"Like flying in formation with another plane," was his description. "It seem to slide away when we turned toward it."

Manning did not speculate as to what the object was, or how it was powered and controlled.

"All I can say is that it definitely was there. Most of the people in the plane saw it. And it was entirely different from any ordinary aircraft-uncanny enough to startle anyone first seeing it."

Captain Adickes agreed on the bizarre' appearance of the thing. When I saw him at Washington, he told me he previously had been only half convinced by other pilots' reports of Flying Saucers. "But I know now they definitely do exist. This was not an airplane and it wasn't imagination."

Adickes said he had seen jet planes at night. He fully confirmed Manning's rebuttal of this explanation.

"'And it wasn't St. Elmo's fire or any reflection on clouds," he added. "A lot of my seventy-eight hundred hours' flight time was put in on night flying. I've seen just about everything you'd expect to encounter, but never anything like that disk."

Captain Adickes said its proximity had no effect on radio reception. Nor did he notice any deviation on his instruments. The object's color, he said, was not a bright cherry-red, as some newspapers had stated. Instead, it was about the dull-red color of hot metal.

"Manning and I could only estimate its size," he said. "It might have been even larger than fifty feet in diameter, depending on its distance from us. This will give you an idea. When I tried to cut in toward it, that last time, it streaked down over South Bend at twice our speed - somewhere between three-fifty and four hundred miles an hour. But even at that speed, it took several minutes to fade out. So it had to be fairly big."

As it speeded up to escape, Adickes said, it turned so that he caught a glimpse of the thing edge on. It seemed to be about 10 per cent as thick as its diameter.

Other air-line pilots had told him of unsuccessful efforts to close in on Flying Saucers, Captain Adickes told me.

"I thought maybe they imagined it, but now I know better. I tried to sneak up on it, and also to get above it. Each time, it veered away. And when I went after it, the thing was off in a flash."

From the darkened cockpit, hostess Gloria Hinshaw also saw the object veer away. Back in the lighted cabin, she saw it again briefly as it speeded off and dived over South Bend.

"How did it look to you?" I asked her.

"Like a big red wheel rolling along," she said. "I haven't any idea what it was, but it was certainly a strange-looking thing. If I hadn't actually seen it, I don't think I would believe it."

None of the passengers was alarmed by the Saucer, but Miss Hinshaw had been worried for

a moment when she made the first announcement.

"Some of them got excited," she said, "but no one seemed to be nervous. And, course, some didn't even believe it - they were on the other side, farther back. The rest of us took a lot of kidding from them before we landed. But there's one thing sure-those who did see it won't laugh any more at Flying Saucer stories."

Passenger Samuel N. Miller, manager of the Goodman Jewelry Company in St. Paul, Minnesota, told me the same thing.

"I'd been laughing at the stories since 1947, but not any more. I saw the Saucer, all right - even before the hostess told us."

Miller was on the left side, near the wing. Glancing up from a magazine, he noticed an odd red glow out on the starboard side.

It was the color of a neon sign," he described it to me. "1 thought at first it was an advertising blimp. Then it got closer and I saw it was disk-shaped. It wasn't flashing, like a neon sign-it was solid color, just a big red disk."

Soon after this, the air liner swerved as Captain Adickes made the first attempt to close in.

"It wasn't abrupt-just an easy turn," said Miller. "Right after that, the hostess's signal began to flash, and she ran up the aisle."

The rest of his story tallied with the crew's, except for the time estimate. He thought he had watched the Saucer almost fifteen minutes; the pilots' figure was eight minutes. When I asked him what he thought it was, he admitted he had no answer.

"I can't believe it's a secret device of ours," he said. "They'd be pretty stupid to fly it near air liners, where everybody could see it and talk about it."

The description given by Clifford H. Jenkins, an engineering supervisor at the Seattle plant of the Boeing Airplane Company, varied considerably from the others. Mr. Jenkins saw the object just over the leading edge of the right wing.

"I've never seen anything like it before," he told me with emphasis. "It was like a row of windows glowing deep red. It had no blinker or clearance lights like a conventional plane."

"Could you distinguish separate windows?" I asked him.

"No, it looked like windows blended by distance into a solid red band. The thing was perfectly steady, with no oscillation that I could see."

Just before Captain Adickes came back, Mr. Jenkins said, the plane veered rather sharply to the right, but the angle of the Saucer in relation to the DC-3 did not appear to change. (In effect, this substantiates the pilots' statements that the object moved simultaneously with the air liner.)

"I had the thing in view three to four minutes," said Jenkins. "Its top speed was obviously much higher than ours, for it left us behind in a hurry."

According to Jenkins, the Saucer disappeared on a parallel course.

"The aspect never changed-neither did the angle. The thing just faded in size until it was out of sight in the darkness.

(Captain Adickes later pointed out that Manning and he had the Saucer in view from the nose of the plane, where it would be visible longer. This might explain Jenkins' failure to see the object's change in altitude.)

Since most of the witnesses agreed that the Saucer was round, I asked Jenkins again about its shape.

"It was like a red-hot bar, moving horizontally," he answered. "If it was a row of windows, then the thing must have been at some distance to blend them together like that."

(Captain Adickes has suggested that the air liner's lighted cabin made it difficult to get a clear view, unless the passenger was close to a starboard window. Jenkins and his seatmate, Bourland, were in the aisle, two feet or more from the window. It is possible that this could account for the difference in descriptions; Jenkins might have attempted subconsciously to fit a blurred reddish mass into the conventional pattern of airplane windows. Otherwise, it seems to be one of those puzzling discrepancies often found in group reports of accidents and other exciting incidents. Miller, for instance, was no closer than Jenkins, yet he saw the object clearly as a disk.)

"It definitely wasn't a hallucination," Jenkins summed up his opinion, "for at least a dozen people saw it. It wasn't any known type of aircraft. It couldn't have been a meteor-it was too slow; besides, it was flying along horizontally.

"It may have been something the United States has developed which it doesn't choose to announce. Or it may be, as some people believe, that such things come from another planet."

Jenkins told me that Dean C. Bourland, from Boeing's Wichita plant. also had seen the mysterious object, but he was not sure whether Bourland's description agreed with his. I tried to reach Bourland at Wichita, but he was on vacation.

After a little difficulty, I located the passenger who had been asleep in the right front seat. He proved to be Edward J. Fitzgerald, vice-president and sales manager of Metal Parts & Equipment Company, Chicago.

"I missed part of the excitement," said Mr. Fitzgerald. I was sound asleep until the pilot woke me up. He was leaning over me, and two men were kneeling in the aisle, staring out the window. The pilot asked me to look out at the Saucer - he said he wanted plenty of witnesses so people wouldn't think he was crazy.

"When I turned around, I saw this strange red glow on a level with the wing. tip. The effect, after being waked up so suddenly, was naturally startling. The thing looked round, though perhaps not a perfect circle. I estimated it to be about two hundred yards away, but that's only a guess.

"The pilot started to explain how they'd sighted the thing, then he saw it was pulling ahead. He went back to the cockpit and a second later the plane banked to the right. The 'saucer,' or whatever it was, speeded up and then dipped a little. Altogether, I saw it about thirty seconds before it disappeared."

"Did you see any windows, or any resemblance to a plane?" I asked him.

"No, it wasn't anything like a plane," Fitzgerald said positively. "It was a very strange object-almost weird."

Five officials of the International Harvester Company who were passengers or Flight 117 refused to be interviewed; whether this was to uphold company dignity or through personal preference was not stated. Two of these officials were in the Chicago office-a Mr. Gelzer and a Mr. Irwin. The others were located at the Springfield, Ohio, plant-Mr. Drum, the works manager, Mr. Anderson, the superintendent, and a Mr. Smith, initials unknown.

In spite of their collective refusal. I learned that two or more of this group did see the Flying Saucer. Other witnesses told me of the Harvester men's comments. One man thought it was round, another oval. Both agreed on its mysterious appearance, its bright-red glow, and its speed.

Another Chicago passenger, Harold C. Weimer, of 5028 Windsor Avenue, reported he did not see the Saucer. He was sitting on the left side, in the rear; by the time he looked out. the object had disappeared. (It was Weimer who suggested the blast-furnace explanation.)

The Saucer was also seen by Martin Nerat, an employee of the Schwernan Trucking Company of Milwaukee. When the hostess made her announcement, Nerat stepped across the aisle and gazed out a starboard window. Like the other witnesses, he was startled by the mysterious object.

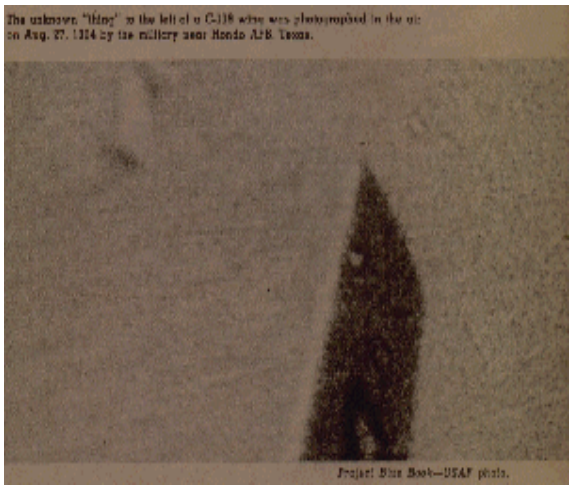
When I talked with him, Nerat said the bright-red glow had prevented him from seeing any distinct shape. He agreed with the pilots on the Saucer's maneuvers.

"Every time the plane turned toward it, the thing pulled away. At the last, it was going a lot faster than we were. I don't know what it was, but it wasn't an airplane."
There were five more passengers aboard Flight 117, but their addresses are unknown. The names are: Berder, Guttfred, Kehma, Moran, and Moseley.

The Flight 117 incident has had an importaist effect. This carefully noted sighting by TWA pilots and passengers impressed many Americans. Among those who made public statements after the incident was Captain Eddie Rickenbacker, then president of Eastern Air Lines. In a United Press story from Savannah, Georgia, Captain Rickenbacker said, commenting on the Saucers:

"There must be something to them, for too many reliable persons have made reports on them."

**The unknown "thing" to the left of a C-119 wing
was photographed in the air on Aug. 27, 1964
by the military near Hondo AFB, Texas.
- Project Blue Book - USAF photo**



However, Captain Rickenbacker apparently suspected that the Saucers might be American guided missiles. When I interviewed Captain Adickes, I mentioned Rickenbacker's comment, and I found that he had the same theory.

"I think that the thing was equipped with some sort of repulse radar," said Adickes, "so it would keep at a certain distance from air liners and other planes."

The guided-missile explanation is not new, of course. The armed services and the White House have emphatically denied that the Saucers are an American development, but some Americans discount this as a smoke screen to hide a secret weapon.

To recheck, I went to the foremost guided-missile authority in the United States, Captain Delmer S. Fahrney, U.S.N. Captain Fahrney began guided-missile experiments for the Navy in 1936. The television-eye missile was designed and perfected by Fabmey and his engineers. All of the later Army and Air Force developments stem from Captain Fabmey's early work.

As commanding officer of the Naval Air Guided Missile Test Station at Point Mugu, California, Captain Fahrney exchanges top-secret information with both the other services.

"I can tell you flatly that the Flying Saucers are not guided missiles of the Navy, Army or Air Force," he said when I interviewed him in Washington. 'No guided-missile officer would be stupid enough to test any such device along airways or over cities. It would be criminal negligence-a mechanical failure could endanger lives. Even when launching a missile over the ocean, we clear the test range and keep it patrolled during operations."

Admiral Calvin Bolster, of the Navy Bureau of Aeronautics, gave me the same personal assurance in regard to U.S. piloted aircraft of advanced design.

"If the Flying Saucers exist," he said, "they're not anything we're producing."

Other high defense officials have pointed out that such top-secret devices, even if piloted, would hardly he tested at random all over the United States, Canada, Mexico and other countries where Saucers frequently have been seen.

The case of Flight 117 is, in chronological order, the ninth air-line Saucer sighting of which **TRUE** has specific record; a tenth occurred one month later; there have also been, at various times, a number of other cases incompletely documented.

Sightings by experienced transport airmen are impressive testimony to the reality of Flying Saucers.

The Air Force, which undertook the investigation of Saucers, has nevertheless professed to deny their existence from the first reported incident.

On July 4,1947, shortly after the start of the "Saucer scare," Captain Emil J. Smith of United Air Lines was still one of the skeptics. But that evening, over Emmett, Idaho, Captain Smith and his copilot, Ralph Stevens, saw nine fast-flying disks above their DC-3. The Air Force's Project Saucer brushed off the sighting as an illusion.

as he explains to stewardess the oddly shaped disc
he saw while on routine flight. - UPI Photo**

Some time after this, the crew of a Pan American Airways plane sighted a strange aerial

object between Everett and Bedford, Massachusetts. The pilot and navigator described it as cylindrical in shape, about the length of a P-40 fuselage, and blunt at both ends.

"Weather balloons," said the Air Force.

Near the end of 1949, a Golden North air freighter was paced between Seattle and Anchorage, Alaska, by a night-flying Saucer. When the pilots tried to close in, the strange craft zoomed at terrific speed. Later, the air-line head reported that Intelligence officers had quizzed the pilots for hours.

"From their questions," he said, "I could tell they had a good idea of what the Saucers are. One officer admitted they did, but he wouldn't say any more."

On April 18, Captain Carl Gray was piloting a Braniff air liner when a C.A.A. tower operator at Childress, Texas, radioed an urgent message. A mysterious, silvery-white object had been sighted from the tower; the operator asked Gray to be on the lookout for it.

Captain Gray and his crew spotted the thing a few minutes later-a large, round, shining object oscillating at a high altitude. His first thought, that it might be a balloon, quickly gave way to puzzled astonishment.

"I've never seen anything like it," he radioed the tower. Later, two Air National

Guard fighter pilots were guided up toward the Saucer by the C.A.A. tower man, who was watching it through binoculars. But the planes failed to reach the object. Its height was later estimated at fifteen miles above the earth. My request for the final C.A.A. report on this sighting was refused, as in the case of the Vandalia affair and, later, Flight 117.

On the night of May 29, *1950*, the pilot, first officer, and flight engineer of an American Air Lines DC-6 that had left Washington watched an intensely glowing something approach their plane head on while they climbed southwest-ward a few miles beyond Mount Vernon. Captain Willis Sperry edged right to avoid it, whereupon it swerved left and stopped. When they swung back toward it, the thing resumed motion. As it swiftly circled behind the plane, it passed before the rising full moon in silhouette, and Captain Sperry observed that it was much elongated-"torpedo-shaped," he called it-and wingless. The lighted portion was at its forward end, and the slim body suggested dark metal. Then it darted out of sight to the east with great speed.

Besides the air-line sightings described above, there are incomplete reports of others-a sighting by a Capital Air Lines pilot near Buffalo, New York; a strange encounter on the airway between Alaska and Japan; Flying Saucers reported by air-line pilots flying from Hawaii to the mainland, and other sightings on American domestic lines.

The Air Force either denies knowledge of C.A.A. reports or refuses permission to see them. Concerning its own data, it announces: "There is no investigation going on. Flying Saucers simply don't exist."

Any thinking person who examines the mass of evidence can reach but one conclusion: the Saucers are real.

I Know The Secret Of The Flying Saucers

by Maj. Donald E. Keyhoe, USMC (Ret.)

Editor's Note: Major Keyhoe has been writing about Unidentified Flying Objects (UFO's) in this magazine and elsewhere for over 15 years. From the outset he has insisted that flying saucers are real and interplanetary, and many authorities have come to agree with him. Now he claims that control over gravity itself is the only explanation for the astounding maneuvers which saucers are said to make. Some physicists dismiss this theory as fundamentally erroneous. But, as you will read, there are others who find Major Keyhoe's latest chapter in "The Great Flying Saucer Story" important and plausible.

One night last February, over the North Pacific, a Flying Tiger Airlines crew had a startling aerial encounter. What they saw is a clue to a fantastic technical mystery. In its solution lies a prize so great that six government agencies are searching for it right now. The answer may not be far off. What they are searching for is the secret of gravity control.

About midnight on February 15, the Flying Tiger plane, carrying a military group from the U.S. to Japan, was four hours out of Anchorage. Suddenly the cockpit radar picked up three fast-moving objects. The plane captain and his crew looked out at the side and saw three huge oval-shaped ships, glowing red in the night.

An Air Force captain who was a passenger on the plane was called forward to confirm the sighting. His signed report is in the files of the National Investigations Committee on Aerial Phenomena.

According to the captain's report, the unknown machines slowed down to the airliner's speed and flew in close formation. Five miles away, by radar range, they leveled off to pace the plane. The Air Force captain computed their length as much more than 700 feet. It was plain that the giant Unidentified Flying Objects had an unknown type of propulsion. No jets, no exhausts were visible. For 30 minutes, still in formation, they continued to pace the plane. Then, swiftly accelerating to 1,200 knots, they climbed out of sight in seconds.

This startlingly swift acceleration is a maneuver that could not be duplicated by any ship now made on Earth. What makes it possible for UFO's? According to many scientists and engineers, there is only one possible answer. The answer is *antigravity:* artificial gravity fields and control of gravity power.

Control of gravity is something that men have been dreaming about for centuries. Now it appears that we are on the threshold of achieving it. Its value, to the country that first attains it, is incalculable. Our government, hoping for a technical breakthrough, has set up 46 different research projects on various aspects of gravity control. The Air Force is running 33 of these projects and the others are divided among five other agencies.

Included in the 46 government projects are experiments and research at two Air Force Laboratories (Flight Dynamics and General Physics Research), Radio Corporation of America, Massachusetts Institute of Technology; Israel Institute of Technology, Haifa; Stevens Institute of Technology; the universities of California, Denver, Harvard, Indiana, Manchester (England), Maryland, Michigan, Minnesota, Ohio, Purdue, Stockholm (Sweden), Syracuse, Texas, and two New York schools – Queens College and Yeshiva

Graduate School of Science.

And, of course, some government agencies have projects so secret that they are not publicly registered and cannot be revealed without permission.

Private industry is also looking at the question of gravity control with new seriousness. A large number of giant corporations, including Bell Aerospace, General Electric, Hughes Aircraft, Boeing, Douglas and many others, have set up gravity projects.

If you add up all the known gravity programs being run by the government and private industry, you get somewhere between 65 and 70 projects. This means there is a heavy concentration of scientific and engineering brains working on the problem.

One leading scientist who is convinced that UFO's are spaceships using gravity control is Dr. Hermann Oberth. Doctor Oberth, a recognized authority, was co-designer of the V-2 rocket and later a U.S. special consultant at Huntsville, Alabama, one of the installations where important antigravity research is now under way.

"With ordinary propulsion," Doctor Oberth told me in 1961, "such violent accelerations and maneuvers would endanger the ship. Also, the force would crush any creatures aboard against the rear or sides of the machine. But with an artificial gravity field the force applies simultaneously to the passengers and the spaceship. Even in swift changes of speed and direction, the ship is not strained and the passengers feel nothing."

Today, doctor Oberth is willing to go further. He is now of the opinion "that energy, inertia and gravitational fields are only aspects of one and the same thing" and that it will prove impossible to separate them from each other. What he has in mind, he says, is "not yet known fields of force" which can be used to accelerate material objects in a way similar to the force of gravity.

Another noted authority who agrees that UFO's are using artificial G fields is William P. Lear, Sr., [see "Hard-nosed Gambler in the Plane Game" in this issue] multimillionaire inventor, pilot, designer of air and space equipment and builder of jet aircraft. Lear, who once sighted a UFO from his executive plane, predicts that future U.S. vehicles will also use artificial gravity. "The people on board would probably not feel any more effect," Lear says, "than they do from the tremendous speed of the Earth as it rotates and orbits and orbits the sun."

Several years ago, Glenn Martin's vice-president for advanced design, G. S. Trimble, predicted that by 1985 practically all airliners would be using artificial gravity, flying at almost unbelievable speeds. At about the same time, future airliner speeds of 10,000 mph. or more were pictured by Dr. Walter Dornberger, then Bell Aircraft's chief guided-missile scientist and now president of Bell Aerospace.

Grover Loening, pioneer aircraft builder and consultant to the Air Force, said it even more strongly, "I firmly believe that before long man will acquire the ability to build an electromagnetic contragravity mechanism that works," he stated.

A top official of Bethlehem Steel, Jesse V. Honeycutt, has indicated some of the results we can expect if Loening is right. ""serious research is being concentrated in an attempt to solve the mystery of gravity and bring about a control of its power.

"It would bring about a greater revolution in power, transportation and many other fields than the discovery of atomic power, "he stated.

Antigravity? It seems inconceivable. Yet, the search goes on and many responsible men believe the answer will be found. And, to my mind, it is the only possible explanation for the performance of the UFO's.

The stakes are so high that no clue can be overlooked. The Air Force Technical Intelligence, hunting for overlooked leads, is carefully checking hundreds of verified UFO reports. Hopefully, some of them will help us find out how these strange vehicles operate.

Four days before Christmas, 1964, a round, metallic craft about 125 feet in diameter was observed to make a brief landing in a field near Staunton, Virginia. Two Du Pont scientists later took Geiger counters to the site.

"It was 'hot'-highly radioactive," Du Pont engineer Lawrence Cook reported. "We checked for 45 minutes – it was definitely 'hot'."

In Puerto Rico, near dusk on December 26, 1964, Ramey Air Force Base radar spotted two large discs. As A4D jets streaked up to pursue them, the discs accelerated to terrific speed. Making instant right-angle turns-impossible for any known aircraft-they vanished over the Atlantic.

On March 21, 1965, Capt. Yoshiaki Inada, piloting a Toa Airlines Convair on a domestic Japanese flight, was chased by a "mysterious, elliptical luminous object." Flying close to the plane, the UFO blanked out his radio and "violently interfered" with his automatic direction finding equipment.

Puzzling earlier cases also are being rechecked. On July 1, 1954, an AF F-94 – a two-man jet – was scrambled to chase a UFO near Walesville, New York. When the pilot tried to close in, a sudden, unbearable heat filled the cockpit. Half-dazed, the pilot and radar officer bailed out. The jet crashed in the street, killing two children and their parents.

These odd phenomena, high radiation, mysterious heat and electrical interference may be side effects of gravity control devices.

Like most people, you probably took gravity for granted before space flights began. Now you know, for example, that one "G" is the Earth's normal gravitational pull. This is what holds you to the seat of your chair – and more important, keeps you from being tossed into the air by the Earth'' rotation. You feel two or three G'' in a roller coaster or a stunting plane -–a mere hint of what our astronauts have to endure during blast-off and acceleration. But gravity causes a lot of trouble and expense we seldom think about. Aircraft and rocket builders have to provide heavy engines, huge weight of fuel, just to offset gravity. In construction of buildings, bridges, and in a hundred other ways, G affects our lives and adds billions to the cost of work.

Gravity control could reduce or end many of these problems.

How soon can we expect antigravity?

Some researchers say it may take a long time. Others believe there may be a sudden breakthrough. If that happens, there will be some fantastic results.

First, obviously, our space program would take a big leap forward. Instead of our present wasteful rockets, we could build spaceships matching the UFO's high speeds and maneuvers. With such advanced ships, we could make swift flights to the moon and the planets.

Recently, Alexander de Seversky stated that "with abundant energy available, we will move in space with constant acceleration or deceleration. Accelerating half-way to our goal and decelerating the rest of the way at one G or 32.2 feet per second, the moon will be reached in three and a half hours, Venus in 36 hours, Mars in two days, Jupiter in six."

According to Oberth, German physicist Burkhard Heim and other scientists, gravity control will enable spaceships to reach even greater speeds than these. With such advanced machines, we could explore the nearest star systems a century or more ahead of our present timetable.

Using carrier or "parent" ships with short-range probes, we could fully explore a planet – either by remote control or direct observation – before attempting to land. Many cases are on record in which large UFO's have launched small units, apparently for close observation of the Earth, then retrieved them in swift, precise operations.

In one such case (an official AF Intelligence report), groups of small UFO's flying at 5240 mph. were seen and tracked by the crew of an AF B-29. One group, after abruptly slowing to pace the bomber, resumed its speed within seconds. The small UFO's were then seen to merge with or go aboard a huge carrier which accelerated to more than 9,000 mph. before it disappeared.

Because of G-crafts' tremendous speeds, the picture of possible military operations becomes hair-raising. Let's take as a basis the figure in a documented case at White Sands Proving Ground, where Navy scientists saw and tracked a UFO flying at 18,000 mph.

Such terrific speed could put bombers back into the picture in place of missiles. Attacks by G-bombers from bases near major targets would take less than five minutes. If a "rush-fire" war broke out halfway around the world, a huge G-transport carrying a fully armed division – or even an army – could be on the scene in 40 minutes, or less.

Another effect of gravity control will be a big change in air travel. Here's what a G-liner trip would be like, according to several researchers. Let's say you are making a flight from New York to London. You go aboard a large ship – probably disc-shaped, from present indications. Your seat has no safety belts – none are needed. The ship takes off vertically, accelerating at incredible speed. You feel weightless but you feel no motion.

The airliner arcs up into a great circle course, silently, with no "bumps" – no rough air. In 10 to 15 minutes, London suddenly takes shape below. There is no long approach, skimming over rooftops. You descend vertically and land. If traffic is heavy, your pilot would stop the ship in midair and hover until cleared.

In spite of the speed, you'd be safer – especially in regard to many of the strange eddies which have thrown jet airliners into uncontrollable dives.

In probing the riddle of gravity, project scientists try widely different approaches – some even contrary to accepted natural laws.

Under an Army contract, a University of Detroit team has built a 4,000-pound, specially wired rotor which spins at 100,000 rpm. With this unique device, scientists are testing gravitational radiation theories searching for a possible key to G control.

Using gravity meters based on new principles of physics, Air Force teams make frequent flights around the equator and over the poles, to speed up worldwide measurement of the Earth's gravitational pull. Tied in with this is a network of gravity stations and special projects all over the world.

Though no breakthrough has occurred (unless in highly secret projects) two significant facts have been established.

1. The Earth's G field is relatively weak, compared with the pull of gravity between planets and the sun.
2. There is a connection between gravity and electromagnetic fields.

Igo Sikorsky, discussing the colossal force of spatial G, says a steel cable about 8,000 miles thick would be needed to hold the Earth in its orbit -–if it were not for gravity.

But, fortunately for our anti-G search, the Earth's gravity pull, for objects on the ground or at average flight altitudes, is fairly small. Likewise, the force required to cancel its pull would be relatively small – if a method can be found.

Using various barriers we can shield ourselves from the heat, light and sound waves. But, so far, no way has been found to create a gravity shield. Some scientists still call the gravity shield idea a "lunatic fringe" notion. But many now refuse to say that such a thing is completely impossible.

Are UFO's using a gravity shield? In an effort to find out, the Air Force is renewing its attempts to capture a UFO. If we could get one on the ground, undamaged, it might make possible a big shortcut in our gravity research and save us years of slow, tedious scientific work.

In the past, many Air Force pilots have tried to down UFO's, without success. But the Air Force has new reason for hope now, based on the recent increase in low-altitude UFO approaches and "touch landings."

On the night of January 12, 1965, an officer of a federal law enforcement agency had a close encounter. As he was driving his official car toward Blaine Air Force Station, in Washington, a flying disc 30 feet in diameter hurtled down at his automobile. At the last moment the disc arced up steeply, avoiding collision. When the officer jumped out, he saw the UFO hovering overhead. After a minute, it shot up into clouds at high speed. A short time afterward, the UFO – or a similar one – was seen landing in a field near Blaine, melting the snow and scorching the ground before it took off. When the AF questioned the federal officer, they said they had tracked the UFO by radar as it raced down toward his car. This officer, like many other UFO witnesses, was warned by his superiors not to let his name be used in connection with the sighting.

On January 25, 1965, two NASA engineers sighted a UFO which touch landed near Hampton, Virginia. One witness was Maj. John Nayadley, a retired AF jet pilot. The other was A. G. Crimmins, who saw the strange machine maneuvering toward the ground.

"It was zigzagging as if searching for a landing spot," said Crimmins. "I watched it through 20 x 50 binoculars and I could see flashing lights. They appeared to be on the rim of a rapidly rotating disc."

Before anyone could reach the spot, the flying disc took off and rapidly climbed out of sight.

The step-up in UFO chases was demonstrated at Washington, D.C., on January 11, 1965, when AF jets pursued several flying objects over the city. The chase was confirmed by an Army lieutenant-colonel and a group of Army communications specialists.

If jets had been near any of the "touch" sites, they might have swarmed down and kept the UFO from getting away. But records of previous attempts to capture UFOs indicate it will be a tough job.

Whether we capture a UFO or not, the search for the elusive secret will go on. The connection between gravity and electromagnetic fields may provide the key to the mystery.

For several years, Burkhard Heim, director of the German Research Institute of Field Physics at Goettingen, Germany, has been searching for the answer to the gravity riddle. Finally, Heim revealed that by direct experimentation he had discovered a positive lead to antigravity. The discovery involved an intermediate field, neither electromagnetic nor gravitational.

The results, Heim stated, if applied to space flight, would be direct levitation, conversion of electricity into kinetic energy without any waste, and "immunizing the occupants and the structures of such vehicles against any effects from acceleration of the vehicle, however great and violent."

After the first shock, several scientists examined Heim's claims.

"His approach is not in conflict with known laws of nature, and it agrees with the quantum theory," A.R. Weyl said in an analysis for the British magazine, *Aeronautics.* "If Heim were right, the amazing properties commonly ascribed to the mysterious flying saucers' would be, in fact, sound physics and proper engineering."

Heim's work toward the goal of an actual antigravity device using "field inducers" has evidently been put under official German security. He has refused to divulge the key to his formula.

Heim's findings would indicate that antigravity researchers may discover new scientific laws and that their work may invalidate old theories. Some scientists are already saying privately that Einstein's famous "general theory of relativity" may turn out to be totally fallacious. Newton's law has also come in for attacks. However, Robert Forward, G expert of Hughes Aircraft Company, uses the Einstein theory to show that it is possible to partially nullify the Earth's gravitational field. The amount of nullification obtainable with present-day technology is extremely small, however. Forward predicts that some day, when our technology is greatly advanced, we will be able to "create artificial gravity fields at will."

With a real all-out effort this could happen a lot sooner than the 10 or 20 years many scientists have in mind.

But getting enough top men to work in the field is a problem. One scientist says, "Scientists are sensitive about their reputations and many of them still think antigravity is a joke. If they knew the facts, they'd be eager to get into it."

Fear among scientists is partially due to the Air force censorship of UFO reports. Air force censors not only hide the facts but also belittle those who publicly report UFO sightings.

One recent victim was Dempsey Bruton, chief of satellite tracking at NASA's Wallops Island station in Virginia. On January 5, 1965, Bruton saw a strange round object flying at terrific speed toward the station. After it passed overhead, the UFO shot straight up out of sight. Using the elapsed time – six to nine seconds – and angles and times reported by other witnesses, Bruton said the speed was definitely "several thousand miles per hour, possibly 8,000 mph. or even higher." The AF, implying he was incompetent, rejected the report and said it was not evidence of any technically superior machine.

But AF policy notwithstanding, the drive to get the secret of antigravity is well underway. It can't be stopped now. But it *can* be speeded up. We are already spending billions on the space program – on the race to the moon, to Mars. Harnessing gravity could put us years ahead and save us enormous sums of money.

With control of the universe at stake, a crash program is imperative. We produced the A-bomb, under the huge Manhattan Project, in an amazingly short time. The needs, the urgency today are even greater. The Air Force should end UFO secrecy, give the facts to scientists, the public, to Congress. Once the people realize the truth, they would back – even demand – a crash G program.

For this is one race we dare not lose. – **Maj. Donald E. Keyhoe**

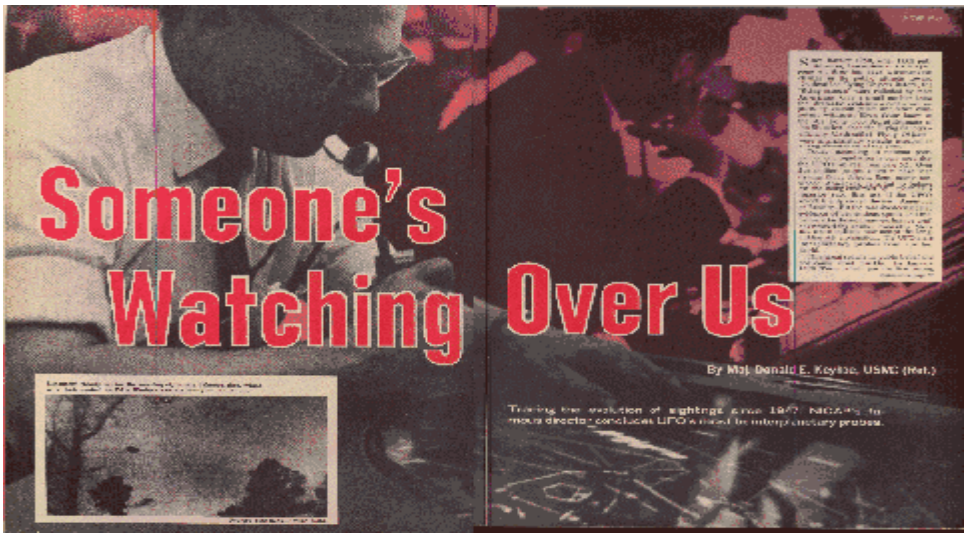
Someone's Watching Over Us

by Maj. Donald E. Keyhoe, USMC (Ret.)



TRUE Magazine, 1967

Since January 1950, when TRUE published my first article on UFO's (see page 6), there has been a tremendous change in the public attitude toward Unidentified Flying Objects. Before, the "flying saucers" were ridiculed by most Americans. Only a small number knew the dramatic evidence - confirmed reports by veteran pilots and other competent witnesses. Even fewer knew of the Air Force Top Secret Estimate of the Situation - that the Flying Saucers - officially Unidentified Flying Objects - were interplanetary vehicles engaged in a long observation of the earth.

Today, according to national polls, half of our population is convinced that the UFO's are real (see page 52). Over five million people claim to have seen strange flying objects. Some newly convinced Americans, reluctant to believe we *are* being observed by a technically superior race, first ask if the UFO's aren't highly secret devices - American or Russian. But the massive documented evidence of tremendous speeds and maneuvers far beyond any earth made craft has proved this answer impossible. More and more millions now accept the long-hidden AF explanation: The UFO's are interplanetary probes from another world.

This great switch in public belief did not come about quickly. The January 1950 TRUE article put the first strong spotlight on UFO's, and hundreds of witnesses reported sightings they had withheld for fear of ridicule.

In 1952, a sudden outbreak of UFO sightings made front-page news, with hundreds of verified reports by military and airline pilots, control tower operators, expert radar trackers, and other reliable observers.

Early in 1953, one group of AF Intelligence officers connected with the UFO project planned to release their most baffling cases, also unexplained photographs of UFO's. No final conclusion was to be stated, though the released evidence would strongly point to the interplanetary answer. But at the last moment, fears of high-level officials caused the plan to be killed. Withholding of UFO reports and "explanations" to prevent public excitement steadily increased.

Despite this, many military reports leaked out because the pilots and others involved opposed this cover-up as a bad policy. In addition to UFO operations over the United States, thousands of similar reports came to light in foreign countries.

In November 1957, another outbreak of sightings further strained official withholding efforts, as a number of "touchdown" landings occurred in this country and abroad.

That same year, investigations were begun by NICAP - the National Investigations Committee On Aerial Phenomena - a private fact-finding group with headquarters in Washington D.C. As Director of NICAP, I have seen it grow to a powerful organization, recognized as the largest scientific UFO research group in the world, with over 12,000 members. NICAP has nearly 300 scientific and technical advisers and special consultants on space operations, astronomy, communications, and other fields bearing on UFO investigations.

Because of its serious and thorough evaluations, and its determined efforts to expose the numerous frauds, opportunists, and deluded persons spreading wild tales about UFO's, NICAP is now accepted as the highest private UFO authority in the world. Our documented reports to Congress and the press have played a major part in making hidden facts public.

After the "marsh gas" fiasco in the spring of 1966, millions of citizens began to reject the AF UFO explanations. High officials, still honestly believing that explaining away the sightings was the safest policy for the country, were caught in an unenviable spot.

The result was a decision to have an independent scientific investigation made - with officials agreeing to a "hands off" policy. The University of Colorado was selected, and a number of recent sightings has already had on-the-scene investigations by one or more scientists from the Colorado project.

Even before the project began operations, NICAP played a vital part, at the request of Dr. Edward Condon, the project head, and his scientific colleagues. In addition to advice on field investigations and evaluations, NICAP has made available several hundred verified reports, including many duplications of cases in AF files.

As a result, the Colorado Project has added to NICAP hopes for a fair and impartial report to the public. Although this is not due until late spring of 1968 - and more time may be requested - public pressure for all possible answers is rapidly increasing.

With at least half the country now strongly interested, it is now more important than ever to re-examine the strongest earlier cases, to search for possibly overlooked clues. It is also extremely important that witnesses to sightings put their reports on record, to help complete the picture and also to help the already lessening ridicule. I urge everyone with factual UFO sighting information to report the details to me at NICAP, 1536 Connecticut Avenue, Washington, D.C. 20036. If you wish, we shall keep your name confidential.

Since January 1950, there has been a tremendous change in the public attitude toward Unidentified Flying Objects

What Radar Tells About Flying Saucers

U.S. Air Force and civilian radar experts know enough about temperature inversion to be sure that it doesn't explain the strange objects they've seen on their scopes in Washington, and in other places. And the official Air Force gun - camera photos reproduced here for the first time back them up

BY DONALD E. KEYHOE

In a new investigation of the flying saucer, TRUE Magazine has secured Air Force confirmation of these important facts:

1. Since 1947, hundreds of unidentified aerial objects have been tracked by radar operators of the Air Force, Navy and Civil Aeronautics Administration.

2. More than 300 times, Air Force interceptor planes have chased mysterious lights and unidentified objects revealed by radar scopes.

3. Strange round objects have shown on interceptors gun camera pictures and on photographs from the ground at a missile testing range.

4. The "temperature inversion" or mirage answer to radar sightings widely publicized by Dr. Donald H. Menzel of Harvard has failed to satisfy Force investigators because he has not attempted to explain any specific "saucer" cases in official files.

In December 1949, when an Air Force statement said saucer reports were hoaxes, hallucinations, or mistaken observations of normal objects, the case lists of "Project Saucer" included several puzzling radar reports. At that time, however, most Air

by Maj. Donald E. Keyhoe (Retired)

Hovering object that was scanned by radar and seen by ground watchers was caught on film by a climbing jet pilot. These unretouched 35 mm. gun - camera movie frames, released to TRUE by the Air Force, were taken at 30,000 feet, near Wright Field, at 11 a.m. on August 20, 1952.

Force officials believed they were errors of interpretation due to weather phenomena. Even during the past year, with radar reports rapidly increasing, some Air Force officers still believed these disturbing cases were caused by temperature inversion.

Accumulated evidence, revealed in this article, now proves that very few of the reports can thus be explained. As a result, many baffling "saucer" cases investigated by the Air Technical Intelligence Command are still listed as unanswered.

The most recent of these mystifying incidents was reported from Congaree Air Base near Columbia, South Carolina as this was being written. On August 20, 1952, radar operators at

a nearby interceptor post were watching their scope when a strange "blip" appeared at an indicated range of 60 miles southeast.

Evidently the object shown was very fast moving, for within less than a minute each successive sweep of the beam renewed the blip in a different position, producing a row of widely spaced spots on the phosphor coated glass in a track that ran off the scope. Dumbfounded, the men hurriedly computed the speed.

It was more than 4,000 miles per hour..

The operators realized that to flash an alarm was useless. Moving at 70 miles a minute, the mysterious object would be 200 miles away before a jet interceptor could take off.

When I checked on this case, the Air Force made no attempt to gloss over the facts. The operators were experts, trained to recognize the blips of solid objects. The radar was working correctly. *Something* streaked through the skies that morning, but the Air Technical Intelligence Command frankly admits it has no explanation.

There are other unexplained Air Force cases almost as incredible. such as the tracking of an unidentified object at 1,700 m.p.h. near Kirksville, Missouri, and vain pursuits by jets at Dayton and St. Paul. (These and other important cases released to TRUE by the Air Force will be discussed in detail later.)

Not until last July, when unidentified lighted objects were seen at Washington Airport, did the general public learn that radar was tracking the saucers. Later, conflicting news stories gave many the impression that the Air Force had "debunked" all saucer reports and had no further interest. Major General Roger S. Ramey, Director of Operations, made the Air Force position clear in the following statement for TRUE:

"The Air Force, in compliance with its mission of air defense of the United States, must assume responsibility for investigation of any object or phenomena in the air over the United States. Fighter units have been instructed to investigate any object observed or established as existing by radar tracks, and to intercept any air-borne identified as hostile or showing hostile interest. This should not be interpreted to mean that air defense pilots have been instructed to fire haphazardly on anything that flies."

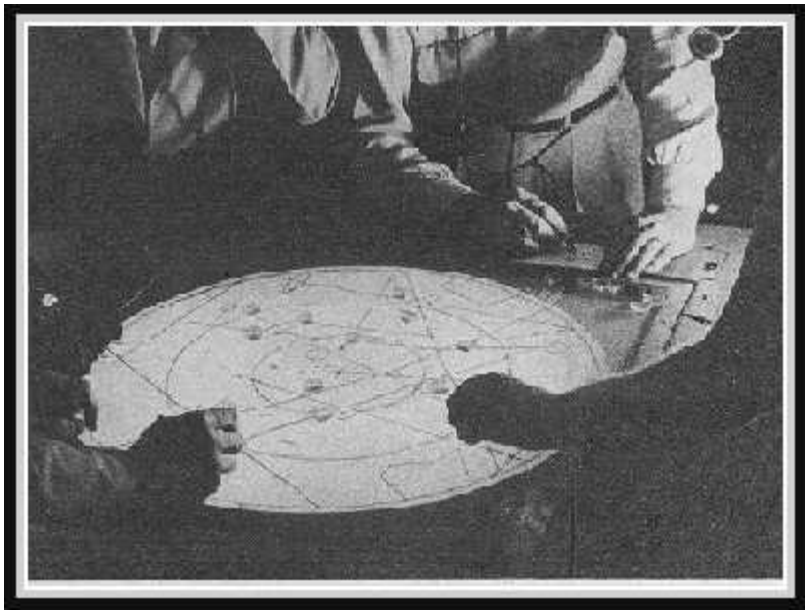
The Air Force attitude was amplified for me by another spokesman in this candid statement:

"We don't know what these things are and there's no use in pretending we do. We can't discount entirely that they may come from another planet, though we have no evidence to support it. We have found no threat to this country - there is not the slightest evidence that they come from a foreign nation - but until we know the answers we shall carry on a serious investigation."

Unfortunately, public confidence in radar has been badly shaken. Many Americans still believe that the Washington radar men, veteran air traffic controllers, were tricked by atmospheric conditions. The same cause was said to have created mirage lights in the sky, deceiving airline and jet pilots, control tower men, and other trained and experienced observers.

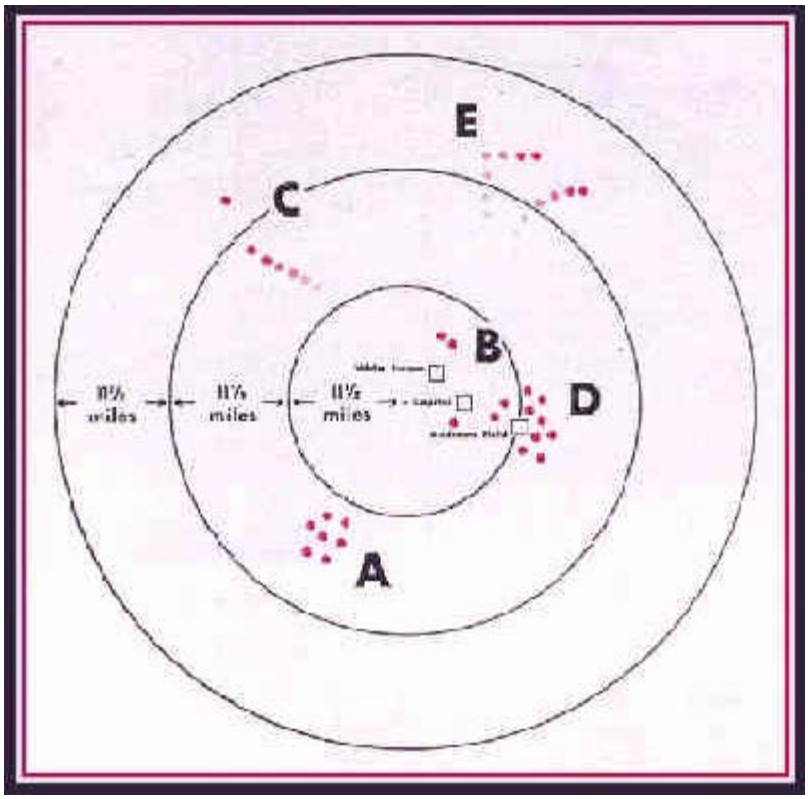
If this were so, serious problems in air traffic control would certainly have to be solved. But the true story behind the Washington sightings has never been told until now. To get that story, I spent considerable time at the Airway Traffic Control Center at Washington Airport. I talked with the controllers who saw the strange blips and also with outside radar experts,

Weather Bureau officials and radio astronomers. The final answer is startling in its implications.



Saucer spots played among markers used by controllers to direct airliners on Washington traffic center radar scope.

Air Force radar men learn to identify all normal phenomena.



From a controller's original sketch, some saucer movements July 20 on Washington radar scope are diagrammed above. At A, seven blips appeared suddenly. Two moved (B) near White House, one near Capitol. At C, one fled a northwest bound airliner (indicated by row of blips). Later (D) ten flocked at Andrews Field. E illustrates a saucer's right-angle turn compared with curving turn of ordinary aircraft."

The action began at 12:40 a.m. on the night of July 20. At midnight. eight air traffic controllers. headed by Harry G. Barnes. took over the watch at the Washington Center. The night was clear, traffic was light and the men settled down for a routine watch.

To understand the queer events that followed. you must first have a clear picture of the Center's operations. The Center is located entirely apart from the airport tower, which directs take-offs and landings and close in traffic. The radar room of the Center is a long dimly lit chamber, darkened so scopes can be easily read. Its radar equipment, by which controllers have guided thousands of airliners through fog and storms, is an M.E.W. (Microwave Early Warning) type similar to the sets used by the air defense forces.

On a nearby hill, a huge parabolic antenna, rotating six times per minute, transmits a narrow radio beam which swings around the horizon. When the beam strikes a plane, an "echo" or "return" is reflected back. Amplified. this appears as a small spot or "blip" on the face of a cathode ray scope. The Center's main scope. 24 inches in diameter, has a pale lavender glow. Traveling around the glass. like a glowing clock hand, is a purplish streak called the "sweep" which shows the direction of the moving radio beam.

As the echo comes back from a cruising airliner, a small round violet blip appears on the scope. At that spot, the phosphor coating of the glass maintains a diminishing glow. Every ten seconds, a new blip appears. showing the plane's changed position. The glass retains seven blips before the first one fades out. From the position of the blips and the space between them, the plane's course and speed call be seen at a glance, also its location, distance and compass bearing.

Besides the main scope, which is adjusted to show traffic within a 34 mile radius - a 68 mile circle - the Center operates two smaller console scopes which show the transmitter's full range of 105 miles, or a circle 210 miles in diameter.

radar scopes show other things than planes in the sky - irregular blobs are reflected from thunderstorms, thin spotty blips from flocks of birds, spreading blotches caused by rain or snow clouds.

Very-high-frequency radar sets can pick up even cobwebs or clouds of nearby insects. But these do not appear on the M.E.W. scope, nor would their echoes resemble the clear, sharp blip of a plane. There are two known things which can cause somewhat similar echoes - balloons especially equipped with large panels of metal for radar tracking, and "chaff" or "window." which are strips of aluminum foil dropped by military planes to jam radar sets. The presence of either is indicated by their drift at the speed of the wind. Strips of chaff, usually dumped by the hundreds, cause heavy returns which trained radar men can easily recognize. In addition, chaff falls to the ground. so that its blips soon disappear.

On the night of July 20, none of these things were involved, as an Air Force check has proved. The scope was clear of any strange objects until 12:40. At that moment, seven round blips, like those of planes. suddenly appeared in the southwest quadrant. Since no group of planes - military or civilian -was due to arrive, the Control Center men were immediately concerned. Harry Barnes, the senior controller, tracked the unknown visitors at 100-130 m.p.h. - a speed oddly low compared with their swift appearance.

Barnes quickly checked the consoles; both scopes showed the strange blips. He called in radar technicians; they found no flaw in the set or antenna. Worried, though the low speeds didn't indicate Soviet bombers, he called the Washington Airport tower. To handle local traffic, the tower has a separate set, an A.S.R. (Airport Surveillance Radar) with a 30 mile range.

Tower operators Howard Cocklin and Joe Zacko both reported the strange blips on their scope, and in the same position. So did Air Force radar men at Andrews Air Force Base, which uses an A.S.R. set. Not only that, visual observers at both points could see mysterious lights moving in the sky.

Flashing word to Air Defense, Barnes turned back to the scope. The unknown visitors had separated, were now over Washington, two near the White House, one close to the Capitol.

A few minutes later, the controllers bending over the scope got a new jolt. One blip track showed an abrupt 90- degree turn, something no plane could do. As the sweep came around, another of the strange objects suddenly reversed, its new blip "blossoming" on top of the one it bad previously made. The unknown craft, or whatever it was, had stopped dead from over 100 m.p.h., then completely reversed direction - all in about five seconds.

"Then we noticed another strange thing," Barnes told me later. "Some blips suddenly disappeared, between sweeps. I couldn't explain, until Jim Ritchey called 'Casey' Pierman to check on one group of the things."

Captain Pierman, flying a Capital airliner, had just taken off from Washington. In a few moments he radioed back that he saw a bright light where the scope showed one of the objects. At the very instant he called the Center, the object raced off at terrific speed.

"It was almost as if whatever controlled it had heard us, or had seen Pierman head toward it," said Barnes. "He said it vanished from sight in three to five seconds. But here's the

important point: at that very moment, the blip disappeared from the scope.

"That means it must have raced out of our beam between ten second sweeps. It could have done this in one of two ways: First, it could make a steep climb at terrific speed, so that in ten seconds it would be above the vertical area swept by our M.E.W. set. [The beam's average altitude, at its highest point, is from 35,000 to 40,000 feet, far out, but it is much less near the airport. At 30 miles, it is about 8,500 feet, sloping to 1,200 at three miles.] Second, it could race horizontally off our 34 mile scope within ten seconds."

Considering the objects' relative position, just before they vanished, this last would require a speed of from 5,000 to 7,000 m.p.h. At the time, this seemed unbelievable to Barnes and the other controllers. But Captain Pierman later confirmed the objects' tremendous speed.

"They'd go up and down at terrific speed, or streak off and disappear. Between Washington and Martinsburg, we saw six of these fast moving lights. [Control Center showed them at the same position.] I don't know what they were, but they weren't shooting stars."

Another confirmation of the visitors' incredible speed came later that night, from the Washington tower. Operator Joe Zacko had been watching the A.S.R. scope when one of the mystery objects abruptly appeared just west of Andrews Field. Unlike the slower M.E.W., the A.S.R., with its 28-r.p.m. antenna, can track extremely high speeds. As Zacko watched, fascinated, the blips made a bright streak or trail, heading north- northeast toward Riverdale. Then the trail ended as swiftly as it had come.

Howard Cocklin, hastily called over by Zacko, also saw the bright trail. Together they figured the object's speed from its trace.

It had been making two miles per second -7,200 m.p.h.

"It was as if it had descended rapidly, almost vertically," Cocklin told me later. "That would bring it suddenly into the A.S.R. beam area. It seemed to level off for those few seconds, and then abruptly ascend out of the beam again."

Barnes and his men saw another significant maneuver that night. When they vectored a pilot toward one of the lighted objects, the strange blip disappeared. Then in a few seconds it reappeared behind the plane. Barnes commented, "If it was the same one - and I think it was - that was another of those high speed vanishing acts between sweeps."

(The same maneuver was reported from Kirtland Air Force Base, New Mexico, on July 29. On this occasion a mysterious disk sighted by numerous ground observers - was seen to whip around at terrific speed behind jet planes sent up to intercept it.)

At 3 a.m., two Air Force jets, brought in from another mission, roared down over Washington. Just before they arrived, all the strange blips left the scope. Coincidence or not, as soon as the jets headed back for their base, the visitors reappeared and again swarmed over Washington. One, simultaneously plotted by the Center, Andrews Field, and the Washington tower, followed an airliner to within four miles of the airport, as the pilot watched its light. At one time, ten of the "saucers" were over Andrews Field, then at daybreak they were gone.

The shaken controllers, for the most part, agreed they had tracked solid objects capable of fantastic maneuvers.

"I'm positive they were guided by some intelligence," Barnes has since told me. "If no planes were in the air, the things would fly over the most likely points of interest - Andrews

Field, the aircraft plant at Riverdale, the Monument, or the Capitol. One or two circled our radio beacons. But as soon as an airliner took off several would dart across and start to follow, as if to look it over.

On July 26, in the early evening, an eerie red lighted object flashed over Key West, Florida. A destroyer - escort quickly put to sea, and the Navy announced it would try to find the answer. Then official silence fell.

That same evening at 9:08 p.m., the Washington Center, still jittery, had another call from its unknown visitors. Again, the control tower and Andrews Field radar confirmed the blips. As before, the mystery objects hovered, made sharp turns, reversed, and vanished from scopes. Pilots, too, and ground observers watched the lights race off.

Of four pilots who saw the fast moving lights, one was flying a jet interceptor. This pilot, Lieutenant William L. Patterson, on seeing four lights, went after one at full throttle.

"I was at my top speed," he said on landing, "but I couldn't close in." His plane's maximum speed was better than 600 m.p.h.

When the story of these weird events broke, combined with full details of the July 20 sightings, the Air Force was flooded with demands for an explanation. Reluctantly, since Air Technical Intelligence at Dayton had not even begun its evaluation, Air Force officials in Washington released a public statement: since some radar reports were due to temperature inversion, this might explain the Washington sightings, including the odd lights.

Until then, few people except scientists, radar men and Weather Bureau experts had ever heard of inversions. In itself, a temperature inversion is a simple effect.

Ordinarily, air gets colder as the altitude increases, but under certain conditions there may be layers of warm air with cooler air underneath. Such inversions are common on the desert. At night, or when clouds suddenly shadow the hot ground, the surface quickly cools off. Air in contact with the ground also cools fairly quickly, but above this there is still a warm layer, its height and thickness varying with conditions. On top of this warm layer, the air becomes cool again, increasingly with altitude.

Since light moves slower in a denser medium, its rays are refracted, or bent, as they pass from the warm to cold air. It is this which causes "lake" mirages on deserts, or a watery sheen that appears ahead as you drive on a heated road. In both these cases, the hot cold layer refracts light waves from above the horizon, and these "bent" waves are simply reflecting the sky.

A spoon in a glass of water also illustrates the principle of refraction. Seen from a certain angle, the spoon appears to be bent sharply - a result of the different densities of air and water.

Like light, radar waves move slower in denser medium, and are bent by refraction. Under certain conditions, this can be caused when the waves strike layers of air with different temperatures.

According to Dr. Donald H. Menzel, of Harvard University, this effect explains many flying saucers, both the lights and radar blips. It is Menzel's belief that observers have merely seen reflections, either of ground lights - or of stars, the moon, or the sun. In the same way, he says, radar "saucers" are simply ground objects picked up by deflected radar beams and shown on scopes as strange blips.

The apparent high speed and violent maneuvers, he explains, can be caused by reflections of moving objects, such as cars and trains, or by turbulence in the inversion. In the latter case, the light or radar waves, striking agitated air, reflect unevenly, creating false effects of motion even from fixed objects.

At first glance, this would seem to explain not only the Washington reports, but all the simultaneous radar- and - light sightings. When word of this answer reached Washington Airport, the controllers and radar engineers were astounded.

"Every man in here knows temperature inversion effects," said Barnes. "When an inversion is big enough, it picks up all sorts of 'ground clutter' - water tanks, buildings, bridges, shore lines and so on. But anybody can recognize it - you'll see huge purplish blobs, but nothing like those blips we tracked. And in the six years I've watched these scopes, absolutely nothing - high speed jets, storms. inversions, or anything else - has ever caused echoes that maneuvered like that, and we have had identical weather conditions many times."

Every controller and technician backed him up.

"Besides that," Chief Engineer J. L. McGivern told me, "there was no ground clutter either time, except the big blotch we always have at the center of the scope, where the bottom of the beam picks up the airport buildings."

Art the Weather Bureau, I found the same answer. Vaughn D. Rockne, senior radar specialist. who is familiar with inversion effects, had never seen or heard of such blips as were tracked on the two nights in question.

Dr. John Hagin. the leading radio astronomer at the Naval Research Laboratory went even further.

"Even with an extreme inversion," Dr. Hagin told me, "conditions would have to be very, very unusual to cause such effects. In my opinion, the pinpointing of blips by three radar stations, and simultaneous sighting of lights at the same points, would make it impossible."

"How much of an inversion - what temperature change would be needed?" I asked him.

"Ten degrees Fahrenheit at the very least. Probably much higher."

As a final step, I asked the Air Force to select a radar expert to present the official opinion. The officer chosen was Major Lewis S. Norman, Jr., of the Aircraft Control and Warning Branch, who had made a special study of temperature inversion.

"Turbulence in an inversion layer absolutely is necessary to get the effect of high speed and fantastic maneuvers," Major Norman told me. "It can result from up or down drafts, or such 'burbles' may be caused by heated air from smoke stacks."

"At a minimum, how much temperature inversion would it take?" I asked.

"On the centigrade scale, between 5 and 10 degrees. If you used the Fahrenheit scale, it would take an inversion between 9 and 18."

Now I was sure of the truth. But to be doubly certain, I rechecked Weather Bureau charts.

On the first night, the inversion had been *I degree Fahrenheit.* The second night it had been about equally negligible - barely 2 degrees.

Here was positive proof. *Temperature inversion could not possibly explain the Washington "saucer" cases.*

Suddenly, as I recalled the words of the Naval Research experts, the hundreds of Air Force radar reports took on dramatic meaning. The rare conditions required to produce moving lights and blips certainly could not have existed in more than a few of these cases. There must be a large number still officially unexplained.

Going back to the Air Force, I asked two point-blank questions. Had Dr. Menzel ever been asked by the Air Force to determine if his theory would explain specific "saucer" cases? If so, what were the results?

Here are the Air Force answers:

1. Dr. Menzel had been invited to apply his theory to cases on record.

2. He had not attempted to explain any specific occurrences.

Following this, I asked the Air Force for typical reports and conclusions, from 1948 up to date.

One of the first cases, involving three separate incidents, took place in Labrador, at Goose Bay Air Force Base. About 3 a.m. on October 29, 1948. an unidentified object in slow level flight was tracked by tower radar men. Two days later, the same thing happened again. But the following night, on November 1, radar men got a jolt. Some strange object making 600 m.p.h. was tracked for four minutes before it raced off on a southwest course.

At the time, weather conditions were considered as a possible answer. But in the light of the new temperature inversion revelations, this obviously must be ruled out.

On November 6, the same year, Air Force operators in Japan tracked two strangely maneuvering objects for sixty five minutes. On the scope they appeared like two planes dog fighting, hut no fighters were in the area. This case is still unsolved.

On the night of November 23, 1948, an F-80 pilot flying near Furstenfeldbruck, Germany, sighted a circling red light. About the same moment, the object was picked up by an Air Force ground radar station. It was tracked as flying in circles at 27,000 feet, the same altitude at which the pilot encountered it. Because of his own maneuvers, he could only guess at its speed - somewhere between 200 and 500 m.p.h.

As the F-80 drew nearer, the object swiftly climbed up out of the pilot's sight. But before it went off the scope, operators tracked it to 40,000 feet. This case also is unexplained.

On February 22, 1950, Naval officers at Key West reported that two glowing objects had been tracked by radar men as they streaked above the air station. They were also seen by pilots and ground men, flying at a height too great for attempted pursuit.

Over a year later, on July 14, 1951, two strange objects were sighted above White Sands as Air Force and other observers watched a guided missile test. An optical tracker, using a 20 power monocular telescope, spotted one of the large objects near a B-29. Its presence was confirmed by two radar operators who tracked it at jet plane speed. Pictures taken on 35 mm film are said to show an oval shaped object, too indistinct because of the altitude to reveal details. At first, a balloon was suggested as an answer, but the "jet speed" approach shown on radar proves this was impossible. No definite conclusion has been made by Air Technical Intelligence analysts.

In the light of these earlier reports, the 1952 sightings now seem doubly important.

On June 19, 1952, a new incident occurred at Goose Bay Air Force Base - the fourth to date. Just after midnight, a weird red light appeared, holding a southwest course. At the same time, tower radar men caught it on their scope. After hovering briefly at 4,000 feet, the light suddenly turned white. At about this instant, the blip on the scope "brightened." This effect, familiar to operators, is seen when a plane banks, the larger surface exposed to the radar beam causing a sharper return.

Apparently. the unknown device had tilted for a swift maneuver. A second later, the blip returned to normal size, then vanished from the scope. The light disappeared at approximately the same moment. (This odd change in color, before a maneuver or increase in speed, has been described in numerous other cases.)

An even more puzzling incident was the Kirksville, Missouri, affair of July 13. It was 9 p.m.. when Air Force radar men picked up an unknown object, its blip indicating a solid device or machine the size of a B-36. Before it raced off into the night, its speed was tracked at 1,500 knots - over 1,700 m.p.h. Searching for a solution, one officer theorized that a thunderstorm might have caused the blip, but Washington Center controllers say this is impossible. To date, the A.T.I.C. has found no explanation.

Week after week, jet fighters are "scrambled" at points around the country for "saucer" chases. One of these alerts happened near Osceola, Wisconsin, three nights after the second Washington episode. As in many of these pursuits, the first reported speeds of the blips contrasted strangely with the objects' later maneuvers. Most of the blips were dawdling at 60 m.p.h. until the jets took off. Shortly afterward, one blip's speed jumped over 600.

Reaching 25,000 feet, one pilot spied some rapidly moving lights, a little east of St. Paul. At the same time, they were sighted by a trained Civil Defense sky- watch observer, just before they disappeared.

A meteor shower was first considered a possible explanation. It is true that meteors can be tracked by radar; this method is now used by several observatories. But an astronomer at the Naval Observatory, Washington, quickly ruled out this answer because of the first slow speeds. In addition, no meteor shower was reported on that night.

Two F-86 pilots had a little better luck in a chase on August 1. At the time, the press was refused permission to interview the pilots - a rule of the Air Defense Command. Since then, however, the A.T.I.C. has made details available for use in this article.

At about 10:45 on the morning of August 1, ground radar at Wright Patterson AFB picked up an unidentified object between the base and Bellefontaine, Ohio. It was also reported by ground witnesses as a mysterious glowing sphere. The two jet pilots, Major James B. Smith and Lieutenant Donald J. Hemer, were immediately dispatched to intercept it if possible.

As they reached 30,000 feet, both pilots saw a brightly glowing object hovering above them. To make certain it was not a ground reflection, they carefully maneuvered to view it from various angles. The 'saucer's" appearance did not change. Positive it was a solid object, both pilots switched on their camera-guns, nosed upward and made separate runs for pictures. Within a few seconds of the planes' maneuver, the "saucer" began to move off, disappearing at a high rate of speed.

When the pictures were developed, a round shape appeared on both films. But its speed or distance prevented distinctive details from showing in the prints.

No final conclusion has been made by the A.T.I.C. in this case. That this might have been a balloon, as suggested, does not stand up, for two reasons. First, and most important, no balloon can hover, then suddenly race off, outdistancing fast jets. Second, ordinary weather balloons will not show on radar scopes: as stated before, it is necessary to attach a metal radar "target" to reflect the beam. But if ground radar men had been tracking such a balloon, there would have been no mystery. All weather balloon records are available to the A.T.I.C. and no radar target balloon was within miles of the spot.

The only balloon in the general area was a standard radiosonde type, which holds a tiny radio transmitting set, and it was released thirty minutes before the pilots' encounter. Weather Bureau experts have informed me it is not possible to get a radar blip from this type of balloon. Even if it were possible, there would still be no explanation for the hovering and sudden burst of speed witnessed by two experienced pilots.

The violent maneuvers and high speeds frequently reported rule out all balloons - including the Navy's "skyhooks" which were once publicized as the correct explanation..

Every other conventional explanation has been proved false. One, given shortly after the Washington sightings, was put forth by a chemist named Noel Scott, who is employed by the Army. Scott announced he had produced tiny "saucers" of ionized gas in a vacuum jar experiment at Fort Belvoir. At the time, Scott told Air Force investigators he had no idea whether the conditions of his experiment were likely to exist in the atmosphere. To get the answer, I queried Dr. George Ray Wait, internationally known physicist of Carnegie Institute. Here's what Dr. Wait told me:

"I know of no conditions in the earth's atmosphere, high or low, that would duplicate those needed to make the laboratory models at Fort Belvoir."

In regard to unidentified objects observed visually and tracked by radar, Dr. Wait posed a key question: Are they navigated?

"If the reports of reversals, sharp turns, rapid climbs and descents are fully confirmed," he said, "no natural phenomena, to my knowledge, would explain such reports."

The swift acceleration of saucers, confirmed by radar and visual reports, far exceeds the acceleration of man-made rockets and guided missiles. In addition, no earthly craft can reverse from high speed or make the violent turns proved by radar tracks.

Some flying saucer skeptics claim that no solid object, not even a revolutionary space ship, could maneuver as reported, since it would be subject to the Earth's laws of gravity, momentum and inertia.

But there is one practical answer. By applying the propulsion force in the opposite direction, abruptly reversing its thrust, an object might be halted in a few seconds. On an M.E.W. radar scope, or as seen visually, it would appear to have stopped almost instantly. After this follower stop, a 90 degree turn could then be achieved by again changing the thrust.

A G-sled used by the Air Force gives a hint of the possibilities. This device, driven by rockets down a long track, attains high speed in a few seconds. Near the end of the track, it is abruptly halted by a powerful braking system. For an instant, the force acting on an occupant is many times the effect of gravity. Tests have proved that human pilots, for a fraction of a second, can take over 45 G's and live.

Perhaps human like beings could withstand the G forces of saucer maneuvers if applied for only a moment. It may be, however, that the objects are remotely controlled from higher up

to avoid repeated exposure to such stresses. In any event, the maneuvers themselves are explainable by reversing or shifting the thrust of some radically new type of propulsion.

The increasing evidence from the radar-and-light reports cannot be denied. It is my opinion, as previously stated in TRUE, that the saucers are devices from outer space, exploring the Earth just as our government expects some day to explore other planets.

Though most authorities believe that life, *as we know it* is not possible on Mars or Venus, they do not exclude the possibility that different forms of life may have developed there. From these neighboring planets, the time required to reach the Earth would be relatively short. with the velocities now considered attainable.

If the saucers are not from planets of our solar system. then the problem of the vast distances from other stars' planets may seem insurmountable. But Einstein's theory of special relativity offers a solution now accepted by space travel planners in this country and abroad. Because of the relative nature of time and space the elapsed time for a round trip to a distant point will be less for the travelers than the elapsed time recorded on Earth when the journey is ended. However, the occupants of the space craft will be unaware of any difference during their trip; to them the daily passage of time, as shown by their clocks, will seem normal.

This difference, or "time dilatation factor" as it is called, will increase as a space ship's speed approximates the velocity of light.

Fantastic though it seems, time dilatation has been proved mathematically. In a recent Journal of the British Interplanetary Society, Dr. L. R. Shepherd gives figures for a specific interstellar voyage. He assumes that a traveler, X, makes a round trip to the star Procyon, 10.4 light years away, while an observer, Y, remains on Earth to record the elapsed time here. He also assumes that, because of the long trip at maximum speed, periods of acceleration and retardation are negligible.

"Suppose X goes to Procyon and back," says Dr. Shepherd, "with a velocity of .99c (*c* equals the velocity of light]. While Y records X's return twenty one years later, X is aware only of a passage of *three years*..... The only shortcoming wo.....that friends whom he left iii the bloom of their youth would be found in their dotage."

This latter effect, however unfortunate, does not alter the basic fact: time dilatation can greatly shorten interstellar journeys. Nor would trips of several years daunt human space explorers any more than long sea voyages daunted Columbus. Magellan and others who left home for extended periods to explore the globe.

To reach velocities close to that of light would, this scientist points out, require a source of energy more powerful than any known today---the wholesale conversion of mass into energy.

The problem is staggering---but so were the problems of splitting the atom. Races on other other planets, with civilizations perhaps thousands of years ahead of ours, could have found the answer and conquered space long ago.

Some Air Force officers still insist the saucers do not exist But regardless of such personal beliefs, the saucer investigation will go on. The growing body of data, it is hoped, may permit some conclusions to be drawn. So far, statistics aren't particularly helpful. A preliminary A.T.I..C. analysis of fifty radar reports taken at random from the files show incidents from land and sea, and speeds between zero and 4,500 m.p.h.; 80% from surface land or ship based radar installations, 20% from air-borne sets, and 35% were confirmed visually. Daytime produced 35% of the incidents, night 65%. In 60% of the cases, a single

object was reported; in 40%, multiple objects. They flew straight paths more often than they maneuvered.

The latest plans of the A.T.I.C. attest to its serious attitude. One hundred special two lens cameras which can take simultaneous straight and spectroscopic photos through which the saucers' light may be analyzed, have been sent to strategic points---air bases, A-bomb plants, and other spots where the mysterious visitors have frequently been seen. The reports of airline pilots and other trained observers are to be studied more carefully than ever before. Even apparent hoaxes will be investigated.

The Air Force is admittedly touchy on one point---the question of interceptors trying to down the "saucers." General Ramey, reiterating his previous statement, emphasized:

"No orders have been issued to the Air Defense Command or by the Air Defense Command to its fighter units to fire on unidentified aerial phenomena."

Unless an object attacks our planes, or is obviously a threat to this country, the decision is left up to pilots.

In talking with Major Norman, the Air Force radar expert, I learned he had been an interceptor pilot and had once chased a strange light.

"On an interception like that," I said, "exactly what steps would you take?"

"First, you prepare for combat," be said. "That means your guns are ready in case you're fired on. Then I'd ease in close, if I could, for a try with my camera- guns. But I'd be very cautious, I'll tell you that."

"Suppose you got close," I said, "and saw some strange device. Would you signal for it to land---maybe fire a burst off to one side?"

He looked at me grimly. "Unless it attacked me, I wouldn't cut loose my guns---it might be suicide."

"Even if they weren't hostile," another officer told me, "barging in too close might scare them into attacking."

There is no doubt that many interceptor pilots remember Captain Mantell, who met his death while chasing a saucer near Godman Field, Kentucky.

Though he was said to have blacked out from lack of oxygen, there is still a lingering doubt among fliers.

Trying to communicate with the saucers would seem the next logical step. So far, the Air Force informed me, it has made no such attempt. When I suggested the idea to Controller Harry Barnes, he looked surprised.

"I was so intent on tracking them, I never thought of trying the radio. After all, what would you say?"

"How about this? 'You, out there three miles north of the airport; if you read me, make a right turn.'"

"If it did turn, my hair would probably stand on end." Barnes thought for a moment. "Maybe I'll try it, at that, if it ever happens again."

From all the hundreds of saucer reports, one fact stands out---there is no cause for fear. For years, these unknown visitors have been operating peacefully in our atmosphere. (I do not believe Mantell's plane was destroyed as a hostile act.) There has been plenty of time, if hostility were intended, for the intelligence back of the saucers to strike at our planes and our cities.

It is evident that exploration, and eventually contact, are the purposes behind the saucers' repeated visits. When that contact comes, it should be no cause for panic. Meeting intelligent beings who know the secrets of space should be of profound benefit to everyone on Earth.

It could be the greatest adventure of all time.--- **Donald E. Keyhoe**

Roswell & The Wave of '47

Too Many Coincidences

Francis L. Ridge

Released: 31 July 2007, Updated: 20 Jan. 2008

Something very important happened in July of 1947, something that will ultimately be life-altering. It was an event that was covered up so well that not even seasoned UFOlogists touched it until the 1970's, a quarter of a decade later. It was 1980 before the first book about the events at Roswell was written. The cover-up worked.

If Jesse Marcel, Sr. hadn't told nuclear physicist/UFO researcher Stanton Friedman about Roswell in 1978, we may never have heard about it. Whoever was responsible for the cover-up had done a remarkable job. Now, with over 600 first and second-hand witnesses on record, the story of what really happened that summer in 1947 has become much clearer. In six weeks time there were as many UFO sightings reported to the news media as there were reports to the U. S. Air Force Project Blue Book for the entire year of 1952!

I have two reasons for writing this paper about Roswell (which occurred in 1947) and the "Estimate of the Situation" produced a year later (in 1948).
1) Looking at the revised data and placing this in the historical context, I think I might have discovered some answers and/or some head-scratching coincidences.
2) I wanted to condense the Roswell enigma into something short but informative, dealing with the most impressive evidence, adding my pet theories for-the-record. This is for my friends and colleagues, and family. I confess that I used the latest information from the affidavit (Ref. 7 & 8) of Lt. Walter Haut to construct this scenario, and that a lot of the other depositions that are no doubt very relevant, but would have made a short report impossible, I left out. The argument about dates and times is not important, at least here, because I'm convinced these events happened. Besides, there were things going on simultaneously at a number of locations. Here is what I think is important and what I want researchers and others to take note of.

Evidence shows that the UFO story began long before World War II, but most are familiar with the stories of objects or lights seen by pilots during the war, called "foo-fighters", etc. Compared to more recent history, this wasn't as interesting. Most of the books we have read paid only cursory attention to those sorts of things. It was the enigmatic "flying saucers" that got our interest, and those suddenly sprang upon us in the summer of 1947, the famous Kenneth Arnold sighting of June 24th being one of the highlights. But the real surprise, was the evidence put forth in the recent book, "Strange Company" (2007), by Keith Chester. (Ref 1.) This book lists about 150 more incidents than even I knew about, some of them close encounters, during WWII. Keith stated in the introduction that the book "presents one of the greatest wartime mysteries, one that has been shrouded in ignorance for more than sixty years. And it suggests that while an immense twentieth century war was raging on Earth, there appeared to be someone, or something, from somewhere else, watching us." This book provided more pieces to the puzzle which has been on my mind for decades.

Planet Earth had just experienced two devastating World Wars. WW II had lasted six long years and ended

on September 2, 1945. Sixty million people died in that war, making it the deadliest conflict in human history. Sadly, nearly 2/3rds of those killed were civilians. In August of 1945 the United States used the only atomic bomb group in the world, the 509th (which by November was based at Roswell, New Mexico. See previous UFO connection at Tinian Island) to deliver two atomic bombs to Japanese targets, killing 140,000 people at Hiroshima and 74,000 at Nagasaki. As soon as the war ended we continued to develop and test bigger bombs and better delivery systems. Soon, atomic warheads could be carried to targets by ballistic missiles. Those missiles were being tested in New Mexico. History has repeatedly shown that when Earth people make things, they use them. To make things even scarier, we already HAD used nuclear weapons twice, and on civilians! And for the record, we have tested over 2,000 nuclear weapons since then, some in space!

The preface of one of the most recently released books, "Witness to Roswell" (Ref. 2) by Thomas Carey and Donald Schmitt (2007), describes New Mexico very well: "The state of New Mexico in 1947 was the most sensitive and highly guarded area in our country, if not the entire world. Not only was there ongoing atomic research at Los Alamos where the first atomic bomb was developed, but there was also the testing of captured German V-2 rockets taking place just to the south at White Sands near Alamogordo. Not far from Alamogordo was also Trinity Site, where the world's first atomic bomb was detonated. And at Roswell itself was the headquarters of the 509th Bomb Group, the only atomic strike force in the world at the time. It was the 509th that just two years before had dropped the two atomic bombs on Hiroshima and Nagasaki to end World War II. Little did they know that they would also become involved in one of the most significant, most historic events of all time—the crash of an unknown object."

By 1947 the night-marish events of WWII were still in the minds of many. I don't know what triggered it, but suddenly and without precedent, a massive wave of sightings of objects described as "flying discs", hit the United States. It is now sixty years later and no satisfactory explanation has been forthcoming. Beginning in June, newspapers across the country carried accounts describing the arrival of flying saucers. Witnesses throughout the country would describe flying "discs" and other assorted, metallic flying objects that defied conventional explanation. Ted Bloecher in his book, "The Report on the UFO Wave of 1947" (Ref. 3), describes newspaper accounts of military pilots being placed on 24-hour alert, and radar operators on 24-hour standby, all looking skyward and hoping that whatever was invading our airspace was not a new threat to our national security that might lead to another war. In most of these (over 1500 incidents) the objects were described as round or disc-shaped. In fact, half of them occurred in broad daylight! For more than a week, sightings were made in continuously increasing numbers.

On the late evening of July 3, 1947, a severe lightning storm raked central New Mexico. During the height of the storm, local ranchers (10-12 miles apart) would later describe hearing a loud explosion that did not sound like the other thunderclaps. Records now show that within hours, UFO sightings began to increase all over the United States. Based on what was going on and the apparent intensity of it all, "somebody" else might have thought we had actually shot down one of their craft.

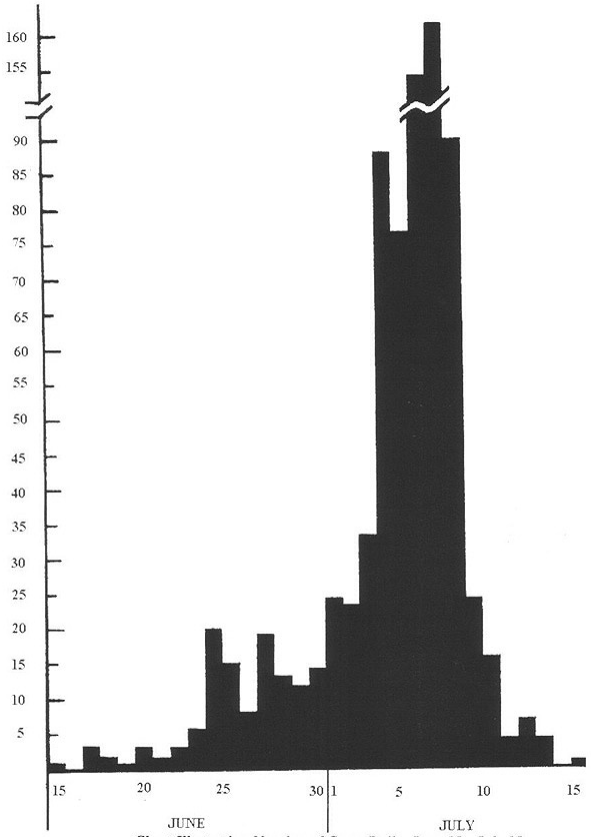

Chart Illustrating Number of Cases Daily, June 15 - July 15

Chart 05-6

On July 4th the reports rose sharply and spontaneously, and for five days there was scarcely any part of the United States that had not been visited by these strangely elusive aerial objects. Reports came from many points in Canada as well. The number of sightings crested on July 7th (carefully note that date), and during the next few days reports began to diminish until, about a week later, only a handful were being made from scattered sections of the country. Although the objects themselves had all but vanished, interest and speculation about them continued for some time after. The printout that lists 853 of the 1500 incidents for that six week period can be found at 1947 wave. I have also posted the complete report, The Report on the UFO Wave of 1947 by Ted Bloecher. The 1947 UFO Chronology, compiled by my NICAP Team may be of interest. All in all, over 500 pages of documentation.

One thing I noticed almost immediately: Sightings had peaked IN NEW MEXICO during that wave on June 27 and 28th, indicating a frenzy of activity days BEFORE the crash. The sudden increase in NATIONAL sightings occurred right after the crash. I had considered the thought that the 27th-28th peak was the result of the famous Kenneth Arnold sighting near Mt. Ranier, Washington, and the press reports from all over the country days later. But this peak was definitely concentrated in New Mexico! Keep in mind that these are civilian reports from newspaper files. There are no military records to tell us what the military was experiencing, but surely there were such incidents in New Mexico. Looking at those charts one cannot help but note a very suspicious LACK of incidents reported from July 3-8 coming from New Mexico, PERIOD. We know that, according to Air Force admission during the 1994 General Accounting Office investigation, that many records were reported as destroyed along with other documents (see GAO investigation)

Note this item is on the very first page of the GAO report. (Numbers of paragraphs are as in the actual report).

> "(2) although some of the records concerning Roswell activities had been destroyed, there was no information available regarding when or under what authority the records were destroyed;"

GAO Report continued:
(3) only two government records originating in 1947 have been recovered regarding the Roswell incident;
(4) a 1947 Federal Bureau of Investigations record revealed that the military had reported that an object resembling a high altitude weather balloon with a radar reflector had been recovered near Roswell; and
(5) a 1947 Air Force report noted the recovery of a flying disc that was later determined by military officials to be a radar tracking balloon

Item (4) is the July 8 FBI telex saying Major Kirton, the intelligence officer at Fort Worth (name spelled incorrectly by the FBI as Curtan) reported the Roswell object was a weather balloon with a hexagonal radar reflector, but also said that "telephonic conversation between their office and Wright Field (Dayton, Ohio) had not borne out this belief. Disc and balloon being transported to Wright Field by special plane for examination". According to newspaper accounts, General Ramey said the flight had been canceled. If the Roswell object WAS a balloon, this makes sense. Why send an obvious balloon all the way to T-3 at Dayton? But here, the July 8 document confirms there WAS a flight. And the balloon explanation didn't agree with the facts known by the FBI at that time.

I asked the reader to note the date, of July 7th, in regard to "the number of sightings crested on July 7th, and during the next few days reports began to diminish until, about a week later, only a handful were being made from scattered sections of the country." The sightings were dying down BEFORE General Ramey put out the balloon explanation on July 8th, ridiculing those who had mistaken a balloon for a flying saucer!!! The wave of 1947 didn't die because of the embarrassment at Roswell. Whatever the saucer mission was, it was over.

Briefly, here is what I contend, happened at Roswell.
Either something involving two flying saucers (which I find hard to believe based on the debris trail), or **something else,** struck the craft, knocking off small fragments and possibly causing decompression. The resultant train of debris was a long NW to SE corridor over 65 miles long. A few pieces were found 5 miles NW of the first official site two months later. The craft then struck the ground at a shallow angle at the Foster Ranch about 60 miles NW of Roswell and skipped back up into the air, leaving a slight gouge and a light debris field several hundred feet wide and 3/4 of a mile long. The rest of the ship, along with the remainder of the doomed crew, remained airborne and continued in an southeast direction for another 20 miles or so before it came to rest in a flat area with low, rolling hills 40 miles north/northwest of Roswell.

Carey & Schmitt (Ref. 2) suggest, that based on their evidence, the crash occurred on July 3rd. My scenario doesn't require this. In fact, the evidence I present indicates that the crash occurred between two peaks in sightings, which includes the 3rd. Just how close to either peak the event took pace, I'm not sure. It doesn't matter. However, Jesse Marcel, Jr. (Ref. 4) says the event occurred one week after the Arnold sighting of June 24th, which means it didn't happen during the 27-28 peak..

The Sites

"Mack" Brazel and his wife

Site #1 - Sixty miles NW of Roswell - Mack Brazel, (foreman of the Foster Ranch) finds the debris on the sheep ranch he worked. The sheep will not cross the debris to get to water. The debris is described as silvery, extremely light weight, and very thin like aluminum foil. Some of the material cannot be dented or bent. Other items can be wadded up into a ball but return to the original shape when released.

Site #2 - Twenty miles further SE.- According to his mother (Loretta Proctor), the severely-frightened Dee Proctor (who never allowed himself to be formally interviewed by anyone about what he witnessed as a 7-year-old boy with Brazel that day in 1947), in 1995, takes his dying mother to one of the sites. This one turns out to be the exact same one identified by Roswell researchers Kevin Randle and Don Schmitt in 1991. Today, it appears that the "Dee Proctor Body Site" is a legitimate one, in the straight-line trajectory of four sites involved in the Roswell UFO crash, where Mack Brazel found two or three alien bodies a few days after they were blown out or ejected from the stricken craft when it exploded over the debris field on the evening of July 3, 1947. (Ref, 1,46)

Site #3 - Forty miles NNW of Roswell - The rest of the ship, along with the remainder of the doomed crew, remains airborne and continues in an east/southeast direction for another 20 miles before crashing in a flat area with low, rolling hills.

Small samples of debris about 5 miles NW of the Foster ranch (Site #1), were discovered months after the crash. My first impression is that something struck the saucer at this point, a fatal blow, which left only a few fragments discovered by CIC agent Bill Rickett and Dr. Lincoln La Paz. In September of 1947, Rickett was ordered by the Pentagon to assist scientist Dr. Lincoln La Paz, from the University of New Mexico at Albuquerque. According to Rickett, La Paz had just been briefed in Washington, D.C. and was to determine the speed and trajectory of the unknown object. Keep in mind that this find is two months after the crash and provides more nails in the balloon theory coffin. They found pieces!!!! They were startled to find that the sand in the high desert terrain has crystallized, apparently as a result of exposure to tremendous heat. La Paz reported to the Pentagon that he thinks that the object was an unmanned interplanetary probe. He knew nothing about the bodies and had not been told there were any. (Ref. 3, 176-179)

CIC Agent Bill Rickett

***

So the story all began when Mack Brazel, the ranch foreman, found debris on what was known as the Foster Ranch. Any seven year old kid would have recognized a balloon of any kind, with or without aluminum radar reflectors, balsa wood struts and monofilament line. Mack had seen these things before. Major Jesse Marcel and CIC Agent Cavitt looked at the debris that Brazel had first brought into town and even they couldn't identify it. And remember, it was 60 miles as the crow flies, but 100+ miles by road, and over some rough terrain, to get to the crash site and they would not have wasted their time on anything like a balloon, no matter how secret its use might have been. Maj. Marcel was trained in radar and knew what balloons and radar targets looked like.

The scenario:
After gathering some of the debris for most of the day, Maj. Marcel sends Cavitt ahead of him and on in to Roswell AAF. By now it is late and by early the next morning (around 1:00 AM) he is on his way to base, his home an easy stopover along the way. He stops for a short while to show his wife and son, Jesse, Jr., what he and the others have found. He then takes the debris samples into the base.

Maj. Jesse Marcel, Sr. .... Col. "Butch" Blanchard

At 6:00 AM Marcel and Cavitt visit with Col. Blanchard in his quarters and tell him what they have seen.

Late, the day before, when Marcel and Cavitt are with him at the ranch, Brazel leaves with KGFL station manager Walt Whitmore or one of his associates and is hidden out while recording "the story of the century" on a wire recorder. KGFL is off the air by this time so the show has to be aired the next morning, July 8. Early in the morning, Jud Roberts (minority owner) gets a call from the FCC in Washington and is warned not to air the interview, that it was in the interest of national security. If he did, KGFL would lose its broadcasting license. A few minutes later, New Mexico Senator Dennis Chavez strongly suggests he do exactly what the FCC ordered.

Mack is taken into custody by the AAF and detained by the U.S. Army Air Forces at the guest house for four or five days while cleanup operations continue. Military officers begin to interrogate. Brazel is denied access to a phone, is given an Army physical, and is subjected to rigorous questioning and intimidation while under arrest. Balloons can get you into a lot of trouble. Mack Brazel was as patriotic as one can get, as many in those days were. All the AAF had to do was tell him not to talk about it, that it was extremely important he keep his mouth shut, and that would have been all there was to....if it had been a balloon.

Col. Blanchard calls the provost marshal, Maj. Edwin Easley, and orders him to post guards on the roads around the debris field, armed guards encircled the primary areas, denying access to anyone without official business.

7:30 a.m. The regular 8:00 AM staff meeting is moved up to 7:30 A.M. Haut's affidavit doesn't mention this.

A flying saucer has crashed right in the middle of the hottest technological and military area in the world, New Mexico. The Army Air Force has the alien technology in their possession and bodies to prove who was behind it, almost immediately. Here's why the military had to cover it up:

1) A plan for such a recovery was devised as early as 1944; dealing with ANY new technology found.
2) There were spies all over New Mexico; we didn't want ANYONE to know we had in our possession a new technology.
3) The Pentagon and the military in New Mexico didn't know if an invasion was imminent or not.

Lieutenant General Nathan E. Twining was the commander of the Air Materiel Command (where crash debris was flown), the parent organization at Wright Field, Ohio, and the next higher headquarters for both the Alamogordo Army Air Field and the Kirtland Army Air Field. Flight records show he changes his plans (Ref. 9) due to "a very important matter that developed here" and flies to Alamogordo AAF on July 7th. Newsclippings place him at Kirtland AFB on July 8th, talking to the press about flying saucers not being a product of the armed forces. Flight records show Twining left NM on July 11.

Lt. Gen. Laurence C. Craigie, chief of the Research and Engineering Division at Headquarters Army Air Force, is sent to investigate the crash on the orders of Gen. Curtis LeMay. The general meets with President Harry Truman immediately afterwards. (Ref. 5)

More men arrive at the debris field at the Foster Ranch and are assigned to assist in cleaning it up. Soldiers with wheelbarrows move across the field, tossing in the debris. When the wheelbarrows are filled, the soldiers take the debris to collection points. The debris is then loaded into covered trucks to be driven into Roswell.

Sometime that morning, Robin Adair, a photographer with the Associated Press receives a call from the main office in New York, is told to get to Roswell immediately, "even if it meant leasing a plane". Before landing at Roswell, Adair flies over the sites (2). Many troops, vehicles, and MPs cover the large open field. "One of them (sites) wasn't very distinct. The other was." Something has descended, impacted the ground, and then ascended into the air. (Ref. 3)

Several flights carry debris and bodies to various locations.

"Pappy" Henderson confides in his close friend John Kromschroeder in 1978 that he flew wreckage from a crashed saucer out of Roswell and to Dayton.

My impression of the highly successful and relatively swift crash-retrieval operation at Roswell was that it was as if it had been orchestrated much earlier. I say "relatively". But I guess it wasn't all that swift nor all that successful in cover-up terms. They drove through the streets of Roswell brazenly with the flatbed truck, allowed politicians etc. into the hangar, and in many other ways showed that they really DID NOT know exactly what to do. It also took many days and hundreds or personnel to sweep the sites. Richard Hall, in a recent note, made a good point:

> Hall:
> "I think a very strong case can be made that the basic reasons they succeeded in the recovery right under the noses of the populace and the base personnel are (1) the remote locations, and (2) the tightly knit and controlled nature of the base traditions and operations. On top of that, the blatant use of threats of violence to keep people silent is well-established, and that sure as hell is not good planning. Apparently they got away with it only because of who and where they were."

But there is documentation supporting other experiences had prepared the military for such an event, even if there was no plan to ever recover a flying saucer. Keith Chester may have found the answer:

Page 61 of "Strange Company":

> By the order of Major General Nathan Twining, a Fifteenth Army Air Force memorandum was issued on March 15, (1944). Superseding a November 15,1943, version, it was titled, "Capture Intelligence Interrogation Of Air Prisoners of War, Examination Of Enemy Equipment." It detailed the apparatus already set in place for such matters. The Combined Services Detailed Interrogation Center (CSDIC) was specifically set up to interrogate enemy air force prisoners and examine their documentation or anything else in their been possession. No prisoner was to be interrogated by anyone, "regardless of rank," except by the CSDIC air interrogators. Fifteenth Air Force Headquarters required all documentation sent to the A-2's attention, whether the air interrogator thought it related to enemy aircraft or something else. The memorandum required that **all crashed enemy aircraft or captured air material be guarded** by personnel from 'the nearest Army unit' until a 'representative of the Captured Intelligence Section, A-2, MAAF [Mediterranean Allied Air Force] arrived."

There was only one facility that was dedicated to the science of "reverse engineering": AMC Intelligence Dept, referred to as T-3 (Ref. 11) at Wright-Paterson AFB, Dayton, Ohio. On May 21, 1951 it would become known as ATIC (Air Technical Intelligence Center). The word "Air" was changed to "Aerospace" in 1959. Then, on July 1, 1961, it would become the Foreign Technology Division (FTD). Air Force Regulations 200-2 and 80-17 would later spell this out, requiring first the 4602nd AISS and later on the 1127th Field Activities Group, to do the investigation and secure materials.

Col. Thomas DuBose

Gen. Thomas DuBose exposes the cover-up at Roswell in an affidavit. More on DuBose.

> DuBose:
> "In early July, I received a phone call from Gen. Clements McMullen, Deputy Commander, Strategic Air Command. He asked what we knew about the object which had been recovered outside Roswell, New Mexico, as reported by the press. I called Col. William Blanchard, Commander of the Roswell Army Air Field and directed him to send the material in a sealed container to me at Fort Worth. I so informed Gen. McMullen."
>
> "The material shown in the photographs taken in Maj. Gen. Ramey's office was a weather balloon. The weather balloon explanation for the material was a cover story to divert the attention of the press."

DuBose and Colonel Alan D. Clark, the base commander, meet the aircraft from Roswell. Clark receives the bag with (a sample of) the debris and walks to the "command" B-26 to fly it out to Andrews Field, Maryland. This was the Pentagon's first peek at the Roswell material.

Gen. Roger Ramey

Lt. Walter Haut

In 2002, Walter Haut, the Lieutenant who had put out the famous press release for Colonel Blanchard announcing the AAF recovery of a flying saucer, signs an affidavit, to be released upon his death.

