville Airport Radar Site, made a report that he had seen peculiar readings on the radar scopes at approximately 1520 hours. Apparently the radar picture was indefinite, intermittent, and inaccurate, because the objects sighted by radar would only make a short "painting" on the scope and would then disappear only to reappear at another location."

Attached to this Summary are eleven (11) enclosures which tend to clarify information contained in the former two (2) Summaries of Information on SUBJECT. These enclosures are composed of witness statements; background information concerning previous sightings of peculiar objects over Oak Ridge; and radar reports. The most reliable sources available were utilized in the

compilation of this report. The employment records and the Federal Bureau of Investigation reports concerning the witnesses were inspected to ascertain their reliability, integrity, and loyalty to the United States Government.

The opinions of the officials of the Security Division, AEC, Oak Ridge; Security Branch, ??PA [partially unreadable] Division, Oak Ridge: AEC Security Patrol, Oak Ridge; FBI, Knoxville: Air Force Radar and Fighter squadrons, Knoxville; and the OSI, Knoxville, Tennessee, FAIL TO EVOLVE AN ADEQUATE EXPLANATION FOR SUBJECT [emphasis mine] however, the possibilities of practical jokers, mass hysteria, balloons of any description, flights of birds (with or without cobwebs or other objects attached), falling leaves, insect swarms, peculiar weather conditions, reflections, flying kites, objects thrown from the ground, windblown objects, insanity, and many other natural happenings HAVE BEEN REJECTED because of the simultaneous witnessing of the objects with the reported radar sightings; because of the reliability of the witnesses; because of the detailed, similar description of the objects seen by different persons; and BECAUSE OF IMPOSSIBILITY…"

(The previous document was declassified in 1983.)

Objects Over Oak Ridge, October 12, 15, 16, 1950
PROTECTION OF VITAL FACILITIES

Ramytel October 13, 1950

There is being submitted herewith a copy of two reports made by District Representative of the OSI, 8th District, U.S. Air Force, with regard to the detection of unidentified objects by the means of radar, as set forth in referenced teletype. These reports continue to set forth additional reports concerning unidentified objects in the air space are over Oak Ridge, Tennessee, which to date have not been explained.

No investigation is being conducted by the Knoxville Office in this matter, but any further information received from OSI or from CIC representatives will be forwarded immediately.

Incident Report

AEC PATROL

Incident report No. 142-50
Date: October 15, 1950
Time: 3:25 P.M.

Classification	Trooper	Location
Unidentified Flying Object	E. D. Rymer	Kerr Hollow

Person Involved	Address	Badge No.	Company
Trooper E. D. Rymer		206	"D" Troop

Person Involved	Address	Badge No.	Company
Capt. J. J. Zarzecki			

[redacted] 66 [redacted] 66

John Moneymaker stopped at Kerr Hollow gate where I was on duty October 15, 1950, 3:20 P.M. He and I observed what appeared to be a skywriter in the air. He was one-quarter of the way through a letter "O". The object appeared to be 12,000 to 15,000 feet high and east by north of the gate, approximately one mile distance from the gate. At this time, the size appeared to be about the size of a four or five passenger plane. The object had a smoke trail the same crossectional size of its body and about one-quarter of a mile long. The smoke was grayish in color. The color of the body of the object was silver metallic. The object gave off no reflection. It was dull in appearance. When first observed, it was describing an arc toward the ground. When the object failed to complete the outside loop, I went into the gate house to report its appearance. Up till this time I thought it to be a plane doing some skywriting. While I was making the phone call, [redacted] watched the object continue downward to 1,500 feet. At that altitude, a second object was noticed alongside the smoke trail. 66
The second object was the same size and shape and was about 50 feet behind the first object. The second object appeared to be attached to the first object's smoke trail with about an 80 degree forward thrust, yet the second object was moving in the same direction of the first object and not drawing away from the smoke trail of the first object the way it should have been doing according to its angle and direction. At this altitude, both objects changed from a bullet shape to a bladder shape. Also, at 1500 feet both objects began pulling out of the vertical dive. During the entire descent, both objects diminished in size. From 1,500 feet, the angle of descent was about 45 degrees. At about 500 feet, the second or trailing object disappeared. The object continued downward to a point north of the perimeter fence over the roadway about 60 yards from the gatehouse toward Solway bridge. This was where the object was when I came out of the gatehouse. At this time, the object had diminished to about 2x3 inches.

A. L. Rydzewski, Acting Assistant Chief, Security Division

REPORT OF MYSTERIOUS FLYING OBJECT

SYMBOL: S:AIR

Pursuant to receipt of a report from John S. Davis, Chief, Oak Ridge Patrol, indicating that a mysterious flying object was observed in the vicinity of the Kerr Hollow Entrance, [redacted] was interviewed by F. P. Callaghan, Acting Chief, Security Division, AEC, ORO, in the presence of A. L. Rydzewski, Security Division, ORO, and Charles Jones, Security Agent, Maxon Construction Company, at approximately 10:15 p.m., October 15, 1950. Hightower is an electrician employed by the Edenfield Electric Company, which is under subcontract with the Maxon Construction Company, performing work at the K-29 Plant. [redacted] gave the following account of his observations. He was driving to work at approximately 3:15 p.m., October 15, 1950, and upon nearing the Kerr Hollow entrance to the Oak Ridge Controlled Area, he was requested by the guard on duty to stop and observe an object which the guard and another civilian were looking at. He got out of the car and noticed a white spot in the sky. He said it was "awful high" and moved from a position southeast of Kerr Hollow entrance in a westerly direction toward the Plant Areas. He noted that the sky was clear and the object was merely white, not shiny and emitted no trail of smoke and appeared to have no appendages. He observed the object for about 5 minutes and continued on his way to work before the white object disappeared from sight.

b6

When asked what he thought of the object, [redacted] related that his first impression was that it might be a toy ballon, because it looked quite similar to a toy ballon which one of the neighbor-hood girls had released in his presence several weeks ago. [redacted] was not sure of the size of shape of the object, however he indicated by hand gesture that it might have been about 9 inches in diameter and probably was in the shape of a disc or ball.

b6

[redacted] said that the guard and civilian appeared to be excited and told him that when they first saw it, the object was "Quite big" and that it moved along the road at very low altitude and that it suddenly ascended at an angle to the point where they were observing it at the time. He stated that the guard originally asked him to look at the object, just to make sure that he wasn't merely imagining he was seeing things.

(Page # 1 of Inclosure # 10)

-1018bdz

The files

16 October 1950

[redacted] stated that as far as he knows his eye-sight is good and that he only had to use glasses for reading purposes. He had his eyes tested about 4 years ago by [redacted], at which time this reading glasses were prescribed. He also had taken a pre-drivers license eye test about 3 weeks ago at the Maxon First Aid Station.

b6

b6 [redacted] stated that the only other person to whom he mentioned seeing the object was a guard stationed at Gate Two to the K-29 Plant.

Note: The Maxon Guard was later identified as being Jack Larton, who was interviewed at approximately 11:15 p.m. Larton stated that a man was driving through the portal shortly after 3:00 p.m. and stopped to chat with him for about 5 minutes. The man [redacted] stated that he had a headache and that he had been observing an object in the sky which was called to his attention by a guard at the Kerr Hollow entrance. According to Larton, the man further related that the object was so high he didn't know what it was, but it looked more or less like a toy ballon. Larton stated that he was not excited by this report; however he did mention something about flying objects to a fellow guard about two hours later when they observed aircraft which they believed were P-38's flying over the plant areas.

b6

Note: Other individuals who had observed the object were identified as AEC Patrolman Edward Dean Rymer and [redacted]

KNOXVILLE DETACHMENT
8th DISTRICT OSI (IC)
PO BOX 401
Knoxville, Tennessee

16 October 1950

SUBJECT: Visual Sightings of Unidentified Flying Objects over Oak Ridge, Tennessee

TO : District Commander
8th District OSI (IC)
Marvell AFB, Ala.

1. At 0830 16 October 1950, Mr. George Rathman, Security Division, Atomic Energy Commission, Oak Ridge, Tennessee, notified the undersigned that visual sightings of an unidentified flying object had been made by several persons at Oak Ridge. Accompanied by W. B. Gray, SAC Knoxville CIC, the undersigned proceeded to Oak Ridge.

2. At the AEC Security Division, Oak Ridge AEC Security Patrol [redacted] was interviewed by Mr. Rathman, Mr. Gray and the undersigned. In substance [redacted] related the following: At about 1525 EST, 15 October 1950 [redacted] was on duty at the Solway entrance to the Oak Ridge controlled area. He was conversing outside the guard house with [redacted], attendant at the University of Tennessee Research Farm Program, Oak Ridge. [redacted] happened to glance in the sky and called [redacted] attention to an object in the sky. The men observed that the object was starting to describe an arc in the sky. They estimated the object to be about twelve to fifteen thousand feet altitude. At this altitude the object resembled a sky-writing plane because smoke appeared to be trailing from the object. After the object described about a quarter of an arc it began to make a controlled descent at a speed estimated at about 100 miles per hour. [redacted] then noticed that the object had no wings and that it appeared to be bullet shaped. By this time the men could observe that what appeared to be smoke coming from the object was an attached tail. At this time [redacted] went in the guard house and called the Captain of the Guard to report a falling object. [redacted] continued to observe the object. When [redacted] came out of the guard house the object had descended to a height of about six (6) feet and was about seventy (70) yards from the two (2) men. By this time the object had assumed the shape of a two (2) by five (5) inch grayish colored card and attached to the object was a ribbon like tail about twenty (20) feet long and an inch wide. The object had no thickness. The tail of the object, which was light gray in color, had a small black line running down through its center. The tail appeared to be waving or rippling and the latter fifteen (15) feet of the tail gave off a pulsating glow intermittently in different section of the fifteen (15) feet. The latter fifteen (15) feet of the tail appeared to be somewhat transparent.

b7C

65-58300-136

ENCLOSURE

[redacted] estimated that the object was traveling about three (3) mile per hour and that the main body of the object was rocking slightly showing the corners and the under and top side. [redacted] advanced on the object to within fifty (50) feet but it did not appear to get any larger. At [redacted] approach the object picked up speed slightly, proceeded across the highway, came to a nine (9) foot chain link fence, rose vertically and parallel with the fence and proceeded over the fence. After clearing the fence it dipped toward the ground for a few feet and then rose sharply to clear a thirty (30) foot willow tree and proceeded in a southeasterly direction at an increased speed to a ridge about a mile away and disappeared over the top of the ridge. The object during the flight to the ridge, changed to a pear shape but the tail continued to be present. While the object was heading for the ridge a car driven by [redacted], employee of the Maxon Construction Company, Oak Ridge, approached the Solway gate. [redacted] called [redacted] attention to the object and he also saw it disappear over the ridge. Shortly after the object disappeared Captain of the AEC Security Patrol [redacted] arrived at the scene. Shortly thereafter another similar object appeared in the sky within sight of the men at a height of about 300 feet, traveling in the same direction as the previous object and it disappeared over the same ridge. The object was visible to the men for about thirty (30) seconds. About five (5) minutes after the second appearance another similar object again was visible at an altitude of about 500 feet for about a ten (10) second interval. b7C

3. After a discussion of the incident Mr. Rathman, Mr. Gray, [redacted] and the undersigned proceeded to Solway Gate, scene of the observation. A check was made of [redacted] estimate of distances and they were found to be substantially accurate. The immediate area around the gate is fairly level with wooded hills and ridges rising around the area. There were no obstructions or hindrances to visibility noticeable. At the direction of Mr. Rathman [redacted] was brought to the scene. He gave substantially the same account as did [redacted] except to add that while [redacted] was phoning and the object had descended to about 1500 feet the object appeared to be pear shaped and another pear shaped object appeared on one side of the object. As it came lower the object assumed the 2" x 5" card shape. b7C

[redacted] b7C

5. At 1400, 16 October Mr. Gray and the undersigned proceeded to the Air Force Radar Station at McGhee-Tyson Airport, Knoxville, Tennessee. Major R. C. Care, Defense Area Commander stated that the radar screen had picked up indistinct, unidentified objects during the afternoon of 15 Oct. Major Care produced the incident report of [redacted], controller; excerpts from his report are as follows: b7C

16 October 1950

Description of object seen by Atomic Energy Commission Security Patrol Trooper Edward D. Rymer; who approached the object as close as Fifty (50) feet, at about 1520 hours on 15 October 1950, is substantially as follows: When first seen at an estimated altitude of twelve (12) to fifteen (15) thousand feet, the object appeared to be an aircraft starting to "skywrite". The "Streamer" left behind is estimated to be approximately one-fourth (¼) of a mile long. The object then started a controlled descent, almost vertical, at a slower speed than an aircraft would dive, and the "tail" followed the object. "It" then appeared to take the shape of a large bullet with a streamer, or ribbon, as thick as the bullet, trailing in the path of the object but connected to it. The object then levelled off parallel to the horizon, decreased its speed, and passed within seventy (70) yards of Rymer and another observer whom Rymer had stopped (John Moneymaker). Rymer had reported via telephone that this object was a "falling object". As the object decreased its speed to less than a mans normal walk, Rymer attempted to approach the object, but when he got within fifty (50) feet of it, the object moved toward the Southeast at about six feet altitude above the terrain; made almost a mechanical maneuver to go over a nine (9) foot cyclone chain link fence; then another similar maneuver to pass over a willow tree and a telephone line; and finally gained altitude and speed and went over a hill about one mile distance.

When Rymer was within fifty (50) feet of the object it appeared to be a two (2) by five (5) card (similar to the ones issued to vehicles entering the "Control Zone" at Oak Ridge) with a twenty (20) foot ribbon tail, the first two feet of which were easily visible and the last eighteen (18) feet of which was almost transparent and divided into several sections. The sections of the tail would pulsate a dim "glow" alternately. Through the entire length of the tail, was a black line which might be described as a "wire". The entire color was bluish-gray similar to the color of the top of a "wood cooking range". The "body" of the object was gently moving up and down, and the tail waved in the breeze like a ribbon or a worm and followed the path of the "body" of the object. There was no breeze at the time! (Knoxville Airport reports a high breeze of eight (8) miles per hour). Further, from fifty (50) feet away, the object looked no bigger than it did from two hundred and ten (210) feet away, and when it disappeared over the hill, one (1) mile away, it still looked the same size that it had appeared at only fifty (50) feet, but the "body" was then "bladder" or "pear-shaped".

When questioned further, Rymer stated that the object had to change size from the time they first observed it until it came near the ground; and it had to get larger as it went over the hill or they would not have been able to see it at such distances.

The object appeared two more times within the next ten (10) minutes and Rymer was able to get two other observers to verify that they could see the same "thing".

The three observers, other than Rymer, [redacted]

(Page # 1 of Inclosure # 3)

b6

65-3-5300-197

[redacted]

and Joe Zarzecki, Captain of the AEC Security Patrol, Oak Ridge, Tennessee. At no time were any noises from this object heard.

AGENTS NOTES: Mr. George Rathman, AEC Security Division, stated that all these persons' description of the object was substantially the same when questioned separately, except that Rymer had been the closest and was the only person to report the transparent portion of the "tail". [redacted] stated substantially the same except that he did not see the transparent portion of the "tail". b6

b6 [redacted] was wearing his glasses at the time and his vision, with glasses, is20/20 in the right eye, and 20/30 in the left eye. Rymer's vision is 20/20 in both eyes without glasses.

Rymer's record indicates that he is one of the "better" and most respected troopers on the AEC Security Patrol. Nothing in his record indicates any weaknesses or peculiar inclinations.

Rymer stated that he would not have reported this incident if there had not been a witness. Moneymaker was reluctant to give information because of the fantastic nature of the incident.

Captain Zarzecki saw the object for only a moment on its third appearance and stated that the object appeared to be round as it crossed the sky at a high rate of speed.

NOTES: The above information was obtained on 16 October 1950 from interviews with Trooper Edward D. Rymer; [redacted], George Rathman, Security Division, Atomic Energy Commission; John S. Davis, Chief of Atomic Energy Commission Security Patrol; and Captain Joe Zarzecki. b6

In addition, the Atomic Energy Commission Security Division took Geiger counters to the scene of the incident but could get no reading.

OBJECTS SIGHTED OVER OAK RIDGE

(Refer: Summary of Information, Subject: as above, dated 15 Oct 1950.)

On 13 October 1950 Atomic Energy Security Patrol Trooper, Edward D. Rymer, and a caretaker, John Moneymaker, from the University of Tennessee Research Farm, at Oak Ridge, saw an object at about 12,000 to 15,000 feet above Soloway Gate of the "Control Zone." This object appeared to be an aircraft which was starting to make an outside loop, trailing smoke behind. Soon these two men realized that the formerly described smoke behind the aircraft was a tail. This object continued to descend in a controlled dive, much slower than an aircraft would dive, and when it approached the ground it levelled off and flew slowly, parallel to the ground. This object came within two hundred and ten (210) feet of the two observers and was paralleling the ground at approximately the speed that a man could walk, at a height of approximately six (6) feet. Trooper Rymer attempted to approach the object but as he approached the object became smaller and started moving in a southeasterly direction. This object is said to have approached a nine (9) foot cyclone chain link fence and made a controlled movement to clear the fence, then a Willow tree, then a telephone post and wire, after which the object gained momentum and altitude and cleared a hill at approximately one (1) mile away. The object appeared to be pear shaped. When this object was over the hill it was still visible as the same sized object that was observed when only fifty (50) feet away. (The explanation given was that this object grew larger as it gained altitude and speed.)

Approximately five minutes later the object appeared again having reappeared from approximately the same location from which it had disappeared. The object was seen again five mintues later for approximately ten second.

During the above happenings, Mr. John Moneymaker had visual reference of this object during its first slight for approximately seven minutes. Trooper Rymer was interrupted twice during which times he called his headquarters in an attempt to get other observers. Also, during the fantastic flight of this object, Trooper Rymer stopped Mr. E. W. Hightower, who was on the highway in his vehicle, to verify what was being seen. Mr. Hightower's statement substantiates the description as before.

By the time the object appeared the second time, Joe Zarzecki, Capt. of the Atomic Energy Commission Security Patrol, was present and also witnessed this phenomenon.

Each of the observers described the object substantially as follows:

a. When the object was first sighted it appeared to be an aircraft, trailing smoke, or better described as "smoke writing."

observers state that the fighter plane passed beneath the object which they were observing. The Security Division, Atomic Energy Commission, will attempt to have the observers, or some of the observers, make these same statements while undergoing a poliograph test.

Further information will be submitted as soon as possible as soon as an adequate verification has been obtained.

OBJECTS SIGHTED OVER OAK RIDGE

b. When the object was approaching the ground in its descent, it took on the shape of a bullett with a large tail.

c. When the object was sighted on the ground (from approximately two hundred and ten (210) feet) it appeared to be approximately the size of a 2x5 card, with a twenty (20) foot ribbon tail. The object and the tail was alternately moving up and down, add the ribbon appeared to be waving in the breeze. The color was a metallic grey.

d. When Trooper Rymer came within fifty (50) feet of the object he described it similar to the above except that the first two and one-half feet of the tail appeared more solid, but the last seventeen and one-half (17½) feet of the tail appeared almost transparent and was glowing, intermittently, in sections. The tail appeared to have four or five sections which would glow intermittently.

Trooper Rymer's record is among the best of the troopers at the Atomic Energy Commission Security Patrol. Mr. JohnMoneymaker holds badge No. UT-1817, and is employed by the University of Tennessee Agricultural Research Farm as a caretaker for small animals. Mr. K. W. Hightower holds badge No. 6633 and is an employee of the Maxon Construction Company.

The Controller, Capt. W. Akin, of Detachment No. 2, 662 AC and W Sqd., McGee-Tyson Airport, P. O. Box 202, Maryville, Tennessee, at the Knoxville Airport Radar Site, made a report that he had seen peculiar readings on the radar scopes at approximately 1520 hours. Apparently the radar picture was indefinite, intermittent, and inaccurate, because the objects sighted by radar would only make a short "painting" on the scope and would then disappear only to reappear at another location.

On 16 October 1950, at approximately 1520 hours, five persons (as yet unknown) sighted objects hovering over the K-25 plant at Oak Ridge, Tennessee. Further information and description is expected from these sources. However, the radar scopes at Knoxville Airport were giving an unintelligible reading. Apparently the Commanding Officer was reluctant to make any statement concerning these readings due to higher Headquarters doubting the event of the past few days.