(8) On Tuesday morning, July 8, I would attend the regularly scheduled staff meeting at 7:30 a.m. Besides Blanchard, Marcel; CIC [Counterintelligence Corp] Capt. Sheridan Cavitt; Col. James I. Hopkins, the operations officer; Lt. Col. Ulysses S. Nero, the supply officer; and from Carswell AAF in Fort Worth, Texas, Blanchard's boss, Brig. Gen. Roger Ramey and his chief of staff, Col. Thomas J. DuBose were also in attendance. The main topic of discussion was reported by Marcel and Cavitt regarding an extensive debris field in Lincoln County approx. 75 miles NW of Roswell. A preliminary briefing was provided by Blanchard about the second site approx. 40 miles north of town. Samples of wreckage were passed around the table. It was unlike any material I had or have ever seen in my life. Pieces which resembled metal foil, paper thin yet extremely strong, and pieces with unusual markings along their length were handled from man to man, each voicing their opinion. No one was able to identify the crash debris.

(9) One of the main concerns discussed at the meeting was whether we should go public or not with the discovery. Gen. Ramey proposed a plan, which I believe originated from his bosses at the Pentagon. Attention needed to be diverted from the more important site north of town by acknowledging the other location. Too many civilians were already involved and the press already was informed. I was not completely informed how this would be accomplished.

(10) At approximately 9:30 a.m. Col. Blanchard phoned my office and dictated the press release of having in our possession a flying disc, coming from a ranch Northwest of Roswell, and Marcel flying the material to higher headquarters. I was to deliver the news release to radio stations KGFL and KSWS, and newspapers the Daily Record and the Morning Dispatch.

(11) By the time the news release hit the wire services, my office was inundated with phone calls from around the world. Messages stacked up on my desk, and rather than deal with the media concern, Col. Blanchard suggested that I go home and "hide out."

(12) Before leaving the base, Col. Blanchard took me personally to Building 84 [AKA Hangar P-3], a B-29 hangar located on the east side of the tarmac. Upon first approaching the building, I observed that it was under heavy guard both outside and inside. Once inside, I was

permitted from a safe distance to first observe the object just recovered north of town. It was approx. 12 to 15 feet in length, not quite as wide, about 6 feet high, and more of an egg shape. Lighting was poor, but its surface did appear metallic. No windows, portholes, wings, tail section, or landing gear were visible.

(13) Also from a distance, I was able to see a couple of bodies under a canvas tarpaulin. Only the heads extended beyond the covering, and I was not able to make out any features. The heads did appear larger than normal and the contour of the canvas suggested the size of a 10 year old child. At a later date in Blanchard's office, he would extend his arm about 4 feet above
the floor to indicate the height.

(14) I was informed of a temporary morgue set up to accommodate the recovered bodies.

(15) I was informed that the wreckage was not "hot" (radioactive).

(16) Upon his return from Fort Worth, Major Marcel described to me taking pieces of the wreckage to Gen. Ramey's office and after returning from a map room, finding the remains of a weather balloon and radar kite substituted while he was out of the room. Marcel was very upset over this situation. We would not discuss it again.

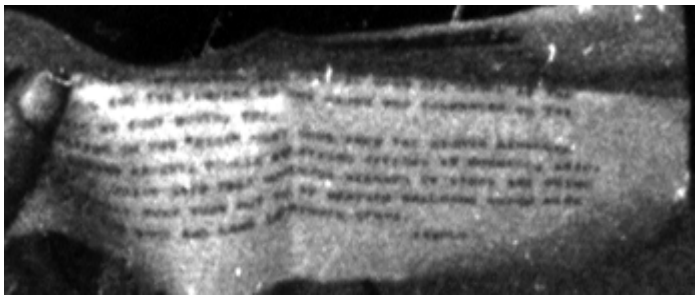
(17) I would be allowed to make at least one visit to one of the recovery sites during the military cleanup. I would return to the base with some of the wreckage which I would display in my office.

(18) I was aware two separate teams would return to each site months later for periodic searches for any remaining evidence.

(19) I am convinced that what I personally observed was some type of craft and its crew from outer space

Ramey & DuBose with substituted foil reflector (balloon not shown)

Gen. Ramey has Maj. Marcel and some debris on the flight to Dayton, Ohio, which is diverted to Fort Worth for the cover-up plan.



Memo

In the photo of Ramey and DuBose at Fort Worth, showing the substituted balloon debris, one can see Ramey holding a memo clutched in his left hand. It is a copy of a message he had just sent to the AAF Chief of Staff at the Pentagon about the recovery and coverup. No one would have imagined that technology would someday reach the point where we could actually read some of that memo. The photographer, the only newsman invited to help perpetrate the cover-up, is James Bond Johnson of the Fort Worth Star-Telegram. He is equipped with a professional-quality camera with much higher resolution than most cameras of the day. Read the memo...but first pay close attention to whom the memo was sent.

Vandenberg was in-charge, says Memo. At the time of the Roswell incident, Gen. Hoyt Vandenberg was the Army Air Force Deputy Chief of Staff. With AAF Chief of Staff Gen. Spaatz out of town, Vandenberg is the acting AAF chief at the Pentagon. It was he who has Clements McMullen order the cover-up, get the material to T-2 at Dayton, Ohio. The Pentagon knows they have a flying saucer and alien bodies. (A year later, in 1948, it was the same Hoyt Vandenberg who "wouldn't buy" the Top Secret Estimate of the Situation.).

Robert Shirkey, standing in the operations building, watches as MPs begin carrying wreckage through to load onto a C-54 from the First Air Transport Unit. To see better, he has to step around Colonel Blanchard.

At 2:30 PM. Blanchard decides it is time to go on leave. Too many phone callers into the base are asking to speak with him. He, along with a few members of his staff (Haut included), drive out to the debris field. Those left at the base are told to inform the reporters that the colonel is now on leave.

At 2:55 PM. the Associated Press reports in a "95," just under a bulletin in importance, that a flying disk had been found.

Now, the bodies.

Archaeologists, including W. Curry Holden, working the sites around Roswell stumbles across the impact site where the object has crashed. One of them heads to the closest phone to tell Sheriff George Wilcox of the discovery of the remains of a crashed aircraft of some kind.

At some point Blanchard calls Eighth Air Force headquarters and advises them of the new find. By this time NO ONE believes the material is from a Soviet device, and certainly not any type of balloon or reflector. Eighth Air Force relays the message up the chain of command to SAC headquarters.

The military, knowing the approximate location of the saucer crash, move in with a carefully selected team for the recovery of the craft. The soldiers find civilians on the site already. They escort them off while others secure the area. Five bodies are found on the site. The site is cleaned and secured.

John McBoyle, a reporter for radio station KSWS in Roswell, tries to reach the crash site. He phones to report an object looking like a crushed dishpan. He tells Lydia Sleppy, who works at the parent station in Albuquerque, to hang on. She overhears an argument and then McBoyle tells her to forget it, he has made a mistake. McBoyle is about forty miles north of Roswell.

Sleppy tries to put a message out on the Teletype. According to Sleppy, the message is intercepted by the FBI in Dallas and she is ordered not to complete the transmission. (Ref. 10)

The bodies arrive at the base and are taken to the hospital for examination. Two doctors who are not assigned to the base but who have arrived on one of the special flights begin the preliminary autopsy.

Mirium "Andrea" Bush, 27-year-old civilian woman, secretary to the military hospital administrator (Lt. Col. Harold M. Warne) , is taken by the arm by Warne to the examination room. A number of bodies, described as like children in size, with grayish to brown skin, large heads, and eyes that wouldn't shut. Then, one of them moved. (Ref. 3)

W.J. Rodden, the owner and operator of a photo studio in Roswell, who during the War had been involved in some special photographic assignments for the government, held a security clearance at that time. Although he'd done nothing in an official capacity since the end of the War, he'd proved himself to be a loyal citizen who could be trusted with classified material. He was an expert in photography and was used to photograph some of the material recovered outside of Roswell. (Ref. 13) We were later told by another 509th informant that the Bomb Group had technicians who processed film and repaired cameras, their expertise directed at aerial photographs for bomb damage assesments and photo reconnaissance. He claimed they were not involved in the Roswell event. The photographer who was used at Roswell was brought in from the outside. This man was in fact, W. J. Rodden.

At 2:00 A.M. the next morning a special flight leaves for Andrews AAF in Washington, D.C. Some of the debris and the bodies are on that flight.

8:00 AM. Members of the First Air Transport Unit begin loading crates into C-54s. They load three or four aircraft with an intermediate destination of Kirtland. From there they are to be taken on to Los Alamos. Armed guards watch the loading of the aircraft. (Ref. 1)

At 9:00 A.M. CIC agents Cavitt and Rickett, having returned from assignment in Carlsbad, drive a staff car to the impact site, followed by MPs. They are stopped by the guards who are still posted. Cavitt wants "a new set of eyes on this". When they arrive, they see that a small containment of debris remains which Rickett is allowed to examine. (Ref. 1)

No sooner had the original press release went out and the cover story / explanation is on the wires. The explanation is that Mack Brazel, Maj. Jesse Marcell, CIC Agent Sheridan Cavitt, and Col. Blanchard were fooled by a weather balloon and a radar target reflector!

The cover-up begins

This brief paper mentioned only a few of the testimonies from the 600+ primary and secondary witnesses. For those wanting an in-depth coverage of Roswell, there are a number of books, including the latest two: "Witness At Roswell" by Tom Carey and Don Schmitt, and "The Roswell Legacy" by Jesse Marcel, Jr.

The story goes way beyond Roswell, however, and with even more coincidences. It was coincidence enough for a UFO crash during the first flying saucer wave that lasted only six weeks, most notably in only ten days. It was coincidence enough for sightings to increase right after the crash and decrease before the debunking campaign started. It was a coincidence that the crash could have happened anywhere in the world, but happened in the hottest technological place you would find on Planet Earth. It was a coincidence that an object was tracked on radar, two hundred miles up, over the area of the Foster Ranch.

Late August, 1947; New Mexico

You can see this one for yourself. This report is in the Project Blue Book documents. A CPS-4 radar was modified to track objects at very high altitude. They aimed the antenna almost straight up and picked up a target at 200 miles up. At an even 200 miles the angle of the radar at 70-degrees would put the spot about

73 miles away from Alamogordo Army Air Field (later Holloman AFB). Since the range could have been slightly higher, because of the high angle the ground range could be as much as 76-80 miles or more. The Foster Ranch debris field (and any fairly close-by anomalous site) was about the same distance, about 85 miles away from Alamogordo. The report leaked out. Not found in the original Project Blue Book as an "unknowns", this incident IS listed in the updated list by Brad Sparks: "AMC Watson Labs Project Mogul engineer Rosmovski and communications officer Lt. H. G. Markley tracked a stationary target at 200 mile altitude using a modified CPS-4 radar aimed at 70-degree elevation." (FOIA, Loren Gross, Aug-Dec 1947 SUPP p.28.) Certain AF operations, like Project MOGUL which did the tracking of the 200-mile high stationary object, BELIEVED that there was an object at 200 miles up and went to some effort to cover it up. Two fairly high-level AMC people (Lt Col James C. Beam and Alfred Loedding the "brains" behind Project SIGN) make special arrangements in advance to fly out from Ohio to NM to interview Dr Peoples about the incident and then only when they arrive they find out Dr Peoples has conveniently LEFT and flown off to New Jersey, evidently to evade interview, and Lt Markley is strangely unavailable.

I don't think anyone was more knowledgeable about crash/retrieval stories than Leonard Stringfield. I'm not sure though just how many crashes he researched, but there was a surprising number of alleged incidents. But none of them comes close to Roswell with over 600 witnesses, first and second hand. I do find the Roswell evidence quite compelling. Assuming on my part that real UFO crashes are extremely rare and flying saucer material is really tough, even showing any lack of vulnerability as evidenced by many reports of objects fired upon during WWII, the idea of any crash seems odd. But with the given of Roswell, in my opinion, something brought the grays' lady down.

Were there two saucer crashes? Stanton Friedman thinks so. The debris train doesn't look like the result of two objects colliding, in my opinion. Was the craft struck by and downed by lightning? This appears to be extremely unlikely. One study report provided by NARCAP's Richard Haines explains why this is very rare even with our aircraft. Something brought the craft down and was extremely loud. Could an air-to-air missile have struck the craft in a vulnerable spot? There is no evidence we had any missile that had any type of reliable homing device. Whatever the cause, with such apparently indestructible material reported at Roswell, and the numerous reports from Keith Chester's new book "Strange Company", concerning Allied and Axis military firing on UFOs with no effect, whatever brought the saucer down would have been very powerful and would have been heard for many miles. We're still looking for the answers. If we had anything to do with the crash, or the crew's superiors thought we had, we could have been in big trouble. Vanderburg may have wondered about all these things, thinking the incident may have stirred up a hornet's nest. Saddened in one sense at the loss of life, and fearful of what was to come of it all, the Pentagon would have covered it up, and waited. The sudden increase in national sightings right after the crash might be explained by the possibility that somebody thought we had shot one of their saucers, maybe two, down over New Mexico.

A year later, without Roswell on the minds of Project SIGN at Dayton, Ohio, the independent evidence of other major UFO incidents in general caused the drafting of the top secret Estimate of the Situation, delivered to AF Headquarters on August 5, 1948. (Ref. 6)

> Captain Edward J. Ruppelt:
> "..... the higher The Estimate of the Situation went in the Air Force chain of command the cooler the reception it got, and .....reports of radar picking up UFO's began to come in. How far this estimate got is something that I could never determine, but it got up into the high echelons of the Air Force before it was batted back down. The reason for batting it down was that the conclusions, interplanetary vehicles, lacked proof. A group from ATIC went to the Pentagon to sell the idea to the late General Hoyt S. Vandenburg, then Chief of Staff of the Air Force, but had no luck. The evidence didn't impress him enough to make him decide to buy the interplanetary theory."

If you remember, the Pentagon's AAF Chief of Staff Gen. Spaatz was out of town when the crash occurred. Vandenberg was the acting AAF chief at the Pentagon, and was directly involved, as evidenced

by historical fact and the Ramey memo. Some group, high up in the Pentagon knew about Roswell and they knew they couldn't sign the EOTS. Actually there were two estimates. ATIC's version made no mention of Roswell. I think the Pentagon's version might have. If not, the Pentagon probably didn't need an estimate. It had a spaceship and its crew!

For an excellent paper on the EOTS, see Project Sign and the Estimate of the Situation By Michael D. Swords.

I had a very interesting conversation with Keith Chester while writing this report and we discussed the EOTS. It seems very logical with the way the government produces reports that there were several copies out there, even though it was stamped Top Secret. Top Secret items are supposed to be locked up. Major Keyhoe saw the EOTS in 1952. Captain Edward Ruppelt had seen it and he was the first to describe it in his book. Major Dewey Fournet, HQ Monitor between Project Blue Book and the Pentagon, actually HAD a copy of it. He wasn't too impressed with it and said that it was put together too early too fast. Harry Woo of NavPIC saw it. Fournet showed him a copy of it. In any event ATIC was seriously considering that flying saucers were interplanetary from the very beginning, at least just a year after the Wave of 1947 and Roswell.

The following Page 8 is from the July 30, 1947: Colonel Garrett's ATIC Estimate, which was a rough draft of the report. The finalized version has not been located. Page 8 mentions "lack of topside inquiries, when compared to the prompt and demanding inquiries that have originated topside upon former events, give more than ordinary weight to the possibility that this is a domestic project, about which the President, etc. know." This is an indication to me that somebody in the Pentagon, Spatz and Vandenburg for sure, knew about Roswell.

And here's the Aug. 19, 1947 FBI Memo that says pretty much the same thing. Memo to D.W. Ladd from E.G. Fitch mentioning SAC Reynolds conversation with Lt. Col. George Garrett, re: "there were objects seen which somebody in the Government knows all about."

In my opinion this made the turnaround necessary. Flying saucers HAD to be played down. Project SIGN had to be changed to Project GRUDGE and UFOs had to be explained away. ATIC was already taking the reports seriously. The Pentagon stance was way beyond taking. After a while and nothing happened (no invasion), the pressure eased. The new project Grudge became Project Blue Book. It would take another paper to go into this aspect of the UFO story, but one my colleagues put it pretty well:

> Keith Chester:
> I don't think Bluebook personnel were informing the Pentagon about anything important. I think they were a front, a front that was compartmentalized; a vehicle for running screen for the Air Force in the Public Eye, and an intelligence gathering entity working with civilian investigations. Bluebook did conduct there own investigations, but I feel they were definitely monitored by a much more sophisticated outfit in the Air Force. I think your paper is lacking much about the OSI's role.

In 1952 the massive UFO sighting wave shook up the military and the CIA. Thousands of people reported having seen things in the sky, and radar was confirming those impressions. There were photographs and movies and jet chases and reports of alien creatures. There were headlines and radio reports of activity in the skies over Washington, D.C., that ended in what was described as the largest press conference held by the military since the end of the Second World War. And while all that was going on in the public eye, a first lieutenant was sent into Roswell (Ref. 12) to review the records and documentation about the UFO crash five years earlier. Although he had not been in the military in 1947, and was certainly not involved in the events of July 1947, he now had access to everything that had been written, photographed, and documented about the crash retrieval. His job was to determine what needed to be left in Roswell, what had to be moved to another facility, and what had to be destroyed. The lieutenant said he had access to all the relevant documents, and so understood the whole story. He had seen dozens of reports told from

various vantage points on the crash site, had seen the photographs of the ship, and had even handled a piece of the thin metallic debris. There was nothing about the crash that he didn't have access to, or failing that, of a way of finding it out. The lieutenant's knowledge of Roswell came from the documents he saw in 1952. This officer would eventually rise to the rank of brigadier general.

After 60 years there is nothing in our inventory that even faintly resembles flying saucers or UFO technology. We haven't learned anything from Roswell. Or have we?

On August 19, 2007, Brad Sparks stated:

> "I must admit from my highly skeptical research that in 1949 AFOSI was almost certainly responding to Roswell - for very compelling reasons I cannot get into here. There is in fact some weak, circumstantial evidence suggesting that it was a classic Roswell coverup."
>
> "In 2000 while doing non-UFO-related research, I accidentally discovered the TOP SECRET U.S. government policy response toRoswell, which should not exist if Roswell was essentially a non-event. <>It is disturbing because I had thought of Roswell as a nothing event, and because the idea the US Government took it so gravely serious should be a disturbing revelation. One of our own balloons (Mogul or otherwise) would not trigger any response at all because it's one of ours."

Oct 12, 2007. Some of you probably remember anthropologist Herbert Dick's denial about being on the Plains of San Agustin in July of 1947? It would support Barney Barnett's story about seeing the military AND the archeologists at the crash site if we could prove Dick and his group WERE there and that he lied about it. Dick, who died in 1992, had a college background and advanced degree and would not have wanted to embarrass a prestigious university or jeopardize a chance to acquire a Ph.D by reporting that he was at a crashed flying saucer site with bodies in 1947. So was he there? Yes! Secretly in our possession for some time, in January of 2008 the Harvard Archives allowed Art Campbell to publish the Dick letters. The material concerning Dick's presence on the Plains is a seven-page letter, cleared to me on January 14th, that Dick sent to his advisor, justifying his side of a feud with another archaeologist, over who would do the Bat Cave dig for a thesis. These documents, provided to me by researcher Art Campbell prove Herbert Dick's group's presence on the Plains on July 1-14, 1947.

In the 2007 motion picture, "National Treasure: Book of Secrets", Benjamin Franklin Gates (Nicolas Cage) and his team take another romp through U.S. history. Now, armed with a stack of long-lost pages from John Wilkes Booth's diary, Ben is obsessed with finding the truth behind President Abraham Lincoln's assassination. Forced to help is the President of the United States, who then asks a favor, for them to look at page 47. At the end of the movie, in the scene in the hanger, the President says, "Any insights, about that thing we talked about.?" And Gates replies, "Yes sir, Mr. President, life altering."

The 1975 SAC Base Northern Tier Overflights

October 27 - November 18, 1975

Updated: June 15, 2007

http://www.globalsecurity.org/wmd/facility/images/usaf-map1.jpg

When Project Blue Book's closure was announced in Dec. of 1969* (with full knowledge of the March 1967 missile incident), the media and the public was told that "No UFO reported, investigated, and evaluated by the Air Force has ever given any indication of threat to our national security. There has been no evidence submitted to or discovered by the Air Force that sightings categorized as 'unidentified' represent technological developments or principles beyond the range of present-day scientific knowledge. There has been no evidence indicating that sightings categorized as 'unidentified' are extraterrestrial vehicles." The incidents listed in the latter part of October and the first few weeks of November dramatically illustrate that at least two of these claims are false.

This 13-page report with 59 documents would not be possible without the help of Dan Wilson, Brad Sparks, Barry Greenwood and Larry Fawcett. My work on this compilation began many months ago because of a need for a very

comprehensive listing of these important incidents. This report is part of the 30-page 1975 UFO Chronology but covers only the events during the northern tier overflights so that the importance of this intrusion would not be lost in the shuffle.

The official documents provided in this report list the cause of these incidents (in many cases) as "helicopters". It would soon be obvious, and surely now after 30-plus years, that these were DEFINITELY NOT any type of helicopter. The times listed in the documents are ZULU, so local time had to be calculated so we could use the listings in the proper chronological order. Many times this actually changed the DATE of the sighting. So what you see (if not in need of any future corrections) is what happened, and when.

Here, then, is the 1975 SAC Base Northern Tier Overflights, listed as they occurred, with the other incidents around the country and the world intact.

Francis Ridge
NICAP Site Coordinator

Oct - Dec 75 - Out in space over the Indian Ocean

U.S. satellites were illuminated or "blinded" over the Indian ocean. Source 10-1,000 times as strong as natural sources. 5 incidents. One 4 hrs. long.

Metropolitan D.C.Besieged With UFO Activity

Strange lights, unexplaonable maneuvers, and craft-like shapes are continuing to puzzle residents of the Washington, D.C. area. Reports began in October and have continued through December at the NICAP office, Many of the reports have similarities while others are an enity onto themselves. (The National Military Command Center [NMCC} is located in Washington, D.C.)

Oct. 3, 1975; Quincy, MA
On this night a large mass of white light, with smaller blue lights inside, hung stationary over Quincy. (Source: CUFOS News Bulletin, February 1976, p. 7).

Oct. 4, 1975; Ramsey, NJ
2:55 a.m. Two police officers, Francis J. Gross and C. Ragazzo were on routine patrol when officer Ragazzo received a radio call from Gross informing him of five "strange looking" lights in the south-west sky. Both officers were able to observe the objects for a period of five minutes. The lights were in a straight line formation and moving very slowly. They appeared to be solid and were reddish in color. The rear sections of the objects were blurred but the rest of the cigar shape was distinctly outlined. The officers watched the objects intently until they disappeared from sight. (Reference: UFO INVESTIGATOR. December 1975, page 1)

Oct.16, 1975; Davis, CA
8:20 p.m. Seven witnesses including the main witness named Landeros sighted two UFOs maneuvering in the sky. The first object was triangular in shape with white and yellow lights. It went down and up rapidly, then back-and-forth. The second UFO was a domed disc; it came from same direction as the first and had red, green, and blue lights spinning on its rim. It hovered, tilted, and shot off toward the west. (Source: CUFOS News Bulletin, February 1976, p. 9).

Oct. 18, 1975; 25 miles NW of Helena, MT
12:30 a.m. John Struble was driving his truck when he noticed a large object, fifty feet in diameter and twenty-five to thirty feet in the air. The object passed over his truck from the rear and then stopped and hovered about one hundred yards ahead of him. As the object did this it directed a very bright light at him, causing the truck's lights and engine to go out. The UFO stayed there for about five minutes before moving away. The object made a noise like a big jet and then rocketed straight up into the sky and moved away to the east at an incredible speed. When the UFO disappeared the truck's lights and engine came back on. Struble notuced that his nonelectric watched had stopped for five minutes, the duration of the UFO's appearance.(Reference: Lawrence Fawcett and Barry J. Greenwood, *Clear Intent*, page 33)

Oct. 19, 1975; Hailey, ID
11:00 p.m. Two men walking just west of town noticed a red light approaching their position at high speed. It stopped over

them, and was described as an almond shaped craft pointed at the ends. It then turned bluish in color and began to hover. The lights suddenly went out and the craft descended making a hissing sound. It landed among some bushes then a small light came on. At this point both men saw a figure moving within the light and ran back to town. (HC addition # 744, CUFOS Reports,Type: A)

Oct. 20, 1975; Priest Butte, MT
4:30 p.m. A couple living on a ranch near Priest Butte, Montana, reported that they had seen a UFO about half a mile from their home, on the east slope of Priest Butte. Using binoculars, they described it as being egg-shaped, with the large end of the craft on the ground. It had one yellowish-gold light which at first gave off a dull glow and then became brighter. It had two arm-like appendages which came out of the craft, one on each side. The arms made a continual motion similar to a breaststroke. The craft remained stationary for five minutes. Then the appendages retracted into the craft, and it went straight up and out of sight. (Reference: Lawrence Fawcett and Barry J. Greenwood, Clear Intent, page 34)

Oct. 25, 1975; Sao Gondolo do Amarante, Ceara state, Brazil
6:00 p.m. A young woman with the surname of Dira had bathed in a lagoon in Sao Gondolo do Amarante on the river and was washing clothes when she felt a heat wave and saw an oscillating blue light in the sky nearby. Frightened, she took cover in some undergrowth, but the light increased intensity. When the blue light approached even closer she ran home. She managed to escape inside her house, but she had a high body temp, bloodshot eyes, and her skin looked like it had a sunburn. (Source: Claude Bourtembourg, SOBEPS News, March 1976, p. 18; Charles Bowen, Saga UFO Report, December 1976, p. 80; both sources cite J. Gualberto.)

Oct. 25, 1975; Sao Gondolo do Amarante, Ceara state, Brazil
Bt. 6:00 & 7:00 p.m. A local man was struck by a blue beam of light, reputedly from a disc. He subsequently died. Several other witnesses reported being attacked and terrified by the experience. Some reported being paralyzed by a blue light. (Source: Charles Bowen, FSR, July 1976, p. 33 and Saga UFO Report, citing La Razon, October 27, 1975).

Oct. 27, 1975; Oxford, ME
David Stephens was one of the principals of this famous abduction case. It's one of the most interesting such incidents, not only for the abduction itself but for its curious aftermath. Investigator Brent M. Raynes wrote about it in 'The Twilight Side of a UFO Encounter', FSR 22,2 (July 1976), with follow-up comment by Berthold E. Schwarz in the same issue. The case is also discussed in Thomas E. Bullard's UFO Abductions: The Measure of a Mystery and in my The UFO Encyclopedia, 2nd Ed., pp. 685-90. (Jerry Clark)

Late Oct. 1975; Cheyenne Mountain, CO
In late October, something happened near Cheyenne Mountain, the home of the National Combat Operations Center, something that triggered a Security Option 5 Alert. According to an informant, nobody was allowed to enter the base, except cleared, high-ranking officers or cleared security patrols. No one was to leave. Those personnel on base who had just completed duty were rolled out of bed. Jet interceptors were scrambled into the air. In fact, everything they put in the air during an attack on the U.S. was airborne. (UFO Filter Center/Ridge Files). But there was more going on in other places....

Target: Loring AFB, ME

Although it is no longer an active Air Force Base today, in 1975 Loring AFB was a Strategic Air Command Base and a storage site for nuclear weapons. The nukes were stored in a fenced weapons dump consisting of small huts covered with dirt for camouflage from the air. It was patrolled day and night by the 42nd Security Police Squadron.

Intrusions at Loring (AFB) - (CLEAR INTENT, 16-26; Barry Greenwood and Larry Fawcett)

Oct. 27, 1975; Loring AFB, ME
7:45 p.m. Staff Sgt. Danny K. Lewis was patrolling the weapons dump when he saw an unidentified aircraft nearing the north perimeter of Loring at a low altitude of about 300 feet. Lewis noticed what appeared to be a red navigation light and a white strobe light on the aircraft. As Lewis watched, the craft entered the perimeter of Loring. Meanwhile, in the control tower of the air base, Staff Sgt. James P. Sampley of the 2192nd Communications Squadron was on duty at the radar

screen. He got a radar return from an unknown aircraft ten to thirteen miles east-northeast of Loring. Sampley made numerous attempts by radio on all available communications bands, civilian and military, to contact the craft, but he got no response. The unidentified craft began to circle, and came to within 300 yards of the restricted nuclear storage area at a low altitude of 150 feet. Back at the nuclear weapons dump, Lewis notified his Command Post of the of the 42 Bomb Wing that an unknown aircraft had penetrated the base perimeter and was within 300 yards of the nuclear weapons area. The base was immediately put on major alert status, a a Security Option 3, and Security contacted the tower.

Oct. 27, 1975; Loring AFB, ME
8:45 p.m. Sgt. Grover K. Eggleston of the 2192nd Communications Squadron was on duty at the tower when the call from the Command Post came. He began observing the unknown aircraft. Six minutes later, while watching the radar screen, Eggleston noted that the unknown craft appeared to be circling approximately ten miles east-northeast of the base. This action lasted for forty minutes when, suddenly, it disappeared from the screen. Either the object had landed, or it had dropped below the radar coverage. The Wing Commander arrived at the weapons storage area seven minutes after the initial sighting was made. Immediately, other units of the 42nd Police began pouring into the area. Security vehicles with blue flashing lights were converging from all over the base. Through the Loring Command Post, the Wing Commander requested fighter coverage from the 21st NORAD Region at Hancock Field, New York, and the 22nd NORAD Region at North Bay, Ontario, Canada. However, fighter support was denied by both regions. The Wing Commander then increased local security posture and requested assistance from the Maine State Police in trying to identify the unknown craft, which they presumed was a helicopter. A call was made to local flight services for possible identification, without results. The 42nd Security Police conducted a sweep of the weapons storage perimeter inside and out. An additional sweep was made of the areas that the craft had flown over. All actions produced no results. The craft broke the circling pattern and began flying toward Grand Falls, New Brunswick, Canada. Radar contact was lost in the vicinity of Grand Falls bearing 065 degrees, twelve miles from Loring. Canadian authorities were not notified.

> No further unusual events occurred throughout that night. Priority messages were sent to the National Military Command Center in Washington, D.C., the Chief of Staff of the U.S. Air Force, the USAF Forward Operations Division at Fort Ritchie, Maryland, and Strategic Air Command headquarters at the 8th Air Force and the 45th Division informing them of what had taken place. The base remained on a high state of alert for the rest of the night and into the early morning hours of October 28.

Oct. 28, 1975; Belgrade, Yugoslavia
DC-9 pilot followed by UFOs, E-M, radar

Oct. 28, 1975; Sudbury, Ontario, Canada
12:15 a.m. EST. One cup and saucer hat shaped object, very bright, low about 500 feet, was observed over the slag pit Murray Mine, Sudbury. The object hovered over the slag pit for a minute then departed at extremely high speed. The object then returned for another minute and left. (National Research Council of Canada Record Group 77, Vol. 308, reel number 1742)

Oct. 28, 1975; Loring AFB, ME
7:45 - 8:20 p.m. While patrolling the weapons storage area, Staff Sgt. Lewis, along with Sgt. Clifton W. Blakeslee and Sgt. William J. Long, again spotted the lights of an unidentified aircraft approaching Loring AFB from the north at an altitude of about 3,000 feet. It approached to within about three miles of the base perimeter and was noted to have a flashing white light and an amber or orange light. Lewis reported the sighting to his Command Post, and the Wing Commander came out to the weapons storage area to see for himself. He reported seeing an object with a flashing white light and an amber light whose speed and motion were similar to that of a helicopter. The craft was also observed on radar. The craft was then observed over the flight line by Sgt, Steven Eichner, Sgt. R. Jones, and others. They saw an orange and red object shaped like a stretched-out football hovering in mid-air. It turned out its lights, and then reappeared making jerky motions, then hovering about 150 feet over the end of the runway. It was described as about four car-lengths long, solid, reddish-orange, with no doors or windows, and with no visible propellers or engines. It was totally silent. The base went on full alert and a sweep was made by security, but the object turned off its lights and was not seen again. Radar picked up a target moving in the direction of Grand Falls, New Brunswick. SAC Headquarters was again notified.

Oct 29 - Nov 10 - NORAD Command Director's Log (1975) (includes text html file)

Oct. 29, 1975; Loring AFB, ME
1:00 a.m. EST. Actual transcript: One unidentified helicopter was sighted 300 to 500 meters from the weapons storage area at Loring AFB, Maine. The helicopter was at an altitude of 150 feet and penetrated Loring AFB. An attempt to contact and identify the intruding "helicopter" was made by an Army National Guard helo, and was unsuccessful. At 290300 EST the helicopter was sighted over the weapons storage area and the Army National Guard helicopter again responded to make contact but was unsuccessful. The USAF (Ops Div) has requested that the Army NG helo be provided until 300800 EST under the following conditions: To track and identify the intruder; no apprehension to take place; the Canadian Border would not be crossed; and civilian police on board will be for commo with ground units only. The request is under consideration by MG Snifin, DA Director of Operations, DCSOPS. Col Bailey, Mil Aide to Special Asst to SECDIF/DEPSECDEF has been advised of the situation show DoD approval be required. The State Department Canadian Desk Officer has been kept informed. (SOURCE: 42 BW CP LORING AFB 291140Z OCT 75; SAC CP OPS CONTROL 291954Z OCT 75. (Actual document below. See page 1 & 2)

Oct 29 - Memorandum For The Record - NMCC Assortment #1 - Gen. C.D. Roberts (NUMEROUS Docs)
Same as above, for Oct. 29 only

Oct. 30, 1975; Ford Creek at Augusta, MT
12:00 a.m. Football shaped UFO. (NIDS UFO 42)

Oct. 30, 1975, Loring AFB, ME

The Maine National Guard Huey was replaced by an Air Force helicopter and crew from Plattsburgh AFB. That evening, objects were reported at several locations over and near the base, and were detected by radar.

October 30, 1975; Wurtsmith AFB Intrusions

At the same time that plans were being prepared at Loring for the return of the intruder, things started to break open at Wurtsmith Air Force Base, Michigan, another of the northern tier bases that were put on a security option three alert. Wurtsmith is a Strategic Air Command base located three miles northwest of Oscoda, Michigan. It serves as the home base for the 40th Air Division and the 379th Bomb Wing.

Intrusions at Wurtsmith (AFB) - (CLEAR INTENT, 41-56; Barry Greenwood and Larry Fawcett)

To summarize briefly, radar picked up the craft over the weapons storage area and followed it to the southeast, where the task of identification was handed over to the KC-135 commander. The KC-135 crew picked it up visually and on radar. Taylor, in his statement to Cahill, never once called the craft a helicopter, but called it "a UFO" and an "object." He said that their speed was about 200 knots, and in each attempt to close with the object, "it would speed away from us." Taylor added that when they were heading back to Wurtsmith, "we turned back in the direction of the UFO, and it really took off... doing approximately 1,000 knots." One thousand knots! Certainly no helicopter ever built could do such a thing!

Oct. 30, 1975; Wurtsmith AFB, MI
10:10 p.m. Personnel in the vicinity of the family housing area located in the southeastern portion of Wurtsmith reported seeing what appeared to be running lights of a low-flying craft which was thought to be a helicopter. The craft hovered and moved up and down in an erratic manner. Airman Martin E. Tackabury, assigned to the Capehart housing area gate, said that he saw the object for about five seconds near the perimeter of Wurtsmith, due south of his location. Tackabury reported that the object had one white light pointing directly downward and two red lights near the rear. The object seemed to be heading in a west-southwest direction. Tackabury could not hear any sound coming from the aerial craft because a B-52 was in the air nearby to the north. Near the main gate at Wurtsmith, Airman Michael J. Myers, assigned to Police Unit Seven, was on duty at the Wurtsmith motor pool. As Myers looked toward the west, he could see several lights near the western edge of the base. The lights turned north and appeared to lose altitude. He did not hear any sound. Sergeant Robert J. Anderson, also at the motor pool, reported that he observed an airborne KC-135 tanker and another craft with a steady red light. The craft appeared to be flying slower, ahead and below the KC-135. Anderson believed he heard a sound similar to a helicopter. After thirty to thirty-five seconds, the object passed out of view. Airman Roger Skipper, at the Wurtsmith main gate, said that when he responded to the activity at the motor pool, he heard sounds that diminished quickly. (Clear Intent)

Oct. 30, 1975; Wurtsmith AFB, MI
At 10:14, 10:20, and 10:25 p.m., at the back gate of Wurtsmith, security police reported to the command post that an unidentified helicopter with no lights came up over the back gate and hovered over the weapons storage area at a low altitude. Security police of the 379th security police squadron in the weapons storage area could not make out the type of craft. The craft started to move towards the northern perimeter where its lights were again turned on. Sergeant James A. Miller of the Wurtsmith security police reported his observations of the unknown craft while on duty in the weapons storage area. He stated that he heard the sound of a possible helicopter coming from an area off the base toward the north. He thought he had heard the sound of a flying helicopter fifteen minutes earlier, but he didn't report it. As he listened, the noise became drowned out by a military jet, and when the jet passed out of range, the original noise had stopped. No other similar sounds were heard. Security police at the weapon storage area notified Colonel John J. Doran, Vice Commander, 379th Bomb Wing, that the guard posted at the back gate had reported what he thought was a helicopter overhead. The command post notified Col. Boardman (wing commander) and Col. Doran, and they proceeded to the flight line. It was at this time that Radar Approach Control (RAPCON) reported low-flying objects on their radar scope. They tracked the craft for approximately thirty-five miles on a southeastern bearing from Wurtsmith.

Oct. 30, 1975; Wurtsmith, MI
10:30 - 11:00 p.m. A KC-135 tanker was returning from a refueling mission. It entered Wurtsmith's traffic pattern and received permission to fly transition approaches. Col. Boardman ordered the KC-135 to attempt to identify the object. Wurtsmith air traffic control vectored the tanker in the object's direction. Aboard the KC-135 was Major Frederick Pappas, the plane's commander; Captain K. E. May, co-pilot; Captain Rick Meier, the navigator; Captain Myron Taylor, instructor navigator; Captain Randy Higginbotham, instructor pilot; and Sergeant Steve Smith. Captain Taylor: "We were returning from a refueling mission and during our first approach into the traffic pattern, RAPCON vectored us to check out a reported UFO in the area of the Wurtsmith Weapons Storage Area. As I recall, this activity occurred between 10:30 and 11:00 in the evening around the 1st of November (later established as Oct. 30). I remember seeing lights similar to strobe lights which were flashing irregularly. We followed the lights north out over Lake Huron and then the UFO swung south still over the lake toward the Saginaw Bay area of Michigan. At first it was difficult to determine whether there were two different objects because of the irregular flashing of the lights. But, after observing the lights we determined that there were in fact two objects and the irregular flashing appeared to be some sort of signal being passed from one to the other in an effort to maintain the same position. We were able to maintain visual contact most of the time and I was only able to paint an object on the radar scope for about 10 seconds. I would estimate that our altitude was about 2,000 feet and our speed approximately 200 knots. Shortly after turning south in pursuit of the UFO, we called Approach Control and received blanket clearance to follow the UFO at all altitudes and at all vectors. Occasionally, RAPCON would pick-up the UFO and help us by giving us vectors to the UFO's position. I would guess that we stayed close to the UFO most of the time, approximately one mile away, and each time we attempted to close on the object it would speed away from us. We followed the UFO down to Saginaw Bay and started across the Bay when we lost it because of all the fishing boat lights. At first we thought it had landed on one of the large oil tankers but later decided that we had been wrong. We continued to search the Bay area but didn't see it so we changed our heading for Wurtsmith. On the way back, we picked the UFO up again at our eight o'clock position. We turned away, and it proceeded to follow us. Finally, we turned back in the direction of the UFO and it really took off back in the direction of the Bay area. I know this might sound crazy, but I would estimate that the UFO sped away from us doing approximately 1,000 knots. We continued in the direction of the Bay until RAPCON called us again and said they were painting a UFO four to five miles over the coast traveling in a westerly direction. They vectored us to the position of the UFO and we proceeded but at that point we were low on fuel and were forced to return to Wurtsmith. I remember that while on final approach we saw the lights again near the Weapons Storage Area. Following the mission we discussed the incident and about a week later, Captain Higginbotham was questioned by the OSI and cautioned not to discuss the incident."

Oct. 30, 1975; Plattsburg AFB, NY
Cabill's "Memo for the Record" alludes to the other incidents at Loring AND Plattsburgh AFB, New York, during the same period of time. At this point, the question about the Plattsburg AFB incidents remain unanswered.

October 31, 1975; Gen. Davis' Memorandum For The Record, Subject: Unidentified Sightings (0451 EST)
SAC Command Post notified the NMCC of reported low flying aircraft/helicopter sightings at Wurtsmith AFB, Michigan at 30234 EST. (See OPREP-3s in link above)

Oct. 31, 1975; 4 miles NW of Loring AFB, ME
At 11:17 p.m. EST, a visual sighting of an unidentified object was reported 4 nautical miles NW of Loring AFB, Me. The alert helo was launched to identify the object but was unable to make contact. The alert helo was launched again at 0146 hours EST, November 1, 1975, in response to a slow moving target picked up by RAPCON (Radar Approach Control). (See NMCC Assortment #1 Frames 16-17 of 40)

Nov. 1, 1975; Monarch, MT
Time not given. UFO hovered 75' away, one foot off ground. (NIDS UFO 92)

> November 3, 1975, Received call from AAC/IN (Alaskan Air Command/Intelligence). They had sent message 012224, Subject: Unidentified Foreign Object to INYSA and wanted to know if INYSA had received it. They wanted guidance from INYSA.

Nov. 4, 1975; Ross, OH
Cylinder hovering at treetop level, windows, body lights visible. Skylook, MUFON, January 1976, p. 6 (E,L) car

Nov. 4, 1975; near Lussault-sur-Loire, France
At 6:50 p.m. a red disc-shaped object flanked by two nocturnal lights stopped in place, then descended slowly into some woods near Lussault-sur-Loire, France. (Source: Lumieres dans la Nuit, February 1977).

Nov. 5, 1975; North of Redwater, Alberta, Canada
At 12:30 a.m. MST, Mr. Jim Divall while driving his vehicle 11 miles north of the town of Redwater saw a large black round rotating object and he had to drive into the ditch to avoid hitting the object. The object was approximately 40 feet long and in the shape of a circle. When Divall got out of his vehicle he heard a rushing sound and saw the object disappear. Duration of the sighting was approximately 3 minutes. RCMP REPORT (National Research Council of Canada Record Group 77, Vol. 308, reel number 1742 N75/150)

Nov. 5, 1975; Nr. Raynesford, MT
4:10 a.m. At least six UFOs near ground. (NIDS UFO 14)

Nov. 5, 1975; 10 miles south of Bowden, Alberta, Canada
9:50 p.m. (Approximate) Mr. Wayne Morrow, observed an unidentified object flying 10 miles south of Bowden, Alberta. Mr. Morrow was proceeding northbound on NBR 2 Highway at the time of the sighting. The object was described as bullet shaped with a constant amount of orange colored flame at the rear of the object. The object was approximately 50 feet above the ground traveling in a southerly direction at 100 mph. The object was sighted for approximately 5 to 10 seconds. (National Research Council of Canada Record Group 77, Vol. 308, reel number 1742 N75/149)

> An interesting aspect to the famous overflights and NORAD incidents is the close proximity, both in time and location, of two famous abduction cases: Travis Walton & David Stephens. See next case entry.

Nov. 5, 1975; Snowflake (Heber), AZ
Travis Walton abduction case. One of the more persistently controversial UFO events in history took place in northeastern Arizona. A work team consisting of seven individuals reported encountering a reflective, luminous object the shape of a flattened disc hovering close to their truck on a remote dirt road in the Apache-Sitgreaves National Forest. According to the crew, one of their members, Travis Walton, exited the truck and approached the object on foot, at which time he was allegedly struck by a brilliant bluish light or flash and hurled to the ground some distance away. In fear, the other crew members fled the scene, returning after a short period of time to find no trace of the UFO, or of Walton. The driver of the truck was Mike Rogers, the crew foreman and a personal friend of Walton's. While fleeing the scene, Rogers reported looking back and seeing a luminous object lift out of the forest and speed rapidly toward the horizon. He, along with the other five witnesses, would eventually be subjected to polygraph (lie detection) examinations regarding the event, the successful outcomes of which catapulted the case into the national spotlight. Walton turned up five days later, confused and distraught but with fleeting memories of alien and exotic human entities. He was also subsequently subjected to a number of controversial polygraph examinations (Image caption: Travis Walton). (NICAP UFO Evidence II, Section XIII).

Nov. 6, 1975; Merxheim, France

10:00 p.m. A domed disc landed on three legs. The dome on the craft opened, and the head and shoulders of an occupant was seen partially emerging from it. The dome closed and the UFO rose up into the air, then took off toward the east-southeast (Source: Larry Hatch, U computer database, case #11518).

Intrusions at Malmstrom (AFB) - (CLEAR INTENT, 27-40; Barry Greenwood and Larry Fawcett)

Nov. 6-7, 1975; Lewiston, MT
Captain Roscoe E. Moulthrop advised the Air Force Office of Special Investigations (AFOSI) that during the evening hours of November 6 and 7, two adjacent Launch Control Facilities approximately fifty miles south of Lewiston reported moving lights as UFOs. (Source: unknown)

Late October, 1975; Malmstrom AFB, MT
Staff Sgt. Joseph M. Chassey, former Minuteman ICBM maintenance technician, 341st Missile Maintenance Squadron, Malmstrom AFB, Montana: Chassey states that one night in the fall of 1975, he overhead a two-way radio transmission alerting Air Force Security Police about an unknown craft hovering over the bases Weapons Storage Area. Chassey said that the incident was widely discussed at the missile mechanical shop the following day. He later heard additional details about it from a friend, who was a helicopter re-fueler. Apparently, two base helicopters had been scrambled to chase the intruder, which rapidly flew toward Belt, Montana, some ten miles distant. As the pursuing choppers neared the town, the unidentified craft quickly doubled-back to Malmstromleaving them far behindand again hovered over the WSA for a short period of time before finally departing. Chassey states that the object was described as an extremely bright light and was assumed to have been a bona fide UFO because of its superior capabilities. He emphasized, It flat outran the helicopters. We heard that it zipped out to Belt and back to the base in no time. Chassey, who separated from the Air Force at the end of October, 1975, believes that the incident occurred shortly before he left Malmstrom. (Robert Hastings files).

Nov. 7, 1975; Lewiston, MT
Remote electronic sensors triggered an alarm indicating that something was violating site security. Underground, in the launch control area, two officers noted the signal, but there was no television surveillance topside. The normal procedure for detecting what had violated security was to call for a missile security helicopter to check the area. At the same time, Sabotage Alert Teams (SAT), consisting of four to six men, were also alerted to the fact that a violation was taking place and were ordered to proceed to the site. On this occasion, an SAT team drove down the highway and onto a dirt road which led to the K-7 area. About a mile away, the team could see an orange, glowing object over the area. As they closed to within half a mile, they could now see that the object was tremendous in size. They radioed to the Launch Control Facility that, from their location, they were viewing a brightly glowing, orange, football field-sized disc that illuminated the missile site. The SAT team was ordered by the launch control people to proceed into the K-7 site. However, they responded that they refused to go any farther, clearly fearful of the intimidating appearance of the object. It began to rise, and at about 1,000 feet, NORAD picked up the UFO on radar. Two F-106 jet interceptors were launched from Great Falls, Montana, and headed toward the K-7 area. The UFO continued to rise. At about 200,000 feet, it disappeared from NORAD's radar. The F-106's were never able to get a visual sighting of the UFO. All members of the SAT team were directed to the base hospital, where they were psychologically tested. It was determined that no one could identify the object that was seen, but that the members of the SAT team obviously had been through a traumatic experience. Meanwhile, targeting teams, along with computer specialists, were brought to the missile site to check out the missile, and specifically, the computer in the warhead that targets the missile. Amazingly, when the computer was checked, they found that the tape had mysteriously changed target numbers! The re-entry vehicle was then taken from the silo and brought back to the base. Eventually the entire missile was changed. (Clear Intemt, 27)

> Note: The source and documentation for the report above, including the actual times, is being sought. As Brad Sparks pointed out recently, the big problem here is that the NORAD radar couldn't track a target up to "200,000 feet." The Malmstrom AFB height-finder FPS-90 radar in operation in 1975 couldn't height-find anything above the maximum 75,000 ft shown on the display.
>
> The following is taken directly from the 24th NORAD Region Senior Director's log: Zulu times are given but converted to local Mountain Standard Time.

Nov. 7, 1975; Moore, nr. Malmstrom AFB, MT

3:35 a.m. MST. (Nov. 7, 1035Z) "Received a call from the 341st Strategic Air Command Post (SAC CP) saying that the following missile locations reported seeing a large red to orange to yellow object: M-1, L-3, LIMA, and L-6. The general object location would be 10 miles south of Moore, Montana, and 20 miles east of Buffalo, Montana. Commander Deputer [sic] for Operations (DO) informed." (CLEAR INTENT, 29)

Nov. 7, 1975; W. of Great Falls, MT
3:38 a.m. Whitish gray UFO with blue lights. (NIDS UFO 15)

Nov. 7, 1975; Harlow, nr Malmstrom AFB, MT
5:03 a.m. MST. (Nov. 7, 1203Z) SAC advised that the LCF at Harlow, Montana, observed an object which emitted a light which illuminated the site driveway. (CLEAR INTENT, 29)

Nov. 7, 1975; Malmstrom AFB, MT
6:19 a.m. MST. (Nov. 7, 1319Z) SAC advised K-1 saw a very bright object to their east is now southeast of them and they are looking at it with 10 x 50 binoculars. Object seems to have lights (several) on it, but no distinct pattern. The orange/gold object overhead also has small lights on it. SAC also advises female civilian reports having seen an object bearing south from her position 6 miles west of Lewiston. (CLEAR INTENT, 29)

Nov. 7, 1975; Malmstrom AFB, MT
6:27 a.m. MST. (Nov. 7, 1327Z) L-1 reports that the object to their northeast seems to be issuing a black object from it, tubular in shape. In all this time, surveillance has not been able to detect any sort of track except for known traffic. (CLEAR INTENT, 29)

Nov. 7, 1975; Malmstrom AFB, MT
6:55 a.m. MST. (Nov. 7, 1355Z) K-1 and L-1 report that as the sun rises, so do the objects they have visual. (CLEAR INTENT, 29)

Nov. 7, 1975; Malmstrom AFB, MT
7:29 a.m. MST. (Nov. 7, 1429Z) From SAC CP: As the sun rose, the UFOs disappeared. Commander and DO notified. (CLEAR INTENT, 29)

Nov. 7, 1975; Malmstrom AFB, MT
11:35 p.m. (0635Z, 8 NOV 75). 2335 MST. A security camper team at K-4 reported UFO with white lights, one red light 50 yards behind white light. Personnel at K-1 seeing same object. (Source unknown)

Nov. 7, 1975; Malmstrom AFB, MT
11:45 p.m. (0645Z, 8 NOV 75). MST. Height personnel picked up objects 10 - 13,000 feet, Track J330, EKLB 0648, 18 knots, 9,500 feet. Objects as many as seven, as few as two A/C. (Source unknown)

Nov. 7, 1975; Lewiston missile site, MT
4:05 a.m. MST. From SAC CP: E-1 reported a bright white light (site is approximately 60 nautical miles north of Lewiston). NCOC notified..

Nov. 7, 1975; Malmstrom AFB, MT
Time not given. Then, yet another sighting was reported. An off-duty missile launch officer and his deputy had just retired for crew rest in the Soft Support Building (SSB). The deputy went to the window and observed the silhouette of a large aircraft hovering about ten to fifteen feet above the ground and about twenty-five feet outside the Launch Control Facility. He described two red and white lights at the front of the aircraft, a white light on the bottom, and white light on the rear. The craft hovered motionless in this position for about one minute and then departed. The missile launch officer did not personally observe the aircraft, but from its sound, he speculated that it was a helicopter. The deputy also felt that the sounds he heard were those of a helicopter. The deputy's observations were limited by the darkness of the night, which prevented any good description of the craft or its shape.

Nov. 8, 1975; Malmstrom AFB, MT
At 12:53 a.m. MST. (0253 EST) Malmstrom AFB, Montana received seven radar cuts on the height-finder radar at

altitudes between 9,500 and 15,500 feet. Simultaneous ground witnesses observed lights in the sky and the sound of jet engines similar to jet fighters. Cross-tell with FAA revealed no jet aircraft within 100 NM of the sighting. Radar tracked the objects over Lewiston, Montana, at a speed of 7 knots. Two F-106 interceptors from the 24th NORAD Region were scrambled at 0254 EST, and became airborne at 0257 EST. At the time of the initial voice report, personnel at Malmstrom AFB and SAC sites K-1, K-3, L-3, and L-6 were reporting lights in the sky accompanied by jet engine noise. (CLEAR INTENT, 30; NMCC Docs751108.pdf)

Nov. 8, 1975; Malmstrom AFB, MT
1:44 a.m. MST. (0344 EST) Objects could not be intercepted. Fighters had to maintain a minimum of 12,000 feet because of mountainous terrain. Sightings had turned west, increased speed to 150 knots. Two tracks were apparent on height-finder radars 10-12 NM apart. SAC site K-3 reported sightings between 300 feet and 1,000 feet, while site L-4 reported sightings 5 NM from the position. Sightings disappeared from radar at position 4650 N/10920 W at a tracked speed of three (3) knots. (CLEAR INTENT, 31; NMCC Docs751108.pdf)

Nov. 8, 1975

2:40 a.m. MST (0440 EST) NMCC initiated contact with the NORAD Command Director who reported the following:

Nov. 8, 1975; Malmstrom AFB, MT
2:05 a.m. MST (0405 EST). "At 4:05 EST, SAC Site L-5 observed one object accelerate, and climb rapidly to a point in altitude where it became indistinguishable from the stars. NORAD will carry this incident as a FADE remaining UNKNOWN at 3:20 EST since after that time only visual sightings occurred." (Note: There is an Air Force term used to describe an incident in which a nuclear device is tampered with. This term is "Faded Giant," a phrase which very appropriately describes the K-7 report. [Clear Intent, 28; (NMCC Docs751108.pdf)])

Nov. 8, 1975; Malmstrom AFB, MT
At 2:05 MST (0405 EST). Malmstrom receiving intermittent tracks on both search and height-finder radars. SAC site C-1, 10NM SE of Stanford, Montana, reported visual sightings of unknown objects.

Nov. 8, 1975; Malmstrom AFB, MT
2:20 MST (0420 EST) Personnel at 4 SAC sites reported observing intercepting F-106s arrive in area; sighted objects turned off their lights upon arrival of interceptors, and back on upon their departure.

Nov. 8, 1975; Malmstrom AFB, MT
2:40 MST (0440 EST) SAC site C-1 still had a visual sighting on objects.

At 6:00 a.m. EST, the National Military Command Center in Washington, D.C., distributed a "Memorandum for the Record." The subject was "Unidentified Sightings." This memo addressed the incidents above.(NMCC Docs751108.pdf)

Nov. 8, 1975; Malmstrom AFB, MT
8:35 p.m. SAT teams at sites K-3 and L-4 were reporting that they had visual sightings on the objects, with K-3 reporting targets at an altitude of 300 feet. As the F-106s arrived at the location, SAT teams reported that the UFOs turned their lights off. The F-106s, in searching for the unknowns, never gained a visual or radar contact at any time because of the low altitude of the UFOs. However, when they left the area, the UFOs would turn their lights back on! At 9:15 P.M., four different locations were reporting that they had the UFOs and fighters in sight. The UFOs seemed to be playing a cat-and-mouse game.

Nov. 8, 1975; Malmstrom AFB, MT
9:53 p.m. The team at L-5 reported to the Command Post that the unknowns had increased in speed, climbed rapidly, and, at that point, could not be distinguished from the stars. A while later, the team at site E-l reported at 11:05 P.M. that a bright white light was seen approximately sixty nautical miles north of Lewiston.

Nov. 9, 1975; Malmstrom AFB, MT
3:05 a.m. SAC crews at sites L-l, L-6, and M-l observed a UFO. They described it as being a yellowish, bright, round light

twenty miles north of Harlowton at an altitude of 2,000 to 4,000 feet. At 3:20 a.m., the SAC Command Post reported the UFO twenty miles southeast of Lewiston. The color of the object was reported as orange-white, and its appearance was round or disc-shaped. (CLEAR INTENT, 31)

> The only response that the Air Force would give to public inquiries was: "All documentation at Malmstrom AFB has been destroyed in accordance with Air Force directives for the dates of the UFO sightings mentioned . . ." Since when are all records of a serious incident or series of incidents of this magnitude destroyed? We must conclude that either there is gross incompetence in the military's handling of such situations, or that the UFOs, in these instances, presented so considerable a threat to the national security of the United States that the Air Force felt compelled to deliberately misinform the public, and, as a result, violated the Freedom of Information Act by stating that existing records had been destroyed. (CLEAR INTENT, 31)

Nov. 10, 1975; 3-page document (with transcriptions) concerning the 1975 flyovers of SAC bases - Capt. Dowman

Nov. 10, 1975; Minot AFB, ND
A long entry from the 24th NORAD Region Senior Director's Log said: "UFO sighting reported by Minot Air Force Station, a bright star-like object in the west, moving east, about the size of a car. First seen approximately 1015. Approximately 1120, the object passed over the radar station, 1000-2000 feet high, no noise heard. Three people from the site on local area saw the object. National Command Operations Center notified."

Nov. 11, 1975; Sudbury, Ontario, Canada
3:00 a.m. EST. Six nurses at the Pioneer Manor Sudbury, observed a very bright object over the Sudbury Stadium. The object seemed to hover at first and then suddenly shot into the sky. It was still visible when the Sudbury Regional Police arrived at 4:55 a.m. (National Research Council of Canada Record Group 77, Vol. 308, reel number 1742)

Nov. 11, 1975; near Sudbury, Ontario, Canada
5:00 a.m. EST. Constables Keables and Whiteside, Sudbury Regional Police, observed a cylindrical-shaped object with shafts of light bright enough to light up clouds in immediate area. The object appeared to travel in circles and at one point came quite close. Observations were made with the use of binoculars. (National Research Council of Canada, Record Group 77, Vol. 308, reel number 1742)

Nov. 11, 1975; Sudbury, Ontario, Canada
4:55 a.m. EST. Sudbury Regional Police constables came on a follow up call by six nurses at the Pioneer Manor to check on a reported UFO. The constables observed four objects clearly in the sky. Three of the objects remained stationary while a fourth moved at times with a jerky motion. The objects were still plainly visible after day break when all regular bright objects in the sky had disappeared. The objects were observed intermittently for one hour. (National Research Council of Canada Record Group 77, Vol. 308, reel number 1742)

Nov. 11, 1975; CFS Falconbridge, Ontario, Canada
6:15 a.m. EST. A spherical shaped object was observed from Canadian Force Station (CFS) Falconbridge. The object appeared to be rotating and had a surface similar to the moon. The object was ascending and descending. The object was observed on height finder radar at altitudes from 42,000 feet to 72,000 feet. (National Research Council of Canada Record Group 77, Vol. 308, reel number 1742)

Nov.11, 1975; Beltsville, MD
Lawrence Albert sighted a solid, spherical, evenly distributed green light. The object was much brighter than the sky background and was sharply outlined. The witness stated the apparent size of the object was that of a quarter held at arm's length. The speed of the object was twice that of a jet plane. His first impression was that perhaps he was observing a falling star. Albert stated that because it moved so slowly and because it was perfectly round with no trail, he realized it could not be a star. Albert estimated the object's distance at a mile and one half high. (Reference: UFO INVESTIGATOR, January 1976, page 1)

Nov. 11, 1975; Freeze Out Lake, MT
A Montana Fish and Game Department employee saw a light flying directly behind a B-52 bomber. Using his rifle scope to get a better look, he noted that the strange object seemed to be pacing the aircraft. The object then briefly attached itself to

the B-52, detached itself, and climbed out of sight. The sighting was reported to to Sheriff Pete Howard of Choteau County. Howard conducted follow-up interviews with military personnel and learned that as the object attached itself to the B-52, the plane's radar equipment went out. (Reference: Lawrence Fawcett and Barry J. Greenwood, Clear Intent, page 35)

More entries appeared in the NORAD regional Senior Director's Log.

Nov. 11, 1975; Falconbridge AFS, Ontario, Canada
7:05 a.m. EST. (1205z) "Received unusual sighting report from Falconbridge AFS, Ontario, Canada. Info passed to NORAD Command Director, Intelligence and Weather."

Nov. 11, 1975; Falconbridge AFS, Ontario, Canada
1:40 p.m. (1840z) "Actions pertaining to scramble of JL08 and 09 due to unusual object sighting. With Director of Operations approval. Scrambled JL08/09 at 1745z (12:45 p.m. EST) airborne at 1750z (12:50 p.m. EST). NORAD Combat Operations Center notified of Falconbridge AFS incidenta. Aircraft over Falconbridge flying over incidenr, point no sighting, 1831 aircraft still in area, no radar aircraft or visual contact. Falconbridge AFS still reporting object at 26,000 ft."

Nov. 15, 1975; Falconbridge AFS, Ontario, Canada
3:02 a.m. EST (event time). Message: "0533z (12:33 a.m. EST)...UFO report from Falconbridge, occurrence time 0202z. Report sent to NCOC Surveillance, referred to Assistant Command Director Space Defense Center, and Intelligence. These three individuals considered the report a UFO report and not an unknown track report."

On November 13, 1975, NORAD issued a press release to the media in Sudbury, Ontario. It stated:

Nov. 12, 1975; Falconbridge AFB, Ontario, Canada
"At 4:05 a.m. Nov. 11, the Canadian Forces radar site at Falconbridge, Ontario, reported a radar track of an unidentified object about 25-30 nautical miles south of the site, ranging in altitude from 25,000 to 72,000 feet. Persons at the site also saw the object and said it appeared as a bright star but much closer. Two F-106 aircraft of the US Air Force Air National Guard's 171st Fighter Interceptor squadron at Selfridge ANGB, Michigan, were scrambled; but the pilots reported no contact with the object." The release was approved by NORAD's commander in charge.

On February 21, 1976, UFO researcher Robert Todd filed a request under the Freedom of Information Act for NORAD Command Director's logs. The logs were released to Todd on March 26, 1976, and confirmed that Canada was also having problems with UFOs. Taken from the logs are incidents related to UFO activity in the area of the Falconbridge Air Force Station, a radar site near North Bay, Ontario, Canada (times listed are Greenwich Zulu, 5 hours ahead of EST).

Nov. 12, 1975; Falconbridge Air Force Station, North Bay, Ontario, Canada
7:15 a.m. 23rd NORAD Region. UFO Reported from Radar site at Falconbridge Ontario, Canada (Sudbury). Reported by Mr. Julian Prince of Sudbury thru Ontario Provincial Police (also observed by 2 OPP constables ZADOW & BRETT) 2 objects seen appeared to be artificial light fading on and off with jerky motion. Broken cloud layer with no estimated base. No radar contact made and no request for fighter scramble initiated.

Nov. 13, 1975; midwestern and southern United States
On this night in 1975 a number of multi-colored nocturnal lights were reported in the midwestern and southern United States. Sparkling white, red, and yellow lights flew in formation erratically in Whitewater, Wisconsin. Red, green, and white lights were sighted in Eau Claire, Wisconsin, moving up-and-down and diagonally. In Fort Atkinson, Wisconsin bright white lights that dimmed, disappeared, and then re-appeared were sighted. In Mobile, Alabama a UFO, changing colors, moved across the horizon. A round silver object was seen moving slowly in the northwest sky in Orlando, Florida. It suddenly disappeared. (Source: CUFOS News Bulletin, February 1976, p. 13.)

Nov. 14, 1975; Falconbridge AFS, Ontario, Canada
9:02 p.m. EST (event time). Message of Nov. 15: "0533z (12:33 a.m. EST)...UFO report from Falconbridge, occurrence time 0202z. Report sent to NCOC Surveillance, referred to Assistant Command Director Space Defense Center, and Intelligence. These three individuals considered the report a UFO report and not an unknown track report."

Nov. 15, 1975; Sudbury, Ontario, Canada
6:30 a.m. EST. Lyman Paquette, his wife, plus his brother and sister in law observed one bright white object that looked like a cup in a bowl due east at 70 degrees elevation. Witnesses using binoculars observed the object climb quite high and can hardly now be seen without the aid of binoculars. The object was observed for 20 minutes. (National Research Council of Canada, Record Group 77, Vol. 308, reel number 1742 N75/182)

Nov. 15, 1975; Falconbridge Air Force Station, North Bay, Ontario, Canada
7:42 a.m. UFO 23rd NORAD REGION. From Falconbridge Radar Site a civilian, Oliver Kizioja, Sudbury, Ontario, at 0615 was standing in back yard facing south. Observed one bright yellow object moving up and back, leaving a tail. It was very high but did not change position in regard to other stars. He watched for 15 minutes, then called radar site. Not observed on radar.

Nov. 15, 1975; Sudbury, Ontario; Falconbridge Air Force Station, North Bay, Ontario, Canada
11:30 a.m. event. 12:29 p.m. 23rd NORAD REGION. From Falconbridge. At 1130, Lyman Paqutte, married student, residence Laurentian Univ., Sudbury, Ontario. Reported he had been looking due east, sky partly cloudy, saw one bright white object about 70° elevation, high out of range of binoculars. It climbed high out of range of binoculars. Observed for 20 minutes and witnessed by his wife, brother-in-law and sister-in-law. Negative radar contact.

Nov. 15, 1975; Pacific, MO
A red flying object approached a car driven by a Mrs. Prichard with three passengers in Pacific, Missouri, then ejected several white balls of light (BOLs). The metal of the car was magnetized after the encounter. (Sources: Lumieres dans la Nuit, September 1976; Mark Rodeghier, UFO Reports)

Nov. 15, 1975; Marseille, France
A disc-shaped UFO rose from the sea near a large radio antenna in Marseille, France. It circled, then made a 90 degree turn to the south and flew out to sea.

Nov. 16, 1975; Curiel, Valladolid, Spain
Red ellipse hovering 1-1.5 km. away; suddenly flew away. Flying Saucer Review, Vol. 22, No. 6; see Rodeghier, 1981, p. 66 (E) car

Nov. 16, 1975; Manitoulin Island, Ontario, Canada
9:30 p.m. EST. 17 November 1975 1705 23rd NORAD region; UFO reported 0230z from a Mr. John Dunlops, address: Manitoulin Island, Ontario, Canada. Two objects, oval shaped with two yellow flashing lights, moving north to south, then became stationary, observed for 10 minutes, one above the other, sky was cloudy—no radar contact. Toronto AMIS advised no known traffic in area.

Nov. 17, 1975; Falconbridge Air Force Station, North Bay, Ontario, Canada
24 NORAD Region UFO at 132345z (too many digits!!!) Large orange ball with 2 red lights stationary; Azimuth 045° from River Court, Ontario. No radar contact. Called in to 24th NORAD at 16-1700z. (11-12:00 EST)

Nov. 18, 1975; Kevin/Dunkirk area, MT
4:31 a.m. UFO. RAPCON notified. (NIDS UFO 20)

Nov. 18, 1975; Strathclair, Manitoba, Canada
At 6:30 a.m. Reginald Jack Langstaff while traveling in a vehicle observed a bright orange to red object with a curved dome shaped top and the sides were sloped 70 to 80 degrees. There was a lip around the bottom. The object seemed to be approximately 150 feet in the air and was traveling east towards the observer, so he started to travel away from it. He stopped after traveling a quarter of a mile and noticed the object was traveling southwest and disappeared in that direction. Langstaff observed the object for approximately 5 minutes.(Reference: Royal Canadian Mounted Police report, November 26, 1975. Shoal Lake Detachment RCMP File References: 75-700-126, National Research Council of Canada Record Group 77, Vol. 308, reel number 1742)

Nov. 19, 1975; Oak Brook, IL
On this night in 1975 in Oak Brook, Illinois, a boy saw a domed disc hovering near his home. The UFO had a red light on

top and two clear lights on the side. (Source: CUFOS News Bulletin, February 1976, p. 13).

Nov. 20, 1975; Camilla, GA
The police chief of Camilla, Georgia reported that a big, round UFO hovered just 80 meters above his police station at two a.m. It had bright lights on the top and bottom. It flew away slowly to the southeast and was in view for three minutes. (Source: Michael Hitt, Georgia UFO Phenomenon 1947-1987, p. 73).

Nov. 22, 1975; Savannah, GA
Pilots observe UFO near nuclear plant

Nov. 25, 1975; Goodridge, MN
On this night in a field nine miles west of Goodridge, Minnesota, a disc-shaped object eight feet in diameter was seen in a field. It rose off the ground, then relanded. The witness's car stalled, and later required major tune-up repair work. (Source: Mark Rodeghier, UFO Reports Involving Vehicle Interference, p. 66).

* Project Blue Book closed down on Jan 30, 1970 as NICAP established (UFO investigator May 1970 p. 5).

OBSERVATIONAL EVIDENCE OF THE "SORENSEN EFFECT"

By Francis L. Ridge

Figure 1

This event took place near Princeton, Indiana, in August of 1973 and involved three witnesses driving home in a thunderstorm. The primary witness was at the time an electrical engineer with a major electronics firm. At age 38 he had a college education, excellent vision, didn't wear glasses, and had military training in US Navy.

None of the witnesses suffered any ill effects. The primary witness has not observed nor reported any other UFO-type objects. He started to report the incident to the newspapers because he didn't know who else to report to, but decided against it. He tried to find out from the Princeton CLARION who he should contact, but they could not advise in 1973. After reading an article in the Sunday COURIER & PRESS in January of 1976 about a local MUFON unit, he was able to contact us.

The following account is the transcript from the taped interview, with some unnecessary material deleted (Ref. 1):

"We were over at my mother-in-law's in Mt. Carmel (Illinois) and that's about 11 miles from Princeton (Indiana) where I live, and it was evening. And there was a storm coming up and we got upset over there. We had some bad experiences. A tree blew down and we decided to leave. We stopped at a filling station and got some gas and then we proceeded on to Princeton through the (Wabash River) bottoms and ah, course this was the time about when they were building PSI (Public Service Indiana power plant) on the right hand side of the road.

"And we saw, what appeared, now this was dark now, to be a couple of headlights. Well, we assumed they were maybe a temperature inversion, but then we got to thinking that during a thunderstorm or rainstorm

you're not going to have a temperature inversion, it's going to be kinda stirred up. But directly in line with this was Owensville Road. We thought maybe they might be headlights bouncing off of low clouds. These (lights) were up in the air. Our angle of perspective changed as we approached it, so we found out it was above the trees. The lightning caught up with us about this time and a pretty-good-sized bolt was behind it and we got it illuminated, all around us, and we saw what appeared to be a saucer (Figure 1). Kinda weird, but the whole family witnessed it and nothing was said until we got home. Duration of the event was 2-5 minutes.

"What surprised me, of course, we thought (at first) it was a car because it was the same spectral response that you'd have from headlights. You know, the infra-red region, heavy in the infra-red. As we got closer to it, before the lightning struck, we saw what looked like clearance lights, one on each side of it. Later on it proved to be four of whatever the lights were, dotted around the 'cupola'. And beneath it was a super-dark 'cone' which apexed below the tree level And this thing didn't appear to be solid, the cone that came down to the ground or whatever it went down to; it was sort of wide at the bottom of the saucer and evidently went to a point which would have been the opposite of a flashlight beam. And ah, we kinda got a shock over it. I'd done a little snooping around during some rainstorms, seeing if we could see it again, my oldest boy and I, back in where we thought it was in the woods.

"As you come outside of Mt. Carmel and are proceeding towards Princeton, you'll find a large woods with a bunch of little spots where they've cut out to plant popcorn, I think, and corn. And IT was over one of these patches, in fact it was the exact location where this Cavanaugh girl was found.

"There is one thing. We've discussed this. The family and my oldest boy, he's 15 now. This is a good topic for us, inter-family. Ah, if these were lights shining on out, I would think they were more outside than in, because if there were anyone inside this thing, they would have been almost blind because the lights, if these were portholes, I'm saying, they would have to be almost blind because the lights were almost the same illumination as car headlights, although we didn't see any beams shooting out from them as you would on a car.

"But the cone beneath seemed to be, well, what I'd seen in laser, except on a much grander scale, in a different light spectrum. Of course in a storm you'll have heavy in ultra-violet, and ah, which could have made a red appear black, or any color would be off-color. Maybe there is something here in a beam, you know, like a laser. I think they (U.S. scientists) are doing experiments with green lasers that actually support objects. Why not?

"Another little injection here. It looked 'archaic', something out of Jules Verne, like a 'pickled metal', you know what I mean? When a piece of metal is heat-treated, pickled, a burnished silver color? It looked like this. Well, you'd almost say you saw the rivets on the damned thing. Of course I didn't see any rivets. It was old-fashioned looking, not streamlined, (but) straight up and down, the cupola, with a little rolled edge on it. And ah, nothing ultra-modern that you would associate with space travel or something like this. I don't really believe the damned thing came from outer space (laughing). I mean, it doesn't ah, seem.....

"Usually there is an explanation, but this damned thing, there wasn't any explanation for me, you know, it was there, solid.

"The damned thing was sitting awful still, you know, to be...it moved in

from the west, or let's see, east, and then kinda stopped and started down. And so smooth and determined in its movements. It wasn't being affected by the storm any.

"I'd say about 30' above the tree-level, five, six hundred feet away, I'd imagine. I would estimate it about 30-40' (wide). Of course, I'm not very good on judging distances or sizes of objects. I over- estimated (driving) because I thought it was landing or going down in a field which was just on the other side of the woods. So, I speeded up and went up there, and it had went down into the woods, so I had overshot my estimate there. We slowed down and watched it to almost a stop, I'd say three or four minutes. All the time we had good lighting from the lightning. Of course, I'd say it was ultra-violet, and this does make the colors...screws up the colors. It changes the shades heavy ultra-violet.

"I still kinda contend that it's not extraterrestrial. It just doesn't look like, 'course I don't know what extraterrestrial looks like, let's face it. But, something, you know, you get a hunch like, 'that sure doesn't look like something from outer space.'

"But the thing that really intrigued me was the cone beneath it, the superdark cone, which wasn't solid, it was a beam or ray. I hate to say ray because it sounds like something out of Buck Rogers, a beam of some sort.

"Light, or nothing, passed through it, but the edges of it were fuzzy. So it was a beam of some sort, like the reverse of a flashlight beam.

"Now the bottom, now I actually never got that much of a view of the bottom of it, I couldn't tell you anything other than the outside edge, you know. It was saucer-shaped, inverted saucer, sloped down from the top. But as I started to sweep around and get as much information, visual information, as I could, I rejected everything when I saw the beam. I went right to it and I guess I studied it maybe too long.

"We hardly said anything coming home. You could have heard a pin drop all the way home. So when we got home we all sat down and we all drew a picture of what we saw. Everybody saw the same thing, which was unusual, I thought. Even the roll around the top of the cupola, which fascinated me."

ANALYSIS:
The time of the observation was determined as around 9:00 PM. Duration of sighting was 2-5 minutes. The object was on a SE to NW track, descending. Weather was stormy, sky overcast with thick clouds, light rain, and lightning. Temperature was warm. A strong wind was from the west.

The initial observation was of headlights, low on the horizon, to an object at about 30-degree elevation. The car was heading SE on Hwy 64 at 40 mph, slowed down to 5 mph. The automobile was a 1971 Chevrolet 4-door Impala, "air-conditioning was on, windows closed until I purposely rolled them down to observe. Realizing, at this time it was a UFO, I turned on the radio, but did not hear any interference, nor did the engine stall, as I had read they did. At about 1,000' from the object, it stopped its linear movement and hovered, until we were within 500', then it descended very slowly into the woods."

Additional Witness Check: Exact date unknown, so unable to do this. No other reports filed from that area during that period.

Source Test: Natural Sources immediately eliminated. Man-Made Sources simply do not qualify in this case. There is little chance of

misidentification of any kind. The only possibility left would be a hoax, and this has been ruled out for a number of reasons, the primary ones being:

1) The initial report was a taped telephone interview. The report filed shows absolutely no variation with this verbal account.

2) The witness requested anonymity.

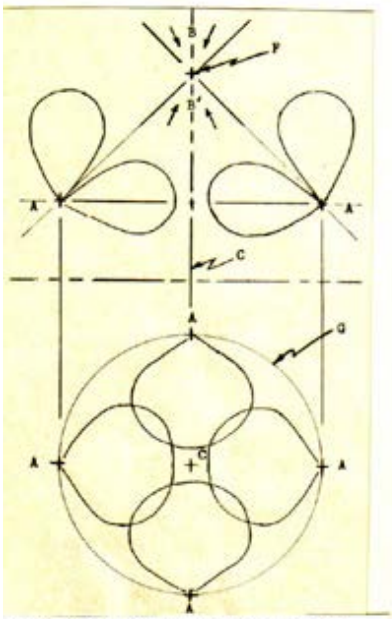
Witness Background Check: I was unable to do this directly because he requested anonymity. However, I was very impressed with the witness and his report. He never sought publicity. He simply wanted his report and the possible significance of the technical data in proper hands. His name and place of occupation are both confidential. He appears to be well-educated and has a more-than-average technical vocabulary and sense of awareness. He reported or dictated the details in a slow and careful manner. The taped interview shows that the written transcript doesn't do him justice.

Besides the fact that apparently three persons, one of which was technically oriented, had a close encounter with a flying saucer, rather than a dark enigmatic object with lights, what else can be gleaned from this event?

1) There was considerable detail observed in this case.
2) Normal aircraft would not have braved this storm. The UFO wasn't affected.
3) The "cone" probably became visible due to the ultraviolet light produced by the intense lightning.
4) The dome was unusual. It was described as "straight up and down cupola with a little rolled edge."
5) The craft looked "old", "archaic". This, again, could have been caused by the u/v light. Or, maybe it WAS an old craft!

This is an UNKNOWN.

OTHER FINDINGS AND POSSIBLE CORRELATIONS:



ure 2. Relative geometry of radiated Electro-Magnetic field to induced gravitational field.

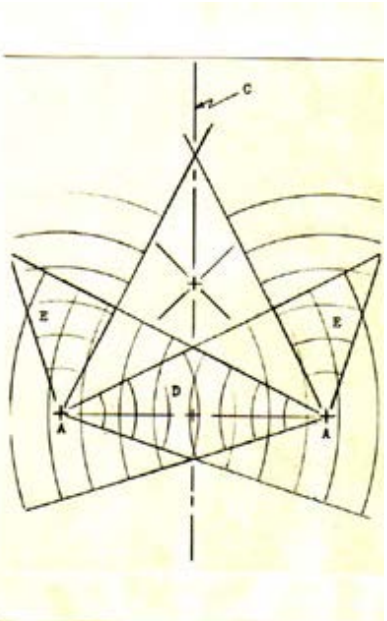


Figure 3. Interference of idealized radiation patterns.

Figure 2 & 3

Figure 2 illustrates the relative geometry of a radiated E-M (Electro-Magnetic) field to an induced gravitational field. Figure 3 shows the interference of idealized radiation patterns. How may this be related to the Princeton case?

The Princeton case occurred in August, prior to the beginning of the major sighting wave of 1973. However, the witness reported the incident to me at the UFO Filter Center by phone in January of 1976. The deposition was recorded. Keep in mind the incident and report preceded the paper by William Hassel(which was about the Sorensen Effect) in 1977.

In 1977, the MUFON Symposium proceedings contained a paper, entitled: "Future Physics and Anti-Gravity", by William F. Hassel, PhD (Reference 2). On page 65 it stated:

"A method of utilizing beams of microwave radiation to effect a reduction in the local gravitational field has been pursued by Niels T. Sorensen. As illustrated in Figure 2, dual-lobe radiation elements were arranged in circular symmetry so that each beam was oriented toward the APEX of a 90-degree CONE (emphasis mine). A null region then occurs at the APEX of the CONE, which represents a region of apparent gravitational attraction."

The actual paper by Niels T. Sorensen was printed in THESIS / SYNTHESIS / ANTI-THESIS (Reference 3), a Joint Symposium sponsored by the Los Angeles & Orange County Sections of the AIAA and the Los Angeles Chapter of the World Futures Society, Saturday, 27 September, 1975. The title of the paper was "New Technology Related To UFO's And Their Origins".

On page 64 Sorensen states: "The general appearance is that of an inverted saucer. The lower portion will be observed to rotate relative to the upper portion. The GPV (Gravitational Propulsion Vehicle) would wobble in the manner of a spinning top during changes in its state of motion. A high energy E-M field will exist near the vehicle. An idealization of this field is shown in Figure 3. It will be noted that interference of the patterns will occur in areas 0 and E. That portion of D, that will be external to the vehicle and extend below the vehicle, will generally be CONE SHAPED (emphasis mine, again)."

Sorensen was a graduate of UCLA, BSEE, 1962. For several years he has been engaged exclusively in theoretical and experimental research related to the development of a Unified Field Theory at J.G. Enterprises, Riverside. He has held engineering positions at Hughes Aircraft and Northrop Corporation where he was employed in Antenna R & D.

The Sorensen theory may or may not be the technical description of what takes place in or near a flying object described as a flying saucer. It is merely the first theory that this author had found to explain an effect that few witnesses would be lucky enough to notice, an effect produced and made visible by the ultraviolet flashes of powerful lightning bolts.

Others describe propulsion beams that could also produce a cone beneath a UFO. These, too, would be invisible under normal circumstances. In my paper, ENGINEERS PRAISE DISC PERFORMANCE, I get more into the disc shape as an air and/or space vehicle.

Has the inverted cone been observed before? Yes. The most recent in Indiana that I am aware of was October 19, 1988 at 11:15 PM. The

location: Bloomington, Indiana. This was a one witness case, a CE-1, an object with lights (OWL). What was most interesting about this one was the object had a vertical tail "like a twister". What brought out the "cone" here? The case was never filed, therefore we'll never know what strange conditions might have "brought out" that protuberance.

Four years earlier, on November 17, 1984, two men reported that they were abducted near Savah, Indiana, in broad daylight! At the beginning of the event the object appeared as a fat, double convex saucer as it came down low over the Wabash River and turned toward the witnesses. The witnesses had said the craft was visible when overhead, but one of them thought the clear afternoon sky was reflected off a long mirrored surface. His subconscious recall, Figure 4, even describes a cone superstructure or something that appears as a surface, which may have been a force field and not even a solid surface at all, especially since this feature was not present when the object came into view for the first time. He even described the UFO changing shape.

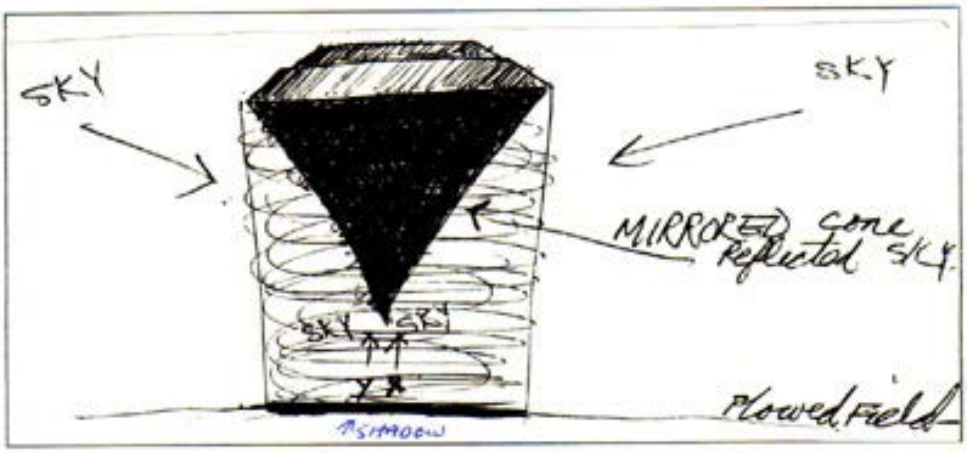

Figure 4

A 1964 photograph (Figure 5) taken in Oberwesel, West Germany even shows a cone beneath the domed disc! (Ref. 4) There is no doubt that the reports of these "cones" are extremely rare, but it is possible that something may be causing the normally invisible cones to become visible. The photograph was taken at 3:00 PM on March 8th. Herr Harry Hauxler was riding a train through the low countries along the Rhine River and was idly gazing out the window on his right as he rode along. His camera was resting in his lap. All of a sudden, a rapidly rotating disc-form object jumped up into the air along the side of the tracks, and started rising into the sky. He was able to raise his camera and snap one photograph before it passed out of sight beyond the window frame. The developed print showed a circular disc-shaped ship with a raised dome on top and a peculiar deep lower cone of dark swirling exhaust or energy of some kind radiating downward from the center underside of the rotating craft. Proper investigation into this case should have included whether the camera was equipped with a polarizing filter and was it used.

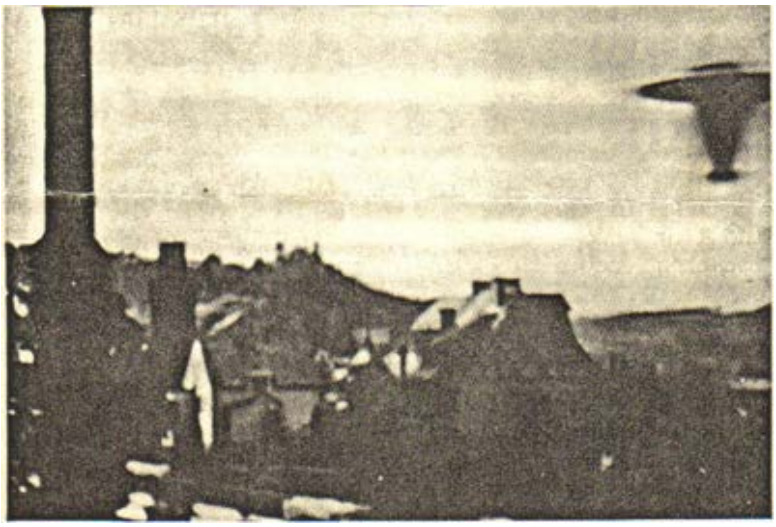

Figure 5

The object drawn and described on page 63 of Hassel's report in the 1975 Proceedings (Figure 6), although fatter, bears a resemblance to the UFO observed in August of 1973 at Princeton, Indiana.

Figure 6

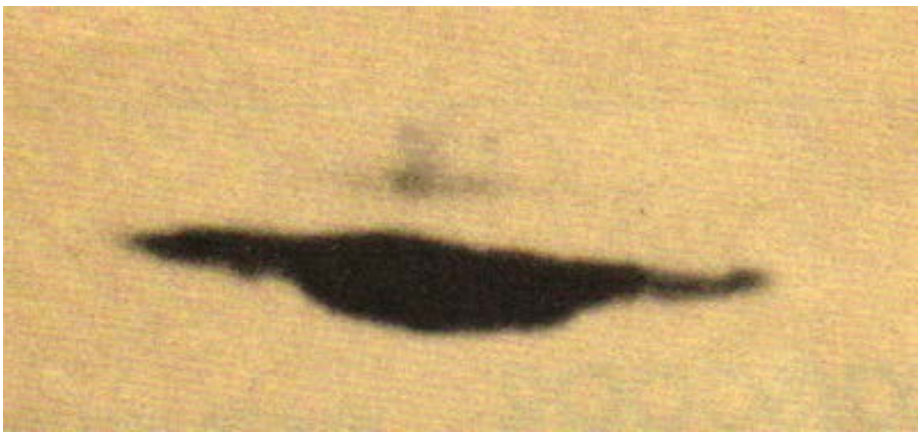

Figure 7

Figure 7 may be a blurred version of a hoaxed photo by Billy Meier. I'm not sure. But the similarity was striking. I am awaiting a better version and information from UFO photo experts around the world regarding this photo.

STRANGE DOMES & PROTUBERANCES

Not shown here is a drawing of the object in the photo above by Indiana MUFON's Staff Artist, Robert Taylor. However, the thought came to Staff Artist, and myself included: Is the dome retractable? Wilbert Smith, author of the Top Secret "Smith Memo" (Ref. 5), mentioned this very possibility.

He had stated that UFO's were the "most highly classified subject in the United States Government, rating higher even than the H-bomb". He also mentioned something interesting to Maj. Donald Edward Keyhoe at one time. In Keyhoe's book, "Flying Saucers From Outer Space" (Reference 6), on page 141 Keyhoe states: "During one of our talks Smith had sketched his idea of a flying saucer, showing a rounded, turret-like central cabin. It was possible, he said, that the turret night retract in flight, to reduce resistance."

The McMinnville, Oregon (Figures 8 & 9), and Rouen, France (Figure 10) photos depict objects with possible telescoping dome-like structures. Since most consider the McMinnville case to be genuine, the protuberance at the top of the object must be a reality, also. For high speed flight one would assume that this was retractable. For the record, after this paper was written, the Rouen, France photo was exposed as a doctored copy of the Trent photo.

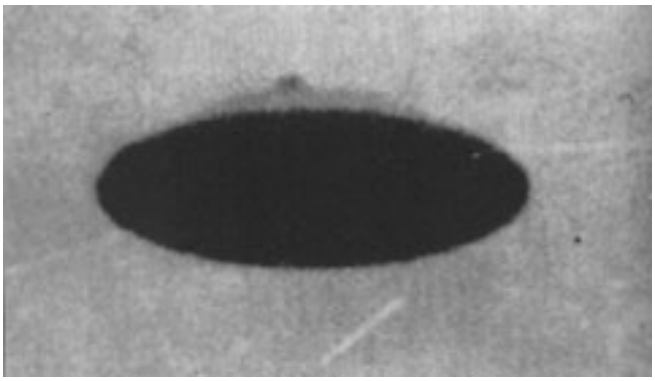

Figure 8

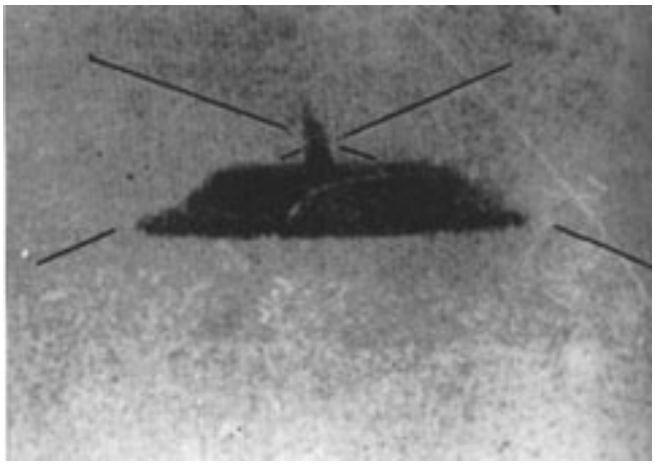

Figure 9

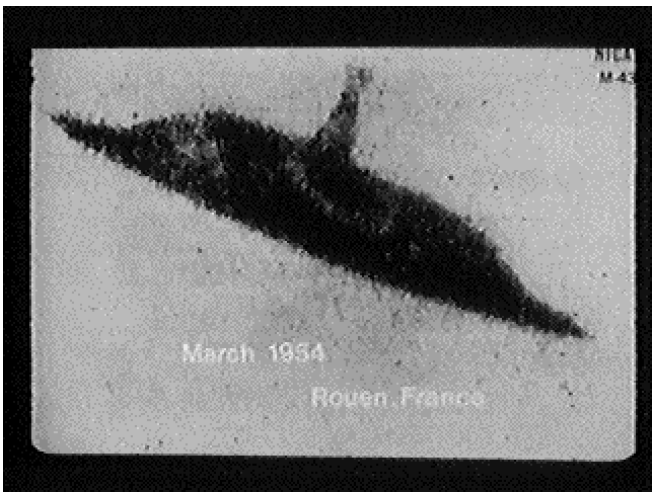

Figure 10

While researching for this updated version of this paper I recalled an incident that we had recently posted on the NICAP web site. The drawing is right from Project Blue Book Special Report 14. See below:

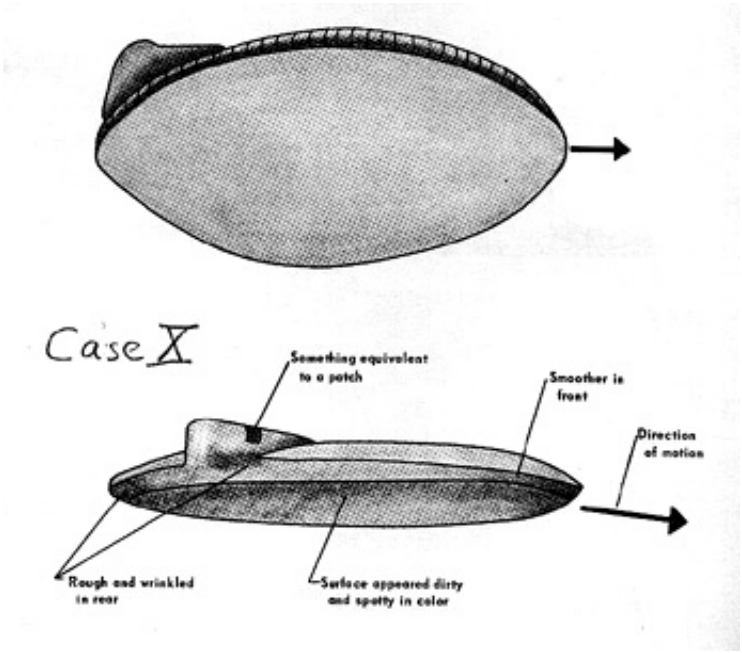

Fig 11

Project Blue Book Special Report 14 mentions, and gives an illustration, of a flying disc on page 86. Our thanks to Bruce Maccabee, who provided the information that made this case much more significant in his book, "UFO/FBI Connection", and then created the even-more-detailed web page document (See NICAP site for report). Also, our thanks to Brad Sparks, who found the witness' names in the Air Intelligence Report and called Bruce's attention to them.