Nevertheless, a fighter aircraft from the 5th Fighter Sqd. was sent to identify an object which was reported to be hovering over K-25. Upon approaching the area the radar equipment aboard the aircraft got an image on its scope and the pilot pursued this image and identified it as a light type aircraft. Ground

050530
From: Bruce Maccabee
Subject: Oak Ridge Security Guard Reports Spinning Spherical Object, Oct 16, 1950
Distribution: NCP

The next day at about 1:30 PM, John Isabell, a security guard of the Oak Ridge Patrol Force, saw a silver-white spherical object traveling from the southwest to the northeast and passing over the K-25 restricted area at high altitude. It was white or silvery and round like a ball. The second sighting on that day occurred at "exactly 2:55 PM." Mr. Isabell and two other members of the patrol force saw the same round object approaching from the northeast at a lower altitude and speed. The object, while spinning about an axis, traveled in a wide circle toward the southwest and disappeared. In a couple of minutes it reappeared in the southwest at a very high altitude and headed northeast at a high rate of speed. The guard phoned the information on the sighting immediately to headquarters where radar was picking up an indistinct target every third or fourth sweep over the K-25 area. An F-82 was scrambled. The ground witnesses reported that the fighter plane arrived about 15 minutes after the object had disappeared. (The ATIC sighting analysts subsequently decided that this object was a balloon in spite of the decription of spinning amd in spite of the odd flight path.) Later on, during the evening, some of the security guards heard strange, loud noises.

That same day, October 16, the CIC agent decided it was time to review the situation. He wrote a report mentioning the 1947 and 1949 sightings and discussed the recent sightings. The CIC took these sightings very seriously and thoroughly checked the backgrounds of the witnesses by using employment records and FBI reports in order "to ascertain their reliability, integrity and loyalty to the United States Government." The was no reason found to discredit these witnesses, many of whom were professional security guards.

The CIC and the other security agencies discussed the situation and attempted to arrive at some conclusions. The CIC report of these discussions make amusing reading in view of the concerted attempt later on by ATIC to explain the sightings any way possible. One gets the impression from the following document that, when it came to explaining UFO sightings as mundane phenomena, the security officials who were involved in the investigations had "been there, done that" and now they were looking for something new and convincing to explain these sightings:

" The opinions of the officials of the Security Division, AEC, Oak Ridge; Security Branch, NEPA Division, Oak Ridge; AEC Security Patrol, Oak Ridge; FBI Knoxville; Air Force Radar and Fighter Squadrons, Knoxville; and the OSI, Knoxville, Tennessee, fail to evolve an adequate explanation for OBJECTS SIGHTED OVER OAK RIDGE, however the possibilities of practical jokers, mass hysteria, balloons of any description, flights of birds (with or without cobwebs or other objects attached), falling leaves, insect swarms, peculiar weather conditions, reflections, flying kites, objects thrown from the ground, windblown objects, insanity, and many other natural happenings have been rejected because of the simultaneous witnessing of the objects with the reported radar sightings; because of the reliability of the witnesses; because of the detailed, similar description of the objects seen by different persons; and because of impossibility."

"...because of impossibility"? What was that supposed to mean? It meant that all the suggested explanations had been rejected because, in view of the high quality of the witnesses and the descriptive details, these explanations were impossible. So, having rejected mundane explanations, what were these objects? The CIC agent continued:

"The trend of opinions seem to follow three patterns of thought. The first is that the objects are a physical phenomenon which have a scientific explanation; the second is that the objects are experimental objects (from an undetermined source) guided by electronics and the third is similar to the second except that an intended demoralization or harrassment is involved. The fantastic is generally rejected.

These objects have apparently followed only two patterns. The first is that they were sighted at the same hour on two consecutive days and the second is that the time of flight is either to or from the Northeast and Southwest, which directions (are) parallel the terrain ridges in the locality."

The fantastic is generally rejected?

PERSON INVOLVED	ADDRESS	BADGE NO.
Trooper Hank N. Briggs		156

REMARKS:

On October 16, 1950, at approximately 2:55 P.M., Trooper Isabell stopped us at this Installation and showed us an object in the north that was traveling toward the northwest. It looked to be about 2,000 feet in the air and a white-silverish looking color, rotating in a counter clockwise manner. It was round in shape and going in a rather fast motion. This object was at a high altitude and seemed to come in sight and then disappear. It looked about the size of a ball and round at every angle we looked at it.

Incident Report No. 1424-50

Date 10-16-50

Time 1:30 p.m.

CLASSIFICATION	TROOPER	LOCATION
Flying Object	John L. Isabell	Blair Gate

PERSON INVOLVED	BADGE NO.
Trooper Lendelle Clark	212
Trooper Hand N. Briggs	156

REMARKS:

At approximately 1:30 P.M., October 16, 1950, while working at Blair Gate, I saw an object in the air over K-25 traveling in a northeast direction from the southwest. It was traveling in a straight line and going very fast. The object was white or silvery in color and round like a ball and was about the size of a baseball as seen at the distance it was from me. It seemed to be very high.

At exactly 2"55 P.M., October 16, 1950, this object reappeared from the northeast at a considerably lower altitude and traveling a lot slower than before. It stopped a car that was coming in the gate in order to have witnesses to what I saw. The occupants of the car were Troopers Lendelle Clark and Hank N. Briggs going in to work. I pointed out the object to Troopers Clark and Briggs and we watched the object for several minutes. This object was slowly circling in a wide circle and spinning very fast, that is, the object itself was spinning around and around. The object drifted toward the southwest and in just a few minutes it reappeared at a very high altitude going back into the northeast and going very fast. We watched the object disappear into the northeast.

This information was phoned in to Headquarters immediately by the undersigned. About fifteen minutes after the object disappeared into the northeast, an F-82 Fighter plane showed up in the area where the object was last seen but appeared to be thousands of feet lower than the object which Troopers Clark, Briggs, and the undersigned saw and reported.

Knoxville, Tenn.

19 October 1950

The "Contract Guards" who guard the building at the NEPA project were warned by the NEPA Security Section to report any peculiarity, regardless of how silly or fantastic it might seem. These guards were unaware of the previous events concerning objects seen over Oak Ridge, but some of the guards had reported peculiar sounds during the evening of 16 October 1950.

Independent reports from different guards were received by the Security Section, NEPA, Oak Ridge. These reports were submitted by Guards S. R. Brown; H. C. Herron; and George R. Davis. They all stated substantially the same and described hearing an intermittant noise resembling the blast of a Jet Fighter Aircraft. Each noise lasted for about three and one half (3½) seconds and would recur frequently between 1956 hours and 2004 hours on 16 October 1950. Each noise would sound like a jet plane which had increased its thrust tremendously. The sounds seemed to leave the vicinity making an ascent almost vertical. None of the guards could see an object in the sky.

On 17 October 1950, Major L. E. Ronniger, Sr. Instructor, ORC Group, Oak Ridge, Tennessee, returned from Nashville, Tennessee, and visited an official of the Security Division, Atomic Energy Commission, Oak Ridge, Tennessee. Major Ronniger was amused when informed of the fantastic sights that some of the persons at Oak Ridge had seen but then he recalled an incident which he thought was not connected to the "Objects Sighted over Oak Ridge." After having been away from Oak Ridge during Monday and Tuesday, the 16th and 17th of October 1950, and without knowledge of the occurrences which had taken place except for the item about which he was being told (which had to do with visual sightings of the object), Major Ronniger stated that he had heard a noise at about 1500 hours on 15 October 1950 which he described exactly as the guards who heard the noise on the night of 16 October 1950. Major Ronniger, accompanied by his daughter, attempted to locate a jet fighter in the sky but could see nothing whatever.

The Radar crew of Detachment # 2, 662nd AC and W Squadron, McGhee-Tyson Airport, Knoxville, Tennessee, did not get an image on their scope during either of these occurrences, according to Major R. C. Care.

NOTES: The above information was obtained on 17 October 1950 from Major L. E. Ronniger; Mr. George Rathman, Security Division, Atomic Energy Commission, and Mr. Gene Caedjon, NEPA, Oak Ridge, Tennessee, and John S. Davis, Atomic Energy Security Patrol/

(Page # 1 of Enclosure # 7)

65-58300-134

[redacted] estimated that the object was traveling about three (3) mile per hour and that the main body of the object was rocking slightly showing the corners and the under and top side. [redacted] advanced on the object to within fifty (50) feet but it did not appear to get any larger. At [redacted] approach the object picked up speed slightly, proceeded across the highway, came to a nine (9) foot chain link fence, rose vertically and parallel with the fence and proceeded over the fence. After clearing the fence it dipped toward the ground for a few feet and then rose sharply to clear a thirty (30) foot willow tree and proceeded in a southeasterly direction at an increased speed to a ridge about a mile away and disappeared over the top of the ridge. The object during the flight to the ridge, changed to a pear shape but the tail continued to be present. While the object was heading for the ridge a car driven by [redacted], employee of the Maxon Construction Company, Oak Ridge, approached the Solway gate. [redacted] called [redacted] attention to the object and he also saw it disappear over the ridge. Shortly after the object disappeared Captain of the AEC Security Patrol [redacted] arrived at the scene. Shortly thereafter another similar object appeared in the sky within sight of the men at a height of about 300 feet, traveling in the same direction as the previous object and it disappeared over the same ridge. The object was visible to the men for about thirty (30) seconds. About five (5) minutes after the second appearance another similar object again was visible at an altitude of about 500 feet for about a ten (10) second interval.

b7C

3. After a discussion of the incident Mr. Rathman, Mr. Gray, [redacted] and the undersigned proceeded to Solway Gate, scene of the observation. A check was made of [redacted] estimate of distances and they were found to be substantially accurate. The immediate area around the gate is fairly level with wooded hills and ridges rising around the area. There were no obstructions or hindrances to visibility noticeable. At the direction of Mr. Rathman [redacted] was brought to the scene. He gave substantially the same account as did [redacted] except to add that while [redacted] was phoning and the object had descended to about 1500 feet the object appeared to be pear shaped and another pear shaped object appeared on one side of the object. As it came lower the object assumed the 2" x 5" card shape.

b7C

[redacted]

b7C

5. At 1400, 16 October Mr. Gray and the undersigned proceeded to the Air Force Radar Station at McGhee-Tyson Airport, Knoxville, Tennessee. Major R. C. Care, Defense Area Commander stated that the radar screen had picked up indistinct, unidentified objects during the afternoon of 15 Oct. Major Care produced the incident report of [redacted], controller; excerpts from his report are as follows:

b7C

"Prior to this report [redacted], we had a reoccurance of targets like Thursday night. We had sent one scramble out and made several good passes at one target which painted very well. It was on a heading of 180 degrees and approx. 4 miles inside the eastern boundary of the area. Our fighter worked from 2500 to 5000 feet, but saw nothing. The speed of these targets varied from 40 to 100 miles per hour. Every characteristic was the same as before except that the speed was slower.

There was nothing on the scope at the location of this strange object.

The strange visitor was reported to [redacted] at Nobody, who carried through to EADF. Their orders were to put a patrol over the area, which was done.

[redacted] operating under my control and later [redacted] saw nothing in the area except one large flock of birds, which we were painting. He estimated their number between 200 and 300. This was at 7000 feet. His patrol up until 1730 EST when I left duty, rangedfrom a low level pass over the gates to 7000 feet.

He was vectored after several well painted targets, but saw nothing."

6. At about 1520 EST 16 October, while the undersigned was present, a report came from the AEC Patrol to the radar station relating that a [redacted] and four civilian employees at Oak Ridge had observed a "silver disk" hovering over the K-25 plant in the controlled area. The radar screen was able to pick up an indistinct target about every three (3) or four (4) sweeps of the indicator. An F-82 fighter plane was sent to attempt an intercept of the object. The airborne radar of the fighter picked up a target which later proved to be a light aircraft. The ground observers reported that the F-82 passed under the "silver disk", while it was in pursuit of the light plane. The crew of the fighter observed nothing unusual. Nothing further was learned of the sightings.

7. Investigation will continue 17 October at which time [redacted] and other witnesses will be interviewed.

WILLIAM M. PRICE

Detachment Commander

Objects Sighted Over "Control Zone"

Oak Ridge, Tennessee
October 20, 1950

FBI Report:

At 1655 hours, on 20 October 1950, Mr. Larry P. Riordan, AEC Badge No.522, Superintendent of Security at X-10 in the "Control Zone" at Oak Ridge, Tennessee, while enroute from X-10 to the Oak Ridge residential area, on Benton Valley Road, saw an object in the sky which appeared to be directly over the University of Tennessee Agricultural Research Farm. This object gave the general appearance of an aerial balloon which had lost its "basket." In other words, the object was generally round; appeared to come together at the bottom in wrinkles (rather indistinct), and something was hanging below. The balloon was described as being from eight to ten feet long; of a lead pipe or gunmetal color; and seemed to be approximately one-fourth (¼) mile from the observer, at a thirty (30) degree elevation above the horizon. The object was apparently stationary but since the observer was in a moving vehicle, he did not verify that it was stationary. As the vehicle in which he was traveling changed position, and went around a curve, Mr. Riordan noticed that this object appeared to be thinner. He concludes that by reason of his changing position, or the object changing its altitude, he observed another angle of the object which appeared to be thinner than upon his first sighting.

At the time of the observation there was adequate light and the object was plainly visible. Mr. Riordan is a responsible person, as is indicated by his position, and he has been aware of the many instances of reported objects flying in the sky. He is also very familiar with the weather balloons which are sent up hourly each day over Oak Ridge between 6:00 AM of one day until 1:00 AM of the next day. The size of these balloons vary, but generally they are similar to a circus balloon which is about twenty- four (24) inches in diameter. Mr. Riordan is certain that the object was not a weather balloon but his first impression was that this object was an experimental "gab" being utilized by the University of Tennessee Agricultural Research Farm.

Mr. Riordan has been the Security Chief of X-10 since 14 July 1943. His vision is normal except that he has negligible impairment of the right eye. Like many of the Atomic Energy Commission officials, Mr. Riordan has hoped for the opportunity to see one of these objects, and under the circumstances, he visualized it as accurately as possible.

On 20 October 1950, at 1527 hours, aircraft No. AF-409, Pilot Wolf, 5th AW-Fighter Sqd., took off from the Knoxville Airport for a "local patrol." The Radar Unit at Knoxville Airport received readings on their Radar scope and sent the aircraft after these targets. The aircraft pilot was unable to identify any flying object in the vicinity of the said targets. All targets were between eighteen (18) and twenty-five (25) miles from the Airport at 320 degrees. The aircraft was landed at 1713 hours. (Attention is invited to the fact that these targets were sighted at approximately the same time, and locality, that was reported by Mr. Larry Riordan.)

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE

At 1655 hours, on 20 October 1950, Mr. Larry P. Riordan, AEC Badge No. 322, Superintendent of Security at X-10 in the "Control Zone" at Oak Ridge, Tennessee, while enroute from X-10 to the Oak Ridge residential area, on Benton Valley Road, saw an object in the sky which appeared to be directly over the University of Tennessee Agricultural Research Farm. This object gave the general appearance of an aerial balloon which had lost its "basket." In other words, the object was generally round; appeared to come together at the bottom in wrinkles (rather indistinct), and something was hanging below. The balloon was described as being from eight to ten feet long; of a lead pipe or gunmetal color; and seemed to be approximately one-fourth (¼) mile from the observer, at a thirty (30) degree elevation above the horizon. The object was apparently stationary but since the observer was in a moving vehicle, he did not verify that it was stationary. As the vehicle in which he was travelling changed position, and went around a curve, Mr. Riordan noticed that this object appeared to be thinner. He concludes that by reason of his changing position, or the object changing its altitude, he observed another angle of the object which appeared to be thinner than upon his first sighting.

At the time of the observation there was adequate light and the object was plainly visible. Mr. Riordan is a responsible person, as is indicated by his position, and he has been aware of the many instances of reported objects flying in the sky. He is also very familiar with the weather balloons which are sent up hourly each day over Oak Ridge between 6:00 a.m. of one day until 1:00 a.m. of the next day. The size of these balloons vary but, generally, they are similar to a circus balloon which is about twenty-four (24) inches in diameter. Mr. Riordan is certain the object seen was not a weather balloon but his first impression was that this object was an experimental "gab" being utilized by the University of Tennessee Agricultural Research Farm.

Mr. Riordan has been the Security Chief of X-10 since 14 July 1943. His vision is normal except that he has negligible impairment of the right eye. Like many of the Atomic Energy Commission officials, Mr. Riordan has hoped for the opportunity to see one of these objects, and under the circumstances, he visualized it as accurately as possible.

At 1845 hours, on 24 October 1950, Mr. William B. Fry, Assistant Chief of Security, MEPA Division, Oak Ridge, Tennessee, while attending a Drive-in theater with his wife and child, at Oak Ridge, noticed an object in the sky North-Northwest of his position, at a thirty (30) to forty (40) degree,

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE

elevation. This object was moving gently in a horizontal plane, back and forth, within thirty (30) degrees of his line of sight. This object emitted a glow, varying in color from red to green, to blue-green, to blue, and to orange. The variations were checked on the vertical window post of Mr. Fry's vehicle and were witnessed by Mr. Fry's wife. The attention of another observer, the Projectionist at the Drive-in theater, was also called to the object and verification of this sighting was made. The object disappeared from his sight at 1920 hours.

At 1855 hours, on 24 October 1950, an Air Force Major, Lawrence Ballweg, MEPA Division, Oak Ridge, Tennessee, also saw from his residence an object which he described similarly. The object disappeared from the sight of Mr. Ballweg at 1920 hours, which coincides with the time of disappearance of the object from Mr. Fry's sight.

On 20 October 1950, at 1527 hours, aircraft No. AF-409, Pilot Wolf, 9th AW-Fighter Sqd., took off from the Knoxville Airport for a "local patrol". The Radar Unit at Knoxville Airport received readings on their Radar scope and sent the aircraft after these targets. The aircraft Pilot was unable to identify any flying object in the vicinity of the said targets. All targets were between eighteen (18) and twenty-five (25) miles from the Airport at 320 degrees. The aircraft was landed at 1713 hours. (Attention is invited to the fact that these targets were sighted at approximately the same time, and locality, that was reported by Mr. Larry Riordan.)

On 24 October 1950, at 1823 hours, several small, slow targets were seen on the Radar screen at the Knoxville Airport Radar Site. These targets appeared in the Southeast sector of the "Restricted Flying Zone" and over the city of Oak Ridge. These targets moved from the city area to and along the East boundary of the area. At 1826 hours, the fighter aircraft was "scrambled" and proceeded to the area where it was vectored among the targets but the pilot reported no visual contact with said targets. At 1920 hours the targets disappeared from the Radar Screen and the fighter was vectored toward another target believed to be one of three (3) aircraft enroute from Andrews Field to Stewart Field. (Note: 1920 hours is also the time that the object sighted by Mr. Fry and Major Ballweg disappeared from their view).

UNIDENTIFIED OBJECT OVER OAK RIDGE, TENNESSEE - 27 October 1950

On the evening of 24 October 1950 at approximately 1855 I heard a plane fly over my home in the Woodland area. Being a curious individual I went outdoors to watch it with my binoculars. While looking for the plane I saw an object in the western sky which appeared at first to be a star but upon closer observation I noticed that it was rapidly changing colors from red to blue to white. When first seen it appeared over a telephone pole about 100 yards from my house and seemed to be moving very slowly in a northwest direction. It was moving relative to the other stars. The object was too small to be able to see any details even with the glasses. It disappeared from sight about 1920. During this period of time my wife also observed the object.

UFO INCIDENT AT OAK RIDGE, TN

10/23/1950

Jan Aldrich: Here is an incident report from Barry Greenwood's Oak Ridge file. I suspect it came from the FBI. Please note the radiation detection.

==========

10 November 1950

On 10 November 1950,----------, Oak Ridge, Tennessee, employee at----------, Oak Ridge, Tennessee was interviewed and he stated substantially as follows: At approximately 1630 hours on 23 October 1950, while driving on the Benton Valley Road, Oak Ridge, Tennessee, he observed an object over the Scarboro School (which is in the control area of Oak Ridge) at a distance of one-quarter to three-eighth of a mile from his position of observations. The object appeared to be between 1000 and 2000 feet in altitude and was described as an "aluminum flash".

It was traveling in a South Southeast direction. The object was dropping fast as it crossed the road and disappeared over a ridge--------heard no noise in connection with this object.

At approximately the time of this observation, a background (Geiger) counter located in the vicinity of this observation registered a reading for Alpha and Beta particles. ---------- with the Health and Research Division of Oak Ridge National Laboratories, has stated that a reading received on this background counter is unexplained.

NPTES: No intentional or accidental releases which would give such a reading were made during month October.

The Radar Station, Knoxville, Tennessee, has not reported a radar sighting on the date and time of this observation.

Created: Sep 23, 1997

2 November 1950

CIC, FAO # 8, P. O. Box 379, Knoxville, Tennessee

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE:

On 26 October 1950, at approximately 500 hours, Col. Edwin W. Thompson, [redacted] 0-340795, Camp Stewart, Georgia, heard a noise which he described as "similar to a Jet aircraft blast". This noise was intermittent and continued for several moments. Col. Thompson was on the turnpike at Oak Ridge for a morning walk at the time, and he believed that this noise was being emitted from a factory in the near vicinity. Although he was aware of some of the facts concerning "Objects Sighted Over Oak Ridge" during the past two weeks, he still did not contribute this as pertinent.

NOTES: Col. Thompson is unfamiliar with Oak Ridge, having arrived for the first time there on 25 October 1950. His description coincides with that of Major L. E. Bonniger who heard a similar noise on 17 October 1950, and also coincides with the description of the noise heard by Guards S. R. Brown, H. C. Harris, George R. Davis; between the hours of 1950 and 2004 hours on 16 October 1950.

On 23 October 1950, at 1630 hours, Mr. F. J. Miller at the K-10 plant, Oak Ridge, Tennessee, saw an object generally referred to as "the flying saucer". He stated that this object was at an altitude of approximately 1000 feet. The speed of the object was not determined.

The following is an article printed in the Clinton Courier-News, dated 26 October 1950:

"Anderson county finally got into the act.

"After two years of reports from all over the nation concerning flying saucers, and after writers have made reads of money arguing the authenticity of flying discs back and forth and up and down, one of the "ships from Mars" has at last been reported as seen in Anderson county.

"This saucer was seen about a week ago in the Oak Ridge area. Just what day no one knows - or will tell. However, the saucer was reported by Jay Moneymaker, an Oak Ridge worker who lives near Edgemoor Bridge, an Oak Ridge guard and another unidentified man. The three men saw it hovering, flying, crouching or something over the area at Oak Ridge, they said.

"Moneymaker isn't talking, however. His family isn't talking. In fact the whole neighborhood is making like a bunch of professional clams. Other than to say he saw "something," he is saying nothing. His family also says he saw "something," but nothing more. The neighbors just say nothing.

"This modesty of Moneymaker, his family and his neighbors is reportedly the result of a visit one night recently from several species of intelligence officers, from heaven knows where.

CIC, [redacted] P. O. Box 379, Knoxville, Tennessee

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE (continued)

"Pre-intelligence-officer reports that leaked out, however, state that the disc was large and that smoke was coming from it. There was no report as to whether the smoke was black, white or lavender blue. The same reports also indicated that the objects came close to the ground and that the men were unmistaken in their identity of it.

"No one will even say whether it was day or night, whether it was raining or the moon was shining when the three men happened to look up. However, Moneymaker works the day shift."

NOTES: Neither of the incidents mentioned in this summary were verified by Radar screen sightings at McGhee-Tyson Airport, Knoxville, Tennessee.

10 November 1950

On 10 November 1950, [redacted] Oak Ridge, Tennessee, employee at [redacted] Oak Ridge, Tennessee, was interviewed and he stated substantially as follows: At approximately 1630 hours on 23 October 1950, while driving on the Benton Valley Road, Oak Ridge, Tennessee, he observed an object over the Scarboro School (which is in the control area of Oak Ridge) at a distance of one-quarter to three-eighth of a mile from his position of observation. The object appeared to be between 1000 and 2000 feet in altitude and was described as an "aluminum flash". It was traveling in a South-Southeast direction. The object was visible to him for only a few seconds and he could distinguish no shape. The object was dropping fast as it crossed the road and disappeared over a ridge [redacted] heard no noise in connection with this object.

At approximately the time of this observation, a background (Geiger) counter located in the vicinity of this observation registered a reading for Alpha and Beta particles. [redacted] with the Health and Research Division of Oak Ridge National Laboratories, has stated that a reading received on this background counter is unexplained.

NOTES: No intentional or accidental releases which would give such a reading were made during the month of October.

The Radar Station, Knoxville, Tennessee, has not reported a radar sighting on the date and time of this observation.

Subject: Assistant Chief of Security sees UFO; Six hours later radar tracks UFOs
By Bruce Maccabee
Source: UFO FBI Connection, Pages 175-177

During the evening.....there was a "light in the sky" sighting by two witnesses who were at widely separated locations. The first to see it was Mr. William Fry, the Assistant Chief of Security for Project NEPA. He was at a drive-in theater with his family at about 6:45 PM waiting for the movie to begin when he saw the lighted object in the southwest while casually looking around the sky. He reported to the CIC investigator,

"...I observed what I at first thought to be an unusually bright star. The exceptional brilliance caused me to continue to observe it when it suddenly seemed to change color rapidly from a reddish hue to a bright orange and again to a brilliant light blue. (His wife and son also saw it.) ...A few moments later I heard a plane directly overhead making passes over the Oak Ridge area, which was later identified as one of the F-82 fighter planes from the Air Force unit stationed at McGhee-Tyson Airport..

(At this point Mr. Fry went to a phone and called someone to look, but the person could not see it because of the hills and trees.) While returning to my car I met a friend...who stated he had been observing the object. I continued to observe the object with my wife but it seemed to be in a more northerly position which caused me to select a fixed point to determine whether or not the object was changing in either direction or altitude. There seemed to be a deviation from north to south for approximately five to ten degrees. The changing colors were still very evident but the object seemed to be continually getting smaller and smaller as though it was becoming more distant. At approximately 7:18 by my watch it disappeared from view entirely. During these observations my wife continued to report to me the identical things that I was observing. During the entire time the F-82 airplane continued to make passes over the area until approximately 7:15. The weather conditions were excellent; the air was calm; and the sky was cloudless with the exception of a very slight haze over the distant horizon.

The following morning, upon reporting to work I confided my story to...(name censored)...stationed at Oak Ridge with the NEPA project, but I hesitated to go on record as having observed such an unidentified object."

Mr. Fry did go on record because he learned that he was not the only witness. Air Force Major Lawrence Ballweg also saw the light. He reported as follows:

"On the evening of 24 October 1950 at approximately 1855 (6:55 PM) I heard a plane fly over my home in the Woodland area. Being a curious individual I went outdoors to watch it with my binoculars. While looking for the plane I saw an object in the western sky which appeared at first to be a star but upon closer observation I noticed that it was rapidly changing colors from red to blue to white. When first seen it appeared to be moving very slowly in a northwest direction. It was moving relative to the other stars. The object was too small to be able to see any details even with the glasses. It disappeared from sight about 1920 (7:20 PM). During this period of time my wife also observed the object."

Mr. Fry then learned that the radar unit had also detected something. He was told that an unidentified object appeared at 6:30 PM at an altitude of approximately 5,000 feet in the same general vicinity as the

object he saw. The radar target disappeared at 7:20 PM. The complete radar report to the CIC investigator says that targets appeared at 6:23 PM moving over the restricted flight zone and at 6:26 a fighter was scrambled to the area of the targets but failed to see anything.

Considering that the atmosphere can make a star or planet which is within a few degrees of the horizon appear to change color and move very slightly or twinkle, one might be tempted to identify the light as the bright planet Venus or a very bright star seen in the west an hour after sunset, which was at about 6 PM local dayight savings time. However, two elements of the description reject that sort of explanation. First, the light was described by Major Ballweg as moving relative to the stars. Since Major Ballweg used binoculars to view the light it is likely that his description of motion is accurate. Furthermore, it must have been quite large because Mr. Fry, not using binoculars, also detected motion. Second, Major Ballweg said that the light appeared over a telephone pole that was about 100 yards away. That would make the angular elevation greater than 5 degrees. According to the CIC investigator, Mr. Fry indicated that the elevation from his location was 30 to 40 degrees above horizontal. Hence it was so high in angular elevation that atmospheric effects would not make it appear to change color and there would be no noticeable effects other than the normal twinkling which affects stars at any angular elevation. The final reason for rejecting Venus or a bright star is that Venus was below the horizon at the time and there were no excessively bright stars in that sector of the sky at the time. The disappearance of the radar target at the same time as the light suggests that the UFO was a some kind of metallic unknown object hovering in the vicinity of Oak Ridge. This is another Oak Ridge sighting that is not in the Blue Book file, nor are the following October events.

About six hours later, between 2 AM and 3 AM, October 25, the radar unit reported several slowly moving objects such as had been seen previously. On October 26 at 5 AM Col. Edwin Thompson heard an intermittent noise like the blast of a jet, similar to what had been reported on the 15th and 16th. He saw no aircraft associated with the noise. Three days later seven people waiting at the Knoxville Airport “saw an object traveling to the Southwest at a great rate of speed. (name censored), who has considerable flying experience, was extremely excited and stated that this object was not an aircraft. He described it as a circular object, leaving a trail of smoke.”

25 October 1950

111th CIC Detachment, FAO # 8, P. O. Box 379, Knoxville, Tennessee

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE

At 1655 hours, on 20 October 1950, Mr. Larry P. Riordan, AEC Badge No. 322, Superintendent of Security at X-10 in the "Control Zone" at Oak Ridge, Tennessee, while enroute from X-10 to the Oak Ridge residential area, on Benton Valley Road, saw an object in the sky which appeared to be directly over the University of Tennessee Agricultural Research Farm. This object gave the general appearance of an aerial balloon which had lost its "basket." In other words, the object was generally round; appeared to come together at the bottom in wrinkles (rather indistinct), and something was hanging below. The balloon was described as being from eight to ten feet long; of a lead pipe or gunmetal color; and seemed to be approximately one-fourth (¼) mile from the observer, at a thirty (30) degree elevation above the horizon. The object was apparently stationary but since the observer was in a moving vehicle, he did not verify that it was stationary. As the vehicle in which he was travelling changed position, and went around a curve, Mr. Riordan noticed that this object appeared to be thinner. He concludes that by reason of his changing position, or the object changing its altitude, he observed another angle of the object which appeared to be thinner than upon his first sighting.

At the time of the observation there was adequate light and the object was plainly visible. Mr. Riordan is a responsible person, as is indicated by his position, and he has been aware of the many instances of reported objects flying in the sky. He is also very familiar with the weather balloons which are sent up hourly each day over Oak Ridge between 6:00 a.m. of one day until 1:00 a.m. of the next day. The size of these balloons vary but, generally, they are similar to a circus balloon which is about twenty-four (24) inches in diameter. Mr. Riordan is certain the object seen was not a weather balloon but his first impression was that this object was an experimental "gab" being utilized by the University of Tennessee Agricultural Research Farm.

Mr. Riordan has been the Security Chief of X-10 since 14 July 1943. His vision is normal except that he has negligible impairment of the right eye. Like many of the Atomic Energy Commission officials, Mr. Riordan has hoped for the opportunity to see one of these objects, and under the circumstances, he visualized it as accurately as possible.

At 1845 hours, on 24 October 1950, Mr. William B. Fry, Assistant Chief of Security, MEPA Division, Oak Ridge, Tennessee, while attending a Drive-in theater with his wife and child, at Oak Ridge, noticed an object in the sky North-Northwest of his position, at a thirty (30) to forty (40) degree,

elevation. This object was moving gently in a horizontal plane, back and forth, within thirty (30) degrees of his line of sight. This object emitted a glow, varying in color from red to green, to blue-green, to blue, and to orange. The variations were checked on the vertical window post of Mr. Fry's vehicle and were witnessed by Mr. Fry's wife. The attention of another observer, the Projectionist at the Drive-in theater, was also called to the object and verification of this sighting was made. The object disappeared from his sight at 1920 hours.

At 1855 hours, on 24 October 1950, an Air Force Major, Lawrence Ballweg, MEPA Division, Oak Ridge, Tennessee, also saw from his residence an object which he described similarly. The object disappeared from the sight of Mr. Ballweg at 1920 hours, which coincides with the time of disappearance of the object from Mr. Fry's sight.

On 20 October 1950, at 1527 hours, aircraft No. AF-409, Pilot Wolf, 9th AW-Fighter Sqd., took off from the Knoxville Airport for a "local patrol". The Radar Unit at Knoxville Airport received readings on their Radar scope and sent the aircraft after these targets. The aircraft Pilot was unable to identify any flying object in the vicinity of the said targets. All targets were between eighteen (18) and twenty-five (25) miles from the Airport at 320 degrees. The aircraft was landed at 1713 hours. (Attention is invited to the fact that these targets were sighted at approximately the same time, and locality, that was reported by Mr. Larry Riordan.)

On 24 October 1950, at 1823 hours, several small, slow targets were seen on the Radar screen at the Knoxville Airport Radar Site. These targets appeared in the Southeast sector of the "Restricted Flying Zone" and over the city of Oak Ridge. These targets moved from the city area to and along the East boundary of the area. At 1826 hours, the fighter aircraft was "scrambled" and proceeded to the area where it was vectored among the targets but the pilot reported no visual contact with said targets. At 1920 hours the targets disappeared from the Radar Screen and the fighter was vectored toward another target believed to be one of three (3) aircraft enroute from Andrews Field to Stewart Field. (Note: 1920 hours is also the time that the object sighted by Mr. Fry and Major Ballweg disappeared from their view).

UNIDENTIFIED OBJECT OVER OAK RIDGE, TENNESSEE - 27 October 1950

On the evening of 24 October 1950 at approximately 1855 I heard a plane fly over my home in the Woodland area. Being a curious individual I went outdoors to watch it with my binoculars. While looking for the plane I saw an object in the western sky which appeared at first to be a star but upon closer observation I noticed that it was rapidly changing colors from red to blue to white. When first seen it appeared over a telephone pole about 100 yards from my house and seemed to be moving very slowly in a northwest direction. It was moving relative to the other stars. The object was too small to be able to see any details even with the glasses. It disappeared from sight about 1920. During this period of time my wife also observed the object.

UNIDENTIFIED OBJECT OVER OAK RIDGE, TENNESSEE - 30 October 1950.

On the evening of October 24, 1950 I was attending a moving picture show at the Oak Ridge out-door drive-in theater. I arrived approximately at 6:45 which was about 15 minutes prior to show time. While sitting in the car with my wife and children I casually glanced skyward towards the southwest and observed what I at first thought to be an unusually bright star. The exceptional brilliance caused me to continue to observe it when it suddenly seemed to change color rapidly from a reddish hue to a bright orange and again to a brilliant light blue. My son noticed that I was observing something and questioned as to what it was at which time I asked him to look at the star and tell me what he saw. At first glance he immediately said that it did not look like a star to him at all because of the change in coloring. My wife also noticed the same phenomena. By now I was certain that I was not merely having an optical illusion. A few moments later I heard a plane directly over head making passes over the Oak Ridge area, which was later identified as one of the F-82 fighter planes from the Air Force unit stationed at the McGhee-Tyson Airport.

I hesitated to approach other vehicles in the theater to witness the object, but managed to reach a telephone at the projection building and called [redacted], NEPA Division, Fairchild Engine and Airplane Corporation, at his home to ask him whether or not he could see in that direction and possibly observe the object. A later check with [redacted] indicated that his home was located in a poor geographical position to observe anything towards the southwest because of hills and other obliterating features of the terrain. He did, however, drive to a higher location but failed to see the object. b7c

While returning to my car I met a friend, [redacted] of Knoxville, to whom I pointed out the object. He stated he had been observing the same object. I continued to observe the object together with my wife but it seemed to be in a slightly more northerly position which caused me to select a fixed point to determine whether or not the object was changing ineither altitude or direction. There seemed to be a deviation from north to south for approximately five to ten degrees. The changing in colors were still very evident but the object seemed to be continually getting smaller and smaller as though it was becoming more distant. At approximately 7:18 by my watch it disappeared from view entirely. During these observations my wife continued to report to me the identical things that I was observing. During the entire time the F-82 airplane continued to make passes over the area until approximately 7:15. The weather conditions were excellent; the air was calm; and the sky was cloudless with the exception of a very slight haze over the distant horizon. b7c

The following morning, upon reporting to work, I confided my story to [redacted] stationed at Oak Ridge with the NEPA Project, but I hesitated [redacted] go on record as having observed such an unidentified object. However, a few hours later Mr. William M. Price of the Knoxville OSI Office visited my office at which time I gave him an off-the-record account of the subject. b7C

In the meantime, I learned that [redacted] had also observed an unidentified object on the prior evening. In the presence of [redacted] and Price, I telephoned [redacted] and asked him to relate what he had seen. [redacted] listened on an auxiliary phone as a witness. [redacted] observations during the prior evening were identical as to the time, location, coloring, etc., with the one exception in which he did not observe any deviation in direction other than the gradual disappearance of the object while it was getting smaller and smaller and finally disappearing from view entirely in the northwest at exactly the same moment that my wife and I had observed. Mr. Price telephoned the radar unit at the McGhee-Tyson Airport and learned that an unidentified object appeared on the screen at 6:30 at an altitude of approximately 5000 feet in the same general vicinity as I had observed and disappeared from the screen at 7:20 the same evening. b7C

Wife of Security Officer Reports "Flat or Disklike" Object
December 5, 1950
Oak Ridge, TN

Bruce Maccabee:
On December 5 and 6 there was a discussion of the technical aspects of the radar sightings with ATIC and intelligence officials. They concluded that the targets were probably “radar angels” which are reflections of objects on the ground which are observed only because of a temperature inversion which bends the radar radiation downward. On the other hand, that did not mean that there were no flying saucers around. At about 12:50 PM, December 5, the wife of one of the security officers saw an unusual object north of her position, flying apparently over the Post Office building in Oak Ridge. It appeared to be a couple of miles away and 500 feet above the ground. It appeared to be made of highly polished aluminum or metal that reflected the sun. Its shape was round and flat or disklike. She saw the object for about a minute as it flew in a direct course eastward. Ten minutes later another lady at a different location observed the same or a similar object heading westward. The OSI agent who investigated this case learned that there was an east wind at 6 mph and a clear sky. No balloons had been launched near that time. He also learned that there were two aircraft airborne at the time, but both were about fourteen miles south of the witnesses. ATIC subsequently claimed that the witnesses saw an aircraft

Although ATIC would eventually claim that most of these events were mundane (radar anomalies, balloons, aircraft) and leave only two of the Oak Ridge sightings unidentified, the local military officials and scientists were not so certain of easy identifications. They planned to begin their own scientific investigation. Lt. Col. John Hood, the AMC Field Engineering Officer, outlined the plan in a December 5 memorandum entitled “Technical Approaches to the Problems of UFOs.” He proposed placing radiation counters over a wide area. After there had been sufficient anomalous object reports to establish a pattern, the data recorded by these counters would then be compared for time and location with the sightings “to see if any change in the background (radiation) occurs with the presence of sighted objects.” He also proposed that portable counters be made available which could be taken to the area of a sighting. Along with the counters he proposed that an aircraft with Geiger counters and also a magnetometer be made available. The magnetometer would indicate any fluctuations in the local magnetic field associated with sightings. He also proposed more accurate radars capable of measuring height as well as range and azimuth. This plan was to begin operating near the end of December.

The next anomalous event in the Oak Ridge area was yet another appearance of radar targets which “blanketed the radar scopes in the area directly over the government Atomic energy Commission projects.....these objects could not be identified from the radar image and a perfect fighter interception met with negative results.”

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE

(In compliance with letter AJACI-360.33 General, dated 15 November 1950. Headquarters, Third Army, Subject; Unconventional Aircraft, the following is submitted.)

A. Location and Time of Sighting: On 1247 hours on 20 December 1950.

B. Weather at Time of Sighting: At 1200 hours on 20 December 1950; Ceiling - 2700 feet; broken overcast; Seven miles visibility; Temperature - 37 degrees F; Dew Point - 31 degrees; and Wind - Calm.