Figure 11 (ref 7) depicts the object observed in daylight at Rogue River. Note the similarity between the McMinnville object and the Rogue River object. The sightings were less than a year apart, and both in Oregon!!! The distance from McMinnville and the mouth of the Rogue River is only about 110 miles.

Lt. Col. Doyle Rees, in a letter written in May 1950, concentrated on about fifty incidents which occurred in "hot" areas. About a dozen of these were "disk' or variation," indicating flying saucer or flying machine reports. The Nuclear Connection Project (which I am coordinator) notes that the same areas mentioned were atomic bomb assembly areas (specific locations in New Mexico) and storage facilities (Fort Hood, Texas - Killeen Base). The document did not include the Rogue River case, which happened during the same period because it occurred many hundreds of miles away at the mouth of the Rogue River in Oregon. But another good flying disk incident, it was. And the caliber of the witnesses were not that bad either.

The ability of, or the appearance of, a dome that might retract is not as important, but even that has been considered before (Project Sign report). Most domed UFOs, however, are not "straight up & down" configurations. Maybe there is a special use for a "coning tower" dome on some UFOs.

The purpose of this paper is to present a theory based on observational evidence and predicted effects of E-M propulsion by Niels Sorensen. The Princeton case is a very interesting close encounter report by an engineer with a notable electronics firm, of a flying saucer, illuminated by ultraviolet light. The "super-dark cone" may be an important finding.

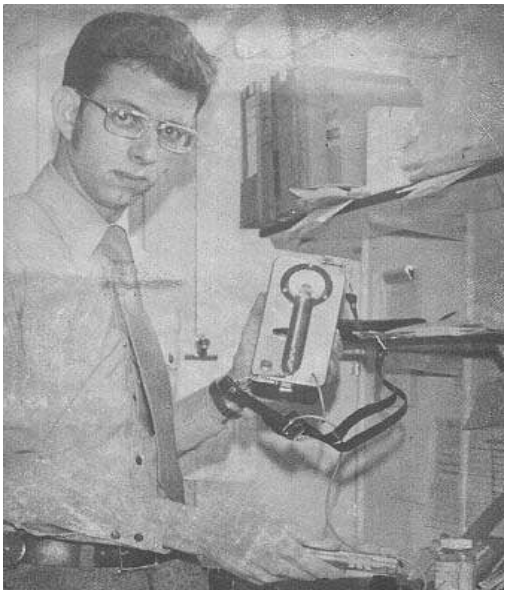
The Sighting Wave of 1967 - Indiana

A NICAP Subcommittee Investigation

By Francis Ridge



Francis Ridge

Abstract

The Indiana-based NICAP Subcommittee, Indiana Unit No.1, headquartered at Vincennes, was authorized in November of 1960. The unit had investigated many cases on a local and regional level, and had been involved in the "concentration" in S. Illinois in 1963, but the wave of 1967 was one of the largest in history. The 7-man NICAP rapid deployment team, one of four in the state, was very busy that year. Since the news media was not covering the UFO subject very well, and communication with NICAP HQ in Washington was by newsletter distributed only four times a year, very few knew what was going on until long after the wave had subsided.

The report on the local wave was published privately in the spring of 1967. This paper is a major update of that report. Here, in chrono order, is what investigators were able to piece together 36 years later. To view a Regional Sighting Information Database printout of over 200 incidents investigated by the Indiana group, click on the link below:

RSID printout for six-state region in 1967

The event on or around January 3, 1967, at Richmond, Indiana, marked the first of many sightings for Indiana. At 2:00 AM an inverted mushroom-shaped object hovered over a car for 10-15 minutes. The area ahead was brightly lighted. Forward motion of the vehicle slowed, it was unable to accelerate, and there was a loss of steering control. (1)

The region was also experiencing strange objects in the sky. On an unknown day in January 1967, city, county, and state police were dispatched to an area west of Galesburg, Illinois after reports of sightings of a large UFO, "bigger than a trailer", with blue lights and a funnel on top were received. One Knoxville farmer and several motorists reported that the UFO "was round, big as a house, had no flying lights, but let off a greenish-blue light." Vibrations from the craft could be felt in the farmer's truck as it followed him along the Victoria blacktop about 7:00 PM. (34) And on January 7th, things were happening near St. Louis, Missouri. There was a sighting of a domed disc with lights on the dome, which hovered, tilted and sped away. (31)

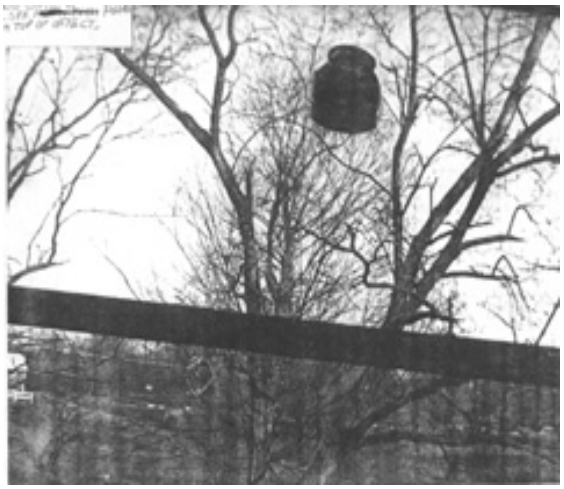
The first sighting that the Vincennes, Indiana, NICAP Subcommittee investigated, occurred on January 10th.

January 10, 8:30 PM; Bruceville, Indiana
Mrs. Pam Ridgley and her son, Joe, were driving down the lane leading from their cabin when they observed an unusual object. It was dull gray, elliptical in shape, and glowing a sort of bluish color around the rim. It was low enough over the car and utility pole to get a good estimate of size. It appeared to be about 30 feet in diameter and about eight feet thick. It hovered for a few seconds, then accelerated slowly at first, then moved fast toward the east (east-southeast). It vanished in 6-8 seconds. The object exhibited a disc-shape as it banked slightly and several dim lights were seen on the rim. (2)

January 16, 6:00 AM; Vincennes, Indiana
On this date there were numerous reports of a glowing, bluish-green object which we were able to identify as a barium cloud launched from a rocket fired from Wallops island. The question that arose was, why are there, many times, barium clouds and radar chaff tests conducted during real sighting periods? Is this just a coincidence or does someone have these tests ready to deploy when people start seeing real UFOs? As you will see, something WAS going in in 1967, and all over the world. (3)

Jan 17, evening; Freetown, Indiana
Francis Bedel, Jr., (23) of Portland, Indiana, was driving on State Highway 135, a two-lane blacktop road, north of Freetown, he later reported to State Police, when a brilliant glowing white light darted into his field of vision. It apparently hovered over the road for a few seconds, then slowly reversed its course. Bedel was so busy staring at the spectacle that he lost control of his car, which left the road and was badly damaged. State Police who investigated said that Bedel was not drinking and was not injured in the crash.. (4)

Same evening; Freetown, Indiana
On the same stretch of highway on the same night, Mr. & Mrs. Phil Patton of Freetown, reported to State Police that a brightly lighted disc-shaped craft, about 30 feet in diameter, came down alongside their car. Mr. Patton told State Trooper Conrad that the object moved along the highway right in front of their car and about one hundred feet distant from it. They estimated that it was about 100 feet above the road and they described it as a circular in shape and about the size of a small house. The Pattons reported to police that they heard no sound from the object but that its outstanding characteristic was the extreme brilliance of its lights, predominately red but with flashing yellow and white along the side or bottom of the thing. After a half a minute, it flashed up and away. According to state police who investigated, the description given by the Pattons was identical to that given by Francis Bedel, the young man who wrecked his car while watching a similar spectacle, about a mile from the scene of the Pattons' experience. (5)



Controversial photo

Jan 19, 3:00 PM; Milan, Indiana
A photograph was reportedly taken of a UFO by Reed Thompson, a 15-year-old boy from Milan. The town constable stated that the boy was reliable and said that he had seen the photo himself. However, the boy refused to submit copies of the print or negative (35) mm to this unit after correspondence and long-distance telephone interviews. His report to us stated he watched the object for 5-7 minutes before it sped off. Later, one of our Indiana field investigators, Don Worley, obtained further information and a black & white copy of the original color photo, along with a report and drawings. (6)

The incident occurred about 3:00 PM. The sound of a "train" passing and a very bright light outside the window attracted his attention. The object had a silvery quilted surfaced and was about 6' by 8' in size, and was shaped like a "jar" with a top opening. It moved slowly by the witness' home, moving about 10' above the ground, keeping the ground contour and making angled turns around trees. Thompson said he grabbed a small camera and got one good photo of the object out the bedroom window. The object disappeared instantly when it got near a pine tree. The original photo, according to FI Worley, shows tree limb reflections on the sides of the object. He also stated that in the top of the object is a faint shadow of a figure's head and shoulder!!!! We never got to see a better version of the picture. Also of interest, the tree limbs where the UFO hovered finally died.

The Indiana State Police also investigated the incident and Reed was questioned. The initial report was taken by trooper Jim Harris who came back later after the film was developed and spent considerable time with Reed and his parents. The Air Force sent investigators from Dayton, and Robert Lowe from the University of Colorado analyzed Reed's negative. Reed was later visited by Frank Edwards and Don Worley.

According to a press report, on the same day (no details) two girls from Dillsboro reported seeing the same object or a similar one. (33)

January 29, 7:00 PM; Eckerty, Indiana
Mr. John Sturm, a linotype operator for the SPRINGS-VALLEY-HERALD at French Lick, and his neighbor, observed a bright red object descending from the northwest. It was traveling approximately three times the speed of a jet and had a tail or trail extending about 10-15 feet to the rear of tie object. The object descended at a 45-degree angle, leveled off at low altitude and turned a bright green. Observation time: 15-20 seconds. Final bearing: southwest. Range: 3-4 miles. The object appeared to be controlled. Meteors don't "level out at low altitude" (7)

FEBRUARY

February 2, 10:30 PM; Sumner, Illinois
To the west of Vincennes, and just across the Wabash River in Illinois, is a little town called Sumner. A well-known craftsman, who requested anonymity, reported to the Lawrenceville-Vincennes Airport that he observed an object for one and a half hours that was doing some pretty good stunts. It hovered, accelerated, changed shape and color, was observed with the naked eye, 7- power binoculars, and a 20x spotting scope. It was described as a very bright red object, flashing like a red neon sign. The upper portion was a very bright white and red and green lights were observed around the object. The object was seen in the east northeast and noticed because of its brightness arid erratic movement. It seemed to have a very thick rim. In a letter dated 13 April, the observer mentioned that the LAWRENCEVILLE DAILEY - RECORD had an article on UFOs seen farther south about the same time. The airport stated during a telephone conversation that no conventional aircraft were in the area at the time. This one sounds suspiciously like a star or planet, but there were no candidates unless he had his bearings completely wrong. (8)

At the time, we had no idea what was going on elsewhere in the six-state region, or the United States, or even further away. But the record shows that something truly unusual was happening.

On that same day, but at Lima, Peru, at 12:30 AM a cone-shaped object approached and paced a Fawcett Airlines airplane. The cabin lights dimmed, there was radio interference, and the radio compass oscillated. (25)

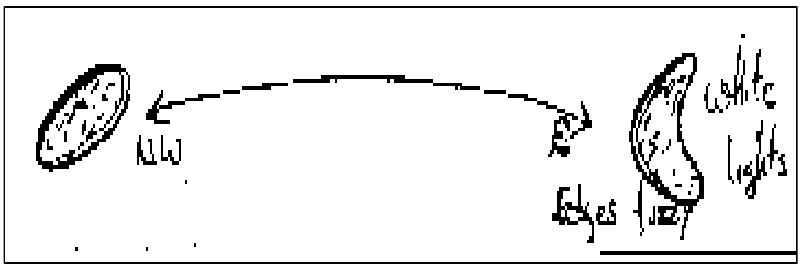
Before the year was out there would be at least 28 pilot chase reports.

Back home in Indiana.....

February 4, 1967, 7:30 PM; Norman, Indiana (68 miles NE of Vincennes)
State Trooper Hollace Chastain was checking his rural mailbox right after patrol when he noticed an unusual and very bright object in the western sky. It was elliptical in shape, about the size of a dime at arm's length and self luminous. Chastain, after observing a few minutes radioed Trooper James Blevins. The object then ceased to move and hovered for a while, then sped up suddenly, changed colors in the process from white to orange to greenish-blue back to white. It appeared to pulsate at times during the observation. No sound was detected during the 30-minute observation and the object finally disappeared behind a tree-line in the southwest. The object appeared solid and seemed to change shape. Estimated range: 5 miles. Estimated speed: (at acceleration) 1,000 mph. (9)

That same evening, 7:30 PM; 10 miles SE of Norman, Indiana
Trooper Blevins, also of the Seymour Post, followed the object for fifteen minutes to Lawrence County. The object was reported as "soft ball-sized" and changing colors from blue to green to white. "It was stationary when I first saw it, " he said, "but it was too big to be a star. Suddenly it started to move." The interrogation form completed by Trooper Blevins stated that the object had flickered & wobbled during observation and finally dropped straight down behind a tree-line. The object appeared solid and was observed at least once through binoculars. It moved from southwest of his position (8 miles west of Brownstown) to due south above the tree line. Estimated range: 2-10 miles. Estimated speed: 1,000 mph at acceleration. (10)

Within hours of the previous sightings & 65 miles southwest of Brownstown, something unusual was being observed.



"Boomerang" observed near Oakland City, Indiana

February 5th, 1:45 AM; 10 miles east of Oakland City, Indiana
Seven members of a band were returning home from a performance in Huntingburg when they observed an object described as "pale green with a bluish tinge" with a cluster of white lights, It was observed for 5-6 minutes from the side of highway 64. The object changed brightness and shape and appeared at first as "boomerang-shaped", then somewhat "teardrop-shaped" as it moved from east to northwest. The object was first observed as they drove up over a hill and was last seen fading in the northwest. Another car with 5-6 occupants also observed the object. The original group requested anonymity and the latter observers were unidentified. (11)

2:30 AM; Crothersville, Indiana (75 miles to the north east)
Richard D. Barker of the Seymour State Police post reported he followed a huge ball of greenish-blue and white lights for some 10 miles about 2:30 AM before the light moved west towards Bedford. "It had a flat bottom, just under basketball size, and had a brilliant blue-green light rotating around it counterclockwise. Barker said he was in the vicinity of Crothersville in Jackson County when he first spotted the changing lights, "It was maybe 300-500 feet high and had three red flashing lights under it," he said. "I got within what seemed like about a mile of it and it started moving south. Barker said he never did lose sight of it and it didn't leave any trail. He said when it got to Littleyork it hovered for a while and then took off fast, "It wasn't like any airplane I've ever seen, " he said. "I know it wasn't a plane." (12)

6:00 AM; Bedford, Indiana (35 miles northwest)
The woman reporting requested anonymity. The report she gave to the DAILEY HERALD-TELEPHONE provided the most vivid description of an unidentified flying object observed as far southwest as Oakland City and as far east as Crothersville.....35 miles away. At this time she arose because of noises on the roof roof. She thought it was raining. That's when she saw what looked like a quarter moon that was moving toward her. "I watched it for a half hour," she said. "It would more, then hover, getting closer all the time. It had a bright light on the bottom. The light kept going around and back and forth an the ground like it was looking for some place to land. As it got closer I could see a bright band around the middle of it," she continued. "It was oval-shaped, sort of like a cigar. The top was shiny, like metal, and the bottom was kind of orange. There was a crater on the bottom of it--and bumps, like legs." It hovered near a utility pole behind her house for ten minutes. She said when she started to dial her telephone to call someone about it the object "turned real bright orange and then blue and took off." (13)

That very evening there was a humanoid sighting at Hilliard, Ohio. An object that was described as an ellipse, landed, humanoid beings emerged and placed small spheres on the ground around the craft. Witnesses observed them interacting with humans. Further, up-to-date research, would show many more HR cases for the year, but at least 14 were found without much effort. (32)

February 7th, 8:00 PM; Owen County, Indiana
An egg-shaped object was reported by Paul Poorman on a farm near some strip mines. Poorman was a 33-year-old specialized police officer and qualified pilot. The object was white and well-defined, turned to a blood-red color, then a pale blue. It arose from the White River bottoms and strip mine area, hovered, "yo-yo'd", then zipped south then back, etc., then went down below a tree line. (14)

February 9th, 7:50 PM; Eight miles south of Seymour, Indiana (35 miles east of Bedford)
Another State Trooper to see and report a UFO in the Seymour area was D. E. Swider at Crothersville, This ended a sighting group for that area and appeared to be somewhat similar to the reports of the 4th and 5th of February. At about 7:50 PM when trooper Swidar was patrolling Interstate 65, 8 miles south of the Seymour State Police HQ, they advised him of a UFO reported to the post. He, himself, saw the object in the west for about 10 minutes before it finally went out of sight further west. It was described as a huge, round object, moving left to right (slowly) changing colors from white to red to orange. This sequence corresponded with a decrease in speed, followed by an increase in speed of the object, typical of a UFO. (15)

The direction and elevation of the UFO put it near the position of Venus. The Seymour Post stated during a long-distance telephone conversation (with this unit) that some people were reporting Venus. However, the description of the object, its lateral movement and short period at visibility, rules out this possibility.

February 14th, 7:00 AM; Jefferson City, Missouri. A CE-III
Going from a local to a regional sampling of UFO activity, a disc-shaped object was seen resting on a shaft in a field at Jefferson City, Missouri. Small beings were reportedly moving around rapidly beneath it. They disappeared behind the shaft, the object rocked back and forth, took off, and sped away. (26)

On February 19th, registered letters were sent simultaneously to Bakalar Air Force Base at Columbus,

Indiana and the Nike Missile Station at Dillsboro, requesting possible information on these reports; either visual or radar. On the 24th we received the following **letter** from the Department of the Air Force, dated 23rd Feb 1967:

> Dept. of the AF
> HQ, 434th Troop Carrier Wing
> Bakalar AFB, Columbus AFB, Indiana
>
> 1. In accordance with AFR 200-2, paragraph 7, this base must submit the following:
>
> "The Office at Information, Office of the Secretary at the Air Force, will release to the public or unofficial persons or organizations, any information or releases concerning UFO's, regardless of origin or nature. This includes replies to correspondence submitted direct to the AFSC (FTD) and other Air Force activities by private individuals requesting comments or results of analysis and investigations of sightings."
>
> 2. Your report dated 19 February 1967, is noted and will be passed to the appropriate personnel.
>
> FOR THE COMMANDER
> Elbert E. Wade, Major, AFRes
> Deputy Director of Operations
> Plans and Training Branch

Checking our copy of AFR 200-2 revealed the following:

1) AFR 200-2 makes no mention of the AFSC Foreign Technology Division in its text. On September 19, 1966, the Air Force Systems Command took over the UFO Project. Thus, we have a change from 20 years of investigation by Air Force intelligence through ATIC (Aerospace Technical Intelligence Center) to an Air Force research & development program. The order that produced that change was AFR 80-17. Major Wade was quoting from an outdated directive.

2) We were requesting information, not reporting.

3) We did not get the requested information, either to confirm or deny knowledge of the events.

4) The mention of the "report" (our request) being passed to the "appropriate personnel" indicated a possible statement from, or authorized by, the Secretary of the Air Force. This is according to instructions provided in AFR 200-2, Section B, paragraph 8, dated 14 September '59. No such answer has been received to date.

On February 20th, we sent a letter to the NICAP Indiana Unit # 4 at Anderson to check to see if they were investigating any of the reports. Instead of a letter, on March 2nd we received a long-distance call from the unit's director, Dennis Simpson. He stated that they had no knowledge of the reports, which indicated that the press had not "stimulated" any other reports. Quite to the contrary, only the Bloomington DAILEY HERALD-TELEPHONE covered the sightings. Even then, only a few were mentioned. The Oakland City case was known only to us and about a week before we received word of the Staten Police reports.

The reports continued.

February 22, 6:30 AM; Milton, Indiana - Dogs React
As Mrs. Jarnes A Clevenger, stood by her kitchen sink, she saw her collie dog jump against the kitchen window, then race around the yard, "barking and jumping."(16) Then she saw the UFO. "It appeared as [the) headlights of a car except there was only a solid light in an oval shape," the housewife told NICAP. She also saw a white row of lights along the object. Mrs. Clevenger let her dog into the house. The

frightened animal raced into the living room and hid. The witness, clad in only her night clothes and with no shoes, ran to the end of her walk in front of the house in the near-zero weather. She saw the object moving slowly at approximately 100 to 200 feet altitude, which followed the course of a creek. Returning to her house, Mrs. Clevenger called a neighbor one quarter of a mile to the south, Mrs. Judd Alford. "I could see a circle of white lights some 200 or 50 feet in the air," Mrs. Alford said. "The object appeared like a saucer to me." Several minutes later, she added, the UFO disappeared behind some trees. Mrs. Alford also said her fox terrier ran into the house "at full speed" and hid under a chair. (16)

On that same evening, Rev. and Mrs. Leonard Lutz and their son, David, saw an oblong UFO that looked like "two headlight-looking affairs" with colored lights near Hagerstown, Indiana. (17)

On the 29th we received the answer to the letter to the Dillsboro Nike Missile Station (40 miles east of Seymour). Instead of the typical professional looking government letterhead, the letter was typed on plain paper and was addressed from the Department of the Army:

Original copy of letter, dated February 24, 1967

.

Department of the Army
HQ, 88th Artillery Group (Air Defense)
Wilmington, Ohio

24 February 1967

Dear Sir,

This organization cannot confirm any of the UFO reports mentioned in your letter of 19 Feb 1967, addressed to Btry C, 5th Msl Bn (HERC), 56th Arty, Dillsboro, Indiana.

Sincerely,
John D. Penrod
WO1, USA
Adjutant

Radar at the NIKE Hercules base did not operate all the time, but it was/is in the Air Defense system. When we wrote to this base we assumed that the radar must have been on. This was an error. The type of radar used would pick up any high altitude aircraft, but probably not any low flying objects. At this base the equipment used for detection is continuous wave acquisition radar. Tracking is accomplished by pulse acquisition radar which guides the missile to the target. The tracking denial was probably legitimate, but there was a directive that covered that situation, too.

Issued by the Secretary of the Army, AR 30-13, dated 31 January 1957 states:

Sightings Of Unconventional Aircraft (UFOB)

"Persona involved in sightings will not discuss or disseminate such information to persons or agencies other than their superior officers and other personnel authorized by the Acting Chief Of Staff, G-2, this headquarters.

BY ORDER OF THE CHIEF OF STAFF,
Colonel Charles L. Olin

Previous correspondence with the missile base on November 25th, 1960, requesting data on a sighting

covered by the press, also died a quick death, when after the base stated that they HAD tracked an object to Indianapolis, denied it on December 1st. That **letter** was signed by Lt. Charles A. Millick, Exec Officer. State police units had been rushed out to look for evidence of a a plane crash, but could find none. This made it a UFO, not an airplane...which changed the circumstances and rules regarding release of information.

MARCH

March 1st, 10:06 PM; Poland, Indiana
A dark-colored disc with a dome, performing slow and low flights in Owen County, was reported to have followed persons in an auto for miles until they reached their home at Poland, in Clay County.. The dome was either reflecting or emitting dim red light, and the object had two white lights on the ends and two larger red lights together in the middle. The flight was reported as as low as 40' and two automobiles had their hoods up, indicating possible E-M effects. (18)

While we were checking out "routine" UFO reports on a local level, and not aware of anything going on elsewhere, the situation was getting more serious. On March 2nd there was a radar/visual sighting of three or four silvery objects at White Sands Missile Range, New Mexico. At 10:30 AM that morning those objects were tracked at 2,000 mph). There were at least nine radar cases in 1967 that were memorable. (27)

That same day we had sent a letter in rebuttal to the February 23rd, Bakalar Air Force letter, stating that we wanted a simple yes or no regarding their official knowledge of UFO activity in the area. Air Force regulations state that only the names and identifying information, classified equipment procedures & frequencies, be deleted in order to declassify a UFO report. A report stripped of this data (which is of no interest to us, anyway) should be readily available to serious researchers and the public. We also mentioned that AFR 80-17 had replaced AFR 200-2 in September. The answer to our letter (which came later and was dated March 21) was very interesting, but somewhat confusing:

Gif of original letter dated March 21, 1967

.

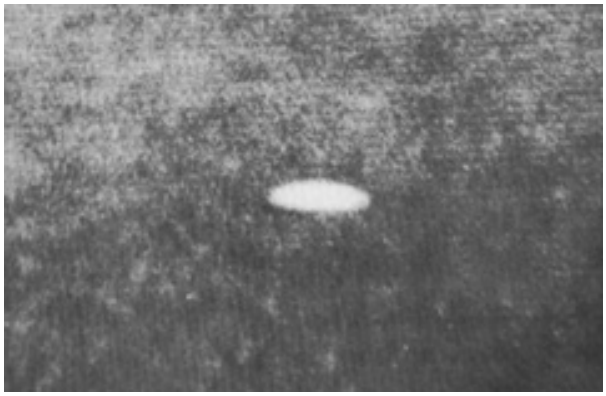
"1. This headquarters submits a negative radar capability and negative report of positively identified sighting.
2. Suggest you recheck section B, Paragraph 5C, AFR 80-17, dated 19 Sep 1966. Quote 'In response to local inquiries regarding UFO's reported in the vicinity of an Air Force Base, the base commander may release information to the news media or the public AFTER THE SIGHTING HAS BEEN POSITIVELY IDENTIFIED. If.....thru the entire paragraph..
3. Suggest contact with SAFOI for desired information."

FOR THE COMMANDER
Albert E. Wade, Major, AFRes

This much we can gather from the sightings reported beginning on Feb 4th. The witnesses were reliable and the testimony provides information that suggests that something truly unusual was going on in Indiana. At that time we were totally unaware that this was part of a major sighting wave that extended across the Country and into other parts of the world. In the cases we investigated, the acceleration of the object produced the same effects, a brighter spectral color. Upon deceleration, the reverse was noted. The greatest change occurred during a relatively swift velocity change. The basic colors reported were orange and greenish-blue from or TO white. In some instances one object could have caused all the reports for that period. No aircraft, balloon, cloud, or astronomical phenomena could, in the opinion of these investigators, be responsible for the physical or flight characteristics reported by the witnesses involved in these sightings.

Continuing to escalate, on March 5th there was a major broad daylight encounter at Minot AFB, North Dakota. Radar had tracked a metallic disc with a ring of bright flashing lights that descended over a

Minuteman missile site and hovered. This was seen by security guards. When jets were ordered to scramble, the object climbed straight up and streaked away. (28)



UFO filmed at Moline, Illinois, on March 9th, a sample of incidents outside Indiana during the wave of 1967.

March 9th, afternoon; Moline, Illinois.
A regional report, and one showing very graphically what was going on around the country, is the Moline, Illinois incident where a policeman spotted two UFOs in the afternoon. Police officer William Fisher said he was riding his motorcycle on patrol when he spotted a boxcar-sized object hovering at about 3,000 feet. He said a second UFO materialized as he watched, and both sped from sight. Fisher took color motion pictures of the objects, one frame of which is displayed at the top of this page. (29)

A major event in March was a glowing red saucer-shaped object which hovered over another Minuteman missile silo on March 16th. This time it was Malmstrom AFB, Montana. The object was seen by security guards and the missiles inexplicably shut down. Missiles later resumed functioning on their own, and no explanation was ever found. There was a similar experience the very next day at another missile site 20 miles away). (30)

March 23rd, 11:30 AM; Lawrenceville, Illinois
Another man requesting his name be kept confidential reported that he observed an object, near the airport, in the west that appeared to be an aircraft fuselage (DC-3) without wings. It was white in color, and after a minute of observation, took off fast towards the northwest into a cloud. The observer is a well-respected individual who has been employed for years at Lawrenceville-Vincennes Airport (formerly George Field). He expressed the fact that he could recognize and identify most aircraft. This one was different. It looked like it was coming in to land (sideways), then sped off, always exhibiting the elliptical shape. (19)

APRIL

April 1st, 5:45 AM; Wayne County, Indiana
A farm wife was putting milkers on cows in a barn when she observed a round, red-yellow object the size of the full moon for about a minute. It hovered about 200 yards away, then climbed and disappeared in about three seconds. (20)

April 10th, 3:00 PM; Fayette County, Indiana.
A bright white oval object with lights in a row were observed for 30-minutes by two witnesses. The object performed "falling leaf" maneuvers, slowly, many times, rising into clouds and coming out of them. Witness finally got a camera and took 12 photos. By then the objects were too distant to capture. (21)

Same day, 9:45 PM; same county.

A glowing orange-yellow ball that swung in a large arc was observed by two witnesses for 20 minutes. It moved closer and became a huge dark object which reminded the witnesses of a passenger coach of a train with seven tall windows emitting light. (22)

MAY

May 15th, 11:15 PM; NE of Indianapolis, Indiana
A commercial airline pilot, who prefers to remain anonymous, had just concluded a tour of duty and was driving to his home in an exclusive residential community a few miles northeast of Indianapolis. As he turned into the lane that led to his home, he noticed a strangely lighted craft in the sky. It was moving slowly toward the south, crossing some fields behind his house at an altitude of about one thousand feet, he estimated. The thing that attracted his attention was the lighting arrangement of the object; a brilliant white light in front, a rapidly blinking red light on the rear, and pulsating red lights from front to back underneath what seemed to be a cigar-shaped craft. The pilot phoned the airport control tower. Did they have anything on their scope in his area? The radar man assured him that they did indeed have an unidentified object on the scope - had been watching it for several minutes. The pilot inquired if either of the Goodyear "blimps" was up? Neither. The radar man said he could clearly see both blimps tied down on the airport, only a couple of hundred yards from his position. And he added that there were no planes in that area, and no weather balloons.

The pilot reported the incident to the Marion County Sheriff's office and that office broadcast an alert The dispatcher in the sheriff's office contacted the radar room at the Municipal Airport and was told that they were watching an unidentified return on the scope from an object moving about at very low altitude in the area indicated. Two deputies who answered from the general area of the pilot's home were dispatched to the scene to check the report. The first to reach the scene was Deputy Kenneth Toler, who told Frank Edwards: "It was a sight--- a very strange sight. The light on the front end was brilliant. We (the pilot and the deputy) could see the shape of the thing - like a fat cigar about forty to fifty feet long, we estimated. It was moving slowly against the wind. The row of lights along the bottom was unusual ---I never saw a craft with lights like that. We watched the thing for about 25 minutes, altogether. It was somewhere beyond a mile from us. When it got ready to leave it just took off at a steep angle. It went fast - very fast was out of sight in a few seconds, still rising." (23)

This sighting is noteworthy because of the caliber of the witnesses: a commercial pilot, a deputy sheriff and the radar operator who confirmed the visual sighting with his instrument.

May 21, 3:00 AM; Union County.
A dark object with a circle of red pulsating lights which lit up the area was observed for two minutes by two witnesses. The object moved slowly along a highway below tree-top level. It made two passes. Witnesses experienced retinal afterimage, and a rooster reduced its crowing to a shrill screaming sound. The location: 5 miles west of the NIKE missile base near Oxford, Ohio! (24)

Five hours later, 8:00 AM; same county.
A farmer out hunting looked up when he heard a brief swishing sound. Six or eight light gray watermelon shaped objects in semicircle formation at undetermined height were moving rapidly to the east. The witness was very shook up, rushed home and called the newspaper. (35)

Sometime in the summer, about 4:00 PM in the afternoon; Booneville, Indiana
The date of this sighting is unknown. At Booneville, just a few miles from Evansville, Indiana, a Close Encounter of the First Kind occurred. The witness, who was 29 years old when she filed this report, said: "I was approximately ten years old when I saw the object. I was playing with my brother, about 6, and a neighbor boy, about 12, in the back yard of my house. I had no idea what it was. When I asked him, he said, 'It's a UFO'. The object was hovering about five feet above the trees that lined the back yard. We had watched it for several minutes when we noticed a second object over the empty field behind our house. It was hovering slightly higher than the first one. There was also a third object, farther behind the second one

and a little higher up. We watched the objects for some time, then I went in the house to try to get my mother to look. She wouldn't. I went back outside and the three of us watched the objects for perhaps twenty minutes. Then, my mother called us into the house, we ate dinner, took a bath, and went into my bedroom at the end of the house and watched the first object until bedtime. Perhaps another hour. At no point could we get my mother to look out the window." The Form 1 indicates the first object was as close as thirty to forty feet at one point. (38)

August 23, time unknown; Hamilton County, Indiana
No details on this one, except that it was a computer entry for a landing report, one of 70 such reports for 1967. (36)

November 9, 1:45 PM; Near Erin, Tennessee
Two nurses driving home from a Waverly, Tennessee hospital stopped for a traffic light in Erin, Tennessee. While stopped they saw a large UFO approach and land on the highway in front of them. Without the driver "feeding gas or anything" the car began to move of its own accord until it stopped a mere thirty feet or so away from the semi-transparent craft. Inside the craft there were at least five small figures looking at them. The women felt completely unafraid and transfixed. The craft rose up and moved away and the women began eagerly to follow it. It "led" them to a rural road where they saw it land. The lights on their car went out. The next recollection was of the object high in the sky leaving them, but they perceived no time lapse nor did they ever check the time. (39)

November 27, 9:00 PM; Fayette County, Indiana
The object was first seen at 9:00 PM by four witnesses at a rural home. The object dropped down near three other witnesses in a car on a rural road northwest of the Philco-Ford Manufacturing Plant. The object was larger than a house. It was a silver, domed disc with masses of red lights pulsating in an erratic fashion underneath it. The witnesses in the automobile stopped and observed windows inside the dome with computer lights behind these. The witnesses fled the scene, tearing down the gravel road at high speed. The duration of this sighting was ten minutes. (37)

FINAL COMMENTS

In 1967 NICAP received 3340 UFO reports. Ted Bloecher and David Webb reported that there were more than 100 humanoid reports. This paper presents the Indiana cases and briefly mentions incidents in the region from and including Missouri, Illinois, Ohio, Kentucky and Tennessee. The Regional Sighting Information Database now lists over 200 cases in the region alone and this represents only the more substantial ones. Laced in with the "localized" incidents are brief accounts of key U.S. and global cases, to illustrate the size and seriousness of this major sighting wave. As Dick Hall reported in Volume II, The UFO Evidence, 55% of the incidents occurred in January through April. The same trend was evident here in Indiana. My father passed away on April 7th of that year and I was writing a report on the wave that very week. Little did we know that the wave was a global one and that even more interesting and serious events were taking place elsewhere.

I wish to thank my team members who helped with this investigation back in 1967: James Catt, Phillip Studler, Jerry Sievers, and Alan Sievers. Also, we all wish to thank police, sheriff, state police and news media who cooperated so well with the effort. Last, but not least, I wish to dedicate this report to my father, Roland Lee Ridge. There were times when he had some serious doubts about his son who was a "ufo chaser", at a time when it wasn't fashionable to believe in UFOs. Not long before his passing he expressed his belief that UFOs were real and they "weren't ours", but remarked, "but what can you do about it?". What we DID do was make it possible for the large percentage of people today to take the subject more seriously than they did 35 years ago. We've come a long way.

Francis Ridge
NICAP Site Coordinator
Former NICAP Subcom Chairman, Indiana Unit No. 1

1967 Sighting Wave - Comments by Richard Hall

During the one full year of operation of the University of Colorado UFO Project, a major sighting wave-one of the largest of all time occurred. The irony of the situation is that, despite assistance in screening reports provided to a Colorado University "Early Warning Net" by NICAP personnel, the project was totally unable to cope with the wave. The Condon Report addresses only 59 cases from 1967 (and most of them inadequately) out of the many hundreds reported directly to the project. Furthermore, 15 of the 59 were left unexplained (see section XV, Colorado UFO Project).

In 1967 NICAP received 3,340 UFO reports. Ted Bloecher and David Webb have established that there were more than 100 human UFO occupant reports during the year, with a peak of 18 cases in August. Among many other oddities of the Condon Report, it is noteworthy that the 1967 cases selected for study did not include any of the 17 Air Force "unidentified" cases for that year.

According to NICAP data the wave started strong in January, peaked in March, and tapered off in May. However, sightings continued at a steady pace throughout the rest of the year, and the sightings in October were comparable in number and quality to those in January through April.

A NICAP rating of 'substanual cases' (containing detailed information and remaining unexplained after preliminary screening) indicates that 55 percent of the 1967 cases occurred in January through April, averaging about 38 cases per month. There were 30 cases in October. Sightings in the remaining months (May-September, November-December) averaged 13 a month.

A special study of 179 solid object cases indicates that the 1967 wave was concentrated east of the Mississippi River; about 51 percent of the sightings occurred between 6:00 P.M. and midnight; there were two or more witnesses in 58 percent of the cases. These reports occurred on the average of 15 per month for the year, conservatively indicating what sort of information was readily available to the Colorado investigators. Of the 179 solid object cases, the Condon Report discusses only seven.

Regularly occurring features of the 1967 wave included vehicle encounters (an average of three per month), landings or near-landings (an average of four per month), and audible sound (an average of four per month). About once or twice a month, on average, witnesses reported humanoid beings, light beams, electromagnetic effects on vehicles, physical traces, and physiological effects on witnesses. The performance features included hovering and rapid acceleration, rapid departure upwards, sharp (noninertial) turns, zigzag and other erratic flight (see section X, Motions and Flight Patterns). National Investigations Committee On Aerial Phenomena

A MOCK CONGRESSIONAL HEARING

The Ruppelt Record
By Francis Ridge & Jerry Washington

Captain Edward J. Ruppelt (left) & General John A. Samford

It is now common knowledge that several official UFO projects came into being as a result of officialdom's concern over the presence of strange objects in our nation's skies - especially since the advent of the "Atomic Age." With the situation reaching critical mass in the late 1940s and '50s, Project Sign, then Grudge, and ultimately, Blue Book, was born.

Edward J. Ruppelt, a captain in the U.S. Air Force, was put in charge of the Project in 1951 and given the unenviable task of getting to the truth of the matter in the face of official obfuscation and stonewalling. A skeptic at heart, Ruppelt changed his tune eventually when confronted with the mounting evidence to the contrary. As a result, Blue Book's official conclusion was that there were a number of cases involving "Unknowns" that could not be explained away - a surprisingly candid admission under the circumstances.

It is in that spirit of truth and honesty that we've cooked-up the following exchanges from a mock hearing, circa 1956, during which Capt. Ruppelt (utilizing his actual quotes) testifies before a skeptical Congress. The Committee Chairman, Senator "Mo Lasses" - a man more interested in grandstanding than anything else - has the floor.

CC: Good morning, Captain Ruppelt.

CR: Good morning, sir.

CC: Captain Ruppelt, we understand that you were head of Project Blue Book for two years, from

September 1951 to some time in 1954.

CR: Yes, Sir.

CC: So, tell me, Captain. Regarding your, uh, "flying saucers," has the Air Force ever taken the reports of these things seriously?

CR: Yes sir, it has. On September 23, 1947, the chief of the Air Technical Intelligence Center, one of the Air Force's most highly specialized intelligence units, sent a letter to the Commanding General of the then Army Air Forces. The letter was in answer to the Commanding General's verbal request to make a preliminary study of the reports of unidentified flying objects.

CC: And what, pray tell, did this letter say?

CR: The letter said that after a preliminary study of UFO reports, ATIC concluded that, to quote from the letter, the reported phenomena were real. The only problem that confronted the people at ATIC was, "Were the UFOs of Russian or interplanetary origin."

CC: Whoa! Slow down there. That's a lot for this ol' peapicker to digest.

(Spoken in his best Southern drawl, Senator Mo then takes a deep breath, using the pregnant pause to shift his immense heft around in his over-stuffed leather chair).

CC: All right now. Let's carry on. Do you know of any higher placed Air Force officers or Project scientists who actually bought into this?

CR: Into what sir?

CC: This outer-space idea? It's pretty far-fetched, to put it mildly.

CR: There was a group among intelligence circles that thought the UFO's were interplanetary spaceships. They ranged from generals and top-grade scientists on down. And "maybe they're interplanetary" - with the "maybe" bordering on "they are" - was the opinion of several high-ranking officers in the Pentagon, so high that their personal opinion was almost policy.

CC: Well how come we're just now hearing about it? Didn't any of these people attempt to tell the public their conclusions?

CR: Well, yes. There were two factions. One believed the spaceship answer but felt we should clamp down on information until we had all the answers. Another group favored giving more facts to the public, including the best cases, the unsolved movies of UFOs, and the Air Force conclusions. A press showing of the "Tremonton" UFO movie - which the Navy analysts said showed unknown objects under intelligent control - was planned early in 1953.

CC: Well, if that's so, what happened to this plan?

CR: A new policy went into effect: "Don't say anything!"

CC: A cover-up, in other words?

CR: Those would be your words, Sir.

CC: Okay. Then could you tell me what, if anything, transpired as a result of that letter?

CR: The (1947) letter strongly urged that a permanent project be established at ATIC to investigate and analyze future UFO reports. It requested a priority for the project, a registered code name, and an overall security classification.

CC: And whatever became of that?

CR: ATIC's request was granted and Project Sign, the forerunner of Project Grudge and Blue Book was launched.

CC: So that's when all of this started; this flying saucer business that got the Air Force's knickers in an uproar began in September of that year?

CR: Although a formal project for UFO investigation wasn't set up until September of 1947, the Air Force had been vitally interested in UFO reports since June 24, 1947, the day Kenneth Arnold made the original UFO report.

CC: The record, as I read it here says, that quite a few sightings occurred both before and after the Arnold sighting. Just how concerned was the Army Air Force about all this? How would you best describe the situation?

CR: By the end of July 1947 the UFO security lid was down tight. The few members of the press that did inquire about what the Air Force was doing got the same treatment you would get today if you inquired about the number of thermonuclear weapons stockpiled in the U.S.'s atomic arsenal.

CC: So this was considered a serious situation by the powers-that-be?

CR: These memos and pieces of correspondence showed that the UFO situation was considered to be serious, in fact, very serious.

CC: And confusion reigned until then, right? When would you say folks started to get a handle on the situation?

CR: This confused speculation lasted only a few weeks. Then the investigation narrowed down to the Soviets and took off on a much more methodical course of action.

CC: Well, naturally. So, by the end of the year things really must have calmed down.

CR: Yes sir. While they were still convinced that UFOs were real objects, the people at ATIC began to change their thinking. Those who were convinced that the UFOs were of Soviet origin now began to look towards outer space; not because of any evidence that UFOs came from there, but because of their conviction that UFOs existed and only some unknown race with a highly developed state of technology could build such vehicles.

CC: Yes, well that's a pretty fanciful notion, Captain. Was that ever put into writing?

CR: In intelligence, if you have something to say about some vital problem you write a report that is known as an "Estimate of the Situation." A few days after the DC-3 was buzzed [Chiles -Whitted case, July 24, 1948], the people at ATIC decided that the time had arrived to make an Estimate of the Situation.

CC: And what was that estimate?

CR: The "situation" was the UFOs; the "estimate" was that they were interplanetary!

CC: Whatever happened to this estimate?

CR: It got as far as General Hoyt S. Vandenburg, then Chief of Staff, before it was batted back down. The General wouldn't buy interplanetary vehicles. The report lacked proof. A group from ATIC went to the Pentagon to bolster their position but had no luck, the Chief of Staff couldn't be convinced.

CC: Sounds like my kind of soldier. What happened next?

CR: The top Air Force's command refusal to buy the interplanetary theory didn't have any immediate effect upon the morale of Project Sign because the reports kept pouring in.

CC: Would you continue to categorize those reports of being of serious nature, Captain?

(Whether it's due to his mush-mouthed delivery or the fawning, greased, obsequious leer that accompanies it, Senator Mo has a talent for making even an innocent question sound patronizing).

CR: Yes sir, I would. Then radar came into the picture. For months the anti-saucer faction had been pointing their fingers at the lack of radar reports, saying, "If they exist, why don't they show up on radarscopes?" When they showed up on radarscopes the UFO theory won some converts.

CC: So tell me, Captain Ruppelt. How many official reports had they gotten by this time?

CR: By the end of 1948, Project Sign had received several hundred good reports. Out of those, 167 had been saved as good reports. About three dozen were classified as "Unknowns." At the same time, more and more work was being pushed off to the other investigative organization that was helping ATIC. The kickback on the Top Secret Estimate of the Situation was beginning to dampen a lot of enthusiasm. It was definitely a bear market for UFOs. A bull market was on the way, however.

CC: And the "moonpies" who believed in the interplanetary explanation, whatever happened to them?

CR: These people weren't a bunch of nuts or crackpots, Sir. They ranged down through the ranks from generals and top-grade civilians. On the outside civilian scientists backed up their views.

CC: Well I guess I stand corrected. Please continue. Tell us what happened next?

CR: New people took over Project Grudge. ATIC's top intelligence specialists who had been so eager to work on Project Sign were no longer working on Project Grudge. Other charter members of project Sign had been "purged." These were the people who had refused to change their original opinions about UFOs.

CC: And what then became the policy about UFOs?

CR: Get rid of the UFOs. It was never specified this way in writing but it didn't take much effort to see that this was the goal of Project Grudge. This unwritten objective was reflected in every memo, report and directive.

CC: From my perspective, it looks as though some sanity had been restored.

(Captain Ruppelt looks down, shaking his head).

CC: What was the overall tone after that?

CR: The one thing that stood out to me, being indoctrinated in the ways of UFO lore, was the schizophrenic approach so many people at ATIC took. On the surface they sided with the belly-laughers on any saucer issue, but if you were alone with them and started to ridicule the subject, they defended it or at least took an active interest. I learned this after I'd been at ATIC about a month.

CC: Did you ever ask anyone about this so-called "explaining away" policy?

CR: I queried one fellow, who answered half-bitterly, "The powers-that-be are anti-saucer. And to stay 'in favor,' it behooves one to follow suit." As of February 1951, this was the UFO project.

CC: And did that policy ever undergo a revision?

CR: Yes sir, it did, in September of that year. Right after the Fort Monmouth radar incident there was a briefing at the Pentagon. Every word of the two-hour meeting was recorded on a wire recorder. The recording was so "hot" that it was later destroyed but not before I heard it several times. I can't tell you everything that was said, but to be conservative, it didn't exactly follow the tone of the official Air Force releases. Many of the people present at the meeting weren't as convinced that the "hoax, hallucination, and misidentification" answer was quite as positive as the Grudge Report and subsequent press releases made out.

CC: Well, taking these things to be real, honest-to-gosh, Unknowns for a minute, let me ask. Has there ever been any evidence to indicate that these things are some kind of threat to our national security?

CR: UFOs were seen more frequently around areas vital to the defense of the United States. The Los Alamos-Albuquerque area, Oak Ridge, and the White Sands Proving Ground rated high. Port areas, Strategic Air Command bases and industrial areas ranked next. UFOs had been reported from every state in the Union and from every foreign country. The U.S. did not have a monopoly.

CC: What was the attitude of those working on Project Blue Book when you were the head honcho? Did you receive much cooperation?

CR: Yes I did. The degree of cooperation I received wasn't something I expected. The people who had worked on Project Grudge and the old Project Sign had warned me that everyone hated the word "UFO," and that I'd have to fight for everything I asked for. But once again they were wrong. The scientists who visited ATIC, General Samford, Project Bear, and now Air Defense Command couldn't have been more cooperative. I was becoming aware that there was much wider concern about UFO reports than I'd ever realized before.

CC: And you are trying to tell me, and all the good folks here on this committee, that you were told to hide the truth from the public?

CR: I was continually being told to "tell them about the sightings reports we've solved. Don't mention the unknowns."

CC: I repeat, Captain. You're claiming in front of God and everybody in this hearing room today, that the Air Force policy was to lie to the American public - to explain away the sightings regardless of the facts?

CR: After the Air Force order of February 11th, 1949, which renamed the project as "Grudge," everything was evaluated on the premise that UFOs couldn't exist, Senator. "No matter what you see or hear, don't believe it."

CC: This committee has learned that when the UFOs were supposedly observed and tracked on radar over Washington, D.C. in 1952, for goodness sakes, that the media was ordered out of the radar room. Is this true?

CR: I later found out that the press had been dismissed on the grounds that the procedures used in an intercept are classified. I knew that this was absurd because any ham radio operator worth his salt could build equipment and listen in on any intercept. The real reason for the press dismissal, I learned, was that

not a few people in the radar room thought this night would be the big night in UFO history; the night when a pilot would close in on and get a better look at a UFO, and they didn't want the press to be in on it.

CC: So what about the perfectly reasonable explanation, in my opinion, put forth by the Air Force regarding the Washington Nation radar sightings?

CR: In 1952, the press was led to believe the famous Washington Airport radar/visual sightings were only weather phenomena. Actually, they're still carried as unknowns. The press conference did take the pressure off Project Blue Book - but behind the scenes it was only the signal for an all-out drive to find out more about the UFOs.

CC: Well, following this line of reasoning to its illogical conclusion, did you ever find a flying saucer connection with atomic testing, let's say?

CR: In November or December [of 1952] the U.S. was going to shoot the first H-bomb during Project Ivy. Although this was Top Secret at the time, it was about the most poorly kept secret in history - everybody seemed to know about it. Some people in the Pentagon had the idea that there were beings, earthly or otherwise, who might be interested in the activities in the Pacific, as they seemed to be in Operation Mainbrace. Consequently, Project Blue Book had been directed to get transportation to the test area to set up a reporting net, brief people on how to report, and analyze their reports on the spot.

CC: On the other hand, Captain Ruppelt, if UFOs are explainable as a natural phenomena, something I'd much rather believe, wouldn't you expect the sightings to be concentrated in the areas with a higher population? In other words: more people, more sightings?

CR: According to the laws of normal distribution, if UFOs are not intelligently controlled vehicles, the distribution or reports SHOULD have been similar to the distribution of population in the United States. It wasn't.

CC: That's it? That's all you have to say? "It wasn't?"

CR: (Ruppelt repeats his previous statement) UFOs were seen more frequently around areas vital to the defense of the United States.....

CC: What about UFO behavior patterns? Did you come to any conclusions there, Captain?

CR: The study covered several hundred or our most detailed UFO reports. By a very critical process of elimination, based on the motion of the reported UFOs, [Major Dewey] Fournet told the [Robertson] panel how he and any previous analysis by Project Blue Book had been disregarded. And how those sightings that could have been caused by any one of the many dozens of known objects - balloons, airplanes, astronomical bodies, etc., were sifted out. This sifting took quite a toll, and the study ended up with only ten or twenty reports that fell into the "Unknown" category. Since such critical methods of evaluation had been used, these few reports proved beyond a doubt the UFO's were intelligently controlled by persons with brains equal to or far surpassing ours. Earthlings eliminated, leaving the final answer: Spacemen.

(Leaning forward in his leather chair as far as his enormous pot-belly will allow, Senator Mo draws a bead on the man in the hotseat and with the entire hearing room hanging on his every word, drawls the one question he believes is certain to rattle him).

CC: Captain Ruppelt_

CR: Yes Senator?

CC: As you know, the Air Force insists that its Project Blue Book Report #14 is proof that UFOs DON'T

exist. I repeat: DON'T EXIST. So, in light of that, Sir, how do you reconcile that with your testimony here today?

CR: That report was a shock to me. I was the one that had the IBM [a computer punch card] system tried out. It didn't prove a thing, and I had written it off as worthless before I left the project_ Also, that report was drawn up in 1953, yet the Air Force released it as the latest hot dope in October, 1955.

(Ruppelt, with his response, simple, succinct and decidedly anti-climactic, manages to diffuse all the drama in the room leaving the slack-jawed Senator groping for words. Sensing that the mood in the room has turned, and with his belly crying out for sustenance, the Senator looks to break for lunch).

CC: Captain Ruppelt, you have been a most cooperative witness this morning and this committee thanks you for your time. Just a few more questions if you don't mind and I believe we can wrap up this morning session.

CR: I don't mind at all, Senator.

CC: Good_good. Well, let's see here. You are on record as saying that the movies taken of UFOs are the best evidence to date.

CR: That is correct.

CC: Not so much the photos of these objects, but the motion pictures. What makes the motion picture film better evidence?

CR: [In the case of the Newhouse and Tremonton films] the possibility that the movies had been faked was considered but quickly rejected because only a Hollywood studio with elaborate equipment could do such a job, and the people who filmed the movies didn't have this kind of equipment.

CC: And you had quite a few of these?

CR: We had or knew about four strips of movie film that fell into the "unknown" category. Two were cinetheodolite movies that had been taken at White Sands Proving Grounds in April and May of 1950, one was the Montana movie and the last was the Tremonton movie. These latter two had been subjected to thousands of hours of analysis.

CC: And every possibility was eliminated? They were deemed to be unknowns? Why couldn't the danged things be conventional aircraft, for example?

CR: In regard to the Newhouse film: We called in several fighter pilots and they watched the UFOs circling and darting in and out in the cloudless, blue sky. Their unqualified comment was that no airplane could do what the UFOs were doing.

CC: And finally: If the UFO situation is a real one as you claim - if they are solid objects - do you think that they actually could be spacecraft?

CR: If they are real, there is no other alternative, staggering as the implications may be.

CC: Once again, Captain Ruppelt, you have been most helpful. At this time we'll break for lunch and call on the testimony of some of the other men involved in the Air Force study concerning this fascinating, but puzzling subject.

***

Note: Though liberties were taken with Capt. Ruppelt's syntax on occasion, in order to match this format, none were taken with out the substance of his statements and/or the implications thereof intact. All of Ruppelt's quotes used in this article can be found in his book, "The Report on Unidentified Flying Objects", which is on the NICAP site in its entirety. Fran Ridge researched the official statements by Ruppelt, and later Jerry Washington drafted the questions which a congressional committee would have asked.

National Investigations Committee On Aerial Phenomena

Engineers Praise Disc Performance

MX-1794

Updated August 1, 2013
While conducting research into the flap of 1957 and the Project Blue Book Special Report 14 ,I ran across some files on the MX-1794 and Project Silver Bug (Ref.1) and an article in 1996 in Invention & Technology (Ref. 2). All of these deal with the serious interest the Air Force had in actually building a flying saucer. Not to mention the work of Alfred Loedding in 1947 (Ref. 3) (See R&D directory for all of these). By the way, Special Report 14 was not an R&D project, but designed by the Air Force to prove that there were no reports that could give them a "model" of what a flying saucer looked like. As you can tell, just as there are numerous concepts of what an airplane or car looks like, there is no single model of one.

Below is the 1/48 scale model kit of the "alien craft" allegedly hidden in Nevada by the U.S. Government, once available from Testors. (Ref 4). The craft illustrated is referred to as the "sport model". I use this as a simple description of what many have reported over the last half-century, but I am not aware of any direct evidence to support the claims of Robert Lazar nor do I feel WE have anything in the skies that remotely behaves as flying saucers do or have done. I wish we did.

I have maintained a small file throughout the years, of statements by scientists and engineers regarding the use of a saucer shape for space travel and flight within the Earth's atmosphere. In 1990 there was a fascinating article in the April/May issue of SCIENCE DIGEST (Ref. 5), entitled, "Planet Of Origin: Hollywood", by Dennis Meredith, adapted from AIR & SPACE MAGAZINE. According to engineers at McDonnell Douglas Aerospace, some of the craft used in motion pictures are actually plausible. Several members of the company's space-station design team analyzed three of the most famous spacecraft from the movies:

1) 2001's "Discovery"
2) Star Trek's "Enterprise"
3) Star War's "Millennium Falcon"

Before getting into disc performance, let me briefly mention some other interesting statements which have some relevance to UFO's. According to Meredith's article, the consensus is that writers of these films were scientifically timid in some ways, accurate in others. The supercomputer, "HAL", (of 2001) was too big, says Robert Wood, director of the space station's advanced systems and technology. In fact, he found all three movies to be overly conservative in terms of computers and optical systems. "Based on the trends I've seen, in another hundred years optical computers, in which the calculations are done with light, will be almost magical devices, they'll be so powerful and compact." What does this say about reports of close encounters where humans remember being onboard the craft? If the description is that of very futuristic devices, the story just might be genuine. If the equipment sounds too much like our present hi-technology, the story may either be a fabrication or an honest, but dreamed experience.

Concerning the "barriers"' to ET coming here, Fritz Runge, McDonnell Douglas' manager of user integration arid commercialization, and other experts, still wonder about surpassing the speed of light. "Maybe it will be like breaking through the sound barrier. The faster you go, the harder it gets and greater the drag. Until you break through; then it gets easier."

Rating the three Hollywood spacecraft, some other interesting comments emerged. 2001's "Discovery" came under criticism for its lack of scanning devices for objects ahead, and the impressive rocket boosters it never needed out in space. However, it would make the most impressive warship. "You want a warship to have the smallest possible radar cross-section for anything ahead or behind it," says George King, a specialist in spacecraft configuration design. "So a hot-dog shape is best." Cigar or torpedo-shaped UFOs were mentioned in the Air Force Project Sign report and have been reported many times. The large "Carrier" class of UFOs is generally described as a giant cigar-shaped or rectangular craft. Saucers have been reported to join up with a cigar-shaped "mother ship", and could even be "stacked saucers".

The most interesting part of the article was actually mentioned last. Wood said he appreciated the "Millennium Falcon's" UFO-like contours. "The saucer shape gives you a nice lift-to-drag ratio for aerodynamic maneuvering. The Falcon reflected a McDonnell Douglas study that showed a flying saucer would be IDEAL for maneuvering within the atmosphere. Wood, himself, headed that project, which investigated propulsion schemes that could take advantage of Earth's magnetic field. His team calculated

that a gigantic saucer shape, encircled laterally by a band of superconducting material, could hold a huge electric charge. "We concluded that you could actually consider a big saucer that would float in the Earth's magnetic and electric fields."

The Air Force Project Grudge Report of December 1949 (Ref. 7) concluded, on the basis of actual military intelligence reports of UFOs, that the objects were of three basic types.

1) The most numerous-reports indicate daytime observation of metallic disc-like objects roughly in diameter ten times their thickness.
2) Rocket-like objects.
3) Sharply-defined luminous objects appearing as lights at night.

Other shapes during the first few decades have been reported in rarer appearance, but becoming more and more common in the 80's & 90's (Ref. 8). One of these is a "V" shaped object, or "boomerang". Another is a "triangle", sometimes black with running lights. "Stingrays", "futuristic" and "stealth-looking" have been observed.

Back to the "disc", many years ago I conducted some experiments on the disc shape which provided some interesting insights into UFO propulsion arid many reported maneuvers. A nine-inch plastic disc, flat on top arid bottom, approximately 3/8" thick was tested in a pool of water 8-1/2' deep. When moved about under water, water effectively simulating airflow arid resistance, the disc maneuvered very well by hand as long as you pushed along the discs horizontal plane. When it was tilted from its normal plane the resistance to continue in the same direction became almost like a brick wall, depending on the angle of change. An abrupt turn was the easiest and most dramatic! This resulted, if the forced motion was continued on the "aft end" of the disc, in a right-angle turn or a tight "U" turn, depending on what you desired. Since the disc is an omnidirectional wing, it could be moved in any direction without turning the disc's crew compartment. As stated previously, there was little or no resistance during a maneuver as long as you pushed in the craft's plane of motion, no matter whether this plane was perpendicularly level to, or at angles to, normal gravity. Of course, if the disc was vertical it would move ahead without resistance, but gravity was pulling it down into a turn instead of letting it go perfectly straight.

In another test, when the model was simply dropped vertically into the water, without being pushed or handled in any way, was unable to enter absolutely vertical and was immediately deflected. It was during these tests that it was noticed that the disc started to go into a "pendulum motion" or "falling leaf" maneuver. As the disc arched into a curve and slowed to a stop, it hovered briefly, then retraced its motion in the opposite direction, but slightly lower in another upward arc, then down again. The "falling leaf" motion occurred over and over again in ever-widening arcs until the disc settled on the bottom of the pool in a perfect UFO landing configuration! Whenever the disc was nearly perfectly level and not in motion, it hovered because the line of maximum resistance was directly under it. A very noticeable barrier could be felt just as if the water was Jello! The disc was weightless and would not move "down" even when touched. However, when the disc was pushed forward, it slid effortlessly forward until a turn was made and the increasing turn angle made the resistance so great to continue on straight that the disc seemed to avoid the undesired direction arid glided effortlessly in the desired direction. The weird effects on the disc during motion, some of which are hard to describe, were felt during every maneuver, except the drop test.

There are other advantages to the disc as a vehicle. A large ship built in this mariner would have the "bridge", "sickbay", "security", "cafeteria", and all the other pie-shaped "bays", etc., directly accessible to the entrance just a few feet away. If large enough, the entrance would be an elevator to other levels, all very accessible to each other, opening under the ship! Smaller "scout ships", as are generally described in abductions, however, appear to be a much simpler version of the disc.

For the non-disc sightings where, to some it appears that the objects responsible for them are new stealth aircraft produced from UFO technology, the data actually suggests something else, possibly a covert

"Trojan Horse" action by someone with superior technology! A small percentage of the reports could be indicative of our own actual stealth craft, but most reports by reliable witnesses suggest an almost silent, hovering craft, or one that flies under 100 mph. In the earlier years when this type of craft was being reported by many (1970's and 1980's) FAA people had told me that they seriously doubted that stealth aircraft had been routinely flying over the sighting areas.But in more recent years this doesn't hold true and really complicates the identification of this type of craft.

Discs predominated the first 30-years of the UFO era and no doubt were the basic unit involved in the first phases of the UFO agenda. I find it extremely interesting (and rewarding) that those who cried out, "If UFOs are real, then they would have to show up on radar," had no way of knowing that stealth-technology would be possible so early. UFO technology from the outset centers around a basic and very efficient disc that makes little or no noise. The disc can and does maneuver at high speeds and appears to have had stealth qualities all along. The "wings" and "boomerangs" are reported to travel very slow, sometimes very low, almost deliberately asking to be seen, but sometimes traveling faster in straight line speed runs.

There is much talk these days about crashed saucers and the subsequent emergence of stealth into our technology. Building a winged craft from UFO technology may sound reasonable to some, but many disagree. The need for a race (or races) to change from a perfected, high-performance disc to a wing shape 30-40 years later doesn't seem to compute, unless it's a deliberate attempt to pass as aircraft and deceive, or the function of the craft is different requiring the wing or delta. Maybe the ETs that were in the strike team during the first phases were replaced by a "coalition" force which has vehicles and a technology less sophisticated. As for the bonafide winged group of UFO' s, they are important, because there has been a 400% increase in this group arid the sightings cannot all be explained as misidentified aircraft. I have been a witness to several of this class (which I classify as Category 9's) myself, simply by being "on call". These objects would "pass" as aircraft by 95% of the population.

But the basic disc is not a lost cause after all the criticism throughout the years by skeptics. "When flying saucer sightings first broke into print, most aeronautical engineers considered the reported performance impossible. Experts went on record stating that disc-shaped airfoils were inefficient, unstable arid difficult to control (Ref. 8). Later, as UFO reports got better and refused to go away, engineers have begun to praise the disc performance. Martin Gerloff, aerodynamics expert for General Electric in 1960 released his views on the disc:

"The discus shape has equally good ability to operate in dense air, rarefied regions, and in empty space. The discus shape is superior to all rotating-wing designs (such as helicopters) in vertical take-off, climb arid cruising**.** Between the 17-mile altitude of today's jets (1963) and 200-mile orbits of earth-circling satellites, there is an uncovered region. The discus is extremely capable of flying in this rarefied area. The discus planform has a blunt-nose radius arid an extended leading edge which alleviate local heating." (Ref. 8,9).

Isn't it strange that the disc's performance, which was considered impossible in the 1940's and 1950's, is now considered, not only possible by our own present technology, but highly recommended by McDonnell Douglas and others? All the arguments against the UFO/disc reality seem to be finally falling by the wayside. After over 50 years we still cannot duplicate the flying saucer. Some feel that OUR hi-tech version of that high-performance vehicle now has to have wings arid noisy jet engines. As the little girl in ET said, "Give me a break.'"

According to Bob Lazar, who claims he was part of a government team involved with back engineering interstellar spacecraft at Area 51, nine "gravity propelled discs" were housed at a secret U. S. installation known as "S4" on the Nellis Air Force Test Range in the Groom Lake of central Nevada. Stanton Friedman, among others, has reasons for not believing Lazar.

If flying saucers were real and moving around in our atmosphere, somebody would see them. Occasionally, some of these people would be credible and articulate. Occasionally someone would have

the sense and the loaded camera to film one. Rarely, but eventually somebody would get a motion picture of one or more. But almost from the beginning, somebody should have picked them up on radar. Strange, but all these things have already occurred! And since UFOs don't need lights and most of the time are operating in a stealth mode, why do they let us take a glimpse at all?

Finally, why is there a lack of flying saucer sightings these days and why are there less close encounters? Mark Rodeghier of the J. Allen Hynek Center for UFO Studies noticed the same thing that I did while doing statistical studies. In the 1970's close encounters dropped off dramatically. This was the same time that our technology with wireless video cameras was taking off. It appears to me that, when the chance to capture on film and video and prove the existence of flying saucers was available to the general public, the "prime directive of non-interference" might have become necessary. See Proposed Studies on the Implications of Peaceful Space Activities for Human Affairs", section entitled "Implications of a Discovery of Extraterrestrial Life", (commonly referred to as The Brookings Report).

THE CASE FOR FLYING SAUCERS

Francis L. Ridge

Trindade Island Saucer

There is a quantum leap in technology that surfaced a half-century ago that, if exhibited today as in the early phases, has either severely degraded or has been replaced by a vastly inferior one. It doesn't make much sense. It's as if someone wrote a story about evolution and got the chapters mixed up. Either that or ET has sent most of its fleet back home.

As someone who was an official investigator during, in my opinion, some of the best years for UFO evidence, I have noticed almost a total lack of contemporary evidence for flying saucer reality during the last few decades. This is in stark contrast to the earlier years, especially the first half of the half-century since the wave of 1947. Why is this? Apparently, the genuine component of the UFO phenomenon has gone covert, taking along with it the more dramatic flying saucer reports. I believe that this is the principal reason why it is harder to defend UFOlogy today because the contemporary evidence is much less compelling. For the record, this is my case for flying saucers.

But before we do that let me first make a few things clear. The situation of UFOs and flying saucers becomes more difficult to accept when you look at the wrong evidence. Skeptics and non-believers continuously pick reports from the "identified" or IFO category, the ones even WE don't pay much attention to. When that fails they generally try to re-write history by changing facts regarding the good cases. It isn't working, but the attention to what we DO know is still being distracted.

What is a good UFO report? Personally, I would have never gotten involved in the UFO controversy had I dealt only with civilian sightings. In the early years before the more close-approaches and close encounters by civilians, we had a lot of what we now refer to as nocturnal lights and distant objects being reported by citizens all over the world. But it was the more-detailed military closer encounters that got my attention, especially the pilot reports and the radar tracking. And after the Robertson Panel in 1953 set the new rules for the Air Force handling of the UFO investigation, the debunking campaign took serious attention away from the UFO subject, at least in the eyes of the media and the public. Press releases in the late 50's and early 60's constantly reported that the Air had no evidence that

indicated the possibility that UFOs might really exist.

By the 1980's Dr. David Saunders and CUFOS had over 106,000 sightings on the UFOCAT computer. Included in this database were some of the best UFO reports ever filed. To date we have:

* More than 3,000 sightings from aircraft, 6% or 185 cases involving E-M effects.
* 489 radar cases, 21% of which are radar/visuals.
* 5600 physical trace cases, with at least 4104 involving actual UFO sightings.
* 441 cases of vehicle interference or E-M cases.

But from the very beginning the descriptions of the real objects was very similar. People, military and civilian, were reporting daylight observations of "flying saucers". And later the CE-II group, where the objects leave some form of evidence of their existence on the ground, etc., very often supported the existence of an object, circular in shape and about 30' or more in diameter! Coincidence or not, the Project SIGN report postulated a 30' disc, and reports many times described a disc approximating this size. But let's start at the beginning.

On September 23, 1947, after the massive wave of 1947 subsided, which included the famous Roswell incident, General Nathan Twining sent a letter to the Commanding General, Army Air Forces. He stated that the reported phenomenon were real! Our first word of this came in 1956 from Captain Edward J. Ruppelt, former director of Project Blue Book in his book, "The Report on Unidentified Flying Objects". Then, later, we found the complete document which states:

"It is the opinion that:
a. The phenomenon reported is something real and not visionary or fictitious.
b. There are objects probably approximating the shape of a disc, of which appreciable size as to appear to be as large as man-made aircraft.
c. There is a possibility that SOME of the incidents may be caused by natural phenomena, such as meteors.
d. The reported operating characteristics such as extreme rates of climb, maneuverability (particularly in a roll), and action which must be considered evasive when sighted or contacted by friendly aircraft and radar, lend belief to the possibility that some of the objects are controlled either manually, automatically or remotely.
e. The apparent common description of the objects is as follows:

1) Metallic or light reflecting surface.
2) Absence of a trail, except in a few instances when the object apparently was operating under high performance conditions.
3) Circular or elliptical in shape, flat on the bottom and domed on top."

What this tells us is that the Army-Air Force was getting reports of "flying saucers" and they were being taken seriously. These were military reports, some of which occurred during one of the most intense sighting waves in UFO history, the Wave of 1947. During this six-week period of intense UFO activity from late May to the early part of July, there were many reported observations of flying discs, many times over sensitive areas, and at least half the time in broad daylight. The intense wave suddenly ended with the reported crash of a flying saucer near Roswell, New Mexico. With the crashed saucer "explained" as a weather balloon the news media and the public stopped reporting, but the military continued to have UFO encounters.

Then, in February of 1949, the Project SIGN Report (page 19) described what the Air Force had discovered in the reports up to that time:

Group 1 -- The most numerous reports indicate the daytime observation of metallic disk-like objects, roughly in diameter ten times their thickness. There is some suggestion that the cross-section is asymmetrical and rather like a turtle shell. Reports agree that these objects are capable of high acceleration and velocity; they often are sighted in groups, sometimes in formation. Sometimes they flutter.

Group 2 -- The second group consists of reports of lights observed at night. These are also capable of high speed and acceleration. They are less commonly seen in groups. They usually appear to be sharply defined luminous objects.

Group 3 -- The third group consists of reports of various kinds of rockets, in general appearing somewhat like V-2 rockets.

Group 4 -- The fourth group contains reports of various devices which, in the writer's opinion, are sounding balloons of unusual shape such as are made by the General Mills Company to Navy contract.

Group 5 -- The fifth group includes reports of objects in which little credence can be placed.

There were several other reports and studies that mention "flying saucers", but we won't go into those here. suffice it to say, "flying saucers" were taken at face value from the very beginning. The question very soon became, "who do they belong to?" When foreign powers were eliminated, the lid went down.

In 1960 I was appointed subcommittee chairman for the National Investigations Committee on Aerial Phenomena. My 7-man investigation unit in SW Indiana later (1968) became a rapid response team assigned by NICAP to the University of Colorado UFO Project. In 1964 NICAP released a document, "The UFO Evidence", which gave a summary of known patterns in appearance and behavior as determined from cases they had studied through 1963. Regarding appearance, the most common type was a disc shape, followed by spherical, oval/elliptical, cylindrical, and triangular. Discs were observed in 26 % of the cases, with a considerable balance very possibly describing a disc viewed from various angles; round, elliptical, cylindrical (28.3%).

And the discs were not just floating by aimlessly. Remember the September 23, 1947 letter?

"The reported operating characteristics such as extreme rates of climb, maneuverability (particularly in a roll), and action which must be considered evasive when sighted or contacted by friendly aircraft and radar, lend belief to the possibility that some of the objects are controlled either manually, automatically or remotely."

Here were reports of "flying saucers" that were not only flying, they were considered as high-performance vehicles.

" Absence of a trail, except in a few instances when the object apparently was operating under high performance conditions."

Many of you have seen WWII footage of "dog-fights" where tight turns by fighter aircraft created heated wing tips, which produced two vapor trails. "Flying saucers" were being reported to do that, something which none of the later explanations could account for.

On January 16, 1957, the day after NICAP's Board of Governors met for the first time, Board Chairman Delmer S. Fahrney called a press conference. News media all over the

country quoted his statements, identifying him as one of the few "top brass" to speak out in defense of UFOs.

"Retired Rear Adm. Delmer S. Fahrney, once head of the Navy's guided missile program, said Wednesday reliable reports indicate that "there are objects coming into our atmosphere at very high speeds. Fahrney told a news conference that "no agency in this country or Russia is able to duplicate at this time the speeds and accelerations which radar and observers indicate these flying objects are able to achieve."

Fahrney told reporters he had no information or preconceived ideas as to whether the unidentified flying objects were from outer space, but he believed that they involved "a tremendous amount of technology of which we have no knowledge," and that their development must have taken a long period of time.

By 1957 the evidence for the existence of "flying saucers" was pretty strong. And this high-performance vehicle, if based on this Earth and owned by one of the super powers, should have shown up in somebody's defense department inventory a long time ago. But it never did. All the time the discs were being reported, somebody was putting down the disc shape. It just couldn't be real. It just couldn't "fly". But that all changed by the 60's and 70's.

I have maintained a small file throughout the years, of statements by scientists and engineers regarding the use of a saucer shape for space travel and flight within the Earth's atmosphere. In 1990 there was a fascinating article in the April/May issue of SCIENCE DIGEST (Ref 2), entitled, "Planet Of Origin: Hollywood", by Dennis Meredith, adapted from AIR & SPACE MAGAZINE. According to engineers at McDonnell Douglas Aerospace, some of the craft used in motion pictures are actually plausible. Several members of the company's space-station design team analyzed three of the most famous spacecraft from the movies:

1) 2001's "Discovery"
2) Star Trek's "Enterprise"
3) Star War's "Millennium Falcon"

Before getting more into disc performance, let me briefly mention some other interesting statements which have some relevance to UFO's. According to Meredith's article, the consensus is that writers of these films were scientifically timid in some ways, accurate in others. The supercomputer, "HAL", (of 2001) was too big, says Robert Wood, director of the space station's advanced systems and technology. In fact, he found all three movies to be overly conservative in terms of computers and optical systems. "Based on the trends I've seen, in another hundred years optical computers, in which the calculations are done with light, will be almost magical devices, they'll be so powerful and compact. What does this say about reports of close encounters where humans remember being onboard the craft? If the description is that of very futuristic devices, the story just might be genuine. If the equipment sounds too much like our present hi-technology, the story may either be a fabrication or an honest, but dreamed-up experience.

Concerning the "barriers"' to ET coming here, Fritz Runge, McDonnell Douglas' manager of user integration and commercialization, and other experts, still wonder about surpassing the speed of light. "Maybe it will be like breaking through the sound barrier. The faster you go, the harder it gets and greater the drag. Until you break through; then it gets easier."

Rating the three Hollywood spacecraft, some other interesting comments emerged. 2001's "Discovery" came under criticism for its lack of scanning devices for objects ahead, and the impressive rocket boosters it never needed out in space. However, it would make the most impressive warship. "You want a warship to have the smallest possible radar cross-section for anything ahead or behind it," says George King, a specialist in spacecraft configuration

design. "So a hot-dog shape is best." Cigar or torpedo-shaped UFOs were mentioned in the Air Force Project Sign report and have been reported many times. The large "Carrier" class of UFOs (Ref. 3) is generally described as a giant cigar-shaped or rectangular craft.

The most interesting part of the article was actually mentioned last. Wood said he appreciated the "Millennium Falcon's" UFO-like contours. "The saucer shape gives you a nice lift-to-drag ratio for aerodynamic maneuvering. The Falcon reflected a McDonnell Douglas study that showed a flying saucer would be IDEAL for maneuvering within the atmosphere. Wood, himself, headed that project, which investigated propulsion schemes that could take advantage of Earth's magnetic field. His team calculated that a gigantic saucer shape, encircled laterally by a band of superconductirig material, could hold a huge electric charge. "We concluded that you could actually consider a big saucer that would float in the Earth's magnetic and electric fields."

The Air Force Project Grudge Report of December 1949 (Ref 4) concluded, on the basis of actual military intelligence reports of UFOs, that the objects were of three basic types.

1) The most numerous-reports indicate daytime observation of metallic disc-like objects roughly in diameter ten times their thickness.

2) Rocket-like objects.

3) Sharply-defined luminous objects appearing as lights at night.

Other shapes during the first few decades have been reported in rarer appearance, but becoming more and more common in the 80's & 90's (Ref 5). One of these is a "V" shaped object, or "boomerang". Another is a "triangle", sometimes black with running lights. "Stingrays", "futuristic" and "stealth-looking" have been observed.

But getting back to the discs, a few years ago I conducted some experiments on the disc shape which provided some interesting insights into UFO propulsion and many reported maneuvers. A nine-inch plastic disc, flat on top and bottom, approximately 3/8" thick was tested in a pool of water 8-1/2' deep. When moved about under water, water effectively simulating airflow and resistance, the disc maneuvered very well by hand as long as you pushed along the discs horizontal plane. When it was tilted from its normal plane the resistance to continue in the same direction became almost like a brick wall, depending on the angle of change. An abrupt turn was the easiest and most dramatic. This resulted, if the forced motion was continued on the "aft end" of the disc, in a right-angle turn or a tight "U" turn, depending on what you desired. Since the disc is an omnidirectional wing, it could be moved in any direction without turning the disc's crew compartment. As stated previously, there was little or no resistance during a maneuver as long as you pushed in the craft's plane of movement, no matter whether this plane was perpendicularly level to, or at angles to, normal gravity. Of course, if the disc was vertical it would move ahead without resistance, but gravity was pulling it down into a turn instead of letting it go perfectly straight.

In another test, when the model was simply dropped vertically into the water, without being pushed or handled in any way, was unable to enter absolutely vertical and was immediately deflected. It was during these tests that it was noticed that the disc started to go into a "pendulum motion" or "falling leaf" maneuver. As the disc arched into a curve and slowed to a stop, it hovered briefly, then retraced its motion in the opposite direction, but slightly lower in another upward arc, then down again. The "falling leaf" motion occurred over and over again in ever-widening arcs until the disc settled on the bottom of the pool in a perfect UFO landing configuration! Whenever the disc was nearly perfectly level and not in motion, it hovered because the line of maximum resistance was directly under it. A very noticeable

barrier could be felt just as if the water was Jell-O! The disc was weightless and would not move "down" even when touched. However, when the disc was pushed forward, it slid effortlessly forward until a turn was made and the increasing turn angle made the resistance so great to continue on straight that the disc seemed to avoid the undesired direction arid glided effortlessly in the desired direction. The weird effects on the disc during motion, some of which are hard to describe, were felt during every maneuver, except the drop test.

There are other advantages to the disc as a vehicle. A large ship built in this manner would have the "bridge", "sickbay", "security", "cafeteria", and all the other pie-shaped "bays", etc., directly accessible to the entrance just a few feet away. If large enough, the entrance would be an elevator to other levels, all very accessible to each other, opening under the ship! Smaller "scout ships", as are generally described in abductions, however, appear to be a much simpler version of the disc.

For the non-disc sightings where, to some it appears that the objects responsible for them are new stealth aircraft produced from UFO technology, the data actually suggests something else, possibly a covert "Trojan Horse" action by someone with superior technology! A small percentage of the reports could be indicative of our own actual stealth craft, but most reports by reliable witnesses suggest an almost silent, hovering craft, or one that flies under 100 mph.

"Flying saucers" or "flying discs" predominated the first 30-years of the UFO era and no doubt were the basic unit involved in the first phases of the UFO agenda. In the beginning some of the uninformed skeptics wanted more proof. "If these things are real, somebody would have taken a picture by now." When they got their pictures, many of them of disc-shaped objects, they cried out for MORE proof. And when the Air Force had two top secret UFO films in their hands (1950 & 1952), that wasn't enough either. But even earlier, at the very beginning of the UFO era some thought, "If these things are real we should be able to pick them up on radar..." Well, that was a complete lost cause. There were two official reports from 1945; one near Okinawa (ground radar) and one near the Hanford Nuclear Plant in Washington (ground/visual). In 1948 there were five good radar cases.

But most UFOs did NOT show up on radar. Skeptics loved this. This was their "proof" that UFO couldn't exist. I find it extremely interesting (and rewarding) that none of us had any way of knowing that stealth-technology would be possible so early and explain this "anomaly". UFO technology from the outset centers around a basic and very efficient disc that makes little or no noise. The disc can and does maneuver at high speeds and appears to have had stealth qualities all along. The "wings" and "boomerangs" are reported to travel very slow, sometimes very low, almost deliberately asking to be seen, but sometimes traveling faster in straight line speed runs. But UFOs apparently are only seen or tracked on radar when they want to be or possibly when an action taken, such as a maneuver, give them away.

In the 1980s and early 90's there was much talk about crashed saucers and the subsequent emergence of stealth into our technology. Building a winged craft from UFO technology may sound reasonable to some, but many disagree. The need for a race (or races) to change from a perfected, high-performance disc to a wing shape 30-40 years later doesn't seem to make much sense, unless it's a deliberate attempt to pass as aircraft and deceive, OR the function of the craft is different requiring the wing or delta shape. The UFO operation may be in a new phase, whereby the occupants may be piloting less sophisticated vehicles.

During the Gulf War I had two sons in the military. During and after this terrible experience for all of us a lot of things went through my mind. In the beginning of the war we had the huge aircraft carriers, high-performance jets, and sea and air-launched cruise missiles. After

the war had ended coalition forces kept the peace, but the bulk of the mighty armada was pulled out. The high-performance vehicles returned to base and the region was kept under surveillance by more distant, less sophisticated vehicles.

This is pure speculation on my part. Lets' suppose that the original ETs that were in the strike team during the first phases (1947) were replaced by a "coalition" force (1990's) which had vehicles and a technology less sophisticated. For the most part the high-performance flying disc and its carrier could have been phased out. As for the bona fide winged group of UFO' s, they may be important, because there was a dramatic increase in this group in the 1990's and the sightings of these cannot all be explained as misidentified aircraft. I have been a witness to several of this class (which I classify as Category 9's) myself, simply by being "on call". These objects would "pass" as aircraft by 95% of the population.

But there is a quantum leap in technology that surfaced a half-century ago that, if exhibited today as in the early phases, has either severely degraded or has been replaced by a vastly inferior one. It doesn't make much sense. It's as if someone wrote a story about evolution and got the chapters mixed up.

One thing for sure, the basic disc is not a lost cause after all the criticism throughout the years by skeptics. "When flying saucer sightings first broke into print, most aeronautical engineers considered the reported performance impossible. Experts went on record stating that disc-shaped airfoils were inefficient, unstable arid difficult to control (Ref 6). Later, as UFO reports got better and refused to go away, engineers have begun to praise the disc performance. Martin Gerloff, aerodynamics expert for General Electric in 1960 released his views on the disc:

"The discus shape has equally good ability to operate in dense air, rarefied regions, and in empty space. The discus shape is superior to all rotating-wing designs (such as helicopters) in vertical take-off, climb and cruising. Between the 17-mile altitude of today's jets (1963) and 200-mile orbits of earth-circling satellites, there is an uncovered region. The discus is extremely capable of flying in this rarefied area. The discus planform has a blunt-nose radius and an extended leading edge which alleviate local heating." (Ref.6,7).

Isn't it strange that the disc's performance, which was considered impossible in the 1940's and 1950's, is now considered, not only possible by our own present technology, but highly recommended by McDonnell Douglas and others? All the arguments against the UFO/disc reality seem to be finally falling by the wayside. After over 50 years we still do not have a flying saucer. Some feel that OUR hi-tech version of that high-performance vehicle now has to have wings and noisy jet engines. As the little girl in ET said, "Give me a break."

If flying saucers were real and moving around in our atmosphere, somebody would see them. Occasionally, some of these people would be credible and articulate. Occasionally someone would have the sense and the loaded camera to film one. Rarely, but eventually somebody would get a motion picture of one or more. But almost from the beginning, somebody should have picked them up on radar. Strange, but all these things have already occurred! And since UFOs don't need lights and most of the time are operating in a stealth mode, why do they let us take a glimpse at all?

While preparing the final draft of this paper I asked Richard Hall, the author of the NICAP "UFO Evidence", to comment on it. I was very surprised:

"Actually, there have been quite a few more radar cases in the past 30 years than you might realize, and many dozens of disc sightings, as "The UFO evidence: II" will make clear. I wouldn't have known this except for thoroughly reviewing the world literature, because the

missing factor is news transmission as things are happening compared to the old days. But when you pull together sightings from all over the world, I guarantee you there are going to be some very surprised people on how strong and consistent the patterns are.

"Your thesis about UFOs going covert is defensible, especially in context with abductions and the reduction in CE-I and CE-II sightings, at least that get publicized. There does appear to have been a scaling back of that kind of activity, but it has not totally disappeared. Overall, a lot of very strong evidence has been quietly accumulating, and UE-II is really going to raise some eyebrows. I can hardly wait!"

Finally, something strange is beginning to happen as we approach the year 2000. The flying discs are back in the news!

National Investigations Committee On Aerial Phenomena

UFOs, the AISS, & My Brush With the 1127th

By Francis Ridge

In 1963, I was living in Vincennes, Indiana. That September I was contacted by an Air Force reserve captain, the CO for the local 1127th Air Reserve Squadron, requesting a briefing concerning our NICAP team's investigations of UFOs. This briefing was scheduled to be given at the Robert Green Auditorium on the 16th of that month. I was flattered and simply thought that this interest was due to the increased UFO activity in the region, particularly the 1963 UFO concentration or "mini-flap" in southern Illinois. But it now appears there was more to it than that

My briefing covered the UFO subject in general, but highlighted the 1963 mini-flap, especially the part about Blue Book sending a special team from Dayton to investigate the S. Illinois sightings. Preliminary investigations are usually carried out by the UFO officer at a nearby Air Force base. In this case it would have been an intelligence officer from Scott Air Force Base at Belleville, Illinois, near St. Louis. However, this time Blue Book had sent a TEAM of investigators, including no less than the Project Blue Book chief, Lt. Col. Robert J. Friend.

The front page of the August 12th issue of the Wayne County Press had the photo and caption: "A TEAM OF AIR FORCE PHYSICISTS were in Fairfield over the week end checking last week's light-in-the-sky stories. Here they are reading about it all in the press...Lt. Col. Robert J. Friend (center), Capt. Hector Quintinalla, right and Sgt. Charles R. Sharp." This team TEAM had checked the Austin boy's automobile for radiation in the Wayne City Car Chase and investigated a few of the 60-70 reported incidents in the area that week.

My briefing covered the key points of the concern about serious UFO reports, including the possibility of accidental war from misinformed air defense radar men mistaking UFOs for Soviet missiles during dangerous alert periods. But many years later, researchers located a document that mentioned a mysterious government project known as Project "Moon Dust" (Just Caus report). They discovered that the retrieval of downed space objects, including UFOs, was the responsibility of a "special unit" at Fort Belvoir, NJ., the 4602d Air Intelligence Service Squadron.

Team of Air Force Physicists in S. Illinois, 1963

I was aware of the 4602d's participation for two reasons: Ruppelt had mentioned it in his book and Air Force Regulation 200-2 had also mentioned it. The latter was an Intelligence regulation titled "Unidentified Flying Objects Reporting". It dealt only with UFO-related questions: "The Air Defense Command has a direct interest in the facts pertaining to UFOB's reported within the ZI and has, in the 4602d Air Intelligence Service Squadron (AISS), the capability to investigate these reports. The 4602d AISS is composed of specialists trained for field collection and investigation of matters of air intelligence interest which occur within the zone of the ZI." I had assumed, however, that the "collection" part probably always referred to just reports and sometimes items that turned out to be IFOs, and that anything else was wishful-thinking. As it turns out, there was more to it.

On January 3, 1953, the 4602d (AISS) was created by Air Defense Command regulation 24-4. The designation of the "special unit" at Fort Belvoir changed a number of times. The 4602d became the 1006th AISS in July 1957. In April 1960 it became the 1127th USAF Activities Group. That designation became important when tracking the Project Moon Dust (Kevin Randle's full report) and Operation Blue Fly documents. Project Moon Dust was set up by the U.S. Air Force to locate, recover, and deliver descended foreign space vehicles (including UFOs). Operation Blue Fly was established to facilitate expeditious delivery to the Foreign Technology Division (FTD) of Moon Dust and other items of great technical intelligence interest (once again including UFOs).

We had always suspected that Project Blue Book (the official AF UFO project) was merely a PR front, and there was evidence that some types of UFO project teams were active even after Blue Book closed down in December of 1969. But now we knew who some of these people were, and we had it from a reliable source: The Bolender Memo of 20 October 1969. Brigadier General C. H. Bolender wrote, "Moreover; reports of unidentified flying objects which could affect national security are made in accordance with JANAP 146 or Air Force Manual 55-11 , and are not part of the Blue Book system." The real responsibility for UFO reports was located in Langley, Virginia and not Dayton, Ohio. This also explained why some important case files were not found in the Blue Book archives.

> **Kevin Randle:**
> "On January 3, 1953, the 4602d Air Intelligence Service Squadron (AISS) was created by Air Defense Command regulation 24-4 in what might be considered an amazing coincidence. The Robertson Panel convened about two weeks later. They reviewed the information, suggested answers for the previously listed unidentifieds, and recommended that the myth be taken from the UFO sighting reports. They suggested that the media be used to "educate" the public about flying saucers. They believed that if they could teach the public about the nature of UFOs, then the

number of sighting reports would drop off."

Captain Edward J. Ruppelt:
"The panel didn't recommend that the activities of Blue Boot be cut back, and they didn't recommend that it be dropped. They recommended that it be expanded. Too many of the reports had been made by credible observers, the report said, people who should know what they're looking at-people who think things out carefully. Data that was out of the circumstantial evidence class was badly needed. And the panel must have been at least partially convinced that an expanded effort would prove something interesting because the expansion they recommended would require a considerable sum of money. The investigative force of Project Blue Book should be quadrupled in size, they wrote, and it should be staffed by specially trained experts in the fields of electronics, meteorology, photography, physics, and other fields of science pertinent to UFO investigations."

Kevin Randle:
"Then, just after the conclusion of the Robertson Panel, Blue Book was stripped of its investigative function. Sighting reports were no longer to be sent to Blue Book and ATIC at Wright-Patterson, but to the 4602d at Fort Belvoir, Virginia. A series of new regulations and special units was created that carefully spelled out who had the responsibility for UFO investigation, and it was not Blue Book. Seven months later, on August 26, 1953, the 4602d was tasked with the official investigation of UFOs under Air Force Regulation 200-2. The regulation required that all UFO reports from inside the United States be transmitted to the 4602d before they were sent on to Project Blue....an organization other than Blue Book and ATIC (would) be alerted first in a UFO report. Then the 4602d would determine if it was to be forwarded to ATIC at Wright-Patterson Air Force Base. Primary responsibility for UFO-related reports was held at Fort Belvoir, Virginia."

Randle continues:
"Project Blue Book was nothing more than a public relations outfit designed to identify objects and to convince the public that something was being done. In November 1961 another policy was established by the air force in a document sent to various air force intelligence functions. It outlined the establishment of the "AFCIN Intelligence Team Personnel." It was more proof that the air force was interested in UFOs and that it has continued its investigation of them. There is a portion of the document deleted, but in paragraph 2, subparagraph c, it says, "In addition to staff duty assignments, intelligence team personnel have peacetime duty functions in support of such Air Force projects as Moondust, Bluefly, and UFO, and other AFCIN directed quick reaction projects which require intelligence team operational capabilities."

One of my experiences that indicated there was somebody in the government officially still in charge of UFO reports occurred in 1983. For some time now we have known that something very strange and important was going on in October and November of 1975. We have proof that there were incidents that, to quote from released documents, "prompted the implementations of a Security Option 3 at our northern tier bases since 27 October." Sightings occurred at Loring AFB, Wurtsmith AFB, and then at Malmstrom AFB. In late 1983, an informant reported to me that there had been a major incident at NORAD during that same period which prompted a Security Option 5 alert and total "lock down" at "the Mountain" which houses NORAD. And some official UFO team from the Air Force investigated that incident.

The mystery of who they were is probably solved. Although it could have been Air Force OSI agents, the

informant told me that the men who interrogated his group were from "the Air Force UFO division", six years after Blue Book shut down. It was very probably some offshoot of the 4602d AISS. But back in 1963 an Air Force reserve squadron which was a descendent of the 4602d was very interested in what we in NICAP knew about UFOs. But more importantly, we found that UFO investigations continued and in direct proportion to the events which may have, or was determined to have, an effect on national security.

Updated 9 May 2021

It has been quite a while since we have updated this page. A lot has happened in those 18 months, one of which was COVID-19's effect on madar and many working at home. 2020 was an important year and we encountered several milestones. But first, breaking news!

Today I am announcing what could be a major update to the system. I say "could be" because we don't know what we may find in the new data as a result of the addition of an accelerometer. This sensor was built into our I-Board, along with the magnetometer and the sensor for barometric pressure, from day one. Those who originally bought MADAR devices never had to spend another dollar to get this feature. Even those who had the original "H" or "Q" chip were upgraded to the new board in 2019. Our Tech Support, and in particular, Eric Bendle, had been working on the software upgrade for months. By Saturday, the software had been tested for a week on our dev server with no issues, and I1.34RBU was uploaded to the production server. Where we had the barometric pressure readings on column 7 of our data spread sheet we now have "Accel/Pressure". When the device is not moving, it should read around 1.00 due to gravity pulling on it. Anything outside of around ±0.02 (m/s^2, Bendle believes) means that something is moving the device or affecting the accelerometer. This may turn out to be a valuable asset. We may have some surprises when we log the next madar/visual.