C. Names, Occupations, and Addresses of Witnesses: Personnel of the 663rd AC &C Squadron, and the 5th AN Fighter Squadron, McGhee Tyson Airport, Knoxville, Tennessee

D. Photographs of Objects, if available: None

E. Object Sighted: The radar log of the 663rd AN and C Squadron, McGhee Tyson Airport, Knoxville, Tennessee contained the following entry; "20 December 1950. 1247 hours. Small paint in area (Oak Ridge Controlled Area). Very, very slow. Made perfect intercept (with F-82 Fighter aircraft) and orbit surrounding small smoke cloud."

F. Any other pertinent information: This report is made because of its possible aid in determining the identity of the numerous unidentified objects sighted over Oak Ridge, Tennessee.

SOURCE: Personnel of 663rd AC &W, Squadron, McGhee Tyson, Knoxville, Tennessee, and the log of the 663rd AC&W Squadron.

ATTN: AC of S. G2

TO: The Adjutant General
Washington 25 D.C.

- 1. Reference: Section VIII, paragraph 73b, AR 380-5.
- 2. The following report of unidentified objects by Norman H. Brown, Acting Chief, Review and Analysis Section, AEC, has been received from the Senior Instructor, USAR Instructor Group, Oak Ridge, Tennessee, and is transmitted herewith in accordance with directive cited in paragraph 1, above:

  "At approximately 3:00 P.M. on July 19, 1953, an F-86 aircraft was observed flying over the Oak Ridge residential area, making circles at what appeared to the writer to be approximately 2,500 or 3,500 feet. The F-86 flew over the area in this manner for approximately ten or fifteen minutes. The writer, together with his wife, observed the aircraft through a pair of six power field glasses. After the aircraft flew in what appeared to be the direction of Knoxville, Tennessee, a black object moved out of a high white cloud, directly over the area the F-86 had been flying. This object began to travel, at a tremendous speed, in a large circle. This action on the part of the unknown object continued for at least five minutes. During the circle of this object, it appeared at times to be in the shape of a cigar and at other times round."

  "This object was extremely black in color, having an appearance of a deep black metal exterior with a fine gloss. It did not leave a vapor trail or were there any lights of shine noticed. No sound was heard. The object flew east at a tremendous speed for what appeared to be approximately three miles where it stopped. The object was then joined by two more of these same objects. A formation similar to a spread "V" was formed and the objects, at a tremendous speed flew in an eastward direction."

Oliver Wendelle "Pappy" Henderson

Oliver "Pappy" Henderson Photo, courtesy of Wendy Connors

C-54

In July of 1947 Robert E. Smith was a member of the 1st Air Transport Unit, Roswell, NM.

> **Robert Smith:**
> The C-54 into which Smith helped load the single twenty-foot crate would have been Pappy Henderson's. I remember seeing T/Sgt. Harbell Elzey, T/Sgt. Edward Bretherton, and S/Sgt. William Fortner.

Stanton Friedman:
Capt. Oliver Wendell "Pappy" Henderson may have been the most highly regarded pilot at Roswell AAF. A veteran of thirty missions in B-24 Liberator bombers in Europe, he participated in the postwar A-bomb tests in the Pacific and earned major commendations for his flying. Henderson kept quiet about the unsettling events of July 1947 for three decades. Finally he mentioned them to a fellow retired officer; dentist John Kromschroeder, with whom he was then involved in a joint business venture. The dentist said nothing about this until July 1990, more than four years after Henderson's death from cancer.

In 1977, Pappy had told Kromsehroeder about the incident. He said he transported wreckage and alien bodies, describing the latter as "spacecraft garbage," and adding "the passengers suffered their death." Henderson, in the recollection of Kromschroeder, described the bodies simply as being "small." About a year later; around 1978, Henderson produced a piece of metal he had taken from the collection of wreckage. "I gave it a good, thorough looking-at," Kromschroeder said in 1990, "and decided it was an alloy we are not familiar with (he and Henderson shared an interest in metallurgy). Gray lustrous metal resembling aluminum, lighter in weight and much stiffer. [We couldn't] bend it... edges sharp and jagged."

The priceless scrap of material may be tucked away in Pappy's records and papers, just waiting to be freed. But there is currently no way to search the two thousand-plus cubic feet of materials that jam two small storage buildings and a garage to the ceilings. His widow Sappho, has rejected suggestions that investigators be allowed to search through a lifetime of her late husband's memorabilia. The prospect is daunting, for a slim piece of metal could be hidden between any two pieces of paper in any of many scores of bulging cardboard boxes. Even if she were willing to have strangers paw through such personal matters,

it could take hundreds of hours, and there is no assurance that the scrap of crashed UFO is there. It could have been lost, thrown out, or even confiscated.

In 1982, Henderson met with several members of his old bomber crew during an Air Division reunion in Nashville. According to one of the men in the group, "It was in his hotel room that he told us the story of the UFO and about his part. All we were told by Pappy is that he flew the plane to Wright Field. He definitely mentioned the bodies, but I don't recall any details except that they were small and different. I was skeptical at first, but soon saw that Pappy was quite serious."

Pappy died before I got a chance to interview him. But his widow Sappho, agreed to be interviewed, as did his daughter; Mary Sappho described what her husband had told her.

Mary Sappho Henderson:
We met during World War II when he flew with the 446th Bomb Squadron; he flew B-24s [on] thirty missions over Germany. After the war, he returned home ... and was then sent to Roswell. While stationed there, he ran the "Green Hornet Airline," which involved flying C-54s and C-47's carrying VIPs, scientists, and materials from Roswell to the Pacific during the atom bomb tests. He had to have a Top Secret clearance for this responsibility

In 1980 or 1981, he picked up a newspaper at a grocery store where we were living in San Diego. One article described the crash of a UFO outside Roswell, with the bodies of aliens discovered beside the craft. He pointed out the article to me and said, "I want you to read this article, because it's a true story. I'm the pilot who flew the wreckage of the UFO to Dayton, Ohio [home of Wright Field]. I guess now that they're putting it in the paper, I can tell you about this. I wanted to tell you for years." Pappy never discussed his work because of his security clearance.

He described the beings as small with large heads for their size. He said the material that their suits were made of was different than anything he had ever seen. He said they looked strange. I believe he mentioned that the bodies had been packed in dry ice to preserve them.

To hear her voice, click here

Mrs. Mary Kathryn Groode, Pappy's daughter, added her remembrances to those of her mother.

Mary Kathryn Goode:
When I was growing up, he and I would often spend evenings looking at the stars. On one occasion, I asked him what he was looking for. He said, "I'm looking for flying saucers. They're real, you know"

In 1981, during a visit to my parents' home, my father showed me a newspaper article which described the crash of a UFO and the recovery of alien bodies outside Roswell, New Mexico. He told me that he saw the crashed craft and the alien bodies described in the article, and that he had flown the wreckage to Ohio. He described the alien beings as small and pale, with slanted eyes and large heads. He said they were humanoid- looking, but different from us. I think he said there were three bodies.

He said the matter had been Top Secret and that he was not supposed to discuss it with anyone, but that he felt it was alright to tell me because it was in the newspaper.

I also spoke with Pappy's son and cousin, both of whom told of having heard Pappy quietly tell his story after the newspaper article appeared.

On the basis of all that is known of Pappy's brief mentions of his involvement with the events at Roswell, it appears that while he probably saw bodies at the airbase, he may have transported only materials to Wright Field.

The Roswell Story

Roswell Daily Record

RAAF Captures Flying Saucer On Ranch in Roswell Region

Claims Army Is Stacking Courts Martial

House Passes Tax Slash by Large Margin

No Details of Flying Disk Are Revealed

Some of Soviet Satellites May Attend Paris Meeting

Miners and Operators Sign Highest Wage Pact in History

Stories about crashed UFOs have circulated for many years, but until recently they were dismissed as nonsense by most people, including ufologists. New investigations, however, are uncovering startling evidence indicating that a UFO may have crashed in the New Mexico desert in July 1947.

The event took place during the first week of July 1947 and involved the recovery of wreckage by the military from a remote ranch northwest of Roswell, New Mexico. There is now considerable testimony from former members of the military known to have been involved, including two brigadier generals, that the recovered material was not of terrestrial origin. Admittedly, such a claim taxes the limits of credibility for discerning and rational individuals. It also tends to evoke a response of immediate dismissal. The preponderance of evidence, however, indicates the event occurred.

Maggie & Mack Brazel in 1951, four years after the Roswell Incident: Photo courtesy of Bill Brazel, Jr.

A rancher named Mac Brazel discovered strange metal strewn across a wide area of range land he tended. Because of the material's unusual characteristics, Brazel took pieces of the debris to the authorities in Roswell, New Mexico. Intrigued by the debris, Colonel Blanchard, commanding officer at Roswell Army Air Field, ordered two intelligence officers to investigate.

Col. William "Butch" Blanchard

Roswell Army Air Field was the home of the 509th Bomb Group, which was an elite outfit--the only atomic group in the world. The two men Col. Blanchard sent to the crash site were Major Jesse Marcel and Captain Sheridan Cavitt. Upon their report, Colonel Blanchard quietly ordered that the ranch area be cordoned off. Soldiers removed the debris, sending it to Army headquarters in Fort Worth, Texas.

Maj. Jesse Marcel

CIC Agent Sheridan Cavett

On the morning of July 8, 1947, Colonel Blanchard had Lt. Walter Haut issue a press release stating that the wreckage of a "crashed disk" (UFO) had been recovered. The press release was transmitted over the wire services in time to make headlines in over thirty U.S. afternoon newspapers that same day.

Lt. Walter Haut

Lt. Walter Haut was the Public Information Officer at Roswell AAF. Within hours something had happened and the press release was retracted, and further press coverage restricted.

Col. Thomas J. DuBose

The late General Thomas DuBose was a colonel and General Ramey's chief of staff at Eighth Air Force Headquarters in Forth Worth, Texas, in 1947. Before his death in 1992, General DuBose testified that he himself had taken the telephone call from General Clements McMullen at Andrews Army Air Field in Washington, D.C., ordering the coverup. The instructions were for General Ramey to concoct a "cover story" to "get the

press off our backs."

At a press conference in Fort Worth, the Army explained that the intelligence officer and others at Roswell had misidentified the debris, which was, in fact, the remains of a downed balloon with a metallic radar reflector attached, and not a flying saucer. Public interest faded, and the Roswell event became a part of UFO folklore, with most ufologists accepting the official government version of the story.

Brigadier General Roger M. Ramey

It was not until the late 1970s, with Jesse Marcel's decision to comment publicly on the strange material and other aspects of the Roswell event, that the UFO crash story was revived. Since that time, new evidence indicates the weather balloon explanation was part of an elaborate government coverup, and in fact, the original report of a recovered flying disk was probably true. Investigations into the UFO crash story continue with the goal of pressuring the United States government to end the coverup and to reveal to the American public what actually crashed on the New Mexican desert that night in July 1947.

OBJECTS SIGHTED OVER OAK RIDGE, TENNESSEE

(Refer: Summaries of Information, subject; as above, dated 13 and 12 October 1950)

Attached to this Summary is eleven (11) inclosures which tend to clarify information contained in the former two (2) Summaries of Information on SUBJECT. These inclosures are composed of witness statements; background information concerning previous sightings of peculiar objects over Oak Ridge; and radar reports. The most reliable sources available were utilized in the compilation of this report. The employment records and the Federal Bureau of Investigation reports concerning the witnesses were inspected to ascertain their reliability, integrity, and loyalty to the United States Government.

The opinion of the officials at the Security Division, AEC, Oak Ridge; Security Branch, NEPA division, Oak Ridge; AEC Security Patrol, Oak Ridge; FBI, Knoxville; Air Force Radar and Fighter Squadron, Knoxville; and the OSI, Knoxville, Tennessee, fail to evolve an adequate explanation fir SUBJECT, however, the possibilities of practical jokes, mass hysteria, balloons of any description, flights of birds (with or without cobwebs or other objects attached), falling leaves, insect swarms, peculiar weather conditions, reflections, flying kites, object thrown from the ground,

windblown objects, insanity, and many other natural happenings have been rejected because of the reliability of the witnesses; because of the detailed, similar description of the objects seen by different persons; and because of impossibility.

The trend of opinions seem to follow three patterns of thought. The first is that the objects are a physical phenomenon which have a scientific explanation; the second is that the objects are experimental objects (from an undetermined source) guided by electronics; and the third is similar to the second except that an intended demoralisation or harassment is involved. The fantastic is generally rejected.

These objects have apparently followed only two patterns. The first is that they were sighted at the same hour on two consecutive days and the second is that the time of flight is either to or from the Northeast and Southwest, which directions parallel the terrain ridges in this locality.

Attention is invited to the 1947 photograph of a flying object (inclosure #8). Atomic Energy Commission officials advise that the Air Force Laboratory at Wright Field, Ohio, indicate that the object is a water sport [sic; "spot"] on the photograph. Because this object does not resemble other water spots of the photograph; and because the object in the second photograph is following the dim trail left by the first object, some officials at Atomic Energy Commission question the veracity of

The most reliable sources available were utilized in the compilation of this report. The employment records and the Federal Bureau of Investigation reports concerning the witnesses were inspected to ascertain their reliability, integrity, and loyalty to the United States Government.

The opinions of the officials of the Security Division, AEC, Oak Ridge; Security Branch, NEPA Division, Oak Ridge; AEC Security Patrol, Oak Ridge; FBI, Knoxville; Air Force Radar and Fighter Squadrons, Knoxville; and the OSI, Knoxville, Tennessee, fail to evolve an adequate explanation for SUBJECT, however the possibilities of practical jokers, mass hysteria, ballons of any description, flights of birds (with or without cobwebs or other objects attached), falling leaves, insect swarms, peculiar weather conditions, reflections, flying kites, objects thrown from the ground, windblown objects, insanity, and many other natural happenings have been rejected because of the simultaneous witnessing of the objects with the reported radar sightings; because of the reliability of the witnesses; because of the detailed, similar description of the objects seen by different persons; and because of impossibility.

The trend of opinions seem to follow three patterns of thought. The first is that the objects are a physical phenomenon which have a scientific explanation; the second is that the objects are experimental objects (from an undetermined source) guided by electronics; and the third is similar to the second except that an intended demoralization or harrassment is involved. The fantastic is generally rejected.

These objects have apparently followed only two patterns. The first is that they were sighted at the same hour on two consecutive days and the second is that the time of flight is either to or from the Northeast and Southwest, which directions parallel the terrain ridges in this locality.

Attention is invited to the 1947 photograph of a flying object (inclosure #8). Atomic Energy Commission officials advise that the Air Force Laboratory at Wright Field, Ohio, indicate that the object is a water spot on the photograph. Because this object does not resemble other water spots on the photograph, and because the object in the second photograph is following the dim trail left by the first object, some officials at Atomic Energy Commission question the veracity of

"U.F.O." REVISITED

"Unidentified Flying Objects", 1956

Part Two: The Other Players

Major Dewey J. Fournet Jr.

Dewey J. Fournet Jr. is presently employed as a member of management in a large international chemical company. Like Chop, he stays quite busy with his job, and he isn't a publicity-seeker in any sense. As a matter of fact, when it comes to UFOs these days, Fournet stays very "low key." He offered me some rather profound dialogue, however, dealing with his involvement in the Air force UFO project in the early fifties. He, Chop and Ruppelt worked closely together on the official UFO investigation. And, like many other knowledgeable contributors, Fournet provided technical experience during the making of "U.F.O."

Fournet's role in the Air Force was intelligence. He served in the Army nearly four years in World War II, and for the last three years of that period he performed intelligence work in the Army Air Force. The Air Force became a separate operation soon after the war, and Fournet's reserve commission was transferred from the Army to the Air Force. In April 1951, Fournet found himself recalled to active Air Force duty and he was sent to Air Command and Staff School until August. He was soon assigned to Intelligence at the Pentagon.

"Shortly afterwards," he recalls, "I was assigned official Headquarters responsibility for the UFO program, serving as Monitor for Project Bluebook and handling UFO-related intelligence matters."

Major Fournet left active service - and the UFO project - in January 1953, having racked up five-and-a-half years with the military during the two periods.

"I was indeed a UFO skeptic when I was assigned to the program," Fournet states. "At some point during the first few months of my assignment - probably during early 1952 - I became convinced that the subject deserved serious attention.

"This change," he indicates, "occurred as a result of my exposure to the project files and the study of the steadily increasing volume of sighting reports. "I didn't become a 'believer' in the popular sense," he cautions, "I simply changed my posture from complete disdain of the subject to one of conviction that it needed serious study."

Fournet, whose comments typify an intelligence officer who treated his work seriously, explained that the USAF had to learn as much as it could about the UFO phenomenon, "if for no other reason than to be able to discern a potential Soviet attack through the background 'static' created by the deluge of UFO reports in 1952."

Nowadays, admitting that scientific curiosity had to remain subordinated during his active USAF participation, Fournet hopes that science will take a major role in identifying UFOs. In the movie "U.F.O.," Fournet (who did not play himself, though he approved every line of his part in the script) shows Al Chop the Montana and Utah UFO films. In reality he, like Chop, found the films very

curious. Following lab tests and witness interviews involving the Utah film, Fournet turned out to be one of the people responsible for classifying Delbert Newhouse's filmed UFOs as "unknowns."

Dewey Fournet has played a mostly silent role as a member of NICAP's Board of Governors since 1957. He recently attended the well-attended UFO conference held at Fort Smith, Arkansas (where, in fact, the Lorenzens of APRO kindly told him of my interest in interviewing him).

Again, thinking back, he summed up his views on the government's efforts to explain UFOs.

"Personally, I regret the fact that the government no longer associates itself with this subject, although I feel no remorse whatsoever over the burial of the USAF project because of the extremely negative path that it generally followed after 1953. "Captain Ruppelt confided to me that he could see the negativism developing following the report by the CIA Scientific Panel in early 1953, and this was the main reason for his request to be reassigned from the project."

Fournet is keen, probably with justification, in emphasizing that the Air Force was mainly concerned with whether UFOs were a threat to national security. However, "when the CIA Scientific Panel concluded in 1953 that no threat was evident, the Air Force philosophy seems to have undergone drastic modification with minor variations until the project was disbanded following the infamous Condon report."

If a government agency with a less limited mission had been funded to study UFOs, according to Fournet, we might have had some of the answers to UFOs. "Since this has never been done, I feel that it was proper for privately funded organizations to move into the vacuum." But there are problems.

"For example." Fournet concedes, "there are few totally serious organizations. Too many have sprung up on the fringe element, either to promote preconceived philosophies and/or 'solutions' or to realize monetary windfalls. Then, the few sound organizations represent a fragmentation of resources and overlapping efforts, as a consequence of which no one is able to bring to bear all the available talent in one coordinated attack on the problem."

Dewey Fournet - via Major Fournet - was portrayed in "U.F.O." in several scenes. Like Al Chop, he was present during the famous Washington National sightings in 1952.

"My involvement in the Washington incidents did entail hectic days and nights, although these sightings were merely a small part of an unbelievable hectic period of eight or nine months in 1952." The advantage during the National sightings was that Fournet didn't have to depend on eyewitness accounts. He was on the scene, observing the UFOs on radar.

"My attention to what was going on, however, was far from undivided - long distance phone calls to handle, fighter interceptor requests to make, reporters outside to be satisfied, etc."

At this point in reality, there arises another conflict in what "U.F.O." portrays. "In fact, I wasn't even present when a fighter pilot reported that he was surrounded by UFOs," Fournet explains. "In reviewing the movie script, I had taken issue with Al Chop over this, and only after considerable discussion and reflection did I finally conclude that this occurred when I was on the phone, talking to Bob Ginna of 'Life' [magazine]."

Discussing "U.F.O.," Fournet is careful to assert that the events in the movie are depicted as they are seen through the eyes of a public information officer (Chop). "Although the facts depicted are accurate," Fournet said, "actual operations in Intelligence were materially different in many respects from the impressions the movie can leave. Al happened to be a privileged recipient of considerable information because I had convinced my superiors in 1952 that all non-sensitive UFO information should be made available to the public.

"Because of this," Fournet points out, "I tried to keep Al informed of all developments that I thought would provoke queries from the press and members of the public.

"This was the only 'open' period that I know of in the entire existence of the UFO project."

The written interview with Dewey Fournet included a final question. Do you feel a lot of important UFO information has been and/or is still being censored by certain government agencies?

"To the best of my knowledge," he replied in conclusion, "there has never been any censoring per se, with the exception of deleting names of witnesses and any data pertaining to radar or intercept procedures.