Also, the original plans in 2016, and the white paper presented to TS in early 2017, was to have alerts sent to cell phones so that the operator could be notified of his alert anywhere in the world. There were problems with this idea, mostly due to cell phone service providers, that made it less successful than planned, and although it worked for some, the alerts didn't provide a real "early warning system". But when we were doing a review for potential correlations in 2019, two major sightings correlations were discovered that had successful cell phone alerts. In the last few months TS Eric Calkins worked very hard and long and now we have an acceptable SMS system (Short Message Service).

Although we have had an alert feature attached to the MADAR Display (Map) for a long time, the idea to use it during skywatches prompted me to have Eric Calkins change the "Sound on" box selection from a

beep every 60 seconds to 3 "red alert" sweeps every 30 seconds.

I had Eric Calkins create an online form called MADAR Alert Search. This has certainly helped Jeramy and I find correlations, and in a totally different way than looking for sightings at NUFORC and MUFON CMS matching certified hits. When finding impressive sightings while doing our research we convert the dates to UTC and plug them into the MAS form, and if there are any madar hits in the system, we check them out. This has paid off several times. Sometimes the sightings did not trigger the madar but field numbers or compass heading changes showed noticeable perturbations.

* As of today we have 139 madar dataprobes in the field with 111 running and 28 (Not OnLine) in various stages. I have made a special effort in the last week to get at least half of the NOLs online.
* Our first UFO "signature" was documented in April of 2020 and it was also our first madar/visual.
* Last July I selected Jeramy Haslam to conduct a major review of the data for 2018-to-date.
* We recently completed our report on 2020. There are 15 potential correlations listed in that report.
* 2018 and 2019 are still in review, but 2019 had two good correlations.

I said it two years ago, as we were represented at the Phoenix conference, if we are to get even close to solving the UAP riddle we must try some new ideas. That was the contention in 1970 when I created the MADAR Project. MADAR stands for Multiple Anomaly Detection and Automated Recording. With numerous successes over a period of 50 years with one such detection station, and evidence from over 500 E-M cases (144 involving compass deviations), one thing is certain: these craft can be detected and an early warning system will work and scientific data collection by civilians will prevail over a century of lies and cover-ups by world governments. We have nothing to lose and everything to gain.

The MADAR Project is continuously delving into the unknown with the latest in technology. Learn all about the beginnings of the project by clicking on MADAR-I above. Using new electronic and computer technology, in 2014 MADAR-II began a new exciting phase in the study, but it was still only one detection site. And in 2016 the ground work for an even better and cheaper system began which has taken the Project world-wide. After over two years of research and development, by April of 2018 the new system became operational and began making UFO history.

Project Sign and the Estimate of the Situation

By Michael D. Swords

PDF Version

Environmental Institute, Western Michigan University, Kalamazoo, Michigan 49008, U.S.A.

Abstract: Upon becoming aware of the explosion of reports of anomalous aerial phenomena over the United States in the summer of 1947, the U.S. Air Force became alarmed and instituted emergency studies of the "flying disks." Quickly this task was delegated to Wright-Patterson Air Force Base's intelligence division, and in January 1948 became a formal project, Sign. Sign investigated the phenomenon for seven months and decided that it was best explained by the extraterrestrial (spacecraft) hypothesis (ETH). An Estimate was produced for the Pentagon giving reasons for this. Elements of the very high rank in the Pentagon would not accept this, and their refusal led to a major debate on the ETH, which resulted in the ultimate breakup of the Project Sign team and the destruction of all (with perhaps one exception) copies of the document. This early confrontation set the tone for the USAF behavior toward UFOs for the next two years and, after a brief respite in the era of Capt. Edward Ruppelt, until the complete cessation of the formal USAF project on the phenomenon in 1969.

INTRODUCTION

Project Sign was the first official, formal investigative body concerned with the mystery of unidentified flying objects. It was a United States Air Force (USAF) intelligence activity located at Wright-Patterson Air Force Base in Dayton. Ohio. Its bureaucratic location was in Air Materiel Command's (AMC) Intelligence Division, referred to on the base as T-2. It operated formally for about one year, the calendar year of 1948.

During that year Project Sign collected reports on a large number of cases, conducted some on-site investigations and many interviews, and attempted to analyze the UFO phenomenon in any way available. By the fall of 1948 the lead personnel of Sign decided that their investigations pointed to a conclusion. As was usually done for any intelligence analysis, they then composed what the military called an "Estimate of the Situation" which they sent to their superiors in the Pentagon. Their conclusion: The flying-disk phenomenon was caused by extraterrestrial agencies.

This created a great stir in the Pentagon. Authorities there were unwilling to accept it. The fallout of this consternation resulted in a quashing of the document, and a denial to the public that it had ever existed. This paper will attempt to detail the origins, nature, and functioning of Project Sign, as well as the reasons for the creation, quashing, and denial of the now-famous Estimate.

THE SUMMER OF 1947

The June 24, 1947, sighting of nine disks near Mt. Rainier, Washington, by Idaho businessman Kenneth Arnold started a flurry of reports that began the modern era of UFO sightings. At first, the military did not take these reports too seriously, but they changed their minds considerably in about one week's time. This change of attitude was due to the continued stream of disk reports, many by their own pilots and personnel. In fact, the first week of July 1947 had created considerable excitement within the offices of the Pentagon, with the Air Force Directorate of Intelligence scrambling to make sense of these mysterious overflights and enlisting the aid of their bases, other services, and the FBI (Fitch, 1947).

Gen. George McDonald was director of intelligence for Chief of Staff Gen. Carl Spaatz. But he and Spaatz seemingly played no role in this story. The real energy at the top of the Air Force's command seems to have been Spaatz's junior executive and incoming replacement, Gen. Hoyt Vandenberg. McDonald, too, seemed to be slipping toward retirement as well as his World War II mentor and friend, and much of the action at the Directorate was handled by his executive officer, Brig. Gen. George Schulgen. McDonald and Schulgen presided over the Directorate when it was adjusting to postwar

changes and the newness of the Air Force itself (soon to achieve formal independence from the Army).

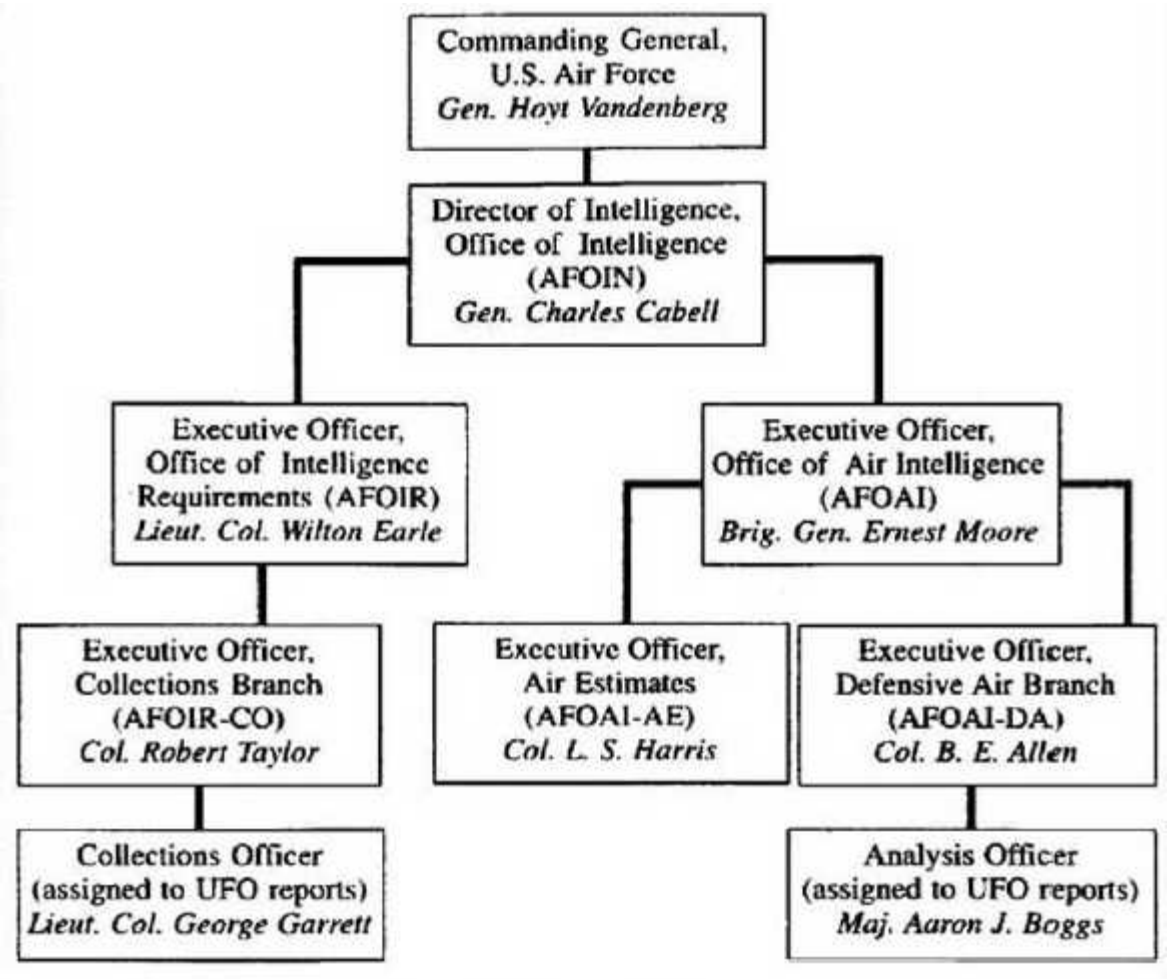
The Directorate had several divisions of which two played major roles regarding UFOs.[1] The primary offices at the Pentagon involved those of the Directorate of Intelligence (AFOIN) and certain locations in the two other divisions, the Air Force Office of Intelligence Requirements (AFOIR) and the Air Force Office of Air Intelligence (AFOAI).

The former had more of a service function, and included the important Collections branch (AFOIR-CO). In this office we find the executive officer, Col. Robert Taylor, and his right-hand man and chief collector of UFO information, Lt. Col. George D. Garrett. Acting Chief Garrett would stay in this position at least to the end of 1949. He would be a veteran source of continuity through this early UFO era, and a person in sympathy with the idea that the flying disks were real, technological objects. AFOIR seems to have been a source of individuals sympathetic to taking UFOs seriously, as it included not only Garrett and Taylor, but Col. Frank Dunn in the main office (who would become Captain Ruppelt's open-minded superior at Wright-Patterson) and Col. (then Major) W. A. Adams of the Documents and Dissemination office (who as Maj. Dewey Fournet's boss in the Pentagon would become a strong proponent of the extraterrestrial hypothesis in 1952. (Fournet was the Pentagon's chief UFO officer in 1952.)

1 All offices had letter designators, the "alphabet soup" of military focal points, and these were in the process of changing. I'll give the designators that applied through most of this early UFO period as examples of the relevant organizational structure. In the summer and fall of 1947, USAF used a set of designators beginning with "AFB" for the Pentagon and "TSD" for the T-2 intelligence office at Wright-Patterson. These designators all changed in about December 1947, were tweaked again by early 1950, and totally changed again by the time Project Blue Book Director Capt. Edward Ruppelt took over in late 1951. I give the structural designators for the late 1947-1950 period below. The real organizational format seems to have remained essentially the same.

Organizational Chart, USAF Intelligence, ca. 1948

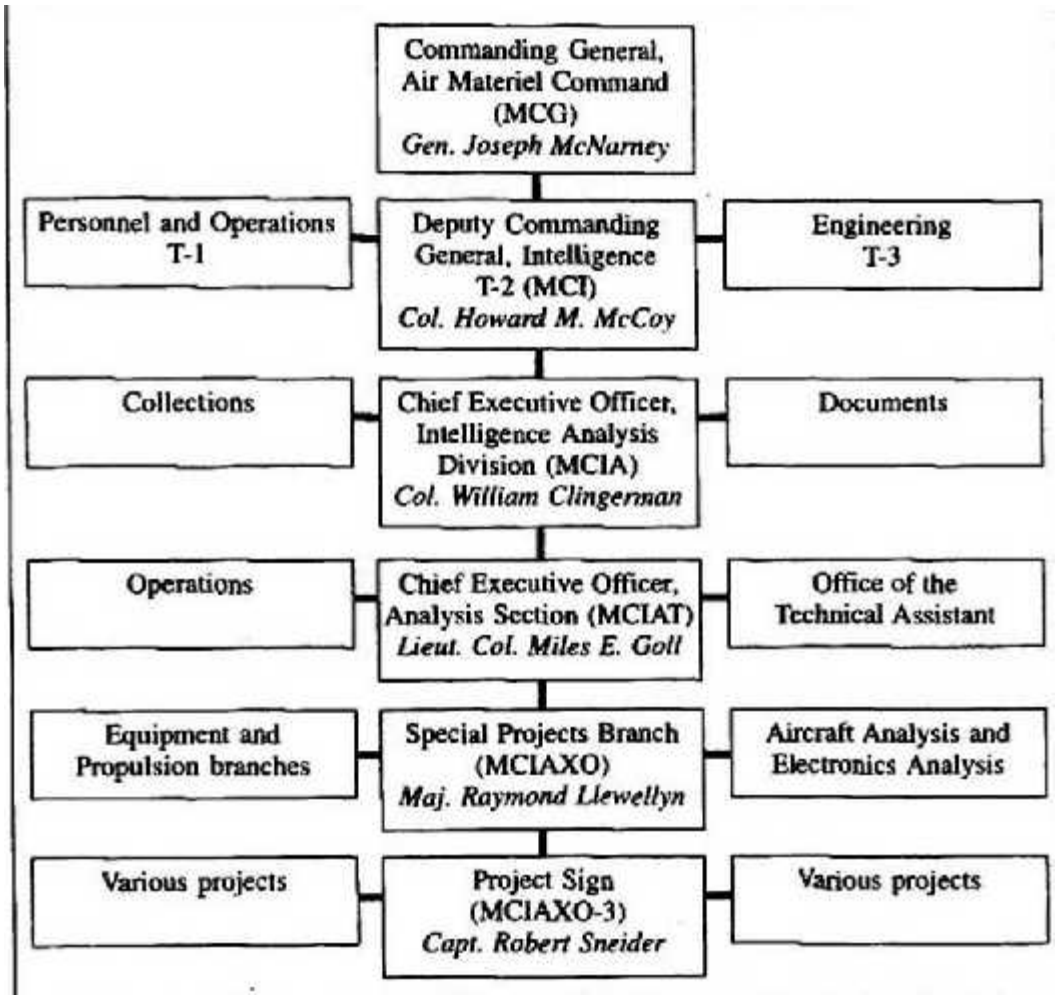
The Pentagon's Directorate of Intelligence was undergoing reorganization in 19471952. Much change also occurred in the executive positions of AFOIN, AFOAI, and its branches. The chart below is representative of the type of structure and staff as it was in the 1948 Project Sign period.



On the other side at the Pentagon was Air Intelligence. This was more an analysis division. From its Defensive Air branch (AFOAI-DA) and certain elements in the main office and Air Estimates (AFOAI-AE) came consistently negative views about the flying disks, particularly about the extraterrestrial hypothesis but to some degree even to their existence at all. AFOAI-DA seems to have been in part almost a spin doctoring office, fixated on manipulating analyses and conclusions to have the proper effect and appropriate action. This was the realm of the saucer-killing Maj. Aaron J. (Jerry) Boggs and Col. E. H. Porter, a very supportive superior who became director of estimates. Boggs stayed in this position a long time and Porter was still there in 1952. The Pentagon was a split house on UFOs from the beginning.

Organizational Chart, USAF Air Materiel Command, ca, 1948

Like the USAF Directorate of intelligence, the intelligence Division at AMC went through major restructuring in 1947-1952. The partial organizational chart below is generally accurate for 1948, the year that Project Sign formally existed.



At Wright-Patterson AFB, the Commanding General of AMC Nathan Twining presided over the USAF's technical research and development operation (called T-3, or AMC-Engineering), as well as the technical intelligence group MCIA, or T-2. These two functions were in separate parts of the base: T-3 engineering was on Wright Field, and T-2 intelligence was tucked away in an outer area of Patterson. T-2 could call upon T-3 labs and experts for help with analysis of reports.

The director of intelligence at AMC was Col. Howard M. McCoy. An excellent engineer (known as "Mr. Propeller' in his prewar days in the engineering division), McCoy was also an experienced intelligence man, having done fieldwork in Europe to bring back the remains of German aviation technology and some of their technical libraries. McCoy's intelligence division was set up to analyze reports of a potential or real enemy's air power. The main part of the operation was the intelligence analysis division (MCIA: Material Command Intelligence Analysis). This group's executive officer was Col. William Clingerman, a fine engineer and intelligence officer who personally investigated what was perhaps the first instance where WrightPatterson was ordered by the Pentagon to send personnel to the site of a UFO case, at Harmon Field, Newfoundland.

MCIA was broken into two sections: MCIAT (the technical analysis section) and MCIAO (the operations section). Under MCIAT were several branches (e.g., aircraft analysis, foreign liaison, guided missiles, special analysis, and special projects). The latter branch was a catchall office where ad hoc projects could arise. It would become the location of the flying-disk team, Project Sign. These offices were fairly fluid with regard to the actual work of their staff. Many officers signed off on documents as "acting chief' of MCIAT and for Clingerman as MCIA. Albert Deyarmond, a friend and war colleague of McCoy, worked out of Clingerman's office, was assigned to Project Sign, and could be seen writing letters and signing off for officers all up and down the T-2 structure.

But in the summer of 1947 the formal operation called Project Sign was not yet in existence. Reports of flying disks were coming from everywhere, but the investigation of these reports was

disorganized. The Pentagon, through Schulgen, responded first as the natural focal point. AFOIR-CO was given the initial responsibility in the person of Lt. Colonel Garrett. He, Taylor, and Schulgen began to try to get their bases to investigate notable cases and forward the reports. They also enlisted the FBI, who assigned Special Agent S. W. Reynolds as the liaison. They began working furiously on this throughout July, involving Wright-Patterson now and then by direct communication with McCoy.

As July wore on into August, Garrett, Schulgen, and Reynolds became confused by a lack of interest and pressure emanating from the high echelons of the Pentagon. The previous year they had gone through an investigative furor about a subject that they considered to be similar to the flying discs, when hundreds of "ghost rocket" reports came out of Sweden and other European countries. In 1946, the top brass had exerted continuous pressure to find an answer, but now it had gone completely quiet. This puzzling void has been termed "the silence from topside." It was very peculiar to Garrett and the FBI. Their mutual suspicion was that the very highest officials knew what this phenomenon was already (Swords, 1991).

THE RESPONSE TO THE SILENCE

Agent Reynolds felt that it was a waste of personnel and resources to engage in a nationwide goose chase to find out what the Pentagon high brass already knew. Garrett agreed: It was no more useful for the USAF to waste its time. Garrett and Schulgen decided to place the issue squarely before the people who should know. They were certain that the response would be: "Yes, fellows, we believe that we do understand precisely what these disk reports are all about, and you really don't need to pursue it any longer." Instead, the chain of communications would ultimately lead to the establishment of Project Sign.

Garrett decided to broach this question of the wild goose chase in concert with a preliminary intelligence Estimate on the nature of the disks that he would write. During late July 1947, Garrett had collected and sifted his flying-disk case reports and selected 16 (two more were added later) from which to make his Estimate. We can visualize him sitting at his desk in the Pentagon, the case reports spread out before him ordered by date, marking each front page with a large circled number, and beginning to extract the pattern that he saw. What Garrett concluded in this first informal USAF Estimate was as follows (see Appendix 1 for the full text):

> From detailed study of reports selected for their impression of veracity and reliability, several conclusions have been formed:
>
> a. This "flying saucer" situation is not all imaginary or seeing too much in some natural phenomenon. Something is really flying around.
>
> b. Lack of topside inquiries, when compared to the prompt and demanding inquiries that have originated topside upon former events, give more than ordinary weight to the possibility that this is a domestic project, about which the President, etc. know.
>
> c. Whatever the objects are, this much can be said of their physical appearance:
>
> 1. The surface of these objects is metallic, indicating a metallic skin, at least.
>
> 2. When a trail is observed, it is lightly colored, a Blue-Brown haze, that is similar to a rocket engine's exhaust. Contrary to a rocket of the solid type, one observation indicates that the fuel may be throttled which would indicate a liquid rocket engine.
>
> 3. As to shape, all observations state that the object is circular or at least elliptical, flat on the bottom and slightly domed on the top. The size estimates place it somewhere near the size of a C54 or a Constellation.
>
> 4. Some reports describe two tabs, located at the rear and symmetrical about the axis of flight motion.

5. Flights have been reported, from three to nine of them, flying good formation on each other, with speeds always above 300 knots.

6. The discs oscillate laterally while flying along, which could be snaking. [Garrett, 1947)

Garrett's 16-case (later 18-case) study was reported to the FBI and to his superiors in Schulgen's office. They then began using the study to query the research and development areas of the armed services: Are these devices our own technology? Are we flying them? Everyone, including USAF Chief of Research and Development Gen. Curtis LeMay, said no. Schulgen passed on LeMay's assessment. His exact words were:

> A complete survey of research activities discloses that the Army Air Forces has no project with the characteristics similar to those which have been associated with the Flying Discs. [Schulgen, 1947a).

The FBI had contacted their sources in the Army and had received the same reply. We don't have similar documentation for the Navy, but the man who was to become the leading civilian UFO researcher of the 1950s and 1960s, retired Marine Major Donald E. Keyhoe, made his own inquiry of his personal friend, Adm. Calvin Bolster (naval chief of aeronautical research), and was also told that no such naval project existed (Keyhoe, 1950, p. 44).

This seemed peculiar - advanced technology flying in U.S. air space that none of the services was responsible for, and yet the very high brass not particularly nervous. Maybe there was something so new going on at Wright-Patterson that even LeMay hadn't yet been briefed. So, as a last resort, General Twining got the Garrett Estimate and the normal inquiry, probably in late August.

Twining passed the inquiry on to McCoy, Maj. Gen. Alden Crawford (chief of T-3), Gen. F. O. Carroll (director of research and development), Col. C. K. Moore (aircraft laboratory chief), Col. Russell Minty (power-plant laboratory chief), and Brig. Gen. Edgar Sorenson (Air Institute of Technology commander). They each studied Garrett's report, and held a conference on the disks sometime in mid-September. Twining reported the results to Schulgen (and thereby to Garrett and the FBI) on September 23, 1947 (Twining, 1947).

We don't have the polished Garrett report to compare with the Twining letter, but it appears that Twining's experts essentially agreed with Garrett's analysis. They added the observations that sound is rarely heard coming from the disks, and that their performance characteristics indicate that they are controlled objects. T-3 was of the opinion that something like this could be built with long-range but slow-speed capabilities, but it would be very expensive. AMC admitted ignorance of the nature of the disks, confirmed that they would continue to monitor reports, and suggested that an official project be formed to get to the bottom of the phenomenon. This was the last of the "we don't know" admissions. The Pentagon agreed that a formal project should be initiated.

WRIGHT-PATTERSON AND THE GERMAN/SOVIET THEORY

When the Pentagon first involved AMC intelligence in the flying-disk problem (probably about mid-July), T-2 chief McCoy began thinking about the possibility of German aeronautical technology. This is shown in the following sequence of events documented in the USAF's Project Blue Book files:

> 1. On July 10, civilian workers at the air base at Harmon Field, Newfoundland, watched a disk-shaped object cut its way through the cloud cover and leave behind a powerful-looking "exhaust trail." Pictures were taken.
>
> 2. On July 16, a formal initial report was made by a base intelligence officer. This was followed by a more detailed report on July 21 that was sent to the Pentagon. (Note that Wright-Patterson was not yet considered any sort of focal point for disk reports.)

3. The Pentagon assessed the report and then got excited about it. Schulgen ordered McCoy (about July 28-29) to send a top-level assessment team to Harmon Field "immediately," and for them to go directly to him at the Pentagon afterwards.

4. McCoy's notes, possibly from a Pentagon phone call, indicate that his team had been asked earlier to do some assessment of these disk reports. He wrote, "What has Clingerman [his head of analysis at T-2] prepared?" and "What has Brentnall [chief of T-3 engineering] prepared?"

5. McCoy's notes also indicate his concern with German technology. "Interview Hugo Eckener. Goodyear. What L/A [lighter-than-air capability] does Russia have? German-Russian Type. What plans & potentialities?"

Nothing would be more natural than for McCoy to be concerned with German technology. His main job in 1945 had been retrieving it from German sites, and he had also helped bring back a huge German air technical library to Wright Field. Although it is said that he had nothing to do with Operation Paperclip (the placement of Nazi scientists in hi-tech U.S. labs), he obviously knew where these people were. And right in his own organization's library was the secret T-2 manual on the so-called Horten flying wings, the most radical of which had a distinct resemblance to the disks (USAF AMC, 1946).

Also working for McCoy in the T-2 analysis division was Alfred C. Loedding, a design engineer on loan from the T-3 engineering division. Loedding had long been interested in low-aspect and disk-shaped airplane designs, and had produced a couple himself (Loedding, 1948). He was intrigued with the disk reports, and was sure that such designs could be made to fly. He soon became McCoy and Clingerman's liaison to the Pentagon on these matters. By late August, McCoy seems to have already gotten the hint that flying-disk investigations would be shifted to Wright-Patterson from the Pentagon and he asked for a meeting between Loedding, Garrett, and Dr. Charles Carroll (McCoy, 1947a). Carroll, a mathematics and missiles expert, had been making some kind of analysis of flying-disk activities. (One wonders, admittedly a bit idly, whether this was the beginning of the analysis mentioned by Project Sign a year later, correlating disks with near approaches of planetary bodies.) As Loedding became a strong supporter of the extraterrestrial hypothesis (ETH) for the disks, and Garrett already was a strong proponent of their reality and extreme unusualness, they could have formed the core of the ETH-friendly faction.

The meeting took place in the Pentagon on September 5, and Pentagon disk files were transferred to Wright-Patterson shortly thereafter. Therefore, even before Twining wrote his famous September 23 letter evaluating the disk problem and suggesting a formal intelligence project at the Dayton base, the matter had been decided.

The Twining letter ("AMC Opinion Concerning Flying Discs") was written by McCoy from his own and T-2's perspective. Not knowing what he was dealing with, he offered two hypotheses: a very high security project that even he, Brentnall, or LeMay didn't know about; or a project, maybe even nuclear, developed by "some foreign nation." He was thinking mainly of German scientists working for the Soviets. He wanted all the top scientific guns in on this: the Atomic Energy Commission, NACA (NASA's predecessor), the Rand think tank, the Nuclear Engine Propulsion Aircraft project, and others. He promised a detailed "Essential Elements of Information" (EEI intelligence requirements) to be formulated immediately, so that all agencies would have guidance on what to look for (Twining, 1947).

Exactly when this EEI was written is unknown, but in about a month it was distributed within the European Command by Lt. Col. Malcolm Seashore, former acting chief of MCIAT under McCoy and Clingerman (Schulgen. 1947b). The EEI covered all the expected bases of an intelligence operation concerned about the use of exNazi technology and engineers by Soviet projects. It was especially concerned with the same things that had been worrying McCoy and Loedding in August: the German engineers Walter and Reimar Horten and their disk-like flying technologies. Its description of the disks in flight were, of course, the same as those in the Twining letter, which were mainly those originally determined by Garrett at the Pentagon. A few descriptors were added, which must have made the idea of

a German-Soviet craft seem very unlikely: the ability to almost hover, quickly disappear, group together very quickly, and "suddenly appear without warning as if from an extremely high altitude." All these new elements appeared in a December Pentagon estimation, rewritten from a similar Pentagon document of October 6. This indicates that radar detection of disks over Fukuoka, Japan, played a role in further concerning the Air Force about great maneuverability (McDonald, 1947).[2]

2 As an important sidebar to this discussion, a very nefarious misuse of the October 6 EE1 by McCoy has been uncovered (Todd, 1997). An unknown individual, apparently while investigating declassified Pentagon documents about the Horten brothers, seems to have taken this original EEI and constructed a fake version of it. The fake is dated the same as the October EEL called a "draft" instead of the completed official document distributed by Seashore, and attributed to Schulgen instead of to McCoy and Wright Field. The contents are largely left intact, undoubtedly on the theory that a good lie is always shrouded in the truth, but several deletions and additions occur. This manufactured fake was then somehow slipped back into the files to be discovered later by trusting ufologists who don't have such dishonest minds. When FOIA requests later included the fake alongside original accurate material, researchers naturally (including myself) were misled by the inclusions. This somewhat sick behavior points out yet another difficulty confronting scholars trying to piece together genuine historical accounts of what took place behind the mirror of secrecy in the military. The unfortunate pan of this is that the faked edition alleged that the USAF was having doubts in the fall of 1947 about the German-Soviet hypothesis and that some personnel were seriously considering the ETH. The tragedy of this hoax, I believe, is that it helps scuttle what was in fact the true situation. The genuine October 6 memo (rewritten in December 1947. and also genuine) indicates that by December the USAF was in serious doubt about the German hypothesis, yet strongly believed in a real "puzzling problem." They reasserted that the objects were not ours and didn't seem to be "theirs" either. Given what Loedding and Sign believed (the ETH) about one-half year later, is it not likely that the faked phrase of the hoax document ("it is the considered opinion of some elements that the object may in fact represent an interplanetary craft of some kind") is an accurate assessment? Sadly, due to the malfeasance of some scoundrel, it makes this case more difficult to defend.

Since September the intelligence department at Wright-Patterson had taken the lead responsibility for flying-disk analysis without having an official project or the material support that a special task would bring. Now the time had come to quit handling this as an add-on job, and become truly organized. The ball began rolling in early December, when LeMay made a request for information on the status of flying-disk analysis. Pentagon Colonel J. F. Olive (chief of AFOAI) and Lt. Col. J. E. Thomas of the Offensive Air section (AFOAI-OA) got the job. By December 18, Olive and Thomas had completed their reanalysis of the earlier documents from the Pentagon and Wright-Patterson, rewritten a new Estimate indicating a potentially serious but puzzling phenomenon, and turned this over to Chief of Air Force Intelligence McDonald for his signature. Also signing off on this document were Garrett's chief at AFOIR-CO and the new chief of AFO1R, Gen. Charles Cabell, who was being groomed to succeed McDonald. Around Christmas, the official letter was actually passed to LeMay recommending that Wright-Patterson should get an official flying-disk project, and that LeMay should formally notify the commanding general there. As it turned out, LeMay had just been replaced by Gen. Laurence C. Craigie, who sent the formal word to Wright-Patterson to establish Project Sign on December 30, 1947 (Craigie, 1947).

PROJECT SIGN AND ITS WORK

Sign was immediately organized as a special project under the Technical Analysis section of T-2. The name seems to have caught on a lot quicker than the alphabet-soup technical designation, but whether it was Sign or MCIAXO-3, the cases began to appear in Dayton to be analyzed. They landed on the desks of the following people:

1. Capt. Robert R. Sneider, the project chief.
2. Loedding, the T-3 veteran engineer.
3. Lawrence Truettner, a civilian engineer working on missile analysis at T-2 in the same corridor.
4. Deyarmond, the civilian intelligence analyst in Clingerman's office who had been a WW II field buddy of McCoy in Germany.

These four people would be considered the core group of the project. Helping this core

were:

5. Maj. Raymond Llewellyn, the chief of the special projects branch of MCIAT.

6. Lt. Howard W. Smith.

7. George W. Towles, a civilian.

8. Occasional others (e.g., Chief of Special Analysis Nicholas Post and John (Red) Honker of McCoy's office) when needed. The project had the authority to ask any lab on the base for help, occasional field support (pilots or equipment), and contacts with outside experts. We do not know how much direct interest McCoy took in the work.

Sign believed (the ETH) about one-half year later, is it not likely that the faked phrase of the hoax document ("it is the considered opinion of some elements that the object may in fact represent an interplanetary craft of some kind") is an accurate assessment? Sadly, due to the malfeasance of some scoundrel, it make this case more difficult to defend.

Although the project did not officially begin until later in January, Sign did not have long to wait for its first big case. It took place on January 7, 1948, and possibly produced more consternation and the longest after-effect of any other: the crash and death of national-guard pilot Capt. Thomas Mantell. The consensus of the UFO community today is that Mantell died while pushing his plane and himself too hard in a chase of a then-secret balloon called a Skyhook. Though this is almost certainly true, it wasn't at all obvious in 1948. From the viewpoint of 1948 and Project Sign, here are what the relevant facts seemed to be:

1. Ground personnel from a variety of locations were seeing a disk-like object in the sky.

2. Four national-guard planes were directed to it, three closed, and Mantel was in hot pursuit.

3. Mantell believed that the target was moving as fast as his plane.

4. It seemed to shine as if made of a reflecting substance like glass or metal.

5. Mantell was quoted, "[it] looks metallic and of tremendous size."

6. After the crash and investigation, the USAF (not Project Sign) said that Mantell had been chasing the planet Venus. No one involved with the investigation at Sign believed that, and in November 1948 they were still puzzling over this. Deyarmond wrote that this clearly was *not* Venus, and the case was unexplained.

It is easy to see how the Mantell case would get the project off to an excited but erroneous start. This incident highlights two important characteristics of the era: reason to believe that the UFO phenomenon was extremely interesting (and unexplained), and reason to disbelieve things said publicly by the Pentagon about UFO explanations. One wonders whether the project team felt that the Mantell object could have been the result of a Soviet-German secret project. The thought of a huge metallic disk leaving a fighter plane behind at high altitude was indeed an unsettling vision.

During the early months of the project another puzzling element added itself to the mystery: The UFOs appeared to be a truly worldwide phenomenon. Although there had been non-U.S. cases previously (and there had been a major wave of aerial anomalies in Europe, especially Scandinavia) in 1946, these were few in number and conveniently placed geographically so that the Soviet-German theory could be rationalized. Now reports seemed to be trickling in from everywhere. Cases in Finland, Denmark, Germany could be rationalized; but what about the Philippines, Paraguay, and the mid-Pacific? Of course, any report that didn't fit in could be wrong.

A second case that interested Sign occurred on February 18, 1948. Like Mantell's Skyhook balloon, this was not a UFO, but it is worth describing for other reasons. The case was of a spectacular

exploding bolide over Norcatur, Kansas.

> Concussion from the blast broke windows, rocked buildings and terrified residents over a wide section of Kansas, Nebraska, and Oklahoma.
>
> > ... The smoke trail started over Nebraska to the north and ran southward, twisting over upon itself in "Jelly-rolls" like the vapor trail of a plane out of control....
> >
> > Many people believed that a jet airplane had exploded instead of a meteor. Scientists, army officers and other officials said that was impossible because of the extreme altitude of the explosion. Some people blamed the explosion on "flying saucers."
> >
> > Two Army B-29 bombers circled over the area until nightfall, but the army did not issue a statement. (United Press, 19481

One could see how a USAF intelligence project that did not view "extreme altitude" as some sort of impossible criterion and who were considering air technologies with unusually powerful engines might be interested. Maybe it was because the project was new or that the Army was already involved or just that our records of the case are incomplete, but the investigation by Sign seems incompetent. The investigation seems to have consisted of:

1. An interview and correspondence with Oscar E. Monnig, a knowledgeable amateur meteorite buff who was not directly involved with either the event itself or the meteorite-fragment hunt at all. This was the only direct interview by T-2, and occurred due to an accidental coincidence of Maj. Melvin W. Faulk (of Clingerman's office) just happening to have a training flight in the vicinity (Faulk. 1948).

2. Photographs of smoke trails of known meteorites were collected to compare to the Norcatur smoke trail.

3. USAF Scientific Advisory Board personnel associated with research and development were apparently contacted for help. Someone, possibly geophysicist Helmut Landsberg, contacted meteoriticist Lincoln LaPaz for an assessment.

4. Suggestions from a citizen, Norman G. Markham, were passed from the Army to USAF and LaPaz, as if they should be taken seriously, and some local interviews were also provided.

5. LaPaz wrote a brief report in April, and the Monnig wrote a letter in May. This completed the investigation.

It was poor judgment not to send a project investigator to the site or work with LaPaz (or whatever experts were available) to interview witnesses and look for debris. No one from Wright-Patterson seems to have gone to Norcatur, talked personally with LaPaz (or with H. H. Nininger, who finally discovered fragment,, of the largest stony meteorite found up to that time), or got any direct evidence at all. Moreover, it was not at all certain that they were dealing with a bolide.

For example, the letter from LaPaz in April 1948 contained the following facts:

1. LaPaz believed that the "flying lenses" were 99% hoax and imagination but 1 % real.

2. He believed the Norcatur object was a bolide, but he could not be certain: "not a trace of meteoritic material has so far been found."

3. An unusual number of such experiences had produced no meteorite finds and he wondered what was going on. Could it be that "many of the fireballs are not meteorites at all?"

4. "The situation cries aloud for thorough investigation" (LaPaz, 1948). LaPaz was also puzzled by the testimony of witnesses who reported artificial objects in association with the case. One witness believed that a battery-like thing fell from the sky "too hot to handle" just after the explosion; another witness backed him up. Five individuals, including three in the tower at McCook Field in Nebraska, reported a dark object like a missile with a jet coming out the back. All specifically denied that the object was like a meteor. And finally, a prominent farmer of good character who lived near Stockton, Kansas, gave amazing testimony of what we would today call a close encounter of the first kind: a close-range observation showing clear structural details. Because this material is so rarely seen by ufologists, it might be of interest to recount farmer Leland Sammons's description in full:

> On February 18 at about 5 P.M., I was standing near my hog-pen about 100' east of my house, when I heard the pheasants raising a disturbance and the chickens all rushed to the chicken-house. I looked around toward the house to see what was causing it and saw something hovering just above the house. I ran toward the house, and it then lowered over the north end of the house and settled toward the ground. I was then very near it, approximately 6' when it stopped about level with my face, and just wobbled around for an instant, fire belching out of it and sucking back in. The thing was about 4' long, shaped something like a funnel. There was a pipe sticking out the back of it, and once as it wobbled around, the pipe was sticking right at my belly. Suddenly there was a lot of sparks showered from it, and the fire increased as if a fuse might have lighted, and it took off in a north-westerly direction very fast, gaining altitude as it went. My wife heard it leave and ran out where I stood, and we watched it go, leaving a trail of smoke all the way. Suddenly there was a great cloud of smoke in the sky, not more than 40 seconds after it left my yard, and in a few seconds or more, we heard an explosion. I then stepped off from my house to where it had been, and it was five steps. Yes, it was hot, I could feel the beat from it. Had I not been washing my car prior to the occurrence, wetting the ground, there would have been a bare spot in the yard where the thing started up because there was a great rush of fire from it when it left. It must have been quite high when it exploded. [Cox. 1948]

One of LaPaz's colleagues had interviewed Sammons, and believed him to "be sincere and very badly scared." One can almost feel LaPaz scratching his head between the lines of his letter as he asks: How could a bolide create such a report in a mature and sincere person such as Sammons?

In addition to all this was extensive correspondence by Norman G. Markham, the first piece of which was sent to the Army Chief of Staff on February 20 (Markham, 1948). Markham was a lover of anomalies, a Fortean, and he felt that he had calculated a connection between the Norcatur event and the position of the moon. Markham suggested that perhaps the moon was inhabited and that flying objects visiting earth come from there. Several other past events were cited to buttress his views. This correspondence was not discarded as obviously crackpot. It went from the Army to the Air Force to Sign to the Scientific Board to LaPaz. Although LaPaz believed Markham's views to be fantastic, he noted that Markham was correct to call attention to certain unexplained incidents, possibly of real flying disks. One wonders whether Project Sign's statements six months later - that they had been plotting disk reports in relation to the positions of planetary bodies (and finding correlations) - stem from Markham's letters in this case file.

Whatever we have here in the Norcatur case, the investigation seems poorly performed. There were no direct interviews or other fieldwork, and the meteorite explanation was accepted on a letter from the uninvolved amateur, not a direct report from Nininger or LaPaz. No crater was ever found or

photographed and placed in the file. And (this is the most telling aspect) the pattern of ignoring inconvenient contrary witness testimony was quietly condoned. What of the five "rocket" witnesses or Leland Sammons? It seemed that no one cared. But why this attitude, given the alleged concern at the times?

The next case activity worth citing was April 5, 1948, at Holloman AFB in New Mexico. Three highly trained balloon observers, including the project leader, J. W. Peoples, were working on a secret project for the Air Force's Watson Laboratories. They saw two objects. One observer followed one object, and the others followed the second object as they diverged. All were certain that the objects weren't balloons. They were large, whitish, roundish, very high, faster than any aircraft, and performing rapid, erratic motion. One object was lost low. The other went up quickly and seemed to just disappear. This case was deemed important enough to send Loedding and one of Clingerman's assistants, Lt. Col. J. C. Beam, to New Mexico to interview Peoples and the others. Unfortunately, the witnesses were gone when Sign arrived. (They were later interviewed at Watson Labs in New Jersey.) The witnesses were very sure of themselves and the case was classed as "Unidentified."

While at Holloman, Loedding and Beam talked with a Lieutenant Markley who had worked with the Watson team. Markley remembered one of them speaking of unusual radar returns from their equipment, but later the Watson personnel said that these were probably just "angels" (spurious echos due to atmospheric microstructures, insects, equipment malfunction, or other stimuli). Markley did report that UFOs had been seen around Holloman often. He himself had seen a disk in August 1947 and flat, round aeroforms on at least two further occasions. Beam and Loedding took a side trip to Phoenix, Arizona, to check up on an old sighting that especially interested Loedding: the July 4, 1947, case of a scooped-disk aeroform photographed by William A. Rhodes. Loedding's own views of a low-aspect, disk-like lifting body undoubtedly resonated with the object depicted in the Rhodes photos, and the report of their interview is very respectful. One might see this investigation as merely Loedding's interest, but it was generally true that Sign was interested in all the evidence, not just the cases which occurred "yesterday." At the end of their trips Beam and Loedding suggested that it was premature to place a permanent observing team at Holloman, despite the amount of activity that seemed to have occurred there.

The Memphis, Tennessee, case of May 7, 1948, is worth a brief mention. Two adult witnesses saw 50-60 unusual objects, apparently moving very high and fast, traveling in straight lines with slight zigzagging. They seemed shiny, like bright aluminum, with silvery trails. Beam also went out on this one. Three things are noteworthy about this case:

1. Astronomer Paul Herget of the Cincinnati Observatory said that he doubted that these objects were meteors.

2. This case was the first to mention J. Allen Hynek, then an astronomer at Ohio State University, whom Herget recommended they talk to.

3. A year later, the military Research and Development Board was viewing such observations of luminous, "definitely or possibly non-meteoritic," objects as important and requiring immediate action - including requesting this particular case file.

In the official Blue Book records, the Air Force unaccountably classed this case as a "meteor." Perhaps it was, but the experts appear on record as not thinking so. The assessment was probably not the original thinking of the Sign office. It is more likely the late-1948 thinking of Allen Hynek, once he was formally asked to make astronomical determinations, when possible, for UFO reports. His study, which was more an embarrassment to him in later years, would appear as an appendix to the reports of projects Sign and Grudge, Sign's new designation in 1949 (Hynek, 1949). Hynek viewed his job in these first case assessments as debunking. He was to get rid of UFOs as any sort of exceptional anomaly even when the so-called explanation he came up with was a huge stretch. He said that he originally enjoyed his job as a debunker (Hynek, 1973: 171-172; 1977: 34-38). Unfortunately this was a completely wrong-headed attitude, and it took him a long time to shake it thoroughly and return to a properly objective

analysis of cases as they came in. But in May and June of 1948, Hynek was not yet around to throw water and rocks at mysteries, so Sign personnel probably viewed this and the next three cases to be real puzzles rather than foolishness, ignorance, or misperception.

The next case occurred between Plevna and Miles City, Montana, on May 17. There was one witness, a professional man named William A. Bonneville who believed that reporting this air intruder was a patriotic duty. A bright white ball, brilliantly illuminated (three times as bright as a locomotive's headlight would be), sailed over the hills from the northwest, and then to the south and back to the west, and repeated these meanderings for 20 minutes until sailing away into a dark cloud. No sounds could be heard. A long, bright light shot out from beneath. Somewhat stunned by this performance, the witness stated (with the charming naiveté of the 1940s):

> ... anything of this nature which we are not familiar with we are duty bound to report to our Defense Forces who may be better equipped to understand the unfamiliar than we are.

Sign was probably as boggled by this experience as Bonneville was. But later, someone was up to the task: The case was explained away as "refraction of the planet Mars." This explanation is of interest not only because of its apparent ridiculousness, but because it is precisely the sort of idea continually used by Donald Menzel (Harvard astronomer and archenemy of UFOs in the 1950s and 1960s) in his later books and articles (Menzel, 1953). This refraction or mirage hypothesis was Menzel's siege gun. Almost any UFO case became a game to find some bright astronomical object in the general direction of the witness' line of sight, and then invoke misperception, ignorance, confusion, or rare atmospheric phenomena to account for the report. But as far as we know Menzel was not consulting on any of these 1948 cases. So where did this explanation come from?

INTERLUDE: J. ALLEN HYNEK AND SIGN

J. Allen Hynek formally became an astronomical consultant to Sign in 1948. The Plevna, Montana, explanation is one that probably came from an astronomer. This is a good place to try to understand Hynek's role, though it will not be possible to do so with any great certainty because of the lack of documentation concerning his earliest relations with the project. But it does offer an important glimpse of the Air Force's approach to UFO analysis.

We know that Hynek was officially tasked with studying UFO cases for astronomical explanations on December 16, 1948. This was Air Materiel Command contract W33-038-1118, the final report of which became the appendix for the Project Grudge report that largely debunked UFOs in 1949 (Hynek, 1949; USAF AMC. I949b). We also know that Herget suggested him as a consultant to the project around late May 1948. Sometime between these two dates, Hynek was signed on as a regular consultant and made "interim reports." It sounds as if the idea of a larger formal report (the Grudge appendix) was already in both Hynek's and Wright-Patterson's mind in the summer or fall of 1948. Still, Hynek said that he sent interim reports earlier than his formal study period. These reports were largely debunking in nature (Hynek, 1977: 15-17). Could Hynek himself have been the source of the "refraction of Mars" pseudoexplanation for the Plevna case? What an irony it would be if Hynek himself initiated the pseudoscientific mirage hypothesis that he would so vehemently criticize when touted by Menzel.

Let us first examine the key characteristics of the Plevna report. The object was an extremely bright ball of light (brighter than the moon, and three times brighter than a locomotive headlight) that flew through many viewing angles (north or northwest through "south of the road"). Whoever was doing the analysis must have had a hard time dealing with both the wide angular travel north to south and the extreme brightness. How any refraction would allow Mars to pick up that much extra luminosity should have given any astronomer pause. Hynek should have known better.

In his final report to Grudge he stated: "If this report is to be taken on face value, then no astronomical explanation of this incident is possible." Unfortunately, he continued:

> However, in seeking even a remote logical explanation for the incident, the

> present investigator is impressed with the fact that on this very night, May 17, Venus was at its greatest brilliancy, with a magnitude of -4.2, or about 100 times brighter than a first magnitude star. It would have appeared that night as an intensely bright light in the northwest. [Hynek, 1949: 151]

This statement is of interest in several ways: Mars doesn't enter into it; the language is very subdued, though it stretches for a debunking answer; and there is a subtle hint of Hynek's (and the military's?) fundamental mind-set. Let's comment on each of these characteristics.

This is a Venus answer, not Mars. Hynek was quite ready to relegate many UFOs to Venus (e.g., the Mantell case, even though Sign refused to buy that). Hynek's Venus proposition tried to deal with the brightness while ignoring the traveling excursion. Refraction is never mentioned. Where then does the refraction of Mars come from? It is my opinion that Hynek was blameless. Refraction and mirage explanations were not his style. Of the 200-plus analyses in the Grudge appendix, only two - case number 33 (Mantell) and 229 - even hint of such a phenomenon, and the word "refraction" appears in neither place. In case number 148, with a Venus explanation crying out for him to tie up its loose ends with refraction, he never resorts to it. Hynek believed refractions of any spectacular kind to be very rare, and even then limited in what they could do (e.g., move erratically about two or three lunar diameters as in case 33). So where did this Menzelian answer come from? Herget? The University of Dayton? A chance interaction with Menzel? We'll probably never know. It does demonstrate a sad, early willingness on an unknown scientist's part to grasp for a debunking explanation wherever one could be found.

Unfortunately, Hynek's tentatively worded guess demonstrated the same thing. He was just being more polite about it. He saw his job as explaining away UFO reports. His typical Grudge style was to make a simple and honestly defensible statement, then (if the first statement didn't explain the case) launch into some low-key speculation. The latter often went well beyond the official descriptions and well outside his charge of providing astronomical analyses. He regularly speculated on balloons, aircraft, subjectivity, and you-name-it. His motives appear to lie in sociology.

Hynek's memory of the Air Force consensus was that there were two contrary schools of thought (Hynek, 1977: 13-14). One school, mostly at Wright-Patterson, felt that UFOs were real, technological, and, probably interplanetary. The second school, a majority in the Pentagon and a minority at Wright-Patterson, felt that the UFOs were nonsense. The Air Force's elite Scientific Advisory Board lined up on the side of nonsense; and these were the Elders of the Tribe of Science to which Allen Hynek belonged.

> It may be that my interim reports helped the transformation of Project Sign into the extremely negative Project Grudge, which took as its premise that UFOs simply *could not be*. I tried hard to find astronomical explanations for as many cases as I could and in those that I couldn't I reached to draw out as many natural explanations as possible. Sometimes, I stretched too far.
>
> Clearly, I, too, thought at the time that UFOs were just a lot of nonsense. I enjoyed the role of debunker.... [Hynek, 1977: 17]

Hynek's mea culpa would have done much to relieve the sting of his early unscientific behavior in this matter if no one had paid any attention to him. Some did not, but others did. The core team at Project Sign apparently paid little or no mind to Hynek's negative analyses or interim reports: They were well on their way to their famous Estimate of the Situation and its interplanetary conclusion. If Hynek influenced bigger movers and shakers, like Clingerman and McCoy, there is no evidence of it. Who then did he affect? Possibly he influenced the negative school in the Pentagon, though there is no direct evidence of this. The Pentagon-created anti-UFO report of December 10, 1948 (USAF AID & USN ONI, 1948) shows nothing that could be attributed to Hynek. He may well have spoken to his tribesmen on the Scientific Advisory Board though, and in doing so reinforced their stance.

Those who were clearly influenced by Hynek were the people who read the Grudge report and who took over the UFO project after the sympathetic Sign team was broken up and dispersed. The evidence is abundant: It consists of the case evaluations written on the lower right-hand corners of the project's cards that led off the files of each individual report. There, scrawled in the corners, one can get the digested version of what the Grudge project was concluding about the cases: balloons, Venus, meteors, aircraft. Usually these were stolen directly from Hynek's report. Most regretfully, they were lifted from the speculation or stretch sections of each case, even when it was obvious that Hynek didn't think much of the explanation himself. Hynek had been very helpful.

One last thing before getting back to Sign's history. Note this phrase in the Plevna analysis: 'in seeking even a remote logical explanation." A *logical* explanation. This was a telling phraseology. These cases *couldn't* be what they seemed; this would not be "logical." Such objects were irrational, unscientific; they could not make sense. This was probably not only Hynek's restricted mind-set, but the Scientific Advisory Board's *in toto*. It was something that we do not understand enough about scientists and do not like to admit about them. Their curiosity is great; *and* it is restricted within broad but nearly ironclad limits. Outside of those limits is the realm of illogic and ridicule. Even in 1977, as he reminisced about his early sins, Hynek had still not made the complete transformation. He still spoke of "rationally" and "astronomically" as if one somehow defined the other (Hynek, 1973; 1977). His Grudge report, with its astronomical and often irrational comments, stood as a rich source of explanations for things not explained, and doubtless he and his tribesmen felt good about it. What an odd and dangerous way to come to conclusions on a matter of possible national security interest.

SIGN ROLLS ON

Ignoring the negative attitudes of consultants and the Pentagon, the Sign team was moving toward the watershed moment for the Project: the Chiles-Whitted case. We'll take two brief stops before arriving there. First, cast of Monroe, Michigan, May 25, 1948. Two Air Force officers were flying as passengers in an Air Force plane; one saw three objects come down from above and level off, approximately even with the plane and ahead of them. They were fuzzy-edged disks, and flying "astern" (one in line behind the other) and "stepped up" (those behind slightly elevated in step fashion). The objects were in sight about 10-15 seconds, flew opposite the plane's direction, took a sharp right turn, and were lost to sight. The viewer was fascinated by this and didn't call it to the other's attention until too late. Fortunately, moments later, a similar performance was put on by two disks instead of three. Both officers saw the action the second time.

The officers made wildly different size estimates (showing the dangers of this well-known subjective error when there are no clear referents), but the rest of the descriptions matched. Later for Grudge, Hynek followed his pattern: He said that there was no astronomical explanation. Then he speculated freely about holes in clouds, allowing a pattern of isolated shafts of sunlight to bounce off lower clouds and cause perfect echelon reflections moving opposite aircraft motion. The Grudge debunker was happy to write "Probable reflection" on the case record card, despite the fact that when Sign specifically asked for an opinion of the witness about reflections, they received a flat "no." Sign almost certainly felt that this was a UFO case. Grudge later "explained" it. Who knows what Hynek thought?

Next, Hecla, South Dakota, June 30, 1948. A husband and wife were driving and saw an unusual "star" high in the sky. The husband, an amateur astronomer and engineer, stopped the car and they got out to look for a while. The star, which they were pretty sure was *not* a star but a much larger (in angular aspect) mass, was not moving at all. They drove on, stopped again, and got others to look. More driving and another stop. This time, something seemed to be happening. The mass, still visually small, seemed to be larger and changing shape. A piece "fell off," moved away, and appeared like a round ball. Two more pieces now did the same, and moved to positions off the central body, which formed a perfect equilateral triangle. All the balls and the central object looked like polished aluminum. The central object now appeared like an aggregation of much smaller objects that dispersed and faded away. The three equilateral balls kept moving outward, always keeping their perfect geometry. Then they seemed to get smaller and fainter, as if rising to great height, and vanished. The astronomer-

engineer said: "my convictions at this point were that it could not be anything terrestrial."

Sign probably agreed. Hynek again did his thing: This was nothing astronomical; on the other hand, "in all probability the object was a cluster of balloons, carrying, perhaps, cosmic ray apparatus." The explanation was within the normal pattern of Air Force explanations for the next 20 years: Find something sort of like what's described, ignore some awkward elements, say "maybe," and count it explained. The ignored awkward element here was the perfect equilateral triangle allegedly formed by the unintelligent, motorless balloon parts. Hynek's "maybe" became "fact" when the Grudge record card was labeled "BALLOON JAH," in honor of J. Allen Hynek.

And then came the Chiles-Whitted case. Capt. Edward Ruppelt, chief of the UFO Project in 1951-1953, said:

> According to the old timers at ATIC (Wright-Patterson T-2 Intelligence division was then named Air Technical Intelligence Center), this report shook them worse than the Mantell Incident. This was the first time two reliable sources had been really close enough to anything resembling a UFO to get a good look and live to tell about it. [Ruppelt, 1956: 40-41]

Between this event and the ultimate demise of Project Sign, many other interesting cases and activities occurred; but because of the overriding significance of this experience for the project's history, the other cases will be (mostly) ignored. From this point forward, the history of Project Sign primarily reflects the Chiles-Whitted case and those thoughts, beliefs, and actions that became closely related to it.

The observation occurred in the early morning hours of July 24, 1948. An Eastern Airlines flight was near Montgomery, Alabama, flying at 5,000 feet and soon to land. The night was mainly clear. Pilot Clarence Chiles and copilot John Whiffed were at the controls. Most of the passengers were asleep. Ahead of the plane and slightly above (the pilots estimated about 5,500 feet), a flying object came into view. Chiles said to Whitted: "Look, there comes one of those new jet jobs." As the device came nearer, they became more amazed. It was shaped like a DC-6, but with neither wings nor tail: a "flying fuselage." It seemed to be about 100 feet long with a barrel diameter about three times that of a B-29. At an estimated 500 miles per hour it took about 10 seconds to pass their plane and pull up sharply through the broken clouds overhead. They estimated its closest approach to be about half a mile. The device was dark at the front with a blue glow underneath. Red-orange jet exhausts spewed out 30 feet behind. The most spectacular aspect of its design was two double-decked rows of brightly lit, large, rectangular windows along the sides. Chiles thought he saw a more dimly lit front-cockpit area. Whitted did not. The whole display seemed a lot brighter and more vivid to Chiles than it did to Whitted. Still, in general estimates and configuration, the two pilots concurred.

The Eastern flight landed shortly afterwards and the pilots reported everything to their managers. Eastern released the reported details to the newspapers that day. The case immediately made national news: "Buck Rogers-like Plane Passes 2 Airline Pilots!" Everyone was reading the story the evening of July 24. It caught the attention of the Pentagon as well. The next day, Chief of Air Force Intelligence Gen. Cabell phoned McCoy's office at Wright-Patterson. Sign was ordered to get into the field immediately and investigate. By that afternoon, Loedding, Deyarmond, and Llewellyn were being flown by Capt. Clarence Groseclose to Atlanta. They met Chiles and Whitted in the Henry Grady Hotel the next day.

The interviewers (Loedding and Deyarmond) were impressed. The pilots told their stories, as recounted above, and were consistent. Both pilots had been military veterans and had good commercial reputations. Chiles particularly was considered by his bosses to be outstanding. Loedding, an excellent aeroengineer who leaned towards the extraterrestrial hypothesis, must have been stunned. Deyarmond seemed a more grounded military engineer, but he too had to be enthusiastic. This seemed to be the case Sign was looking for. Later, Llewellyn was able to locate and interview the lone passenger who had awakened and noticed something. He only saw the bright redorange exhaust of the retreating object and no details. Still, it was a small corroboration. Presumably, as Cabell himself had ordered this, they made some preliminary report to the Pentagon and began their analysis back at Wright-Patterson.

The pieces of Sign's thinking coalesced around this case during August and September of 1948. In the first week of August they received word of an independent ground witness (an experienced observer on a military base) to the Chiles-Whitted object. They immediately requested details from the base. Although official forms took about a month to arrive, this was another corroboration. Cross-checking anomalous cases, they noted that an apparently identical object had been sighted over The Hague. Netherlands, on July 20. They also recalled the wave of so-called "ghost rocket" sightings over Scandinavia in 1946 and early 1947 - more jet-propelled, flying fuselages. They requested special interviews for more information on August 19. It looked like the Chiles-Whitted object was the real thing.

But how could it fly? It was the exploration of this question that, I believe, finally tipped the balance. The object was a wingless, tailless fuselage. It was not simply a missile; it had windows, ergo, presumably, pilots and passengers. It must be able to take off, maneuver, and land. But how? This is exactly the sort of problem that air-intelligence engineers love. When they dove into it and (in their minds) came up with the solution, it placed the last powerful overlay of reality on the investigation. They found their aerodynamic answers in the advanced theories of the German aerodesign geniuses. Ludwig Prandtl's theory of lift provided not only the rationale of how such an object could fly, but also a guesstimate of the required power plant (USAF AMC, 1949a). The latter then took them the final step into the Land of Oz. Conventional power plants were nowhere near sufficient. It would take something much more powerful to fly the Chiles-Whitted object ... perhaps something nuclear.

This investigative odyssey must have been as exciting as it was astounding. Nuclear powered aircraft, or something even more unsuspected. We couldn't do it. The Soviets couldn't do it. Sometime during all of this the project personnel must have wondered about the correlation that they felt they were finding between UFO events and close approaches of the inner solar-system planets. Based on these correlations and their new conviction about Chiles-Whitted, Sign later sent notice to the Pentagon to alert all operatives, bases, and the other services to the potential for new UFOs reports in mid-October (Earle, 1948).

THE ESTIMATE OF THE SITUATION

In September 1948, Sign heard the details of the Chiles-Whitted ground-witness corroboration. The third qualified observer had seen a cylindrical object jetting red-orange exhaust over Robins AFB in Georgia, one hour earlier. It was heading in the direction of Montgomery. Project officer Capt. Robert Sneider had decided that the time had come to climax the project's task and write the required "Estimate of the Situation." Every intelligence operation's task was ultimately to present such a bestguess summary, strongly backed with as much fact ("proof") as possible. Using Chiles-Whitted as the core, and collecting around it many cases from the summer of 1947 to September 1948, Sneider composed the fateful document. The latest case known to have been utilized in the document took place on September 23, at Los Alamos National Laboratory.

We know that two prominent Air Force intelligence officers (Ruppelt and Fournet) saw the document in 1952. Ruppelt described it:

> It was a rather thick document with a black cover and it was printed on legal-sized paper. Stamped across the front were the words TOP SECRET. [Ruppelt, 1956:41]

As project officer, Sneider would have been the primary author. Throughout this era, several other staff members typically got involved in approvals and sign-offs on drafts and reports. Deyarmond, Loedding, and Truettner almost certainly were part of the writing. Llewellyn certainly looked in. All these people, as well as higher-ups in Clingerman's and McCoy's offices, had to approve, at least in some sense. And an Estimate of UFOs as extraterrestrial would have been no small thing to assent to.

No one can give a detailed description of the contents of this famous yet mysterious document, as it has not been available for modern analysts to read. Yet the following cryptic description by Ruppelt, only the last paragraph of which made it into his book, offers some hints:

> As documented proof, many unexplained sightings were quoted. The original UFO sighting by Kenneth Arnold, the series of sightings from the secret Air Force Test Center, Muroc AFB; the F-51 pilot's observation of a formation of spheres near Lake Meade; the report of an F-80 pilot who saw two round objects diving toward the ground near the Grand Canyon; and a report by the pilot of an Idaho National Guard T-6 trainer, who saw a violently maneuvering black object.
>
> As further documentation, the report quoted an interview with an Air Force Major from the Rapid City AFB (now Ellsworth AFB) who saw twelve UFO's flying a tight diamond formation. When he first saw them they were high but soon they went into a fantastically high speed dive, leveled out, made a perfect formation turn, and climbed at a 30 to 40 degree angle, accelerating all the time. The UFO's were oval-shaped and brilliant yellowish-white.
>
> Also included was one of the reports from the AEC's Los Alamos Laboratory. The incident occurred at 9:40 AM on September 23. 1948. A group of people were waiting for an airplane at the landing strip in Los Alamos when one of them noticed something glint in the sun. It was a flat, circular object, high in the northern sky. The appearance and relative size was the same as a dime held edgewise and slightly tipped, about 50 feet away.
>
> The document pointed out that the reports hadn't actually started with the Arnold Incident. Belated reports from a weather observer in Richmond, Virginia, who observed a "silver disk" through his theodolite telescope; an F-47 pilot, and three pilots in his formation, who saw a "silver flying wing"; and the English "ghost airplanes" that had been picked up on radar early in 1947, proved this point. Although not received until after the Arnold sighting, they all had taken place earlier. [Unedited MS of *The Report on Unidentified Flying Objects* in Ruppelt files]

The Estimate would have been addressed to Chief of Staff Gen. Hoyt Vandenberg, but it really was meant for Director of Intelligence Gen. Charles Cabell. It was probably sent near the end of September, just prior to the next stunning UFO case: the George Gorman "UFO Dogfight" in Fargo, North Dakota, on October 1 (Ruppelt, 1956: 41-43). It would have landed in Garrett's Collections office and been handcarried to Cabell. Cabell may or may not have been shocked. It is my guess that he and his operatives knew what was coming. Very few real surprises are good strategy in military circles. Still, with a pro-ETH Wright-Patterson intelligence group on one side, an anti-ETH Pentagon Intelligence Requirements Office on the other, and open-minded collections officers and the powerful Research and Development chief (Gen. Donald Putt) in between, Cabell didn't want to decide this on his own. He handed the Estimate further upstairs to Vandenberg himself (Ruppelt, 1956: 45).

Upon reflection, this seems a bit extraordinary. Cabell's job was to deal with these Estimates and not burden Vandenberg with them. And Cabell almost certainly had to know that this was coming. But he still ducked. This situation, UFOs and extraterrestrials, was too big for anyone but the chief of staff himself to rule on. Cabell must have been in doubt about this, not just about the reality of UFOs but their extraterrestrial nature. It was Cabell who reinitiated the Wright-Patterson UFO project in 1951 as a serious investigation and cleaned the anti-ETH elements out of Wright-Patterson and the Pentagon (Ruppelt, n.d.). And much later, in the 1960s. Cabell told UFO and ETH-friendly CIA photo analyst Art Lundahl that he still felt the UFO matter deserved serious investigation (McDonald, n.d.).

But Vandenberg didn't have any doubts - not about action anyway. In what was apparently a very short time period for contemplation, the chief sent the Estimate cascading back down channels to Sign as unacceptable. We don't know who Vandenberg consulted or why he did this, but he was quick and decisive. He did not want an extraterrestrial assessment. He was saying clearly and loudly to Sign and everyone in between that he was not happy with this.

The timetable is uncertain, but a few facts are known. An October 7 document from Sign to Garrett and Cabell is an upbeat Sneider report on the initial investigation of the Gorman dogfight, making the object sound extremely unusual and intelligent in behavior. This was almost like a supplement to the Estimate (Snider, 1948a). However, on the same day a separate set of letters, composed not by Sneider but by S. Z. Hunnicutt, a member of T-2 and the Sign team, and approved by MCI heavyweights McCoy, Clingerman, and Leland Money, went out to the CIA, U.S. Army Intelligence, and the Office of Naval Intelligence. The query: What domestic (U.S.) technological developments do you know of that might explain UFOs and help us differentiate them from inimical (Soviet) foreign developments? McCoy writes in Hunnicutt's letter:

> To date, no concrete evidence as to the exact identity of any of the reported objects has been received. Similarly, the origin of the so-called "flying disks" remains obscure. [McCoy. 1948a]

This certainly was not the conclusion of the Estimate. McCoy may have already gotten the word. None of the primary Sign personnel signed off on the draft.

The intelligence roil over this extraterrestrial conclusion for UFOs must have been fierce in October. Headquarters had expressed dissatisfaction over Sign's views but, fueled by the enthusiasm over the Gorman case investigation, Sign was undaunted at first. McCoy was caught in the middle. The fact that Sign preceded with their ETH opinions in the face of high-level Pentagon opposition is a source of some wonder. Either Vandenberg's slap down was very mildly delivered, or there was much support, albeit in the minority, for the respectability of the ETH in the Pentagon. Otherwise, McCoy would have reined in his staff at Sign. My guess is that both conditions were true.

In October, Sign personnel met with Garrett in the Pentagon to make reports, especially those from foreign sources, more efficiently transferable to the project. Word was spread about the impending new wave of reports due soon (which apparently actually happened). Internal memos referred to the Gorman case as possibly nuclear-powered and interplanetary. A request was made for the Rand Corporation to assess the feasibility of interplanetary spaceships (Clingerman, 1948a). Meanwhile, opposing elements in the Pentagon were marshalling their forces for a counterstrike. The most hostile area, the Defensive Air branch of Air Intelligence, had been pursuing a study of "flying saucer tactics" since early August, when the first assessment of the Chiles-Whitted object had reached them. Now AFOAI-DA brought the Office of Naval Intelligence seriously into this game. ONI had been mildly involved with USAF concerns about UFOs since it had requested to be included in January 1948 (USN Chief of Naval Intelligence, 1948). Out of this liaison would come a counter-ETH report in December. More immediately, AFOAI-DA and ONI would begin to change the atmosphere in the Pentagon to a more hostile, overt position. Ultimately these efforts swayed Cabell into writing a firm letter to Wright-Patterson on November 3 (Cabell, 1948a; see Appendix 2).

It would be interesting to know who composed this letter for Cabell to sign. Two prime candidates are AFOAI-DA, the office of the consistently anti-ETH saucerkiller, Maj. Aaron J. Boggs; or the Office of Director of Estimates, wherein resided Boggs's main anti-ETH confederate, Col. E. H. Porter, who was its deputy director. Essentially, the letter asked Sign for another Estimate. While admitting that the objects seemed real, it also cautioned that they were *not* identified. (Read: You may not identify them as extraterrestrial craft.) Efforts at identification must be serious and increased, since national security was concerned. Countermeasures must be considered. All of these comments were in line with Boggs's and Porter's concern (as well as many others) that some objects could be Soviet or Nazi-inspired weaponry. While Sign had been immersed in a world of investigating essentially local cases, the darker Pentagon corridors had been fixated on the Soviets and German scientific geniuses. Two different realities had been created.

Wright-Patterson's response was timely. By November 8, a Sign viewpoint was sent over McCoy's signature to Cabell and presumably Boggs, Porter, and ONI (McCoy, 1948b; see Appendix 3). The letter, written by Sign operative Deyarmond, was overtly submissive but covertly rebellious. It contained several comments agreeing with Cabell that the phenomenon was not identifiable and that no

concrete physical proof existed to identify it. At the same time it dropped all sorts of hints, doubtless the same arguments used in the original Estimate, that the objects really were extraterrestrial whether the Pentagon thought so or not: It mentioned the ETH; it mentioned plotting waves against planetary approaches and finding a correlation; it mentioned the books of Charles Fort as indicating that this has been going on for at least a century (Fort, 1941); it mentioned that odd shapes (like Chiles-Whitted) can fly but require more advanced power plants than we have. It is interesting that the letter was written by Al Deyarmond, who was McCoy's old WWII buddy. One can imagine the two conferring personally on exactly what tactic Sign could take that would still be consistent with what McCoy was willing to say. The letter seems very strategically worded. McCoy was sympathetic to UFOs and remained so his whole life. In the late 1950s, stationed in Washington, he was a frequent and interested visitor at the major civilian UFO organization in the world, the National Investigations Committee on Aerial Phenomena (Swords, 1997).

SHOWDOWN AND AFTERMATH

The Pentagon surely recognized the letter for what it was: a diplomatic refusal to give up. Either it or Sign initiated a confrontational meeting on this scheduled for November 12. Meanwhile, on the 10th, Deyarmond completed his reassessment of the Mantell crash from the beginning of the year. The object could *not* have been Venus, he concluded, and therefore was a true unidentified. With this added ammunition, some Sign personnel trekked to Washington to attempt to convince Cabell and Vandenberg of the ETH (Ruppelt, 1956:45). Other than Sneider, we don't know who attended from the pro-ET side. Deyarmond, Loedding, and perhaps even McCoy are good candidates. Ruppelt wrote that a "group from ATIC' went. The meeting was held at the National Bureau of Standards. Again, we don't know who attended on the D.C. side. Boggs *is* known to have been there. Ruppelt hints that Vandenberg himself was there. Some representative of the Air Force's Scientific Advisory Board came (probably Col. Ted Walkowicz). NBS personnel attended. As Edward Condon was then director, he may have had a stiff introduction to ufology at that time. Others, including Cabell, were certainly present.

I suspect that this was the final watershed moment for the project. Boggs, Porter, and ONI essentially won the war. Suddenly all the big scientific guns and overseers were required to peek over Sign's shoulders and assess their work. The Scientific Advisory Board and George Valley of MIT were to be made aware of all cases. So too Boggs' office, ONI, and maybe even the NBS (USAF DI, 1948; McCoy, 1948c; Clingerman, 1948b; McCoy, 1948d). Hynek was to be formally commissioned for an assessment, as well as Irving Langmuir and Rand. Going back home to Dayton, Deyarmond and Truettner went about the labor of writing the sanitized final Project Sign report of November 30 (USAF AMC, 1949a). Loedding met with Langmuir and had his views rebuffed. He said that he learned that "his stock was at an all-time low" in Washington (*Trenton Tunes-Advertiser*, 1954). Sneider continued to believe that the Chiles-Whiffed case was undeniable evidence, but it was a battle lost for almost everyone else.

On December 10 the victorious powers in the Pentagon published their own version of an Estimate - Air Intelligence Report number 100-203-72, *Analysis of Flying Object Incidents in the U.S.* (USAF AID & USN ONI, 1948). This was the culmination of AFOAI-DD's work since early August, augmented by ONI collaboration over the past two months. UFOs are not extraterrestrial (the idea was hardly noticed). UFOs are probably real, but if so there is a small chance that they are Soviet and therefore dangerous. All in all, the word "Soviet" dominates the commentary. This estimate, like that of Sign, was classified top secret. Sign's Estimate was ordered destroyed. Six days later, the director of research and development ordered that the code word Sign be changed to Grudge. Ruppelt said that the choice of words was not random (Ruppelt, 1956: 59-60). The Air Force bore a grudge against UFO reports. One would guess that quite a few grudges remained among the contending intelligence elements. Ruppelt said that by the end of 1948 the morale on the project was very low and no one wanted to do the work any more. Sneider persisted with his analysis of the Chiles-Whitted object, and his five-page summary, Air Intelligence Report number 102-122-79, was forwarded to Cabell on December 20 (Sneider, 1948b). It has been called, probably insightfully, "The Ghost of the Estimate" by some UFO researchers. Report no. 100-203-72 has also been given this nickname, much less insightfully. It might more properly be labeled "The Assassin of the Estimate."

By the beginning of 1949, Sign personnel had begun to evaporate. Loedding disappeared from project records. Deyarmond's attention went elsewhere. Truettner made one last serious attempt at interviewing about nuclear propulsion (at Oak Ridge), and was given a negative opinion on UFOs by Col. Wassell. He, too, disappeared from the project. The civilian members were relieved of their duties and reassigned to other intelligence tasks within T-2. For Loedding in particular, his role and prestige were never the same. After a few further years of intelligence work, both he and Truettner left AMC. For the higher military ranks (Llewelyn and Sneider), all we know is that they were soon no longer involved, perhaps not even assigned to the same base. Even Clingerman and McCoy became less involved, perhaps because they had also heard that their tenures would soon be up and they would be sent to school and then transferred. The only persons left active on the project were two of the lower ranks: Lieut. Howard Smith and civilian George Towles. Their job was reduced basically to collection and filing. In this condition, or worse, would remain the Air Force commitment to a UFO investigation project until the summer of 1951: two years of neglect (Ruppelt, 1956: 59-95).

The Estimate and Sign had their revenge, however, in an unintended way. For whatever reason, the public and the media had become more interested in UFOs at the turn of the year. Perhaps the Mantell, Chiles-Whitted, and Gorman cases were having an effect on popular opinion, as well as behind the doors of secrecy. Or perhaps the doors of secrecy were leaky. Either way, the media was becoming proactively interested (Shalett, 1949). Sidney Shalett's push into the Pentagon to get Defense chief Forrestal's permission for a *Saturday Evening Post* article was the most spectacular example of this, but other magazines such as *Argosy* and *True* were snooping around as well (Moorehouse, 1949; Keyhoe, 1950a). Shalett visited the Pentagon and Wright-Patterson in early 1949, and got case information and quotes for his two-part article that would appear in April 1949 (Clingerman, 1949a). While he was collecting information, two things happened directly related to our story. The first was that the Pentagon really didn't like the idea of a civilian press person messing around a classified subject and then writing a "Lord knows what" rendition of what he'd found with apparent government approval (Cabell, 1948b). Therefore, the Pentagon determined to produce its own more elaborate report to be released simultaneously with the *Post* article (Boggs, 1949).

The second awkward moment occurred when Walter Winchell apparently was given a "Pentagon rumor" that the UFOs were Soviet missiles, and announced as much on his national radio program (Clingerman, 1949b). The rumor was pretty much what some Pentagon loose cannons would have said if they had been privy to the information and attitude of Air Intelligence Report number 100-203-79, the so-called "Assassin of the Estimate." By killing the Estimate, the Pentagon had produced an awkward and unhelpful rumor that they hurried to deny, but which stuck in many citizens' minds.

The Pentagon was clear in its intent to create and release a countering UFO report, but it blundered in executing the task. Whoever was responsible did not use the AIR information or perspective, or a strong debunking attitude of any kind. Instead, the report - called Project Saucer to match the nickname given Shalett to use in his article - was written in the mildest agnostic tradition of the post-Vandenberg Project Sign (USNME, 1949). It read like a sanitized Estimate.

How this UFO-friendly report was released is itself a mystery. Someone at AMC in the Public Relations Office had written something called "Flying Saucer Story," which was aimed at public release in order to give the official story. This was described as an article, whereas the Project Saucer press release was 22 pages long. Still, they may have been one and the same.

This article was shipped to the Pentagon's director of public relations, and from there to the Intelligence Department. There some disagreement occurred between Boggs, Brig. Gen. Moore, and Cabell (Boggs, 1949). Apparently Cabell himself approved the friendlier Project Saucer release, coming down squarely between the attitude of the Estimate and the attitude of his antipathetic underlings Boggs and Moore. A line from Boggs's memorandum cited above reads like a comment from Cabell:

> AFOIN [Cabell] found no grounds for denying information to the press on incidents and investigative accomplishments such as were furnished Mr. Shalett.

Whether the busy general had time to think through all the aspects of this decision can be debated.

So the Pentagon's poor communications and blundering had produced the exact opposite effect from what they had seemingly intended: Shalett's article was the mainly debunking publication and the Pentagon's release looked like a corrective in the pro-UFO, amazing-unidentified-technology direction.

The individual most confused by all this was a freelance writer brought in by *True* magazine in the hopes of getting more information on the flying disks. The Project Saucer release convinced him to make a serious investigation, which got more and more fascinating. This, of course, was Donald E. Keyhoe: the Ultimate "Revenge of the Estimate," and an ongoing nightmare for the Air Force for the next 20 years (Keyhoe, 1950b. 1953; Swords, 1996; Jacobs, 1975).

APPENDIX I
GEORGE GARRETT's FIRST ESTIMATE

FLYING DISCS
30 July 1947

For purposes of analysis by AFBIR-CO, eighteen reported sightings of "Flying Discs' were selected for breakdown into detailed particulars. Each report was assigned a number and each number appears in the left-hand column of the data on the following pages.

One report, Number 7, has not yet been received and therefore no information is included other than Date, Name of Observer, and Location. The Fourth Air Force is attempting to secure a statement from this observer.

Four reports, Numbers 2, 4, 17, and 18, have not yet been analyzed.

The subject headings on which the breakdown has been made are:

Date

Hour (Local standard Time)

Location

Observer's Name

Observer's Occupation

Observed from Ground or Air

Number of Objects Sighted

Altitude

Direction of Flight

Speed

Distance Covered

Length of Time in Sight

Deviation from Straight Flight

Color

Size

Shape

Sound

Trail

Weather

Manner of Disappearance

Remarks

Report	Date	*Hour	Location
1	19-May	1215	Manitou Springs, Colorado
2	22-May		Oklahoma City, Oklahoma
3	22-Jun	1130	Greenfield, Massachusetts
4	24-Jun		Mt. Rainier, Washington
5	28-Jun	2120	Maxwell Field, Alabama
6	29-Jun	1330	Near White Sands, New

7	1-Jul		Bakersfield, California
8	4-Jul	2015	Emmett, Idaho
9	6-Jul	1345	Clay Center, Kansas
10	6-Jul		Fairfield-Suisun, California
11	7-Jul	1145	Koshkonong, Wisconsin
12	7-Jul	1430	East Troy, Wisconsin
13	8-Jul	1550	Mt. Baldy, California
14	9-Jul	2330	Grand Falls, Newfoundland
15	10-Jul	1600	Harmon Field, Newfoundland
16	12-Jul	1830	Elmendorf Field, Alaska

* Local Standard Time

Report	Observer's Name	Occupation	Observed From
1		Railroad Employee	Ground
		" "	"
		" "	"
2		Businessman-Pilot	Ground
3		*Not stated	Ground
4		Businessman-Pilot	Air
5		Captain AAF	Ground
		" "	"
		" "	"
		1st Lieut., AAF	"
6		Employee, NRL	Ground
		" "	"
		" "	"
		Wife of _____	"
7		Civilian Pilot	Ground
8		United Air Lines Pilot	Air
		" " "Co-Pilot	"
9		Major, AAF	Air
10		Captain, AAF	Ground
11		CAP Instructor	Air
		CAP Student	"
12		CAP Pilot	Air
		CAP Passenger	"
13		1st Lieut., ACCNG	Air
14		Constable, Newfoundland Constabulary	Ground
15		TWA Representative	Ground
		PAA "	"
16		Major, AAF	Ground

*From letter received, observer is obviously well educated.

Report	Deviation from Straight Flight	Color	Size
1	Climbed, dove, hovered overhead, Resumed original course	Silver	Apparently small
2			
3	None reported	Silver, very bright	Small
4			
5	Zig zag course “much like a water bug”	Brilliance slightly greater than a star	Not stated
6	None reported	Some solar specular reflection	Not stated
7			
8	None reported	Almost dusk; could not distinguish	Impossible to determine
9	None reported	Very bright and silvery colored	30-50’ in diameter
10	None reported	Reflection from sun	Comparable to a C-54 at 10,000’
11	Descended edgewise, stopped at 4000’ And assumed horizontal position, Proceeded In horizontal flight for 15 seconds, stopped again, then disappeared	Not stated	Not stated
12	None reported	Not stated	Not stated
13	None reported	Of light-reflecting nature	Apparent depth of a P-51
14	None reported	Phosphorous color	Not stated
15	None reported	Silvery	Same span as a C-54 at 10,000’
16	Followed contours of mountains five miles away from observers’	resembled a grayish balloon	Approx. 10’ in diameter

---

Report	Shape	Sound	Trail	Weather
1	No definite shape could be determined	None	None	CAVU
2				
3	Irregular; round, Did not appear particularly disc-shaped	None	None	Not stated
4				
5	None stated; seemed like a bright light	None	None	Clear moonlight
6	No details other than that shape was uniform with no protuberances	None	Possible vapor trails	CAVU
7				
	None definite, but seemed flat on base with the top slightly			

8	rough in contour	None	None	CAVU
9	Round, disc-shaped	None	None	CAVU
10	No shape could be distinguished	None	None	Sunny
11	Not stated, but report refers to “saucer” several times	None	None	CAVU
12	Same as Report No. 11	None	None	CAVU
13	Flat object, of light reflecting nature which appeared to be without vertical fin or any visible wings	None	None	Not stated
14	Egg-shaped, or like barrel	None	None	CAVU
15	Head Circular in shape, like wagon wheel	None	Bluish black trail approx. 15 mi. long	Clear with scattered cumulus at 8 to 10,000’
16	Resembled balloon	None	None	Not stated

Report	Manner of Disappearance	Remarks
1	Climbed very fast and out of sight	No definite shape could be determined and even with the aid of 4 to 6 power binoculars object could not be brought into focus
2		
3	Obscured by a cloud bank	From letter this observer wrote, it is obvious he is a well-educated person. Seeks no publicity.
4		
5	Lost in brilliancy of the moon	Observers (2 rated, 2 air intell.) Phoned Field Ops to ascertain no scheduled experimental a/c were in vicinity. Sky chart attached to report?
6	Cannot explain, except that reflection angle may have changed abruptly	Observer is Admin. Asst. in the Rocket Sonde Sect. of NRL. Two other “scientists”, and wife of one, were in party and made same observation.
7		
8	Don’t know whether they put on a tremendous burst of speed, or disintegrated. However, they did disappear into sunset	Observers were Pilot, Co-Pilot, of scheduled UAL DC-3. Stewardess also saw objects. Suggest reading of very detailed statements.
9	Unexplained	When first sighting object near horizon, observer looked at chart in his lap to check position. When he looked out the window again, object was off his left wing at 11 o’clock
10	Disappeared at an angle of about 30° above the earth’s surface	Rolled from side to side 3 times in its path across the sky. Sun reflected from top side, but never from underside, even when turning
11	Unexplained	None
12	Unexplained	None
	Pilot (at 300 MPH) attempted to keep	Observer contacted bases in area which reported

13	object in sight, but unable to do so	no a/c in air at time
14	Unexplained	First 4 discs flying line-a-trail
15	Unexplained	Seemed to cut clouds open as it passed thru. Trail was like beam seen after a high-powered landing light is switched off.
16	Not stated	Object was observed paralleling the course of a C-47 then landing.

From detailed study of reports selected for their impression of veracity and reliability, several conclusions have been formed:

a. This "flying saucer" situation is not all imaginary or seeing too much in some natural phenomenon. Something is really flying around.

b. Lack of topside inquiries, when compared to the prompt and demanding inquiries that have originated topside upon former events, give more than ordinary weight to the possibility that this is a domestic project, about which the President, etc. know.

c. Whatever the objects are, this much can be said of their physical appearance:

1. The surface of these objects is metallic, indicating a metallic skin, at least.

2. When a trail is observed, it is lightly colored, a Blue-Brown haze, that is similar to a rocket engine's exhaust. Contrary to a rocket of the solid type, one observation indicates that the fuel may be throttled which would indicate a liquid rocket engine.

3. As to shape, all observations state that the object is circular or at least elliptical, flat on the bottom and slightly domed on the top. The size estimates place it somewhere near the size of a C-54 or a Constellation.

4. Some reports describe two tabs, located at the rear and symmetrical about the axis of flight motion.

5. Flights have been reported, from three to nine of them, flying good formation on each other, with speeds always above 300 knots.

6. The discs oscillate laterally while flying along, which could be snaking.

APPENDIX 2
MAJ. GEN. CABELL PRESSURES PROJECT SIGN

Department of the Air Force
Headquarters United States Air Force
Washington

3 Nov 1948

SUBJECT: Flying Object Incidents in the United States

TO: Commanding General, Air Materiel Command
Wright-Patterson Air Force Base
Dayton, Ohio

1. By letter dated 30 December 1947 from the Director of Research and Development, Headquarters USAF, your Headquarters was required to establish Project "SIGN".

2. The conclusion appears inescapable that some type of flying object has been observed. Identification and the origin of these objects is not discernible to this Headquarters. It is imperative, therefore, that efforts to determine whether these objects are of domestic or foreign origin must be increased until conclusive evidence is obtained. The needs of national defense require such evidence in order that appropriate countermeasures may be taken.

3. In addition to the imperative need for evidence to permit countermeasures, is the necessity of informing the public as to the status of the problem. To date there has been too little data to present to the public. The press, however, is about to take it into its own hands and demand to be told what we do or do not know about the situation. Silence on our part will not long be acceptable.

4. Request immediate information as to your conclusions to date and your recommendations as to the information to be given to the press. Your recommendation is requested also as to whether that information should be offered to the press or withheld until it is actively sought by the press.

BY COMMAND OF THE CHIEF OF STAFF:

/sig/

C. P. CABELL

Major General, USAF

Director of Intelligence, Office of Deputy Chief of Staff, Operations

---

APPENDIX 3
COL. McCOY REPLIES

Basic ltr fr Hq USAF, 3 Nov 48 to CG, AMC, "Flying Object Incidents in the United States"

1st lnd MCIAT/ABD/amb

Hq AMC, Wright-Patterson Air Force Base, Dayton, Ohio. 8 Nov 48

TO: Chief of Staff, United States Air Force, Washington 25, D. C., ATTN: AFOIR

1. In attempting to arrive at conclusions as to the nature of unidentified flying object incidents in the United States, this Command has made a study of approximately 180 such incidents. Data derived from initial reports have been supplemented by further information obtained from check lists submitted by mail, from interrogations of other field agencies, and by personal investigation by personnel of this Command in the case of incidents that seem to indicate the possibility of obtaining particularly significant information.

2. The objects described fall into the following general classification groups, according to shape or physical configuration:

a. Flat disc of circular or approximately circular shape.

b. Torpedo or cigar shaped aircraft, with no wings or fins visible in flight.

c. Spherical or balloon shaped objects.

d. Balls of light with no apparent form attached.

3. Some of the objects sighted have definitely been identified, upon further investigation, as weather or upper air scientific balloons of some type. A great many of the round or balloon shaped objects indicated in paragraph 2c above are probably of the same nature, although in most cases, definite confirmation of that fact has been impossible to obtain.

4. Some of the objects have been identified as being astrophysical in nature. For example, in daylight sightings, the planet Venus has been reported as a round, silvery object at extremely high altitude. Action is being taken to obtain the services of a prominent astrophysicist as a consultant, to study all of the incidents to determine whether some can be identified as meteors, planets or other manifestations of astral bodies.

5. Arrangements for accomplishing a study of the psychological problems involved in this project are being made in coordination with the Aero-Medical Laboratory at this Headquarters. The possibility that some of the sightings are hallucinations, optical illusions or even deliberate hoaxes has been considered.

6. Although explanation of many of the incidents can be obtained from the investigations described above, there remains a certain number of reports for which no reasonable everyday explanation is available. So far, no physical evidence of the existence of the unidentified sightings has been obtained. Prominent scientists, including Dr. Irving Langmuir of the General Electric Company, have been interviewed to determine whether they could advance any reasonable explanation for characteristics exhibited by the objects sighted. In an early interview, Dr. Langmuir indicated that these incidents could be explained, but insufficient data were available at that time on which to base definite conclusions. It is planned to have another interview with Dr. Langmuir in the near future to review all the data now available, and it is hoped that he will be able to present some opinion as to the nature of many of the unidentified objects, particularly those described as "balls of light."

7. All information that has been made available to this Headquarters indicates that the discs, the cigar shaped objects, and the "balls of light" are not of domestic origin. Engineering investigation indicates that disc or wingless aircraft could support themselves in flight by aerodynamic means. It is probable that the problems of stability and control could also be solved for such aircraft. However, according to current aerodynamic theory in this country, aircraft with such configurations would have relatively poor climb, altitude and range characteristics with power plants now in use.

8. The possibility that the reported objects are vehicles from another planet has not been ignored. However, tangible evidence to support conclusions about such a possibility are completely lacking. The occurrence of incidents in relation to the approach of the earth of the planets Mercury, Venus and Mars have been plotted. A periodic variation in the frequency of incidents, which appears to have some relation to the planet approach curves, is noted, but it may be purely a coincidence.

9. Reference is made to "The Books of Charles Fort" with an introduction by Tiffany Thayer, published 1941, by Henry Holt & Co., New York, N. Y. It appears that similar phenomena have been noted and reported for the past century or more.

10. In view of the above, the following conclusions are drawn:

a) In the majority of cases reported, observers have actually sighted some type of flying object which they cannot classify as an aircraft within the

limits of their personal experience.

b) There is as yet no conclusive proof that unidentified flying objects, other than those which are known to be balloons, are real aircraft.

c) Although it is obvious that some types of flying objects have been sighted, the exact nature of those objects cannot be established until physical evidence, such as that which would result from a crash, has been obtained.

11. It is not considered advisable to present to the press information on those objects which we cannot yet identify or about which we cannot present any reasonable conclusions. In the event that they insist on some kind of a statement, it is suggested that they be informed that many of the objects sighted have been identified as weather balloons or astral bodies, and that investigation is being pursued to determine reasonable explanations for the others.

12. A report, summarizing the results obtained from analysis of the data and a technical investigation of the engineering aspects of the objects described, is nearly complete, and a copy will be forwarded to your Headquarters in the near future.

FOR THE COMMANDING GENERAL

H. M. McCOY,

Colonel, USAF

Chief, Intelligence Department

NICAP Home Page

BIBLIOGRAPHIC DATABASE

Listed By Category
Produced for InterLink:UFO by Francis Ridge

Basic Codes: Title/Author/Source/Cat/Subcat
This database utilizes the same system of category numbers as used by InterLink: UFO. Source codes: IUR=International UFO Reporter; MUJ=MUFON UFO Journal; Symposium Proceedings are listed by year and page (92 Symp, 015).

BIBLIOGRAPHIC DATABASE

Alphabetical Listings: All Categories 1-11

Produced for the NICAP site by Francis Ridge

Basic Codes: Title/Author/Source/Cat/Subcat
This database utilizes the same system of category numbers as used by InterLink: UFO. Source codes: IUR=International UFO Reporter; MUJ=MUFON UFO Journal; Symposium Proceedings are listed by year and page (92 Symp, 015).

Editor's Note: Jan Aldrich is the director of Project 1947, devoted to the documentation of the early history of the UFO phenomenon. He and the project may be be reached at Box 391, Canterbury, CT 06331.

Top-Secret 1949 Document

by Jan Aldrich

In the general correspondence file on UFOs for the Director of Intelligence (Decimal files .009 "Flying Disks" 1949), there were vague references made to this document and other USAF contacts with the Joint Intelligence Committee regarding UFOs. Citizens Against UFO Secrecy (CAUS) did submit FOIA requests for the document, which was thought to be classified secret.

CAUS had been looking for this document for more than 20 years. It was found in the National Archives II in College Park, Maryland, in the USAF Air Force Director of Intelligence files entitled A General File July 1945--December 1954: Records Relating to the Requirements for and the Collection and Dissemination of Intelligence" (Records Group 341, Entry 214A) during research for Project 1947 in July 1997. The JIC document had not been found previously because it had been classified top secret and was not in the records checked to satisfy the previous FOIA requests. This discovery demonstrates the usefulness of on site records inspection by researchers.

Project Saucer

In his 1950 paperback book *The Flying Saucers Are Real*, pp. 18 &19, Donald E. Keyhoe reported a conversation with Ken Purdy, an editor at *True* magazine:

> "Have you seen the *[Saturday Evening] Post* this week?" [said Purdy.]
> I told him no.
>
> "There's something damned queer going on. For fifteen months, 'Project Sauce' is buttoned up tight. Top Secret. Then suddenly, Forrestal gets the *Saturday Evening Post* to run two articles, brushing the whole thing off. The first piece hits the stands and what happens?"
>
> Purdy swung around, jabbed his finger at a document on his desk.
>
> "The same day, the Air Force rushes out his Project 'Saucer' report. It admits they haven't identified the disks in any important cases. They say it's still serious enough--wait a minute"--he thumbed through the stapled papers--"to require constant vigilance by 'Project Saucer' personnel and civilian population."