"On the other hand, I'm positive that the public was frequently fed misleading statistics and examples of reports that were atypical, intended only to make the subject appear to be entirely asinine."

Straight talk from Dewey J. Fournet Jr., another important figure in UFO history who helped to add accuracy to "U.F.O."

Clarence Greene was well on his way to making his planned documentary a celluloid reality in late 1955.

Al Chop had given the okay to basing the film on his experiences with the official UFO investigation. Dewey Fournet had offered to lend technical advice. Arrangements were under way for Edward Ruppelt to play his own role as well as give advice. Delbert Newhouse and Nicholas Mariana were available to be interviewed on film about the unexplained UFO films they had made.

In addition, Greene had enlisted the aid of electronics engineer and radar specialist Wendell V. Swanson. Swanson had built our first radar installation at Okinawa, and later analyzed many radar-confirmed UFO reports at Wright Field during the years the movie depicts. By 1954, he was a leading engineer in the missile guidance division of a West Coast aircraft plant. Like Ruppelt, Swanson played himself in "U.F.O."

The production staff was being readied as well. Exhaustive research by screenwriter Francis Martin was being put into script form and undergoing revision. Winston Jones, a Hollywood prop man, was about to assume a more strategic position as the director of "U.F.O."

Amidst all the organizing, documenting and double-checking, however, there was still a key position to be filled. Someone had to play the role of Al Chop. That someone was found in the City Room of the now defunct "Los Angeles Examiner." His name was Tom Towers, a writer who was then a senior member of the Aviation Writers association. Towers recently recounted the events surrounding his selection for the part:

"When 'U.F.O.' came about, Al Chop recommended me to Greene-Rouse Productions as an active newspaperman who would fill the part he played as a member of Project Bluebook. Chop was then working in the public relations department of the Douglas Aircraft Company and I knew him through my aviation writing duties. So, after a few meetings with Greene-Rouse - and a check with my editors at the 'Examiner' - I was able to get a 21-day leave to make the picture.

'The picture was low-budget - under $200,000 I believe - and I furnished almost all my own wardrobe. I also furnished my own car for scenes requiring a vehicle, and the film was made in a small hideaway studio on the outskirts of Hollywood." Towers emphasizes that production was carried out under strict secrecy for fear that other companies might try to rush a competing film into print. Or perhaps to keep reporters away from the studio: "I recall that my dressing room in this 'studio' was the men's room. What a put-down!"

Tom Towers is very opinionated about his role in "U.F.O." He regrets that he wasn't able to give the form of portrayal he had in mind. "This was because I was under the direction of a director who was following the script and taking orders from producers who were genuinely interested in presenting the facts. I do not offer this as a criticism, but only as my own feeling. I felt the film was

too damn factual. It attracted two kinds of people: those who believed and those who did not. The broad middle mass could not have cared less - and you need that market to make a film successful at the box office."

Tom Towers. He admits that as the highest paid performer in "U.F.O.," he only grossed $1,500.

In attempting to reach his goal of making "U.F.O." a documentary of the highest standards, Clarence Greene sought out people and events that had the means to lend authenticity. For instance, even though the Newhouse (Utah) and Mariana (Montana) films had been shot in color - and "U.F.O." was filmed in glorious black and white - Greene insisted on showing the UFO movies in their original color. Therefore, every point of "U.F.O." contains color sections just to accommodate these films.

It might be argued that Clarence Greene left very little to chance in his selection of convincing UFO events. What better form of documentation could there be than to include an interview with a commercial airlines pilot who, with crew and passengers aboard, actually encountered a UFO while in flight? Greene located an American Airlines pilot who was still on duty with the company. His name was Capt. Willis T. Sperry ("Doc" Sperry, as he is known to his friends).

Sperry had made an important UFO sighting on May 29, 1950, at about 9:30 in the evening. There was unlimited visibility, and Sperry's American Airlines flight was 60 miles southwest of Washington, DC, headed for Nashville, Tennessee. His aircraft was flying at 7,500 feet. Sperry (who retired from American in April, 1971, after 32 years of service) was about to make UFO history. A UFO came into view.

"I was turned around in my seat at the moment it appeared, getting a map out of a briefcase. My copilot called out, 'What is that - look out - it's coming right at us.'" Sperry outlined what happened next.

"I made an immediate right turn from a heading of approximately 230 degrees to 320 degrees.

"The object was a very bright shimmering blue light. We were very interested in ascertaining its distance from us."

As Sperry leveled off in flight, the UFO appeared to stop in the sky.

"As I look back on this incident, I recall that, at the time, it did not occur to me that I was seeing an object called a UFO. It was a very puzzling sight." By the time the UFO appeared to stop, the stewardess and eight passengers had seen the light, along with Sperry, the copilot and the flight engineer. The object remained stationary for about 30 seconds before it began moving again. "At this time," continued Sperry, "I started a left turn to keep it in view."

"There was a full moon in the eastern sky; the object passed between us and the moon, and I got a definite silhouette of it. It appeared cigar-shaped, with no external (characteristics) protruding from it.

"It circled around behind us and appeared on our right, where it again came to an apparent stop. How far was it from us? I will take a guess that it was five miles away. We really had no way of judging its distance.

"After about 20 to 30 seconds," Sperry relates, "it started moving eastbound, climbing at about a 30 degree angle. We watched it until it disappeared."

For this interview, "Doc" Sperry surprised this writer with further information on his sighting - data that is not known even to veteran researchers.

"An eastbound American Airlines DC6 between Nashville and Knoxville at 19,000 feet, headed for Washington and flown by Capt. Henry Myers, observed what appeared to be a brilliant shooting star falling eastward from the zenith.

"When it got to the horizon it stopped. They watched it for seconds as it seemed to move horizontally, then it disappeared.

"I talked to Myers after the incident and we correlated the time of my sighting with his, and it was exactly the same time."

Myers told Sperry that what was most interesting was the fact that "shooting stars" don't stop and change direction!

"His aircraft was 450 nautical miles to the southwest of us," Sperry continued.

"I have been reluctant to report this, as he asked me at the time to please keep his sighting out of the news. He is now deceased. Capt. Henry Myers was the pilot of the Sacred Cow, which flew President Roosevelt during World War II," Sperry added. (I double-checked with Sperry to make sure he wanted this information released now; he did, and I'm glad.) Thus, Clarence Greene invited Sperry to tell his story in "U.F.O." The interview took place at L.A. International Airport. Now, twenty years later, Willis Sperry is in partnership with another man, and he's still in the "flying business," though from a different point of view. Instead of just piloting assorted aircraft, Sperry now sells them, at his Orion Aircraft Sales Company (Van Nuys, California).

Sperry was asked if he recalls receiving any public reaction or any reaction from American Airlines after his interview in "U.F.O." appeared across the nation. "The public reaction at that time," he indicates, "and from American Airlines, was genuine interest."

Sperry confirms that no particular physical effects resulted among anybody on the plane during or after the UFO sighting.

"I had no idea that this sighting would generate so much interest," he confesses. "Almost everyone seemed genuinely interested in what I saw. I had several interviews with Air Force Intelligence personnel from Washington.

"American Airlines expressed only interest in what I saw and never issued any censorship orders to me."

In the Greene-Rouse movie, Sperry was asked, "Have you ever seen any similar object, Captain?" He replies, "Never before or since." He feels the same today.

"Although I observe probably more than the average layman for any unusual phenomena, I have never seen anything since then."

Willis Sperry. Like so many pilots, he believes UFOs are more than products of the imagination. What is your opinion of UFOs in 1976? I asked in conclusion.

"I am very much of the opinion that there is some extraterrestrial phenomenon that has not been explained," he advises. He believes that the findings of Erich von Daniken ("Chariots of the Gods?") are very convincing.

But Sperry bases his belief on other events - like sightings by people who know about things that fly - on the Earth and beyond.

"The sightings by Apollo flights to the moon should convince most skeptics that this old Earth has been visited in the past as well as the present."

Willis Sperry. In many ways, he unintentionally acts as a spokesman for many pilots whose views on UFOs are similar to his own. Willis Sperry. Another reason why "U.F.O." can truly be classified a documentary.

All the good, sincere people - all the documentation - all the time and all the planning came to fruition in May 1956, when "U.F.O." Was released by theaters around the world. Movie reviews were generally kind, often ecstatic. Columnist Louella Parsons wrote: "Hollywood is talking about the

incredible interest expressed by fans and those in the industry over the flying saucer film made by Clarence Greene and Russell Rouse with our government's knowledge. It actually shows pictures of the saucers and is attracting front page and editorial attention although what the saucers are is still a mystery."

From "Variety": "An authentic beat! Interesting, informing and important! Gripping climax! Should register well!"

And the movie did register well, but not as well as it should have. The documentary approach just didn't go over as attractively as the producers had planned. Why not, is anybody's guess, and the whole question is irrelevant at this point, anyway.

Greene-Rouse went to great lengths to support their motion picture with facts. Every document that would back up the story line was placed in the custody of a Los Angeles insurance company and made available for public inspection.

Among the documents on file was a weather chart which reported atmospheric conditions over Washington, DC during the July 1952 sightings. The chart reportedly proved that the radar pickup of UFOs could not be attributed to temperature inversions. Also on file was a transcript of General Samford's Pentagon press conference held after the July 26 sightings.

A wire from Al Chop was likewise on display in which he said: "I AM TELLING THE TRUE FACTS TO THE PUBLIC FOR THE FIRST TIME IN YOUR MOTION PICTURE_"

Capt. Edward Ruppelt, USAF Reserve, also had a wire on file, and he stated: "I HEREWITH CONFIRM THE AUTHENTICITY OF THE FACTS AND INCIDENTS DRAMATIZED IN YOUR SCREENPLAY_"

Maj. Dewey Fournet submitted a statement to Greene-Rouse, also kept on file: He certified that the part of the script dealing with his role was "_factually correct and true to the best of my knowledge_"

Delbert C. Newhouse and Nicholas Mariana each placed statements on file regarding their UFO films. The Newhouse film contained up to 12 unknowns; the Mariana film, two.

Some of the documents on file were as much of an anomaly as the UFOs. Part of an official press statement prepared by Albert Chop and Colonel Wendell Smith (Current Intelligence Office Branch, Deputy Chief of Staff, Intelligence USAF) stated that the Newhouse Utah UFO film "could not be produced under simulated conditions."

At the same time, this press statement "was cleared by Col. Adams, Chief of Current Intelligence, and also by the Air Force Office of Information Services." Then, the puzzler: "At the last moment," the statement continued, "this press statement was killed by Col. Teaburg of Air Force Intelligence." Assuredly, the military works in strange ways.

However, Col. Adams sent a letter to Newhouse, telling him that his UFO film "still remains one of the most interesting incidents we have investigated."

The full reports of Thomas Mantell's death while chasing a UFO was also placed on view.

The Gorman case of October 1948, dramatized in "U.F.O.," Was on file, containing information on a blinking, white light that made a pass at the Fargo, North Dakota, Air Base tower. Lt. Gorman, coming in for a landing, dove at the light and chased it for 27 minutes while several observers watched the "dogfight." Substantiating witness reports were on file.

Another official report, from January 1951, was in the hands of the insurance company. A Mid-Continent Airlines DC3 had taken off from Sioux City (Iowa) Airport. As it climbed for altitude, an unidentified light closed in. The object made a head-on pass at the DC3, which swerved to avoid a collision. The incident was observed by several passengers - including a colonel from Military

Intelligence. The chaos ended when the UFO suddenly zoomed straight up in the air and disappeared. This event was also portrayed in the movie.

Capt. Willis Sperry's report, in affidavit form, was the final document kept on file. "Since my experience," he clearly pointed out, "I have talked to many airline pilots who have seen similar objects that absolutely cannot be identified in any known type of aircraft category due to the speed, maneuverability and shape of the object."

Any discussions of "U.F.O." should also make mention of the theme music. The lively, often beautiful score heard throughout the movie was written by Ernest Gold (conducted by Emil Newman) and is entitled "U.F.O.," according to the files of the musical society, A.S.C.A.P. It's one of those scores that, if put into an LP album (as so many movie scores are these days), might be very successful.

Where can "U.F.O." be found these days? Actually, the motion picture can be obtained for special showings (or by TV stations when purchased in a "package"). Write the following for information, and don't fear the price of rental - group showings can be arranged for around $70.00 per viewing: UA Sixteen, 729 Seventh Avenue, New York, N.Y. 10019. "Unidentified Flying Objects."/Clarence Greene.

Maybe if the two of them had made acquaintances today, instead of 1956, the movie would have the same shattering effect on audiences that recent films like "Chariots of the Gods" have had.

Strange, really. Way back in December '75, I wrote Clarence Greene and asked a question that was special to me. Considering how public interest in UFOs has become more heightened and sophisticated over the years, would you ever consider making another UFO film documentary? Green's reply consisted of just one word: "Possibly."

One contemplates what wonders Clarence Greene might work with an updated documentary on the UFO mystery. UFO research owes him a great debt. Unfortunately, he does not owe UFO research another great film documentary.

"U.F.O." Could there ever be another like it?

"Possibly," the sound of the word makes me more hopeful. "Possibly."

**** THE END ****

NICAP Home Page

Wurtsmith Air Force Base Sighting

(From the book titled "***Clear Intent***" by Lawrence Fawcett and Barry Greenwood)

Wurtsmith is a Strategic Air Command base located three miles north-west of Oscoda, Michigan. It serves as the home base for the 40th Air Division and the 379th Bomb Wing.

At approx. 10:10 pm, personnel in the vicinity of the family housing area located in the southeastern portion of Wurtsmith reported seeing what appeared to be running lights of a low flying craft which was thought to be a helicopter. The craft hovered and moved up and down in an erratic manner.

Airman Martin E. Tackabury, assigned to the Capehart housing area gate, said that he saw the object for about five seconds near the perimeter of Wurtsmith, due south of his location. Tackabury reported that the object had one white light pointing directly downward and two red lights near the rear. The object seemed to be heading in a west southwest direction. Tackabury could not hear any sound coming from the aerial craft because a B-52 was in the air nearby to the north.

Near the main gate at Wurtsmith, Airman Michael J. Myers, assigned to Police Unit Seven, was on duty at the Wurtsmith motor pool. As Myers looked toward the west, he could see several lights near the western edge of the base. The lights turned north and appeared to lose altitude. He did not hear any sound.

Sergeant Robert J. Anderson, also at the motor pool, reported that he observed an airborne KC-135 tanker and another craft with a steady red light. The craft appeared to be flying slower, ahead and below the KC-135. Anderson believed the heard a sound similar to a helicopter. After 30 - 35 seconds, the object passed out of view.

Airman Roger Skipper, at the Wurtsmith main gate, said that when he responded to the activity at the motor pool, he heard sounds that diminished quickly.

At 10:14, 10:20, and 10:25 pm, at the back gate of Wurtsmith, security police reported to the command post that an unidentified helicopter with no lights came up over the back gate and hovered over the weapons storage area at a low altitude. Security police of the 379th security police squadron in the weapons storage area could not make out the type of craft. The craft started to move towards the northern perimeter where its lights were again turned on.

Sergeant James A. Miller of the Wurtsmith security police reported his observations of the unknown craft while on duty in the weapons storage area. He stated that he heard the sound of a possible helicopter coming from an area off the base toward the north. He thought he had heard the sound of a flying helicopter fifteen minutes earlier, but he didn't report it.

As he listened, the noise became drowned out by a military jet, and when the jet passed out of range, the original noise had stopped. No other similar sounds were heard.

The local police were notified; however, no evidence was found to corroborate a landing. Wurtsmith Control Tower personnel did not make visual contact with the craft, and no efforts were made to challenge the craft by radio.

Security police at the weapon storage area notified Colonel John J. Doran, Vice Commander, 379th Bomb Wing, that the guard posted at the back gate had reported what he thought was a helicopter overhead. The command post notified Col. Boardman (wing commander) and Col. Doran, and they proceeded to the flight

line. It was at this time that Radar Approach tracked the craft for approx. 35 miles on a southeastern bearing from Wurtsmith. Simultaneously, a KC-135 tanker was returning from a refueling mission. It entered Wurtsmith's traffic pattern and received permission to fly transition approaches. Col. Boardman ordered the KC-135 to attempt to identify the object. Wurtsmith air traffic control vectored the tanker in the object's direction.

Aboard the KC-135 was Major Frederick Pappas, the plane's commander; Captain K.E. May, co-pilot; Captain Rick Meier, the navigator; Captain Myron Taylor, instructor navigator; Captain Randy Higginbotham, instructor pilot; and Sergeant Steve Smith.

The following statement on the KC-135 encounter with the UFO was given to the 379th Bomb Wing Historian, Staff Sergeant Paul J. Cahill, by Captain Taylor in a "Memo for the Record" dated January 18, 1979.

"We were returning from a refueling mission and during our first approach into the traffic pattern, RAPCON vectored us to check out a reported UFO in the area of the Wurtsmith Weapons Storage Area. As I recall, this activity occurred between 10:30 and 11:00 in the evening around the 1st of November. I remember seeing lights similar to strobe lights which were flashing irregularly. We followed the lights north out over Lake Huron and then Michigan. At first it was difficult to determine whether there were two different objects because of the irregular flashing of the lights. But, after observing the lights we determined that there were in fact two objects and the irregular flashing appeared to be some sort of signal being passed from one to the other in an effort to maintain the same position. We were able to paint an object on the radar scope for about 10 seconds. I would estimate that our altitude was about 2,000 ft. and our speed approximately 200 knots. Shortly after turning south in pursuit of the UFO, we called Approach Control and received blanket clearance to follow the UFO at all altitudes and at all vectors. Occasionally, RAPCON would pick up the UFO and help us by giving us vectors to the UFO's position. I would guess that we stayed close to the UFO most of the time, approx. one mile away, and each time we attempted to close on the object it would speed away from us. We followed the UFO down to Saginaw Bay and started across the Bay when we lost it because of all the fishing boat lights. At first we thought it had landed on one of the large oil tankers but later decided that we had been wrong. We continued to search the Bay area but didn't see it so we changed our heading for Wurtsmith. On the way back, we picked the UFO up again at our eight o'clock position. We turned away, and it proceeded to follow us. Finally, we turned back in the direction of the UFO and it really took off back in the direction of the Bay area. I know this might sound crazy, but I would estimate that the UFO sped away from us doing approx. 1,000 knots. We continued in the direction of the Bay until RAPCON called us again and said they were painting a UFO four to five miles over the coast traveling in a westerly direction. They vectored us to the position of the UFO and we proceeded but at that point we were low on fuel and were forced to return to Wurtsmith. I remember that while on final approach we saw the lights again near the Weapons Storage Area. Following the mission we discussed the incident and about a week later, Captain Higginbotham was questioned by the OSI and cautioned not to discuss the incident."

No positive visual identification was ever given by any of the personnel involved in the Wurtsmith sightings. Only lights and sounds were reported.

The FBI field office in Saginaw, Michigan was contacted by the Air Force and advised of the activity at Wurtsmith. The special agent in charge said that his office was "unaware of hostile threats against Wurtsmith Air Force Base."

(For research records made by Staff Sergeant Paul J. Cahill, and more information concerning this case see the book "***Clear Intent***")

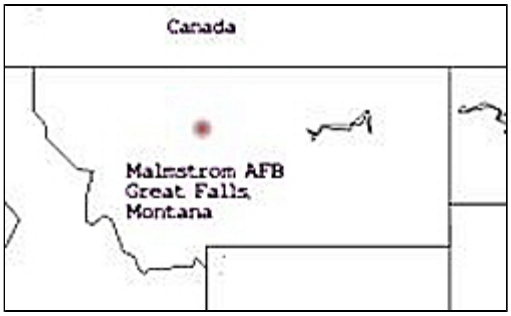
Malmstrom AFB, Incident

Lewiston, Montana
November 7, 1975



Malmstrom AFB, Montana

Lawrence Fawcett & Barry Greenwood:
There are more than 2,000 missile sites spread across the United States. At Malmstrom Air Force Base in Montana, there are twenty Launch Control Facilities (LCF) housing Minuteman missiles underground. The Minuteman sites are alphabetically coded, such as "L-1," "K-1," "E-1," and the like, and are distributed over a wide area. One of these sites, K-7, which is located in the Judith Gap region just south of Lewiston, Montana, was the scene of an event which caused a major stir for the United states Air Force.

On November 7, remote electronic sensors triggered an alarm indicating that something was violating site security. Underground, in the launch control area, two officers noted the signal, but there was no television surveillance topside. The normal procedure for detecting what had violated security was to call for a missile security helicopter to check the area. At the same time, Sabotage Alert Teams (SAT), consisting of four to six men, were also alerted to the fact that a violation was taking place and were ordered to proceed to the site. On this occasion, an SAT team drove down the highway and onto a dirt road which led to the K-7 area. About a mile away, the team could see an orange, glowing object over the area. As they closed to within half a mile, they could now see that the object was tremendous in size. They radioed to the Launch Control Facility that, from their location, they were viewing a brightly glowing, orange, football field-sized disc that illuminated the missile site. The SAT team was ordered by the launch control people to proceed into the K-7 site. However, they responded that they refused to go any farther, clearly fearful of the intimidating appearance of the object. It began to rise, and at about 1,000 feet, NORAD picked up the UFO on radar. Two F-106 jet interceptors were launched from Great Falls, Montana, and headed toward the K-7 area. The UFO continued to rise. At about 200,000 feet*, it disappeared from NORAD's radar. The F-106's were never able to get a visual sighting of the UFO.

All members of the SAT team were directed to the base hospital, where they were psychologically tested. It was determined that no one could identify the object that was seen, but that the members of the SAT team obviously had been through a traumatic experience. Meanwhile, targeting teams, along with computer specialists, were brought to the missile site to check out the missile, and specifically, the computer in the warhead that targets the missile. Amazingly, when the computer was checked, they found that the tape had mysteriously changed target numbers! The re-entry vehicle was then taken from the silo and brought back to the base. Eventually the entire missile was changed.

Source: A Strange Harvest; reprinted in Clear Intent, 28.

***** (The source of this part of the story has not been documented. Furthermore, NORAD didn't have radar capability for that altitude, nor was there any radar within a thousand miles that could track an object at 200'000 feet. - Fran Ridge)

1. A copy of you letter dated 22 August 1977 was received in this headquarters for direct reply on 19 September 1977. The following log entries have been extracted for release:

a. NORAD Command Director's Log (1975)

29 Oct/0630Z: Command Director called by Air Force Operations Center concerning an unknown helicopter landing in the munitions storage area at Loring AFB, Maine. Apparently this was second night in a row this occurrence. There was also an indication, but not confirmed, that Canadian bases had been overflown by a helicopter.

31 Oct/0445Z: Report from Wurtsmith AFB through Air Force Ops Center - incident at 0355Z. Helicopter hovered over SAC Weapons storage area then departed area. Tanker flying at 2700 feet made both visual sighting and radar skin paint. Track object 35NM SE over Lake Huron where contack was lost.

1 Nov/0920Z: Received, as info, message from Loring AFB, Maine, citing probable helicopter overflight of base.

8 Nov/0753Z: 24th NORAD Region unknown tract J330, heading SSW, 12000 feet. 1 To 7 objects, 46.46N 109.23W. Two F-106 scrambled out of Great Falls at 0745Z. SAC reported visual sighting from Sabotage Alert Teams (SAT) K1, K3, L1 and L6 (lights and jet sounds). Weather section states no anomalous propagation or northern lights.

FREEDOM OF INFORMATION ACT DOCUMENT FILES

NORAD Region Senior Director's Log (Malmstrom AFB, Montana).

0835Z: SAT Teams K3 and L4 report visual, K3 report target at 300 feet altituds and L4 reports target at 5 miles. Contact lost at 0820Z. F-106s returned to base at 0850Z with negative results. 0905Z Great Falls radar search and height had intermittent contact. 0910Z SAT teams again had visual (Site C-1, 10 miles SE Stanford, Montana0. 0920Z SAT CP reported that when F-106s were in area, targets would turn out lights, and when

F-106s left, targets would turn lights on. F-106s never gained visual or radar contact at anytime due to terrain clearance.

This type of activity has been reported in the Malmstrom area for several days although previous to tonight no unknowns were declared. The track will be carried as a remaining unknown.

7 NOV 75 (1035Z) - Received a call from the 34st Strategic Air Command post (SAC CP), saying that the following missile locations reported seeing a large red to orange to yellow object: M-1, L-3, LIMA and L-6.The general object location would be 10 miles south of Moore, Montana, and 20 miles east of Buffalo,Montana, Commander and Deputy for Operations (DO) informed

7 NOV 75 (1203Z) - SAC advised that the LCF at Harlowton, Montana,observed an object which emitted a light which illuminated the site driveway.

7 NOV 75 (1319Z) - SAC advised K-1 says very bright object to their east is now southeast of them and they are looking at it with 10x50 binoculars. Object seems to have lights (several) on it, but no distinct pattern. The orange/gold object overhead also has small lights on it. SAC also advises female civilian reports having seen an object bearing south from her position six miles west of Lewistown.

7 NOV 75 (1327Z) - L-1 reports that the object to their northeast seems to be issuing a black object from it, tubular in the shape. In all this time, surveilance has not been able to detect any sort of track except for known traffic.

7 NOV 75 (1355Z) - K-1 and L-1 report that as the sun rises, so do the objects they have visual.

7 NOV 75 (1429Z) - From SAC CP: As the sun rose, the UFOs disappeared. Commander and DO notitier.

8 NOV 75 (0635Z) - A security camper team at K-4 reported UFO with white lights, one red light 50 yards behind white light personnel at K-1 seeing same object.

8 NOV 75 (0645Z) - Height personnel picked up object 10-13,000 feet, track J330, EKLB 0648, 18 Knots, 9,500 feet. Objects as many as seven, as few as two A/C.

8 NOV 75 (0753Z) - J330 unknown 0753, Stationary / seven knots /12,000. One (varies seven objects.). None, no possibility, EKLB 3746, two F-106, GTF, SCR 0754. NCOC notified.

FREEDOM OF INFORMATION ACT DOCUMENT FILES

24th NORAD Region Senior Director's Log (Malmstrom AFB, Montana).

8 NOV 75 (0820Z) - Lost radar contact, figters broken off at 0825, looking in area of J331 (another height finder contact).

8 NOV 75 (0905Z) - From SAC CP: L-sites had fighters and objects; fighters did not get down to objects.

8 NOV 75 (0915Z) - From SAC CP:From four different points:Observed objects and fighters; when fighters arrived in the area, the lights went out; when fighters departed, the lights came back on; to NCOC.

8 nov 75 (0953Z) - From SAC CP: L-5 reported object increased in speed - high velocity,raised in altitude and now cannot tell the object from stars . to NCOC.

8 NOV 75 (1105Z) - From SAC CP: E-1 reported white light (site is approximately 60 nautical miles north of Lewistown). NCOC notified.

9 NOV 75 (0305Z) - SAC CP Called and advised SAC crews at sites L-1, L-6 and M-1 observing UFO. object yellowish bright round light 20 miles north of Harlowton, 2 to 4,000 feet.

9 NOV 75 (0320) - SAC CP reported UFO 20 miles southeast of Lewistown, orange white disc object. 24 NORAD Region survellance checking area. Surveillance unable to get height check.

9 NOV 75 (0320Z) - FAA Watch Supervisor reported he had five air carriers vicinity of UFO, United Fight 157 reported seeing meteor, "arc welder's blue" in color. SAC CP advised,sites still report seeing object stationary

9 NOV 75 (0348Z) - SAC CP Confirms L-1, sees object, a mobile security team has been directed to get closer and report.

9 NOV 75 (0629Z) - SAC CP advises UFO sighting reported around 0305Z. Cancelled the flight security team from site L-1, checked area and all secure, no more sightings.

10 NOV 75 (0215Z) - Received a call from SAC CP. Report UFO sighting from site K-1 around Harlowton area. Surveillance

10 NOV 75 (0153Z) - Surveillance report unable to locate track that would correlate with UFO sighting by K-1.

24th NORAD Region Senior Director's Log (malmstrom AFB, Montana).

10 NOV 75 (1125Z) - UFO sighting reported by Minot Air Force Station, a bright star-like object in the west, moving east, about the size of a car. First seen approximately 1015Z. Approximately 1120Z, the object passed over the radar station, 1,000 feet to 2,000 feet high, no noise heard. Three people from the site or local area saw the object. NCOC notified.

2. HQ USAF/DADF also forwarded a copy of a NORAD document for a review for possible downgrade and release. We have determined the document is properly and currently classified and is exempt from disclosure under public law 90-23, 5 USC 552b(1).

3. The decision to withhold release of this document may be appealed in writing to the Secretary of the Air Force within 45 days from the date of this letter. If you appeal, include any reasons for reconsideration you wish to present and attach a copy of this letter. Address your letter as follows: Secretary of the Air Force, thru HQ ADCOM/DAD, Peterson AFB CO 80914.

Observational Evidence Of Propulsion

Princeton, Indiana
August 1973

Francis Ridge:
This is one case I will always remember. Not just because I investigated it first hand, but because of the intimate details missing from many other UFO incidents. And if it hadn't been for a nearby lightning strike the sighting might have rated no more than a nocturnal light It happened in August of 1973, but wasn't reported until January of 1976 to the UFO Filter Center in Mt. Vernon. I was very impressed with the person reporting and with some of the details of the incident which appeared to be observational evidence of the "Sorenson Effect". I later found a foreign photograph that depicted the same "super dark cone" that the witness had reported below the object. Although the drawing suggests an "Adamski-type" saucer, the witness had merely drawn what he and the two other witnesses had observed and agreed on, a "disc" with a "little rolled edge" on a "straight up & down cupola", items like portholes, and the "cone".

INTRODUCTION

At the termination of WW II, intelligence information was plentiful. It was then possible to accurately assess the effectiveness of our weapons. Documents containing valuable technical data were abundant. Persons having knowledge of a multitude of pertinent subjects were available for interrogation. Inventions of all stages of development were awaiting investigation. Prisoners of War were returning from areas of interest. All this and much more was at our disposal for intelligence exploitation.

An enormous opportunity and challenge existed for military intelligence, and many military programs were initiated to gather as much information as possible. These programs constituted a commendable effort. Reports containing valuable intelligence of all types were evaluated and collated. They clearly showed the potential, but only a minute portion of intelligence information available was being collected.

The CIC, later redesigned by USAF as the OSI, was doing its best to service the intelligence requirements in both Europe and the Far East, but the two-fold mission of collecting counter and positive intelligence precluded any concentrated effort toward the collection of positive air intelligence. Criminal investigation, black market activities, and security investigations were receiving priority while air intelligence exploitation went begging.

==========
==========

{Page 2}

SECRET
2

Realizing the need for an organization comparable to the OSI for the collection of positive air intelligence, D/I, USAF gathered a group of linguists to service the D/I of the United States Air Force in Europe with interpreters, translators, and interrogators. In November, 1948, this group was designated the 7001st Air Intelligence Service Squadron.

As relations with the USSR became increasingly strained and the Iron Curtain closed around Russia and the Satellites, the Director of Intelligence, USAF, established "Project Wringer" to exploit, for air intelligence, former prisoners of war repatriated from the USSR and its satellites. The returnees had been scattered in PW camps throughout the "Iron Curtain" countries performing a variety of tasks in semi-skilled and hard labor capacities. In some cases PoW's had worked as specialists in key industries, and a small group of PoW had enjoyed limited freedom of movement in certain areas of USAF interest. Through interrogation of these returnees, the Air Force was able to begin forming a picture of the USSR's air offensive and defensive capabilities, and the extent and vulnerability of the USSR's industry and war making potential.

The results of the intelligence collection efforts proved sufficient to indicate the need for further expansion. The original 7001st AISS of 15 officers and 45 airmen grew into the 7050th Air Intelligence Service Wing with personnel skilled in all phases of intelligence. recognizing the success of this type of unit, the Director of Intelligence, USAF, took action in August, 1950 to develop

additional 7050th Air Intelligence Service Organizations for certain selected major air commands and areas to intensify the collection of air intelligence in the field. The 6004th AISS in the Far East proved beyond a doubt the value of an AISO during hostilities through overt collection activities. This unit has recently been enlarged and redesignated the 6002d Air Intelligence Service group. the 5004th, activated in Alaska in 1951, although a much smaller unit, is nevertheless producing valuable positive intelligence. The 4602d AISS, activated in March 1952, is the newest AISO, but has the greatest geographical coverage per individual assigned.

Operations Section has been reorganized to comply more closely to actual functional needs and to the organizational T/D. Under the new set up there are three major sections in Operations: Training, Critique and Analysis (formerly Editing and Evaluation) and Operational Control. Training is broken down into two sections, Language Training and Specialized Training. Operational Control is broken down into Field Coordination (formerly Field Units) and Documents and Dissemination. Personnel assigned to the various sections and the AFSC slots they are occupying are as follows:

OIC Operations	- Lt Colonel Jones 2016
AOIC Operations	- Major Romanoff 2074
Airborne Operations Officer	- Vacant 2064
OIC Operational Control	- Vacant 2064
AOIC Operational Control	- Vacant 2074
OIC Field Coordination	- Lt Hammond 2054
OIC D & D	- Lt Stockstill
OIC Training	- Captain Ivanow 2074
OIC Language Training	- Vacant 2074
OIC Specialized Training	- Lt Jacobs 2054
OIC Evaluation and Editing	- Capt Schottloutner [1]

Object (UFOB) Program, and an ATI course for the 4602d. It was proposed that in the future the 4602d will be the agency responsible to ATIC for the investigation of FLYOBRPTS in the ZI. Captain Cybulski was appointed FLYOBRPT officer and departed on 5 December 1953 for Wright-Patterson AFB for the purpose of (1. Establishing the role of the 4602d in the collection of and reporting of FLYOBRPT data and (2. Developing an ATI course to meet 4602d requirements. The course will be designed primarily to instruct our personnel in the latest technological developments in SLRA, ECM, and A-Bomb and Guided Missile techniques as applicable to our responsibilities. UNIDENTIFIED FLYING OBJECTS (UFOB)

First I wish to caution you that the regulation on UFOB reporting is only in draft form and that we are waiting for approval to go ahead from Headquarters USAF.

No Flight or Detachment personnel will be authorized to arrange with local Air Defense units for interception action. The 4602d is an investigating agency. We are not operations. Colonel Walton, Intelligence, at the Pentagon asked that we be permitted to go into this, before the regulation becomes final, but so far I have not heard any report on it. The primary reason for our participation in this program is to solve a very perplexing problem for the Air Force and the country as a whole. To the Air Force the investigations of the UFOB is very important. In all but a few cases a satisfactory solution has been reached and the Air Force feels that adequate, thorough investigative procedures can solve the small percentage of unsolved sightings. This is where we come into the picture.

Due to our strategic locations throughout the country, we can be available at a moments notice, to investigate any legitimate sightings. However, before any flight or detachment embarks on an investigation, it should accomplish two major steps: (1) determine the reliability of the reported sighting, (2) obtain permission to investigate from this headquarters by TWX or MARS. It is possible, under some circumstances, to obtain permission by placing a phone call to our headquarters. As a matter of fact that may be necessary in some cases.

For example: If the information indicates that the sighting will be around for some time, it may pay off to obtain permission by telephone, because you want to go out there immediately. Several factors will determine that of course. Distance will be a factor. If you have to go some place 250, 300 miles away and you feel that you should, the time that you have spent placing the phone call would not matter. However, if it was 15 or 20 miles away, and someone calls, reporting an object still in sight, you may want to go immediately. Many factors will have to be taken into consideration when a sighting is reported to one of the flights, or detachments. To better understand the elements and procedures involved in the investigation of UFOB I would like to cover this draft of the regulation. Now you are going to be faced with many, many new problems that you haven't had to face to date, and it will call for and require a great deal of common sense. Determine first how legitimate it is, how serious it is, if there really is something, or if it is a letter from some crackpot. If it is the letter, you'll have to ignore it. Above all, the Air Force is sincere in its attempt to obtain proof one way or the other. When I went to Dayton, the scientist and the astronomer they had hired, were ready to quit. But before they were permitted to say anything I was introduced and told them what I was there for and what I was going to do. They threw their resignations away and decided to stay. Because as the astronomer said - "put yourself in my

==========

{Page 84}

position, I am being ridiculed by members of my profession for chasing those imaginary objects, and when I went into this ,I went into it sincerely, because I thought that both from the astronomical standpoint and also from the scientific value, I could disprove these things. In so doing I would be rendering my profession and my country some service. However, in the past, I have not been able to get support from the Air Force. It seems that they all think this is a hot subject, and they want to drop it. They don't want to have anything to do with it. No one wants to be quoted.

Now that the 4602d has entered the picture, we are assuming quite a serious role. The feeling is, both at Wright_Patterson and Washington, that we could be very very instrumental in bringing this thing to a head, once and for all. They feel that it can be done by personal contact, where a piece of paper fails, because in the past if they had a sighting somewhere, the people looking into it were the people at Wright-Patterson where there was only one officer, and one airman available. So they get a sighting in South Dakota. They send out a form of about 6 or 8 pages, Lt Ledher is quite familiar with it, as probably all of you are. The man takes one look at it, depending on the intelligence level of the person, and he more or less decides that he didn't see anything. Or he'll answer it hastily in a haphazard way, and it doesn't give anyone anything to work with. And that is where we hope to rectify the situation because you will fill out this form if you go out. Let's say that there is a sighting in Kansas City. You go and you look into it and you fill out the form and there's sufficient evidence that it should be looked into, and you've made all efforts to investigate it, it would be turned over from there to ATIC and they would take over. In many cases they would come up with a solution, whereas now it's dropped dead. They don't do anything about it. It just comes to a blank wall, because of insufficient

information. The biggest files at ATIC, are complied of materials that stated insufficient evidence. Of course some of it you can't help. Obviously if somebody calls in and says that he saw an object for 5 seconds, he or she would have to have some very conclusive evidence to substantiate, maybe a picture, maybe some other factor, before you could put any value on it. What can you prove in 5 seconds? But if at La Cross, Wisconsin, where apparently a number of people had seen it for several hours, that's another story. There you could really make something out of it, Then there are cases, like that near Great Falls, Montana where a Warrant Officer shot 40 feet of film. After you blow it up and look at it, you see it's a formation of high-flying geese. Powerful telescopes like those in California or the East, can analyze some of the sightings as stars.

I'd like to say a few words on the analysis portion of this AF Reg. (See Par 4b) After we have gone as far as we can, and we have

==========

{Page 85}

HQ 4602D AISS, ENT AFB, COLO.
3RD COMDRS' CONF

exhausted all efforts to identify a sighting, we will turn it over to ATIC, with a recommendation that it be investigated. You will send it in to us here at Headquarters. I will review it, AND WE WILL PUT AN INDORSEMENT, a cover letter on it and send it on to ATIC. They will investigate from both the astronomical and the scientific standpoint. They will come up with some answer and will notify us. We here in Headquarters will keep a complete file on all the sightings. That's why we want the information copied. We will file them under separate headings, such as the type of personnel involved, military or civilian, or air-lines. We will record it under the type of object it was eventually determined to be.

Cooperation: When requested by ATIC, the 4602d will conduct investigations, within our capability, and furnish air and ground transportation, to ATIC, and 4602d representatives when feasible. Direct communication is authorized between us and ATIC.

Area of Responsibility; All portions of this regulation are equally applicable to us and to ATIC under the following conditions: When the 4602d AISS exhausts all efforts to identify the object, we will turn it over to ATIC. That is one time when the ATIC comes into the picture and the second is when it is actually in their area, and we will be responsible for telling them that. Bear in mind that their military facilities are practically nil. As I cited earlier, they have only one officer. The airman (assigned to this project) was discharged the 31st of December, leaving only the officer and a typist.

Guidance: The thoroughness and quality of the reports and investigations is entirely up to you., It's up to the individual. He can make it or break it. The steps you should take to identify the object are (1) the theodolite measurements, (2) the possibility of interception, (3) contact which is your biggest factor. If it happened in this area, who would you check with? Pueblo Airport? Albuquerque? Denver? Determine if they had any aircraft in the area at that time. Contact AC&W people and find out if they had any information on it. Check with weather people and find out if any balloons had been released at that time and in that area. All these steps you would have to take before you could feel that you had exhausted all efforts. now, consult astronomers in the area to determine if any astronomical body or phenomena could account for it, or have any bearing on the observation. This is optional. if you are fortunate in having an astronomer, or their facilities in your area, go to them, and see if they can help you. However, there cannot be any expense involved, because the astronomer in Dayton is under contract to the Air Force for all investigation, astronomically speaking and he receives funds to contact other people. If you were in the Albuquerque area and had exhausted all efforts, and we turned it over to ATIC, their astronomer would undoubtedly call the local astronomer whom he probably knows, and asks him to look into it.