Purdy only knew the half of it. There was more. Had Keyhoe or Purdy known of the other activities around the last part of April and early May, they would have been sure there was something funny occurring. The Air Force made a concerted effort to disseminate its position to both official circles and the public.

REPORT BY THE DIRECTOR OF INTELLIGENCE, USAF

to the

JOINT INTELLIGENCE COMMITTEE

on

UNIDENTIFIED AERIAL OBJECTS

THE PROBLEM

1. To advise the Joint Intelligence Committee of the findings of the Directorate of Intelligence, USAF, regarding the sightings of unidentified aerial objects and the Air Force organization established for further investigation and solution of the problem.

FACTS BEARING ON THE PROBLEM

2. Following the great number of reported sightings of flying discs during the summer of 1947, Hq, Air Material Command, in a letter dated 23 September 1947, requested that the Commanding General, Army Air Forces, issue a directive assigning a priority, security classification and code name for a detailed study of flying disc reports. Hq, Air Material Command explained that their action was based on the opinion that phenomena reported appeared to be real and that there were objects in existence which would approximate the shape of a disc. AMC concluded that some incidents might be caused by natural phenomena but that some incidents described characteristics which suggested evasive tactics. Awaiting a specific directive, Hq, AMC continued to collect information on flying disc incidents in order to more clearly define the nature of the phenomena. On the

TOP SECRET
JIC

1

|The first page of the 1949 report to the Joint Intelligence Committee on Unidentified Aerial Objects

Among these activities were:

1. The Directorate of Intelligence personnel briefed the USAF Deputy Chief of Staff for Operations and his staff on UFOs on April 27, 1949. (Directorate of Intelligence, USAF, Decimal Correspondence File, "Flying Discs," 1949, National Archives II, College Park, Maryland.)

2. The Air Force sent a top-secret "Unidentified Aerial Objects" presentation with Appendix A, a summary of Air Force actions, to the Joint Intelligence Committee

(JIC) on April 27, 1949. The Committee was composed of representatives from the Army, Navy, Air Force, State Department, FBI and CIA. (Deputy Director of Intelligence, USAF. Records Group 341, Entry 214A, Top Secret Control #2-7051-A, National Archives II, College Park, Maryland. Reprinted in full at the end of this article.)

3.The USAF printed copies of the Top Secret "Analysis of Flying Object Incidents in the United States" (Air Intelligence Report 100-203-79) by the USAF Director Intelligence and the Office of Naval Intelligence. The printed report cover shows the date, April 28, 1949, although the document had been approved on December 1948. (USAF Directorate of Intelligence, Current Intelligence Files: Top Secret Control #2-7341, National Archives II, College Park, Maryland; see

4. The "Memorandum for the Press: Project Saucer" was released on April 29, 1949. ("Project Saucer," Memorandum to the Press # M26-49, April 27, 1949, Project Blue Book files; see

http://www.project1947.com/fig/projsauc.htm

5. The *Saturday Evening Post* hit the newsstands on April 29,1949, with the first part of Sidney Shalett's article on UFOs. ("What You Can Believe About Flying Saucers," *Saturday Evening Post,* April 30, 1949, pp. 20-21, 136-39; part 2, May 7, 1949, pp. 36, 184-86.)

The Air Force Public Relations Office cooperated fully with Shalett in the preparation of his article, but Major General Cabell had major problems. He would rather have had complete control over the press policy. However, his attempt to obtain this authority from Secretary of Defense Forrestal appeared to have been thwarted by Mr. Leo of the Public Relations Office. (See the Air Staff Study on press policy and flying discs, http://www/project1947.com/fig/1948e.htm ; Memorandum to Forrestal on press policy,

http://www.project1947.com/fig/1948f.htm ;

Memorandum for Record concerning press policy,

http://www.project1947.com/fig/1948d.htm ;

and Secretary of Air Force Office of Information UFO files 1947-1952, microfilm #33765, USAF Historical Research Activity, Maxwell Air Force Base, Ala.)

Shalett's article dismissed UFOs as any type of problem despite the conclusions of the recently printed "Analysis of Flying Object Incidents in the United States," which recommended that efforts be taken to determine whether UFOs represented a domestic development. Or if not, that actions be taken to determine whether they were a foreign development.

Shalett's article was his own, but it was probably endorsed by Leo. The Project Saucer press release was less negative, as Purdy pointed out to Keyhoe. There was then a necessity to make sure that the USAF and the intelligence community knew the Directorate of Intelligence's position. Therefore, the briefings prior to the release of the Project Saucer press memorandum informed these officials of the Air Force intelligence position.

Project Grudge's files had been opened to Shalett. Leo wrote to Wright Field, advising that Shalett should be given access to all information except for foreign sources and any material classified top secret.

Soon after Shalett's article hit the stands, other writers and editors also requested access to the files at Wright Field. Purdy was one of the first. Maj. Gen. Cabell may have ost his bid to limit

press access, but when asked about these new requests, Cabell responded that if one writer was given access, then all of them should have access. Cabell's sense of fair play may have helped Keyhoe and Purdy obtain the information that convinced them that UFOs were extraterrestrial. The desired effect of Shalett's article was soon overcome by Keyhoe's articles and his subsequent bestselling book, *The Flying Saucers Are Real*.

The JIC document has eluded researchers for years. In it one can see the seeds of the later Project Grudge report. It contains a summarized history of the Air Force's early attempt to investigate UFO reports.

There is one error in the document. The study that led to "Analysis of Flying Object Reports in the United States" was initiated by Maj. Gen. Cabell on July 27, 1948, shortly after the Chiles-Whitted sighting, not August 6, 1948, as given in the JIC presentation. (Records Group 341, General Files, Entry 214, Top Secret Control # 2-3931.)

In the JIC report the Directorate of Intelligence had already abandoned a major portion of the freshly printed A Analysis." In about 18 months the "Analysis" would be completely discarded and ordered destroyed. (Letter, Subject: Destruction of Air Intelligence Report Number 10079, September 25, 1950, Directorate of Intelligence, USAF, Decimal Correspondence File, A Flying Discs," 1950, National Archives II, College Park Maryland.)

Report by the Director of Intelligence, USAF, to the
Joint Intelligence Committee on
Unidentified Aerial Objects

The problem

1. To advise the Joint Intelligence Committee of the findings of the Directorate of Intelligence, USAF, regarding the sightings of unidentified aerial objects and the Air Force organization established for further investigation and solution of the problem.

Facts bearing on the problem

2. Following the great number of reported sightings of flying discs during the summer of 1947, Hq, Air Materiel Command, in a letter dated 23 September 1947, requested that the Commanding General, Army Air Forces, issue a directive assigning a priority, security classification and code name for a detailed study of flying disc reports. Hq, Air Materiel Command explained that their action was based on the opinion that phenomena reported appeared to be real and that there were objects in existence which would approximate the shape of a disc. AMC concluded that some incidents might be caused by natural phenomena but that some incidents described characteristics which suggested evasive tactics. Awaiting a specific directive, Hq, AMC continued to collect information on flying disc incidents in order to more clearly define the nature of the phenomena. On the 22nd of December 1947, in a memorandum, "Analysis of Flying Disc Reports," the Director of Intelligence concurred with Air Materiel Command's recommendation and forwarded their letter to the Director of Research and Development, DCS/M for reply.

3. In a letter dated 30 December 1947, the Director of Research and Development, DCS/M, advised the Commanding General, AMC, that Air Force policy was not to ignore reports of sightings and phenomena in the atmosphere but to recognize that part of its mission to collect, evaluate and act on information of this nature. To implement this policy it was directed that Hq, Air Materiel Command set up a project with the purpose of collecting, collating, evaluating, and distributing to interested government agencies and contractors, all information concerning sightings and phenomena in the atmosphere which could be construed to be of concern to the national security. This directive assigned a priority of 2-A to the project, a RESTRICTED

classification, and a code name of "SIGN."

4. At Air Materiel Command the Technical Intelligence Division was assigned the responsibility for accomplishing this mission with the full assistance of all divisions and activities within Air Materiel Command to permit successful completion of the project. The cooperation of the Army, Navy, Coast Guard and F.B.I. was solicited in order to facilitate the forwarding and investigation of all reports. Arrangements were effected for handling such reports directly with Air Materiel Command.

5. In addition to the collection, analysis and investigation activities directed by the project personnel at Hq, Air Materiel Command, Air Intelligence Memorandum dated 6 August 1948, subject: "Flying Saucers," required that a study be made by the Air Intelligence Division to examine the pattern of tactics of reported flying saucers and develop conclusions as to their probability. The results of this analysis were prepared as Air Intelligence division (DI/USAF-ONI) Study No. 203, "Analysis of Flying Object Incidents in the United States." The Directorate of Intelligence has maintained close liaison with Project "SIGN" activities in order that appropriate staff sections of Headquarters, USAF may be adequately advised on the entire subject of unidentified aerial phenomena reports.

6. The code name of "SIGN" for the project was changed to "GRUDGE" by a request on 16 December 1948 by the Director of Research and Development, DCS/M, Hq, USAF. "GRUDGE" under the U.S. Joint Services Code Word Index refers to the title "Detailed Study of Flying Discs."

Assumptions and conclusions

7. Hq, Air Materiel Command will continue its investigations under project "GRUDGE" and the Directorate of Intelligence, USAF, will maintain close liaison with that Command in order to advise Staff sections on the subject of unidentified aerial objects.

8. See Appendix "A" for discussion of the problem and conclusions drawn therefrom.

Recommendations

9. It is recommended that the Joint Intelligence Committee:

a. Furnish the Director of Intelligence, USAF, with comments on this paper.

Appendix A

Unidentified Aerial Objects
Facts and Discussion 1. As of 10 March 1949, a total of 256 incidents involving unidentified aerial objects had been recorded, under Project "SIGN." The majority of these were domestic observations but there were many from reports from foreign sources. In each incident the observers have been interrogated by investigators and the results have been analyzed by technical personnel.

2. Condensed summaries have been prepared on each incident to provide basic information to individuals and agencies having a responsibility or interest in the project.

3. The extreme lack of accurate observed details and the unpredictable occurrence of incidents have made positive identification extremely difficult. Data on unidentified aerial objects has grouped the incidents as follows:

13.3% - discs

43.0% - spherical or elliptical [sic] shape (including balls of fire)

6.0% - cylindrical shape

2.5% - winged objects

32.2% - shapes other than those above

4. In order to identify ordinary and conventional objects, that have probably been included in the list of reported incidents, graphical methods have been applied as follows:

5. Prepared graphical data includes:

a. Charts concerning unidentified aerial objects, to indicate:

(1) Type of object observed

(2) Vicinity in which particular type of object was observed

(3) Direction of flight

b. Location of guided missiles, research and related centers

c. Location of airlines, airfields, both military and commercial

d. Locations of radio beacon stations

e. Known or projected radar stations from which reports and assistance may be derived

f. Meteorological stations from which balloon release data, radiosonde or theodolite readings may be obtained

g. Past, current, and projected celestial phenomena

h. Flight paths of migratory birds

6. A psychological analysis of the reported data is being prepared by Aero-Medical Laboratory, AMC, for the purpose of determining those incidents that are probably based upon errors of the human mind and senses. A preliminary verbal report from the professional psychologists indicates that a considerable number of incidents can be explained as ordinary occurrences that have been misrepresented, as the result of human errors.

7. Specialist services, supplementary to those of AMC technical offices, are being provided by a number of agencies.

8. The Air Weather Service has reviewed incident data and has provided the information that 24 of the first 172 coincide, both with respect to location and time, with the release of weather balloons.

9. The Ohio State University has contracted with AMC to supply astronomical services in an effort to identify meteors, planetoids and associated phenomena. Professor Hynek, Ohio State University Astrophysicist and head of the University Observatory has reviewed the incident summary sheets.

10. Preliminary report of Dr. Hynek, indicates that 30 per cent of the first 200 incidents are positively attributable to astronomical phenomena, and 45 per cent could be explained on the basis of such phenomena or the sighting of weather balloons and other objects. This gives a total of 75 per cent of all incidents with possible explanation.

11. Members of the Scientific Advisory Board o the Chief of Staff, USAF, who have provided consultant services to Project "Grudge," include Dr. Irving Langmuir, Chief, General Electric Research and Dr. G. E. Valley of MIT.

12. Dr.G. E. Valley has displayed an active interest in Project "Grudge" to the extent of reviewing the reported incidents and writing an overall type of analysis in which he groups the various objects and then analyzes each group from the standpoint of scientific feasibility.

13. Inasmuch as various surmises have been advanced that some of the reported observations may have represented "space ships" or satellite vehicles, a special study has been initiated with the Rand Corporation, under the Rand Project, to provide an analysis from this standpoint and also to provide fundamental information, pertaining to the basic design and performance characteristics that might distinguish a possible "space ship." Rand Corporation has also informed AMC that their analysis of all incidents leads them to the conclusion that there is nothing in any reported incidents which would go against a rational explanation.

14. The Weather Bureau Library of the Department of Commerce has supplied information on "ball lightning." This was requested because of the belief by some persons that some of the observations may have represented "ball lightning." It appears that the subject of "ball lightning" occupies an undetermined status and authorities are not at all convinced that such a phenomenon actually exists.

15. On 8 April 1949 the repeated occurrence of green fireball phenomena in New Mexico was discussed with Dr. Joseph Kaplan, member of the USAF Scientific Advisory Board. This phenomenon has caused considerable concern on the part of Hq, Fourth Army and has occupied the interests of Dr. Lincoln LaPaz of the University of New Mexico. Dr. LaPaz believes that the phenomena are not meteorites. Because of Dr. LaPaz' outstanding ability for accurate observation and his experience in identification of meteoritic phenomena, Dr. Kaplan expressed the belief that the green fireball phenomena should be further investigated. Dr. Kaplan's views and this phenomena were discussed 12 April 1948 with Dr. Theodore von Karman, Chairman, USAF Scientific Advisory Board, who feels that the problem is more properly in the field of upper atmosphere research than the field of intelligence.

16. A summary of the incidents reported would indicate that:

a. All incidents which coincide with explainable aerial activities or recorded natural phenomena should be eliminated from further consideration.

b. Creditable unexplained incidents involving light phenomena should be further investigated and analyzed by highly competent scientists who can establish the identity either within or without the limits of known natural phenomena.

c. Creditable unexplained incidents which might involve the use of atomic powered craft of usual [sic] design should be considered jointly by the Atomic Energy Commission and highly competent aerodynamicists to determine the necessity for further consideration of such incidents by the National Defense Intelligence Agencies.

Conclusions

17. The majority of reported incidents are reliable to the extent that they have involved the sighting of some object or light phenomenon.

18. In spite of the lack of accurate data provided by witnesses, the majority of reported incidnts have been caused by misidentification of weather balloons, high altitude balloons with lights and/or electronic equipment, meteors, bolides, and the planet Venus.

19. There are numerous reports from reliable and competent observers for which a conclusive explanation has not been made. Some of these involve descriptions which would place them in the category of new manifestations of probable natural phenomena but others involve configurations and described performance which might conceivably represent an advanced aerodynamical development. A few unexplained incidents surpass these limits of credibility.

20. It is unlikely that a foreign power would expose a superior aerial weapon by a prolonged ineffectual penetration of the United States.

NICAP Home Page

A Die-Hard Issue

CIA's Role in the Study of UFOs, 1947-90

Gerald K. Haines

An extraordinary 95 percent of all Americans have at least heard or read something about Unidentified Flying Objects (UFOs), and 57 percent believe they are real. **(1)** Former US Presidents Carter and Reagan claim to have seen a UFO. UFOlogists--a neologism for UFO buffs--and private UFO organizations are found throughout the United States. Many are convinced that the US Government, and particularly CIA, are engaged in a massive conspiracy and coverup of the issue. The idea that CIA has secretly concealed its research into UFOs has been a major theme of UFO buffs since the modern UFO phenomena emerged in the late 1940s. **(2)**

In late 1993, after being pressured by UFOlogists for the release of additional CIA information on UFOs, **(3)** DCI R. James Woolsey ordered another review of all Agency files on UFOs. Using CIA records compiled from that review, this study traces CIA interest and involvement in the UFO controversy from the late 1940s to 1990. It chronologically examines the Agency's efforts to solve the mystery of UFOs, its programs that had an impact on UFO sightings, and its attempts to conceal CIA involvement in the entire UFO issue. What emerges from this examination is that, while Agency concern over UFOs was substantial until the early 1950s, CIA has since paid only limited and peripheral attention to the phenomena.

Background

The emergence in 1947 of the Cold War confrontation between the United States and the Soviet Union also saw the first wave of UFO sightings. The first report of a "flying saucer" over the United States came on 24 June 1947, when Kenneth Arnold, a private pilot and reputable businessman, while looking for a downed plane sighted nine disk-shaped objects near Mt. Rainier, Washington, traveling at an estimated speed of over 1,000 mph. Arnold's report was followed by a flood of additional sightings, including reports from military and civilian pilots and air traffic controllers all over the United States. **(4)** In 1948, Air Force Gen. Nathan Twining, head of the Air Technical Service Command, established Project SIGN (initially named Project SAUCER) to collect, collate, evaluate, and distribute within the government all information relating to such sightings, on the premise that UFOs might be real and of national security concern. **(5)**

The Technical Intelligence Division of the Air Material Command (AMC) at Wright Field (later Wright-Patterson Air Force Base) in Dayton, Ohio, assumed control of Project SIGN and began its work on 23 January 1948. Although at first fearful that the objects might be Soviet secret weapons, the Air Force soon concluded that UFOs were real but easily explained and not extraordinary. The Air Force report found that almost all sightings stemmed from one or more of three causes: mass hysteria and hallucination, hoax, or misinterpretation of known objects. Nevertheless, the report recommended continued military intelligence control over the investigation of all sightings and did not rule out the possibility of extraterrestrial phenomena. **(6)**

Amid mounting UFO sightings, the Air Force continued to collect and evaluate UFO data in the late 1940s under a new project, GRUDGE, which tried to alleviate public anxiety over UFOs via a public relations campaign designed to persuade the public that UFOs constituted nothing unusual or extraordinary. UFO sightings were explained as balloons, conventional aircraft, planets, meteors, optical illusions, solar reflections, or even "large hailstones." GRUDGE officials found no evidence in UFO sightings of advanced foreign weapons design or development, and they concluded that UFOs did not threaten US security. They recommended that the project be reduced in scope because the very existence of Air Force official interest encouraged people to believe in UFOs and contributed to a "war hysteria" atmosphere. On 27 December 1949, the Air Force announced the project's termination. **(7)**

With increased Cold War tensions, the Korean war, and continued UFO sightings, USAF Director of Intelligence Maj.

Gen. Charles P. Cabell ordered a new UFO project in 1952. Project BLUE BOOK became the major Air Force effort to study the UFO phenomenon throughout the 1950s and 1960s. **(8)** The task of identifying and explaining UFOs continued to fall on the Air Material Command at Wright-Patterson. With a small staff, the Air Technical Intelligence Center (ATIC) tried to persuade the public that UFOs were not extraordinary. **(9)** Projects SIGN, GRUDGE, and BLUE BOOK set the tone for the official US Government position regarding UFOs for the next 30 years.

Early CIA Concerns, 1947-52

CIA closely monitored the Air Force effort, aware of the mounting number of sightings and increasingly concerned that UFOs might pose a potential security threat. **(10)** Given the distribution of the sightings, CIA officials in 1952 questioned whether they might reflect "midsummer madness." **(11)** Agency officials accepted the Air Force's conclusions about UFO reports, although they concluded that "since there is a remote possibility that they may be interplanetary aircraft, it is necessary to investigate each sighting." **(12)**

A massive buildup of sightings over the United States in 1952, especially in July, alarmed the Truman administration. On 19 and 20 July, radar scopes at Washington National Airport and Andrews Air Force Base tracked mysterious blips. On 27 July, the blips reappeared. The Air Force scrambled interceptor aircraft to investigate, but they found nothing. The incidents, however, caused headlines across the country. The White House wanted to know what was happening, and the Air Force quickly offered the explanation that the radar blips might be the result of "temperature inversions." Later, a Civil Aeronautics Administration investigation confirmed that such radar blips were quite common and were caused by temperature inversions. **(13)**

Although it had monitored UFO reports for at least three years, CIA reacted to the new rash of sightings by forming a special study group within the Office of Scientific Intelligence (OSI) and the Office of Current Intelligence (OCI) to review the situation. **(14)** Edward Tauss, acting chief of OSI's Weapons and Equipment Division, reported for the group that most UFO sightings could be easily explained. Nevertheless, he recommended that the Agency continue monitoring the problem, in coordination with ATIC. He also urged that CIA conceal its interest from the media and the public, "in view of their probable alarmist tendencies" to accept such interest as confirming the existence of UFOs. **(15)**

Upon receiving the report, Deputy Director for Intelligence (DDI) Robert Amory, Jr. assigned responsibility for the UFO investigations to OSI's Physics and Electronics Division, with A. Ray Gordon as the officer in charge. **(16)** Each branch in the division was to contribute to the investigation, and Gordon was to coordinate closely with ATIC. Amory, who asked the group to focus on the national security implications of UFOs, was relaying DCI Walter Bedell Smith's concerns. **(17)** Smith wanted to know whether or not the Air Force investigation of flying saucers was sufficiently objective and how much more money and manpower would be necessary to determine the cause of the small percentage of unexplained flying saucers. Smith believed "there was only one chance in 10,000 that the phenomenon posed a threat to the security of the country, but even that chance could not be taken." According to Smith, it was CIA's responsibility by statute to coordinate the intelligence effort required to solve the problem. Smith also wanted to know what use could be made of the UFO phenomenon in connection with US psychological warfare efforts. **(18)**

Led by Gordon, the CIA Study Group met with Air Force officials at Wright-Patterson and reviewed their data and findings. The Air Force claimed that 90 percent of the reported sightings were easily accounted for. The other 10 percent were characterized as "a number of incredible reports from credible observers." The Air Force rejected the theories that the sightings involved US or Soviet secret weapons development or that they involved "men from Mars"; there was no evidence to support these concepts. The Air Force briefers sought to explain these UFO reports as the misinterpretation of known objects or little understood natural phenomena. **(19)** Air Force and CIA officials agreed that outside knowledge of Agency interest in UFOs would make the problem more serious. **(20)** This concealment of CIA interest contributed greatly to later charges of a CIA conspiracy and coverup.

Amateur photographs of alleged UFOs

Passoria, New Jersey, 31 July 1952

& Minneapolis, Minnesota, 20 October 1960

The CIA Study Group also searched the Soviet press for UFO reports, but found none, causing the group to conclude that the absence of reports had to have been the result of deliberate Soviet Government policy. The group also envisioned the USSR's possible use of UFOs as a psychological warfare tool. In addition, they worried that, if the US air warning system should be deliberately overloaded by UFO sightings, the Soviets might gain a surprise advantage in any nuclear attack. **(21)**

Because of the tense Cold War situation and increased Soviet capabilities, the CIA Study Group saw serious national security concerns in the flying saucer situation. The group believed that the Soviets could use UFO reports to touch off mass hysteria and panic in the United States. The group also believed that the Soviets might use UFO sightings to overload the US air warning system so that it could not distinguish real targets from phantom UFOs. H. Marshall Chadwell, Assistant Director of OSI, added that he considered the problem of such importance "that it should be brought to the attention of the National Security Council, in order that a communitywide coordinated effort towards it solution may be initiated." **(22)**

Chadwell briefed DCI Smith on the subject of UFOs in December 1952. He urged action because he was convinced that "something was going on that must have immediate attention" and that "sightings of unexplained objects at great altitudes and traveling at high speeds in the vicinity of major US defense installations are of such nature that they are not attributable to natural phenomena or known types of aerial vehicles." He drafted a memorandum from the DCI to the National Security Council (NSC) and a proposed NSC Directive establishing the investigation of UFOs as a priority project throughout the intelligence and the defense research and development community. **(23)** Chadwell also urged Smith to establish an external research project of top-level scientists to study the problem of UFOs. **(24)** After this briefing, Smith directed DDI Amory to prepare a NSC Intelligence Directive (NSCID) for submission to the NSC on the need to continue the investigation of UFOs and to coordinate such investigations with the Air Force. **(25)**

The Robertson Panel, 1952-53

On 4 December 1952, the Intelligence Advisory Committee (IAC) took up the issue of UFOs. **(26)** Amory, as acting chairman, presented DCI Smith's request to the committee that it informally discuss the subject of UFOs. Chadwell then briefly reviewed the situation and the active program of the ATIC relating to UFOs. The committee agreed that the DCI should "enlist the services of selected scientists to review and appraise the available evidence in the light of pertinent scientific theories" and draft an NSCID on the subject. **(27)** Maj. Gen. John A. Samford, Director of Air Force Intelligence, offered full cooperation. **(28)**

At the same time, Chadwell looked into British efforts in this area. He learned the British also were active in studying the UFO phenomena. An eminent British scientist, R. V. Jones, headed a standing committee created in June 1951 on flying saucers. Jones' and his committee's conclusions on UFOs were similar to those of Agency officials: the sightings were not enemy aircraft but misrepresentations of natural phenomena. The British noted, however, that during a recent air show RAF pilots and senior military officials had observed a "perfect flying saucer." Given the press response, according to the officer, Jones was having a most difficult time trying to correct public opinion regarding UFOs. The public was convinced they were real. **(29)**

In January 1953, Chadwell and H. P. Robertson, a noted physicist from the California Institute of Technology, put together a distinguished panel of nonmilitary scientists to study the UFO issue. It included Robertson as chairman; Samuel A. Goudsmit, a nuclear physicist from the Brookhaven National Laboratories; Luis Alvarez, a high-energy physicist; Thornton Page, the deputy director of the Johns Hopkins Operations Research Office and an expert on radar and electronics; and Lloyd Berkner, a director of the Brookhaven National Laboratories and a specialist in geophysics. **(30)**

The charge to the panel was to review the available evidence on UFOs and to consider the possible dangers of the phenomena to US national security. The panel met from 14 to 17 January 1953. It reviewed Air Force data on UFO case histories and, after spending 12 hours studying the phenomena, declared that reasonable explanations could be suggested for most, if not all, sightings. For example, after reviewing motion-picture film taken of a UFO sighting near

Tremonton, Utah, on 2 July 1952 and one near Great Falls, Montana, on 15 August 1950, the panel concluded that the images on the Tremonton film were caused by sunlight reflecting off seagulls and that the images at Great Falls were sunlight reflecting off the surface of two Air Force interceptors. **(31)**

The panel concluded unanimously that there was no evidence of a direct threat to national security in the UFO sightings. Nor could the panel find any evidence that the objects sighted might be extraterrestrials. It did find that continued emphasis on UFO reporting might threaten "the orderly functioning" of the government by clogging the channels of communication with irrelevant reports and by inducing "hysterical mass behavior" harmful to constituted authority. The panel also worried that potential enemies contemplating an attack on the United States might exploit the UFO phenomena and use them to disrupt US air defenses. **(32)**

To meet these problems, the panel recommended that the National Security Council debunk UFO reports and institute a policy of public education to reassure the public of the lack of evidence behind UFOs. It suggested using the mass media, advertising, business clubs, schools, and even the Disney corporation to get the message across. Reporting at the height of McCarthyism, the panel also recommended that such private UFO groups as the Civilian Flying Saucer Investigators in Los Angeles and the Aerial Phenomena Research Organization in Wisconsin be monitored for subversive activities. **(33)**

The Robertson panel's conclusions were strikingly similar to those of the earlier Air Force project reports on SIGN and GRUDGE and to those of the CIA's own OSI Study Group. All investigative groups found that UFO reports indicated no direct threat to national security and no evidence of visits by extraterrestrials.

Following the Robertson panel findings, the Agency abandoned efforts to draft an NSCID on UFOs. **(34)** The Scientific Advisory Panel on UFOs (the Robertson panel) submitted its report to the IAC, the Secretary of Defense, the Director of the Federal Civil Defense Administration, and the Chairman of the National Security Resources Board. CIA officials said no further consideration of the subject appeared warranted, although they continued to monitor sightings in the interest of national security. Philip Strong and Fred Durant from OSI also briefed the Office of National Estimates on the findings. **(35)** CIA officials wanted knowledge of any Agency interest in the subject of flying saucers carefully restricted, noting not only that the Robertson panel report was classified but also that any mention of CIA sponsorship of the panel was forbidden. This attitude would later cause the Agency major problems relating to its credibility. **(36)**

The 1950s: Fading CIA Interest in UFOs

After the report of the Robertson panel, Agency officials put the entire issue of UFOs on the back burner. In May 1953, Chadwell transferred chief responsibility for keeping abreast of UFOs to OSI's Physics and Electronic Division, while the Applied Science Division continued to provide any necessary support. **(37)** Todos M. Odarenko, chief of the Physics and Electronics Division, did not want to take on the problem, contending that it would require too much of his division's analytic and clerical time. Given the findings of the Robertson panel, he proposed to consider the project "inactive" and to devote only one analyst part-time and a file clerk to maintain a reference file of the activities of the Air Force and other agencies on UFOs. Neither the Navy nor the Army showed much interest in UFOs, according to Odarenko. **(38)**

A nonbeliever in UFOs, Odarenko sought to have his division relieved of the responsibility for monitoring UFO reports. In 1955, for example, he recommended that the entire project be terminated because no new information concerning UFOs had surfaced. Besides, he argued, his division was facing a serious budget reduction and could not spare the resources. **(39)** Chadwell and other Agency officials, however, continued to worry about UFOs. Of special concern were overseas reports of UFO sightings and claims that German engineers held by the Soviets were developing a "flying saucer" as a future weapon of war. **(40)**

To most US political and military leaders, the Soviet Union by the mid-1950s had become a dangerous opponent. Soviet progress in nuclear weapons and guided missiles was particularly alarming. In the summer of 1949, the USSR had detonated an atomic bomb. In August 1953, only nine months after the United States tested a hydrogen bomb, the Soviets detonated one. In the spring of 1953, a top secret RAND Corporation study also pointed out the vulnerability of SAC bases to a surprise attack by Soviet long-range bombers. Concern over the danger of a Soviet attack on the United

States continued to grow, and UFO sightings added to the uneasiness of US policymakers.

Mounting reports of UFOs over eastern Europe and Afghanistan also prompted concern that the Soviets were making rapid progress in this area. CIA officials knew that the British and Canadians were already experimenting with "flying saucers." Project Y was a Canadian-British-US developmental operation to produce a nonconventional flying-saucer-type aircraft, and Agency officials feared the Soviets were testing similar devices. **(41)**

Adding to the concern was a flying saucer sighting by US Senator Richard Russell and his party while traveling on a train in the USSR in October 1955. After extensive interviews of Russell and his group, however, CIA officials concluded that Russell's sighting did not support the theory that the Soviets had developed saucerlike or unconventional aircraft. Herbert Scoville, Jr., the Assistant Director of OSI, wrote that the objects observed probably were normal jet aircraft in a steep climb. **(42)**

Wilton E. Lexow, head of the CIA's Applied Sciences Division, was also skeptical. He questioned why the Soviets were continuing to develop conventional-type aircraft if they had a "flying saucer." **(43)** Scoville asked Lexow to assume responsibility for fully assessing the capabilities and limitations of nonconventional aircraft and to maintain the OSI central file on the subject of UFOs.

CIA's U-2 and OXCART as UFOs

In November 1954, CIA had entered into the world of high technology with its U-2 overhead reconnaissance project. Working with Lockheed's Advanced Development facility in Burbank, California, known as the Skunk Works, and Kelly Johnson, an eminent aeronautical engineer, the Agency by August 1955 was testing a high-altitude experimental aircraft--the U-2. It could fly at 60,000 feet; in the mid-1950s, most commercial airliners flew between 10,000 feet and 20,000 feet. Consequently, once the U-2 started test flights, commercial pilots and air traffic controllers began reporting a large increase in UFO sightings. **(44)** (U)

The early U-2s were silver (they were later painted black) and reflected the rays from the sun, especially at sunrise and sunset. They often appeared as fiery objects to observers below. Air Force BLUE BOOK investigators aware of the secret U-2 flights tried to explain away such sightings by linking them to natural phenomena such as ice crystals and temperature inversions. By checking with the Agency's U-2 Project Staff in Washington, BLUE BOOK investigators were able to attribute many UFO sightings to U-2 flights. They were careful, however, not to reveal the true cause of the sighting to the public.

According to later estimates from CIA officials who worked on the U-2 project and the OXCART (SR-71, or Blackbird) project, over half of all UFO reports from the late 1950s through the 1960s were accounted for by manned reconnaissance flights (namely the U-2) over the United States. **(45)** This led the Air Force to make misleading and deceptive statements to the public in order to allay public fears and to protect an extraordinarily sensitive national security project. While perhaps justified, this deception added fuel to the later conspiracy theories and the coverup controversy of the 1970s. The percentage of what the Air Force considered unexplained UFO sightings fell to 5.9 percent in 1955 and to 4 percent in 1956. **(46)**

At the same time, pressure was building for the release of the Robertson panel report on UFOs. In 1956, Edward Ruppelt, former head of the Air Force BLUE BOOK project, publicly revealed the existence of the panel. A best-selling book by UFOlogist Donald Keyhoe, a retired Marine Corps major, advocated release of all government information relating to UFOs. Civilian UFO groups such as the National Investigations Committee on Aerial Phenomena (NICAP) and the Aerial Phenomena Research Organization (APRO) immediately pushed for release of the Robertson panel report. **(47)** Under pressure, the Air Force approached CIA for permission to declassify and release the report. Despite such pressure, Philip Strong, Deputy Assistant Director of OSI, refused to declassify the report and declined to disclose CIA sponsorship of the panel. As an alternative, the Agency prepared a sanitized version of the report which deleted any reference to CIA and avoided mention of any psychological warfare potential in the UFO controversy. **(48)**

The demands, however, for more government information about UFOs did not let up. On 8 March 1958, Keyhoe, in an interview with Mike Wallace of CBS, claimed deep CIA involvement with UFOs and Agency sponsorship of the

Robertson panel. This prompted a series of letters to the Agency from Keyhoe and Dr. Leon Davidson, a chemical engineer and UFOlogist. They demanded the release of the full Robertson panel report and confirmation of CIA involvement in the UFO issue. Davidson had convinced himself that the Agency, not the Air Force, carried most of the responsibility for UFO analysis and that "the activities of the US Government are responsible for the flying saucer sightings of the last decade." Indeed, because of the undisclosed U-2 and OXCART flights, Davidson was closer to the truth than he suspected. CI, nevertheless held firm to its policy of not revealing its role in UFO investigations and refused to declassify the full Robertson panel report. **(49)**

In a meeting with Air Force representatives to discuss how to handle future inquires such as Keyhoe's and Davidson's, Agency officials confirmed their opposition to the declassification of the full report and worried that Keyhoe had the ear of former DCI VAdm. Roscoe Hillenkoetter, who served on the board of governors of NICAP. They debated whether to have CIA General Counsel Lawrence R. Houston show Hillenkoetter the report as a possible way to defuse the situation. CIA officer Frank Chapin also hinted that Davidson might have ulterior motives, "some of them perhaps not in the best interest of this country," and suggested bringing in the FBI to investigate. **(50)** Although the record is unclear whether the FBI ever instituted an investigation of Davidson or Keyhoe, or whether Houston ever saw Hillenkoetter about the Robertson report, Hillenkoetter did resign from the NICAP in 1962. **(51)**

The Agency was also involved with Davidson and Keyhoe in two rather famous UFO cases in the 1950s, which helped contribute to a growing sense of public distrust of CIA with regard to UFOs. One focused on what was reported to have been a tape recording of a radio signal from a flying saucer; the other on reported photographs of a flying saucer. The "radio code" incident began innocently enough in 1955, when two elderly sisters in Chicago, Mildred and Marie Maier, reported in the *Journal of Space Flight* their experiences with UFOs, including the recording of a radio program in which an unidentified code was reportedly heard. The sisters taped the program and other ham radio operators also claimed to have heard the "space message." OSI became interested and asked the Scientific Contact Branch to obtain a copy of the recording. **(52)**

Field officers from the Contact Division (CD), one of whom was Dewelt Walker, made contact with the Maier sisters, who were "thrilled that the government was interested," and set up a time to meet with them. **(53)** In trying to secure the tape recording, the Agency officers reported that they had stumbled upon a scene from *Arsenic and Old Lace*. "The only thing lacking was the elderberry wine," Walker cabled Headquarters. After reviewing the sisters' scrapbook of clippings from their days on the stage, the officers secured a copy of the recording. **(54)** OSI analyzed the tape and found it was nothing more than Morse code from a US radio station.

The matter rested there until UFOlogist Leon Davidson talked with the Maier sisters in 1957. The sisters remembered they had talked with a Mr. Walker who said he was from the US Air Force. Davidson then wrote to a Mr. Walker, believing him to be a US Air Force Intelligence Officer from Wright-Patterson, to ask if the tape had been analyzed at ATIC. Dewelt Walker replied to Davidson that the tape had been forwarded to proper authorities for evaluation, and no information was available concerning the results. Not satisfied, and suspecting that Walker was really a CIA officer, Davidson next wrote DCI Allen Dulles demanding to learn what the coded message revealed and who Mr. Walker was. **(55)** The Agency, wanting to keep Walker's identity as a CIA employee secret, replied that another agency of the government had analyzed the tape in question and that Davidson would be hearing from the Air Force. **(56)** On 5 August, the Air Force wrote Davidson saying that Walker "was and is an Air Force Officer" and that the tape "was analyzed by another government organization." The Air Force letter confirmed that the recording contained only identifiable Morse code which came from a known US-licensed radio station. **(57)**

Davidson wrote Dulles again. This time he wanted to know the identity of the Morse operator and of the agency that had conducted the analysis. CIA and the Air Force were now in a quandary. The Agency had previously denied that it had actually analyzed the tape. The Air Force had also denied analyzing the tape and claimed that Walker was an Air Force officer. CIA officers, under cover, contacted Davidson in Chicago and promised to get the code translation and the identification of the transmitter, if possible. **(58)**

In another attempt to pacify Davidson, a CIA officer, again under cover and wearing his Air Force uniform, contacted Davidson in New York City. The CIA officer explained that there was no super agency involved and that Air Force policy was not to disclose who was doing what. While seeming to accept this argument, Davidson nevertheless pressed

for disclosure of the recording message and the source. The officer agreed to see what he could do. **(59)** After checking with Headquarters, the CIA officer phoned Davidson to report that a thorough check had been made and, because the signal was of known US origin, the tape and the notes made at the time had been destroyed to conserve file space. **(60)**

Incensed over what he perceived was a runaround, Davidson told the CIA officer that "he and his agency, whichever it was, were acting like Jimmy Hoffa and the Teamster Union in destroying records which might indict them." **(61)** Believing that any more contact with Davidson would only encourage more speculation, the Contact Division washed its hands of the issue by reporting to the DCI and to ATIC that it would not respond to or try to contact Davidson again. **(62)** Thus, a minor, rather bizarre incident, handled poorly by both CIA and the Air Force, turned into a major flap that added fuel to the growing mystery surrounding UFOs and CIA's role in their investigation.

Another minor flap a few months later added to the growing questions surrounding the Agency's true role with regard to flying saucers. CIA's concern over secrecy again made matters worse. In 1958, Major Keyhoe charged that the Agency was deliberately asking eyewitnesses of UFOs not to make their sightings public. **(63)**

The incident stemmed from a November 1957 request from OSI to the CD to obtain from Ralph C. Mayher, a photographer for KYW-TV in Cleveland, Ohio, certain photographs he took in 1952 of an unidentified flying object. Harry Real, a CD officer, contacted Mayher and obtained copies of the photographs for analysis. On 12 December 1957, John Hazen, another CD officer, returned the five photographs of the alleged UFO to Mayher without comment. Mayher asked Hazen for the Agency's evaluation of the photos, explaining that he was trying to organize a TV program to brief the public on UFOs. He wanted to mention on the show that a US intelligence organization had viewed the photographs and thought them of interest. Although he advised Mayher not to take this approach, Hazen stated that Mayher was a US citizen and would have to make his own decision as to what to do. **(64)**

Keyhoe later contacted Mayher, who told him his story of CIA and the photographs. Keyhoe then asked the Agency to confirm Hazen's employment in writing, in an effort to expose CIA's role in UFO investigations. The Agency refused, despite the fact that CD field representatives were normally overt and carried credentials identifying their Agency association. DCI Dulles's aide, John S. Earman, merely sent Keyhoe a noncommittal letter noting that, because UFOs were of primary concern to the Department of the Air Force, the Agency had referred his letter to the Air Force for an appropriate response. Like the response to Davidson, the Agency reply to Keyhoe only fueled the speculation that the Agency was deeply involved in UFO sightings. Pressure for release of CIA information on UFOs continued to grow. **(65)**

Although CIA had a declining interest in UFO cases, it continued to monitor UFO sightings. Agency officials felt the need to keep informed on UFOs if only to alert the DCI to the more sensational UFO reports and flaps. **(66)**

The 1960s: Declining CIA Involvement and Mounting Controversy

In the early 1960s, Keyhoe, Davidson, and other UFOlogists maintained their assault on the Agency for release of UFO information. Davidson now claimed that CIA "was solely responsible for creating the Flying Saucer furor as a tool for cold war psychological warfare since 1951." Despite calls for Congressional hearings and the release of all materials relating to UFOs, little changed. **(67)**

In 1964, however, following high-level White House discussions on what to do if an alien intelligence was discovered in space and a new outbreak of UFO reports and sightings, DCI John McCone asked for an updated CIA evaluation of UFOs. Responding to McCone's request, OSI asked the CD to obtain various recent samples and reports of UFO sightings from NICAP. With Keyhoe, one of the founders, no longer active in the organization, CIA officers met with Richard H. Hall, the acting director. Hall gave the officers samples from the NICAP database on the most recent sightings. **(68)**

After OSI officers had reviewed the material, Donald F. Chamberlain, OSI Assistant Director, assured McCone that little had changed since the early 1950s. There was still no evidence that UFOs were a threat to the security of the United States or that they were of "foreign origin." Chamberlain told McCone that OSI still monitored UFO reports, including the official Air Force investigation, Project BLUE BOOK. **(69)**

At the same time that CIA was conducting this latest internal review of UFOs, public pressure forced the Air Force to establish a special ad hoc committee to review BLUE BOOK. Chaired by Dr. Brian O'Brien, a member of the Air Force Scientific Advisory Board, the panel included Carl Sagan, the famous astronomer from Cornell University. Its report offered nothing new. It declared that UFOs did not threaten the national security and that it could find "no UFO case which represented technological or scientific advances outside of a terrestrial framework." The committee did recommend that UFOs be studied intensively, with a leading university acting as a coordinator for the project, to settle the issue conclusively. **(70)**

The House Armed Services Committee also held brief hearings on UFOs in 1966 that produced similar results. Secretary of the Air Force Harold Brown assured the committee that most sightings were easily explained and that there was no evidence that "strangers from outer space" had been visiting Earth. He told the committee members, however, that the Air Force would keep an open mind and continue to investigate all UFO reports. **(71)**

Following the report of its O'Brien Committee, the House hearings on UFOs, and Dr. Robertson's disclosure on a *CBS Reports* program that CIA indeed had been involved in UFO analysis, the Air Force in July 1966 again approached the Agency for declassification of the entire Robertson panel report of 1953 and the full Durant report on the Robertson panel deliberations and findings. The Agency again refused to budge. Karl H. Weber, Deputy Director of OSI, wrote the Air Force that "We are most anxious that further publicity not be given to the information that the panel was sponsored by the CIA." Weber noted that there was already a sanitized version available to the public. **(72)** Weber's response was rather shortsighted and ill considered. It only drew more attention to the 13-year-old Robertson panel report and CIA's role in the investigation of UFOs. The science editor of *The Saturday Review* drew nationwide attention to the CIA's role in investigating UFOs when he published an article criticizing the "sanitized version" of the 1953 Robertson panel report and called for release of the entire document. **(73)**

Unknown to CIA officials, Dr. James E. McDonald, a noted atmospheric physicist from the University of Arizona, had already seen the Durant report on the Robertson panel proceedings at Wright-Patterson on 6 June 1966. When McDonald returned to Wright-Patterson on 30 June to copy the report, however, the Air Force refused to let him see it again, stating that it was a CIA classified document. Emerging as a UFO authority, McDonald publicly claimed that the CIA was behind the Air Force secrecy policies and coverup. He demanded the release of the full Robertson panel report and the Durant report. **(74)**

Bowing to public pressure and the recommendation of its own O'Brien Committee, the Air Force announced in August 1966 that it was seeking a contract with a leading university to undertake a program of intensive investigations of UFO sightings. The new program was designed to blunt continuing charges that the US Government had concealed what it knew about UFOs. On 7 October, the University of Colorado accepted a $325,000 contract with the Air Force for an 18-month study of flying saucers. Dr. Edward U. Condon, a physicist at Colorado and a former Director of the National Bureau of Standards, agreed to head the program. Pronouncing himself an "agnostic" on the subject of UFOs, Condon observed that he had an open mind on the question and thought that possible extraterritorial origins were "improbable but not impossible." **(75)** Brig. Gen. Edward Giller, USAF, and Dr. Thomas Ratchford from the Air Force Research and Development Office became the Air Force coordinators for the project.

In February 1967, Giller contacted Arthur C. Lundahl, Director of CIA's National Photographic Interpretation Center (NPIC), and proposed an informal liaison through which NPIC could provide the Condon Committee with technical advice and services in examining photographs of alleged UFOs. Lundahl and DDI R. Jack Smith approved the arrangement as a way of "preserving a window" on the new effort. They wanted the CIA and NPIC to maintain a low profile, however, and to take no part in writing any conclusions for the committee. No work done for the committee by NPIC was to be formally acknowledged. **(76)**

Ratchford next requested that Condon and his committee be allowed to visit NPIC to discuss the technical aspects of the problem and to view the special equipment NPIC had for photoanalysis. On 20 February 1967, Condon and four members of his committee visited NPIC. Lundahl emphasized to the group that any NPIC work to assist the committee must not be identified as CIA work. Moreover, work performed by NPIC would be strictly of a technical nature. After receiving these guidelines, the group heard a series of briefings on the services and equipment not available elsewhere that CIA had used in its analysis of some UFO photography furnished by Ratchford. Condon and his committee were

impressed.> **(77)**

Condon and the same group met again in May 1967 at NPIC to hear an analysis of UFO photographs taken at Zanesville, Ohio. The analysis debunked that sighting. The committee was again impressed with the technical work performed, and Condon remarked that for the first time a scientific analysis of a UFO would stand up to investigation. **(78)** The group also discussed the committee's plans to call on US citizens for additional photographs and to issue guidelines for taking useful UFO photographs. In addition, CIA officials agreed that the Condon Committee could release the full Durant report with only minor deletions.

In April 1969, Condon and his committee released their report on UFOs. The report concluded that little, if anything, had come from the study of UFOs in the past 21 years and that further extensive study of UFO sightings was unwarranted. It also recommended that the Air Force special unit, Project BLUE BOOK, be discontinued. It did not mention CIA participation in the Condon committee's investigation. **(79)** A special panel established by the National Academy of Sciences reviewed the Condon report and concurred with its conclusion that "no high priority in UFO investigations is warranted by data of the past two decades." It concluded its review by declaring, "On the basis of present knowledge, the least likely explanation of UFOs is the hypothesis of extraterrestrial visitations by intelligent beings." Following the recommendations of the Condon Committee and the National Academy of Sciences, the Secretary of the Air Force, Robert C. Seamans, Jr., announced on 17 December 1969 the termination of BLUE BOOK. **(80)**

The 1970s and 1980s: The UFO Issue Refuses To Die

The Condon report did not satisfy many UFOlogists, who considered it a coverup for CIA activities in UFO research. Additional sightings in the early 1970s fueled beliefs that the CIA was somehow involved in a vast conspiracy. On 7 June 1975, William Spaulding, head of a small UFO group, Ground Saucer Watch (GSW), wrote to CIA requesting a copy of the Robertson panel report and all records relating to UFOs. **(81)** Spaulding was convinced that the Agency was withholding major files on UFOs. Agency officials provided Spaulding with a copy of the Robertson panel report and of the Durant report. **(82)**

On 14 July 1975, Spaulding again wrote the Agency questioning the authenticity of the reports he had received and alleging a CIA coverup of its UFO activities. Gene Wilson, CIA's Information and Privacy Coordinator, replied in an attempt to satisfy Spaulding, "At no time prior to the formation of the Robertson Panel and subsequent to the issuance of the panel's report has CIA engaged in the study of the UFO phenomena." The Robertson panel report, according to Wilson, was "the summation of Agency interest and involvement in UFOs." Wilson also inferred that there were no additional documents in CIA's possession that related to UFOs. Wilson was ill informed. **(83)**

In September 1977, Spaulding and GSW, unconvinced by Wilson's response, filed a Freedom of Information Act (FOIA) lawsuit against the Agency that specifically requested all UFO documents in CIA's possession. Deluged by similar FOIA requests for Agency information on UFOs, CIA officials agreed, after much legal maneuvering, to conduct a "reasonable search" of CIA files for UFO materials. **(84)** Despite an Agency-wide unsympathetic attitude toward the suit, Agency officials, led by Launie Ziebell from the Office of General Counsel, conducted a thorough search for records pertaining to UFOs. Persistent, demanding, and even threatening at times, Ziebell and his group scoured the Agency. They even turned up an old UFO file under a secretary's desk. The search finally produced 355 documents totaling approximately 900 pages. On 14 December 1978, the Agency released all but 57 documents of about 100 pages to GSW. It withheld these 57 documents on national security grounds and to protect sources and methods. **(85)**

Although the released documents produced no smoking gun and revealed only a low-level Agency interest in the UFO phenomena after the Robertson panel report of 1953, the press treated the release in a sensational manner. *The New York Times,* for example, claimed that the declassified documents confirmed intensive government concern over UFOs and that the Agency was secretly involved in the surveillance of UFOs. **(86)** GSW then sued for the release of the withheld documents, claiming that the Agency was still holding out key information. **(87)** It was much like the John F. Kennedy assassination issue. No matter how much material the Agency released and no matter how dull and prosaic the information, people continued to believe in a Agency coverup and conspiracy.

DCI Stansfield Turner was so upset when he read *The New York Times* article that he asked his senior officers, "Are we in UFOs?" After reviewing the records, Don Wortman, Deputy Director for Administration, reported to Turner that there was "no organized Agency effort to do research in connection with UFO phenomena nor has there been an organized effort to collect intelligence on UFOs since the 1950s." Wortman assured Turner that the Agency records held only "sporadic instances of correspondence dealing with the subject," including various kinds of reports of UFO sightings. There was no Agency program to collect actively information on UFOs, and the material released to GSW had few deletions. **(88)** Thus assured, Turner had the General Counsel press for a summary judgment against the new lawsuit by GSW. In May 1980, the courts dismissed the lawsuit, finding that the Agency had conducted a thorough and adequate search in good faith. **(89)**

During the late 1970s and 1980s, the Agency continued its low-key interest in UFOs and UFO sightings. While most scientists now dismissed flying saucers reports as a quaint part of the 1950s and 1960s, some in the Agency and in the Intelligence Community shifted their interest to studying parapsychology and psychic phenomena associated with UFO sightings. CIA officials also looked at the UFO problem to determine what UFO sightings might tell them about Soviet progress in rockets and missiles and reviewed its counterintelligence aspects. Agency analysts from the Life Science Division of OSI and OSWR officially devoted a small amount of their time to issues relating to UFOs. These included counterintelligence concerns that the Soviets and the KGB were using US citizens and UFO groups to obtain information on sensitive US weapons development programs (such as the Stealth aircraft), the vulnerability of the US air-defense network to penetration by foreign missiles mimicking UFOs, and evidence of Soviet advanced technology associated with UFO sightings.

CIA also maintained Intelligence Community coordination with other agencies regarding their work in parapsychology, psychic phenomena, and "remote viewing" experiments. In general, the Agency took a conservative scientific view of these unconventional scientific issues. There was no formal or official UFO project within the Agency in the 1980s, and Agency officials purposely kept files on UFOs to a minimum to avoid creating records that might mislead the public if released. **(90)**

The 1980s also produced renewed charges that the Agency was still withholding documents relating to the 1947 Roswell incident, in which a flying saucer supposedly crashed in New Mexico, and the surfacing of documents which purportedly revealed the existence of a top secret US research and development intelligence operation responsible only to the President on UFOs in the late 1940s and early 1950s. UFOlogists had long argued that, following a flying saucer crash in New Mexico in 1947, the government not only recovered debris from the crashed saucer but also four or five alien bodies. According to some UFOlogists, the government clamped tight security around the project and has refused to divulge its investigation results and research ever since. **(91)** In September 1994, the US Air Force released a new report on the Roswell incident that concluded that the debris found in New Mexico in 1947 probably came from a once top secret balloon operation, Project MOGUL, designed to monitor the atmosphere for evidence of Soviet nuclear tests. **(92)**

Circa 1984, a series of documents surfaced which some UFOlogists said proved that President Truman created a top secret committee in 1947, Majestic-12, to secure the recovery of UFO wreckage from Roswell and any other UFO crash sight for scientific study and to examine any alien bodies recovered from such sites. Most if not all of these documents have proved to be fabrications. Yet the controversy persists. **(93)**

Like the JFK assassination conspiracy theories, the UFO issue probably will not go away soon, no matter what the Agency does or says. The belief that we are not alone in the universe is too emotionally appealing and the distrust of our government is too pervasive to make the issue amenable to traditional scientific studies of rational explanation and evidence.

Notes

(1) See the 1973 Gallup Poll results printed in *The New York Times*, 29 November 1973, p. 45 and Philip J. Klass, *UFOs: The Public Deceived* (New York: Prometheus Books, 1983), p. 3.

(2) See Klass, *UFOs,* p. 3; James S. Gordon, "The UFO Experience," *Atlantic Monthly* (August 1991), pp. 82-92; David Michael Jacobs, *The UFO Controversy in America* (Bloomington: Indiana University Press, 1975); Howard Blum, *Out There: The Government's Secret Quest for Extraterrestrials* (New York: Simon and Schuster, 1990); Timothy Good, *Above Top Secret: The Worldwide UFO Cover-Up* (New York: William Morrow, 1987); and Whitley Strieber, Communion: *The True Story* (New York: Morrow, 1987).

(3) In September 1993 John Peterson, an acquaintance of Woolsey's, first approached the DCI with a package of heavily sanitized CIA material on UFOs released to UFOlogist Stanton T. Friedman. Peterson and Friedman wanted to know the reasons for the redactions. Woolsey agreed to look into the matter. See Richard J. Warshaw, Executive Assistant, note to author, 1 November 1994; Warshaw, note to John H. Wright, Information and Privacy Coordinator, 31 January 1994; and Wright, memorandum to Executive Secretariat, 2 March 1994. (Except where noted, all citations to CIA records in this article are to the records collected for the 1994 Agency-wide search that are held by the Executive Assistant to the DCI).

(4) See Hector Quintanilla, Jr., "The Investigation of UFOs," Vol. 10, No. 4, *Studies in Intelligence* (fall 1966): pp.95-110 and CIA, unsigned memorandum, "Flying Saucers," 14 August 1952. See also Good, *Above Top Secret,* p. 253. During World War II, US pilots reported "foo fighters" (bright lights trailing US aircraft). Fearing they might be Japanese or German secret weapons, OSS investigated but could find no concrete evidence of enemy weapons and often filed such reports in the "crackpot" category. The OSS also investigated possible sightings of German V-1 and V-2 rockets before their operational use during the war. See Jacobs, *UFO Controversy,* p. 33. The Central Intelligence Group, the predecessor of the CIA, also monitored reports of "ghost rockets" in Sweden in 1946. See CIG, Intelligence Report, 9 April 1947.

(73) See John Lear, "The Disputed CIA Document on UFOs," *Saturday Review* (September 3, 1966), p. 45. The Lear article was otherwise unsympathetic to UFO sightings and the possibility that extraterritorials were involved. The Air Force had been eager to provide Lear with the full report. See Walter L. Mackey, Executive Officer, memorandum for DCI, "Air Force Request to Declassify CIA Material on Unidentified Flying Objects (UFO)," 1 September 1966.

(74) See Klass, UFOs, p. 40, Jacobs, *The UFO Controversy*, p. 214 and Everet Clark, "Physicist Scores `Saucer Status,'" *The New York Times*, 21 October 1966. See also James E. McDonald, "Statement on Unidentified Flying Objects," submitted to the House Committee on Science and Astronautics, 29 July 1968.

(75) Condon is quoted in Walter Sullivan, "3 Aides Selected in Saucer Inquiry," *The New York Times*, 8 October 1966. See also "An Outspoken Scientist, Edward Uhler Condon," *The New York Times*, 8 October 1966. Condon, an outgoing, gruff scientist, had earlier become embroiled in a controversy with the House Unamerican Activities Committee that claimed Condon was "one of the weakest links in our atomic security." See also Peebles, Watch the Skies, pp. 169-195.

(76) See Lundahl, memorandum for DDI, 7 February 1967.

(77) See memorandum for the record, "Visit of Dr. Condon to NPIC, 20 February 1967," 23 February 1967. See also the analysis of the photographs in memorandum for Lundahl, "Photo Analysis of UFO Photography," 17 February 1967.

(78) See memorandum for the record, "UFO Briefing for Dr. Edward Condon, 5 May 1967," 8 May 1967 and attached "Guidelines to UFO Photographers and UFO Photographic Information Sheet." See also Condon Committee, Press Release, 1 May 1967 and Klass, *UFOs*, p. 41. The Zaneville photographs turned out to be a hoax.

(79) See Edward U. Condon, Scientific Study of Unidentified Flying Objects (New York: Bantam Books, 1969) and Klass, UFOs, p. 41. The report contained the Durant report with only minor deletions.

(80) See Office of Assistant Secretary of Defense, News Release, "Air Force to Terminate Project BLUEBOOK," 17 December 1969. The Air Force retired BLUEBOOK records to the USAF Archives at Maxwell Air Force Base in Alabama. In 1976 the Air Force turned over all BLUEBOOK files to the National Archives and Records Administration, which made them available to the public without major restrictions. Some names have been withheld from the documents. See Klass, *UFOs,* p. 6.

(81) GSW was a small group of UFO buffs based in Phoenix, Arizona, and headed by William H. Spaulding.

(82) See Klass, *UFOs,* p. 8.

(83) See Wilson, letter to Spaulding, 26 March 1976 and GSW v. CIA Civil Action Case 78-859.

(84) GSW v. CIA Civil Action Case 78-859, p. 2.

(85) Author interview with Launie Ziebell, 23 June 1994 and author interview with OSI analyst, 21 July 1994. See also affidavits of George Owens, CIA Information and Privacy Act Coordinator; Karl H. Weber, OSI; Sidney D. Stembridge, Office of Security; and Rutledge P. Hazzard, DS&T; GSW v. CIA Civil Action Case 78-859 and Sayre Stevens, Deputy Director for National Foreign Assessment, memorandum for Thomas H. White, Assistant for Information, Information Review Committee, "FOIA Litigation Ground Saucer Watch," no date.

(86) See "CIA Papers Detail UFO Surveillance," *The New York Times,* 13 January 1979; Patrick Huyghe, "UFO Files: The Untold Story," *The New York Times Magazine,* 14 October 1979, p. 106; and Jerome Clark, "UFO Update," *UFO Report,* August 1979.

(87) Jerome Clark, "Latest UFO News Briefs From Around the World," *UFO Update,* August 1979 and GSW v. CIA Civil Action No. 78-859.

(88) See Wortman, memorandum for DCI Turner, "Your Question, `Are we in UFOs?' Annotated to The *New York Times* News Release Article," 18 January 1979.

(89) See GSW v. CIA Civil Action 78-859. See also Klass, *UFOs,* pp. 10-12.

(90) See John Brennan, memorandum for Richard Warshaw, Executive Assistant, DCI, "Requested Information on UFOs," 30 September 1993; Author interviews with OSWR analyst, 14 June 1994 and OSI analyst, 21 July 1994. This author found almost no documentation on Agency involvement with UFOs in the 1980s.

There is a DIA Psychic Center and the NSA studies parapsychology, that branch of psychology that deals with the investigation of such psychic phenomena as clairvoyance, extrasensory perception, and telepathy. The CIA reportedly is also a member of an Incident Response Team to investigate UFO landings, if one should occur. This team has never met. The lack of solid CIA documentation on Agency UFO-related activities in the 1980s leaves the entire issue somewhat murky for this period.

Much of the UFO literature presently focuses on contactees and abductees. See John E. Mack, *Abduction, Human Encounters with Aliens* (New York: Charles Scribner's Sons, 1994) and Howard Blum, *Out There* (New York: Simon and Schuster, 1990).

(91) See Charles Berlitz and William L. Moore, *The Roswell Incident* (New York: Berkeley Books, 1988); Moore, "The Roswell Incident: New Evidence in the Search for a Crashed UFO," (Burbank, California: Fair Witness Project, 1982), Publication Number 1201; and Klass, *UFOs,* pp. 280-281. In 1994 Congressman Steven H. Schiff (R-NM) called for an official study of the Roswell incident. The GAO is conducting a separate investigation of the incident. The CIA is not involved in the investigation. See Klass, *UFOs,* pp. 279-281; John H. Wright, Information and Privacy Coordinator, letter to Derek Skreen, 20 September 1993; and OSWR analyst interview. See also the made-for-TV film, *Roswell,* which appeared on cable TV on 31 July 1994 and Peebles, *Watch the Skies,* pp. 245-251.

(92) See John Diamond, "Air Force Probes 1947 UFO Claim Findings Are Down to Earth," 9 September 1994,

Associated Press release; William J. Broad, "Wreckage of a `Spaceship': Of This Earth (and U.S.)," *The New York Times,* 18 September 1994, p. 1; and USAF Col. Richard L. Weaver and 1st Lt. James McAndrew, *The Roswell Report, Fact Versus Fiction in New Mexico Desert* (Washington, DC: GPO, 1995).

(93) See Good, *Above Top Secret;* Moore and S. T. Friedman, "Philip Klass and MJ-12: What are the Facts," (Burbank California: Fair-Witness Project, 1988), Publication Number 1290; Klass, "New Evidence of MJ-12 Hoax," *Skeptical Inquirer,* vol. 14 (Winter 1990); and Moore and Jaime H. Shandera, *The MJ-12 Documents: An Analytical Report* (Burbank, California: Fair-Witness Project, 1990), Publication Number 1500. Walter Bedell Smith supposedly replaced Forrestal on 1 August 1950 following Forrestal's death. All members listed were deceased when the MJ-12 "documents" surfaced in 1984. See Peebles, *Watch the Skies,* pp. 258-268.

Dr. Larry Bland, editor of *The George C. Marshall Papers,* discovered that one of the so-called Majestic-12 documents was a complete fraud. It contained the exact same language as a letter from Marshall to Presidential candidate Thomas Dewey regarding the "Magic" intercepts in 1944. The dates and names had been altered and "Magic" changed to "Majic." Moreover, it was a photocopy, not an original. No original MJ-12 documents have ever surfaced. Telephone conversation between the author and Bland, 29 August 1994.

Subject: Brookings Report, 1960

Cat: 0
Distribution: CE, SHG, NCP

On December 14, 1960, The Brookings Research Institute in Washington released a report prepared during 1960 for NASA entitled "Proposed Studies on the Implications of Peaceful Space Activities for Human Affairs", including a section entitled "Implications of a Discovery of Extraterrestrial Life". (Commonly referred to as "the Brookings Institute report".) The report discusses effects of meeting extraterrestrial life: "It is possible that if the intelligence of these creatures were sufficiently superior to ours, they would choose to have little if any contact with us. . . " (New York Times, Dec. 15, 1960) The original site for the 219-page report and the 50-page summary is listed below. For security reasons, if the site would go down, the NICAP site also hosts the full documents, also listed below. The article in the NICAP UFO Investigator that announced the release of the report in its Dec/Jan issue is produced below. Recently added is the New York Times article transcript,

New York Times article (transcript only)

SPACE-LIFE REPORT COULD BE SHOCK, UFOI, Vol. I, No. II (Dec 1960 - Jan 1961 issue)
The discovery of intelligent space beings could have a severe effect on the public, according to a research report released by the National Aeronautics and Space Administration. The report warned that America should prepare to meet the psychological impact of such a revelation.

The 190-page report was the result of a $96,000 one-year study conducted by the Brookings Institution for NASA's long-range study committee.

Public realization that intelligent beings live on other planets could bring about profound changes, or even the collapse of our civilization, the research report stated.

> "Societies sure of their own place have disintegrated when confronted by a superior society," said the NASA report. "Others have survived even though changed. Clearly, the better we can come to understand the factors involved in responding to such crises the better prepared we may be."

Although the research group did not expect any immediate contact with other planet beings, it said that the discovery of intelligent space races "could nevertheless happen at any time."

Even though the UFO problem was not indicated as a reason for the study, it undoubtedly was an important factor. Fear of public reaction to an admission of UFO reality was cited as the main reason for secrecy in the early years of the AF investigation. (Confirmed to NICAP's present director in 1952-3, when the AF was planning to release important UFO reports, also the famous Utah motion-pictures of a UFO formation.)

Radio communication probably would be the first proof of other intelligent life, says the NASA report. It adds: "Evidences of its existence might also be found in artifacts left on the moon or other planets."

This report gives weight to previous thinking by scholars who have suggested that the earth already may be under close scrutiny by advanced space races. In 1958, Prof. Harold D. Lasswell of the Yale Law School stated:

> "The implications of the UFOs may be that we are already viewed with suspicion by more advanced civilizations and that our attempts to gain a foothold elsewhere may be rebuffed as a threat to other systems of public order." (UFO Investigator, Dec. 1958.)

The NASA warning of a possible shock to the public, from the revelation of more advanced civilizations, support's NICAP's previous arguments against AF secrecy about UFOs. All available information about UFOs should be given to the public now, so that we will be prepared for any eventuality.

National Investigations Committee On Aerial Phenomena

THE NICAP SITE PRESENTS

The RAND Corporation published a paper titled

"UFOs: What to Do?,

Here is the actual RAND Document in pdf format

Fran Ridge:
Originally, the RAND Corporation, a high level research group that had nothing to do with the business-machine firms and one of the most unpublicized yet highly competent contractors to the Air Force, stated in a letter dated June 25, 1969 that they were unable to identify any RAND publication on UFOs "available for external distribution."

Then, in another letter dated August 8th, 1969 RAND stated, "RAND has done very little on the subject of UFOs: therefore, no publications have been written on the subject."

I also have a copy of a letter dated October ? 1969 from the Department of the Air Force, to Mr. William Laub, of Northfield, Illinois. The letter was written by Lt. Col. James H. Aikman, Chief, Civil Branch, Community Relations Division, Office of Information. It states, "The Rand Corporation has never made any reports on unidentified flying objects (UFOs) for the United States Air Force. If any reports were made by this corporation they were made on their own."

RAND finally had to admit the existence of this paper and later stated that it was originally produced as an internal document and not prepared for or delivered to any of RAND's clients. RAND decided to make this paper available to the public if they asked for it.

This document, which crops up for discussion every once in a while, is placed here, with commentary at the end of this page, for the record. In regard to the commentary I have made a request to CUFOS (Nov. 2006) to locate a copy of a letter from George Kocher to Dr. J. Allen Hynek to document the contents mentioned by Jan Aldrich and confirm the date of same.

Below is the text version of the Rand Document

INTRODUCTION

Common sense is the quintessence of the experiences and prejudices of its time. It is a most unreliable advisor when one is confronted with a perfectly new situation. **Gustav Naan**

UFOs -- unidentified flying objects, or flying saucers as they are often called -- have been on the mind of the public for at least the last 22 years. For a number of reasons, we know little more about them now than we did at the outset. There exists a great amount of misinformation about the phenomenon not only in the minds of the public, but among educated groups such as scientists as well. It is the purpose of this series of essays to describe various aspects of the phenomenon, make clear my prejudices and the reasons for them, and to suggest a means of proceeding on this interesting and potentially very significant problem.

But first, a few words about the term UFO. J. A. Hynek, an astronomer having continuous involvement with UFO study for over 20 years, defines UFOs as "any reported aerial or surface visual sighting or radar return which remains unexplained by conventional means even after examination by competent persons. This definition ... specifies neither flying nor objects." (1) I would agree, but would prefer to replace "or radar return" with "or instrumental observation" and "even after examination by competent persons" to "even after competent examination by qualified persons." This, then, is the definition I have adopted in the five essays that follow.

PART 1: UFOs -- HISTORICAL ASPECTS

Those familiar with the UFO literature are aware that reports of sightings did not begin with Arnold's sighting in 1947, but that phenomenology much the same as is reported today can be found in documents going back to the earliest times. Vallee (2) gives a sampling of this; B.L.P. Trench (3) has made a more thorough study and reports on the research of others able to study the original documents.

What was reported? Luminous discs, shields, globes and elongated objects in the sky, sometimes alone, sometimes in large numbers. Occasional descriptions of interactions with the observers are also mentioned, including landings, and seeing and communicating with occupants. The latter events especially were almost always interpreted in a religious context. A recent example is the repeated appearance of a typical UFO phenomenology at Fatima, Portugal on six successive months in 1917. The October 13 phenomenon was the best reported and was witnessed by a crowd of about 70,000 persons, including a number of scientists, reporters, atheists, and agnostics, as wel as faithful Catholics. One of the scientifically curious was Dr. A Garrett of the University of Coimbra. Rain, which had been falling that day, ceased and the crowd looked up to see the "sun" now visible through the heavy clouds. Professor Garrett wrote, "...I turned toward this (sun) which was attracting all eyes and I could see it like a disk with a clear cut edge, with a vivid rim,

luminous and shining, but without hurting one. The comparison I have heard at Fatima with a disk of dull silver, does

-3-

not seem to me exact. It was a clearer, more vivid, richer color and with shifting tints like the luster of a pearl. It was not at all like the moon on a clear transparent night, for one saw and felt it like a living star. Nor was it spherical like the moon, nor did it have the same quality of lighter and less light. It looked like a burnished wheel cut out of mother-of-pearl. Nor could it be confused with the sun seen through a fog -- there was no fog... This disc spun dizzily round. It was not the twinkling of a star: it whirled round upon itself with mad rapidity... The sun, preserving the celerity of its rotation, detached itself from the firmament and advanced, blood-red, towards the earth, threatening to crush us with the weight of its vast and fiery mass. These moments made a terrifying impression." (4) The relationship of the old phenomenology to religion are discussed by Thomas. (5)

An example of earlier celestial displays of interest is illustrated in Figs 1 and 2. These are broadsheets from Nuremberg (1561) and Basel (1566), respectively. The psychologist, C. G. Jung; provides an analysis of the contents of the woodcuts in his interesting book. (6) Reference 7 has a very interesting reproduction of a fourteenth century fresco in a Yugoslavian church.

The modern period of the phenomenon began with a widely publicized sighting made by Kenneth Arnold in Washington state in 1947. A study by Bloecher of North American reports over the four week period bracketing the Arnold sighting lists 853 events, including 38 sightings made before Arnold's heavily publicized Sighting. (8)

Because the early reports seemed to suggest airborne craft of unusual appearance and kinematics, the problem came to rest with the newly organized U.S. Air Force. Initial fears were that the country was being over flown by advanced foreign aircraft, possibly on intelligence missions. The latter was suggested by the large number of sightings from the White Sands, New Mexico area and from the vicinity of the Hanford, Washington atomic plant.

Serious inquiry proceeded for a few years without any positive results. A number of supposedly knowledgeable people spoke out pointing out the sporadic nature of the sightings, and that since the reported

-4-

Both Broadsheets from the Wickiana Collection, Zurich Central Library

-5-

kinematics were inconsistent with current physical theory, the UFOs were not likely to be from a foreign power. Further, they argued, no other planets in our solar system were believed to support life -- certainly not intelligent life -- and since even the nearest star was over four light years away, the hypothesis of extraterrestrial origin was simply unacceptable from a scientific point of view. (9)

The Air Force investigative effort worked as follows: (10) Whenever a sighting was made, a report was to be made out and turned in to the Air Force at base level. The report was forwarded to Wright-Patterson AFB, Ohio for study. If the report was interesting enough, follow up inquiry was made. By 1952 the number of reports coming in was so large that the CIA was concerned that an actual attack on the country might not be immediately recognized. A panel of scientists was then convened in January 1953 to study the available evidence and see what conclusion could be reached about UFOs. After seven days of hearing evidence and discussing the matter it was concluded that there was only circumstantial evidence of the extraterrestrial hypothesis. The panel recommended a broadened study effort with full disclosure of investigations. In order to unplug the military intelligence channels, however, the CIA recommended that,

since the UFOs apparently posed no threat, the Air Force should debunk UFO reports and try generally to discourage public interest in them, in the hope that they would go away. (11)

It was the CIA's recommendation, apparently, that was made policy, for the investigative procedures used since 1953 have been vestigial and the handling of the subject by the authorities tended to make witnesses look ridiculous. In spite of the unfavorable publicity accorded witnesses, reports persisted, and no doubt in response to official behavior several civilian study groups were formed to receive reports and investigate sightings. The most successful of these groups is the National Investigation Committee on Aerial Phenomena (NICAP). NICAP's membership is well dispersed geographically and acts to learn as much as possible from sightings. The large number of scientific and technical personnel in the NICAP membership aids the quality of their evaluations. A summary of characteristics of the UFO phenomenology published by NICAP

-6-

in 1964 (12) contains 575 reports that were extensively checked by NICAP for accuracy.

A series of sightings in 1965 and 1966 received considerable public attention arid after the poor public reception given the official explanations, the Air Force felt compelled to contract for a 15 month (later stretched to l8 months) scientific study to be performed at the University of Colorado under the leadership of E. U. Condon, a highly respected physicist. The Condon Committee is due to complete investigations at the end of June 1968; its report will be reviewed by the National Academy of Sciences (presumably to validate that the study was indeed the objective pearl of the scientific method that was desired), and is expected to be made public in October 1968. Unfortunately, the dismissal of two members of the Committee in February 1968 resulted in publicity suggesting that the study was not, in fact, objective. It remains, therefore, to see the final report to determine the worth of the study.

In the meantime, the respectability accorded UFOs by the $500,000 study contract permitted a considerable amount of scientific interest to surface. Astronomer Hynek has made a number of public statements on the basis of his long involvement as a consultant to the Air Force; atmospheric physicist James F. McDonald has turned his attention full time to the subject, and a number of scientific and technical journals have printed some dialogue - notably Science, the AIAA Journal, Bulletin of the Atomic Scientists and the Journal of the Astronautical Sciences. It is also noteworthy that the University of Toronto has recently formed a UFO study group.

Even the Soviets, who previously refused even to discuss the subject now admit to having a study group with good qualifications. The USSR Academy of Sciences still holds to the orthodox scientific view that UFOs are a nonproblem, however, using the same arguments we heard so long. These arguments are just as invalid in the USSR as in the USA.

It therefore appears that the subject is slowly and finally being regarded as a fit subject of scientific inquiry. It is hoped that enough scientists will acquaint themselves with the subject so that progress can finally be made.

-7-

(Reference 13 is a good account of how the UFO phenomenon was treated in the U.S. and is recommended to those wondering how science came to consciously ignore the subject.)

-8-

PART 2: UFOs -- ASTRONOMICAL ASPECTS

The astonishing thing would be if they did not exist.
Jean Cocteau

We saw in Part 1 that the historical aspects suggest an extraterrestrial explanation to UFOs. While it has not been established that the contemporary phenomena are extensions of the historical, there does seem to be a continuity in the descriptions of the phenomena described. We shall therefore look at contemporary astronomical knowledge and theories and ascertain the likelihood of the existence of other highly developed life forms.

To begin with, the observable universe -- that is, the distance to which we can observe luminous objects -- is several billion light years in radius (a light year is the distance light travels in a year at a rate of 186,300 miles per second. The sun is 8 light minutes from the earth. The next-nearest star is 4.2 light years away). Within this vast volume we find hundreds of millions of galaxies. Our own (Milky Way) galaxy is similar to many of those we see at great distances. It is a lens-shaped assemblage of some 100 billion stars having a diameter of about 100,000 light years. The sun is but one of its component stars and lies about 30,000 light years from the center, close to the plane of symmetry.

Now let us just consider the stars in our own galaxy -- specifically excluding those in neighboring or distant galaxies. We would like to estimate the number of stars having planets roughly similar to the Earth. From the statistics of stars within 15 light years of the sun we find that only about one-third are single, the rest binary or multiple. Since planetary orbits are often unstable in multiple systems (depending on the details of the configuration) we will say that only 30 billion stars in our galaxy now have a dynamical environment that permits planets to exist around them. Will these stars have planets? We cannot state with assurance that they will; however, current knowledge supports the theory that planetary formation is a natural adjunct to formation of the star itself from the interstellar gas cloud.

-9-

We would therefore expect about 30 billion stars to have one or more planets. Now, we can reject certain classes of stars as candidates or habitable planets, because their lifetimes are too short (these are stars of high mass). Others can be rejected because of variability in light output, a characteristic that would make evolutionary development of life much more difficult. In fact if we select only those stars similar to the sun (whose peak of radiation energy coincides with a region of terrestrial atmospheric transparency) we have only a few percent of the total -- about one in 30. Therefore, we would expect about 1000 million suitable solar type stars exist. Of these, it is estimated by various astronomers that 200-600 million have planets at about the right distance and have been around long enough that life forms as developed as our own could exist. Implicit in further discussion are the assumptions that:

1. Planets and/or life evolves to a mutual compatibility;
2. The life force, whether spontaneous or otherwise, is such that whenever the environment is favorable, life will exist;
3. Our own history of past evolution and development is neither slow nor fast, but average and typical for life forms. (Ours is the only example available and no one has yet demonstrated that the "average" galactic life form should be any different.)

Now let us turn momentarily to time scales. The sun and earth are on the order of 5 billion years old. We might define modern man as being about 5000 years old (Stonehenge is 4000 years old) -- just one millionth of the earth's age. The age of science is certainly not more than 500 years, so our scientific and technical development has thus far occupied only one ten-millionth of the earth's life span. We expect the sun will burn another 5 billion years before significant changes in its brightness occur. Now the age of the galaxy is between 5 and 10 billion years; therefore among the 200-600 million stars we would expect to have acceptable planets, some would be older than the sun, some younger (for star formation is still continuing, even though at a lesser rate than in the galaxy's early history) and some the same age. It should be clear from assumption (3) and the example of our own

-10-

development, that among the populated planets those younger than the sun would be peopled by beings very much behind us technologically, while those on older planets would be extraordinarily advanced (remember our progress of 500 years and note that some planets could be as much as a few billion years older). Indeed, we would be surprised to find someone else at just our stage of technological development. For the purposes of this paper, we can ignore both the multitude younger than ourselves and those at our point of development. Even so, we are left with the possibility of 100,000,000 planets in the galaxy having life forms very much advanced from us. (This number would be reduced significantly if life forms destroyed themselves soon after reaching our age of development. This is a philosophical point on which I am optimistic -- I believe the majority of races will learn to survive.) If these stars are uniformly distributed in the galactic disk, the average separation will be about 10 light years.

The usual scientist's reaction at this point is, well, even if the assumptions are correct and this number of advanced civilizations does exist, contact is still impossible because of the speed of light limitation of the theory of relativity. An excellent example of this kind of reasoning can be found in Ref. 14. My reply is that such a statement would appear to be shortsighted. For the moment, let us ignore the possibilities of overcoming the long time of travel by suspended animation and the like. Recall that our own physical theory has been developed in only 500 years. What can we expect in the next 500? Or 1000 or million or even billion years? I suggest that _if_ a way to circumvent the speed of light restriction is possible, it has already been found by someone in our galaxy. (I haven't the faintest idea how this might be done and I fully agree that our own experimental data appear to accurately confirm the existence of this limitation.) If it has been discovered by one, we certainly would expect it to be used; if no other planet's inhabitants independently discovered the means, it makes little difference for such a thing could be taught by the discoverer. Thus we may conclude that it is very likely that at least one, and probably many of the 100 million advanced planetary populations is capable of interstellar travel.

-11-

The next question is, of course, have any of them been here? That question cannot yet be answered definitively. Without knowing what kind of phenomenology extraterrestrial visitors might exhibit, I will fall back on my scientific, mechanistic attitudes and say it makes sense to look for some kind of vehicle or spaceship. It appears that the class of phenomenology called UFO reports may contain, as a subset, actual observations of such craft. We shall now turn to the reports to see when and where things are seen and by whom and what phenomenology, if any) is revealed by the reports.

(Further information about the astronomical and biological possibilities are in Ref. 15, whose principal defects are (1) the authors uninformed rejection of UFO phenomenology as being relevant to the subject under discussion, and (2) their meek acceptance of the speed-of-light restriction as a universal truth. References 16 and 17 provide more detailed and more technical discussions of some aspects of the problem.)

-12-

PART 3: UFOs -- THE CHARACTER OF REPORTS

Any collection of reports of unknown aerial sightings by the public will include a large percent of noise - sightings of something explainable. The reports are made because the appearance falls outside the range of the observer's experience, and the observer believes it is sufficiently anomalous to warrant the attention of authorities. Thus, any large collection of reports will include descriptions of aircraft, balloons) spacecraft, astronomical objects, atmospheric effects and the like. Often the practiced and perceptive analyst can recognize the stimulus, particularly if he has access to records of aircraft, balloon, and satellite movements, meteorological data and astronomical phenomenology. Recognition of stimulus is aided by a high quality report which is as quantitative as possible and which shows the observer to be able to differentiate between observation and interpretation. Of course a number of reports will be so lacking in details that no conclusion can be reached about what was seen. These are of little use; they may, however, serve as corroborating

evidence to another, higher quality, report and should not, therefore be rejected. The really interesting class of reports is that reporting phenomenology which is clearly extraordinary. The observer's qualifications may be such that the report is not only highly credible but is articulate and quantitative as well. It is this subclass of reports, variously estimated at 5 to 20 percent of the total, that offer hope of our learning what is going on.

Hynek considers two parameters of reports) credibility and strangeness, and suggests that the investigator really needs only to be concerned with reports having high strangeness and high credibility. The physical scientist is in a position to evaluate strangeness, the social scientist should be able to provide some measure of credibility. Hynek also comments on a number of beliefs about UFOs and reports stating, (18) among other things, that most reports are made by people who previously never gave much thought to UFOs; that reports are not always vague; and that well educated, well trained, reliable, stable people also contribute reports. These conclusions have been reached by most people who have taken the trouble to collect and investigate reports first hand.

-13-

To illustrate the character of reports, I will quote several narratives from the literature. (Narratives, of course, are just the beginning of any report. Quantitative information, usually not given in the narrative must be obtained by careful interview of the witness.) The first is taken from a collection of 160 reports by Olsen. (19) It was originally made to NICAP.

Date: 24 April 1962
Place: Springfield (Delaware County), Pennsylvania

First witness, J. A. Gasslein, Jr. (Lt. Colonel, USAR Ret.) reports: "Time: Approximately 1945 hours, weather: clear, cloudless, medium blue sky, visibility good.

"My wife was driving her mother home following the latter's visit to our home. They had driven around the block to higher ground when my wife's mother looked out the car window and saw a large object. It was moving slowly and silently in an east-to-west direction at not over 50 ft. above street level. (Determined by the proximity to and relationship to the size of the Cape-Cod-type bungalows over which the object was passing.) My wife then plainly saw the object herself.

"Anxious to have me see the object, my wife quickly drove the car back to our house and attracted my attention. I had been working in the basement. I ran out of the house and up the street for a view. by the time I saw it, the object appeared to be about a quarter to a half-mile away, moving in a westerly direction. I saw it as an object smaller at the top than at the base, seemingly suspended in the air at an angle of about 45 degrees from my position, and giving off colored lights. I know that the object was not any kind of conventional aircraft of balloon.

"Having had the advantage of a closer viewing than I, my wife describes the object as follows..

" 'The UFO appeared to be about the size of one of the Cape Cod houses over which it passed, which would make it approximately 30 ft. in diameter and about the same dimension in height. It was circular, surmounted by a dome giving off flashes of green light. The center section rotated a series of square shaped "windows", each giving off a brilliant white light. The base section was somewhat saucer-shaped,

-14-

curved upward. Shafts of white light were directed downward from the base.' Unfortunately, my wife cannot recall if the exterior was metallic in appearance. In any event, the object had a well-defined outline. Again, it moved silently. There was no evidence of occupants of the UFO.

"Approximately 20 to 25 minutes following the first sighting described above, the following sighting

occurred: "Returning from taking her mother home, my wife drove the car into our driveway alongside the house, headed westward. In the rear of our home was a wooded park area. My wife walked down the driveway to enter the house. Coming up the driveway was a neighbor friend, a young lady 20 years of age. In a tone of astonishment, she called my wife's attention to the park area, from which was emerging an object of the same description as outlined above moving easterly at low level -- not over 50 ft. above ground level, as judged by the trees in the area -- the UFO proceeded relatively slowly and without sound. It was approaching the rear of our home and adjacent properties.

"Again, my wife called me from the basement. By the time I got outside, the object had made a 90 degree turn northward and was proceeding parallel to the backs of the houses in the same line as ours. It was perhaps 150 - 200 yards distant. My observation of the characteristics of the UFO tallied with my wife's and the young lady's. Each of them independently made a pencil sketch within a few minutes after the sighting, and the sketches were substantially alike. "All told, there were at least 15 persons in the vicinity who acknowledged seeing the object at about the same time as the sightings made by my wife and myself."

Another witness, P. T. Scattergood, reports: "Around 8 (p.m.) I stepped out the front door, facing south and saw a brilliantly lighted object low in the southern sky. At first I took it to be a jet taking off from Philadelphia Airport, which is in that general direction. But I could hear no engine noise and it was traveling too slowly to be a plane. Also it did not have the usual blinking lights.

"It appeared to have a row of yellowish lights (which I took for the windows of the "jet") with a clear green light at the top. As I

watched, the row of lights appeared to be obscured as though a large paddle-wheel were revolving and blotting them out, beginning with the rear lights and proceeding forward. Since the object was moving west, I saw the right hand side of it. The periodic appearance and disappearance of the lights was perfectly regular. The top green light was constantly visible. I stood on the pavement and watched the object sail leisurely to the west until it disappeared behind some trees. The observation probably lasted from 5 to 10 minutes."

This report has the desirable features of the UFO being seen by a number of people (about 15) of which two actually made reports. (Hynek estimates the number of sightings to be about 10 times the number of reports turned in) . Other desirable aspects of this sighting are that it was made during daylight; that it was near enough that some details of its configuration were observable; and, it was visible long enough to allow the observers to consider "explanations" as they watched it.

The second example is reported by James F. McDonald in T. Bloecher's book on an intense period of UFO activity in 1947. The report was made 20 years after the sighting to Prof. McDonald for the reasons given at the end of the quotation.

"Mrs. Olavick was in her kitchen at 2101 East Hawthorne Street, Tucson, while Mrs. Down was out in the back-year patio. Suddenly Mrs. Down called her out excitedly, and both proceeded to observe what had caught Mrs. Down's eye. The time was just after the noon hour; Tucson's skies were completely cloudless. Somewhat north of their zenith lay an unusual, isolated, "steamy-fleecy" cloud at an altitude which Mrs. Olavick found difficult to estimate, though she recalled that it seemed lower than average for that time of year (thus, perhaps at or below 10,000 feet, say.). No other cloud was to be seen in the sky. In and out of the cloud moved a number of dull-white disc-like objects that rose and fell in an erratic manner, occasionally disappearing into or above the unnatural cloud. She said that these objects were round in planform but were not spherical, for they frequently tipped a bit, exposing a flattened-sphere form. She estimates that they watched these objects cavorting near the cloud for perhaps five or six minutes before the entire group suddenly disappeared within the cloud or perhaps above it.

"After a minute or so, as she now recalls it, a new object, perhaps three of four times as large as the little objects, came out of the cloud on its east side. After it emerged, the small objects began to emerge also, taking up a V-formation pattern behind it. The V comprised a line of four-abreast just to the rear of the large object, then a line of three-abreast behind that, and finally two-abreast in the rear. Thus the point of the V was to the rear (in the sense of the emergent and subsequent motion). This formation permitted the first accurate count of the small objects, nine in all. No sooner had the last pair emerged than all ten objects shot off to the northeast, climbing out of sight in a time that she thought was probably two to three seconds. She does not recall what happened to the cloud after the ten objects departed.

"I (McDonald) have spoken with Mrs. Olavick several additional times, following her first call. Her account was presented in an unembellished manner, and her descriptions were carefully framed, specifying just which parts had become less distinct in her memory. But the basic vividness of her memory of this observation she stressed repeatedly. I had to explain that it was by no means clear that the objects she saw were identical with those reported by Kenneth Arnold two months later. When I queried her as to why she had not reported them, she pointed out that she and Mrs. Down were entirely convinced that they had been fortunate enough to witness some new American military vehicles about which the general public had not yet been informed. Later she heard of the "flying saucers," and she and Mrs. Down, when they rejoined their husbands in mid-summer in Iowa, told them about their own observation. The husbands, she recalled, made such a joke of it that they ceased mentioning it.

Again we have a daytime sighting of several minutes duration, with two witnesses. As is often the case when.the phenomenon appears mechanical, it was interpreted as some secret government development. Ridicule of the sighting by family members and friends (if not by authorities) is frequently mentioned as a reason for delayed reporting of sightings.

-17-

A third report is taken from a paper Prof. McDonald presented at the 12 March 1968 Canadian Aeronautics and Space Institute Astronautics Symposium, Montreal.

"At about 5:15 am., PDT, on the morning of July 4, 1967, at least five witnesses (and reportedly others not yet locatable) saw an object of unconventional nature moving over Highway 5 on the edge of Corning, California. Hearing of the event from NICAP, I began searching for the witnesses and eventually telephone-interviewed four. Press accounts from the Corning Daily Observer and Oakland Tribune afforded further corroboration.

"Jay Munger, operator of an all-night bowling alley, was drinking coffee with two police officers, James Overton of the Corning force and Frank Rakes of the Orland force, when Munger suddenly spotted the object out the front windows of his bowling alley. In a moment all three were outside observing what they each described as a dark gray oval or disc-shaped object with a bright light shining upwards on its top and a dimmer light shining downward from the underside. A dark gray or black band encircled the mid-section of the object. When first sighted, it lay almost due west, at a distance that they estimated at a quarter of a mile (later substantiated by independent witnesses viewing it at right angles to the line of sight of the trio at the bowling alley). It was barely moving, and seemed to be only a few hundred feet above terrain. The dawn light illuminated the object, but not so brightly as to obscure the two lights on top and bottom, they stated.

"Munger, thinking to get an independent observation from a different part of Corning, returned almost immediately to telephone his wife; but she never saw it for reasons of tree-obscuration. At my request, Munger re-enacted the telephoning process to form a rough estimate of elapsed time. He obtained a time of 1-1.5 minutes. This time is of interest because, when he completed the call and rejoined Overton and Rakes, the object had still moved only a short distance south on Highway 5 (about a quarter of a mile: perhaps), but then quickly accelerated and passed off to the south, going out of their sight in only about 10 seconds, far to their south.

Paul Heideman, of Fremont, California, was driving south on Highway 5 at the time of the above sighting, along with a friend, Robert King. I located Heideman and obtained from him an account of his observation made from a point on the highway north of Corning. He saw the light from the object, and had veered east (a turn not seen from the more restricted viewing point of the bowling-alley parking lot). Heideman said that, when first seen, it lay almost straight down Highway 5, serving to check the estimate of the other observers that the object lay only a few city blocks to their west.

The weather was clear, no haze, no wind, according to the witnesses. Munger's concise comment was "I've never seen anything like it before." He estimated its "diameter" at perhaps 50-100 ft, and its vertical thickness as perhaps 15-20 ft, with some kind of edge (band) perhaps 5-10 ft thick. No sound was ever heard. Overton stated to me that he had no idea what it was, but that "there was no doubt it was a craft of some sort."

The next example is from a report I personally investigated. It occurred in the area where I was reared; the observers are known to my family; I am familiar with the natural phenomenology of the area.

Date: 10 October 1966
Place: Near Newton, Illinois

First witnesses: Mrs. A (she prefers not to be publicly identified because of the reaction of friends and neighbors). Time: 5:20 p.m.

"Mrs. A was in her kitchen preparing supper; five of her children were playing outdoors. The children shouted to her to "come out and see the silent plane". She writes "I glanced out the south window and there it was coming into sight just south of our 72 foot silo moving very slowly from east to west. It was about 35 feet high. My first thought was that it was a plane making an emergency landing, but when I saw it in full view, I knew it was no plane, not like anything I have ever seen. I hurried outside to join the children in the yard. It

continued to move in a straight line to the west. We could see it clearly as it drifted over a 50 by 100 foot machine shed being built at the time [the workers were, however, in the fields this day]. It appeared to be larger than our car, and was more oval. There was a bluish glow around the ends, top, and bottom of it. It (the glow) wasn't bright, since it was daylight yet, but more like a low cloud, haze, or fog; or a mixture of bluish-grey tiny bubbles floating along around it. The object was seen clearly. It was blue in color and appeared to be made of metal. You could see [longitudinal] seam lines. There was one black window. I thought they (assuming someone was in it) could see out but we could not see them. I kept looking for someone to peep out and wave, but don't recall seeing or feeling anything at the time. There was a brownish-gold design on the lower back half. A raised part was on the top near the back which was noticed by all the children. It moved very quietly, making no sound at all except for a whirling or vibrating sound for 1 or 2 seconds as it drifted on toward the west... We followed it down the yard and lane, continuing to watch it as it was 300 feet, then 200 feet from the north and south gravel road and the REA electric line which is on the west side of the road. We were talking together, all very excited about what it was, where it came from, if there were people in it, and if it would rise to clear the electric line. It did; it rose so quickly and was out of sight in just a few seconds. Our eyes could not follow it fast enough. This was certainly a fantastic thing."