==========

{Page 86}

HQ 4602D AISS, ENT AFB, COLO.
3RD COMDRS CONF

However you could save time and money if you happened to have that contact yourself. not all people will have that. Originally we were trying to work out something where we could take care of that end of it, but it would entail the task of lining up 18 different astronomers with 18 different contracts. Besides the man at ATIC is getting quite a sum of money for this and they feel that it should be his business. In case you can do it, go ahead. Contact military and civilian tower operators, that, of course, goes without saying. You would almost automatically do that. Contact persons who might have knowledge of experimental aircraft, and so on. Lt. Ledher ran into that. They have firms up there that do experimental work at Niagra Falls. Bell Aircraft does much experimental work with supersonic aircraft and things like that.

Reports: Information relating to UFOB will be reported without delay to the nearest 4602d unit. It will eventually end up at an Air Force Base or an Air Force Channel, regardless of who reports it, whether it's a civilian or the police. The method and priority of the dispatch will be selected in accordance with the apparent value of the material. There's nothing classified about this. We want to make this as unclassified as possible. Unless, and this I rather doubt, unless it happens to be the real thing. In that case additional data will be necessary, and we will have to come back to you to follow it up and you would have to give us the additional information that we need. The only time I can see that coming up is when we turn it over to ATIC and they get together with their astronomer and scientists, and decide that they need more information. They would come directly to you, the people who investigated it. We want to give them every assistance possible. That's where the program has been falling down. All written reports will be prepared on the Form 112, short title, "UFOB". I won't go into the report format because its outlined for you, and is also on this form.

Security: Reports should be unclassified, unless data included necessitates a higher classification.

Evidence: If anyone ever looked up AFR 95-6 and 95-7 as to what you have to do to send photographs forward, the way to mark them, the way to identify them, measurements etc., you'll know its complicated. These regulations outline where you have to send them. The photographs go to Washington. In addition one copy of each print will b forwarded to ATIC, and one to us here at headquarters. Fortunately there will not be too much of that. In almost every case where gun cameras or aircraft cameras have been used, the thing has been too small for identification and the photographs haven't been of too much value.

Material: In case of any physical evidence of UFOB, you're to safeguard it and notify us. We will tell you what to do with it.

10. Release of Information:

a. Inquiries concerning specific local sightings will be referred to the activity information officer. The reporting officer may furnish the latter all raw information except names of principals, Air Force comments, details of intercept procedures involved and classified radar data. Examples of the type of information which may be released are:

(1) The location, time and date
(2) Description of the object
(3) Maneuvers reported
(4) Type of physical evidence
(If requester knows that such evidence exists)
(5) Intercept or other identification attempt made
(6) The fact that the object has been conclusively identified by ATIC or 4602d AISS as a conventional aerial device or other familiar object and no further evaluation is contemplated.

b. general information, such as periodic news releases, summaries of investigations, and status of the program, will be released by Headquarters USAF. ATIC and Headquarters 4602d AISS, will furnish this news release material to Headquarters USAF.

DOCUMENTS AND DISSEMINATION

I. INTRODUCTION

The Documents and Dissemination folder that was passed out to all Officers-in-Charge included all the forms used between D&D and the field units. The sample forms were filled out in a correct manner and contained complete instructions. The few problems that D&D has had with the field units were in the nature of administrative errors in filling out the forms. The D&D folder will guide the personnel that maintain the field unit libraries and classified sections. In addition to standard form, the D&D folder contained the directives that revised the AFR 205-1 and directives that upgraded and downgraded restricted documents. The security directives will be effective pending revision of AFR 205-1, ADCR 205-2, and SR 205-1 and 205-2.

II. REGISTERED DOCUMENTS

The Officer-in-Charge of each field unit will be designated on orders as Custodian of Registered Documents. The as Custodian of Registered Documents is the only officer that can sign Air Force Forms 163, 164, 165, and flyleaf receipts (certificate of entry and destruction) that come with the AIB, AIB #2, and CEI's (Communication-Electronics Instructions which only detachments have). All Registered Document forms with the exception of CEI's will be sent to this headquarters. The office of record for the AIBs is Hq, USAF, Air Adjutant General, ATTN: Custodian of Registered Documents. ADCR 205-2b states that the Custodian of Registered Documents will have at least an interim Top Secret clearance.

III CLASSIFIED DOCUMENTS

JANAPs and ACPs were discussed. The detachments have a letter of authority which will authorize them to order the necessary documents from the Cheli Depot and the Shelby Depot (JANAP - Joint Army-Navy-Air Force Procedures) (ACP -Allied Command Procedures). These publications contain directives covering standard communication format and procedures. All field units will receive the WAF AID as soon as Hq USAF, changes their distribution list. This is done quarterly. All units are receiving CONAC Intelligence Training Bulletin, ADC WIR, ADC Mission Intelligence and SAC Survival Trends.

The ICGM, AFM 200 series, has been upgraded along with the old AIG. The ATIC Studies, Reports, and Bulletins have been requested for all units. The ATIC publications with the AFM-200 series will be the documents used in the new

technical training program being established.

IV. TARGET MATERIALS

Squadron coverage of WACs and classified materials were discussed. A "WAC Bible" composed of WACs annotated in such a manner as to show coverage within the WAC area, was demonstrated. A squadron regulation cov-

ering the filing by numerical order of all target material is being prepared by this Headquarters. A consolidated inventory of all target materials sent to the field units before Jan 54 is being compiled by D&D sections. This type of inventory will be accomplished semi-annually and will incorporate all Form 104Cs issued in the period concerned.

V. CONTROL OF CLASSIFIED DOCUMENTS

The AGO Form 996, until replaced with DD 646, will be used in the transmission of all classified materials to this Headquarters. Certificates of Destruction are to arrive at this Headquarters in two copies. Inventory and Transfer Reports of Classified Documents must be submitted to this Headquarters upon a change of the Officer-in-Charge in accordance with SR 205-2. Classified documents originating in the field must note:

(a) Authority and Reason; par 22 and 23, AFR 205-1
(b) Pages and inclosures numbered in series of total pages
(c) Copy number of total copies produced

The 104C forms that accompany the target material are to be kept as receipts and will be reflected on inventories by the registry number found on each shipment.

...

13 UNIDENTIFIED FLYING OBJECTS

When the UFOB program becomes active, Headquarters will issue implementing instructions. I don't want you to implement anything until those instructions become final. Adhere completely to the instructions you received on public

information releases. We are currently reviewing all directives in the Squadron, and we are going to set the example in preparation. We will try to give you the best directives that we can give you, and you've got to apply common sense to see whether these directives are sufficient to answer your needs. If, after a normal study of them, you are still unable to obtain exactly what you need, then let us know. Most of the time I think you'll find that some regulations may be improved as operational conditions change.

INTRODUCTION

As time passes and new technological advances are made, the prospect of future war looms more ominous and foreboding; into this atmosphere the 4602d AISS was projected. The increased tempo of activity in all phases of the squadron operations gave rise to new problems and required refinement of procedures already in existence and the reevaluation of the progress made in certain activities. The way in which the 4602d has attempted to solve its problems is in effect the history of the organization.

Time is the most significant factor in solving these problems. War does not wait for the unprepared; therefore, the 4602d has increased its training, liaison, logistical and administrative efforts.

New regulations were issued and old ones revised. A total of twenty-eight (28) were published during the reporting period. Administrative work was simplified, enabling field units to concentrate on peacetime training.

Communications, parachute, interrogation, language and technical training was intensified.

Unwieldy supply procedures were simplified, resulting in greater flexibility and reduced effort.

Issues with the FBI which had temporarily halted liaison activities with law enforcement agencies were resolved. The liaison effort produced proportionately greater pledges of assistance
during the reporting period than in any previous period. Pledges of communication assistance from non-military agencies and increased familiarity with portable communications equipment resulted in some improvement in the communications capability of the squadron. The printing and distribution of 300,000 copies of the new Squadron Brochure provided a new medium for solicitation of assistance.

There was steady advancement in combat readiness at the end of the reporting period.

There was more assurance that the field units of the squadron would be notified in the event of downed enemy aircraft or aircrewmen. The squadron had greater capability to move rapidly to the scene of an enemy crash.

The squadron's intelligence teams were more capable of exploitation of intelligence sources.

While still the weakest phase of squadron operations, there was some increase in the ability of the squadron to transmit intelligence information rapidly into Air Defense Command channels.

The period was characterized by an evaluation of previous efforts. This evaluation was expressed in new and refined procedures and directives. The squadron is more mature and better able to take its place in the Air Defense structure.

==========

{Page 2 (Part)}

SECRET

SURVEY OF PERIOD

I. Organization

a. A change occurred in the organization of the 4602d AISS with the issuance of Air Defense Command General Orders #16 [1], dated 21 May 1954. These orders amended Headquarters Air Defense Command General Orders #47 [2], dated 17 October 1952 in the following manner:

(1) So much of General Orders #47 as pertains to organization of Flight 3-B and Flight 3-I was deleted.

(2) Flight 3-B was reorganized and activated effective 24 May 1954. General Orders #16 further assigned Flight 3-B to the Air Materiel Command, Wright-Patterson Air Force Base, Ohio, for administrative and logistical support.

b. A revision of Squadron Regulation 24-1 [3], Organization of the 4602d AISS, dated 29 July 52 was effected on 4 June 54. This new regulation reorganized the headquarters staff. It divided the staff into four departments; Command, Personnel & Administration, Operations, and Materiel & Services. The major revisions took place in the Operations Section. All sub-sections concerned with direct control of peacetime and combat operations of the squadron were placed under the Operations Officer. Control of classified material including all intelligence reference documents was returned to the Officer-in-Charge of Personnel & Administration (Adjutant).

c. The mission, function and responsibilities of field units and Headquarters Staff of the 4602d AISS were described on Squadron Regulation 24-2 [4], dated 16 June 54. It set forth in detail the peacetime mission of training and liaison to prepare the intelligence teams of the squadron for the wartime mission of overt collecting of intelligence from "people,

paper and hardware". This regulation defined duties of field units in respect to the two aspects of the mission.

The Project Blue Book Research Center presents

Figures Associated With Project Blue Book

Captain Edward J. Ruppelt notes:

Ackerman, Brig. Gen. John B.
General Ackerman was Chief of the Collection Division of the D/I all during the big UFO Flap of l952. He had no direct connection with the project but he was very much interested. I used to stop in to see him and he always had definite ideas as to what we had and what we should be doing. He would tend to get all excited about individual sightings. He got copies of the UFO reports and several times he was on the phone wanting to know what I planned to do even before I had time to digest what was in the report. Ackerman had a "direct channel" to the top, to the Secretary of the Air Force and people in the Department of Defense, and every once in awhile he would quote some top dog in the government and what he thought that I should be doing.

Adams, Col. W.A.
Col Adams was the chief of the Topical Intelligence Branch of the D/I and Col. (Weldon H.S.) Smith and Major Dewey Fournet worked for him. He was pretty much sold on the whole thing. I think that Dewey Fournet influenced his thinking to a great extent and he really went to bat for all of Dewey's ideas. He pushed Fournet's study of the motions of the UFO's and he is the one who used to be the most vocal in briefings and at meetings in regard to Blue Book's taking a "negative" attitude. He is the one who became irked in one briefing and asked me if it wasn't true that if we made a few positive assumptions we could prove that the UFO's were real

Alvarez, Louis Dr.
Dr. Louis Alvarez, a physics professor from the University or California in Berkley, developer of MEW radar at the beginning of World War II and one of the "fathers" of the H-bomb. He sat on the panel that met in Washington in January 1953. Alavarz was only lukewarm to the idea that the UFO's might be real.

Burgess, Brig. Gen. Woodbury
General Burgess was the D/I of the Air Defense Command under General Chidlaw. He wasn't a believer in UFOs but he was firmly convinced that we, meaning the Air Force, should make every effort to find out what they were, even if they were all explainable. He bent over backwards to give us all the cooperation that we needed. I would say that his ideas reflected those of General Chidlaw.

Major General John B. Cabell
General Cabell was the Director of Intelligence for the Air Force during the 1947-1951 UFO era. He is the one who ordered Project Grudge reorganized in the summer of 1951. I didn't know him too well because he left to become number two man in the CIA shortly after I got on the project. He is the man who held the initial meeting in the Pentagon that Lt. Jerry Cummings and Col Rosengarten attended. He raised all kinds of hell when he found out that Col Watson and ATIC hadn't been doing anything about the UFO project in 1950. According to what Cummings said, he was pretty much a believer in the UFO's. General Samord replaced Cabell in the summer of1951.

Chapman, ??
This man was in charge of one of the photo labs at Wright Air Development Center and he did all of our work on UFO photos. He was a firm believer. He did do a good job of making unbiased analyses of our photos, however.

Deyarmond, Col. Albert B.
Al Deyarnond was an old hand with the UFO's, he'd been in on the first of Project Sign. From the old memo's I found, signed by him, he was once a firm believer along with Al Loeding, "Red"

Honnacker and the rest of the veterans or Project Sign. But by the time I got into the picture was, at least on the surface, lined up with the scoffers. But once, when I began to knock the UFO's, he raised the devil and chewed me out for not keeping an open mind." I would guess that he was a "scoffer" because he was a deciple of Col. Watson's. Deyarmond is now chief of structures at Ryan Aircraft Company.

Erickson, Col. J.G.
Col Erickson was head of the Policy and Management Branch of the Directorate of Intelligence and in some way he got in on all of the UFO business. He was sort of power behind the throne on what the official policy would be. I gave him quite a few briefings and he seemed to be a "lone wolf" in that he wanted to get the picture for himself. He got a little hacked at Fournet quite often, because he thought that Fournet was pushing his ideas, that the UF0's were real, too hard. I think that Erickson tended to put a lot of faith in the UFO's but he was one of those who was afraid to stick his neck out.

Fournet, Dewey J., Major, USAF
Dewey was Blue Book's liaison man in the D.I. He took over in early 1952 or late 1951 from a Lt. Col. whose name I've forgotten. The Lt. Col. was a completely worthless jerk. Dewey got hot on the subject right away and helped us a great deal in getting things straightened out in the Pentagon. His job was just supposed to be part time, but within a matter of months he was working on it full time. Fournet was the most confirmed believer that I ran into in the Pentagon. He had access to all of our reports, read them all over very carefully, and he was still absolutely convinced. He and I used to argue by the hour and I must say that he had some good arguments. All of his conclusions were based on the "race value" of the reports. If a person said that they saw something and had a good description of it, Dewey took this as the last word. He and I disagreed when I didn't buy the reports lock, stock and barrel. I didn't think that the person was using or having hallucinations, I was sure that they reported what they saw, but I wasn't convinced that what they saw was actually what happened. In other words I played it heavy on the "optical illusion" side and I backed this up with experience. I'd investigated too many reports and found that something that starts out to seem real mysterious can many times prove to be something very simple. No matter how much I talked, however, I never convinced Fournet that I had a point. Dewey is now (1955) a civilian engineer with the Ethyl Corporation in Baton Rouge, La.

Garland, Brig Gen, W. M.
General Garland was my boss at ATIC from the Fall of 1952 until I left. He was a moderately confirmed believer. He had seen a UFO while he was stationed in Sacramento, California. He was Gen. Samford's assistant in the Pentagon before he came to ATIC and he was the inspiration behind the Life article by Ginna. He gave Ginna his ideas and prompted Life to stick their necks out. Gen. Garland is now out of the Air Force and is a consultant to Rand.

Gittings, Homer
Homer Gittings was my contact in Los Alamos. He was a charter member of the group that was trying to correlate recorded radiation from an unknown source with UFO reports. He worked closely with a Ph.D. but I've forgotten the Ph.D.'s name. Gittings, the Ph.D. and several other scientists would fly down to Albuquerque and we'd meet with Col Methaney at Air Defense Headquarters. If I remember correctly, Gittings had an MS degree in Physics and was an instrumentation specialist.

Goudsmidt, Samuel
This man, from AEC's Brookhaven Lab on Long Island, sat on the Panel that met in Washington in January 1953. Goudsmidt was probably the most violent anti-saucer man at the panel meeting. Everything was a big joke to him which brought down the wrath of the other panel members on numerous occasions.

Hardin, Capt Charles
Chuck Hardin is running Project Blue Book at the present time. Since the operation of the project has changed and the 4602nd has taken over the leg work, he doesn't have much to do. By his own admission, he has a good deal at ATIC and is playing it for all it is worth. General Watson doesn't like UFO's so Hardin is keeping things just as quiet as possible and staying out from under everyone's feet. In other words, being a regular Air Force, he is just doing as little as possible because he knows how controversial the subject is and his philosophy is that if you don't do anything you won't get hurt. He definitely doesn't believe in UFO's, in fact he thinks that anyone who is even interested is crazy. They bore him. He has been the one big bottleneck in my getting anything from the Air Force because he is afraid that my book will stir things up too much.

Hayden, Father
Father Hayden was head of the astronomy department at Georgetown University. I never met him but Dr. Steve Possony was always going to him with our UFO problems. Father Hayden seemed to be very much interested in our problems and couldn't at all be classed as a scoffer.

Hynek, Dr. J. Allen
Dr. Hynek has been the consultant astronomer to Projects Sign, Grudge and Blue Book. I won't say that he's a "believer" but he's darn interested. He has devoted a great deal of his valuable time to the project. He has read almost every UFO report in the Air Force files. In the summer of 1952 he debated with Menzel at the American Optical Society meeting in Boston and blasted Menzel right out of the hall. He sat on the panel in Washington in January 1952 and was very much pro-UFO. Dr. Hynek is Head of the Ohio State Univ. Astronomy Department, Director of the Perkins Observatory and Assistant Dean of the USU Graduate School. He is still working for Blue Book.

Kalizewski, J.J.
This was one of the people that I talked to at General Mills. He was one of the members of the original Skyhook balloon launching crew. He had a BS degree in aeronautical engineering and was considered to be a sharp lad. All of the people at General Mills were convinced that the UFO's were real, as they said, they had all seen the UFO's. The boss, Chas. Moore, whom I talked to for only a few minutes, was very put out at the way the Air Force had handled many of the UFO reports and was very indignant. In the summer of 1952, Kalezewski was quoted in the Minneapolis paper as saying that the Air Force should put forth more effort because he was convinced that the UFO's were real.

Kaplan, Dr. Joseph.
"Joe" Kaplan is a physics professor at UCLA. His main UFO interest was the Green Fireballs. He put a lot of stock in Dr. La Paz's theory that the GFB's were man-made, although at one time he thought that they were auroral patches. Dr. Kaplan originated the grid camera idea. Dr. Kaplan is presently "ram rodding" the satellite program for the International Geophysical Year.

Lipp, Dr. James
"Jimmy" Lipp was the Rand Corporations guided missile expert and he was violently anti-saucer. He wrote an analysis of the possibility that other planets were inhabited for the Grudge report. Early in 1953 Col. Don Bower and I tried to enlist Rand's aid, on a contract basis, to try to develop some way of getting more positive answers but, at the recommendation of Lipp, Rand refused to touch it. "Too hot," was their reason. I think controversial would have been a better word than "hot."

Col. Methaney
Col Methaney was the CO of the 34th Air Defense Division in Albuquerque. He is now a Brig General. He was firmly convinced that the UFO's were real and that they were interplanetary space ships. He wrote up a plan that called for a special squadron of stripped down F-94C's to chase the UFO's. The plan went through Western Air Defense Headquarters and to Air Defense Command Headquarters but it was rejected because of the non-availability of the aircraft. It was in the 34th that

the F-86 pilot claimed that he shot at the UFO.

Paige, Thornton
Thornton Paige of John Hopkin's Operations Research Office, editor of the Operations Research Journal, and an astronomer, sat on the panel in Washington D.C. in January 1952. He tended to line up with Hynek against Louis Alvarez and Goudsmidt to stick up for the UFO's. He actually didn't know too much about the subject but, like Hynek, he didn't go along with the idea of being so definite about the UFO's not existing.