The questionnaire, a lengthy correspondence, an interview in June 1967 and other checking produced the following details:

Meteorology: Clear, warm, dry weather, cloudless.
Astronomical: Moonset 3:51 p.m. EST

UFO: Prolate spheroidial shape.

-20-

The surface appeared to be non-spectacular, like dull aluminum or metal, and blue, the color probably deriving from the self-luminous halo. Longitudinal seams were apparent, but no rivets or such were seen. The black rectangle was assumed to be a window and appeared to be recessed. It was not shiny, but "like the dark of night." The surrounding glow was partly opaque, yet self luminous. It was darker than the sky and extended about 1/4 the object's length in all directions. The halo was particularly opaque at the ends: of the object, obscuring the underlying parts. The design at the lower rear looked like a pattern of crosses and dots.

Mrs. A says the glow obscured the design and in any case her attention was fixed on the "window". The only sound heard occurred when the UFO was nearest the unfinished shed, being constructed of a wooden framework covered with ferrous sheets. It is possible that some sheets were caused to vibrate. No electromagnetic effects were noted (TV was off) and no electrostatic or other effects were noted by Mrs. A or her children. As the UFO disappeared, Mrs. A was just looking along the road for a car; two of the children said the UFO pitched nose-up and as it went up a light or flame of orange color was seen at the rear.

Enough angular data was provided from building and landmark placement and sizes that it is possible to estimate the size of the metallic portion of the UFO at 16 to 20 feet in length, seen at a distance of 150 to 300 feet. Its linear speed was about 4 to 8 miles per hour, based on the above distances and timings obtained by re-enactment. It was visible for 4 minutes. Angular size was 2 3/4" at arms length. In an effort to quantify the colors somewhat, a Nickerson color fan was used by the witnesses to select the colors most nearly like those on the UFO. The color selections were made independently in direct sunlight with the color fan held in front of a white field. The colors given were

-21-

```
Metallic surface
        Mrs. A.         7.5 PB - 7
        Child 1         2.5 PB - 8/5
        Child 2         7.5 B  - 3/5
Glow (The color of "grayness" was not uniform)
        Mrs. A.         5   PB - 8/5
                        2.5 PB - 8/5

        Child 2         5   YR - 7/11
```

Second event: Same day, 6:30 p.m., sky is now dark. Location is in town of Newton, Illinois, about seven miles north west of first event.

Mrs. B was walking down the steps of a friend's house toward her car. "As I started down the steps my eyes were drawn by something in the south eastern sky. I stopped a moment and saw very clearly a luminous bluish object moving quite rapidly from east to west. It seemed to be rather low in the sky, but at night it is difficult to judge distance either as to how high it was or how far away it was. It did appear larger than a full moon, but instead of being round it had a definite oval shape. I would say an elongated oval. There was no sound that I could detect, and while it appeared to be blue and purple, there was also a whitish glow in it. The outline of the object was very distinct. I watched it until it disappeared behind some trees and a house a little less than a block from me.

Further correspondence and discussion brought forth the following information: The major axis of the oval was horizontal; its path was not perfectly horizontal) but somewhat undulatory. Its color was brightest and whitest at the center, becoming more blue and darker toward the edges. Mrs. B. estimated the colors as

shown below (Since the interview was conducted in the evening) the color fan was illuminated by an incandescent lamp).

-22-

In itself, this last report, which describes a sighting of 15 to 20 seconds duration, contains insufficient information to come to any conclusion. However, when put alongside the earlier report there is the possibility of a relationship -- could these be reports of the same thing seen under differing conditions of illumination? We'll never know positively but the suggestion is quite strong.

As far as Mrs. A's sighting is concerned, we have obtained enough data from follow-up inquiry and on-site investigation to rule out known airborne craft, meteorological, and astronomical phenomenon. Yet the observations are sufficiently detailed to give us adequate confidence that some sort of machine was present, behaving in a very extraordinary way. Some parts of the object are similar to other reports (the effervescent glow, the orange color on acceleration, the very black "window" (which sounds like a block-body absorber)). Other parts are unusual -- the UFO's prolate spheroidal shape and the pattern (although seeing the pattern would require the observer to be quite close). The original correspondence and data sheets on Mrs. A's sighting run to over 40 pages. In correspondence and interviews over a period of 8 months no substantial inconsistencies could be found. The geometric data, particularly, are so intricately related that it is most unlikely that the witness could have fabricated a story so well. In addition, acquaintances made it clear that Mrs. A. is not prone to story telling and that "she is too busy to dream up such a tale". Mr. A, who returned from the fields that evening found the household still considerably agitated four hours after the event. He said he had no idea what it was his wife and children saw, but he obviously treated the sighting seriously for he went to considerable trouble to comply with a request to measure the sizes and locations of each building and tree on the farm.

It is this kind of sighting - the kind which is clearly inexplicable in contemporary terms, which causes me (and other interested persons) to take the whole subject so seriously. Hynek suggests that it is just this kind of sighting that often goes unreported, because the witness -- especially if his education or training are appropriate -- knows that what he saw was unambiguously extraordinary. And machine-like. A number of such reports were belatedly made after the University of

-23-

Colorado study effort got underway. Apparently the witnesses waited for the respectability the UOC study brought to the subject. It is hoped that the scientific and intellectual climate will change to the point where witnesses, particularly those having the best qualifications, can feel free to report sightings and know that they are being taken seriously.

Not all reports are visual reports only. An example of a photographic observation studied in detail is given in reference 20. Here, a 16mn movie of two objects sighted in the daytime provided the analyst enough information to conclude that no known phenomena could have caused the images. This report is, hopefully, the first in a series of instrumented sightings carefully and adequately studied.

-24-

PART 4: UFO'S - PHENOMENONOLOGICAL ASPECTS

Since I have made a first hand study of only a dozen sightings, the phenomenology described in this section will necessarily be based on descriptions of reports collected by others, particularly NICAP, APRO, UFOIRC, and Vallee. There is, unfortunately, no central file of reports accessible to the interested scientist, although large numbers of reports are in the hands of the organizations mentioned above. (The extensive Air Force files are of very limited use, from what I can tell, because of the extremely inconsistent quality of investigation.) In an unfortunate number of cases the report consists of little more than a narrative. My experience with the Newton sightings suggests that quantitative information is available if the investigator

takes the trouble to personally make an on-site study. True, it may not be the quality of an instrumented sighting, but enough quantitative data are available to permit meaningful study of sighting reports.

NICAP's document "The UFO Evidence" contains a summary of patterns in appearance and behavior as determined from cases they had studied through 1963. Regarding appearance, the most common type is a disc shape, followed by spherical, oval/elliptical, cylindrical, and triangular. The breakdown of NICAP's 575 cases goes as follows

Disc	**26 %**	**149**	**cases**
Round	**17 %**	**96**	**cases**
Oval/elliptical	**13 %**	**77**	**cases**
Cylindrical	**8.3 %**	**48**	**cases**
Triangular	**2 %**	**11**	**cases**
Other (Radar, light source, not stated)	**33.7%**	**194**	**cases**

Obviously, there may be some mis-classification within the first three groups because of projective effects. Discs may be coin-shaped or lens shaped (double convex). The domed disk is plano-convex, (sometimes double convex) with a smaller radius bulge atop the convex side. The saturn disk is a sphere or oblate spheroid with a thin ring projecting from the equator. Similar objects are

seen without the equatorial ring also. Another subset are the hemispheric variety, sometimes with a small protrusion at the apex and usually seen with the flat side down. All the above mentioned objects are generically oblate with the axis of symmetry usually seen oriented vertically. Another group are prolate, having the major axis horizontal, usually. This includes the elliptical (football) variety, the triangular or tear drop variety, and the cylindrical or cigar shaped species.

Reported colors depend strongly on the luminous environment. NICAP finds that of the 253 cases of daytime observations where color is stated, the results are

Silver or metallic	**34.8 %**	**88 cases**
White	**32.0 %**	**81 cases**
Specular	**13.4 %**	**34 cases**
Gray	**7.5 %**	**19 cases**
Black	**12.3 %**	**31 cases**

It should be noted that a few reports exist suggesting that the brightness of the object first thought by the observer to be reflected sunlight, was in fact self luminosity, as ascertained by the geometry, presence of clouds and the like.

In the dark-sky observations, the outline or shape of the UFO is often not seen. What is seen is a light or series of lights, sometimes extremely bright. Luminous rays are also reported, going up sometimes (particularly from domed discs) downward (from hemispheric types principally, also from discs) and from one UFO to another (spherical types). The luminous column is usually not divergent. Excluding these interesting rays, the reported colors of UFOs seen at night are, for 162 cases

Red	**38.3 %**	**62**	**cases**
Orange	**15.4 %**	**25**	**cases**
Yellow	**17.3 %**	**28**	**cases**
Green	**13.0 %**	**21**	**cases**
Blue	**16.0 %**	**26**	**cases**
Purple	**0**	**0**	

Brightness and color changes are also noted, and while the sample is small (82 cases) NICAP found the following: Of the 25 cases showing a change in brightness, 23 of the changes occurred at the moment of a velocity change (a change of either magnitude or direction). Concerning the change of color, 23 cases

showed a color change related to acceleration. While the supporting data are not conclusive, it appears that the spectral shift is to the red upon acceleration.

It should also be noted that UFOs reported at night have only a star-like appearance unless very close. Distant UFO's sometimes turn off and on. When closer to the observer, reports often indicate a number of lights, located at the top and around the rim usually. Sometimes the lights flash on and off or change color rhythmically. Several cases have been reported of the UFO flashing its lights in response to the witness flashing hand or vehicular lights. In other cases the lights winked off with the approach of another car or an aircraft, only to turn on again when the vehicle had passed.

While practically any luminous behavior could be produced by someone with sufficient time and money, kinematic behavior at odds with experience or, preferably, at odds with Newtonian behavior are suggestive of non-terrestrial origin.

A common kind of motion is called oscillation by NICAP and is subdivided into "wobble on axis" (frequently described also as fluttering, flipping, and tipping); pendulum motion on slow ascent, hovering and decent (also called "falling leaf motion"); and occasionally a side-to-side oscillation observed as the UFO proceeds horizontally. These motions are most often performed by discs, although examples of similar behavior by other forms also exist.

The last class, that of violent and erratic maneuvers, most clearly lacks an explanation from current physical theory. Using terms like bobbing, erratic, jerky, zigzag, dark, and shot away, witnesses describe motions involving high angular accelerations and velocities. A number of radar observations appear to substantiate this anomalous behavior. Among the 40 cases showing such characteristics, NICAP finds that 28 percent were reported by scientific or other appropriately experienced personnel.

Variation of Sightings with Time

It appears that the UFO phenomenology has been with us from the earliest times. In the last twenty-five years, however, there seems to be a drastic increase in the number of sightings. It is practically impossible to estimate the number of world-wide sightings because of the lack of suitable data collection means. In the U.S., the principal depositories are currently the Air Force, NICAP and APRO. It is estimated that currently these sources together receive about 2000 reports per year. Since only about one sighting in 10 is reported, the number of sightings is about 20,000. But of these, 80 to 95% are not interesting, leaving us with "only" 1000 to 4000 worthwhile sightings per year for North America.

In addition to the background of reports more or less constantly flowing in, occasional periods of intense activity are also noted. One such period was October 1954 over most of France. NICAP lists a number of these "flaps". Sometimes they are very localized, covering only a small portion of a state for a period of a few weeks.

APRO concludes, on the basis of the reports available to them, that the patterns of appearance follow phases - atomic test areas and installations in the late 1940s and early 50s, rivers, reservoirs and bodies of water in the late 50s and early 60s and now electrical distribution systems. Convincing evidence to support this hypothesis has not been published; however, if the hypothesis were true it would certainly raise a lot of question.

McDonald and others suggest that reports of the last few years show more sightings of objects at low altitude (or landed) and more sightings made from urban areas (in the 40s and 50s sightings were generally inversely correlated with population densities).

Interactions with the Environment

Interactions of UFOs with the environment produce a kind of believability that pure visual observations will never do. Some examples of interaction are cases showing electromagnetic disturbances in practically every kind of device -- radio, TV, auto ignition, aircraft electronics, compass, magnetometer, magnetic automobile speedometer, etc. NICAP lists 106 examples. NICAP also lists 81 cases of radar

-28-

tracking of UFOs, most of which were simultaneous with visual sightings, and a number of which involved use of interceptors. Among the physiological effects noted are burns, temporary paralysis, prickling sensation, and eyes irritated as by ultraviolet light. A number of witnesses claim to have observed landings; depressions in the ground and damaged vegetation usually result. At a landing site in France, only weeds grow in a nine foot circular area where a disc was seen to land two years ago, despite efforts to replant. (21) At another landing site, French railway officials calculated that a weight of 30 tons would be required to make the depressions found in some railroad ties where a UFO was reported to have landed.

While most UFO's are silent, some have made sounds described as hissing, rushing, swishing, humming, whirring, whining, droning, like thunder, like shotgun, and a series of staccato explosions. In the past the absence of sonic booms from supersonic UFO's bothered many scientists; it appears now that that problem might be overcome by surrounding the craft by a corona discharge (which incidentally would be a luminous blue glow around the object). (23)

I will purposely not comment much on occupants, except to say that there are a few (very few) reasonably reliable and carefully investigated reports of UFO occupants. For the time being, I would prefer to concentrate on reports of the objects, however, as the frequency of reliable occupant reports is so low. I have no bias one way or the other along these lines. If UFOs are of extraterrestrial origin, they may or may not be "manned". If manned, one should expect an occasional appearance. Readers more interested in this aspect of UFOs are referred to reference 24.

In summary, we see a wide, almost exasperating range of reported phenomenology. By careful interviews with witnesses and analysis of a large number of reports the significant patterns in phenomenonology should appear. If the UFOs are a new manifestation of nature, they should exhibit some patterns of appearance or behavior which would aid in identifying and predicting them. If of extraterrestrial origin and intelligently guided it may be possible to anticipate appearances. This will be discussed in the next and final essay.

-29-

PART 5: UFOs -- HOW TO PROCEED AND WHY

> We are so far from knowing all the forces of Nature and the various modes of their action that it is not worthy of a philosopher to deny phenomena only because they are inexplicable in the present state of our knowledge. The harder it is to acknowledge the existence of phenomena, the more we are bound to investigate them with increasing care.
> **Laplace**

Laplace's remarks are certainly as true and significant for us today as for his contemporaries. In the preceeding essays I have suggested that there exists a class of phenomena rather widely occuring today (and perhaps since earliest times) that is elusive, puzzling and often at variance with known scientific and technical experience. What are we going to do about it? What should we, what can we do about it?

J. E. MacDonald suggests that the UFO phenomena lie somewhere in the following categories of explanation:

> **1.** Hoaxes, fabrications, and frauds. Report files contain examples of these; investigators believe about 5 percent of all reports made are in this category. Detailed study, however, usually uncovers

such reports.
2. Hallucinations, mass hysteria, and rumor phenomena. Present understanding of psychology does not admit many of the significant reports to be explained in this way.
3. Misinterpretations of well known physical phenomena (meteorolo- gical, astronomical, optical, etc.). By far the largest percentage of reports fall in this category. Study by an experienced investigator can usually identify these.
4. Poorly understood physical phenomena (rare electrical or moteorological effects, plasmas). Certainly a distinct possibility in a number of cases, it is a category worthy of careful study. Some of the most interesting cases, however have sufficient observational datail to eliminate this possibility (I am referring to reports of unambiguously machine-like objects).

-30-

5. Advanced technologies (test vehicles, satellites, reentry effects). Again, some reports can be attributed to this cause, but most cannot.
6. Poorly understood psychic phenomena (psychic projections, archetypal images, parapsychological phenomena, etc). It is difficult to comment on this possibility because the current lack of knowledge of parapsychology. While a (small) number of UFO reports do exhibit aspects of parapsychological phenomenology (25) general relationships have yet to be convincingly demonstrated. Reference 6 deals with this explanation.
7. Extraterrestrial probes. A possibility commonly held by the public and commonly rejected by scientists. Prof. McDonald believes a number of sightings are best explained by this hypothesis.
8. Messengers of salvation and occult truth. This explanation is listed because of the nature of certain reports (particularly "contact" reports -- reports involving communication of UFO occupants and the witnesses) and because of the historical aspects of the phenomenology. See reference 5 for elaboration.
Perhaps, to play it safe, an additional category should be listed:
9. Other

Clearly, the explanation of UFOs will interest someone. Psychologists have an interest in 1, 2, 3 and 6; theologians in category 8, scientists in 4 and 7. Therefore, whatever the explanation, it is a problem of at least average interest. If, by chance, the explanation is 7, or even 8 (and possibly 6) the value to society would be profound and significant. In this sense, an identification of the phenomenon would be a task of highest potential urgency.

How might it be done?

Because of the transient nature of UFO's we cannot expect to have the interested scientist rush to the spot to make his own observations. Reports so far accumulated, however, show that UFO's sometimes appear frequently in certain areas for a short period of time (a so-called "flap"). One characteristic of the flap is a larger percentage of sightings of objects at low levels than one normally obtains. If the reporting and analysis system were responsive enough, men and instruments

-31-

could be dispatched when a flap was recognized with a reasonable hope of making first hand observations. I would therefore suggest the following:

1. Organization of a central report receiving agency, staffed by a permanent group of experienced UFO investigators and having on call specialists in astronomy, physics, optics, atmospheric physics, psychology and the like for application when needed.

2. This agency should be readily and instantly accessible to the public for the purpose of reporting. (Witnesses should be able to turn to someone other than the press to make reports.) Report forms could be made available in Post Offices, for example. More urgent reports could be made by toll-free telephone lines.

(Radio amateurs have recently begun cooperating with NICAP to provide an alerting system.) Because many sightings are made at night when most services are closed, the local police office should be prepared to receive reports of sightings. Experience indicates that witnesses usually turn first to the police, particularly if the UFO was close or if the witness was frightened. Such a local "data center" would be very useful for identifying flaps and could possibly serve to dispatch personnel to an area of interest. Care must be taken to properly inform the officers involved about the aims of the project and requests for assistance should be made in such a way as to minimize additional police work. An awareness of the problem by a dispatcher or desk sergeant might be sufficient to draw attention to a developing situation. An interested local scientist could then be notified, perhaps in time to make an observation. Hynek also suggests that the police carry cameras in their cars should they become involved as observers. This advice obviously applies to all interested persons.

3. A loose organization of interested scientists should be available to investigate reports in their local areas. A good start toward this has been made by NICAP. It is important that investigations be made rapidly and by properly qualified people.

4. The press should be encouraged to report sightings accurately and in a non-sensational manner. Suitable reporting would encourage other witnesses to come forth.

-32-

5. Existing sensor records could be examined for anomalies, particularly if visual reports are made nearby. Since we don't know what to expect, it is difficult to say what is needed; however records of electric, magnetic and gravitational fields, radioactivity, optical and radio frequency anomalies would be a logical place to start. Radars could also contribute, if they are designed for general purpose use. As it is, most current radar detection and tracking devices are designed to ignore anomalous objects.

After a few years' operation in this mode, it should be possible to study the resulting report statistics to draw generalities about appearance and behavior (such as was done in Part IV) and most importantly to anticipate times and locations of appearances. Only when this is done will it be possible to instrument sightings and therefore obtain the objective data so badly needed If the explanation is #4, some environmental correlations are bound to occur. For #7 it is possible that appearances could be anticipated, if we are clever enough; for #6 and #8 we will likely not be able to anticipate appearances.

Certainly the conclusions drawn by NICAP from reports in their file are startling and, if valid worthy of considerable scientific effort. It would be much more convincing if data could be collected worldwide and if the most interesting reports could be intensively and completely investigated. I believe current reports justify the expanded data collection and analysis effort.

Pages 33 to 40 consist of the basic report form used by the University of Colorado UFO project which have not been included here. A copy of this reporting form is reproduced in "The Final Report of the Scientific Study of Unidentified Flying Objects," Bantam Books, 1968, published in association with Colorado Associated University Press.

25. An interesting example appears in the July, 1968 issue of Science & Mechanics, starting on page 30

26. A highly recommended collection of recent views on this subject are contained in the Symposium on Unidentified Flying Objects, Hearings Before the House Committee on Science and Astronautics, July 29, 1968

Short Commentaries

30 Dec 1966
Jan Aldrich:
George Kocher worked at RAND. He was interested in the UFOs. He wrote up a short paper for circulation within RAND. It was personal. It was not an official RAND document. Kocher got little or no response to his privately circulated document. One copy of it did make its way to Wright-Patterson. LTC Quintanilla wrote RAND a blazing letter. Once again, Quinanilla's letter was not an official ATIC response, but from Quintanilla's address and his personal opinion.

Kocher's supervisor turned Quintanilla's letter over to Kocher. RAND never responded to Quintanilla. Kocher did not follow up on his paper. The matter went no further. Kocher confirmed all this in a letter to Dr. Hynek which is now at CUFOS with a copy of Quintanilla's letter. CUFOS made copies of Kocher's document available years ago. You can, I believe, still purchase copies from them.

Ruppelt, I believe in his papers, mentioned that the chief of RAND in the early 1950s was hostile towards UFOs. Prior to that RAND had done a "Spaceship" study that COL McCoy requested in 1948. Parts of the study were used in the Project Grudge report.

There were several RAND scientists who, like Kocher, had at one time or another a personal interest in UFOs. NICAP was in contact with one or two. However, over the years contact was lost with these people.

There was one request from a scientist at RAND in 1965 to the Air Force for UFO material. The Air Force forwarded the request to Hynek. Nothing seems to have come of it. Again, it may have just been a personal interest item.

16 Nov 2006
Dick Hall:
It would be perfectly legitimate and accurate to list this document as an "internal RAND document." It is exactly the same sort of thing as the NSA think piece generated by an employee, which was not an "official" NSA document. These documents are part of the history and are revealing and important in their own right. What people in positions like theirs were thinking and trying to do is significant for historians (of which I are one).

Brad Sparks:
The hostile RAND official mentioned by Ruppelt in his papers was NOT the President and founder of RAND, Franklin Collbohm, it was James Lipp, chief of the Missile Division of RAND. Ruppelt also mentioned that RAND astronomer James Thompson was pro-UFO and used to visit him at BB.

The RAND "spaceship" UFO study was done by Lipp in Dec 1948 and included as an appendix to the Sign Report, not the Grudge Report.,

What is Jan's source for what Kocher said or did? Is it solely Kocher's letter to Hynek? Why is there no date or copy of it?

Kocher's RAND report seems to have more status as a RAND document than the NSA paper, given that it has RAND letterhead and the NSA paper has no NSA letterhead or routing.

17 Nov 2006
Jan Aldrich:
There were some UFO fans at RAND. Mary Rorig comes to mind. However, this paper is about as significant as some NICAP member writing a paper supporting contactees. It should be made clear that this was an individual effort within an organization which took no action, and had no discussion on the matter as the result of his effort other than to file it.

Dick Hall:
The agencies represented are not private, pro-UFO citizen groups. They are major Government agencies. So what they did and tried to do even on an in-house basis and the results (or non-results) is very significant for the purposes of historical analysis. The people mentioned all were highly qualified, reasonably high-level or respected employees. To simply label them as "fans" (sounds like "UFO buffs") and compare what they did to an internal NICAP paper is not a reasonable comparison. History has more to do with only what "officially" is said and done. A more apt comparison would be what Ruppelt or Fournet did and tried to do on the subject, and what had success and what didn't.

Intelligence Requirements on Flying Saucer Type Aircraft

CSGID Attn: Plans and Collection Branch	Hq. USAF - AFOIR	**30 OCT 1947** Lt Col Garrett/mob/4544

1. It is requested that a Collection Memorandum, similar to the attached draft, be issued to the addresses indicated thereon. This is in accordance with conversation between Lt. Colonel Smith and Lt. Colonel Garrett.

2. It will be appreciated if, at the time this Memorandum is reproduced, ten (10) additional copies could be run off and sent to the Directorate of Intelligence, Air Intelligence Requirements Division, Collection Branch, for file purposes.

FOR THE SECRETARY OF THE AIR FORCE:

2 Incls.
1. Intelligence Requirements
2. Draft of Collection Memorandum

GEO. F. SCHULGEN
Brigadier General, U.S.A.F.
Chief, Air Intelligence Requirements Div.
Office of Ass't. Chief of Air Staff-2

SECRET

SECRET

DRAFT OF COLLECTION MEMORANDUM

OBJECT

1. This Memo sets forth the current intelligence requirements in the field of Flying Saucer type aircraft.

GENERAL

1. An alleged "Flying Saucer" type aircraft or object in flight, approximating the shape of a disc, has been reported by many observers from widely scattered places, such as the United States, Alaska, Canada, Hungary, the Island of Guam, and Japan. This object has been reported by many competent observers, including USAF rated officers. Sightings have been made from the ground as well as from the air.

2. Commonly reported features that are very significant and which may aid in the investigation are as follows:

a. Relatively flat bottom with extreme light-reflecting ability.

b. Absence of sound except for an occasional roar when operating under super performance conditions.

c. Extreme maneuverability and apparent ability to almost hover.

d. A plan form approximating that of an oval or disc with a dome shape on the top surface.

e. The absence of an exhaust trail except in a few instances when it was reported to have a bluish color, like a Diesel exhaust, which persisted for approximately one hour. Other reports indicated a brownish smoke trail that could be the results of a special catalyst or chemical agent for extra power.

f. The ability to quickly disappear by high speed or by complete disintegration.

g. The ability to suddenly appear without warning as if from an extremely high altitude.

h. The size most reported approximated that of a C-54 or Constellation type aircraft.

i. The ability to group together very quickly in a tight formation when more than one aircraft are together.

j. Evasive action ability indicates possibility of being manually operated, or possibly by electronic or remote control devices.

k. Under certain power conditions, the craft seems to have the ability to cut a clear path through clouds -- width of path estimated to be approximately one-half mile. Only one incident indicated this phenomenon.

SECRET

SECRET

3. The first sightings in the U.S. were reported around the middle of May. The last reported sighting took place in Toronto, Canada, 14 September. The greatest activity in the U.S. was during the last week of June and the first week of July.

4. This strange object, or phenomenon, may be considered, in view of certain observations, as long-range aircraft capable of a high rate of climb, high cruising speed (possibly sub-sonic at all times) and highly maneuverable and capable of being flown in very tight formation. For the purpose of analysis and evaluation of the so-called "flying saucer" phenomenon, the object sighted is being assumed to be a manned aircraft, of Russian origin, and based on the perspective thinking and actual accomplishments of the Germans.

5. There is also a possibility that the Horten brothers' perspective thinking may have inspired this type of aircraft - particularly the "Parabola", which has a crescent plan form. Records show that only a glider version was built of this type aircraft. It is reported to have been built in Hellegenberg, Germany, but was destroyed by fire before having ever been flown. The Horten brothers' latest trend of perspective thinking was definitely toward aircraft configurations of low aspect ratio. The younger brother, Riemar, stated that the "Parabola" configuration would have the least induced drag - which is a very significant statement. The theory supporting this statement should be obtained if possible.

6. The German High Command indicated a definite interest in the Horten type of flying wing and were about to embark on a rigorous campaign to develop such aircraft toward the end of the war. A Horten design, known as the IX, which was designated as the Go-8-229 and the Go-P-60 (night fighter) was to be manufactured by the Gotha Plant. It is reported that a contract for fifty such aircraft was planned, but only three or four were built. This plant is now in the hands of the Russians. A recent report indicates that the Russians are now planning to build a fleet of 1,800 Horten VIII (six engine pusher) type flying wing aircraft. The wing span is 131 feet. The sweepback angle is 30 degrees. The Russian version is reported to be jet propelled.

REQUIREMENTS

1. Requirements appear at Inclosure No. 1.

SPECIAL INSTRUCTIONS

Control No. A-1917

DISTRIBUTION

1. To M.A.'s England, France, Sweden, Finland, USSR, Turkey, Greece, Iran,

China, Norway, Philippines, and to Commander-in-Chief, Far East, and Commanding General, United States Air Forces in Europe, through Commanding General, EUCOM.

SECRET

SECRET

INCLOSURE NO. 1

1. Research and Development

a. What German scientists had a better-than-average knowledge of the Horten brothers' work and perspective thinking; where are these scientists now located, and what is their present activity? Should be contacted and interrogated.

b. What Russian factories are building the Horten VIII design?

c. Why are the Russians building 1,800 of the Horten VIII design?

d. What is their contemplated tactical purpose?

e. What is the present activity of the Horten brothers, Walter and Riemar?

f. What is known of the whereabouts of the entire Horten family, particular- ly the sister? All should be contacted and interrogated regarding any contemplated plans or perspective thinking of the Horten brothers, and any interest shown by the Russians to develop their aircraft.

g. Are any efforts being made to develop the Horten "Parabola" or modify this configuration to approximate an oval or disc?

h. What is the Horten perspective thinking on internal controls or controls that are effective mainly by streams of air or gas originating from within the aircraft to supplant conventional external surface controls?

2. Control

For any aircraft whose shape approximates that of an oval, disc, or saucer, information

regarding the following items is requested:

a. Boundary layer control method by suction, blowing, or a combination of both.

b. Special controls for effective maneuverability at very slow speeds or extremely high altitudes.

c. Openings either in the leading edge top and bottom surfaces that are employed chiefly to accomplish boundary layer control or for the purpose of reducing the induced drag. Any openings in the leading edge should be reported and described as to shape, size, etc. This investigation is significant to justify a disc shape configuration for long-range application.

SECRET

SECRET

d. Approximate airfoil shape in the center and near the tips.

e. Front view and rear view shape.

3. Items of Construction

a. Type of material, whether metal, ferrous, non-ferrous, or non-metallic.

b. Composite or sandwich construction utilizing various combinations of metals, plastics, and perhaps balsa wood.

c. Unusual fabrication methods to achieve extreme light weight and structural stability particularly in connection with great capacity for fuel storage.

4. Items of Arrangement

a. Special provisions such as retractable domes to provide unusual observation for the pilot or crew members.

b. Crew number and accommodation facilities.

c. Pressurized cabin equipment.

d. High altitude or high speed escapement methods.

e. Methods of pressurization or supercharging from auxiliary units or from the prime

power plant.

f. Provisions for towing - especially with short fixed bar, and for re-fueling in flight.

g. Provisions for assisted take off application.

h. Bomb bay provisions, such as dimensions, approximate location, and unusual features regarding the opening and closing of the doors.

5. Landing Gear

a. Indicate type of landing gear - whether conventional, tricycle, multiple wheel, etc.

b. Retractable, and jettison features for hand gear.

c. Provisions for takeoff from ice, snow, or water.

d. Skid arrangements for either takeoff or landing.

SECRET

SECRET

6. Power Plant

a.. Information is needed regarding the propulsion system used in the aircraft. Possible types of engines that could be employed include:

(1) Reciprocating (piston type) engine or gas turbine. Either or both of these could be used to drive propellers of conventional or special design, rotating vanes, ducted fans, or compressors.

(2) Jet propulsion engines including turbo jets, rockets, ramjets, pulse jets, or a combination of all four.

(3) Nuclear propulsion (atomic energy). Atomic energy engines would probably be unlike any familiar type of engine, although atomic engines might be employed in combination with any of the above types.

Aircraft would be characterized by lack of fuel systems and fuel storage place.

b. The power plant would likely be an integral part of the aircraft and could possibly not be distinguished as an item separate from the aircraft. If jet propulsion is used, large air handling capacity, characterized by a large air inlet and large exhaust nozzle, should be evident. The size of entrance and exit areas would be of interest. It is possible that the propulsive jet is governed or influenced for control of the aircraft. The presence of vanes or control surfaces in the exhaust or methods of changing the direction of the object should be observed.

c. Information desired on the propulsion systems pertains to the following items:

(1) Type of power plant or power plants.

(2) General description.

(3) Rating (thrust, horsepower, or air flow).

(4) Type of fuel

(5) Catalytic agents for super-performance or normal cruising power.

CUFON 4602d AISS UNIT HISTORY SAMPLER

A SAMPLER OF ITEMS FROM THE UNIT HISTORY OF
THE 4602d AIR INTELLIGENCE SERVICE SQUADRON
ENT AIR FORCE BASE, COLORADO SPRINGS, COLORADO
Part 1 of 7 Parts

CUFONSM Comment

29 Jan 1996 - If one delves to any depth at all into UFO history, then mention of the 4602nd Air Intelligence Service Squadron (AISS) is sure to crop up. Considering this, and the recent claims that the 4602d AISS involvement in field investigation of UFO incidents is the key to the "real", super secret UFO investigation, we thought that we should make available some of the 4602d AISS documents we obtained via the Freedom of Information Act.

Additionally our philosophical aim of making information freely available so that others may make up their own minds is well served by posing these files.

This material is extracted from the 4602d AISS unit history sent to us in 1994. In time available, over most of 1995, I have retyped the material in these files from copies made one page at a time on the microfilm viewer/printer at the University of Washington, Seattle WA (at $0.10 per page) from the 16mm microfilm on which the material was supplied. In many places, parts of the text is difficult to read; far too poor a text quality to allow scanning for OCR.

This file is one of a series of CUFONSM presentations we've named "samplers." These samplers are collections of extracts from larger groups of documents. The items chosen for inclusion in this sampler were picked entirely at the whim of the CUFONSM SYSOP. The selected items generally either involve UFO, 4602d AISS mission and organization, or other information which is interesting or relevant in some fashion. All UFO related material is included. This sampler contains approximately the equivalent of about 200 typewritten pages of material, selected from over 2000 pages in the 4602d AISS unit history. We make no claims regarding completeness. The material is broken into 7 parts plus a table of "symbols" used in the documents.

The retyping was done as carefully as possible. We cannot rule out the possibility of errors creeping into the text, but we did try to eliminate as much error as possible. Please note that we did not go to our usual lengths to preserve the look of the documents. Some formatting is preserved like the security markings, but line length and line spacing is not always preserved.

Much can be learned from these documents. For example, insights can be gained into the operation and organization of a USAF combat intelligence unit and the military processes and mindset in place at the time as well as a window on part of the military response to UFO.

TEXT STANDARDS

Some symbols and such are used to indicate certain aspects of the original papers, but may not have been uniformly or consistently applied:

1. ======= Double lines of equal signs denotes a break between documents
   =======

2. ======= Single lines of equal signs denotes a break between pages of a document.

3. xxx XXX Lines of x's or X's denote unreadable text.

4. /s/ Indicates an actual signature in the original.

5. {page x} Text in curly brackets are comments by CUFONSM.

6. ... Ellipsis indicates that text continues in the original, but is not reproduced here.

Jim Klotz, CUFONSM SYSOP

History (Mar-Jun 52)
4602d AISS

MISSION

The Mission of the 4602d Air Intelligence Service Squadron is to provide an organization within Air Defense Command which will:

a. Collect positive air intelligence information by overt means from:

(1) Downed enemy air crews
(2) Enemy materiel
(3) Enemy documents

b. Collect information for such Bomb Damage Assessment as may be directed by Headquarters, United States Air Force.

It was established by DCS/I, ADC and the initial planning Staff prior to activation of the unit that the squadron's efforts would be primarily channeled toward collection of information from Soviet prisoners and equipment rather than forming a unit of multi-language and technical capability. All formal training within the unit was based on this plan.

The Bomb Damage assessment capability was limited by xx to that of providing a file of pre-strike photos, charts, xxx, graphs and Photo xxxx and making initial damage assessment reports to ADC from photo samples xxxxxx Tactical Air Command.

==========

History (Mar-Jun 52)
4602d AISS

BACKGROUND

In the early part of 1951, the Director of Intelligence, Air Defense Command, reviewed all existing requirements and capabilities for (1) immediate first phase examination of enemy air force equipment recovered within the continental Unites States, and (2) First phase interrogation of enemy air force personnel recovered within the continental Unites States, and (3) Providing xxxxx Bomb Damage Assessment of continental Unites States target area.

Although Air Base Commanders are responsible for all crashed aircraft within their areas,[1] it was found that they had no capability for examination of enemy equipment. At the same time, although Air Materiel Command had the capability for thorough examination of enemy equipment, they had only limited first phase and field collection capabilities.[2]

The Department of the Army who xxxxx xxxx xxxxxxxx of xxx and captured documents responsibility within the

ZI. However, there were no provisions for first phase interrogation and interpretation which would be of immediate value to ADC.

Bomb XXXXXXXXXXXXXX in similar conditions. Tactical Air Commanders capable of engineering xx with the actual making of damage photographs. However, no provisions existed for a central library of pre-strike photographs and photo interpretation

4602d AISS

which would be of immediate assistance to ADC Commander.

In an effort to overcome these problems, the DI, ADC proposed that an Air Intelligence Service Squadron be established within ADC. Headquarters, United States Air Force concurred with the basic plan and authorized activation of the unit with a strength of 79 officers and 133 airmen.. However, the responsibilities of the proposed unit were telescoped in a manner which reduced its capability for providing immediate intelligence to ADC. The mission and function were further modified so that this unit would provide cadres for establishment of xxxxxx in other commands and the Air Force complement to the xxxx ASxIC,[3] ASDIC,[4] AND JM1A,[5] rather than being a unit of fixed capabilities to meet ADC requirements. As a result, operational xxxxxx authorized for this unit were

xxxxxxxxx

==========

History (Mar-Jun 52) 6
4602d AISS

ORGANIZATION and ADMINISTRATION

During the early part of this period, the administration of personnel records and related matters were handled by the 4600th Air Base Group. Morning reports, Form 20's and similar administrative forms were prepared by 4600th personnel. As more personnel became available, squadron clerks began to take over these functions, and in April, the personnel function, except for officers' records was moved to Peterson Field. The Command and Operations functions remained in the Domestic Vulnerability Division, R&E, DSC/I, until May, when these functions were also moved to offices at Peterson Field.

Throughout this period, the squadron was attached to the 4600th Air Base Group for Administration and Logistical Support. At a later date, when the unit has sufficient qualified personnel to man its administrative and operational functions, it is to become an independent squadron, attached to the 4600th AB Gp only for logistical support.

The squadron, as organized, provides for a Squadron Headquarters at Peterson Field, three Detachments, with one attached to each Defense Force, and 17 flights. The Fights are divided with 4 in WADF, 4 in CADF, and 9 in EADF areas.

The flights were designed as the basic field collection units for exploitation of crashed enemy aircraft and captured enemy personnel. These units were designed to be highly mobile, semi-self-supporting, and cross-trained in language and technical ability.

==========

Each Detachment and Squadron Headquarters was also designed to provide field collection units within its basic structure, thus providing an actual total of 21 field collection teams.

The organizational structure was designed to facilitate operational direction and control by DCS/I, ADC, with direct responsibility for operational and administrative control, under the Commanding Officer, 4602d AISS.

The basic structure of the Squadron Headquarters follows fairly closely that of a standard Air Force unit of similar size, with Command, Personnel and Administration, and Operations sections. Some changes, such as the addition of a full time Supply Officer on a Staff level with Operations; and a Training and Library sub-section to Operations and the addition of a Personnel section, with an officer in charge under the Adjutant, have been noted as desirable. It is also apparent that additional officer and enlisted personnel must be allotted the Personnel, Administration, and Operations overhead functions.

Some changes must also be made in the AFSC's authorized for the various functions. Most apparent at the present time is that of changing one airman on each detachment from a 70270 to a 20470 and one airman on each flight from a 20570 to a 20470. These changes will provide the detachments and flights with the necessary administrative, intelligence evaluation and operations capability, not previously provided.

It has also become apparent that enlisted grade authorizations

==========

as requested in the initial T/D submitted by ADC in July 1951, and approved by USAF for this organization, are not high enough to assure the unit of receiving the type of highly skilled personnel required for operation under the present concept.

Action to facilitate the changes in the AFSC's and functional requirements will be reflected the September 52 T/D. Personnel to man the changes will have to be drawn from within the unit's authorized strength. As the flights were planned on a basis of a total strength of 8, and this number has been reduced to 7 due to the shortage of officers, and is not further reducible without seriously hampering the efficiency of the flight, either the number of flights must be reduced or personnel drawn from the administrative overhead of the detachments. The latter is the most likely.

SECRET
SECURITY INFORMATION

The 4602d Air Intelligence Service Squadron was activated 1 March 1952 in order to provide the Air Defense Command with an organization capable of filling a definite gap in ADC Intelligence in the vital field of collection of air combat intelligence. The very existence of the 4602d is predicated on the assumption of a possible enemy air assault against the United States. As a result of the tight security measures inherent in the Soviet system, certain information will never be obtained until the enemy exposes its military potential to us in the form of an attack. This squadron is one of the very few which is concerned with what will happen after the crucial initial attack, at which time it must be a fully trained combat unit capable of immediate movement to any type of terrain regardless of the climactic conditions or difficulty of access. It will be capable of fully investigating crashed enemy equipment, interrogating enemy personnel, translating enemy documents, and reporting Essential Elements of Information in time to be of value to the commanders. Only by means of such an organization will the intelligence agencies be able to obtain the facts concerning what hit us, how they hit us, when they will hit us again, how they will hit us again, and possibly where they will strike again. Information about the enemy Air Order of Battle, about their technological developments, and about their attack strategy, will allow the interceptors to be more effective in their action against the succeeding waves. The savings thereby incurred to the United States in terms of civilian casualties, property, and military installations will be of incalculable value.

SECRET
SECURITY INFORMATION

==========

SECRET
SECURITY INFORMATION

The period with which this historical report is concerned witnesses the activation and deployment of twelve (12) field units dispersed strategically throughout the United States. The limitations of any historical document do not permit a full treatment of the painstaking preparations that were involved in the formation of these intelligence teams or the relentless efforts of the team commanders and their personnel, but it is the aim of this historical report to relate the evolution of the 4602d Air Intelligence Service Squadron from an embryonic state of existence as of 1 July 1952 to that of a full-fledged active member of the United States air defense system by 31 December 1952.

SECRET

SECURITY INFORMATION

==========

SECRET 1
SECURITY INFORMATION

ORGANIZATION
Reorganization of 4602d AISS

The 4602d Air Intelligence Service Squadron was activated and organized under authority of Air Defense Command General Order Number 20, dated 28 February 1952, at Peterson field, Ent Air Force Base, Colorado Springs, Colorado with an authorized strength of thirty-four (34) officers and ninety-seven (97) airmen. Under this General Order, three (3) flights, designated as Flights A, B and C were organized to be located at the three (3) Defense Force Headquarters at Hamilton Air Force Base, California, at Kansas City, Missouri, and at Stewart Air Force Base, new York, respectively.

A reorganization of the 4602d AISS was directed by ADC GO #47, dated 17 October 1952. The authorized strength of this organization was increased to sixty-one (61) officers and 133 airmen. Administrative and housekeeping equipment was authorized in accordance with Table of Allowance 1-1, March 1952, Table of Allowance 1-21, December 1951, and Special Equipment List as authorized by Headquarters, United States Air Force and Air Material Command. Under this reorganization, the three (3) original flights located at the Defense Force Headquarters were redesignated as detachments with a greatly reduced personnel strength, and a total of seventeen (17) flights were authorized, each with a strength of two (2) officers and five (5) airmen. ADC GO #47 also served to assign each field unit of the 4602 AISS to the nearest Air Defense Command base for logistical support. It was specifically determined that operational control resided with Headquarters, 4602d AISS.

SECRET
SECURITY INFORMATION

==========

SECRET 2
SECURITY INFORMATION

Considerable time and effort was expended during this reporting period in the drafting and submitting of an Air Defense Command Regulation which would prescribe the mission, organization, functions, and responsibilities of the 4602d AISS and the responsibilities within the Air Defense Command for its control, support and general deployment. Acceptance of this regulation was received from Headquarters, Air Defense Command at the close of this reporting period and its publication as Air Defense Command regulation 24-4 was to be effected 3 January 1953.

The 4602d AISS has the combat mission of supporting the Air Defense Command intelligence function through overt collection. limited field analysis, and rapid reporting of air combat intelligence from positive field sources within the area of Air Defense Command responsibility. It will render such other general support of the Air Defense Command intelligence mission as shall be directed.

During peacetime, the 4602d AISS has been assigned the primary mission of training, effecting liaison, and otherwise preparing for full and instantaneous performance of its combat mission; and the secondary mission of supporting Air Defense Command training and other activities to the extent consistent with the squadron's combat mission and primary peacetime mission.

Under ADCR 24-4 the 4602d AISS has been organized as follows: headquarters, located at Headquarters, Air Defense Command; a detachment established and maintained at each Air Defense Headquarters; and numbered flights, each subordinate to one of the detachments, located at various points throughout the area of responsibility of the Air Defense

Forces. In view of the pattern of deployment of these small

SECRET
SECURITY INFORMATION

==========

SECRET 3
SECURITY INFORMATION

units, it was decided that administrative and operational control would be maintained at squadron headquarters, and that logistical support would be the responsibility of the ADC bases to which the units wee permanently attached.

Under current plans, there will be nineteen (19) strategically deployed intelligence teams trained to fulfill the requirements of our highly specialized mission. the selection of geographical locations has been based on a study of prime target areas coupled with a desire for maximum area coverage. The vital Northeast Area will therefore be covered by the greatest number of teams, while the central and Western Defense Zones, in line with tactical considerations, will be covered by fewer teams. This assignment ratio has been based on the same assignment ratio given the tactical units in those areas.

The most significant feature of ADCR 24-4, insofar as the future of this organization is concerned, is its flexibility to meet any future emergencies. The promulgation of ADCR 24-4 signified the culmination of a series of documents in which the 4602d AISS obtained formal recognition throughout the air defense system.

Key Personnel Changes

Early in this reporting period the 4602d AISS received a new commanding officer. Lieutenant Colonel John M. White, formerly Commanding Officer of the 6004th AISS in Japan, was assigned to the 4602d AISS in July 1952 and formally assumed command of this organization on 4 August 1952, replacing Lieutenant Colonel Richard C. Jones. Lieutenant Colonel

SECRET
SECURITY INFORMATION

==========

SECRET 4
SECURITY INFORMATION

Jones, in January 1952, received the assignment of writing and obtaining approval of the mission of this unit and activating and assuming command of the 4602d. Lieutenant Colonel Rial F. Callagher, the former Commanding Officer of the 7053 AISS in Germany, was assigned to the 4602d AISS as Deputy Commanding Officer on 17 October 1952.

On 22 December 1952, Major William H. Smith and Captain Milton Bellovin were assigned to this organization as Operations Officer and Training Officer respectively.

Commander's Conference

A Commander's Conference was held at Headquarters, 4602d AISS during the period 15 to 17 December 1952 in order to discuss and resolve problems encountered by the field units and the squadron since activation. The conference proved valuable to all participants and, as revealed in the enclosed copy of the Summary of the Commander's Conference, every phase of this organization's varied activities were discussed. This first conference served to pave the way for future gatherings of the Officer-in-charge which will be held on an ad hoc basis when necessary.

SECRET 19
SECURITY INFORMATION

TRAINING

In order to cover effectively its huge area of responsibilities with a limited number of personnel, the 4602d Air Intelligence Service Squadron has inaugurated an intensive training program designed both to promote greater proficiency in each airman's job specialty and to cross train him in other fields of intelligence activities.

Based on current goals, the ultimate training objectives are as follows:

1. All male personnel trained in skiing and Arctic survival.
2. All field personnel trained in horse and pack animal operations.
3. All linguists cross trained in technical intelligence.
4. All technical personnel intelligence cross trained in intelligence operations.
5. All linguists and intelligence operations specialists instructed in interrogation procedures.
6. At least thirty-four (34) officers and airmen completing the parachute training course at Fort Benning, Georgia.
7. All squadron personnel trained in the essentials of public speaking.

Russian Language Training Program

Two (2) classes of Russian linguists wee graduated during this reporting period, in September and December 1952 respectively.

The original Russian language course at Headquarters 4602d AISS was

SECRET
SECURITY INFORMATION

==========

SECRET 20
SECURITY INFORMATION

TRAINING

intended to complement the individual proficiencies of the students, many of whom were already highly qualified linguists or possessed a Slavic language capability. The first two (2) classes provided the necessary number of linguists to fill the immediate requirements for manning the field units that were activated during the past six (6) months. The bulk of the students remaining after 19 December 1953 were linguists assigned to the 4602d AISS who were not proficient in the Russian language who required a greater degree of formal training before they could assume duties as linguists at the various field units.

Emphasis in the Russian language training was placed on conversation, orthography, and Air Force terminology. Students whose native tongue was Russian were proficient in the use of colloquialisms; however, grammar and pronunciation had to be stresses in order to achieve the desired standard.

In addition to language training, a program of Russian background and area studies was pursued. Among the subjects covered were Russian history, with particular emphasis being placed on events since the Bolshevik Revolution

of 1917, Soviet armed forces, the Soviet Air Force, and the characteristics of the Russian and satellite peoples as well as the Soviet airman.

Several classes were conducted on intelligence report writing which dealt primarily with the Form 112 since, as potential interrogators, this is the form with which linguists will be most confronted. Specific attention was devoted to Air Defense Command, Essential Elements of Information. Sample interrogation reports were executed in

SECRET
SECURITY INFORMATION

==========

{part}

conjunction with mock interrogations given both in the English and Russian languages. The composition and uses of the Air Interrogation Guide were also explained to the students.

In order to adapt the training program to the specific needs of air intelligence, approximately two-fifths of the language training was devoted to the study of technical terms and the RAF Handbook for Interpreters. The Training Section of the 4602d AISS was most fortunate in receiving fifty (50) copies of the RAF Handbook since only 200 copies have been made available to the entire United States Air Force. It has been considered by members of the Training Section to be the best Russian technical text available, containing in concentrated form, statistics, Soviet Air Force terminology, abbreviations, and conversion tables. During free conversation periods and mock interrogations, the use of colloquial expressions was stressed to give the linguists greater rapport in any actual interrogations they might be called upon to conduct in the future.

It is significant to note that when the linguists underwent proficiency testing in the Russian language at Camp Carson, Colorado, the students, trained at Headquarters 4602d AISS, displayed greater fluency in the writing, speaking and comprehension of the Russian language than did the graduates of the Russian course of the United States Air Force Institute of Technology at Syracuse University.

Air Technical Intelligence Training

As of 31 December 1952 a total of five (5) officers and forty-four (44) airmen assigned to the 4602d AISS had completed the nine (9) week course at Air Technical Intelligence at the Air Intelligence Center at Wright-Patterson Air Force Base, Dayton, Ohio.[1] In view of the valuable training these personnel received there in technical investigation, it has been planned to detail more personnel of the 4602d AISS to ATIC in the future. Word has been received from the Commanding Officer, Air Technical Intelligence allotting the 4602d AISS ten (10) slots for the ATIC course to be conducted from 5 January through 16 March 1953.[2]

NUMBER 47 17 October 1952

REORGANIZATION OF 4602D AIR INTELLIGENCE
SERVICE SQUADRON. . . . . SECTION I
DESIGNATION AND ORGANIZATION OF AIR INTELLIGENCE
SERVICE FLIGHTS. . . . . SECTION II

SECTION I

1. Effective 10 October 1952, the 4602d Air Intelligence Service Squadron, a Table of Distribution Unit, is reorganized with an authorized strength of 61 officers and 133 airmen.

2. Personnel will be furnished from sources available to this command.

3. Administrative and housekeeping equipment is authorized in accordance with Table of Allowance 1-1, March 1952, Table of Allowance 1-21, December 1951, and Special Equipment List as authorized by Headquarters USAF and Air Material Command.

4. Nonappropriated funds will be governed by the provisions of he AFR 176-1 and AFR 176-2.

5. Concurrent with above action the following detachments of the Air Intelligence Service Squadron are reorganized with strength as indicated:

DETACHMENT	*AUTHORIZED STRENGTH OFF	AMN
Detachment 1 (Hq)	4	8
Detachment 2 (Hq)	4	8
Detachment 3 (Hq)	4	8

6. Authority: AFR 20-52, as amended.

SECTION II

1. Effective 10 October 1952, the following flights of the 4602d Air Intelligence Service Squadron are designated

and organized at stations and with strength as indicated:

STATION	*AUTHORIZED STRENGTH OFF	AMN
Flight 1-A, McChord Field, Tacoma, Washington	2	5
Flight 1-B, Great Falls AFB, Great Falls, Montana	2	5

ADCR 24-4
1-5

ADC REGULATION) HEADQUARTERS AIR DEFENSE COMMAND
24-4)

Ent Air Force
Base, Colorado Springs, Colo.
3 January 1953

ORGANIZATION - AIR BASES AND AIR UNITS

1. Purpose. This regulation prescribes the mission, organization, functions and responsibilities of the 4602d Air Intelligence Service Squadron (AISS) and the responsibilities within the Air Defense Command for its control, support and general deployment.

2. References. ADCR 200-1; AFR 23-9; AFM 77-1; AFR 200-5; ADCR 200-3 (Classified), and General Order 47, Headquarters ADC, 1952.

3. Mission. a. The 4602d AISS has the combat mission of supporting the Air Defense Command intelligence function through overt collection, limited field analysis, and rapid reporting of air combat intelligence from positive field sources within the area of Air Defense Command responsibility. It will render such other general support of the Air Defense Command intelligence mission as shall be directed.

b. During peacetime, the 4602d AISS has been assigned the primary mission of training, effecting liaison, and otherwise preparing for full and instantaneous performance of its combat mission; and the secondary mission of supporting Air Defense Command training and other activities to the extent consistent with the squadron's combat mission and primary peacetime mission.

4. Organization, Control and Support. a. The 4602d Air Intelligence Service Squadron is a Table of Distribution Unit allocated to the Air Defense Command by Headquarters USAF for the specific purpose of performing the mission

set forth in paragraph 3, above. it is organized as follows:

(1) Headquarters 4602d Air Intelligence Service Squadron will be located at Headquarters, Air Defense Command.

(2) Detachment Headquarters will be established and maintained at each air defense force headquarters.

(3) Numbered flights, each subordinate to one of the detachments, located at various points throughout the area of responsibility as may be specifically prescribed from time to time by the Commanding General, Air Defense Command.

(4) The squadron headquarters has full administrative capability, but no logistic support capability. detachments and subordinate flights have only limited administrative and no logistical support capabilities.

b. Headquarters, Air Defense Command will ensure over-all logistical support to the 4602d Air Intelligence Service Squadron and its field units throughout the Air Defense Command. This support will be provided by the nearest Air Force base in accordance with AFR 11-4. the squadron commander has direct access to Headquarters Air Defense Command staff agencies.

5. Functions. The functions of the 4602d Air Intelligence Service Squadron are:

a. To fulfill Air Defense Command combat readiness elements of information by overt collection of air combat intelligence in the Air Defense

==========

ADCR 24-4
5-6

Command area of responsibility through the interrogation of captured enemy personnel, the examination and field analysis of enemy materiel, and the translation of captured enemy documents.

b. To supply the Deputy Chief of Staff/Intelligence with timely information and technical assistance in discharge of responsibility for Weapons Impact Evaluation (Air Defense Command aspects of the Bomb Damage Assessment Program).

c. To procure and/or train and maintain the necessary personnel qualified in general intelligence procedures, written and spoken foreign languages, technical intelligence investigation, photography and photo interpretation, and other such activities as may be necessary for the accomplishment of the mission.

d. To establish through procurement and training, a capability on the part of the personnel for prompt physical access to and effective operations in remote areas, over all types of terrain, and in all conditions of climate and weather. Training will specifically include, but is not confined to, cold weather, desert and swamp survival; skiing, snow shoeing, mountain climbing, animal transport and parachutist operations.

6. Responsibilities. a. The 4602d Air Intelligence Service Squadron will be responsible for:

(1) Exercise of administrative control and, under the general direction of Deputy Chief of Staff Intelligence, Air Defense Command, centralized operational control for deployed units and personnel.

(2) Establishment and maintenance of effective liaison and coordination with military, semi-military, governmental, and civilian agencies listed below:

(a) Military organizations to include, but not limited to, Headquarters Air Defense Command and subordinate units, Army Anti-Aircraft Command, other Air Force commands and subordinate units, Army, Navy, Marine and Coast Guard command and subordinate units.

(b) Semi-military agencies to include, but not limited to, Civil Defense Administration, ground Observer Corps, and Civil Air Patrol.

(c) Governmental agencies to include, but not limited to, Central Intelligence Agency, Federal Bureau of Investigation, Civil Aeronautics Administration, Federal and State Park and Forestry Services, State and local law enforcement agencies.

(d) Civil agencies when appropriate and in accordance with governing regulations, AFR 205-1 and ADCR 190-4, to include, but not limited to, the press, radio, television, telephone and telegraph companies, land grant agencies, flying clubs, etc.

(3) Arranging through local facilities for transportation of requisite personnel to intelligence targets.

(4) Arranging for rapid dissemination of collected intelligence through prescribed channels using organizational communications where appropriate.

==========

ADCR 24-4
6-7

(5) Keeping fully acquainted with all established training facilities, exploitation of which will further the squadron's training mission, and initiating action pointed toward such exploitation.

(6) Exploitation of squadron capabilities and training activities for the benefit of organizations to which attached to the maximum extent consonant with the squadron mission, along such lines as crash rescue and investigation; language, technical, and intelligence instruction; and direct support of intelligence operations within Air Defense Command.

b. All echelons of Air Defense Command are responsible for the administrative and logistical support o the field units of the 4602d Air Intelligence Service Squadron in discharge of their highly specialized mission. This responsibility includes, but is not limited to the provision of:

(1) Transportation -- surface and air operations officers will authorize flights for 4602d AISS field units for training purposes, photo reconnaissance requirements, and liaison and coordination visits to local governmental and civilian agencies. Transportation officers will authorize vehicles to be used for round trip distances up to 500 miles, in accordance with Chapter 3, paragraph 8h, AFM 77-1.

(2) Communications facilities, as tie lines and teletype.

(3) Office and storage space and supplies.

(4) Billeting and subsistence.

(5) Petty cash facilities. Funding assistance will be rendered field units in obtaining petty cash from bases at which they are located. petty cash facilities normally will be limited to purchased incident to the peculiar mission of the 4602d Air Intelligence Service Squadron. Any other purchases will be rigidly controlled by the limitations of paragraph 11, AFR 70-19.

c. Air defense force and air division (defense) commanders, or their representatives are authorized to provide letters of introduction to of detachments or flights of the 4602d Air Intelligence Service Squadron, within their area of responsibility, in order to facilitate liaison with local governmental and civilian agencies.

d. Headquarters, Air Defense Command will take appropriate action to assist in the procurement of collateral training facilities and equipment to the maximum extent required for accomplishing the squadron mission.

Authority. Letter, this headquarters, 7 January 1952, to DI, Headquarters USAF, Washington, 25, D.C., Subject: Air Intelligence Service Squadron, 1st Ind thereto by Headquarters USAF, 6 February 1952. (ADDIN)

COMMANDERS CONFERENCE SUMMARY

SECURITY INFORMATION
SECRET

==========

{Tenth Unnumbered Page}

SECRET
SECURITY INFORMATION

{Brigadier General Woodbury M. Burgess was a guest speaker at this Commanders conference}

GENERAL BURGESS

The theme which General Burgess dwelt upon was the readiness of the 4602d AISS to get combat intelligence when the bell rings. That is our full purpose and we must point our efforts in that direction. We must prepare ourselves for immediate readiness. Our constant training is one method of accomplishing our mission. We must fit in with and contribute to, the axiom that "Air Power is Peace Power."

Because time is of the essence, one of our goals is to train to be able to go anywhere in our area of responsibility within six hours. We must train to use any means of transportation; make all possible liaison contacts in order to get our job done. We are reporters out to get facts. We must know how to get things done and to be able to report incidents clearly and concisely. Even though our mission is after the advent of hostilities, we must take advantage of every way now to be ready to make people aware of our mission in order to fulfill the requirements of key EEI's and supply information which the ADC Commanders must know.

{Part of 14th Page}

SECRET
SECURITY INFORMATION

REQUIREMENTS

This Headquarters has only one copy of ADC EEI's. As soon as this Headquarters receives more copies, dissemination will be made in the field. Headquarters ADC is preparing 3 hour and 24 hour SRI's. It is hoped that these will be finalized and disseminated in the near future. (Definition: EEI's are essential elements of information and are of a continuing nature. SRI's are specific requests for information and are usually of one-time nature).

SECRET
SECURITY INFORMATION

INTELLIGENCE PUBLICATIONS

The intelligence publications which headquarters will send to all Detachments and Flights are:

1. CONARC Air Intelligence Training Bulletin.

2. USAF Air Intelligence Digest.

3. ADC Weekly Intelligence Review and ADC Mission Intelligence.

We are now getting only 14 copies of USAF AI Digest. We have requested 21 copies. the 5th Air Force Summary and the FEAF Intelligence Roundup will also be ordered for distribution to all flights. Flight 3C stated they have received only one copy so far and they were informed by Lt Stockstill that the first copies go to the Detachments and the remainder will go to the flights on priority distribution.

Colonel Gallagher informed the conference that none of these publications can be copied or reproduced. Intelligence Documents will be distributed as soon as possible to all Flights, but above all, don't reproduce any part or section thereof.

AIR TECHNICAL RESEARCH PUBLICATION

The ATIC studies will be screened by the Tech personnel at headquarters and passed on if applicable. Headquarters has ordered 4 copies of the ATIC Summary, one copy will go to each detachment. This publication is distributed quarterly.

There is a Joint Anglo-American Study of USSR aircraft being compiled and will be available to us in the near future.

The Characteristics and Performance Handbook on USSR Aircraft and Armament is under revision at USAF and will be available after January 53.

ETHNIC CARDS & NIS

Ethnic Cards will prove invaluable to the interrogator. They explain in detail the languages and dialects of the USSR and Satellite Countries. These are on order. The National Intelligence Survey compiled by the CIA on Russia and Satellite Countries will be available after January 1953.

Volume 39, Air Fields and Seaplane Stations of the World has also been placed on order.

==========
==========

{Part of 16th Page}

RECOGNITION JOURNAL AND JANAP's

Headquarters 4602d has ordered the Joint Army, Navy, Air Force procedure publications (JANAP) for the headquarters units and all the detachments. We have ordered only the basic JANAP's and ACP's (Allied Command Procedures) for communication format and procedures JANAP (201-B) contains the index of all JANAP's and ACP's.

...

Captain Kenyon informed the Conference that JANAP's are of little use to the layman. They are written for Technical Specialists and are not pertinent to our squadron at this time. he would like to have a communications SOP

sent from headquarters to fit his requirements.

Lt Vaughn brought to the attention of the Conference that the "Monthly Aviation Accident" publication would be applicable to our Technical Program.

...

SPECIALIZED TRAINING

Specialized training within the 4602d AISS is for the purpose of covering large areas under adverse conditions, under varying climatic conditions, with as much technical knowledge as possible. In view of this, as many persons as possible will attend various specialized training schools such as:

Special Weapons
Evasion and Survival
Guided Missiles
Atomic Weapons Indoctrination
Supply School
Parachutist Training

Because of the restricted number of personnel assigned to this organization, all personnel must be trained and cross-trained to be a double and triple-threat man in order that the squadron mission can be accomplished.

INTELLIGENCE REPORTS

The squadron regulations 200-2 and 2A are currently being revised and should be completed and distributed to the Field Units within a few weeks. The new regulation governs the submission of reports.

The new regulation 200-2 will to contain all the items formerly contained in the old regulation 200-2. Operational SOP #1 contains all the material which was omitted from the new regulation.

Sample report forms will be attached to the new regulation which will serve as a guide for the report writer. There are three types of transmittal reports:

1. Technical - Essay Type.
2. Interrogation - Essay and enumeration Type.
3. Documents.

All transmittals will be numbered in a prescribed fashion.

T - Technical
I - Interrogation
D - Documents
Example: 1-T-23

Flash reports will also be given a number for follow-up.

Example: 1-F-23

Referencing should be used whenever possible to refer to other reports rather than going to the trouble to reproduce material which is already available.

In writing reports, the telegraphic style should be utilized to the maximum. The word "SOURCE" in interrogation reports is always capitalized.

The OIC of each flight is required to sign all reports forwarded to Headquarters 4602d AISS and is further responsible for editing all reports sent from his individual flight.

SECURITY INFORMATION
4
SECRET

==========

==========

{Part of 22nd Page}

SECRET
SECURITY INFORMATION

It was pointed out that AFR 205-1 should be reviewed by all personnel and should be adhered to in all matters of classification. The OIC's have the authority to classify matter Secret and Top Secret. The authority for classification should be stamped in the top right hand corner of each document or report and also the transmittal cover sheet.

The OIC's should also put a signature block on the transmittal cover sheet as well as on each report within the material.

For reproduction purposes, all transmittals must be carbon-backed. India ink may be used instead of the carbon-back method if desired.

All units should have or procure AF Form 112.

When naming geographical locations (cities, towns, etc.), always list the geographic coordinates as well as the name. Capitalize all proper nouns.

Enclosures should be attached to the individual report of which they are part and each enclosure should be positively identified to avoid confusion.

All flash reports will have a number whether it is by letter, phone, TWX, or radio in order to positively identify it for future reference.

...

Colonel White stated that the policy would be to send the original report (form 112) to Headquarters 4602d AISS in peacetime and in wartime the original would be sent to the D/I Defense Force.

MAJOR TOOKE'S TEXT

1. Under the restrictive security requirements of ADCR 190-4, page 3, paragraph titled "Identification of Individuals", effective liaison and public relations cannot be conducted by this squadron in the efficient fulfillment of its operations.

...

3. Since this organization is based in continental limits of the United States and a part of the Air Defense Command since it is identical in mission with 7050th AISW in Europe and 6004th AISS in the Pacific, the latter two organizations both having considerable contact with personnel of the USSR, the mission and requirements as a collection agency of the 4602d and other like units could hardly remain as restricted as ADCR 190-4 would place them.

National Investigations Committee On Aerial Phenomena

The Chop Clearance List

updated: 13 Feb 2011

Fran Ridge:
In regard to the famous Albert M. Chop Clearance Letter and the Chop Letter to Henry Holt & Company here is the clearance list referred to in both letters. Items, dates, and locations are exactly as found in the original. Added click-on links take you to the detailed reports with any corrected data. For example, Item #2 shows wrong date. Major Donald E. Keyhoe, later to be NICAP's director, was investigating and reporting on history being made on the UFO subject. His status report turned out to be, "Flying Saucers From Outer Space" in 1953. This page is still under construction.

Jan Aldrich:
As Al Chop revealed in his Sign Historical Group oral history interview, the Air Force policy was if asked about a certain case, the Air Force would release the details. Chop said that Keyhoe had a good network feeding him leads and he also had access to newspaper clippings and was able to ask about many cases which the Air Force released to him in 1952. Keyhoe was very persistant and would not go away or could not be discourage with a simple, "no." Chop said when he came to work, he would find Keyhoe already there with more questions for him. An important point was: one still had to know about a case to get the details. Later, the policy was not so open which led to charges of cover up.

List of Air Technical Intelligence UFO sightings and other information secured and cleared for Major Donald E. Keyhoe by Mr. Albert M. Chop, Air Force Press Desk.

1. Laredo Air Force Base, Tex., December 4, 1952. Air Force pilot's "fight" with a UFO.

2. North Atlantic area, August 29, 1952". Three disc shaped objects seen during tracking of a balloon.

3. Santa Ana, Calif., January 9, 1953. B-29 pilots saw rapidly moving UFO lights, bluish white, in formation.

4. Pesque Isle, Maine; Jan. 29, 1953. Pilots of an F-94 and two other fighter aircraft sighted a dark gray object, with a very definite oval shape.

5. Hempstead, Long Island; October 29, 1952. Two F-94s; very strong statement on object's maneuvering, high speed, that it seemed to be controlled.

6. Duncanville, Tex., January 6, 1953. Strange lighted object seen by CAA tower operator and others.

7. Goose Bay Air Force Base, Labrador, December 15, 1952. Two Air Force crews got a momentary radar lock on a strange object. One pilot had seen similar object before, on November 26, 1952.

8. Gulf of Mexico area, December 6, 1952. B-29 training flight. Radar and visual reports, accurate details, double-checked; speeds computed showed UFO making 9,000 m.p.h.

9. Minneapolis, Minn., October 11, 1951. Extremely important sighting by two airborne balloon observers, General Mills-Navy balloon project; observers were in a plane, sighted two smoky-gray cigar shaped objects moving at terrific speed. Also one of the objects was sighted and briefly seen in a theodolite by a ground observer.

10. March Air Force Base, Calif., September 28 (actually March 23), 1951. F-86s trying to intercept a strange object in controlled orbit at 50,000 feet or higher.

11. Terre Haute, Ind., October 9, 1951. CAA communicator report; silvery object seen overhead, moving at high speed. (See next case.)

12. Greencastle, Ind. (Paris, Illinois), October 9, 1951. Private pilot sighted silvery object at (estimated) 5,000 feet.

13. Japan. Rotating lights case. December 29, 1952. Extremely accurate details, with ground and airborne radar and visual confirmation; three plane crews confirmed position, movements, and speeds.

14. Northern Michigan area, November 24, 1951. UFO observed from four locations, faster than any jet.

15. Greenville, S.C., May 13, 1952. Four amateur astronomers observed a diamond-shaped formation, oval shaped objects, wobbled in flight.

16. Patrick Air Force Base, Fla., July 18, 1952. Three officers, four airmen, saw a series of UFO lights. Objects hovered, speeded up, stopped, turned.

17. July 29, 1952. An Aircraft and Warning Station in Michigan reported an extremely important case: Ground Control Intercept tracked UFO by radar, target speed 550 knots. Chased by F-94s; one got a radar lock-on; bright flashing light seen at the same time, same position.

18. Los Alamos, N.M., July 29, 1952. Several pilots and a Los Alamos guard saw a UFO, metallic in color, in straight, fast flight object made a 360 degree turn behind fighters trying to intercept it.

19. Albuquerque, N.M.; July 29, 1952. Air Force reserve colonel at Los Alamos saw a strange ellipse shaped light; indicated its rapid speed.

20. Bellefontaine, Ohio, August 1, 1952. Two F-86s chased a strange round object, got gun camera pictures.

21. Truth or Consequences, N. M. Three cylindrical objects sighted.

22. Azores; September 26, 1952. Strange green lights seen by Air Force crews approaching the Azores.

23. Washington, D.C., July 19-20 and July 26-27, 1952. The Washington Airport cases, radar and visual sightings.

24. Norfolk, Va., July 14, 1952. Pan American pilots' extremely' accurate report to ATIC on several lighted objects maneuvering and flying at terrific speeds.

25. Pittsburg, Kans., August 27, 1952. ATIC states basic details and soil sample forwarded from town where sighting occurred. Object reported hovering over open field; bluish lights seen through ports; swift ascent when observed. Soil sample broken up, unable to analyze for radioactivity.

26. Yuma County Airport, February 4, 1953. Theodolite tracking of two elliptical shaped objects.

27. Fort Worth, Tex, February 13, 1953. B-36 radar tracking and visual sightings of strange flying objects.

28. Terre Haute, Ind., February 1, 1953. Sighting of a UFO by a T-33 pilot.

29. Japan, April 19, 1952 (March 29 is the corrected date). A T-6 pilot, Lieut. D. C. Brigham, reported to ATIC the sighting of a small disc shaped object closing in on a fighter, maneuvering around it.

30. Uvalde, Tex., July 22, 1952. Details on separate list.

31. Manhatten Beach, Calif., July 27, 1952. The "stack of coins" sighting.

32. Near Hermanas, N. M., August 24, 1952. F-84 pilot observed two strange objects (disc shaped and maneuvering at high

speeds).

33. Hamilton Air Force Base, Calif., August 3, 1952. Sighting of a series of UFOs; extremely accurate report of maneuvers, speeds.

34. Rosalia, Wash., February 6, 1953. A B-36 report, very accurate sighting description, showing object circled as B36 approached it, and light commenced flashing at short intervals.

35. Truk Island, Feb. 6, 1953. Shiny, metallic looking object sighted by officer in charge of weather station.

36. Korea area (Okinawa), February 7, 1953. Radar picked up a UFO; an F-94 was scrambled, pilot saw bright orange colored object, which changed altitudes, pulled away at high speed.

37. Tunis-Tripoli, February 11, 1953. UFO sighted by crew of an Air Force C-119, closed in, fell back, paced plane for long period.

38. South Carolina. Preliminary report on case, in February, 1953, where a man named Booth fired at an apparently hovering lighted object. (Possibility he fired on a Navy blimp is being investigated.)

39. Falls Church, Va. Preliminary report on a sighting in August, 1952; rotating light UFO seen by ground observers including police. When police officer tilted scout car spotlight upward, object seemed to descend toward it. Light was hurriedly turned off, and object rose to former height, continued rotating.

40. Erie, Pa., February 22, 1953. Former Navy gunner, now plane spotter, reported silvery disc, with very brilliant glow, estimated to be at least 150 feet in diameter.

41. Panama, Canal Zone, November 25-26, 1952. Two UFOs, tracked by defense radar, no visual sighting.

42. Series of questions in regard to Dr. Donald Menzel's theories. Answered by ATIC.

43. Questions regarding claims of Henry J. Taylor, U.S. News and World Report, Dr. Urner Liddel, Frank Scully, Dr. Anthony Mirachi. Answered by ATIC.

44. Questions on Tremonton, Utah, pictures; existence known from outside source, confirmed by Air Force, including confirmation by Intelligence officers at showing of the McLean pictures.

45. Summary of early Air Force investigation; admission by Albert M. Chop that early phase was not well handled, but attitude now changed, with a very serious approach.

46. Fact that an increasing number of Air Force personnel, including officers both in and out of Intelligence and the Project, are convinced that the saucers are interplanetary in origin, unless some strange natural phenomena. (This statement was cleared before the official statement made to Henry Holt and Company.)

47. Fact that classified briefings are given by Intelligence to various important officials (as indicated by the Finletter report).

48. Fact that various highly reputable scientists, astronomers, astrophysicists, engineers, aeronautical experts, guided missile and rocket experts, etc., are used by the Project in analyzing reports and other evidence.

49. Fact that I helped the Air Force secure the McLean pictures for analysis.

50. Fact that Col. William C. Odell submitted an article (through Mr. Chop) indicating possible exodus from an other planet; that he was not allowed to use his rank in connection with it, and that after discussing the matter with True magazine I returned the manuscript to the colonel (again through Mr. Chop).

cleared

51. Clearance of the Tremonton, Utah, case, and the facts I previously had confirmed.

This itemized list bears the following notation.

"As initialed, the above is the true account of subjects discussed, opinions expressed, and material cleared for publication."

(Signed) Albert M. Chop.

THIRD OFFICIAL USAF INVESTIGATION of UNIDENTIFIED FLYING OBJECTS

PROJECT BLUE BOOK RESEARCH CENTER

About Michael David Hall	Project Bluebook 1951-1969	The Report on Unidentified Flying Objects - Ruppelt
Research Articles	NARA Blue Book Microfilm	Bluebook Member Biographies
"Blue List" Unknowns - Berliner 1500 BB Unknowns - Sparks	Project Blue Book Special Reports 1-12 (pdf file)	Captain Edward J. Ruppelt

The Project Blue Book Research Center is under the direction of Michael Hall, a private researcher, specializing in the historical aspects of Project Bluebook. Started in 1998 the Center is devoted to the task of researching the historical aspects of the third official investigation of Unidentified Flying Objects by the United States Air Force. Email mdhall@LAF.CIOE.Com

Mr. Hall takes no formal position regarding UFOs other than the belief the UFO phenomenon is reality based and constitutes a phenomenon that warrants on-going and UNBIASED scientific investigation by private researchers and the various disciplines in the field of academia. The primary goal of the Center is to share the history of Project Blue Book and the military and civilian personnel who were involved.

As research is an on-going endeavor at the Center new information and documents have recently been located that shed new insight on Blue Book's operation. This new information includes insights into the various military and civilian personnel associated with Project Blue Book. You are encouraged to visit this site often as new discoveries and commentary will be posted on a frequent basis.

Please enjoy your visit to the Project Bluebook Research Center. Mr. Hall can be reached by any of the following methods listed and we welcome your comments and assistance regarding Project Blue Book. All inquires to Mr. Hall is held in the strictest of confidence.

Although donations are graciously accepted for research by Mr. Hall, he believes that exchanging ideas, documentation and insight is vastly more important and the Project Blue Book Research Center has a few items available for purchase to assist in researching the history of Project Blue Book.

Mr. Francis Ridge has graciously donated the Project blue bookResearch Center's Web Page. Visitors are encouraged to check out the exciting work being done by Mr. Ridge and the the NICAP website, and the Project SIGN work by Wendy Connors.

Training Information Series

TI-1, TAX DEDUCTIONS

This Training Information paper deals with expenses incurred with UFO investigation and research, and tax benefits that can offset these expenses. While this is NOT a policy statement, it is information that each FI/researcher should be aware of. This TI should be kept with other directives.

DEDUCTIBLE

A surprising number of researchers do not realize that their expenses incurred for investigations or administrative duties are tax deductible. As stated on the inside cover of every MUFON UFO Journal: "The Mutual UFO Network, Inc., is exempt from Federal Income Tax under Section 501(c)(3) of the Internal Revenue Code. MUFON is a publicly supported organization of the type described in Section 509(a)(2)." Which is to say, we are a scientific research organization.

ACTUAL EXPENSES

Actual expenses incurred (i.e. not to include estimates of worth for duties performed) include: mailings (stamps/metered costs, materials and photocopying), long distance telephone charges,
equipment purchases (e.g. telephone answering machine or two-drawer file), ID printing (letterhead or calling cards) and transportation pursuant to investigations or meetings (mileage at 12-cents per mile, still in effect this date, meals and lodging if necessary). Certainly good judgment must be used. A word processor or audio cassette recorder may be claimed if used primarily for MUFON purposes. UFO-related handbooks and encyclopedias, science texts used for the subject, nonfiction works on UFO cases that provide background information, and other investigative tools purchased for yourself or your membership are normally deductible. Receipts must be kept for all expenses. In order to submit the claim, you must use IRS Form 1040 schedule A - Itemized Deductions and Form 8283, Noncash Charitable Contributions. (Check with your tax consultant on form numbers or titles which may change over the years). A separate statement must accompany the forms which includes the above-quoted statement regarding MUFON's tax-exempt status.

We hope that this information will help you in determining what expenses are deductible.

May 1986, Revised July 1996

Training Information Series

TI-2, FIELD INVESTIGATION

By Francis L. Ridge

This Training Information paper deals with basic field investigation and local, regional, and state operational tips not covered in the Field Investigator's Manual. This revised paper was originally published in May 1986 in the MUFON UFO JOURNAL (Issue Number 217, Page 16).

REPORT SOURCES

Since the demise of the Air Force Project Blue Book in 1969, to facilitate the receipt and transmission of initial UFO reports, witnesses generally contact local law enforcement personnel, airport, airport control tower operators, weather observers, or nearby military bases. Reports are then usually referred to a local civilian UFO investigator. In the absence of a local operative the caller should be asked to contact the National UFO Reporting Center in Seattle, WA.:

.

(206) 722-3000

The person handling the call completes an initial report form or **Message Slip** , which is then sent to the Mutual UFO Network (MUFON) in Seguin, TX. MUFON then submits a copy of this form to the MUFON State Director or the nearest qualified field investigator, who, in turn, contacts the witness directly. Sometimes initial reports are filed with the J. Allen Hynek Center for UFO Studies (CUFOS) in Chicago. In this case, a CUFOS representative may contact the state directly and request an investigation. In most cases the initial report to the state arrives as a form in the mail or a phone call, depending on the urgency. With the widespread use of the internet, preliminary reports and the acceptance of the case for investigation can sometimes be conducted by email. Finally, many times initial reports are made by the witnesses themselves, either in letter form or by calling the nearby field investigator referred by police, sheriff departments or airports.

PRELIMINARY INVESTIGATION

After the witness is contacted, if the object in question appears to evade conventional explanation, an investigation may begin. Depending on the potential value of the incident a number of methods may be used. If the object appears to have been an aircraft, balloon, star/planet, the report simply is noted on the message slip and filed way. Recording it is important, since an incident harder to explain may be linked directly with it later on, indicating both were probable IFOs (Identified Flying Objects). If something in the incident truly qualifies the event as a potential UFO (description or flight characteristic such as hovering, exhibiting anomalistic motion, absence of sound where some type of actual craft is observed at close range, etc.), the case should be thoroughly investigated. This can be done either in-person or by mail depending on the situation. Caution: Investigation by mail has become more and more less productive. And determining the character and reliability of the witness can BE more difficult, if not impossible, by the limited access of written communication. If the FI cannot investigate the incident in-person or on-site it should be conducted over the telephone, the Form 1 (General Case) then mailed to be signed and/or corrected. People in general hate to fill out questionnaires.

DISPOSITION

Preliminary reports on significant cases not received from MUFON direct, but acquired without MUFON HQ knowledge, should be sent to MUFON ASAP, either by phone, "snailmail", or email:

.

MUFON_HQ@aol.com

Completed reports are submitted by Field Investigators or State Section Directors to their State Directors, who then forward the original copy to their Regional Director. Some states appoint an Investigation Coordinator to handle UFO investigations, leaving the administration activities to the State Director. After the Regional Director (who usually has about 15-20 states under his jurisdiction) reviews and checks it for completeness, the case report is then forwarded to the DDI (Deputy Director of Investigations). The report is then filed and data placed in the MUFON UFO database program. Copies of the report are retained by the state and the FI in charge. Some states also file duplicate reports, one

copy to CUFOS as a courtesy, especially if they provided the initial or preliminary report.

TRAINING SUGGESTIONS

Field Investigator and Field Investigator Trainee preparation and training should include the following:

1) The acquisition of the MUFON Field Investigator's Manual
2) Completion of the FIE (FI Exam) as soon as possible.
3) The construction of the Field Investigator Kit(s).
4) The establishment of a local hotline or "filter center".
5) Production and distribution of a "status report" or newsletter, sent periodically to local law enforcement dispatchers, airport control towers, selected news media, etc.

THE TRAINING OFFICER

To better facilitate training in a state group I highly recommend the selection of a "Training Officer". This person maintains contact by mail with FITs, sending materials, etc. I use a checklist and training record form (Training Transmittal Record) which lists all the materials available and when they were mailed. The TTR begins with the date the applicant became a member of MUFON, the date the applicant was sent a "welcome aboard" letter and sample newsletter, all the materials in the Training Information Series, and ends with the date the applicant completed the FI Exam, his score, and his promotion to FI and/or State Section Director. There is even a line and date for the "Certificate of Award" if the state uses one, such as Indiana. The trainee must send an SASE (one or two stamps) to the Training Officer for the next step of additional materials until the program is completed. The training ceases when the FIT stops requesting materials or fails to pay the state's annual dues. FITs may call the Training Officer at any time. If the state has no Training Officer, FITs should contact their State Director. If no State Director, trainees should contact Walt Andrus, MUFON's International Director, at 103 Oldtowne Rd., Seguin, TX 78155-4099. (210) 379-9216

THE FI MANUAL

This is a tool many veteran researchers never had available in the early years. The FI Manual was prepared from the combined experience of many respected and experienced UFO researchers. Any fool can ask questions from a questionnaire and write down the answers. There is more to it than that. And separating UFOs from IFOs requires knowledge, attainable through experience and proper use of the Manual. UFOlogy, the scientific study of UFOs, is a "volunteer profession", not a hobby. The FI Manual can be obtained from MUFON for $25 plus $3.50 for postage and handling. I suggest FITs send checks made out to MUFON to their State Director or Training Officer, to be forwarded to MUFON so that a notation can be made on the TTR that the FIT has complied with that requirement. The TTR is not a MUFON form or requirement, but an idea successfully used in Indiana for over ten years.

FI EXAM

As soon as the study of the Manual and other training information are completed, FITs should be ready to take the FI Exam. The State Director or Training Officer will help them acquire and submit the exam papers to the appropriate persons. The exam is an open-book test. If further assistance is needed, contact Walter Andrus at MUFON HQ.

THE FIELD INVESTIGATION KITS

Basic materials needed are listed in the Manual. I suggest at least two kits.

1) Kit One. Should include the Manual, copies of all the necessary forms, pens, paper, everything you might need for a routine on-the-spot investigation.
2) Kit Two. Would actually be the one mentioned in the Manual for collecting physical evidence.
3) Other kits. Could be designed to include everything needed for special investigations and collection. Items that need special care and support materials such as camcorders, which need tapes, batteries, chargers, etc. Or cameras, film, etc.

THE RAPID DEPLOYMENT TEAM

We use a list called a "PLL" or "Prescribed Load List" to include anything and everything a "think tank" might conceive needed during any investigation or deployment. The PLL is a major portion of our basic plan of having an alert team ready to go at any time. Years of experience has improved on the PLL. The list is checked periodically and everything on that list is loaded before we hit the road. The point is, organization and speed is important. You may only get one

chance in your lifetime to document an actual close encounter. When bonified UFOs decide to appear, confusion and panic begins. And Murphy's Law works best in UFOlogy. So, you still want to be a serious Field Investigator?

THE LOCAL HOTLINE

The idea of a UFO investigation means nothing if people can't contact you. And if the UFO sighting is "in progress", you want to view it yourself and possibly identify it or document the rare occurrence with videotape, etc. It is not necessary to have a dedicated line used strictly for UFO reports. But, if you do not, make sure you have "call waiting". I call it "call bothering", but it comes in handy. The phone near a note pad or pad of "message slips" is perfect, but another useful tool is the cordless phone. With that you can be outside actually looking for the locally-reported UFO and talking to the witness, other spotters in your group, or the control tower, etc.

STATUS REPORT OR NEWSLETTER

A tip for FIs and SSDs is to put out a periodic status report to dispatchers (local police, sheriff, state police) and airport tower controllers, and selected news media. Keep your local group up-to-date and constantly reminded of your telephone number and presence. An initial visit in-person is a good idea. Dress appropriate. Don't wear sunglasses or try to look like the CIA! If the newspaper does an article on your efforts, that could suffice. However, if you are good at PR, go for it! If you are in a good state group with a state newsletter being printed periodically, you're in luck. All you have to do is copy the newsletter, add a slip sheet with your information and phone number, and mail out. Caution: If your state newsletter is inappropriate or too radical, make up your own. If you look like a kook, or belong to a group of kooks, law enforcement will have nothing to do with you. Keep your theories to yourself. Remember, you are a serious researcher and you are searching for the truth, no matter what that turns out to be. It's called science. Dispatchers generally don't want to handle UFO reports. If they know you are in place and your phone number is handy, you can bet that they will hand off the report to you, unless they are ardent skeptics. Even then they want to appear to the public as concerned and will probably have the witness call you. Finally, you might make up a card (business or 3x5 or larger) to place under their desk glass or put on the bulletin board.

OTHER SUGGESTIONS

To become familiar with things in the sky, especially at night, you should spend time out on SKYWATCH. These are group learning sessions. And having "spotters" distributed around the county you live in can come in handy, too, if someone reports a UFO in your area. Telephone "patches" are very useful, but must be used with caution. Radio Shack units turn the cassette recorder on and off by simply picking up the phone, great for outdoors use. Other useful items include a strobelight or spotlight, CB radio or cellular phone, bionic ear, etc. One of the most important tools I have saved until last. The camcorder is a valuable piece of equipment in more ways than one. It's better than a movie camera and has sound. If you have one, make sure it is charged, loaded with tape, and ready to go at all times.

FINAL COMMENTS

Being prepared is the most important aspect of being a serious investigator. Most investigations will be routine and somewhat boring. If you must travel to investigate an incident, make sure you are prepared. A later return to complete an extra form may not be in your schedule. And witnesses might decide one session with you is all they want.

Here are a few other suggestions:

1) Use your ID card, but don't abuse it. Laminate it and have it clipped on your pocket or lapel. That way you don't have to make an issue of it.
2) FITs should be accompanied by a trained FI if at all possible.
3) If the witness is a child under 16 or a woman, one of the investigating personnel should be a woman.
4) If you obtain anything from the witness other than a signed report form, leave a receipt.
5) Don't discuss your theories. Get your work done, be courteous, and get out. If they ask questions or want information, tell them you will send some information. There are fact sheets and you have your newsletter.
6) One of the most important things you need to know is to let the witnesses tell what they saw and how it all started, in their own words and without interruption. If you interrogate the witnesses from a questionnaire only, the story you will get will be out-of-sequence and may be lacking a lot of important details. Answering a battery of "Joe Friday" questions is

not only distracting, it is unprofessional.

7) Finally, when investigating a "sight and sound type UFO" report, be sure to look around for an intermittent or continuous conventional sound source nearby. Witnesses may be in unfamiliar territory when they have a sighting, and the sound they associate with it may have a local and conventional explanation. A normal or even noisy (meaning needing maintenance) air conditioner, or blower on a grain dryer, or unfamiliar animal sound, may become associated with the sighting. And this sighting could be a genuine anomaly or a misidentification of a common object, but you must not assume the sound and the sighting event are related.

May 1986, Revised July 1996

Training Information Series

TI-3, SOURCE TESTS & EVALUATION

By Francis L. Ridge

This Training Information paper deals with possible, definite, or not-applicable sources for UFO sightings. It also provides a checklist for the sighting evaluation based on all the information in the report. Used initially as a training aid, copies made of these checklists were designed to be used in each case investigation as part of the final report.

SOURCE TESTS

These two checklists, Natural Source and Man-Made Source, are used to try to identify the sighting and later becomes part of the evaluation record. Due to the lack of space in these forms the appropriate items should be simply checked, then expanded on in the "Comments" portion of the report.

SIGHTING EVALUATION

This form provides a checklist and is the result of the overall analysis of the data collected by the FI. It also becomes part of the final report.

COMMENTS OF INVESTIGATOR

Besides the three pages mentioned above, the final report includes an additional report whereby the person completing the case record can add his/her comments. This is referred to as "Comments of the Investigator". For simpler cases the comments are usually brief. For more complicated or detailed cases the comments are more extensive. It includes comments about the possible cause of the sighting if the sighting may be explainable or reasons why the case remains unexplained. Many of these comments are recorded in letters and notes during the investigation. However, it is suggested that comments be re-capped in a separate report. The investigator should list his comments regarding the possibility or lack thereof of certain stimulus for the sighting based on the Source Test. Special note needs to be made concerning reported sounds noticed during the observation of the UFO. A witness in an unfamiliar area may detect a sound from one source and a visual observation from another source, both identifiable in prosaic terms. Or the object may be unidentified and the sound associated with a nearby, but invisible, power transformer or air conditioner, etc. The investigator should describe where the interrogation took place and who was present, names of other witnesses, etc. This would include who assisted in the investigation. The investigator should give his assessment of the observer(s) or report reliability. The observer may be sincere, but not be able to explain the particulars of the case properly or in terms that are usable to the investigator. His/her report may be too brief or lacking clarity for a determination to be made. A good example is where the witness only answers the questions with brief statements or simply a yes or no. A good witness is a credible person who tries to give as much detail and accurate information as possible.

Case Name _____ Date of Incident _____

FI In Charge _____

SOURCE TEST, Page One

This form, which needs to be attached to the final report itself, is a checklist of what natural objects were considered in an effort to identify the stimulus for the reported UFO. The reasons for rejecting or suspecting the possible stimulus, should be clearly noted. The not applicable items can be left blank. Use right side of form or separate sheets for notes.

NATURAL SOURCE:

1. ORGANIC SOURCE, TERRESTRIAL ( ) a. Animal ( ) b. Bird, Reptile ( ) c. Insect ( ) d. By-Product (spider webs, seeds)

2. INORGANIC SOURCE, TERRESTRIAL ( ) a. Adverse Weather (whirlwind) ( ) b. Atmospheric (clouds, moondogs) ( ) c. Lightning (ball, bolt, heat) ( ) d. Swamp Gas ( ) e. Other (debris, mirage)

3. INORGANIC SOURCE, TRANSTERRESTRIAL ( ) a. Bolides ( ) b. Meteorites/Meteors

4. INORGANIC SOURCE, EXTRATERRESTRIAL ( ) a. Comets ( ) b. Moon ( ) c. Planet(s) ( ) d. Star(s) ( ) e. Sun

5. OTHER (explain)

SOURCE TEST, Page Two

This form, which needs to be attached to the final report itself, is a checklist of what man-made objects were considered in an effort to identify the stimulus for the reported UFO. The reasons for rejecting or suspecting the possible stimulus, should be clearly noted. The not applicable items can be left blank. Use right side of form or separate sheets for notes.