Parrish, Lt. Glenn.
This officer fits into the UFO picture because he was the Intelligence Officer at the 34th Air Defense Division at Albuquerque where Col. Methany was the CO. Parrish sent in some of the best reports that we had and he is the man who showed me the report on the pilot who shot at the UFO. With all of the good reports that Parrish sent in, he wasn't a confirmed believer. But he did think that the reports were important enough to warrant careful investigations. In addition to the above, Parrish was the middle man for the reports from the people who were doing the radiation work in Los Alamos. We had most of our meetings in Parrish's, or Col Methaney's office at Kirtland AFB. Parrish didn't have much to do with Dr. Lincoln La Paz in Albuquerque. Again he was the middle man, so to speak. A special agent in the CSI office at Kirtland was the man who did most of our contact work with La Paz. This agent, whose name I've forgotten, was convinced that the Green Fireballs were the real thing and he and La Paz were always out investigating something. Since the Air Force didn't recognize the fireballs as any threat, he did all of this on his own time, but he was tapping Air Force contacts and equipment.

Porter, Col J.J.
Col Porter was the Deputy Director for Estimate of the D/I. He was violently anti-UFO. He was Fournet's boss. At every briefing or meeting he always got his two cents worth in and he minced no words. But he never had a decent argument; he didn't know what was being reported nor did he care, he just didn't believe that there was anything to it. General Cabell is reported to have climbed all over him and Col Hal Watson for conspiring to get rid of the UFO project in 1950.

Possony, Dr. Stephen T.
Steve Possony was the acting chief of the Directorate of Intelligence Special Study Group and he had a direct channel to Samford. Steve was pretty much sold on the whole thing. He did a lot of investigating on his own book and he had Father Hayden, the astonomer, as his special consultant. Steve and his crew used to cruise all over the U.S. and Europe and during these travels they picked up a lot of UFO data. Steve was behind Fournet 100% and tended to push him. He was smart enough to know that the UFO situation was hot so he used Fournet, who was a reserve and didn't plan to stay in the Air Force any longer than he had to, to try out his ideas. Possony didn't much care what he said, however, and he used to go to battle with any or all of the more vocal skeptics. He really got teed off at Menzell and went to all ends to find out everything about the man. It turned out to be very interesting. Possony had a good reputation in the Air Force. Besides being a fairly sharp intelligence man, he is a professor at Georgetown University and he has written quite a bit on the strategy and concepts of airpower. He is considered one the of the world's experts on this subject.

Robertson, Bob
Bob Robertson is now chief scientific advisor to the Commander-in-Chief of NATO. He first came out to ATIC in November 1952, with a group of other scientists, to review our UFO material. He and his party stayed two days and then went back to Washington and suggested to the National Security Council that a group of top scientists get together to look over the reports. At that time, at least, he... (missing page here?) no more info on this man in original typed letter

Rosenzweig, Leslie
Les Rosenzweig worked for Possony. He was sort of a dull tool and whenever Possony said or did

anything Les took it as the gospel. When it came to UFO's there was no difference. Les made quite a few studies on how the UFO's could be powered, how they could be contacted, etc. He pushed the idea of using a huge horizontal movie screen to flash messages to the UFO's. He, or possibly it was Possony himself, made a lot of contacts with Willy Ley. They dropped him fast however, when good old commercial Willy began to try to push himself into the act a little too fast. It is interesting to note that those people in the U.S. who are actually considered to be tops in the fields of interplanetary travel have no use for Willy Ley or Von Braun.

Samford, Major General John
General Samford never committed himself one way or the other on the subject of UFO's. He was always very much interested and gave me the utmost in cooperation, but he never said much. He used to ask many of the other people at meetings what they thought and there were a lot of "pro" answers but he never agreed or disagreed with anyone. The only time that I ever heard him say anything was when Col Porter got real nasty about the whole thing one day and began to knock ATIC, UFO's, me and everything associated with the project. Then the General said something to the effect that as far as he could see, I was the first person in the history of the Air Force's investigation that had taken a serious approach to the investigation and that he didn't see how anyone could decide until I'd collected more data. At the present time the General is the one who is so rabid on the fact that nothing will be released. He got "burned" real bad on the press conference in July 1952. His statements were twisted around and newsreel shots of him were "cut and pieced" to get him saying things that he didn't. He wanted to play along with the writers but they misquoted him so badly that now he is saying absolutely nothing. Donald Keyhoe keeps writing about the "silence group" in the Air Force, those who want to clamp down on UFO news. Gen Sanford is the silence group and friend Keyhoe can take all of the credit for making him that way.

Smith, Weldon H.S. Col
This man was Dewey Fournet's boss. He wasn't quite as sold on the UFO's as Col Bill Adams but he was pretty well sold. He also "brought" Fournet's ideas and studies. I remember specifically the case of the Burned Scoutmaster: Col Smith was "sold" that this was the real thing. He was following the whole show from the Pentagon, through my calls to Fournet and from the wires that I was sending back. Just as soon as I got back from the first trip to Florida I went in to see him and he got quite irked when I said that something about this scoutmaster just didn't ring true. He said that I was biased and wasn't giving the man a chance. According to Keyhoe, he is the person from the D/I that wrote the anonymous letter that Keyhoe quotes in his book. I don't believe it, however, I think that Fournet wrote it.

Thompson, James
When I knew Jim Thompson he was an astronomer working for RAND in Santa Monica. He used to stop in at ATIC quite frequently and spend a day or two reading reports. Whenever I got out to California he used to arrange an unofficial bull session with a dozen or so of the "believers" AND and we'd talk UFO's.

Watson, Col. H.E.
Col Watson, now a Brig Gen and once again Chief of ATIC, was chief of ATIC when I arrived. (He later went to Europe for three years.) He was violently anti-saucer but he crossed himself up too many times trying to constantly grab publicity. He was the one who made the famous remark about all UFO observers being nuts or "fatigued airline pilots". He continually hauled in writers who would plug him and debunk the UFO's. I've overheard him tell how he completely snowed Bob Considine.

White, Major General
I think that this man's name was White. He was from some branch of research and development in the Pentagon. He and his staff religiously attended every one of my briefings and were sold that the UFO's were real. He had Gen Samford's ear but I don't think he quite convinced Samford that the

UFO’s were real.

Zimmerman, Charles
Charley Zimmerman was the technical advisor to the chief of the Analysis Branch at ATIC. I never could figure out exactly where he stood on the subject of UFO’s but I think he was a bit of a believer. Several times I tried to put through an explanation that a UFO was a balloon or other known object and he’d argue like mad against it. Many times he’d come running into my office to show me “a new, red hot report”.

Air Force Figures Tell Real Story: 88.79% Unexplained

To: News Media

Captain Edward Ruppelt, in his 1956 book, "The Report on Unidentified Flying Objects", gave some interesting statistics on the Air Force's Project Blue Book findings. Ruppelt's tenure was at a time when the Air Force was putting its best foot forward and the figures presented were based on 1,593 sightings. Less than 20 years later, in 1969 when Blue Book closed down, there were over 12,618 sightings on the books with 741 Unknowns. That equates to to only 5.8%. I later found out that these figures were derived from the Battelle Institude study which produced Project Blue Book Special Report 14. Let's look at those figures a little closer, the one's Ruppelt quoted in his book.

	Known	Probable	Possible	Total
Balloons	1.57	4.99	11.95	18.51
Aircraft	0.98	7.74	3.04	11.76
Astro	2.79	4.01	7.40	14.20
Other	4.21			4.21*
Hoaxes	1.66			1.66*
Insuff. Data				22.72
Unknowns				26.94
	11.21	16.74	22.39	
				100.00

According to Ruppelt the percentage of Unknowns was 26.94%. A scientific approach to these figures shows that only 11.21% were actually proven explained (total of column 1 which represents 179 cases) leaving, in actuality, 88.79% unexplained! These Blue Book figures (during the most serious time of it's life) were based on the then 1,593 sightings the Air Force had studied.

Actually it's worse! They only "studied" 1,593 sightings, but had "received" over 4,400 with only 179 explained!!! That's less than 4% "explained"! If we were to state that a certain percentage of UFOs were "possible" or "probable" ET, the debunkers would remind us that, "scientifically", only the "proven" could be used in such an analysis. Using the Air Forces's actual numbers11.21% were proven explained, leaving over 88% without a proven explanation.

With something like that going on in U.S. air space, somebody in the Air Force should have been more

concerned. This was a matter of national security and/or scientific interest.

Perspectives On The Environment In Which Blue Book Operated During 1952 series:

The Air Defense Command

By Michael Hall

June marked the real start of the 1952 wave or as Ruppelt put it, flap. Dozens of reports came in per day and while researchers often talk about ten to twenty good reports for a particular year, June alone had over 100. One such case developed on this Sunday morning in Los Angeles when Hughes Aircraft Company technicians were conducting a test of a new experimental radar. The set worked well all morning, tracking civilian and military aircraft in the Los Angeles area. Near the end of their testing the set picked up what they assumed to be a DC-3 coming across the San Gabriel Mountains north of Los Angeles at 11,000 feet. As the scientist monitored the blip they thought it might be the last good airliner target for the morning. It did prove to be one of the last radar targets they would have until the afternoon, but no other aircraft would perform the way this would-be DC-3 did. Soon their instruments tracked it in a 35,000 feet per minute climb traveling at 550 miles per hour! The object then dove until it leveled out at 55,000 feet, heading southeast near Riverside, California. After checking with Edwards AFB, the technicians confirmed that no high performance aircraft had been in the area. The radar set was checked and rechecked, yet Hughes engineers felt confident that the radar recorded the information accurately.

That same day UFO reports came in from Africa, Korea, Rapid City, Iowa; Indianapolis, Indiana; and Walla Walla, Washington. Not since 1947 had as many cases been recorded per day as would be in these summer months. But unlike the ’47 wave, this surge of sightings would last well into the fall.

Central to an understanding of the UFO wave of 1952 is a knowledge of the way in which the military then monitored the skies. UFOs, even by 1952, did not necessarily infer spacecraft from another world. UFOs were considered to be any object flying through the air space of the United States that could not be identified. Then, as now, the military is interested in any “unidentified” air traffic. This is of greatest relevance when realizing that from 1949 to 1989, the threat of a Soviet air attack was perceived to be quite real. Today we take it for granted with our vast technology that the skies are constantly being scanned with satellite and sophisticated radar networks of the United States Space Command — formerly known only as NORAD. But in 1952 no satellite systems existed and very few modern ground radar units were in operation.

There were only three basic means available to the Air Force’s air defense system by 1952. The first consisted of a few large radar stations that had been put in place to scan for attacking Soviet bomber fleets. Although the famous DEW network of northern radar defense was still on the drawing board, installations were already in place, mainly in Alaska and Canada, to scan for a Soviet threat coming out of Siberia. In the lower continental U.S., radar stations dotted various states—designed to follow possible enemy aircraft and direct fighters from Air Defense Command bases. These were basically an outgrowth of about 75 radar stations already in place at the end of the Second World War—known as Ground Control Intercept sites or GCI. Most of these were near major Eastern cities and in the Western regions around nuclear facilities with a few stations in Canada and Mexico. The GCI sites consisted of one or two search radars, a height-finder radar, ground-to-air and air-to-ground communications. The operators at each station worked on shifts but not necessarily on a round-the-clock basis. Each operator filled his hours by watching a small round radar “scope” or screen. When an aircraft was detected it would appear as a “blip” of light on the screen. Each radar site was connected by telephone so a target could be tracked by multiple stations. Information from the radar sights was tied into control centers which had a large illuminated Plexiglas board with geographic features of the local countryside imposed on its surface. Men would stand on ladders behind these

huge clear boards and mark the trajectory of significant targets as reports came in from the various radar stations.

Unfortunately, ever since 1950 the Air Force had been severely stretching its radar resources because of the war in Korea. As a result, experienced radar operators became greatly diluted among the total number of bases. Still more of the experienced personnel were reassigned to serve at the growing number of bomber bases built for the Strategic Air Command or SAC. These units operated their own powerful radar defense equipment. Yet even though most large civilian airports were installing radar, vast areas of the country and sea-side approaches still lay blind by 1952 to aerial intrusions. And even in areas of complete radar coverage, no technology then existed to track very low flying aircraft.

It is apparent from declassified documents that the Air Force was thus very concerned about air defense. One part of a top secret project had evolved from the work of top scientists at the wartime Radiation Laboratory at MIT. Actually a continuation of their work, “Project Charles” and then known as “Project Lincoln,” analyzed possible points of weakness—mainly in America, but also NATO defenses. Jointly sponsored by the Air Force, Army, and Navy, Lincoln (which evolved into the Lincoln labs in July of 1951) described these problems in terms of “chaos.” Uppermost in the minds of military officials was the development of a comprehensive system of early warning air defense.

This brings us to the third important type of defense network relied upon by 1952—known as the Ground Observer Corps. The GOC utilized thousands of civilian volunteers to man government stations to visually spot unknown aircraft. The GOC first began on an experimental basis in September of 1949—then called Operation Lookout. (Actually a very similar operation existed during the Second World War when the same need arose to guard against possible Axis air and submarine attacks.) The goal of the GOC was to eventually have a 24-hour surveillance of the sky by one million volunteers at 24,000 observation posts. The Air Force trained these volunteers and designed procedures for filing reports. Although GOC personnel were administered by civilian authorities under each state government’s civil defense structure, the reports of GOC observation posts came into “filter centers”—run both by the military and state civil defense. Each filter center had an Air Force officer in charge.

Most GOC posts were short staffed. Rarely were they operating on a 24-hour basis. As the Cold War reached a severe state of tension by the summer of 1952, the Air Force initiated a campaign to beef-up the GOC. Operation Skywatch became a direct result of this plan. President Truman even made a personal call for volunteers to man Skywatch. Yet despite agreat deal of publicity, most GOC posts remained severely undermanned during the nighttime hours when even the most dedicated volunteers had to sleep so they could go to their regular jobs. As a result, some researchers have suggested that the Air Force intentionally played-up UFO reports to interest people in the project. Even if this was true, it must be noted that something truly phenomenal was flying through the skies that summer because many Skywatch personnel reported UFOs.

The Project Blue Book Research Center presents

By Michael Hall

Following are a few very good news articles from the time that reflect the public's perception of Operation Skywatch:

OPERATION 'SKYWATCH' OPENS MONDAY
Washington [July 12, 1952]—President Truman made a bid Saturday for more volunteers to man lookout stations which will go on a round-the-clock watch Monday against air invaders.Without saying directly that his aim was recruitments for "Operation Skywatch" around America's air frontiers, the President still put over the point in a statement saying the project is "a common sense precaution in which Americans can serve proudly." He added that the watchers will be helping to prevent war. The first shifts of some 150,000 volunteers will take their posts early Monday at about 6,000 stations in 27 states to scan the skies for any raiders who might slip through the radar screen for a sneak attack that could set off World War III. The Air Defense Command is announcing the delayed start of the need for at least 350,000 more observers. The president pointed out the need for every possible second of warning in the event of attack, both to speed counter-action and to save lives and vital facilities. "Our greatest hopes for peace lie in being so strong and well prepared that our enemies will not dare attack." Mr. Truman said, "Every citizen who cooperates in "Operation Skywatch" as well as in other defense activities, is helping prevent the war none of us wants to happen." The Air Force wanted to start the watch in May, because the experts said weather conditions are most favorable for a long distance air assault from May through September. The Federal Air Defense Organization was forced to postpone start of the operation because not enough civilians had volunteered to make possible a round-the-clock operation. The Air Force has pressed for the start of the continuous ground observation because Russia now has the atomic bomb and long distance bombers capable of attacking the United States. The start of "Operation Skywatch" follows by a few weeks an Army announcement that antiaircraft men and their guns are now on continuous duty around key target areas across the nation. Despite great advances in electronics development, defense experts stress the essential need for human eyes and brains to spot and report aircraft in areas where natural obstacles, such as mountains, and the earth's curvature, create blind spots for the radar screen that already is operating along the country's coasts, northern borders and around vital areas such as atomic plants. All the New England states and all those in the northern third of the country are taking part in the sky watching. Along the East Coast, civilian observers will take their posts in the states extending southward through Virginia. The three Pacific Coast states are also tied into the observer network."

AIR FORCE DENIES 'SAUCER' REPORTS 'SKYWATCH' CAUSE
Washington-July 24—An Air Force spokesman "emphatically" denied last night the new crop of "flying saucer" reports had anything to do with putting volunteer aircraft spotters on 24-hour duty. The civilian ground observer corps began standing a round-the-clock watch this month in coastal and northern border states, the most likely avenues of enemy plane approach. The spokesman noted that saucer reports come from every direction.

He said the sole function of the ground observers is to supplement the radar network of the Air Defense Command by watching for unidentified low-flying planes. Any flying saucers they see will be strictly incidental.

The Air Force denial followed reports from two New England "Operation Skywatch" stations that

"silver discs" had been spotted in the sky Tuesday night and early today.

Charles Buck, an observer at Westfield, Me., said he saw three discs of different sizes flying at high altitude and heading southwest. Coast Guard Seaman Henry Armpriester said two disc-like objects circled the Nahant, Mass., Coast Guard station at about 2,000 feet and then headed out to sea. Other airborne objects of the flying saucer variety were sighted over Boston, Springfield, Mass. and over several New Jersey points."

NEED MORE VOLUNTEERS FOR AIR SPOTTERS POST
Although no flying saucers, blips, discs, or whatever their name is, have been reported from the Austin Town Hall skywatch station, Lake and Central, volunteers there would know just what to do should any of the nocturnal apparitions show up.

This is the word of Fred. W. Bosserman, boss of the operation, and Town Hall director, who told The Austinite this week that he could use some more help.

He first explained how the station works by telling of a recent "dry run". In this instance, a passing commercial plane was the guinea pig. Sighting it, one of the volunteers noted its position, altitude, type and direction. He then grabbed a telephone and asked for "aircraft flash," was promptly connected with the Air Defense Filter Center in the Museum of Science and Industry, and gave the operator there the information.

The Austin station, known as "Charles Mike 15 Black," is one of 15 in the city and suburbs and is part of a 27-state network designated as "Operation Skywatch."

Bosserman says he can use about 25 more persons for the 8 a. m. to 11 p. m. schedule on which the post is open. They are asked to stand watch only one day a week on one or the other of the following shifts:

8 to 10:30 a.m.
10:30 a.m. to 1 p.m.
1 p.m. to 3:30 p.m.
3:30 p.m. to 6 p.m.
6 p.m. to 8:30 p.m.
8:30 p.m. to 11 p.m.

Heretofore, he added, it has been necessary for those wishing to volunteer to do so by filing applications at the Chicago Civil Defense Corps at 140 South Dearborn. Now they need only phone the Town Hall, Estebrook, 8-0126, or call in person.

Two persons are required for each shift and at the present time, a watcher can just about choose one suiting his convenience. Both men and women, 18 years and over, may volunteer, Bosserman declared. He said that no previous training is necessary. Austin residents, who may be in the prescribed area, were warned this week that an air raid siren test will be conducted Thursday."

Perspectives On The Environment In Which Blue Book Operated During 1952

series

Newsclippings

By Michael Hall

All during the summer wave of 1952, Blue Book received huge numbers of news accounts dealing with the flying saucer phenomenon. Detailed via the Romeike clippings service subscription Ruppelt initiated—literally thousands of sightings became available that otherwise would have never been reported to ATIC. Unfortunately, due to staff shortages, these accounts could not even be cataloged. In fact, it is doubtful the clippings were ever reviewed. Eventually they were microfilmed, but in the 1960s a later Blue Book director effectively disposed of them by giving the microfilm to a civilian researcher. From that point on, they have remained in private hands. Thus the Romeike clippings are not now part of the National Archives' Blue Book collection. But thanks to UFO researcher Jan Aldrich, this author has been allowed to view and make personal copies of all of the thousands and thousands of clippings. Working in close connection with Aldrich, this author has begun an analysis.

A remarkable series of clippings, for example, come from Friday, August 15, 1952. They all speak of a bright green oval-shaped UFO traversing over the central United States. The sightings began in Dallas, Texas, at 7:59 P.M. describing a "round light" heading north-east. Far to the northeast of Dallas at 9:00 P.M., East St. Louis news accounts talk of a "bright green oval object," but no trajectory is given. By 9:15 P.M., however, many news accounts have Taylorville, Illinois, residents seeing a "bright green disk," placing it on a due north heading. Just a few miles north of there, at 9:30 P.M., the object appeared over Springfield, Illinois.