MAN-MADE SOURCE:
1. AIRCRAFT ( ) a. Advertizing ( ) b. Commercial, Military, Private ( ) c. Other (blimp, experimental, helicopter)

2. BALLOON ( ) a. Hot Air ( ) b. Weather, Test, Etc. ( ) c. Other (prank, toy, etc.)

3. FIXED STRUCTURES ( ) a. Buildings ( ) b. Lights (ground, search, etc.) ( ) c. Towers (water, power line, radio)

4. HOAX ( ) a. On Witness ( ) b. By Witness

5. MISSILE ( ) a. Chemical (cloud, smoke, etc.) ( ) b. Cruise-type ( ) c. Launch

6. SATELLITE ( ) a. Orbiting (high-altitude) ( ) b. Re-Entry (similar to meteor)

7. OTHER (explain)

SIGHTING EVALUATION

The result of the overall analysis of the data collected by the field investigator.
1. Berliner Strangeness Scale:
( ) 0 - Identified as a known object/phenomenon or a report lacking clear UFO content
( ) 1 - Night light with no apparent object
( ) 2 - Night object
( ) 3 - Daylight object seen at a distance
( ) 4 - Night Close Encounter of the First Kind (within 500')
( ) 5 - Daylight CE-1
( ) 6 - Ambiguous CE-2 (trace, capable of being understood in more than one way)
( ) 7 - Unambiguous CE-2 (apparently only one explanation)
( ) 8 - CE-3 (occupants on or near craft)
( ) 9 - CE-3 (occupant reaction to witness)
( ) 10- CE-3 (with meaningful communication)

2. Berliner Credibility Scale:
( ) 0 - Witness(es) lacking believability
( ) 1 - Single average witness
( ) 2 - Multiple average witness
( ) 3 - Single exceptional witness
( ) 4 - Multiple Exceptional Witnesse

( ) 5 - Radar/visual observation
( ) 6 - Still photo(s) by amateur
( ) 7 - Still photo(s) by professional
( ) 8 - Movie/video by amateur
( ) 9 - Movie/video by professional
( ) 10- Live television

3. Speiser Strangeness Factor:
( ) S1 - Explainable or explained
( ) S2 - Probably explainable with more data
( ) S3 - Possibly explainable, but with elements of strangeness
( ) S4 - Strange; does not conform to known principles
( ) S5 - Highly strange: suggests intelligent guidance

4. Speiser Probability Factor:
( ) P1 - Not credible or sound
( ) P2 - Unreliable witness; possible hoax
( ) P3 - Somewhat credible or indeterminate
( ) P4 - Credible and sound
( ) P5 - Highly credible, leaving almost no doubt

( ) Great Significance
( ) Significant
( ) Limited Merit
( ) Borderline

TI-5, CASE SUBMITTAL CHECKLIST

By Francis L. Ridge

This Training Information paper provides what is suggested regarding content of case submittal based on many years experience of field investigators. Although this is covered in the MUFON Field Investigator's Manual, the format used is designed to be as a checklist. Used by the State Director and or DDI , the form can be used to request further information from the Fl. Finally, copies of the form can actually be be used as part of the final report.

SIGHTING BACKGROUND
A description of the circumstances surrounding the receipt of the initial UFO sighting information or abduction report. Simply attach copy of initial report form or "message slip".

Notice of Initial Report - Message Slip
Initial Form/Material Checklist

SIGHTING ACCOUNT
Form 1, General Cases, should include witness notes or brief chronological composite or consolidation of the UFO sighting account.

SIGHTING INVESTIGATION
Activity Log. Simple chronological log by date, time and place denoting the tasks the FI carried out during the investigation. Sample on page two.

INTERVIEW AND INTERROGATION
FI Notes. A description of the interview and interrogation. This should include where and how the interview took place (mail, telephone, or onsite).

ADDITIONAL WITNESS CHECK
FI Notes. The circumstances surrounding how, when, and where additional witnesses were located and any subsequent interviews and interrogations including the FI's personal impressions of these witnesses and their home environment, interests, etc.

SOURCE TEST
A list of what natural or man-made objects were checked in an effort to identify the stimulus for the reported UFO is attached to this report. The reasons for rejecting or suspecting each, as being the stimulus should be clearly noted. (See TI~3).

WITNESS BACKGROUND CHECK
FI Notes. A list of the persons checked, their comments about the witness's character and their relationship to the witness. This section should include the FI's impressions of the witness personality, credibility, etc.

OTHER DATA NEEDED
Includes other forms, drawings, as needed for special evidence.

COMMENTS INTERROGATING FI

THE INVESTIGATION ACTIVITY LOG
If you don't have a computer or word processor, use a typewriter or a notebook. Title the log by location and date. Keep separate logs for different cases.

THE LOG'S CURRENT DATE IS THE DATE OF THE LAST ENTRY. If stored on computer, you simply load it, make a new entry, and save.

SAMPLE LOG

Subject: Investigation Activity Log "Jones" Case, 1/4/95

Jan 5, 9:00 PM. Received preliminary report on Jones case, a CE-2, set date for interview on 1/9 at 7:00 PM, at witness' home.

Jan 6, Sent copy of preliminary report (message slip) to MUFON since this is a priority case.

Jan 9, 7:00 PM. Conducted interview on-site. Witness drove us to location approximately 2 miles from home. Was assisted by FIT Bob 0lson.

The time of entry is important for certain things, such as when you were contacted about the case or when you called checking on a lead. Or when you went to the site and took measurements or photos. It's a good habit to put down the date AND time for each entry. Keep in mind, you don't have to make a formal entry every time you do something, just jot down the date and time on your notes. Then, when you do make your log entries you simply gather your notes in chronological order and summarize the action taken.

When asked by someone (the Deputy Director of Investigation or Regional Director, or members of the media) you will have these notes to refer to.

The Fl Manual tell us we need to keep an activity log on each case. We in Indiana do this on each and every one. In 1993 it became a real lifesaver. On July 13th of that year there was a mini flap in NE Indiana that occurred within the period of one hour and involved 50 witnesses and 20 filed reports. The stack of paperwork was about 2" thick.

Final Report Checklist

Training Information Series

TI-6, FACTS ABOUT UFOS

The subject of this Training Information Series is facts about UFOs. Copies of this TI are periodically and routinely given to news media, law enforcement, airport control towers, etc. Discussed are the phenomenon, the categories, the kinds of physical evidence, the research, and how to report a UFO.

THE PHENOMENON

From time to time throughout history there have been reports of strange things seen in the sky. In 1946 a series of sightings occurred in Sweden. And in the summer of 1947 there were
thousands of sightings in a six week period, and at least 350 people found themselves first and second-hand witnesses to what may have been an actual crash of a UFO with occupants. Since 1947, reports of UFOs have become increasingly numerous in the U.S. and other parts of the world. These reports continue in much the same form today.

UFO sightings are reported to MUFON (Mutual UFO Network) at Seguin, TX, and CUFOS (J. Allen Center for UFO Studies) in Chicago, IL, by a broad spectrum of the public, particularly through local law enforcement agencies. UFOs themselves are reported by many highly responsible people, e.g. military and civilian pilots, air traffic controllers, scientists, etc.

The majority of present-day sightings prove to be misinterpretations of natural phenomena: meteors, planets, and stars, or man-made objects such as airplanes, balloons, and satellites. These are referred to as identified flying objects (IFOs). A smaller number of reports cannot be investigated properly due either to lack of pertinent details or the inaccessibility of witnesses. In any given set of UFO reports, however, there remains a residue of about 5-10% which are truly puzzling, not only to witnesses, but to technically trained investigators who study the reports.

While UFO reports differ in many details, there are also a number of similarities recurring in such features as shape, maneuverability, appearance and disappearance, sound and color. There are several basic observational categories into which the unidentifieds may be classified.

The number of sightings worldwide must be in the millions, but there are over 106,000 entries on the UFOCAT (UFO Catalog) computer database. And over three thousand sightings have been cataloged by Dr. Richard Haines, a leading expert on sightings from aircraft, in his "Selected Sightings From Aircraft", observations from over 40 countries. "A long history of UFOs pacing aircraft or rockets, circling them, and fleeing when pursued by military jets, suggests some form of intelligence and curiosity."

RELATIVELY DISTANT SIGHTINGS

1. Nocturnal Lights (NL): These are sightings of lights in the night sky whose appearance and/or motions are not explainable in terms of conventional light sources. The lights appear most often as red, orange, or white. They form the largest group of UFO reports. Although unexplained, this group generally doesn't provide enough information for scientific study, but is still recorded on computer.

2. Daylight Discs (DD): Daytime sightings are generally of oval or disc-shaped metallic-appearing objects. They can appear high in the sky or close to the ground, and they are often reported to hover. They can seem to disappear in the distance with astounding speed. Daylight sightings are much rarer than nighttime sightings. As mentioned earlier, one of the largest UFO waves in UFO history occurred in a six-week period in the summer of 1947. The wave ended abruptly due to the "balloon" explanation and subsequent ridicule of the Roswell object put forth by the Army Air Force at that time.

3. Sightings From Aircraft. Dr. Richard Haines has presented a summary of his extensive research into pilot-UFO-sighting reports. He now has a catalog of over 3,000 pilot reports. **Sightings From Aircraft**

4. Radar/Visuals (RV): There are literally hundreds of reports of radar contact with UFOs. Of special significance are unidentified "blips" on radar screens which coincide with and confirm simultaneous visual sightings by the same or

other witnesses.

With the Sturrock Panel, Velasco presented information on radar cases drawn in part from the files of GEPAN/SEPRA. He pointed out that one catalog (the "Weinstein catalog" now under development at GEPAN/SEPRA), with 489 cases in all, contains 101 (21%) radar/visual cases (cases that involve both radar detection and visual observation), and the files of the US Air Force Blue Book project contain 363 cases of which 76 (21%) are radar/visual cases. Since 1945, reports of aeronautical cases have been collected by order of the French Air Force Chief of Staff. From 1977 on, information from civil and military observations made in French air-space have been sent to GEPAN/SEPRA.

RELATIVELY CLOSE SIGHTINGS - WITHIN 200 YARDS

1. Close Encounters of the First Kind (CE-1): Though the witness observes a UFO nearby, it does not appear to interact with either the witness or the environment.

2. Close Encounters of the Second Kind (CE-2): In these encounters there is a reported interaction between the UFO and the environment which may vary from interference to imprints or burns on the ground and physical effects on plants, animals, and humans. Of special interest is a group of such sightings involving vehicle interference. CUFOS published a report in 1981 with 441 cases. The report concluded: "Since an earthly origin for machines performing in this way for so many years can be ruled out, ET becomes the simplest and most direct hypothetical explanation."

3. Close Encounters of the Third Kind (CE-3): In this category entities generally of a more-or-less humanlike appearance (now referred to as "humanoids") are reported in or closely associated with the UFO. There is no direct contact or communication with the witness. In regard to this group, based on computer studies of worldwide, national, and regional data, CE-3's have been proven to be extremely rare occurrences. The UFO Filter Center can only vouch for national data from 1986-on for the United States, or from the beginning of the century for regional entries. Regional entries show that CE-3's represent less than 1.7% of the total regional database. The latest entry was for September 20, 1992, at Sullivan, Missouri.

Isolated encounters with humanoids with no apparent UFO or craft in the vicinity are referred to as "Humanoid Reports" and are not classified as CE-3's. An example would be of a humanoid seen in a field or near a road, such as reported in the early 1970's. Encounters with humanoids which interact with humans, such as bedroom visitations or attempted abductions, fall within the CE-4 classification below. Of particular interest is the relationship between CE-3's and the total CE group. Except for Close Encounters since 1985 all events prior to that period indicate simultaneous peaks.

4. Close Encounters of the Fourth Kind (CE-4): Let it be made clear that, prior to the massive press and media coverage of the 80's concerning UFO abductions, there were sightings of solid objects by qualified observers. There have been many reports, since 1980 and increasing in recent years, of incidents involving very close contact, involving temporary detainment of witnesses. These are usually referred to as UFO abductions. A better name might for an alleged abductee might be an "experiencer". Statistics and graphs on CE-4's are impossible to produce because reports are not filed expeditiously as other reports and date and time parameters are almost always unknown. Many are never filed at all because cases are on-going. These incidents appear to have begun early in the century and in many instances follow bloodlines through several generations.

Many believe that if abduction researchers followed the same guidelines as seasoned UFO researchers, the number of unexplained or actual incidents would be only a fraction of the reported total. Since 90% of the UFO sightings are actually "IFOs", honest evaluators might conclude that, in regard to "abductions", the experiencer is reporting what he or she believes actually happened but the causative factor may fall under other contexts with no relation to UFOs at all.

The best cases to ponder would be cases under investigation by qualified researchers and dealing with at least some conscious memory of an alleged abduction. Make no mistake about it. It is apparent that some or many of these incidents are for real.

WHAT ARE UFOS?

The world view now varies between the "nuts and bolts" (ET), "earthlights", "plasmas", "time travelers", and "parallel universes". Since the alleged craft sometimes appear to "dematerialize" right in front of the witnesses, many think UFOs cannot be real physical objects. As amply put by Richard Hall in "Uninvited Guests": "Popular authors have exploited

these themes, especially since the ETH (Extraterrestrial Hypothesis) has bogged down for lack of proof, but they remain essentially science fiction notions inaccessible to scientific verification".

KINDS OF PHYSICAL EVIDENCE

After some sightings, indications of the presence of something most unusual have been found.

1. Physical traces. Compressed and dehydrated vegetation, broken tree branches, and imprints in the ground have all been reported. Sometimes a soil sample taken from an area where a UFO had been close to the ground will be determined by laboratory analysis to have undergone heating or other changes not present in the control sample. CUFOS has a computer file of over 5600 such cases, 4,104 cases involving actual UFO sightings. **Trace Cases**

2. E-M Effects. Includes vehicle interference cases. With E-M (Electro-Magnetic) cases, the UFO appears to cause a number of effects on automobile ignition systems. CUFOS has a computer catalog of over 500 such cases. Within Dr. Haines catalog of over 3,000 pilot reports, approximately 6% involve transient electromagnetic effects allegedly associated with the presence of strange objects. Haines has compiled a catalog of 185 such EM events. **E-M Effects**

3. Physiological effects. Medical verification of burns, eye inflammation or temporary blindness, or other physiological effects attributed to encounters with UFOs, even healings of previous conditions, can also constitute evidence, especially when no other obvious cause for the effect can be found by the medical examiner.

4. Radarscope photos. A series of photographs of a radar screen on which a "blip" of a UFO appears is a powerful adjunct to a visual sighting because it provides quantitative evidence of the UFO's motions and velocity. **Radar Cases**

5. Photographs and videos. While it might seem that photographs would constitute the best evidence for UFOs, this has not been the case. Hoaxes are common but can usually be exposed quite easily, but even those photos which pass the test of microscopic analysis and/or computer enhancement often show no more than an object of unknown nature and frequently out of focus. For proper analysis of a photo it is necessary that the original negative be available and the photographer, witnesses, and circumstances under which the photograph was taken be known. Polaroid photos are more difficult, but not impossible to fake.

Of special interest is the influx of relatively good videos of UFOs. If properly used, a camcorder is almost fully automatic, eliminating most of the problems found in photos and drastically increasing the number of "frames" per study.

THE RESEARCH

The persistence of the UFO phenomenon and its worldwide occurrence have led to a growing number of scientists to involve themselves in UFO research. The attitude of scientific community is slowly changing.

HOW TO REPORT A UFO

If you yourself should see a UFO, first try to get as many other witnesses as possible and take a photograph (or better yet, a video of the object. Take careful note of its appearance, its motion, the time and duration of the sighting (a camcorder mode will give you a time/date) and the directions involved. Caution: A video viewer will temporarily blind at night, so aim the device quickly and try to pan as well as watch. Avoid zooming! Put objects of reference in the background wherever possible.

If you misplace the hotline number to report your sighting, you can call local law enforcement or the nearest airport control tower. The following are the UFO hotline numbers:

National UFO Reporting Center: (206) 722-3000
MUFON: (800) 836-2166

The major UFO organizations are: 1) Mutual UFO Network, Inc., 103 Oldtowne Rd., Seguin, TX 78155; 2) Allen Hynek Center for UFO Studies, 2457 W. Peterson Ave., Chicago, IL 60659; 3) Fund for UFO Research, PO Box 277, Mount Ranier, MD 20712.

Training Information Series

TI-7, PRESCRIBED LOAD LIST

This Training Information Sheet deals with various equipment for field investigators. It is an expansion of page 34 of the MUFON FIELD INVESTIGATOR'S MANUAL. This paper also discusses home office and skywatch equipment. Instructions on the use of said equipment can be found in the MANUAL and TI-2, FIELD INVESTIGATION. Because of the state- of-the-art regarding some equipment, some of these items may be obsolete.

For instructions regarding the use of these items, please refer to other TI's, in particular TI-2, "UFO Investigation".

FINANCIAL LIMITATIONS

The following lists are comprised of items used in field investigations. Because of the financial limitations inherent in any volunteer organization, the items have been divided into three categories: "Necessary", "Desired", and "Optional", according to priority and/or expense. For example, not everyone can afford to purchase a good Geiger counter and be professionally trained in its use. Thus, this piece of equipment has been placed in the optional list. None-the-less, the State and/or State Section Director should contact their local Civil Defense Director or Civil Defense Radiological Monitor. Usually Civil Defense is most cooperative in this respect. In some instances, CD personnel may be interested in becoming field investigators or consultants. Arrangements might be made to utilize their expertise and equipment.

NECESSARY EQUIPMENT

Although the investigator will generally not always employ all of the items in this list during any given investigation, such items, nevertheless, should be readily accessible to him/her when the need arises. Thus, it would be advantageous to store these items in a special container, suitcase, or tool box-type unit. Experience has shown that one kit pertaining to paperwork and related materials should be the primary kit.

MUFON ID Card
Camera & film
MUFON questionnaires
Sample containers (ziplock bags)
Field Investigator's Manual
Tape measure, ruler
Compass (good quality)
Flashlight (extra batteries)
Clipboard or notebook
Farmers almanac (ref 1)
Area maps
Magnifying glass
Paper
String
Pencils, pens
Knife
Star finder (ref 1)
Tweezers

DESIRABLE EQUIPMENT

This second list contains items which are extremely helpful to the UFO investigator and should be added to your kit, if possible and practical.

Cassette recorder & tapes
Supply of stakes
Color chart
Small garden trowel
Elevation indicator
Shovel

Arc indicator
Boots
Binoculars
Disposable polyethylene gloves
100' steel tape
Insect repellent
Several 100' chalk lines
First aid kit
Camera flash attachment
Personal MUFON calling cards
Plaster of Paris or paraffin
Detailed almanac (ref 1)

OPTIONAL EQUIPMENT

The items in this list are valuable tools for any UFO investigator. Some instruments require a trained specialist to operate correctly. Someone with a background in Chemistry or Physics would be a likely candidate for locating and operating a Scintillation Spectrometer. The contents of these kits are dependent upon the capabilities and resources of the Network talent.

Geiger counter
Video camera & videotapes (Ref 3)
Pocket spectroscope
Camera light meter
Scintillation spectrometer
Camera tripod
Magnetometer
Topographical maps
Camera & diffraction grating
Aerial maps (ref 4)
Police scanner (ref 2)
Rangefinder

OPTIONAL EQUIPMENT FOR OFFICE OR CAR

Cordless telephone
Telephone recorder
Cellular telephone

OPTIONAL EQUIPMENT FOR SKYWATCH OR RAPID DEPLOYMENT TEAM

Whisper 2000 or bionic ear
Halogen spotlight
Strobe light
Telescope
Night vision goggles
Polaroid sunglasses (ref 5)

References:

1. A subscription to "Astronomy" or "Sky & Telescope" could replace the almanac. Current star & planet positions are found in each monthly issues of both magazines. Of course, if you have a personal computer, there are numerous inexpensive programs such as "Skyglobe" and "EZ Cosmos".
2. Where legally permitted only.
3. See TI-12, Camcorders & UFOs.
4. Aerial photos and maps in the form of soil surveys can be obtained from your county office of the U. S. Department of Agriculture, Soil Conservation Service.

5. Polaroid lenses are supposed to show areas of polarization around UFOs due to their alleged strong magnetic field. This would be one way of verifying a daylight sighting of a genuine UFO.

The prospect of being wrong
need not frighten us a bit.

- Alan E. Nourse

CHAPTER 5

ELECTRICAL INTERFERENCE

UFOs have been notorious for stopping automobiles at close range. It is relatively common for a motorist, cruising down the highway, to have his engine sputter, lose power, or stop running. At night, the headlights frequently grow dim or go out completely. Also, static is heard on the radio, and it may stop playing. The driver stops at the side of the road and gets out to search for the cause. Only then does he notice a large, glowing disc nearby, commonly hovering at low altitude over his car.

These effects are not limited to automobiles, but occur with all kinds of vehicles that are powered by internal combustion engines, except diesels. Incidents of engine interference or failure have been reported for aircraft, motorcycles, trucks, buses, power mowers, tractors, and other farm machinery. In all cases, the engines ran normally after the UFO had departed.

A list of 106 cases of electromagnetic interference by UFOs has been compiled. (1) These examples occurred at scattered locations in North America, South America, Europe, and Australia from August 1945 to November 1963. The age of these reports need not cause concern because they are thoroughly typical of many similar events of more recent years.

In this list, more than sixty vehicles are reported to have had their engines miss, lose power, or fail completely during the sighting. Simultaneous interference on the radio and/or fading or complete loss of headlights is common. Unfortunately, there is insufficient data to identify the cases that occurred in the daytime when headlights would not be turned on. Nor is it clear in which cases the vehicle was equipped with a radio, or whether any radio was being played. At first glance, the list appears to provide information regarding the relative susceptibility of engines, radios, and headlights to interference by UFOs. One would expect, for example, that upon approaching a UFO a driver would observe the loss of his radio, headlamps, and engine, in that order. But such is not the case. In three instances, the engine, radio, and lights were all affected; in two cases, they all failed, in the third, the engine and radio failed, but the lights only dimmed. While this last case suggests that lights may be the most resistant to UFO interference, several counter-examples belie this notion. In some cases, the lights dimmed or failed while the engine was unaffected. Thus the engines, radios, and lights appear to be roughly equal in their sensitivity to UFOs, a rather surprising observation in view of the extreme sensitivity of radios to ordinary electrical interference. Driving close to power transmission lines which operate at 60 cycles/second usually causes static on the radio without affecting the lights and engine. The implication is clear: the mechanism of UFO interference is something other than low frequency, electromagnetic radiation.

Close examination of the reported cases discloses a gradation effect and suggests that the influence on the vehicle is related to the strength of emanation or proximity to the UFO. One engine missed as the lights flickered - another engine sputtered as the lights only dimmed - a third engine ran normally as static was heard on the radio and the lights dimmed. An expected pattern thus emerges. A weak influence from a UFO at a great distance mildly disturbs the engine, radio, and lights, whereas a

stronger influence upon closer approach causes all three to fail completely. In a previous chapter it was shown that the intensity of

the field radiated by UFOs was also variable; hence, the graduated response could occur while the distance to the UFO remained fixed.

Internal Combustion Engines

As everyone knows, the common automotive engine operates by drawing air and vaporized gasoline into a combustion chamber where the mixture is ignited with an electrical spark. Disruption of a running engine by an object at some distance must effectively interfere with the fuel, air, or spark, or any combination thereof. The flow of both fuel and air is a consequence of the piston evacuating the cylinder and drawing air through the carburetor, where it picks up minute droplets of fuel. These functions must continue as long as a vehicle is moving and in gear, whether or not the engine is delivering power. In other words, these two essential functions of a running engine which is pulling a heavy vehicle cannot be stopped by any means short of physically halting the vehicle, like against a concrete overpass. The only way to stop a running engine, therefore, is to disrupt the electrical system. Thus the influence of UFOs upon automobiles is most assuredly electrical or electromagnetic in nature. This inference, based on the effects upon radios, is surely correct. Any doubt on this point is completely dispelled by an unlikely coincidence in Italy in 1954 when a UFO flew over a conventional tractor and a diesel tractor running side by side. The conventional tractor was stopped, but the diesel was not. (2) Similarly in England, the driver of a truck told the police that a hovering UFO knocked out his lights and radio while his diesel engine continued to run. (3)

The above line of reasoning may seem to be very elementary, but it was by no means obvious to the Condon Committee. (4) The primary effort of that investigation into the interference with engines was directed toward experimentally determining the effect of strong magnetic fields upon the components of the electrical system. In very strong fields up to 20,000 gauss, insignificant effects were measured for the spark plugs, battery,

and lamp filaments. For the common steel encased coil, the spark was occasionally interrupted at 20,000 gauss. It was concluded that in view of "the magnetic shielding action of the sheet steel in the car body, the strength of the field outside the car would have to be considerably greater than this." Such strong fields would permanently alter the normal magnetic pattern of the car body. Hence, a car exposed to a strong magnetic field supposedly surrounding a UFO would carry a record of the event. Tests were conducted on a car that was alleged to have been stopped by a UFO. Its magnetic pattern was essentially the same as that of another car of the same make and model. The inquiry was dropped at that point with the conclusion that the car had not been exposed to an intense magnetic field. The implication was that it had not been exposed to a UFO, but of course, it may well have been stopped by a UFO without experiencing a strong magnetic field.

Instead of focusing exclusively upon strong magnetic fields, the investigation should have encompassed fluctuating, electromagnetic fields that could have effects upon engines, radios, and headlamps without altering the magnetic signature of the car body. This approach was suggested by David R. Saunders, who held a key position on the project . (5) High-frequency electromagnetic radiation is an excellent candidate for the cause of UFO interference with cars. It might be found capable of inducing high voltage surges in the secondary winding of the coil. The resulting sparks in

the cylinders would be completely out of time with the sequence of events required for an engine to run. Timing of the spark is quite critical; an engine will not run if it is only slightly off timing. This mechanism might explain why engines seem to be unusually sensitive to UFO interference. Regarding radios, it is clear that a high frequency field could cause static, or if strong enough, saturate the input circuit, thereby blocking its normal reception. A physical basis for the effect upon headlamps is the increase of resistivity of tungsten in the presence of microwave energy (6) Increasing resistance would reduce the flow of current through the lamp filament thereby diminishing the

.

---

heating. The lamp would grow dim as the temperature dropped, or become entirely extinguished when the current became too low

The "tungsten" effect offers an alternative explanation for engine failure also, in that distributor points, being made of tungsten alloy, would be subject to interference. An increase of resistance would reduce the current in the primary winding of the coil, thus reducing the spark intensity in the secondary winding or eliminating it altogether. As the distributor cap enclosing the points is non-metallic, the absence of good shielding could make the ignition system extremely sensitive to this mechanism. Two more incidental effects, related to vehicles, that must be accounted for by a valid interpretation are a wildly oscillating behavior of both ordinary compasses and magnetic speedometers.

Radios

As mentioned in the previous section, automobile radios, and those installed in other vehicles, such as aircraft, have been disrupted on many occasions by UFOs. It may be assumed that most of them were amplitude modulation (AM) sets, as prior to the mid sixties frequency modulation (FM) receivers in automobiles were comparatively rare. Among the thirty-two cases of radio interference in the Hall list, some did not fail completely but emitted "static," "shrieking," "pulsating," and "roaring." Others produced intelligible signals such as "steady dit-dit-dit," "loud beeping," and "steady dot-dot-dash." Two such sounds were produced by radios in police cars. It appears that standard AM receivers are merely disrupted, whereas a message content is detected in the bandwidth commonly used for police communication. Again, an unusual coincidence provides some confirmation. In November *1957,* a Canadian observed the simultaneous failure of his battery radio and a portable shortwave radio as a UFO hovered at low altitude. The regular portable simply failed, but "a single tone was heard on one shortwave frequency." (7)

While the radio interference and the sighting were simultane-

.

---

ous, there is no indication in these cases that the recognizable signals were emitted by the UFO, and there is ample reason to suspect that they were not. Nearly all medium-power marine beacons used for radio navigation, broadcast a steady repetition of dot-dash signals corresponding to a single letter in International Morse Code. A few coastal beacons transmit only a series of dashes, and are sometimes referred to as "beepers." (8) Aeronautical beacons, on the other hand, transmit coded signals of three letters, such as SF0 for San Francisco. (9) Hence, the question arises as to whether one can identify marine beacons that are responsible for the above signals, namely,

Signal	Letter	Vicinity

***	S	Kodiak, Alaska
beeping	none	Hammond, Indiana
**_	U	Hobbs, New Mexico

If such exist, they would be tabulated in *Radio Navigational Aids,* Publication No. 117-A and 117-B, U.S. Navy Hydro graphic Office.

The inference to be drawn here relates to the mechanism of UFO interference. Rather than saturate or block the input circuit, radiant energy from the UFO may be disturbing the highly sensitive tuning adjustment, that is, by detuning the station from that to which it had been previously set. Thus police radios might be picking up signals from the marine band where standard broadcast receivers usually do not. This possibility seems all the more likely from the nearness of the police and marine bands. It seems odd, however, that car radios are not reported to have changed their stations.

The question remains, "How could such a change occur?" The answer may lie in the characteristics of a tuning circuit which is composed of a coil, capacitor, and resistor in series. When stimulated by an alternating voltage, the circuit carries an alternating current of the same frequency. The magnitude of the current depends upon the frequency, and it reaches a maximum

.

---

when the stimulating frequency matches the natural, resonant frequency of the circuit. The frequency at which resonance occurs is governed by the values of the electrical elements in the circuit. Hence, the resonant frequency can be changed by modifying one of them; the set is usually tuned by adjusting the capacitance. A particular station is tuned in by adjusting the resonant frequency to correspond to its transmitted carrier. Competing signals from other stations are suppressed because they are out of resonance. (10)

Should the coil in the tuned circuit be exposed to a fluctuating field of high frequency, extraneous currents will be induced in it, thereby altering its normal role in the circuit. Theoretically, the circuit would continue to function but at a different resonant frequency. In other words, the set would be detuned from the original station and might pick up another one. This mechanism of detuning may account for the common report of radio transmission being lost from aircraft, police cars, and radio stations. Police chasing a UFO in Danville, Illinois, were *unable to notify headquarters* because their radio went mysteriously dead. (11) Possibly their transmitter was detuned so that they could not be heard on the normally operating receiver at headquarters some distance away.

The most common problem with radios, however, is that they simply fail. They cease to produce any sounds in the presence of UFOs. Their return to normal after the UFO disappears weakens the notion that loss of power might be responsible. Any other possible basis for this behavior should be identified. As the influence of microwaves upon tungsten came under suspicion previously, it is rather significant to note that another major application of that metal is for cathodes in radio tubes. (12) Electrons inside the evacuated space of a radio tube are supplied by the cathode; they are boiled off its surface in vast numbers when it is at high temperature, producing the familiar glow in radio tubes. The flow of these electrons through the tube, being easily controlled, accounts for the extreme sensitivity of radios. In other words, signals are amplified enormously by controlling the flow

.

---

of electrons through the tube. Restricting their supply at the origin, the cathode, would have a profound

effect. It would reduce the normal gain through the tube, or in the limit, stop the current completely. The output of the radio would either diminish below the threshold for hearing or cease altogether until the normal conditions were restored. This behavior is precisely the expected consequence of increasing the resistance of the tungsten or tungsten-alloy cathode with microwaves. Cathodes are maintained at their operating temperature by a separate, low-voltage circuit. Current through that circuit heats the cathode to incandescence in an exact analogy to the filament in a headlamp. (13) Increasing the resistance in the circuit would reduce the current and the rate of heating, thereby reducing or shutting off the supply of electrons. This mechanism would also hamper or prevent broadcasting of messages on transmitters by restricting the internal amplification or limiting the flow of power through output tubes into the antenna.

Household Receivers and Lamps

Hall cited eighteen cases of interference with radios, television sets, and house lights as UFOs flew over cities, towns, and populated areas. Interference with television was six times more frequent than with radios, a ratio so great that an explanation should be sought. It may simply reflect the greater popularity of television, but some technical aspects are implied. The large, rooftop antennas commonly used for TV are much more efficient than the small, ferrite antennas that are built into table-model and portable radios. This factor alone could account for the observations. In addition, the UFO interference may have frequency components closer to that of the TV carriers than to that of radio.

In any event, the specific nature of the reported TV interference, such as "dimmed," "blurred," "loss of audio," and "distortion," indicates that the trouble was not caused by loss of power. Thus, one must look to direct interference in the receiver circuits along the lines described above. A few instances of

---

household lights being dimmed or extinguished may be identical to the effect on automobile headlamps. Obviously, loss of electrical power could be responsible, and UFO interference with power transmission over large areas is another prominent feature of the whole problem.

Power Transmission

An association between UFOs and electrical power facilities has been recognized for many years. UFOs tend to hover near generating stations, switchyards, and substations, and to travel along the rights-of-way for high-voltage transmission lines. They are frequently seen at these locations at the time of, or just prior to, electrical blackouts over extended areas served by the facilities. Naturally, blame for the inconvenience is laid upon the UFOs, but satisfactory explanations have not been found. The deficiency is twofold: The affinity of UFOs for electrical facilities is not well understood and their method of causing power failure has not been satisfactorily identified.

During the fall of 1966, a series of UFO sightings in southern New Hampshire attracted the attention of a famous journalist who conducted a thorough, on-the-spot investigation. Armed with portable tape recorders, he collected testimony from many witnesses, some of which was later published verbatim. In 73 separate testimonies, a direct relationship was reported between the UFOs and the power lines of the Northeast Grid. (14) The UFOs typically appeared at low altitude near the transmission lines, alternately rising and falling behind the trees. On more than one occasion, a "pipe like object came down from the base of the disc and actually touched the lines, remaining there for a minute or so." (15) In view of such observations, the contention that these UFOs were merely some obscure, electrical blobs that were precipitated by the power lines is absolutely untenable, especially since many of them were also seen at great altitudes being chased by jet fighter planes. Since in thousands of other situations, UFOs have been well removed from transmission lines, this group of

sightings, is unique and reveals a particular purpose behind their behavior. Exactly what this purpose might be is still an open question.

During the period of these sightings, on November 9, 1966, the power distribution system serving one-fifth of the American population in eight eastern states simply failed. The source of the trouble was initially reported to be a remote-controlled substation at Clay, New York, where only seconds before the blackout a pilot saw a brilliant, red ball, 100 feet in diameter. A total of five people saw this object, or one like it, in the vicinity. Investigations by the Federal Power Commission, however, officially traced the source of the blackout to a Canadian hydroelectric plant on the Niagara River. "The initial event was the operation of a backup relay at Beck Generating Station which opened circuit Q29BD, one of five 230-kv circuits connecting the generation of Beck to the Toronto-Hamilton load area." (16) Before examining these findings in further detail it is necessary to review some practices in the electrical industry. High-voltage transmission lines are subject to various natural hazards such as lightning, falling trees, and wind damage to the lines and towers. In the event of a lightning stroke, for example, the voltage of a line would suddenly rise to very high level causing an arc-over to ground around the insulators. This conducting path would continue to drain off the generated power unless the line were taken out of service momentarily. It would have to be isolated from the system, with other lines in parallel picking up its load, then switched back into service. To provide this protection, each leg of a transmission system is monitored by automatic devices that detect any abnormal conditions and take corrective action. These sensitive and fast-acting relays, in turn, operate the more massive and cumbersome circuit breakers that handle large amounts of power. It has been proposed in the past that magnetic fields accompanying UFOs induce current surges in the lines as they fly at high speed across the rights-of-way. (17) These surges would then be detected with the resulting isolation of the line. As a section of line is removed from service, the transfer of its power may cause

an overload on a parallel line, and so on as the disturbance propagates throughout the whole system. These relays are the points at which trouble begins, and the previously quoted FPC report indicated that "The precise cause of the backup relay energization is not known." This admission was then followed by a discussion of some possible system conditions that could have triggered it.

The clues to some of these puzzles sometimes hide in the detailed sequence of the reported events. For this reason, an obscure power failure in Brazil takes on special significance. On August 17, 1959, the automatic keys at the Uberlandia power station suddenly disconnected power to all four trunks. A technician at a substation 45 miles away immediately telephoned to report that all the keys at his location had been automatically disconnected as a UFO passed overhead, traveling in the direction of the generating station along the lines. The chief engineer then manually reset the keys at the main station, but they all automatically turned off again. At that moment he ran outside and saw a bright object in the sky approaching at high speed, later calculated to be 1,500 mph. As soon as the UFO passed, the entire system returned to normal. (18) The critical point in this report is that operation of the relays at the substation occurred when the UFO was directly overhead. Those at the main station, clearly out of range of influence from the UFO, detected an abnormal condition and apparently responded properly. A two-stage mechanism for this interference would involve first the induction of a surge in the lines and then corrective action by the relay. Instead, it appears that the influence of the UFO was exerted directly upon the relay itself without any intervening process. Design details of these devices assure that they would be sensitive to stray radiation. The heart of the induction-type relay is a small, circular plate of metal with a spindle rigidly attached at the center. Bearings at the ends of the spindle permit free rotation, and under normal conditions, the metallic disc is held in stationary balance by a spring acting against electromagnetic forces that are derived from the conditions on the line being monitored.

In the event of an undesirable condition, rotation of the disc closes the contacts for taking corrective action. Clearly, high-frequency electromagnetic radiation from a UFO would induce eddy currents in the disc, disrupting its delicate balance and actuating a circuit breaker. Induction of stray currents could also operate a plunger-type relay that is in common use, essentially a solenoid like an electric door bell, although these devices should be more resistant to interference than the others. The possible effect upon a third type of relay utilizing solid state electronics is simply not known. Of course, the induced operation of the electromagnetic relays would cause no damage. "Ostensibly, backup relay #Q-29 at the Sir Adam Beck generating station, Queenston, Ontario, was eventually pinpointed as the source of the massive failure. But further investigation, hardly noted in the press, showed that nothing in the relay was broken when it was removed for inspection. In fact, it went back into operation automatically when power was restored. The line it was protecting was totally undamaged." (19) Induced operation of the protective relays by electromagnetic radiation from UFOs is probably the reason for these power blackouts.

METAL TUBE HOVERS OVER A-PLANT

Oak Ridge, Tennessee
September 1944

#498: 1944/9/18 0:0 2 84:15:20W 36:1:40N 3321 NAM USA TNS 8 9
OAK RIDGE,TN:MTL TUBE HVRS/A-PLANT DAYS AFTER OPENING:GOES WHEN CROWD GATHERS
Ref# 129 GROSS,Loren: CHARLES FORT & UFOS Page No. 56 MIL. BASE

"Back on the American home front, on the banks of the Clinch River at Oak Ridge, TN, a huge, black, windowless building was being constructed. In the middle of Sept 1944, this structure, a gaseous diffusion plant, began operation. This unusual factory was designed to prepare quantities of fissionable material for the US' most important secret weapon, the A-bomb.

"Shortly after the plant began operations, the area had a very odd visitor. A strange, metallic looking, tube-like object was spotted hovering over the road near the Oak Ridge plant. The object moved away as a crowd started to gather. The sighting was reported to the FBI (20)."

UFO SIGHTING OVER HANFORD NUCLEAR REACTOR
Mid-July, 1945

Case report from NICAP files

Radar detected a fast-moving object that was in a holding pattern directly above the Hanford plant. It was extremely high and the pilots couldn't see it at first. As they rapidly increased altitude the pilots all spotted it at about the same time and headed directly for its position. None of them could recognize it, but they could see it well from their vantage point. It had a saucer-like appearance, was bright, extremely fast, and very high. The F6F had an operating ceiling of 37,000 feet, but on this day they exceeded that considerably and still couldn't get close enough. It didn't make any overt moves, gave no signals, just hovered there as if observing, staying well enough out of reach. When some of the engines began to fail, and fuel consumption got critical, the planes returned to base one by one, and the strange craft disappeared as quickly as it came. The six F6F "Hellcats" made visual contact with the object described as the size of three aircraft carriers side by side, oval shaped, very streamlined like a stretched-out egg and pinkish in color. The witness who filed this report said that some kind of vapor was being emitted around the outside edges from portholes or vents. The object was observed at noon in a clear sky at an estimated altitude of 65,000 feet. After hovering in a fixed position above the Hanford Nuclear Reactor for an additional twenty minutes, the object disappeared going straight-up as the six Hellcats limped back to the Pasco Naval Air Station (Washington).

Radar Tracks Object

White Sands, New Mexico

July 1, 1947

It was not only civilians from the Roswell area that knew something strange had happened. Military officials, both officers and the enlisted technicians had been tracking, on their radar, an unidentified object in flight over southern New Mexico since July 1. The object had first appeared over the highly restricted areas near the White Sands Proving Ground (later the White Sands Missile Range) about one hundred miles from Roswell. This was the site of the first atomic bomb detonation in 1945 and currently the home of sensitive rocket and missile research being conducted by members of various components of the United States military.

On July 2, Steve MacKenzie,[7]* stationed at Roswell Army Air Field, had received a call from Brigadier General Martin E Scanlon of the Air Defense Command, ordering him to report to the radar sites at White Sands. MacKenzie was to monitor the object's movements and report them directly to the general. MacKenzie could not leave the scope unattended for even the shortest of times. In fact, once he had his watch established, he set up a system of mirrors so that he could see the screen even when he needed to use the latrine.

No one at White Sands doubted that this was a real object. When it first appeared, radar operators at White Sands had considered the possibility of a malfunction, but a check with a second set, as well as coordination with other sites, including those at Roswell and in Albuquerque, established that the target was real, and solid.

MacKenzie stayed at his post for twenty-four hours straight, but nothing changed. The object appeared periodically over southern New Mexico, but usually just "flitting from one location to another."

When MacKenzie reported that nothing had changed significantly during his twenty-four-hour watch, Scanlon decided to end MacKenzie's part of the operation. Although MacKenzie was ordered back to Roswell, the operators at White Sands were told to continue to monitor the object, as were the radarmen at Roswell and Albuquerque.

MacKenzie was in contact with Robert Thomas, an officer stationed in Washington, D.C., all during this time. Thomas asked on several occasions if he should head out to New Mexico, but MacKenzie told him not to bother for the time being. The situation was still fluid, and he didn't know what would happen. At two or three in the morning on July 4, however, Thomas called to inform MacKenzie he was on the way; explaining that he wanted to be on the scene in case something happened.

Radar Tracks Object

White Sands, New Mexico

July 4th, 1947

(See report, July 1, 1947)

Thursday, July 3. At the White Sands Proving Ground, an attempted launch of a V-2 rocket fails, never getting off the pad. Several people are injured in a spray of acid.

Steve MacKenzie is ordered to White Sands, where he spends nearly twenty-four hours watching the (radar) displays as the object flashes through the New Mexico skies. (160)

At two or three in the morning on July 4, ... Robert Thomas (an officer stationed in Washington, D.C.) called to inform MacKenzie he was on the way; explaining that he wanted to be on the scene in case something happened.

Thomas's special flight from Washington, D.C., arrived early on the afternoon of July 4. He had requested some special equipment and arranged for transportation for himself and for the small party of experts he had brought with him. He held a quick briefing with the men stationed at Roswell and then settled in to wait.

That evening the situation changed radically. The object, as displayed on the radar, seemed to pulsate, the blip growing larger and brightening before shrinking to its original size and dimming. This activity kept up for a short time and then the object blossomed into a sunburst and disappeared from the screen at about 11:20P.M. Because there were three sites tracking the object, the army technicians were able to plot, within vague parameters, the location of the crash or landing.

But the radar coverage in that section of New Mexico was not as complete as the military would have liked. The Capitan Mountains sit between the impact site and the radar sets of White Sands and Alamogordo. Other mountains rest between Albuquerque and Roswell. Coverage in some places did not extend below eight or nine thousand feet. That meant that the army, based on what it had learned while tracking the object at Roswell, knew that the object was down north of town. They just didn't have a precise location. A comprehensive search would be launched at sunrise. (8)

PILOTS OBSERVE UFO NEAR NUCLEAR PLANT
Savannah, Georgia
November 22, 1975

Pilot Frank Auman, Jr. and UFO investigator Arlan Keith Andrews were flying in a private plane near the Savannah, Georgia Nuclear Plant. They saw a bright white UFO maneuvering in the area for four or five minutes. It made a "slight wobble" and then a hard turn, before it flew away. Jacksonville Control Center personnel at Jacksonville, Florida confirmed three UFO sightings (either radar or visuals) by pilots at the site. 11

In 1975 Arlan K. Andrews was a MUFON Consultant and State Director for Indiana.

RV NEAR OAK RIDGE AEC PLANT
June 21, 1952

On June 21, 1952, at 10:58 PM**,** a Ground Observer Corps spotter reported that a slow-moving craft was nearing the AECs Oak Ridge Laboratory, an area so secret that it is prohibited to aircraft. The spotter called the light into his filter center and the filter center relayed the message to the ground control intercept radar. They had a target. But before they could do more than confirm the GOC spotter's report, the target faded from the radarscope.

An F-47 aircraft on combat air patrol in the area was vectored in visually, spotted a light, and closed on it. They "fought" from 10,000 to 27,000 feet, and several times the object made what seemed to be ramming attacks. The light was described as white, 6 to 8 inches in diameter, and blinking until it put on power. The pilot could see no silhouette around the light. The similarity to the Fargo case was striking.

In each of these instances, as well as in the case narrated next, the sources of the stories were trained airmen with excellent reputations. They were sincerely baffled by what they bad seen. They had no conceivable motive for falsifying or "dressing up" their reports.

HANFORD,WA:4 PILOTS:SCR 2.7km OVR ATOMIC PLANT:CHANGES SHAPE:/r242p38
Ref# 210 The APRO BULLETIN. (J & C Lorenzen) Volume 1 Issue 2 MIL. BASE

A "perfectly round disc" hovering above the Hanford atomic plant, Richland, Washington, was observed by four veteran pilots July 5, 1952. The four Conner Airlines pilots were interviewed by United Press when they landed in Denver, Colorado, and their story was put on the newswires that day.

Capt. John Baldwin (former Air Force pilot, with 7000 hours airline pilot experience at the time) said he was flying near the Hanford atomic plant at about 9000 feet. The UFO was noticed above the plane about 6:00 a.m. It was "just below a deck of wispy clouds about 10,000 to 15,000 feet directly above us," Baldwin said. He described it as "a perfectly round disc, white in color and almost transparent with small vapor trails off it like the tentacles of an octopus." fcf., September 24, .1959 FAA case below]

Capt. George Robertson, D. Shenkel (both former Air Force pilots) and Steven Summers confirmed Baldwin's report. "All of us have been flying a number of years," Baldwin said, "and we've seen all kinds of clouds and formations, but none of us had ever seen anything like this before."

At first, the UFO was hovering. Then it "seemed to back away" and tilt edge-on. "It became flat, gained speed and then disappeared quickly," Baldwin reported.

OPERATION MAINBRACE SIGHTINGS
In the vicinity of Denmark & Norway
September, 1952

A particularly interesting series of UFO reports came from the vicinity of the "Operation Mainbrace" NATO maneuvers held in September 1952. The maneuvers commenced September 13th and lasted twelve days. According to the U. S. Navy, “units of eight NATO governments and New Zealand participated, including 80,000 men, 1,000 planes, and 200 ships . . . in the vicinity of Denmark and Norway . . . ." Directed by British Admiral Sir Patrick Brind, "it was the largest NATO maneuver held up until that time."

September 13--The Danish destroyer Willemoes, participating in the maneuvers, was north of Bornholm Island. During the night, Lieutenant Commander Schmidt Jensen and several members of the crew saw an unidentified object, triangular in shape, which moved at high speed toward the southeast. The object emitted a bluish glow. Commander Jensen estimated the speed at over 900 mph.

Within the next week, there were four important sightings by well-qualified observers. (Various sources differ by a day or two on the exact dates, but agree on details. There is no question about the authenticity of the sightings; the British cases were officially reported by the Air Ministry, the others are confirmed by reliable witnesses. All occurred on or about September 20).

September 19--A British Meteor jet aircraft was returning to the airfield at Topcliffe, Yorkshire, England, just before 11 A. M. As it approached for landing, a silvery object was observed following it, swaying back and forth like a pendulum. Lieutenant John W. Kilburn and other observers on the ground said that when the Meteor began circling, the UFO stopped. It was disk-shaped, and rotated on its axis while hovering. The disk suddenly took off westward at high speed, changed course, and disappeared to the southeast.

About September 20--Personnel of the U.S.S. Franklin D. Roosevelt, an aircraft carrier participating in the Mainbrace maneuvers, observed a silvery, spherical object which was also photographed. (The pictures have never been made public). The UFO was seen moving across the sky behind the fleet. Reporter Wallace Litwin took a series of color photographs, which were examined by Navy Intelligence officers. The Air Force project chief, Captain Ruppelt stated: “[The pictures] turned out to be excellent . . . . judging by the size of the object in each successive photo, one could see that is was moving rapidly." The possibility that a balloon had been launched from one of the ships was immediately checked out. No unit had launched a balloon. A poor print of one of the photographs appears in the Project Blue Book files, but with no analysis report.

September 20--At Karup Field, Denmark, three Danish Air Force officers sighted a UFO about 7:30 P.M. The object, a shiny disk with metallic appearance, passed overhead from the direction of the fleet and disappeared in clouds to the east.

September 21--Six British pilots flying a formation of RAF jets above the North Sea observed a shiny sphere approaching from the direction of the fleet. The UFO eluded their pursuit and disappeared. When returning to base, one of the pilots looked back and saw the UFO following him. He turned to chase it, but the UFO also turned and sped away.

September 27/28--Throughout Western Germany, Denmark, and southern Sweden, there were widespread UFO reports. A brightly luminous object with a comet like tail was visible for a long period of time moving irregularly near Hamburg and Kiel. On one occasion, three satellite objects were reported moving around a larger object. A cigar-shaped object moving silently eastward also was reported.

Since existing documentation shows that U. S. Navy and Air Force Intelligence, and the RAF, were studying these incidents, it is a safe assumption that more information exists in the files of NATO, the British Air Ministry, the U. S. Navy, and the U. S. Air Force. The sightings remain unexplained.

The Nuclear Connection

RV NEAR HANFORD AEC PLANT
December 10, 1952

On the night of December 10, 1952, near another atomic installation. the Hanford plant in Washington, the pilot and radar observer of a patrolling F-94 spotted a light while flying at 26,000 feet. The crew called their ground control station and were told that no planes were known to be in the area. They closed on the object and saw a large, round, white "thing" with a dim reddish light corning from two "windows." They lost visual contact but got a radar lock-on. They reported that when they attempted to close on it again it would reverse direction and dive away. Several times the plane altered course itself because collision seemed imminent.

In each of these instances, as well as in the case narrated next, the sources of the stories were trained airmen with excellent reputations. They were sincerely baffled by what they had seen. They had no conceivable motive for falsifying or "dressing up" their reports.

UFO CIRCLED ATOMIC PLANT
SHIPPINGPORT, PA
10/1/57

From page 1, "The Fifth Horseman of the Apocalypse, UFOs: A History, 1957: October 1st - November 2d" by Loren Gross

"1 October. Rochester, Pennsylvania. (about 7:00 p.m.)

"Circled Shippingport Atomic Plant"

"A former Rochester councilman, John Karcher, owned a farm in Daugherty township, outside the city of Rochester. On October 1st, about 7:00 p.m., Mr. Karcher was with a friend, Lee Plunkett. The men were outdoors with a clear view of the sky.

"From the direction of the nearby town of Ohioville something strange approached at an altitude of 2,000 feet. The two men spotted it and were astonished. The thing was a big luminous torpedo they estimated was 200 feet long. The top half was green-colored and the bottom half was reddish-orange. These two colors were separated by a strip of yellow. The thing was moving slowly, perhaps as slow as 15 miles per hour. Karcher had enough time to get a pair of binoculars and to also phone some neighbors, a Mrs. Norderbugger and her daughter and son-in-law. These three neighbors managed to observe the object as it passed by on a steady course to the south, in the direction of Shippingport Atomic Plant. Karcher saw nothing worth mentioning with the binoculars and like everyone else believed the show was over when the UFO moved out of sight. To the surprise of all, the torpedo reappeared after a few minutes, retracing its course, apparently
returning to its home base, if it had one. In Mr. Karcher's opinion, the mystery ship made a U-turn over the nuclear facility, considering its speed and distance involved. This suggestion was taken seriously by the Air Force and the FBI." (The Beaver County Times, Beaver, Pennsylvania, 8 November 1957.)

Gross' comments in a footnote: "The newspaper said the FBI and the Air Force investigated. Where are those records?"

EGG-SHAPED OBJECT HOVERS OVER BASE

Kirtland Air Force Base, New Mexico
4 November, 1957

More detailed version on NICAP site

2245 MST
Witnesses: FAA (CAA) tower personnel, R.M. Kaser and E. G. Brink, reliable observers with 23 years of airport tower control experience between them.

Weather: Light rain.

A lighted object came down steeply at the east end of runway 26, left the flight line, crossed runways, taxiways, and unpaved areas at about a 30 degree angle, and proceeded southwest towards the control tower at an altitude of less than 100 feet. Observed through through 7x binoculars, the object appeared to be egg shaped, having no wings, tail, or fuselage, and was elongated vertically. It appeared to be fifteen to twenty feet tall, about the size of an automobile standing on its nose, and had a single white light at its base. Both Kaser and Brink emphatically stated that the object in no way resembled an aircraft.

When the object was about 3000 feet ENE of the tower, it stopped completely and hovered for about a minute. Then it began moving again, slowly at first, but then suddenly climbing at an extremely rapid rate of speed until it disappeared into the overcast sky. The object was in clear view at all time, with no intervening obstructions, according to the two men.

At this point Kaser and Brink phoned the CAA Radar Approach Control (RAPCON) unit to ask them if they could detect a fast target to the east. RAPCON was using CPN-18 surveillance radar at that time. Radar showed that the target moved eastward, then turned south at very high speed until it reached the vicinity of the Albuquerque Low Frequency Range Station, where it circled for several minutes. Then it came back towards Kirtland until it took up a position behind an Air Force C-46 that had just taken off. It stayed in position behind the C-46 until they both moved out of radar range.

Subject: Missile Battery Fires At Disc, Summer 1961; UFO Stalls Electrical Apparatus Near Moscow

Francis Ridge:
By the 1960s some extraordinary stories - largely unsubstantiated - had reached the Western media. According to science writer Alberto Fenogho, in an article in an Italian journal devoted to missile and space research, which was subsequently condensed and translated by Robert Pinotti, claims to have obtained his information from Soviet sources in the West, including a well-known diplomat. Here is what Timothy Good reported about one incident from "Above Top Secret", page 227:

"In the summer of 1961 near Rybinsk, 150 kilometers from Moscow, new missile batteries were being set up as part of Moscow's defense network. A huge disk-shaped object allegedly appeared at an estimated altitude of 20,000 meters, surrounded by a number of smaller objects. 'A nervous battery commander panicked and gave - unauthorized - the order to fire a salvo at the giant disk,' reported Fenogho. 'The missiles were fired. All exploded when at an estimated distance of some two kilometers from the target, creating a fantastic spectacle in the sky. The third salvo was never fired, for at this point the smaller 'saucers' went into action and stalled the electrical apparatus of the whole missile base. When the smaller discoidal UFOs had withdrawn and joined the larger craft, the electrical apparatus was again found to be in working order.'

"What are we to make of these sensational stories? In translating Fenogho's original article, Robert Pinotti noted that skeptics would point to the anonymity of Fenogho's informants and conclude that the reports are a pack of lies. Yet the stories are no more sensational than those reported in the West, and it seems unlikely that a respected journal would have published Fenogho's material unless there was *some* substance to it."

THREE UFOS OVER McGUIRE NUCLEAR STATION

October 1965

In October 1965 Philip Parker on an aerial photography mission was flying with pilot H.T. Mayhew near the Perth Church Road Lake Norman crossing. Their plane was flying at about 1,000 feet as they circled the lake near the McGuire Nuclear Station, when they noticed three "bright objects" to their right. Pilot Mayhew gave his plane full throttle and they rose barely high enough to escape the UFOs, which were flying in formation 100 feet below them. Unnerved, as he was Parker was able to take one photograph of the three circular UFOs above Lake Norman, which is bordered by the Catawba, Lincoln, Gaston, Mecklenburg and Iredell counties in North Carolina.

The Nuclear Connection

DOMED UFO NEAR AEC PLANT
Lake Norman, NC
Late Summer, 1968

In past years several other photographs of UFOs flying above Lake Norman were taken by different photographers. One of the photographs of an early morning UFO was captured near the Sun on the film. In the photo, the UFO moved from the 4 to the 6 o'clock position from 90 to 20 degrees over a short period of time.

In the late summer of 1968 at 2 a.m. a married couple (names confidential on file) reported seeing a dome-topped UFO with "windows" and odd-colored lights (yellow, blue and red fixed together) flying near their Lake Norman home. The UFO was about two to three car lengths wide and made a soft humming sound. A "metal rod" came from the bottom edge of the UFO, as it moved down nearby power lines, almost touching the wires as it followed the power lines. The eyewitnesses ran the rest of the way home and were badly frightened by their experience. 7

The Nuclear Connection

SAUCER NEAR NUCLEAR FACILITY
Lake Norman, NC
July or August, 1972

At 9:30 p.m. businessman Robert P. Sartin, who lives near the Lake Norman Airport and Duke Power Plant's 150 high Cowans Ford Dam spotted a UFO. His attention to the UFO came when he heard children fishing from a nearby pier, who were shouting about an object in the sky. Four other persons became eyewitnesses to the UFO, which was seen about four miles East of the Marshall Steam Plant near Terrell.

The UFO, appeared to be about the size of a basketball court and had a thickness, one-half its width. The object looked like "one saucer inverted on top of another and had a row of flashing windows through its middle."

It had red, white and yellow lighted windows and hovered in the area overhead for about 10 minutes, before it flew sideways, then moved up and away at an unbelievable speed as it disappeared in the sky. 8

The Nuclear Connection

CLOSE ENCOUNTER NEAR LAKE MURRAY
March, 1975
Lexington, South Carolina

Mr. and Mrs. Jim Richardson were driving near the Lake Murray Hydroelectric Plant's Saluda Dam, when a brilliant "spotlight" came on and illuminated the interior of their car. They noticed the UFO looked "like two pie pans" put together and had a dome on top.

It flew about 40 to 50 feet above their car and it had red and blue lights on its ends and its dome was "brilliant white." The bottom of the UFO was octagonal in shape or like a stop sign. The Lake Murray area has been the scene of many UFO encounters over the years. 9

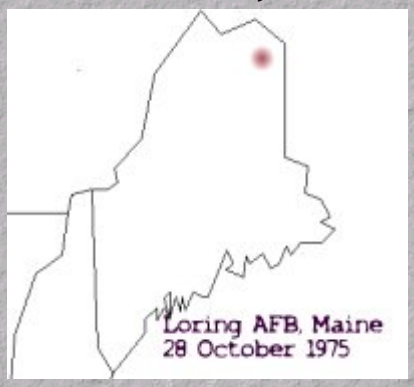
UFO CIRCLES WEAPONS STORAGE AREA
Loring AFB, Maine
October 27, 1975



A UFO was reported by Staff Sgt. Danny K. Lewis near the Loring Air Force Base, Maine. The UFO began to circle the nuclear weapons storage area to within 300 yards of the facility. Finally, it hovered 150 feet above the ground. The base was placed on a major alert status. Radar tracked its maneuvers in the area for over 40 minutes. The reddish-orange UFO later moved to within five feet of the ground. Security personnel said the UFO was "like a stretched-out football in the air" as it hovered nearby. They described the object as about four car lengths long. It shut off its lights and rapidly left the area from near ground level.

Documentation

Here's the detailed report adapted from "CLEAR INTENT" (Lawrence Fawcett and Barry Greenwood), page 16-26:

Loring Air Force Base,
Northeastern Maine
27 October 1975

Although it is no longer an active Air Force Base today, in 1975 Loring AFB was a Strategic Air Command Base and a storage site for nuclear weapons. The nukes were stored in a fenced weapons dump consisting of small huts covered with dirt for camouflage from the air. It was patrolled day and night by the 42nd Security Police Squadron.

At 7:45 P.M. on 27 October, 1975, Staff Sgt. Danny K. Lewis was patrolling the weapons dump when he saw an unidentified aircraft nearing the north perimeter of Loring at a low altitude of about 300 feet. Lewis noticed what appeared to be a red navigation light and a white strobe light on the aircraft. As Lewis watched, the craft entered the perimeter of Loring.

Meanwhile, in the control tower of the air base, Staff Sgt. James P. Sampley of the 2192nd

Communications Squadron was on duty at the radar screen. He got a radar return from an unknown aircraft ten to thirteen miles east-northeast of Loring. Sampley made numerous attempts by radio on all available communications bands, civilian and military, to contact the craft, but he got no response. The unidentified craft began to circle, and came to within 300 yards of the restricted nuclear storage area at a low altitude of 150 feet.

Back at the nuclear weapons dump, Lewis notified his Command Post that an unknown aircraft had penetrated the base perimeter and was within 300 yards of the nuclear weapons area. The base was immediately put on a Security Option 3 alert and Security contacted the tower regarding radar tracking of the aircraft.

At 8:45 P.M., Sgt. Grover K. Eggleston began observing the craft on radar from the tower as it began circling ten miles east-northeast of the base. The Wing Commander ordered a ground search and requested air support from Hancock Field, New York and North Bay, Ontario, Canada. Both bases refused to send air support. The Maine State Police and local airport flight services were contacted to attempt to identify the unknown craft, but without results. Intense ground searches produced no results.

The craft continued circling for approximately forty minutes, at which time it broke the pattern and headed toward Grand Falls, New Brunswick, Canada. In the vicinity of Grand Falls, twelve miles from Loring, it vanished from the radar screen. There was no further activity that night, although the base remained on high alert into the next morning. SAC Headquarters was notified.

28 October 1975

The next night, again at 7:45 P.M., while patrolling the weapons storage area, Staff Sgt. Lewis, along with Sgt. Clifton W. Blakeslee and Sgt. William J. Long, again spotted the lights of an unidentified aircraft approaching Loring AFB from the north at an altitude of about 3,000 feet. It approached to within about three miles of the base perimeter and was noted to have a flashing white light and an amber or orange light. Lewis reported the sighting to his Command Post, and the Wing Commander came out to the weapons storage area to see for himself. He reported seeing an object with a flashing white light and an amber light whose speed and motion were similar to that of a helicopter. The craft was also observed on radar.

The craft was then observed over the flight line by Sgt, Steven Eichner, Sgt. R. Jones, and others. They saw an orange and red object shaped like a stretched-out football hovering in mid-air. It turned out its lights, and then reappeared hovering about 150 feet over the end of the runway. It was described as about four car-lengths long, solid, reddish-orange, with no doors or windows, and with no visible propellers or engines. It was totally silent.

The base went on full alert and a sweep was made by security, but the object turned off its lights and was not seen again. Radar picked up a target moving in the direction of Grand Falls, New Brunswick. SAC Headquarters was again notified.

29 October 1975

Finally, because of the activity of the previous two nights, air support was given in the form of a National Guard helicopter. Canadian authorities were contacted, and permission to cross the border was granted. An RCMP officer would be aboard the helicopter because it was thought that the sightings might be connected with drug smuggling in the area.

That evening, when the first sighting was made, the Huey took off with its Army National Guard crew, the Royal Canadian Mounted Police officer, a Maine State Policeman, and

several Loring Air Security officers aboard. The Huey chased sighting reports made by ground crew for forty minutes, but they could see nothing from the air, even when they were as close as 100 yards to a spot where ground observers saw something. Nothing was detected by radar.

30 October 1975

The Maine National Guard Huey was replaced by an air force helicopter and crew from Plattsburgh AFB. That evening, objects were reported at several locations over and near the base, and were detected by radar.

During the remainder of 1975, objects and lights were reported several times in the skies between Loring and Grand Falls, New Brunswick. Official investigations by various U.S. and Canadian agencies revealed nothing that was released to the public.

UFO CHASED BY KC-135 TANKER
Wurtsmith AFB, Michigan
30 October 1975

Wurtsmith AFB, located 2 miles west of Oscoda, Michigan, had its beginning in 1923 as a landing area for Army airplanes from Selfridge Field near Detroit. In 1953, it was formally named for Michigan's World War II hero, Major General Paul B. Wurtsmith, who died in an aircraft accident.

Wurtsmith was home for the 379th Bombardment Wing which controlled the 524th Bombardment Squadron and the 920th Aerial Refueling Squadron. The base was signed over to SAC in April, 1960 and the 40th Air Division, which was reactivated in July 1959 and assigned to the Strategic Air Command's Eighth Air Force, was headquartered there. The Division's mission at Wurtsmith was to supervise and monitor the operation of the 379th and 410th Bombardment Wings, the 305th Aerial Refueling Wing, the 351st Strategic Missile Wing, the 128th Aerial Refueling Group, and the 931st Aerial Refueling Group. Wurtsmith was one of the northern tier bases that housed nuclear weapons. Wurtsmith encompasses some 5,200 acres of land and had about 3,500 people assigned. It was formally closed in June, 1993, and all nuclear weapons were removed.

10:10 P.M., October 30th, 1975.

Persons in the base family housing area in the southeast part of Wurtsmith began seeing a low-flying aircraft that they thought was a helicopter. It had running lights and it hovered and moved up and down in an erratic fashion. An airman guarding the Capehart housing area gate observed an object with one white searchlight and two red lights at the rear. It was heading in a west-southwest direction. Another airman, on duty at the motor pool, saw lights near the western perimeter of the base. Sergeant Robert J. Anderson, also on duty at the motor pool, saw a KC-135 tanker and below the tanker he saw an unknown craft with a steady red light. Sounds similar to that of a helicopter were heard intermittently by observers.

10:25 P.M.

Security policemen at the back gate of Wurtsmith reported to their command post that they had observed an unidentified helicopter with no lights. The craft had hovered over the weapons storage area at low altitude. The craft moved towards the north, and when it reached the northern perimeter, it turned on its lights. Guards inside the weapons storage area reported seeing the craft and hearing a sound similar to that made by a helicopter.

10:30 P.M.

Radar Approach Control reported tracking low-flying objects on radar. They tracked a return as it flew a distance of thirty-five miles southeast of Wurtsmith. No visual sighting was made by tower personnel, and (oddly) no attempt was made to contact the unknown craft by radio. At that point, a KC-135 tanker returned to Wurtsmith from a refueling

mission. The Wing Commander, Colonel Boardman, ordered the KC-135 to try to intercept and identify the craft. The tanker was vectored in by Radar Approach Control.

Captain Myron Taylor, a navigation instructor who was on board the KC-135, later reported in a statement to 379th Bomb Wing Historian Staff Sergeant Paul J. Cahill, that:

I remember seeing lights similar to strobe lights which were flashing irregularly. We followed the lights north out over Lake Huron and then the UFO swung south...
...after observing the lights we determined that there were in fact two objects and the irregular flashing appeared to be some sort of signal being passed from one to the other in an effort to maintain the same position.
...I would estimate that our altitude was about 2,000 feet and our speed approximately 200 knots.
...I would guess that we stayed close to the UFO most of the time, approximately one mile away, and each time we attempted to close on the object it would speed away from us. We followed the UFO down to Saginaw Bay and started across the Bay when we lost it because of all the fishing boat lights.
...On the way back [to Wurtsmith], we picked up the UFO again at our eight o'clock position. We turned away, and it proceeded to follow us. Finally, we turned back in the direction of the UFO and it really took off back in the direction of the Bay area. I know this might sound crazy, but I would estimate that the UFO sped away from us doing approximately 1,000 knots.
...we proceeded but at that point we were low on fuel and were forced to return to Wurtsmith. I remember that while on final approach we saw the lights again near the Weapons Storage Area.
...Captain Higginbotham was questioned by the OSI and cautioned not to discuss the incident.

A report was made to NORAD. The extract from the NORAD Command Director's Log reads:

31 Oct 75/0445Z:
Report from Wurtsmith AFB through Air Force Ops Center - incident at 0355Z. Helicopter hovered over SAC weapons storage area then departed area. Tanker flying at 2700 feet made both visual sighting and radar skin paint. Tracked object 25NM SE over Lake Huron where contact was lost.

The local police and the Saginaw, Michigan FBI office were notified, with no results.

All possible air traffic in the area was investigated, but none explained the UFO.

Since the Michigan Department of Natural Resources sometimes sent out helicopters to catch hunters spotlighting deer in nearby Huron National Forest, they were contacted. They had no aircraft in the air at the time.

The incidents were never explained.

"FADED GIANT"
TARGETING SYSTEM TAMPERED WITH
Malmstrom AFB, Montana
7 November 1975

There are more than 2,000 missile sites spread across the United States. At Malmstrom Air Force Base in Montana, there are twenty Launch Control Facilities (LCF) housing Minuteman missiles underground. The Minuteman sites are alphabetically coded, such as "L-1," "K-1," "E-1," and the like, and are distributed over a wide area. One of these sites, K-7, which is located in the Judith Gap region just south of Lewiston, Montana, was the scene of an event which caused a major stir for the United states Air Force.

On November 7, remote electronic sensors triggered an alarm indicating that something was violating site security. Underground, in the launch control area, two officers noted the signal, but there was no television surveillance topside. The normal procedure for detecting what had violated security was to call for a missile security helicopter to check the area. At the same time, Sabotage Alert Teams (SAT), consisting of four to six men, were also alerted to the fact that a violation was taking place and were ordered to proceed to the site. On this occasion, an SAT team drove down the highway and onto a dirt road which led to the K-7 area. About a mile away, the team could see an orange, glowing object over the area. As they closed to within half a mile, they could now see that the object was tremendous in size. They radioed to the Launch Control Facility that, from their location, they were viewing a brightly glowing, orange, football field-sized disc that illuminated the missile site. The SAT team was ordered by the launch control people to proceed into the K-7 site. However, they responded that they refused to go any farther, clearly fearful of the intimidating appearance of the object. It began to rise, and at about 1,000 feet, NORAD picked up the UFO on radar. Two F-106 jet interceptors were launched from Great Falls, Montana, and headed toward the K-7 area. The UFO continued to rise. At about 200,000 feet, it disappeared from NORAD's radar. The F-106's were never able to get a visual sighting of the UFO.

All members of the SAT team were directed to the base hospital, where they were psychologically tested. It was determined that no one could identify the object that was seen, but that the members of the SAT team obviously had been through a traumatic experience. Meanwhile, targeting teams, along with computer specialists, were brought to the missile site to check out the missile, and specifically, the computer in the warhead that targets the missile. Amazingly, when the computer was checked, they found that the tape had mysteriously changed target numbers! The re-entry vehicle was then taken from the silo and brought back to the base. Eventually the entire missile was changed.

F-106's SCRAMBLED AFTER UNKNOWNS
Malmstrom AFB, Montana
8 November 1975

7:45 P.M.
NORAD radar detected unknowns heading south-southwest at 1200 feet. Once again, two F-106s were scrambled. SAT teams at areas K-1, K-3, L-1, L-4, and L-6 reported visual sightings of objects at low altitudes. The SAT teams reported that, when the jets approached, the UFOs would turn off their lights and become invisible. Then, when the jets had gone, the UFOs would turn their lights back on. At 9:15 P.M., teams in four different locations could see both the F-106s and the UFOs. Again, at 9:35, area L-5 reported that the unknown rose rapidly until it could not be distinguished from the stars.

From the 24 NORAD Region Senior Director's Log:
8 NOV 75 (0635Z) - (7 NOV 75 2335 MST) - A security camper team at K-4 reported UFO with white lights, one red light 50 yards behind white light. Personnel at K-1 seeing same object.

8 NOV 75 (0645Z) - (7 NOV 75 2345 MST) - Height personnel picked up objects 10 - 13,000 feet, Track J330, EKLB 0648, 18 knots, 9,500 feet. Objects as many as seven, as few as two A/C.

8 NOV 75 (0745Z) - (0045 MST) - Conversation about the UFOs; Advised to go ahead and scramble; but be sure and brief pilots, FAA. Go easy and the pilots will not descend below 12,000 ft.

8 NOV 75 (0753Z) - (0053 MST) - J330 unknown 0753. Stationary/seven knots/12,000. One (varies to seven) object. None, no possibility, EKLB 3746, two F-106, GTF, SCR 0754. NCOC notified.

8 NOV 75 (0820Z) - (0120 MST) - Lost radar contact, fighters broken off at 0825, looking in area of J331 (another height finder contact).

8 NOV 75 (0850Z) - (0150 MST) - Directed ftrs to RTB (return to base).

8 NOV 75 (0905Z) - (0205 MST) - From SAC CP: L-sites had fighters and objects; fighters did not get down to objects.

8 NOV 75 (0915Z) - (0215 MST) - From SAC CP: From four different points: Observed objects and fighters; when fighters arrived in area, the lights went out; when fighters departed, the lights came back on; to NCOC.

8 NOV 75 (00953Z) - (0253 MST) - From SAC CP: L-5 reported object increased in speed - high velocity, raised in altitude and now cannot tell object from stars. To NCOC.

<>8 NOV 75 (1105Z) - (0405 MST) - From SAC CP: E-1 reported a bright white light (site is approximately 60 nautical miles north of Lewiston). NCOC notified.

Between August, 1975 and May, 1976, 130 reports of UFOs or unidentified helicopters were logged in the Great Falls, Montana area.

These reports were never explained.

UFO NEAR CHEROKEE NUCLEAR STATION
Gaffney, SC
October 13, 1983

At 12:30 a.m. Mr. and Mrs. Wayne Ruppe of Gaffney, South Carolina were disturbed from their sleep by a siren-like sound (like something taking off). They looked out of their house windows in time to see a glowing oval-shaped UFO about 20 feet above their neighbor's home.

The neighborhood dogs were barking in a frenzy. The UFO, described as "about the size of a Winnebago travel-trailer" had two "beams of lights" on the bottom of the object.

It was orange-yellow in color and made a high-pitched sound as it crossed the power lines and moved east in direction of the Cherokee Nuclear Station. The UFO was seen for approximately five minutes and was estimated to be about 20 feet long and 8 to 10 feet in height. 15

UFO HOVERS OVER INDIAN POINT NUCLEAR POWER PLANT
Peekskill, New York
June 24, 1984

At 10:30 to 10:45 p.m. on this date security guards at the Indian Point Nuclear Power Plant near Peekskill, New York reported seeing a UFO over the plant for approximately 15 minutes. It was roughly 30 stories above the exhaust funnel of one of the plant's three nuclear reactors.

UFO investigator Philip J. Imbrogno for the Dr. J. Allen Hynek's Center for UFO Studies (CUFOS) in Chicago, Illinois interviewed six of the twelve security guards who saw the UFO.

The UFO, according to the witnesses was huge in size, diamond-shaped and approximately 450 feet in length. It was first white, then changed to blue to red to green to amber in color. Local police in Peekskill received numerous UFO sightings during the same evening. One of them, Sgt. Karl Hoffman said the UFO he observed included a "dozen white lights" in V-formation that slowly moved towards the power plant at Indian Point. 16

Investigators uncovered some interesting information.

As the UFO approached the nuclear plant it flew to within 30 feet of its Reactor Number Three. When it did the plant's security systems, shut down as did all of its alarm systems and communication systems. Security guards were issued shotguns and were waiting for the final word to shoot at the UFO. A request was also made for an armed helicopter to come and shoot down the UFO, but before the command was given, the UFO moved away and left the area.

Carl Patrick of the plant's information office, when questioned by investigators about the UFO had this to say, "I can neither confirm or deny that the guards fired upon it, but they did what was necessary to protect the plant. 17

"One Month Earlier:
...a raising number of UFO observations in the area of the Chernobyl Nuclear Power Station (ChNPS)"

Chernobyl Exploded on 4/26/86 at 1:23 AM.

In reference to the possible UFO cause & effect relationship, in particular, Chernobyl:

On May 1, 1997, Jerry Washington wrote:

In response to Anders Liljegren assertion that "'the UFO phenomenon' was NOT out to check on that...No sightings in the affected area until more than a week after the nuclear crash," referring to the Chernobyl disaster, I offer this excerpt from Dr. Vladimir V. Rubtsov's lectures as published in MUFON's 1994 Symposium Proceedings:

"...about one month before the Chernobyl disaster I had a talk with an air traffic controller of the Kharkov airport. He told me that, according to pilots' reports, there was a rising number of UFO observations in the area of the Chernobyl Nuclear Power Station (ChNPS). Later it became known that on the night of the fire in the ChNPS, some 3 hours after the explosion, a team of nuclear specialists saw in the sky over the station a fiery ball of the color of brass. The witnesses estimated its diameter as 6-8 meters and its distance from the burning nuclear reactor No. 4 as some 300 meters. Just before the observation these specialists measured the level of radiation in the place where they were standing. It was measured at 3000 milliroentgens per hour. 'Suddenly two bright rays of crimson color extended from the ball to the reactor... This lasted for some 3 minutes... The rays abruptly faded and the ball slowly floated away in a north-westerly direction, towards Byelorussia. Then we again looked at our radiation monitor. It displayed only 800 milliroentgens per hour...'"

Just thought you'd like to know.

UFO OBSERVED OVER SUBMARINE BASE AND NUCLEAR WEAPONS FACILITY
April 22, 1998

Synopsis: From between approximately 2120 hrs. and 2130 hrs. (Pacific Daylight Time), one or more objects, variously described as a blue-green sphere, an oval of blue-green light, or a disc with six lights on it, was reported from multiple points throughout western Washington State. The object was reported to change direction of flight on at least three occasions, to execute a rolling maneuver on at least one occasion, to come to an almost complete stop in two locations, to reverse its general course of travel from south to north, and to change its appearance, including its color, on at least two occasions. One reliable observer witnessed the object to pass slowly over the center of Bangor Submarine Base on Hood Canal, approximately 20-30 miles to the west of Seattle, passing directly over the underground bunkers where nuclear weapons are thought to be stored. In excess of a dozen seemingly independent and reliable reports regarding the alleged sightings were received by the National UFO Reporting Center between April 22 and May 11.

Summary of Witness Reports:

1. Snohomish County, WA: A 16-yr. old male and his mother, located approximately 15-20 miles north of Seattle, witnessed a blue-green object suddenly descend from the sky, hover, and then accelerate to the south-southwest and disappear in that direction at approximately 2120 hrs. (PDT).

2. Poulsbo, WA: Larry Swanson, a former federal employee and computer specialist, who resides approximately ¼ mile from the northeast corner of the Bangor Submarine Base, allegedly witnessed a brightly lighted, disc-shaped object glide silently over the center of that military facility at approximately 2122 hrs.. The object tilted somewhat, so the witness was able to see the ventral side of the object quite clearly, he reports. A computer-generated graphic, provided by the witness, is shown above.

3. Auburn, WA: A man out walking his dog witnessed a perfectly circular, blue-green ball of light descend from north to south in the western sky at 2120 hrs. at a very high velocity.

4. Puyallup, WA: A man driving to work witnessed a striking blue-green ball of light descending at a 30-35 degree angle from north to south in the western sky at a very high velocity.

5. Shelton, WA: A young father witnessed a blue-green ball of light streak across the sky to the west of his location.

6. Oakville, WA: A mother and her two sons, driving west on State Route 12, located to the west of Interstate 5, witnessed a “disc shaped” object, imbedded in a cloud of blue-green light, streak from north to south in the western sky. The object appeared to “follow the contour” of the horizon, dipping down suddenly, and then rising up again during its rapid flight to the south. The object was reported to generate a peculiar “tail,” which streamed off the aft end of the object for a fleeting instant. All three witnesses believed they observed three lights on the top of the disc, and three lights on its ventral side, as well.

7. Steilacoom, WA: A woman witnessed a blue-green ball of light streak from north to south in the western sky at 2123 hrs..

8. Vancouver, WA: A husband and wife witnessed a blue-green ball of light move slowly from north to south in the western sky. Very peculiar appearance to the object, they reported, with a peculiar looking “mist” surrounding the object.

9. Portland, OR: A young musician witnessed a blue-green ball of light move from west to east in the northern sky from his vantage point in the city of Portland, OR.

10. Vancouver, WA: A male Ph.D. in computer science, driving north on Interstate 5 witnessed a blue-green ball of light, that seemed to him to descend vertically ahead of his automobile and hover momentarily above the highway. The witness added that he had experienced some very unusual emotional reactions to the event.

11. Yakima, WA: A law enforcement officer witnessed a blue-green ball of light moving at a very high velocity from south to north for approximately 2 seconds. During his sighting, the object suddenly changed its color from green to red. The sighting occurred at 2130 hrs., the witness thought.

REPORT OF THE MANAGER SANTA FE OPERATIONS U.S. ATOMIC ENERGY COMMISSION JULY 1950 TO JANUARY 1954 (DELETED)

Author: TYLER C L

1. JULY 1947 TO JULY 1950

The newly-created Atomic Energy Commission took over responsibility for the atomic energy program on January 1, 1947. On July 2 the Office of Santa Fe Directed Operations (nowSanta Fe Operations Office) was established to administer the atomic weapons field program. Two weeks later, the present Manager of SFOO arrived at Los Alamos to be the first civilian manager of the project.

In mid-1947, Los Alamos Scientific Laboratory, assisted by a small Sandia Branch, was carrying the major weight of weapons manufacture. There was some production of mechanical components at the Army's Rock Island (Ill.) Arsenal. The Salt Wells Pilot Plant of Naval Ordnance Test Station, Inyokern, California, was producing high explosives. There was little participation by private industry. Two weapons types were being produced in extremely limited quantity. Units going into stockpile were laboratory-fabricated. The limited production chain had only one source for each major component. Three major modifications of one Mark weapon were in early development,

The SFOO assignment at the beginning of its operations represented a tremendous undertaking. It was required to build the mandatory physical plant and organization, while at the same time assuring continuous production of weapons, and maintaining basic and applied research for development of more powerful, more varied, or more efficient weapons. The scope and priority of initial assignment were direct reflections of the

situation:

To build and develop at Los Alamos, the heart of the program, a community that would be adequate to obtain and to retain the type of personnel required. This meant rebuilding and expanding the community.

To provide a climate in which LASL could proceed with its job of basic nuclear research and development, and to provide a Technical Area physical plant adequate for the job.

To organize and supervise an ordnance development, production, and testing complex, relieving LASL of these responsibilities.

To expand production and facilities at other sites, in order to achieve a continuous flow of component parts.

To evolve an organization competent to achieve basic management and program objectives.

Approximately two and one-half peacetime years provided a relatively secure period unhampered by wartime expediencies, during which programs could be adequately planned and activated. The value of time for orderly development of a basic SF0 structure was underwritten by national and international events near the end of the period. In the Autumnof 1949 Russia tested an atomic weapon, and SF0 moved immediately out of its “peace-time” period into one of increased mission urgency and of “crash” programs. This was intensified in early 1950 with the decision to go all out on thermonuclear weapon development. It was further intensified three days before the end of the reporting period by the outbreak of the Korean War.

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 01; Distant Encounters

Subject: AFOSI Case 7: Another Object in Verical Descent Explodes Near Colonel
Date: November 23, 1948
Location: Vaughn, NM

Francis Ridge:
This one is not listed in the original or the upgraded version of the Blue Book Unknowns by Brad Sparks. The information that we have accumulated comes from the Blue Book Microfilms. The following comes from the documents that also include the November 3 or 4th incident:

> "On 23 November 1948 at approximately 2130 hours, I was driving west on Highway 60, about 10 miles west of Vaughn, New Mexico. I observed a ball of light, descending vertically, which burst 100-200 feet from the ground. The conditions and appearance were the same as occurred on 3-4 November."
>
> The document continues: "Colonel Hayes stated that he did not report the incidents as he thought they might have been connected with some Air Force exercises. He further stated that he heard no sound or saw no aircraft during either incident, which is understandable as he was travelling in a closed automobile. Weather conditions were clear."

For reports, documentation, analysis or discussions - see below:

Subject: AFOSI Case 10; AESS Observed Green Flare Directly Over Sandia Base
Date: December 6, 1948
Location: Albuquerque, NM

Francis Ridge:
This report is not an original BB unknown, but has been included in the Comprehensive Catalog of Project Blue Book Unknowns by Brad Sparks.

> Dec. 6, 1948. Albuquerque, New Mexico (35.10° N, 106.64° W). 10:55 p.m. AESS officer Joseph Toulouse driving W saw a green fireball almost directly overhead above Sandia Base nuclear weapons assembly site, slightly to the NW arching slightly downward from E to W, about 1/3 full moon, with a flaming tail. (FOIA)

Case Directory - Category: 1; Distant Sighting

Subject: AFOSI Case 13; LaPaz, Captain, CAP Intel Officer Observed Green Fireball
Date: December 12, 1948
Location: Starvation Peak, NM

Francis Ridge:
This report is not an original BB unknown, but has been included in the Comprehensive Catalog of Project Blue Book Unknowns by Brad Sparks.

> Dec. 12, 1948. Starvation Peak near Bernal, New Mexico. 9:02 p.m. ±0.5 min (MST). Dr. Lincoln LaPaz, USAF Capt. Charles L. Phillips, and CAP intelligence officer Lt. Allan B. Clark, returning from green fireball investigations while looking to the NW saw a green fireball at least stellar magnitude -4 traveling E to W low above the horizon about 3°-4° elevation in almost perfectly level flight until the last 0.1 to 0.2 sec when it slightly curved downward, disintegrating into 3-4 pieces, no sound. Based on independent witness, an AESS guard at Los Alamos, LaPaz triangulated object's flight path at about 8-10 miles height along a 25-mile path, speed 39,000 to 43,000 mph. (FOIA)

National Investigations Committee On Aerial Phenomena

Category: 08; Photographic Evidence

Subject: **AFOSI Case 18; Green Fireball Event Witnssed in New Mexico**
Date: **January 30, 1949**
Location: **Near Amarillo and Lamesa, TX**

Francis Ridge:
This case is listed for the record, since it has been incorrectly listed as a New Mexico case for so many years. Sighted and photographed in New Mexico, this event took place in Texas. It is listed in the updated catalog of BB unknowns by Brad Sparks:

> Jan. 30, 1949. Near Amarillo (at 34°50' N, 104°5' W) to near Lamesa (at 32°48' N, 102°22' W), Texas. 5:54 p.m. (MST). Thousands of witnesses over several states saw spectacular green fireball, N-S trajectory triangulated by Dr. Lincoln LaPaz as 12 mile altitude over Amarillo area descending slightly on nearly horizontal 143-mile path to near Lamesa disappearing about 8 miles altitude. No noise except slight hissing. 100+ witnesses interviewed. (Sparks; FOIA)

Brad Sparks:
This is NOT a White Sands or Holloman case, this is the famous GREEN FIREBALL event of 5:54 PM Jan 30, 1949, where Lincoln LaPaz was able to precisely triangulate the location of the object from near Amarillo (at 34°50' N, 104°5' W) to near Lamesa (at 32°48' N, 102°22' W), Texas.

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 1; Distant Sighting

Subject: AFOSI Case 23; Truck Driver Reports Luminous Object With Faint Trail of White Smoke
Date: February 17, 1949
Location: Grants, NM

Francis Ridge:
This report is not an original BB unknown, but has been included in the Comprehensive Catalog of Project Blue Book Unknowns by Brad Sparks.

Cases 23 and 24 are apparently the same object viewed at different or overlapping times on its trajectory. Case 23 is truck driver Herman Wilcox at about 6 PM (actually 5:57) from near Grants, NM, and Case 24 is UNM Prof. Marvin May at 5:57 PM from Albuquerque (who with his training in meteorite tracking with LaPaz has the more accurate time than the truck driver). There were also about 100 guards at Sandia Base including the Officer of the Guard, sighting it at 5:59-6:06 PM evidently.

> Feb. 17, 1949. Near Grants (at 35° 7' ±2' N, 107°47' ±2' W), Sandia Base, and near Albuquerque (at 35° 5' N, 106° 35' W), New Mexico. 5:57-6:06 p.m. Green Oil Co. truck driver Herman Wilcox, at Chief's Rancho stop on Hwy 66, saw oval luminous white light with faint trail of white smoke in the SW at about 225° azimuth moving S in vertical climb then leveled off, then a gradual ascent, disappearing suddenly after several secs, no clouds in the sky to obscure it. (BB Maxwell Microfilm Roll 5, pp. 546-557, NARA Microfilm Roll 88, p. 401, Roll 91, p. 412; FOIA; Saunders/FUFOR Index) 9 mins 100+ 1 UNM Civil Engr Prof / meteorite tracker (LaPaz assoc.)

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 1; Distant Sighting

Subject: AFOSI Case 24; Vertical Climb, Then Leveled Off
Date: February 17, 1949
Location: Albuquerque, NM

Francis Ridge:
This report is not an original BB unknown, but has been included in the Comprehensive Catalog of Project Blue Book Unknowns by Brad Sparks.

Cases 23 and 24 are apparently the same object viewed at different or overlapping times on its trajectory. Case 23 is truck driver Herman Wilcox at about 6 PM (actually 5:57) from near Grants, NM, and Case 24 is UNM Prof. Marvin May at 5:57 PM from Albuquerque (who with his training in meteorite tracking with LaPaz has the more accurate time than the truck driver). There were also about 100 guards at Sandia Base including the Officer of the Guard, sighting it at 5:59-6:06 PM evidently.

> Univ. of NM Prof. of Civil Engineering Marvin May, an associate of Dr. Lincoln LaPaz in meteorite tracking, saw a brilliant white object in the W at 6° elevation at 5:57 p.m. for >6 mins. Object was first round [1/3 Full Moon in size at this point apparently] then shifted to ellipse as it approached then appeared to be elongated like a bent pipe with corners, 1 Full Moon in length and 1/10 in width. Object made slight climbing turn to the N, shifted to peach color [yellow-orange?] as it made rapid sharp turning climb to the S at the end, disappearing in cloudless sky by diminishing in size and brightness. 100 Sandia Base guards including Officer of the Guard saw a yellow-orange cigar or yellow-red cigar-shaped object for 7 minutes from 5:59 to 6:06 p.m. (BB Maxwell Microfilm Roll 5, pp. 546-557, NARA Microfilm Roll 88, p. 401, Roll 91, p. 412; FOIA; Saunders/FUFOR Index) 9 mins 100+ 1 UNM Civil Engr Prof / meteorite tracker (LaPaz assoc.)

Subject: Concern over UFOs over AEC areas.

To: Francis Ridge <nicap@insightbb.com>

Dr. Kaplan expressed a great concern, as these occurrences relate to the National Defense of the United States.

There is concern over:
Los Alamos
Sandia Base
USAF Guided Missile Base at Holloman AFB
Camp Hood

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 01; Distant Encounters

Subject: Los Alamos Sighting From NICAP Files
Date: May 1949
Location: Los Alamos, NM

Francis Ridge:
The following report was submitted to NICAP in 1961. The witness, a technician for the Atomic Energy Commission at Los Alamos, one morning had noticed a group of men outside the lab he was working at. Joining them he looked skyward, and at an altitude of approximately 9,000 feet observed 13 saucer shaped objects in a perfect straight line formation. During this observation period of about forty five minutes, several of the objects would suddenly leave this formation and with a tremendous burst of speed climb to what he thought was about 20,000 ft. There were hundreds of witnesses. See attached.

Case Directory - Category: 01; Distant Encounters

Subject: Array Comprised of Six "Windowlike" Rectangles of Light
Date: August 20, 1949
Location: Las Cruces, NM

Francis Ridge:
This incident is not among the original BB Unknowns, but IS listed in the new Comprehensive Catalog of Project Blue Book Unknowns by Brad Sparks:

> At about 10:00 p.m. on 8/20/49, The noted astronomer Dr. Clyde Tombaugh (Discoverer of Pluto), his wife, and his mother-in-law were in the yard of his Las Cruces home, admiring what Tombaugh described as a sky of rare transparency, when Tombaugh, looking almost directly towards zenith, spotted an array of pale yellow lights moving rapidly across the sky towards the southeast. He called them to the attention of the two others, who saw them just before they disappeared halfway to the horizon. The entire array subtended an angle which Tombaugh put at about one degree, and it took only a few seconds to cross 50 or 60 degrees of sky. The array comprised six "windowlike" rectangles of light, formed into a symmetric pattern; they moved too fast for aircraft, too slowly for a meteor, and made no sound. Tombaugh was quited as saying, "I have never seen anything like it before or since, and I have spent a lot of time where the night sky could be seen well."

Summary of Sightings of Unknown Aerial Phenomena, Reported by the 17th District Office of Special Investigations, Kirtland AFB, New Mexico. Cases 129, 141, 143-148

October 7, 1949, Albuquerque, NM, OSI Case 129
Size: Half a moon
Color: Yellow to green
Shape: Round
Witness: 1st Lt. John W. Bloomfield, 8456 M.P. Company, Sandia Base, NM.

<>

October 14, 1949, Los Alamos, NM, OSI Case 141
Size: 1/8 size of full moon
Color: Green and silver
Estimated Speed: 500 M.P.H. or more
Witness: Employee at Los Alamos

<>

October 22, 1949, Los Alamos, NM, OSI Case 144
Size: Small
Color: Green
Witness: Inspector J.W. Fisher

October 22, 1949, Los Alamos, NM, OSI Case 143
Size: Four time the size of a flare
Color: Brilliant green
Estimated Speed: 150 M.P.H.
Witness: Inspector F.V. Cotner

November 19, 1949, Los Alamos, NM, OSI Case 146
Size:----
Color: Green
Witness: Inspector William G. Putman

November 19, 1949, Los Alamos, NM, OSI Case 147
Size:----
Color: Green
Witness: Inspector Thomas R. Roche, Jr.

November 19, 1949, Los Alamos, NM, OSI Case 145
Two bluish-green lights seen overhead and appeared to be stationary. The two objects suddenly curved around and disappeared to the north with great speed. No sound was heard. Witness was John F. Kalbach, scientist with Group P- 8 Group at Los Alamos.

November 25, 1949, Los Alamos, NM, OSI Case 148
Five staff members of the Los Alamos Scientific Laboratory saw a very bright object move from east to west with no sound.

Summary of Sightings of Unknown Aerial Phenomena, Reported by the 17th District Office of Special Investigations, Kirtland AFB, New Mexico.

December 3, 1949, Alamogordo, NM, OSI Case 153

Observer Charles S. Bagley, civilian employee at Holloman AFB, saw a round, green colored with a fringe of orange, object moving east to west in the sky. The object traveled in an arc downward and seemed to prescribe a small loop about midway in its travel. Time of sighting was 1805 hrs. MST. Object appeared somewhat larger than Venus.

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 01; Distant Encounters

Subject: AFOSI Case 173; Egg-Shaped Object Observed Through Theodolite
Date: February 24, 1950
Location: Albuquerque, NM

Francis Ridge:
Listed in the original BB Unknowns, this incident is also retained in the Comprehensive Catalog of Project Blue Book Unknowns by Brad Sparks. The incident occurred at 1:55 PM, but there were six other sightings listed in the LaPaz catalog.

> Case No. 642. Feb. 24, 1950. Albuquerque, New Mexico (35.10° N, 106.64° W). 1:55 p.m. While tracking a weather balloon from atop TWA Bld. at the Municipal Airport, Weather Observer Luther B. McDonald saw crossing the field of view in the theodolite a white, round object not quite as elongated as an egg, darkened on the top-left side, flying straight and level from about 20° to 23° elevation at about 110° azimuth in the E apparently on a trajectory towards them on about a 240° to 270° heading, covering 2° in 1-1/2 mins [probable roundoff in angles so that elevation may have changed from about 20.5° to 22.5° and azimuth from about 109° to 111°]. Objects angular size about that of the upper part of the moon as seen through theodolite [probable 21x telescope sight of David White pibal theodolite]. Lost sight when shifted to weather balloon (and back). Weather Observer Harrison S. Manson also observed object with the naked eye, for about 20-30 secs, appearing to be brilliant white like metal reflecting sunlight the apparent size of a weather balloon about to disappear in the distance, impression of flight heading to ESE [actually from ESE]. (Berliner; Jan Aldrich)

AFOSI Case 186: Feb. 25, 1950; Los Alamos, NM
3:45 pm (3:55 pm?) Fourteen witnesses, NE-SW, overhead from 4 to 10 miles, traveled with a fluttering motion, silver, few seconds to 2-minutes, round, vary from 1/4" to small airplane, very fast 500 - 15 pph.

==========

Summary of Sightings of Unknown Aerial Phenomena, Reported by the 17th District Office of Special Investigations, Kirtland AFB, New Mexico.

February 25, 1950, 1545-1555 hours, Los Alamos, NM, OSI Case 186

Twelve Atomic Energy Security Service Inspectors observed an object like a plane fuselage flying in a fluttering motion. Object was silver and flashing and flew from very slow to very fast.
Time in sight: 3 seconds to 2 minutes

At 1505 hours, three members of the 8450th MP (Military Police) Group observed a bright object about the size of a softball in the sky going north. The object was observed for approximately 4 or 5 minutes. The object was round and silver in color. Object was standing still at first then started traveling at around 700 MPH.

At 1547 hours, Pvt. Henry D. McMinn of the 8450 MP Group observed four round silvery objects at approximately 7000 feet over Sandia Base. The objects were faster than any jet. They flew level and then straight up.

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 1; Distant Sightings

Subject: AFOSI Case 209; 690th AC&W Members Report Metallic Cylinder
Date: May 1, 1950
Location: Kirtland AFB, NM

Francis Ridge:
This report is not an original BB unknown, and has not yet been included in the Comprehensive Catalog of Project Blue Book Unknowns by Brad Sparks. However, it is listed in the AFOSI Catalog by Dr. Lincoln LaPaz. Details can be found at the link at the bottom of this directory. The Spot Intelligence Report, dated 2 May, briefly describes the sighting:

> On 1 May 1950, at approximately 1510 hours, Sgt. Jean W. Ortman, AF-16274854 and Pvt. Edward B. Hitchcock, AF-11202257, both members of the 690th AC&W Squadron, Kirtland AFB, New Mexico, observed a silver metallic object of a cylindrical shape. Said object was viewed for a second at which time it disintegrated. This observation was made from the Orderly Room, 690th. Aircraft Control and Warning Squadron at Kirtland Air Force Base, New Mexico.

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 09; Radar Cases

Subject: Radar-Inspired National Alert
Date: December 6, 1950
Location: New Mexico/Texas Border

Bruce Maccabee:
For an hour the United States military was under a condition of national emergency during the morning of December 6, 1950. Two days later the FBI was informed that the Army's Counter Intelligence Corps had been placed on Immediate High Alert for any information related to flying saucers. Were these two documented events related? This paper contains a discussion of the possibility that a flight of saucers caused the emergency and that the crash of one of them near the Texas-Mexico border on or about December 6, 1950 caused the immediate high alert.

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 1; Distant Sightings

Subject: Six Witnesses From General Mills Report Objects Circled Balloon
Date: January 16, 1951
Location: Artesia, NM

Francis Ridge:
This report is not a BB unknown but probably should be. The Blue Book Archives themselves tell us this much: Jan 16, 1951; Artesia, New Mexico. Time unknown. Witnesses: Two members of a balloon project from the General Mills . Aeronautical Research Laboratory, the manger of the Artesia Airport, and three pilots. The balloon crew was observing their 110' balloon at an altitude of 112,000' when a dull white, round object was spotted. It appeared larger than the balloon, but made no movement. Later, the balloon crew and the others saw two objects from the airport; flying side-by-side, they circled the balloon and flew away to the northeast. The second observation lasted about 40 seconds. Note: There was some confusion over the date of this case, with some records showing 1952 as the year. However

AIR INTELLIGENCE INFORMATION REPORT

SUBJECT: Unidentified Flying Objects (FLYOBRPT)	
AREA REPORTED ON: Albuquerque, New Mexico	FROM (Agency): ~~Hq 4901st Support Wing (Atomic)~~ Kirtland Air Force Base, New Mexico
DATE OF REPORT: 9 June 1952	DATE OF INFORMATION: 6 June 1952
EVALUATION: C-3	
PREPARED BY (Officer): Major Roy L. Huddleston, USAF	SOURCE: S/Sgt T.H. Shorey, USAF
REFERENCES (Control number, directive, previous report, etc., as applicable): AFL #200-5 and TWX AQQ-WCKO 6-1	

SUMMARY: (Short concise summary of report. Give significance in final one-sentence paragraph. List inclosures at lower left. Begin text of report on AF Form 112—Part II)

One object was observed from the ground at 1845 on 5 June 1952 by S/Sgt T.H. Shorey of 4925th Test Group (Atomic), Kirtland Air Force Base, New Mexico at his home at 521 South Cedar Street, Albuquerque, New Mexico. This address is approximately in the center of the city. The object was round in shape, but of indeterminable size. It had a very shiny luster but neither made noise nor left a trail. Its speed was described by the observer as approximately five or six times that of the F-86. It was first

sighted at an angle of 80° to the observer on its north course which involved no apparent maneuvers or change of altitude. The object was observed for approximately six seconds in which time it covered the remaining distance across the horizon. The object crossed above a B-29 or B-50 which was flying on an easterly course at approximately 10,000 feet. It was believed by the observer that the object was at a much greater altitude than the bomber. There were no clouds with 60-mile visibility and easterly winds aloft of 20 MPH. S/Sgt Shorey's duty in the 4925th Test Group (Atomic) is in the engineering field. His observations from the mechanical viewpoint should be credited as fairly reliable. He has had experience in judging altidudes and speeds by observing F-86's in flight with knowledge of their speed and altitude.

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 02; Close Encounters

Subject: Close Encounter at White Sands
Date: November 25, 1952
Location: White Sands, NM

Francis Ridge:
This incident is not listed among the BB Unknowns but is listed in the Comprehensive Catalog of Project Blue Book Unknowns by Brad Sparks as item 693: Nov. 25, 1952. White Sands, New Mexico. (McDonald list). The BB documents linked at the bottom of this directory, however, describe a close encounter after a major UFO flap in 1952.

BB Microfilm:
While returning to White Sands Proving Ground from Wm Beaumont Hospital, at approximately 2030 hours on 25 November 1952, I observed what appeared to be flares, or pyrotechnics, on the right side of the road. My first thought was that these objects were flares that were being fired by troops on a night project. However, shortly thereafter a matter of seconds I observed what appeared to be a flare land right in the middle of the road, about three or four hundred yards distant. It assumed the shape of a ball, having a green center, fading to a light hazy blue at the exterior. This light disappeared before my car arrived at the spot. After observing this light, I thought that the Department of Army had a new type pyrotechnics that I was not familiar with that they were using on a night problem. Approximately three to five minutes later I observed a light, or series of lights, approaching from the right side of the road, in the heavens, at an altitude of about three to five hundred feet and between 1/4 and 1/2 mile distant. I thought that probably, in conjunction with the night problem, this was an airborne drop of troops. I first thought it might be a C-119 or a C-123. However, this object made a right hand turn above the road and then disappeared at an angle of approximately 90 degrees straight into the sky. I cannot state whether it was a plane or a type of aircraft. I can merely state that there were two rows of what appeared to be windows, brilliantly lighted, and I would estimate that they were five to six feet in height and six to eight windows in each of the two rows. After this object disappeared, I stopped my car and got out to see if I could see a plane but could see nothing. I turned off the motor on my car to see if I could hear the motors of a plane, but I could near no sound. I then proceeded to White Sands Proving Ground."

Nuclear Connection Project
NCP

Subject: The Kirtland UFO Incident; Albuquerque, New Mexico; November 4, 1957

Francis Ridge:
Apparently the UFO flew right-to-left along the East-West runway, then turned SW toward the tower, stopping near the nuclear weapons storage area for about a minute. McDonald mentioned that the UFO stopped near the Kirtland "Drumhead Area" where the B-58 operated. If the object hovering near a WSA (Weapons Storage Area) didn't get your attention, you have to read what the implications might have been with the B-58 "Hustler"! See Joel Carpenter's preliminary analysis link below. And there's a lot more.

CAA tower personnel, R.M. Kaser and E. G. Brink, were reliable observers with 23 years of airport control tower experience between them. A lighted object came down steeply at the east end of a runway, left the flight line, crossed runways, taxiways, and unpaved areas at about a 30 degree angle, and proceeded southwest towards the control tower at an altitude of less than 100 feet. Observed through through 7x binoculars, the object appeared to be egg-shaped, having no wings, tail, or fuselage, and was elongated vertically. It appeared to be fifteen to twenty feet tall, about the size of an automobile standing on its nose, and had a single white light at its base. After the UFO left the area it was tracked on a CPN-18 surveillance radar and it exhibited some amazing flight characteristics. The object also came back towards Kirtland until it took up a position behind an Air Force C-46 that had just taken off. It stayed in position behind the C-46 until they both moved out of radar range.

There have been several UFO incidents in and around Kirtland AFB through the years. A questionable one happened in 1980, but the one of November 4th, 1957, was one that has stood the test of time and has been well covered by Hynek, McDonald, etc.

Here's the full story.

Subject: March 2-3, 1949, Los Alamos/ Then Killeen Base

To: Francis Ridge, Coordinator, Nuclear Connection Project <nicap@insightbb.com>

This a very interesting time. On March 2 and 3, 1949, there are two UFO reports from Los Alamos, and then on March 6,7,8, 1949, we have UFO reports from Killeen base, and then on the March 8, 1949, we have another UFO report from Los Alamos. Just a wild quess--maybe atomic weapons are being tranferred from Los Alamos to Killeen Base. Would be nice to see a log of when weapons were moved from Los Alamos during 1949.

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 01; Distant Encounters

Subject: The Killeen Base/Camp Hood Incidents
Date: March 17, 1949
Location: Camp Hood, TX

Francis Ridge:
UFOs have been seen where uranium and plutonium are mined and manufactured, where bomb development takes place, and where the bombs are stored, such as Killeen Base. Even where the bombs are transported to the testing areas (USS Curtiss). Surprisingly, the Camp Hood/Killeen incidents are even listed in the Project Blue Book "Unknowns" (case319).

Brad Sparks:
7:52 p.m. Capt. Horace McCulloch, Asst. G-2 of the 2nd Armored Division at the nuclear weapons storage site, was preparing the test firing of flares in order to prove recent sightings were mistakes when he and his men themselves saw aerial phenomena, 7 separate sightings by trained artillery observers in different locations enabled rapid triangulation of large, green, red and white flare-like objects flying in generally straight lines. (FOIA)

Loren Gross:
After becoming a true bomb factory, Sandia (Base) shipped assembled bombs to Fort Hood, Texas, where there was a secure storage site guarded by the 12th Armored Infantry Battalion under the command of the Fourth Army...due to the difficulties previously mentioned (NCP-01 - Loren Gross), it wasn't until the spring of 1949 that the U.S. manufactured enough bombs to have a "stockpile." It is suggested that the "green fireballs" that appeared over Sandia in late 1948 bear a direct relationship to a sudden ramp-up of American nuclear weapon production. Also, later, in March,1949, when strange "flares" appeared around the "Q" area at Fort Hood, it is suggested that this interest by the UFOs was triggered by the recent arrival of the first shipment of atomic bombs which was stored as America's first nuclear bomb stockpile.

February 11, 1950, Waco, Texas, 2230 hours. 10th District OSI report

Two witnesses observed two objects "like little moons" traveling at a high rate of speed in a northerly direction, over Waco, Texas.

This sighting not listed in Project Blue Book Master Index.

Subject: April 18, 1950, Near Memphis, Texas, UFO Report To: Francis Ridge <nicap@insightbb.com>

April 18, 1950. Near Memphis, Texas. 9 a.m.-12:40 p.m. (CST). CAA observers in Clarendon, Texas, saw unidentified object to the SE while observers in Childress about 50 miles SE saw object to NW and triangulated stationary object midway in between near Memphis, for 3+ hrs beginning at 9 a.m., which did not move significantly despite winds aloft. Northrop engineering test pilot Max Stanley and observers Lloyd Balsam and Sam F. West were asked to intercept object as they were about to take off in F-61C (AF 8357) from Amarillo on an MX-775 test (Navaho cruise missile celestial guidance test), and a B-36 also took off from Ft. Worth to intercept. At about 12:20 p.m., F-61C crew reached 20,000 ft near Memphis and saw a translucent silver spherical shaped object to the SE at "considerable distance" at 30,000+ ft with "prominent detents" top and bottom with a dark vertical streak or shadow, and streak tilted occasionally resulting in object moving laterally slowly and briefly, with no visible means of propulsion. Object was visible only when sunlight intermittently reflected on it. Contact with CAA Amarillo Range Station revealed no other aircraft in area at high altitude. Northrop crew flew 10 mins at 200+ mph (150 mph IAS) toward object but could not overtake it though apparently closed distance so that object was better observed, appearing as if possibly a weather balloon, however CAA Amarillo denied the possibility due to winds aloft and extreme length of CAA observation. Object then disappeared behind or into a deck of high altitude cirrus clouds. F-61C continued on SE heading for about 5 mins at 30,000 ft and UFO reappeared slightly to the right and higher, very close to the base of the cirrus cloud deck, and much closer than when it had disappeared. UFO angular size 1/2 of full moon. F-61C made radio contact with B-36 crew at 46,000 ft, above the cloud layer who could not see object. UFO then disappeared again behind or into a cloud [probably after < 1 min], F-61C circled for about 5 mins, then regained object for about 30 secs in a break between 2 clouds before losing sight of it for the last time. F-61C had to descend due to depletion of oxygen supply, 2-3 mins later B-36 broke off attempted intercept too. (Jan Aldrich) 3+ hrs 5+ witnesses 1/2 Full Moon triangulation; test pilot

The Lubbock Lights / Carl Hart Photos

August 25, 1951
Lubbock, Texas

Fran Ridge:
Listed as item 11 under photographic evidence in the Special Evidence section of NICAP's UFO Evidence, is the Lubbock Texas Lights. These photographs by Carl Hart, Jr., show a V-formation of large circular objects. Capt. Ruppelt, head of Air Force Project Blue Book, reported that "In each photograph the individual lights in the formation shifted position according to a definite pattern." Main photograph reproduced in True, May 1954. Skeptics have always had a field day with this one because it seemed to be only a set of photographs, taken by a young, inexperienced photographer, of geese, later explained as moths. Little did anyone know that even the Air Force, including the professors who also witnessed the overflights, did not buy the explanations. In fact, it appears some people, alerted to UFO activity, saw birds; others saw UFOs. And the most damning evidence against birds, a professional photographer, with professional equipment and better film, could not capture lighted bellies of geese. And that's not all. A swept-back winged object was being seen around the country during the period and two radars confirmed an unknown.

Captain Edward Ruppelt:
This target was real. I quickly took out a map of the United States and drew in a course line between Lubbock and the radar station. A UFO flying between these two points would be on a northwesterly heading and the times it was seen at the two places gave it a speed of roughly 900 miles per hour. This was by far the best combination of UFO reports I'd ever read and I'd read every one in the Air Force's files.

Subject: Carswell AFB, Texas, UFO/Nuclear Connection
To: Francis Ridge <nicap@insightbb.com>

There is a possible nuclear connection with sightings in and around the Dallas/ Fort Worth, Texas, area due to the proximity to Carswell AFB, a SAC Base, flying B-29, B-50, and B-36 bombers, whose mission was to wage nuclear war on the USSR. Carswell AFB is approximately 120 miles north of Fort Hood/Killeen Base area and there may have been many nuclear weapon transfers between the two locations. Also, Texas had probably the most Air Force Bases of any state (around 22 bases in the 1940-1950 range).

Carswell AFB

Location:

Two miles northwest of Fort Worth, Texas

Origin of Name:

Named after Maj Horace S. Carswell, killed in a B-24 crash in the South China Sea near Tungchen, China on 26 Oct 1944

Previous Designations:

- Carswell AFB, Texas (????-????)
- Fort Worth AAF, Texas (????-????)

Major Command:

- Air Combat Command (1 Jun 1992-????)
- Strategic Air Command (????-1 Jun 1992)
- ()

Wings/Groups Stationed:

- 7th Bomb Wing (1 Jun 1958-1 Oct 1993)
- 11th Bombardment Wing, Heavy ()
- 43rd Bombardment Wing, Medium ()

HISTORY OF THE B-36 PEACEMAKER
"NEVER A SHOT IN ANGER"

SELECT A YEAR:

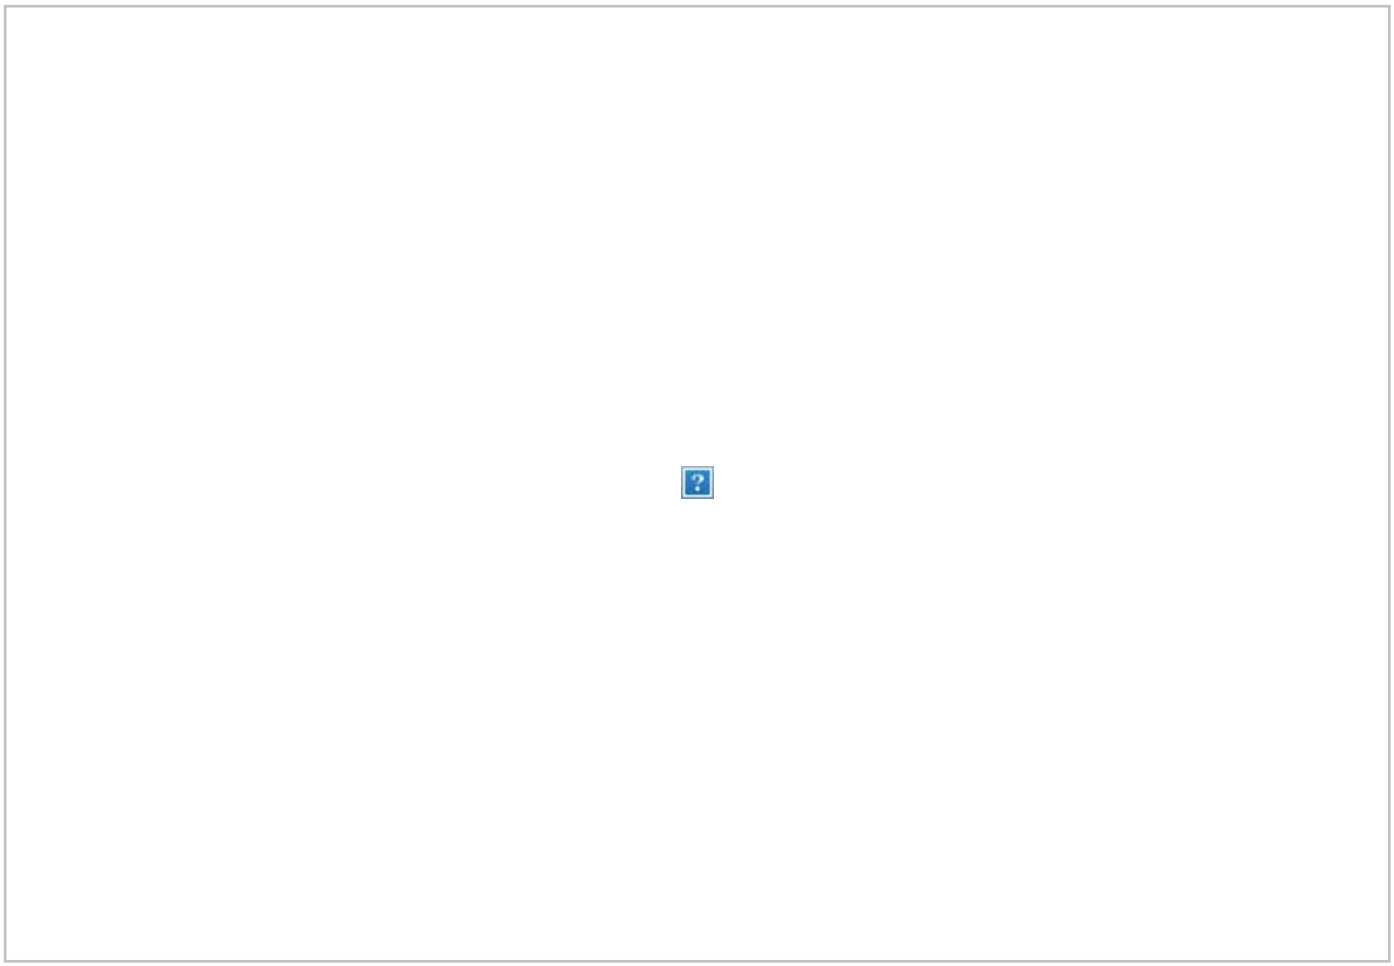
1946	1947	1948	1949	1950
1951	1952	1953	1954	1955
	1956	1957	1958	

1949

RETURN TO TOP

The year 1949 opened with both assigned bomb groups changing commanders. On 2 January 1949, Colonel Bryan B. Harper became the 7th Bomb Group commander, previously held by Colonel Clark, the present wing commander (he held the position of both group and wing commander since November 1947). Colonel Harper had

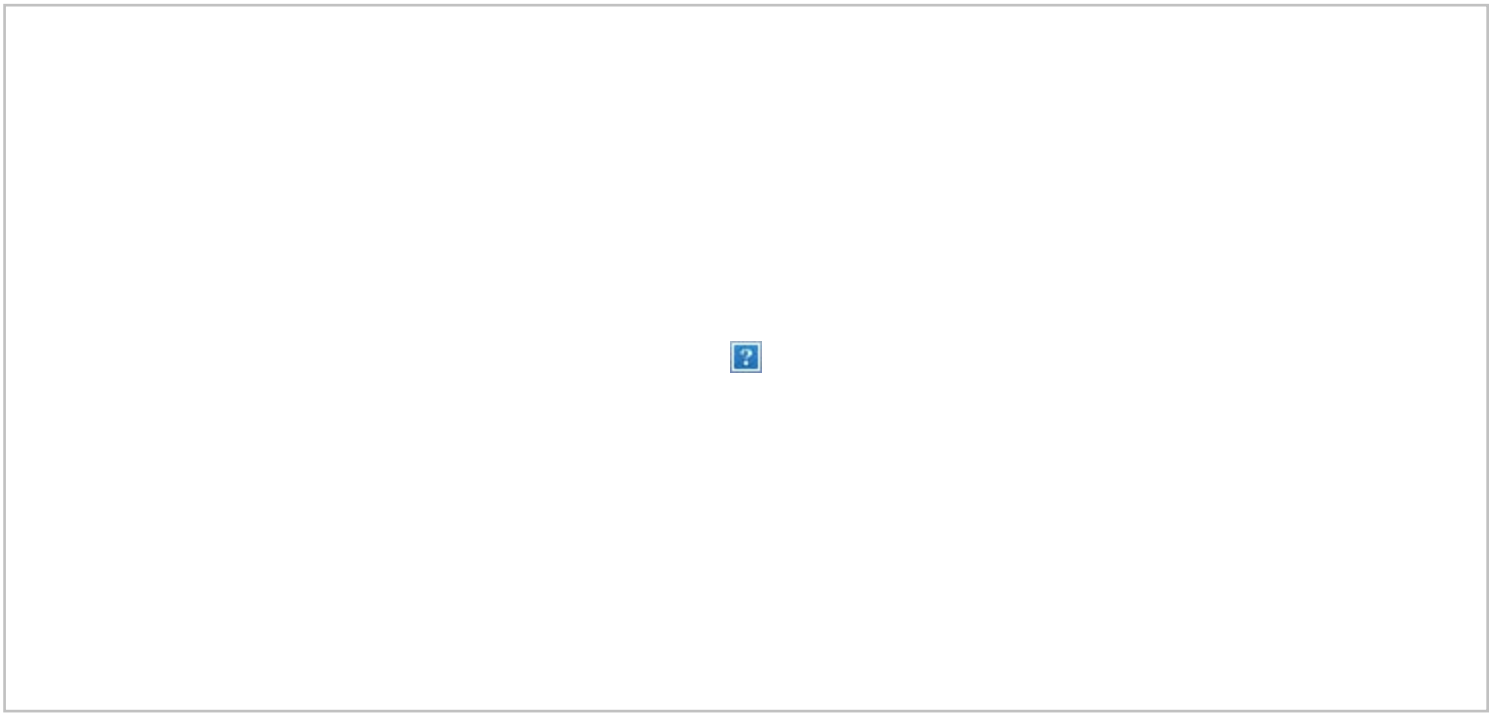
been the deputy base commander at Carswell since November 1947. A few days later, on 11 January, Lieutenant Colonel Harry E. Goldsworthy (later, Lieutenant General) replaced Major Ireland as the 11th Bomb Group commander. Major Ireland moved to the position of 11th Bomb Group executive officer. Colonel Goldsworthy had been the 436th Bomb Squadron commander.



Bob Hope inspecting a B-36 at Carswell on 6 January 1949.
Photo by Frank Kleinwechter

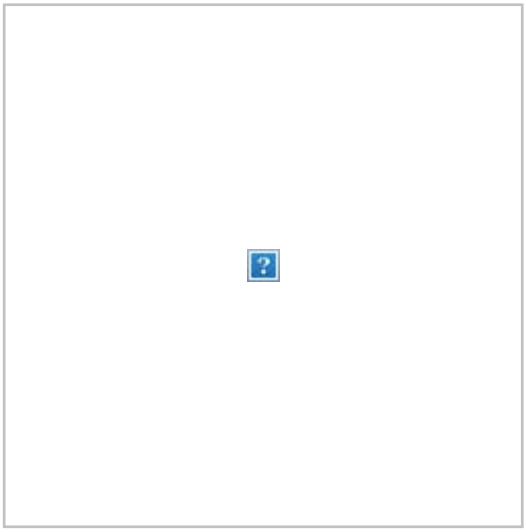
1949 PRESIDENTIAL INAUGURATION FLIGHT A five ship B-36 formation was flown four days later on 15 January 1949, in an air review over Washington, D.C., commemorating the inauguration of the President of the United States, Harry S. Truman. The mission was scheduled to be led by Major General Roger M. Ramey, 8th Air Force commander, but due to difficulties encountered after take off his aircraft returned to Carswell. The lead was then assumed by Colonel Clark, 7th Bomb Wing commander.

11TH BOMB GROUP RECEIVES FIRST B-36 BOMBERS On 17 January, the first B-36A 44-92007 was transferred from the 7th Bomb Group to the 11th Bomb Group. It was further assigned to the 26th Bomb Squadron. A second B-36A 44-02009 was assigned to the 26th on 19 January. That same day, the 11th Bomb Group conducted its maiden flight of a B-36 aircraft in B-36A 44-92007.



44-92007

The 26th Bomb Squadron crew which flew the training flight consisted of: Major Moreland, pilot and 26th Bomb Squadron commander; Captain Warner, Instructor pilot; First Lieutenant Giles, copilot; First Lieutenant Sikes, bombardier; Captain Wolford, navigator; First Lieutenant Weldon and Master Sergeant Benefield, engineers; Staff Sergeants Kelly, Rose and Greenfield, central fire control; Staff Sergeants Taggs, Johnson and Harris, aerial gunners; and Technical Sergeant McLemore, radio operator. Also, on 17 January, the 42nd Bomb Squadron, 11th Bomb Group received its first B-36A 44-92010 with a second B-36A 44-92019 delivered on 21 January 1949. The 98th Bomb Squadron, 11th Bomb Group, received its first B-36A 44-92022 on 19 January.



44-92009

The 11th Bomb Group conducted its maiden flight of a B36 aircraft in B-36A 44-92007 delivered to the 26th Bomb Squadron earlier. The 42nd Bomb Squadron, 11th Bomb Group received its first B-36A 44-92010. The 98th Bomb Squadron, 11th Bomb Group, received its first B-36A 44-92022 on 19 January.

FIRST AERIAL FLIGHT FOR 11TH BOMB GROUP Then on 25 January, the 11th Bomb Group took part in its first aerial review. A total of six B-36s (3-As 11th Bomb Group and 3-Bs 7th Bomb Group) led an aerial review in commemoration of the 7th Bomb Wing and 8th Air Force birthdays over Carswell AFB. Following the B-36s

were B-29s of the 509th Bomb Group, Walker AFB, Roswell, New Mexico and F-82 fighters from Kearney AFB, Kearney, Nebraska. The flight of 7th Bomb Wing aircraft was led by Lieutenant Colonel Ellery D. Preston, 436th Bomb Squadron commander, 7th Bomb Group.

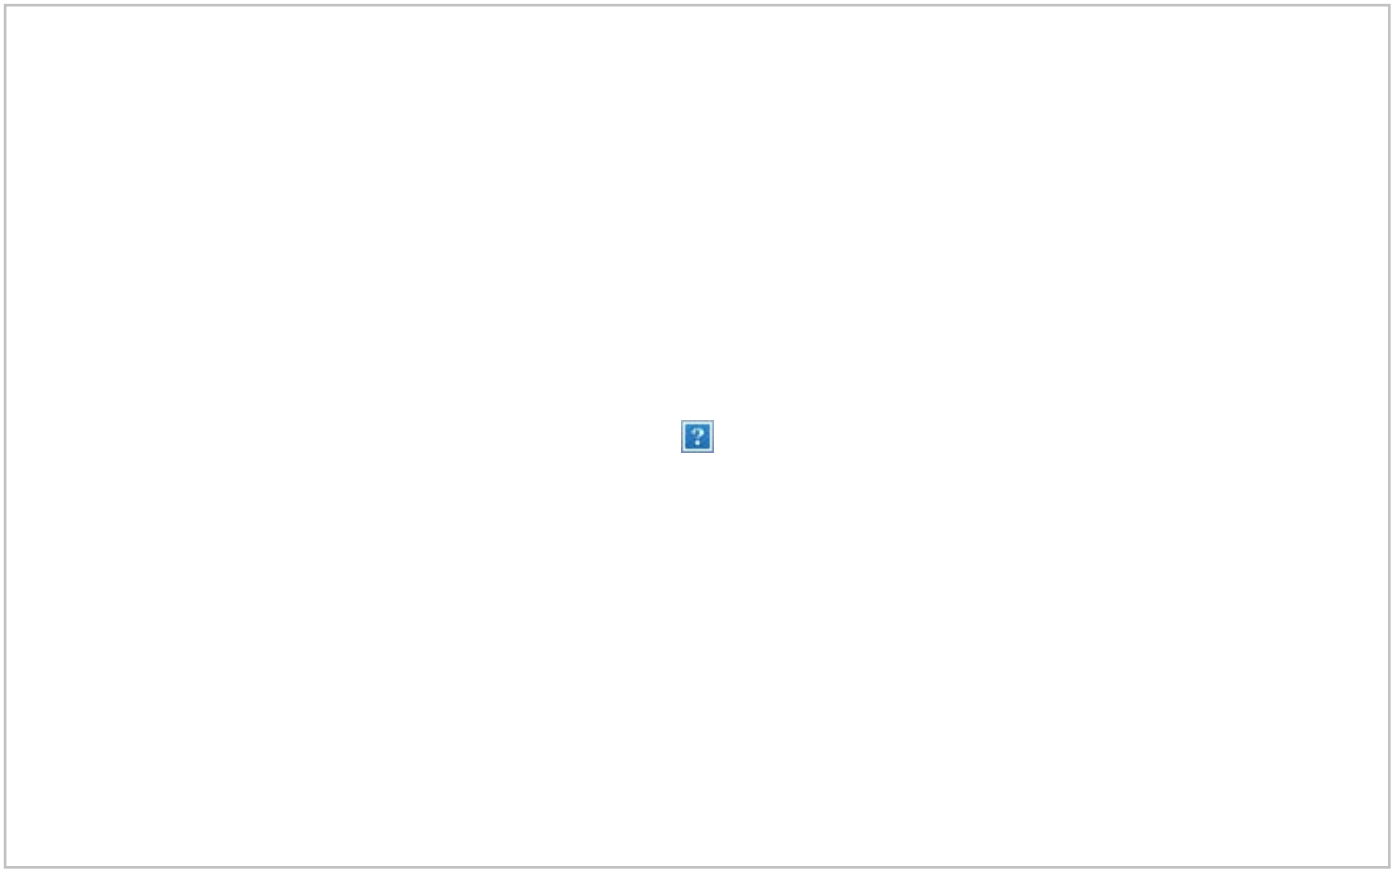
As the month closed the wing had 35 B-36s assigned, 30 in the 7th Bomb Group and five in the 11th Bomb Group. The 9th Bomb Squadron had 11 B-36s (5-A and 6-B), the 436th had 10 B-36s (5-A and 5-B), and the 492nd totaled 9 B-36s (4-A and 5-B). In the 11th Bomb Group, the 26th Bomb Squadron had two B-36As assigned, the 42nd had two B-36As, and the 98th only one B-36A. The 7th Maintenance and Supply Group under the wing was assigned the 7th Motor Vehicle Squadron, Bomb, on 1 February 1949, per SAC General Order 40.

Then on 11 February, Colonel Harper, 7th Bomb Group commander, became the wing executive officer. He was replaced as group commander by Colonel Charles D. Farr, who recently arrived from the Armed Forces Staff College in Washington, D.C.

On 15 February, the 7th Bomb Group, lead by Colonel Clark, wing commander, flew a sixteen ship formation commemorating air progress, in an aerial review over Andrews Field, Maryland. This formation was the largest B-36 formation to date of the world's largest bomber. The 7th Bomb Group transferred a total of six B-36As to the 11th Bomb Group in February. One B-36A 44-92012 to the 26th Bomb Squadron on 4 February, bringing total assigned in the squadron to six. The 42nd Bomb Squadron received three (44-92024, 12 February; 44-92006, 16 February; and 44-92017, 18 February) for five assigned. The last two B-36As (44-92016, 16 February and 44-92021, 18 February) were assigned to the 98th Bomb Squadron which had a total of three B-36As. This left the 11th Bomb Group with a total of 14 B-36As assigned in February. Additionally, B-29A 44-21753 (last 7th Bomb Wing, 7th Bomb Group, 492nd Bomb Squadron B-29 assigned) assigned to Headquarters, Eighth Air Force in December 1948, was pending disposition as the month closed.

NON-STOP B-36 FLIGHT Of importance during the month of March 1949 was a 9,600-mile, non-stop flight by a 492nd Bomb Squadron, 7th Bomb Group, B-36B 44-92035. The flight, lasting over 44 hours, pin-pointed entirely within the borders of the United States, began on 10 March from Carswell. The aircraft flew north to Minneapolis, Minnesota, then turned westward to Great Falls, Montana. From there, the bomber flew a diagonal line across the United States to Key West, Florida. While enroute north to Houston, midway from Key West, the aircraft dropped nearly 10,000 pounds of bombs over the Gulf of Mexico. Crossing over Houston the B-36 headed for Fort Worth. Reaching Fort Worth the bomber flew on to Denver, Colorado, and Great Falls, Montana, before turning and flying to Spokane, Washington. From Spokane, the aircraft flew to Denver. During this leg, the aircraft developed engine trouble and was forced to land two hours early at Carswell. The flight was the longest recorded to date in a B-36.

11TH BOMB GROUP RECEIVES FIRST B-36B AIRCRAFT On 18 March, the 11th Bomb Group received its first B-36B 44-92050, followed by a second B-36B 44-92049 on 19 March. Both aircraft were assigned to the 26th Bomb Squadron. Two more B-36Bs (44-92047 and 44-92051) were assigned to the 42nd Bomb Squadron on 24 March. The 98th Bomb Squadron received the last next B-36Bs in the 11th Bomb Group (44-92053 and 44-92055) on 28 March. Those aircraft resulted in 20 B-36s (14-A and 6-B) assigned to the 11th Bomb Group as March closed.



13 April 1949
Photo by Frank Kleinwechter

On 22 April 1949, two B-36B aircraft of the 9th and 492nd Bomb Squadrons, 7th Bomb Group, flew to Muroc, California, to perform an accelerated service test at 40,000 feet. The mission tested the suitability of the B-36 as a bombing platform for very-large type bombs. The two aircraft returned to Carswell on 10 June 1949. During the month, a total of 25 B-36s were assigned to the 7th Bomb Group (7-A and 18-B). Of those, the 9th Bomb Squadron had eight (2-A and 6-B), the 436th had eight (2-A and 6-B), while the 492nd totaled nine (3-A and 6-B). In the 11th Bomb Group, total B-36s assigned increased by two over last month to 22 for April (14-A and 8-B). The 26th Bomb Squadron had eight (6-A and 2-B), the 42nd totaled eight (5-A and 3-B), and the 98th had six (4-A and 2-B).

May was highlighted by a change of command in the wing commander position. On 11 May 1949, Colonel Clark, (later, Major General) the first 7th Bomb Wing commander, relinquished command to Colonel William P. Fisher. Colonel Fisher arrived from the Air War College, Maxwell AFB, Alabama, where he was serving on the faculty staff. Colonel Clark was reassigned to Headquarters, Eighth Air Force. The same day, Colonel Richard H. Carmichael assumed command of the 11th Bomb Group from Lieutenant Colonel Goldsworthy, who was awaiting further assignment. Colonel Carmichael had been assigned to the Office of the Secretary of the Air Force in Washington, D.C., prior to his becoming the 11th Bomb Group commander.

WING RECEIVES WORLD'S LARGEST LAND AIRCRAFT-CONSOLIDATED XC-99 On 26 May 1949, the 7th Bomb Wing became the first unit in the Air Force to receive the world's largest land aircraft, the Consolidated XC-99, 43-52436 cargo aircraft. The wings were made at the Consolidated Fort Worth plant, then shipped to the Convair plant, San Diego, California, in 1947 for assembly to the fuselage manufactured at Convair. It first flew from San Diego on 24 November 1947. After successful tests in San Diego, it was flown to Fort Worth and modified with the standard four wheel landing gear and bigger engines. It was the sister ship to its far-reaching counterpart bomber, the B-36, and was assigned to the 436th Bomb Squadron, 7th Bomb Group, for a series of inspections prior to reassignment with another Air Force unit at Kelly AFB, San Antonio, Texas, in September 1949. The gigantic, cigar-shaped aircraft had its modification and flight test program administered by the 436th Bomb Squadron. During June, the XC-99 had a complete over-all inspection. Maintenance of the double decked XC-99 was the responsibility of Master Sergeant Howell M. Covert, 436th Bomb Squadron crew chief. He and Technical Sergeant C. E. Cornell, 436th Bomb Squadron, his assistant, had just completed a seven-week

familiarization training course on the XC-99 at the Consolidated plant in Fort Worth. The aircraft bore a striking resemblance to the huge B-36 "Peacemaker". However, the XC-99 was 20 feet longer and 10 feet higher than the slender B-36. Wingspan of both aircraft was 230 feet. Designed from almost identical specifications, except for fuselages, both aircraft were equipped with multiple-wheel main landing gears. Both were powered by six-pusher-type engines located on the trailing edge of the wing. The weight of the aircraft was 265,000 pounds. Also, it could haul 400 fully equipped troops, 100,000 pounds of cargo, or 300 litter patients and their attendants. The volume of the XC-99 interior was 300,000 cubic feet; equivalent to 10 railroad freight cars, with a top speed of 300 mph, and maximum range of 8,100 miles. Service ceiling was set at 30,000 feet. The central portion of the 230 foot wing span was seven and a half feet thick, high enough to permit installation of a catwalk, so that crew members could climb into the wing to check engines during flight. This huge transport had an upper and lower cargo deck, connected by two stairways. The two electrically operated sliding cargo doors in the bottom of the fuselage could be opened in flight to permit dropping cargo. Four electrical hoists, operating on overhead rollers extending the length of each cargo area, were used to load and unload the aircraft. Maintenance people assigned to the 436th Bomb Squadron constructed four specially built loading cranes for the XC-99. These cranes expedited loading the transport.

FIRST AIR FORCE FLIGHT OF CONSOLIDATED XC-99 On 9 June 1949, Captain Deane G. Curry, 492nd Bomb Squadron, made the first Air Force flight in the new Consolidated XC-99 and accomplished six landings at Carswell. During the remainder of June, Captain Curry completed five additional flights, of which one was a night mission, and one an emergency landing at Kelly AFB, San Antonio, Texas. As the month closed the XC-99 was at Kelly undergoing repair and installation of a new engine.

XC-99

During June, the 11th Bomb Group transferred five B-36A aircraft to the Consolidated plant at Fort Worth, and one B-36B to the Oklahoma City Air Material Area, Tinker AFB, Oklahoma, for modification. Six remaining B-36Bs in the group were divided between the three assigned squadrons: 26th, 42nd and 98th Bomb Squadrons. Overall, the 11th Bomb Group had 22 B-36s assigned in June (15-A and 7-B). Also, the 7th Bomb Group received three new B-36Bs from the factory in June, for a total of 24 B-36s (3-A and 21-B) assigned, and one XC-99. Of those, the 9th Bomb Squadron had eight B-36s (1-A and 7-B), the 436th totaled seven B-36s (1-A and 6-B), plus one XC-99. This left the 492nd Bomb Squadron with the remaining nine B-36s (1-A and 8-B). On 1 July 1949, Captain Harold Barry, 492nd Bomb Squadron, flew a B-36B to Chicago, Illinois, for static display at Orchard Park Airport during the National Air Fair. The event was held from 1 to 5 July. Following this the 7th Bomb Group flew seven B-36s in a formation flyover of the National Air Fair in Chicago on 3 July. The next day, the group flew a formation of five B-36Bs over the fair.

3 July 1949. Enroute to the National Air Fair in Chicago
Photo by Frank Kleinwechter

BOEING B-29 SUPERFORTRESS ASSIGNED On 6 July, the base swimming pool was opened for use. Two days later, on 8 July, B-29A 44-62044, was assigned to the 492nd Bomb Squadron, 7th Bomb Group. The aircraft was formerly assigned to the 97th Bomb Group at Biggs AFB, El Paso, Texas. The 9th Bomb Squadron, 7th Bomb Group, received two new B-36B aircraft (44-92061A and 44-92064A) from the Consolidated plant, Fort Worth, on 11 July 1949. Also, two 9th Bomb Squadron B-36Bs (44-92033A and 44-92038A) were sent to the Consolidated plant, Fort Worth, for modification in July.

1948 B-36 DEPLOYMENT TO ALASKA Two 492nd Bomb Squadron B-36s departed for Alaska on 25 July 1949 with Major General Roger M. Ramey, 8th Air Force commander, and Colonel Fisher, 7th Bomb Wing commander. This flight was for the purpose of surveying B-36 facilities at Eielsen AFB, Alaska. The aircraft returned to Carswell on 29 July.

LAST WING B-36A'S TRANSFERRED During the month the 7th Bomb Group transferred the last three B-36As to the Air Material Command Storage at the Consolidated plant in Fort Worth. That left the group with 21 B-36Bs, one XC-99 and one B-29A assigned. The 9th Bomb Squadron had eight B-36Bs, the 436th totaled seven B-36Bs and one XC-99 (at Kelly AFB, Texas since late June for engine changes), and the 492nd with six B-36Bs and one B-29A. The 11th Bomb Group acquired four new B-36B aircraft in July, two (44-92053 and 44-92050) went to the 98th Bomb Squadron. Additionally, the 11th sent four B-36As to Consolidated in July for conversion. As the month closed 22 B-36s were assigned to the 11th Bomb Group (11-As and 11-Bs).

August 1949 opened with the official ground-breaking ceremony at Carswell AFB on 5 August, for the new base housing project. Major General Roger M. Ramey, 8th Air Force commander, turned the first earth with a gold-plated spade. He was followed by the 7th Bomb Wing commander, Colonel Fisher. The housing project would include a total of 67 units constructed by McCann Construction Company, Fort Worth, Texas. Following this the 7th Bomb Group changed commanders on 17 August 1949. That date, Colonel John A. Roberts (later Brigadier General) assumed command of the group from Colonel Farr who was reassigned to Fairfield-Suisan AFB, San Francisco, California. Colonel Roberts was previously the Eighth Air Force, Chief of Staff at Carswell.

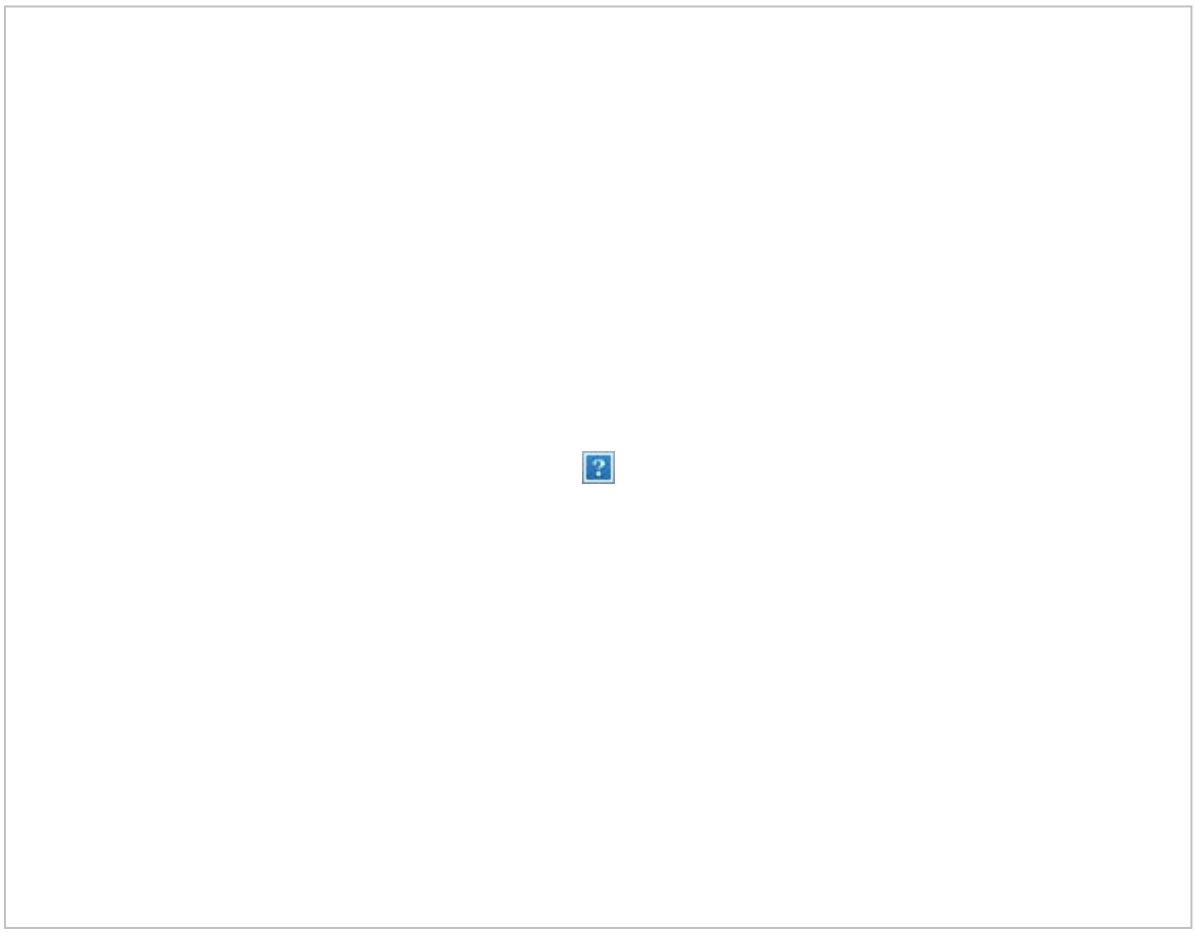
1949 NATIONAL AMERICAN LEGION CONVENTION FLYOVER Next, on 29 August, the wing flew three B-36B aircraft in a flyover at the Pennsylvania Railroad Station, Philadelphia, Pennsylvania, in conjunction with a commemoration of President Harry S. Truman and the Secretary of Defense, attending the National American Legion Convention. During the rest of August the 492nd Bomb Squadron, 7th Bomb Group, conducted a series of polar training missions out of Eielsen AFB, Alaska in the B-36B.

1949 CLEVELAND AIR RACES FLYOVERS During September 1949, wing B-36s flew in several flyover demonstrations. The first occurred on 3 September, when two 7th Bomb Group B-36Bs and one 11th Bomb Group B-36B accomplished a flyover at the Cleveland Air Races, Cleveland, Ohio. On 4 September, three more wing B-36s (2-7th and 1-11th Bomb Group) flew a second flyover at the Air Races in Cleveland. The last flyover for the

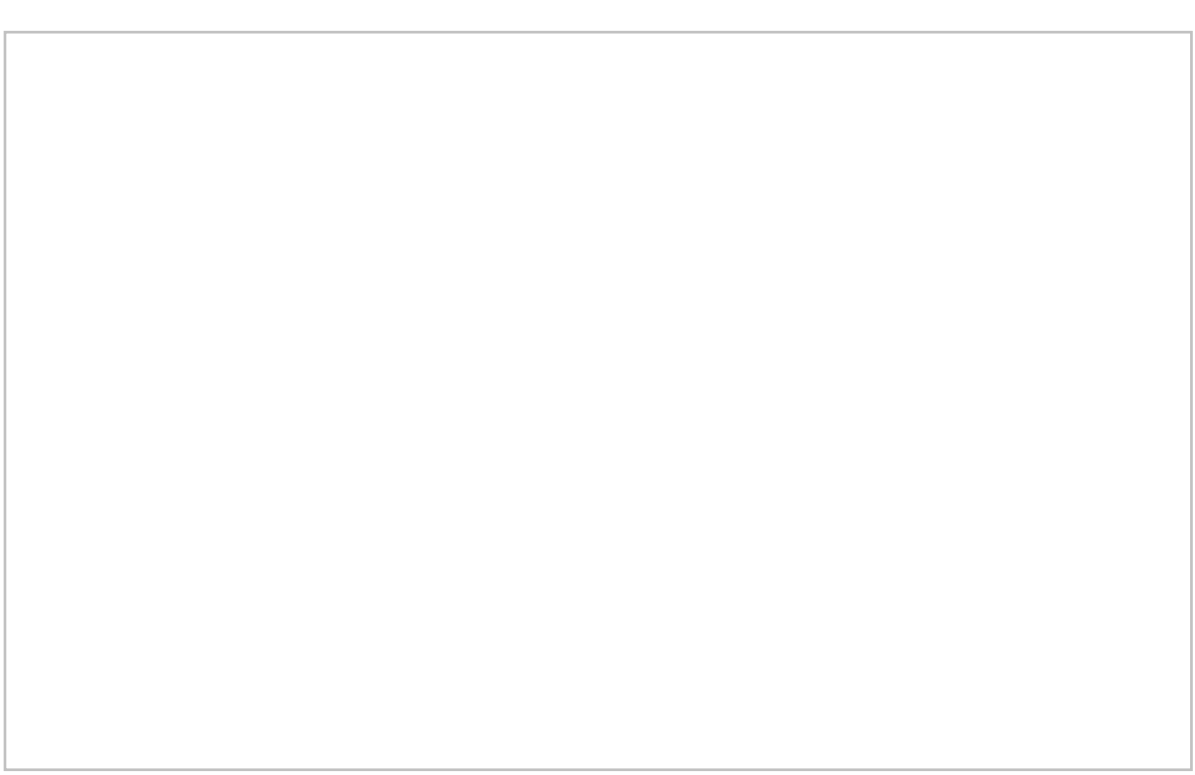
Air Races occurred on 5 September, with three B-36s (2-7th and 1-11th Bomb Group).

One 492nd Bomb Squadron, 7th Bomb Group, B-36B flew a navigational training flight to Eielsen AFB, Alaska, on 14 September. Enroute to Alaska the bomber conducted radar bombing at Stockton, California, and Geiger Field, Washington. The aircraft returned to Carswell on 16 September.

FIRST WING B-36 ACCIDENT The wing recorded its first major accident in a B-36 aircraft on 15 September 1949, when a 9th Bomb Squadron, 7th Bomb Group, B-36B 44-92079, crashed on take-off into Lake Worth, at the north end of the Carswell runway. The cause was attributed to the reversal of some engine propellers during launch resulting in a loss of power during take-off. Five of the 13 crew members were killed in the crash. These were the first fatalities in three years of B-36 operations.



15 September 1949



15 September 1949

The next day, 16 September, the 7th Bomb Wing received Eighth Air Force Operations Order 19-49, dated 15 September 1949. This order instructed that a forward operational area at Eielsen AFB, Alaska, be established for future training flights to Alaska. This exercise was to provide a means of testing the existing facilities at Eielsen and give the wing experience in maneuvers in Arctic flying. The operation was called Operation Drizzle.

Later in the month a distinguished visitor, Lord Arthur Tedder, Marshall of the Royal Air Force, United Kingdom, arrived at Carswell AFB on 21 September. He and his wife, Lady Tedder, viewed B-36 facilities at Carswell, inspected a B-36 and were briefed on Eighth Air Force operations.

1949 SAC BOMBING COMPETITION Convinced that the first SAC Bombing Competition had provided better bombing and a competitive spirit throughout SAC, Lieutenant General Curtis E. LeMay, Commander-in-Chief, Strategic Air Command, decided to make it an annual affair. Held from 3 to 7 October 1949, the second competition included 13 bomb groups: three B-36, eight B-29, and two B-50. The B-36 crews operated out of their home bases. Six crews from the wing took part, three from the 7th Bomb Group (9th, 436th and 492nd Bomb Squadrons), and three from the 11th Bomb Group (26th, 42nd and 98th Bomb Squadrons). Each participating crew accomplished three visual bomb releases and three radar releases from 25,000 feet. The 7th Bomb Group placed 4th overall with the 11th Bomb Group crews last at 13th.

Following return of the competition crews the wing mission changed on 13 October 1949. The higher headquarters directive divided the new mission into three parts as follows:

1. Organize and train a force capable of long range offensive bombardment.
2. To participate in the reserve training program to a maximum extent by training and administering assigned reserve personnel and units.
3. Be prepared to perform those tasks assigned in current emergency plans and related operations plans.

The basic difference between the old and new mission was the wing was no longer required to maintain a force for the purposes of participating in operations involving reconnaissance, photographic, mapping photography, sea search, and anti-submarine patrols.

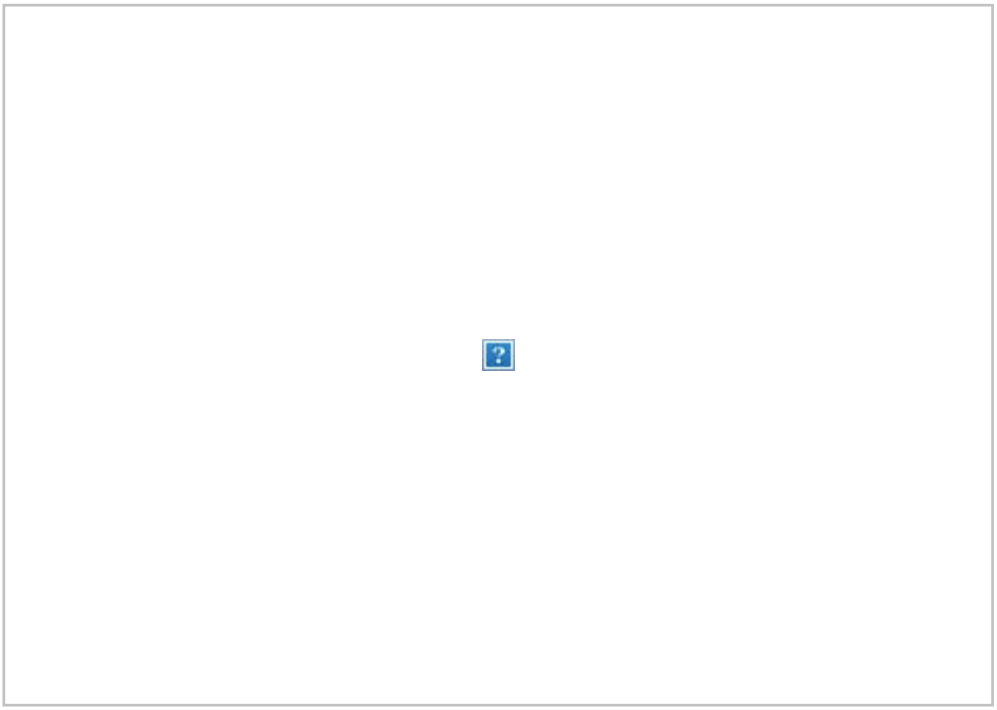
A rather unique method of training men for food service work was adopted by the 7th Food Service Squadron in October. The method was one in which airmen who had completed basic and secondary phases of cookery were given advanced training in local civilian organizations. Several airmen assigned to the squadron were attending cooking courses during October in such establishments as the Hotel Texas, Dean and Kroger Wholesale Meat and Provisions, and Milan Cafeteria, Fort Worth, Texas. Also, the Hotel Mayflower, Washington, D.C. With the knowledge gained from the well-known chefs of these establishments, the 7th Food Service Squadron expected to create culinary masterpieces.

On 24 October 1949, Portugal's Air Force Chief, General Alfredo dos Santos Cintra and party arrived at Carswell. General Cintra viewed a B-36 first hand and toured the Consolidated plant adjacent to the base. He described the Air Force B-36 as further proof that the United States Air Force was in an excellent state of readiness.

WING BEGINS APG-3 RADAR TAIL TURRET TESTING Realizing the necessity of testing and evaluating the APG-3 radar tail turret system, Headquarters, United States Air Force, directed the 7th Bomb Wing to undertake testing. The APG-3 was a radar airborne gun sighting system that provided for aircraft detection and automatic fire control of the tail-turret guns, designed to detect and automatically tract targets up to 5,000 yards in range on fighter-type aircraft. However, it was possible to extend that search range temporarily on fighters. After a particular target had been selected by the gunner-radar operator, the system automatically tracked the target within its angular limits in both range and direction. Also, the system automatically directed and pointed the gun turret in the correct firing position. The only mechanical function of the gunner was the activation of the firing mechanism when the target was in effective firing range. One B-36B 44-92042, of the 26th Bomb Squadron, 11th Bomb Group, was modified for testing as the right gun on the APG-3 was removed and a 35mm Vitarama camera installed in lieu of the turret. The first mission was flown on 25 October 1949, over Eglin AFB Gunnery Range, Florida, at 25,000 feet. Three passes were made on the tail position by two Lockheed F-80 Shooting Star fighters. The F-80 was the first true American jet fighter. Following those passes the APG-3 radar system failed. The malfunction of the radar system was due to low voltage transmitted to the modular and to the antenna tilt motor which became inoperative. Fifty feet of film was obtained and taken to Eglin for operational analysis. As the month closed, 23 B-36Bs were assigned to the wing: 20 in the 7th Bomb Group and 3 in the 11th Bomb Group.

On 1 November, the wing flew its second APG-3 Tail Turret System evaluation test. A total of 12 passes were made in the Eglin AFB Gunnery Range by two F-80 jet fighters at 25,000 feet. Both fighters and the B-36B assigned to the 26th Bomb Squadron, 11th Bomb Group, staged out of Eglin AFB, Florida. The next day, a fighter intercept gun-camera mission was flown on 2 November, out of Carswell in a B-36B of the 7th Bomb Group. Two North American F-82 Twin Mustang fighters from Bergstrom AFB, Austin, Texas, intercepted the bomber at 25,000 feet in the vicinity of Austin. The purpose of the mission, as in any gun-camera mission, was to provide "tracking" and "framing" experience for the B-36 gunners. Also, it provided experience in interception for the fighter pilots. A third test of the APG-3 system was flown out of Eglin AFB on 7 November. A total of 18 passes were made by two F-80 jet fighters on the bomber at 15,000 feet.

ANNUAL AIR INSPECTION From 7 to 18 November 1949, the annual Air Inspection of Carswell AFB was conducted by Eighth Air Force. In general, the inspection team was satisfied with the overall condition of the base over last year's inspection. The day the inspection closed, 18 November, Mr. W. Stuart Symington, Secretary of the Air Force, arrived at Carswell to inspect Eighth Air Force and fly in a B-36. He was greeted upon arrival by Lieutenant General Curtis E. LeMay, Commander-in-Chief, Strategic Air Command, and Major General Roger M. Ramey, Eighth Air Force commander. Mr. Symington stated that the B-36 was "still the best bomber we have", after his flight. Other honored guests in Mr. Symington's party included Senator Lyndon B. Johnson from Texas, Senator Richard Russell of Georgia, Mr. Amon G. Carter, and Mr. D. Harold Byrd, National Vice Chairman of the Civil Air Patrol.



19 November, 1949
VIPs ready for flight in B-36. (L-R): General LeMay, Senator Russell (Georgia), General Roger M. Ramey, Major John Bartlett, Air Force Secretary Symington, Senator Lyndon Johnson (Texas), Representative Thornberry.

A total of 22 B-36s were assigned to the wing (18-7th and 4-11th Bomb Group) as November closed out.

December was uneventful as the wing prepared a second B-36B 44-92078 (436th Bomb Squadron, 7th Bomb Group) for APG-3 modification.

As 1949 closed, the wing bomber inventory included 23 B-36s. The 7th Bomb Group accounted for 18, and the 11th Bomb Group had the remaining 5.

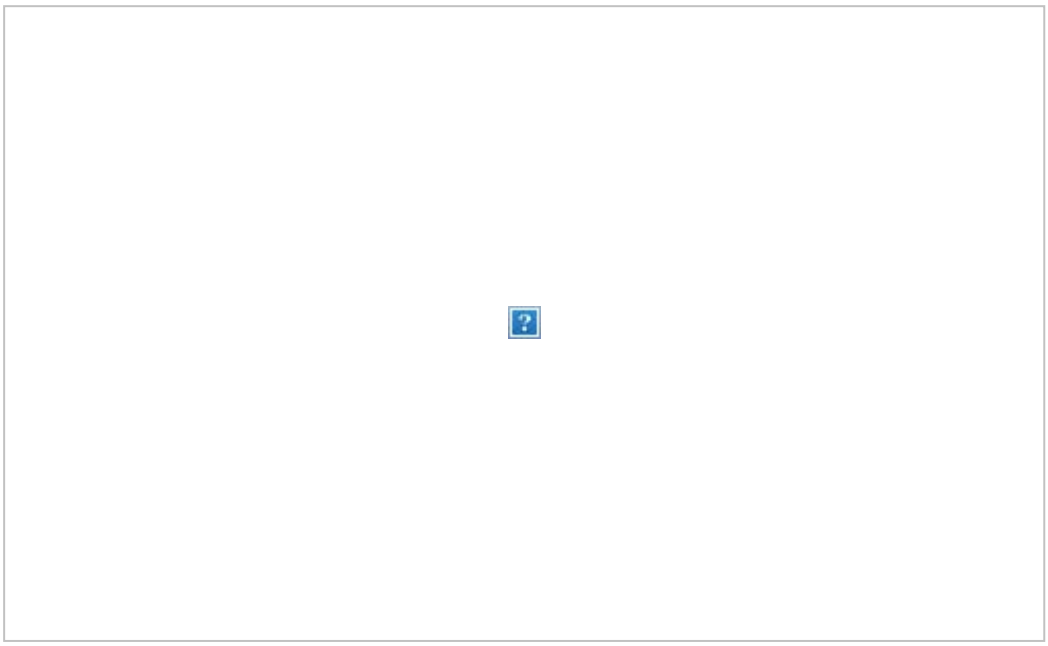
1950

RETURN TO TOP

WING COMMANDED BY BRIGADIER GENERAL A change in the wing command structure started off 1950 when Brigadier General Clarence S. Irvine (later, Major General) assumed command of the wing on 2 January from Colonel Fisher, who became the 43rd Bombardment Wing, Medium, commander at Davis-Monthan AFB, Tuscon, Arizona, the same day. General Irvine previously commanded the 509th Bombardment Wing, Medium, at Walker AFB, Roswell, New Mexico.

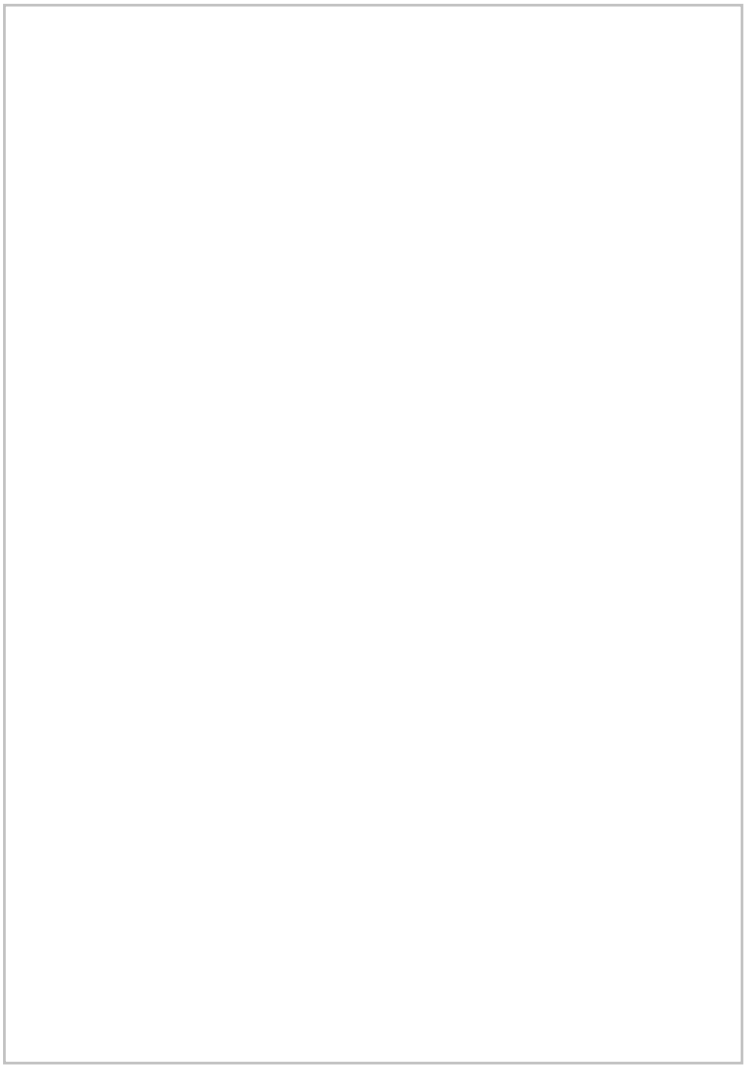
OFFICER FLIGHT ENGINEER SCHOOL ESTABLISHED AT CARSWELL The Officer Flight Engineer School, established by General Irvine on 8 November 1949, at Walker AFB, moved to Carswell on 1 February 1950. The school provided officer flight engineers the opportunity to regain their flying status, which had been suspended since July 1948. Of course, the school was not established for that purpose. The main reason for the school was that General Irvine realized the flight engineer position on present day and future bombers should be performed by a highly qualified technician. On 20 February, the sixth Officer Flight Engineer School class overall, and first at Carswell, commenced with 22 individuals. The length of the course was increased by six weeks to provide for additional B-36 subject matter. Carswell was visited on 3 February 1950, by Colonel Charles A. Lindberg, famed aviator who crossed the Atlantic in the "Spirit of St. Louis". During his visit Colonel Lindberg viewed the B-36, its operations, and training programs.

SECOND WING B-36 ACCIDENT Following this, one of the most important developments in the B-36 program occurred in mid-February as a result of numerous major malfunctions associated with the B-36. Those problems brought the B-36 program down to a low, and were emphasized in a dramatic, but tragic, manner--the crash of B-36B 44-92075 of the 436th Bomb Squadron, 7th Bomb Group, returning from Alaska.



Site of crash of B-36B 44-92075 in British Columbia
Photo by Doug Davidge

The aircraft had been taking part in cold weather maneuvers over British Columbia, Canada. The aircrew abandoned the aircraft when severe icing, plus an engine fire endangered the crew. A total of five out of 17 that parachuted lost their lives. Those five individuals were: 1Lt Holiel Ascol, bombardier; Captain Theodore F. Schreier, copilot; Captain William Phillips, navigator; Staff Sergeant Neal A. Straley, gunner; and Staff Sergeant Elbert W. Pollard, gunner. All except Schreier had streets in base housing named after them later in 1950. To date the streets are still named for those members.



Co-pilot's 7th Bomb Wing pin recovered from 44-92075 in 1998
Photo by Doug Davidge

This was the second recorded B-36 crash in the history of the wing. The engineering difficulties attributed to the crash in Canada were concerned with the following aircraft components, exhaust system, alternators, icing systems, and carburetors. Based on these problem areas and the crash on 14 February, General Irvine imposed flight restrictions on the B-36 aircraft at Carswell effective 15 February 1950. Flying activity ground to a halt following this.

On 24 February 1950, Major General (Retired) Ralph Royce, former 7th Bomb Group commander from 1939-1940, visited Carswell and toured a B-36. General Royce was one of the early pioneers in military aviation dating back to World War I.

The 11th Bomb Group changed commanders on 4 March 1950, as Colonel Bertram C. Harrison took over from Colonel Carmichael, who was transferred to Headquarters, Eighth Air Force at Carswell. Colonel Harrison, former deputy commander of the 7th Bomb Wing, was assigned duties as commander pending arrival of Colonel Thomas P. Gerrity, currently assigned to Air Material Command, Wright-Patterson AFB, Ohio.

Two days later on 6 March 1950, his Royal Highness, Prince Bernhard of The Netherlands, visited Carswell and toured the Consolidated plant at Fort Worth. The next day, 7 March, the Italian Air Force Chief of Staff, Lieutenant General Mario Ajmonecat, visited Carswell and the Consolidated plant at Fort Worth.

Tragedy hit Carswell on 15 March, as the 42nd Bomb Squadron, 11th Bomb Group, hanger burned down. This hanger was originally constructed in June 1943 and relocated in September 1945.

Following this, all the squadrons assigned to the 7th Maintenance and Supply Group, and 7th Air Base Group were

redesignated on 16 March 1950 in that the words "Bombardment, Heavy", were deleted from their titles. The official reason for this action was not known at the time but was presumed it was because no complimentary relationship between any one of those squadrons, and the type of tactical unit on the base under the wing-base theory of organization existed; therefore, those squadrons should not have a designation having reference to the type of tactical unit on base.

The need for a new exhaust system for the B-36, identified in February 1950, was quickly acted upon by Consolidated (Convair) and the Rohr Manufacturing Company, builder of the current exhaust system. Seven modified systems designed by Convair and two designed by Rohr were tested at Carswell during March. Both types failed to correct problems noted in February. Convair and Rohr returned to the drawing board as the month closed. Prior to the close of March, Colonel Geraldine May, Director of Women in the Air Force, toured Carswell on 22 March and viewed a B-36. A few days later plans were developed in maintenance to establish modification docks at Carswell, manned by Convair (formerly Consolidated-Vultee) people, to conduct specially designated modification projects. Plans were placed into operation on 27 March as the docks opened.

FIRST B-36 EXPERIMENTAL LANDING GEAR FLIGHTS The first B-36 take-off and landing with experimental caterpillar-type track landing gear was accomplished on 29 March at Carswell. Although this type of landing gear was not yet an innovation on Air Force B-36 aircraft, it was the latest step in the Air Force's program of track type gear development, and could eventually become an integrated part of the Air Force's production models of the B-36. Present production models of the B-36 were equipped with a four-wheel main landing gear and a dual wheel nose gear. As the month closed the wing possessed 24 B-36B aircraft, 17 in the 7th Bomb Group and seven in the 11th Bomb Group.

March, 1950

SAC REORGANIZES NUMBERED AIR FORCES During March, Strategic Air Command evaluated its

numbered air forces. The Eighth, at Carswell AFB, concentrated on medium and heavy bombers; Fifteenth, at March AFB, California, with medium bombers; and the Second, at Barksdale AFB, Louisiana, devoted exclusively to reconnaissance activities. Expansion and the integration of the B-36 and B-50 in the command created the need for a more balanced organization. Geographic factors also promoted the need for reorganization. For those reasons, SAC realigned the command effective 1 April 1950. Under the realignment, each numbered Air Force received bomber and reconnaissance assets in a geographic region. Second Air Force had eastern bases, Eighth central bases, and Fifteenth the western bases. This left the 7th Bomb Wing under control of Eighth Air Force as before. Barely a month after assuming command of the 11th Bomb Group, Colonel Harrison relinquished command to Colonel Thomas P. Gerrity on 3 April. Colonel Harrison, had been filling in as commander while awaiting arrival of Colonel Gerrity since March. He now assumed the group deputy commander position. Colonel Gerrity arrived from Wright-Patterson AFB, Ohio, where he was assigned to Headquarters, Air Material Command.

During April, 18 complete B-36 exhaust systems from Rohr Manufacturing arrived. This Rohr system fix, known locally as No. VI, consisted of reinforced plates attached to the outer periphery of the shroud cut-out for exhaust port legs. This improved shroud was installed on those exhaust bank segments having the Rohr spider fix.

Certification to build 600 units of rental housing off state highway 183 was received on 15 April 1950 from Scott W. Donaldson, Special Assistant to the Assistant Secretary of the Air Force. The Bucco Corporation of Fort Worth was awarded the 5.2 million dollar contract. Word of the contract was telephoned to Bucco President Raymound E. Buck, by Senator Lyndon B. Johnson and Congressman Wingate Lucas. This project was the first such undertaking in the Fort Worth area, designated solely to provide living quarters for military people. The 600 units would include two and three bedroom houses with 820 to 1,260 square feet of floor space. They would be divided between officers and enlisted in a rent range from $62.00 to $115.00 a month.

As the month closed, two B-36B aircraft were received by the 11th Bomb Group for a total of nine assigned in that unit.

FIRST B-36 LANDING OUTSIDE NORTH AMERICA Also during April, the Operational Engineering Program for B-36 aircraft was started at Carswell. Its purpose was to recommend modifications, maintenance procedures, and miscellaneous reports. The first landing made outside the North American continent by a B-36 occurred on 24 May 1950 at Ramey AFB, Puerto Rico. Brigadier General C. S. Irvine, wing commander, was in the lead aircraft. A total of four B-36s took part commanded by Captain (later, Brigadier General) Wesley L. Pendergraft, Captain George J. Benedict, Captain Artis H. Prichard, Jr., and First Lieutenant Edward C. Barrett; all from the 9th Bomb Squadron.

The same day, two new squadrons were activated and assigned to the wing, the 4010th Organizational Maintenance Squadron and the 4014th Electronic Squadron. Both were further assigned to the 7th Maintenance and Supply Group. The month of June opened with the wing gaining another squadron, the 4005th Women's Air Force (WAF) Squadron. It was designated and assigned to 8th Air Force, and further attached to the wing on 16 June 1950.

SAC FORCES ENTER COMBAT IN KOREA The invasion of South Korea by North Korea on 25 June 1950 brought part of SAC into combat for the first time since World War II. General Hoyt S. Vandenberg, USAF Chief of Staff, ordered two SAC bomb groups on 3 July to deploy their B-29s to the Far East and carry out conventional bombing operations north of the 38th parallel in North Korea. The 7th Bomb Wing, equipped with two B-36 groups was not effected at this time and continued training in the United States.

Five of the 17 units of the base NCO Housing Project (Row Type), ongoing since 1949, were turned over for occupancy on 14 July 1950. The first family presented keys to their new unit was Master Sergeant Leroy J. Wanless. Two days later, on 16 July, the 4010th Organizational Maintenance Squadron was reorganized into specialist teams, one for each tactical squadron in the wing (six total). Each team performed periodic organizational maintenance on assigned aircraft. Also, the 4010th Electronic Squadron was reorganized into specialist teams, one per each tactical squadron. These teams consisted of electronic and instrument specialists who performed periodic maintenance on the instruments and electronic systems of the B-36.

Additionally, the 7th Maintenance Squadron, under the 7th Maintenance and Supply Group, reorganized assigned

people on 16 July into teams to support assigned aircraft. Overall, reorganization of all three above squadrons altered the control of maintenance people by the Maintenance Control Section in the wing and assigned them directly to the tactical squadrons.

During July, the wing unveiled a new flying training program. It consisted of flying simulated combat missions to Limestone AFB, Maine (later Loring AFB), at the rate of one per each day. Maximum training requirements would be accomplished on all missions, including work with fighters of the Eastern Defense Command. The program would start in August.

Arrangements were made with Convair to have the flight section of the Fort Worth plant provide familiarization flights for pilots and flight engineers of the Wing Standardization Board in July. The purpose of these flights was to improve the effectiveness of the people assigned to stand aboard in the operation of the new B-36D model aircraft, scheduled to arrive from the plant in August.

In late July, an accelerated program was put into effort for modification of the carburetor on the B-36B engines. This modification was designed to improve engine performance during take-off, high altitude and ground operations, and to reduce carburetor icing at high altitude.

Following this on 25 July 1950, a contract in the amount of $40,519.00 was awarded to the General Engineering Corporation of Texas, for the installation of a hydrant refueling system at Carswell for tactical aircraft. The system, underground with storage and pump houses, would allow assigned aircraft to refuel or defuel at twice the rate currently done by tank trucks. Construction of the system started 27 July.

The next day, 28 July, ground breaking ceremonies were conducted by Major General Archie J. Old, Jr., new 8th Air Force commander, and Brigadier General Irvine for the new Wherry Housing Project, designated Valley View Housing. The 600-units would relieve the critical housing shortage experienced at Carswell once completed. Estimated completion was set for February 1951.

As the month closed out 31 B-36Bs were assigned to the wing. Of those, 17 were assigned to the 7th Bomb Group and 14 to the 11th Bomb Group.

On 21 August, 18 B-36B aircraft departed Carswell for Limestone AFB, Maine, to participate in a special training mission (Unit Simulated Combat Mission). It consisted of simulated radar bombing of St. Louis, Missouri, using Limestone AFB as the pre-strike launch base. All the aircraft, (9-7th and 9-11th Bomb Group) two from each squadron under respective groups, recovered at Limestone the same day. On 23 August, 17 of the bombers launched out of Limestone. The one bomber left experienced maintenance problems and once fixed returned to Carswell. The flight of bombers flew direct to St. Louis for the simulated bomb run. It was accomplished with no problems as all aircraft recovered at Carswell on 24 August.

WING RECEIVES FIRST CONVAIR B-36D AIRCRAFT While half the wing was TDY at Limestone AFB, Maine, the 26th Bomb Squadron, 11th Bomb Group, took delivery of the first B-36D 49-2653 in the wing on 22 August. The aircraft had six 3,500 horsepower propeller engines and four 5,200 pound jet thrust engines. The addition of jet engines increased the aircraft top speed to 439 mph at 32,000 feet. Also, the aircrew grew to 15: aircraft commander, two pilots, two engineers, bombardier, two radio operators, four gunners, navigator, radar operator (bombardier), and second observer. The second pilot and second radio operator doubled as gunners manning the top forward guns. The second observer manned the nose turret including loading and cleaning the guns.

WING BEGINS B-36B TRANSFER By the end of August, three more "D" models: 49-2647 (42nd Bomb Squadron, 11th Bomb Group), 49-2652 (9th Bomb Squadron, 7th Bomb Group), and 49-2654 (492nd Bomb Squadron, 7th Bomb Group) were delivered to Carswell.

Also, two B-36B aircraft were sent to the Convair Plant in San Diego, California, for modification into "D" models. Overall, a total of 35 B-36s were assigned in August, 19 in the 7th Bomb Group (2-D and 17-B), and 16 in the 11th Bomb Group (2-D and 14-B).

FIRST B-36D GUNNERY MISSION On 12 September 1950, a 26th Bomb Squadron, 11th Bomb Group, B-36D 49-2653 (the first D model in the wing) took part in the first "D" model gunnery mission. It was a test evaluation mission flown over the Eglin AFB Gunnery Range, Florida at 24,000 feet. During the mission seven malfunctions of various types occurred before the plane returned to Carswell. Just over a week later on 20 September, three B-36Ds (436th, 492nd and 9th Bomb Squadrons) of the 7th Bomb Group participated in an exact profile of the war plan. The mission consisted of a night attack on Fort Worth with additional training accomplished by making a simulated bomb run over Birmingham, Alabama. Also, the aircraft conducted a live firing over the Eglin AFB Gunnery Range, Florida, before recovering at Carswell. Later in the month, two more D models arrived brining the total number of B-36D aircraft in the wing to six. The two were assigned to the 436th Bomb Squadron, 7th Bomb Group (49-2650), and the 98th Bomb Squadron, 11th Bomb Group (49-2649).

A total of 37 B-36s were assigned to the wing as September closed out, 20 (17-B and 3-D) to the 7th Bomb Group and 17 (14-B and 3-D) in the 11th Bomb Group.

The remaining eight units of the ongoing NCO Housing Project (Row Type) were completed at Carswell and turned over for occupancy on 12 October. The overall project totaled 17 housing units.

Three 7th Bomb Group B-36D aircraft (9th, 436th and 492nd Bomb Squadrons) took part in a special training mission in October 1950. The purpose was to determine requirements in people, equipment, and supplies for staging through bases other than Carswell or home base. On 13 October, one North American B-25 Mitchell (assigned to Eighth Air Force at Carswell) flew to March AFB, California, with the advance party. The next day, prior to the bombers deploying, a Douglas C-54 Skymaster cargo aircraft launched from Carswell with support people, recovering later in the day at March. The three bombers conducted a simulated bombing mission over Fort Worth after take-off, then proceeded to Phoenix, Arizona, and accomplished a second bombing run. The bombers then flew to the Pacific Ocean for a gunnery mission. Completing this they landed at March AFB. The three bombers launched from March on 16 October and flew to Castle AFB, California. On 17 October, the bombers redeployed from Castle to Carswell. Enroute the bombers took part in a camera gunnery mission at 25,000 feet in Southern California with four Republic F-84 Thunderjet fighters of the 78th Fighter Group, Hamilton AFB, San Rafael, California. The F-84 was a descendant of the first bearer of the "Thunder" name, the Republic P-47 Thunderbolt, famed "Jug" of World War II. Additionally, the bombers conducted a simulated bomb run over San Francisco and Sacramento, California; Phoenix, Arizona; and Fort Worth, before landing at Carswell.

Following this, First Lieutenant Julian T. Williams was assigned the first house in the on going Wherry Housing Project (Valley View Housing) on 19 October 1950.

Next, Lieutenant Colonel Richard T. Black, deputy commanding officer, 7th Bomb Group, was appointed group commander on 24 October, when Colonel Roberts moved up to deputy commanding officer, 7th Bomb Wing.

As the month closed, one B-36D arrived upping total Ds assigned to seven. Overall, the wing had 35 B-36s, 23 in the 7th Bomb Group (3-D and 17-B) and 15 in the 11th Bomb Group (4-D and 11-B).

THIRD WING B-36 ACCIDENT The month of November opened with the 4001st Base Service Squadron, located at Gray AFB, Killeen, Texas, attached to the 7th Bomb Wing. Also, Gray AFB was further designated a sub-base of Carswell AFB. On 22 November, the wing recorded its third major B-36 accident that resulted in the complete destruction of B-36B 44-92035 (26th Bomb Squadron, 11th Bomb Group). Heading for Carswell with three engines out and no engine control the aircraft lost altitude and crashed 20 miles south of the runway. The entire crew bailed out prior to the crash with two losing their lives.

General (Retired) Carl Spaatz, former Air Force Chief of Staff, and former 7th Bomb Group commander (May 1929 to October 1931) arrived at Carswell on 28 November, along with members of the Air Force Academy Site Inspection Team. The purpose of the visit was to view sites for the proposed Air Force Academy. The team departed Carswell on 30 November.

Four B-36D aircraft arrived from the Convair plant, San Diego, California, during late November bringing total "D" models to 11 in the wing. Also, three B-36Bs were lost, two to Convair for modification, and one to crash

noted earlier.

Eight B-36D aircraft (4-7th Bomb Group and 4-11th Bomb Group) deployed to Limestone AFB, Maine, on 30 November to test pre-strike staging facilities, and evaluate B-36D aircraft and combat crews on a profile mission.

On 1 December 1950, six of those B-36s launched out of Limestone and flew direct to Ramey AFB, Puerto Rico. This was the second time wing B-36s had landed in Puerto Rico (previously B-36s had been flown to Alaska). Enroute to Ramey the bombers flew simulated bomb runs one Charleston, South Carolina, and Tallahassee, Florida. The two remaining B-36 bombers at Limestone deployed to Carswell on 5 and 6 December 1950. This operation closed out flying activity for 1950.

Based on the B-36 crash in November gunnery firing training missions were discontinued in the wing. With this action emphasis was placed on gun camera training instead of the live fire previously conducted.

One "D" model B-36 arrived from the Convair plant, San Diego, California on 12 December. As the year closed 12 B-36D aircraft were assigned in the wing.

1951

RETURN TO TOP

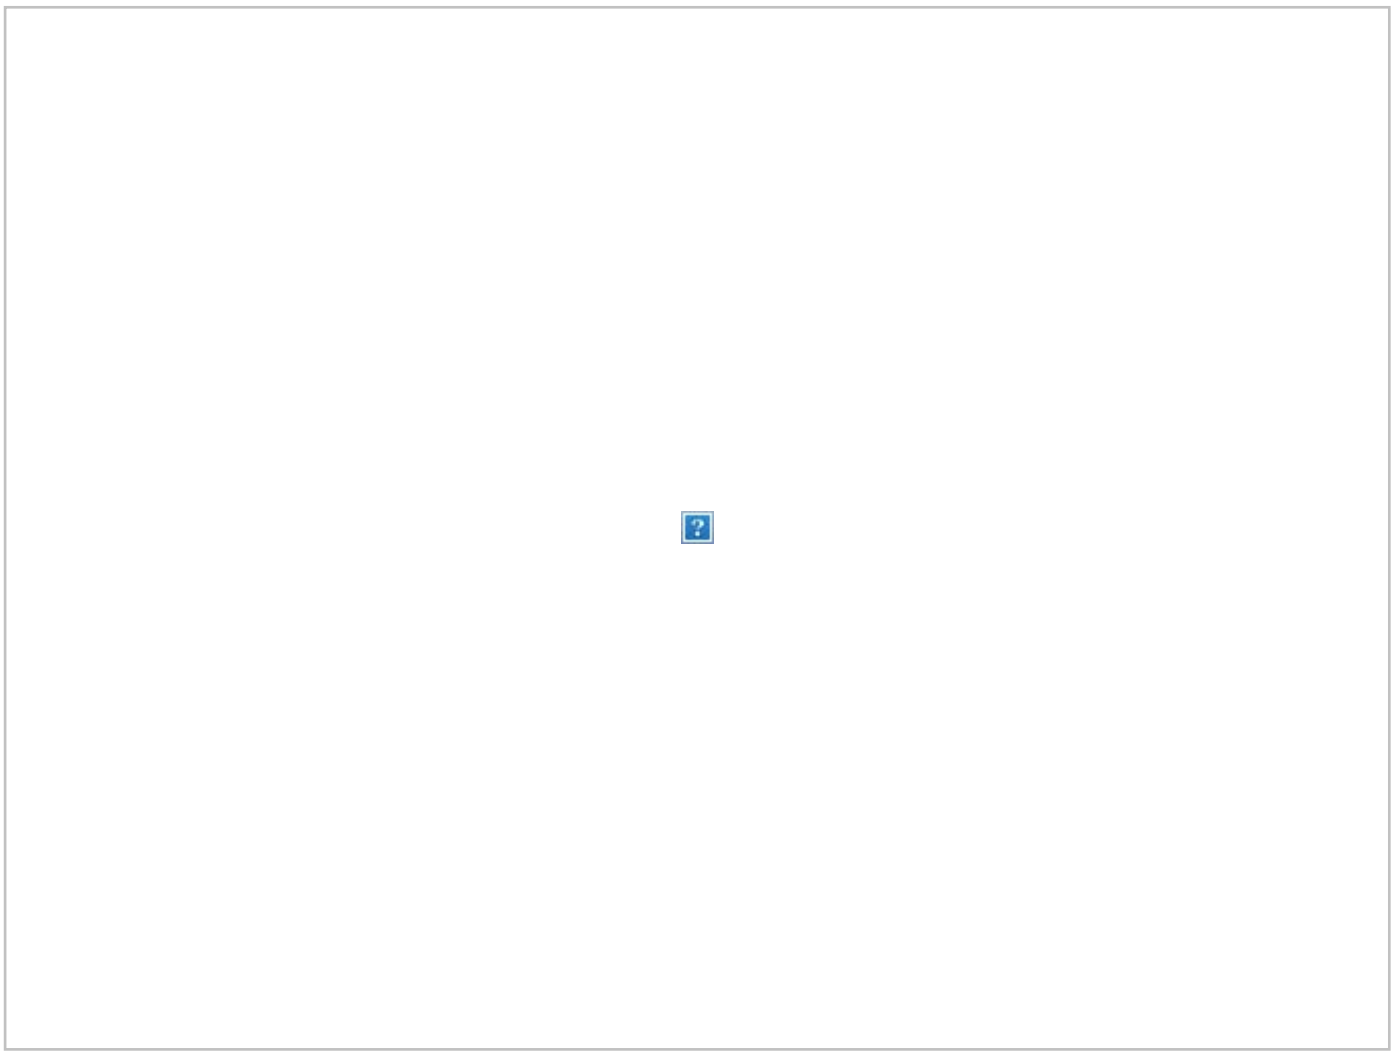
SAC REORGANIZES In January 1951 Headquarters, United States Air Force approved a proposal by General Curtis E. LeMay, Commander-in-Chief, Strategic Air Command, to reorganize SAC's combat forces at base level. Prior to this reorganization, each combat wing consisted of a wing headquarters, a combat group with tactical squadrons, a maintenance and supply group, air base group, and a medical group. This structure existed in most combat wings, including those on both single and double-wing bases. Under the new system, effective 15 February 1951, each wing would reorganize to include a wing headquarters, combat group with tactical squadrons; three maintenance squadrons; an air base group of housekeeping squadrons; a supply squadron; and a medical squadron. Both medical and maintenance and supply groups would be discontinued. The combat group headquarters remained in name only. The wing commander served as the combat group commander. In conjunction with this reorganization, SAC received authority from Air Force to organize air divisions on double wing bases and to operate the air base group on base. Composed of approximately 17 people, representing functions of command, operations, material, and administration, the air division headquarters served as an intermediate echelon of command between the combat wings and the numbered air force. The air division commander exercised direct control over the two wing commanders and the air base group commander.

On 4 January 1951, the 11th Maintenance and Supply Group was activated and attached to the 7th Bomb Wing. The group consisted of: 11th Maintenance Squadron, 11th Supply Squadron, 11th Motor Vehicle Squadron, and the 4014th Organizational Maintenance Squadron (formerly under the 7th Maintenance and Supply Group). The group was further attached to the 7th Maintenance and Supply Group for administrative, operational control, and logistical support.

FIRST B-36 DEPLOYMENT TO THE UNITED KINGDOM AND EUROPE Next, the wing took part in a special training mission to the United Kingdom. The purpose of the mission was to evaluate the B-36D under simulated war plan conditions. Also, further evaluate the equivalent airspeed and compression tactics for heavy bombardment aircraft; and evaluate select crew capability for bombing unfamiliar targets. The aircraft, staging through Limestone AFB, Maine, would land at RAF Lakenheath, United Kingdom, following a night radar bombing attack on Helgoland, Germany. From there the bombers would conduct a simulated bomb run on the Heston Bomb Plot, London, finally landing at Lakenheath. A total of 11 bombers launched out of Carswell on 14 January to Limestone AFB, landing that same day. On 15 January, all were set to depart Limestone. Of those, two aborted shortly after takeoff for engine failures, and three more returned to Carswell that day. The remaining six (one 9th Bomb Squadron, two 436th Bomb Squadron, 7th Bomb Group; and one each from the 26th, 42nd and 98th Bomb Squadrons, 11th Bomb Group) landed at RAF Lakenheath on 16 January following the two bomb runs

scheduled. This was the first deployment of wing and SAC B-36 aircraft to England and Europe. For the next four days the flight flew sorties out of England. The aircraft redeployed to the states on 20 January arriving at Carswell on 21 January.

As January closed, 18 B-36B and 18 B-36D bombers were assigned to the wing. Also, assigned "B" models began rotating to the Convair plant at San Diego, California, for modification to "D" models. This would continue until late June 1951 when all B models would be converted to B-36Ds in SAC.



B-36Bs being converted to B-36Ds at Convair in San Diego

11TH BOMBARDMENT WING AND 19TH AIR DIVISION ACTIVATED AT CARSWELL February opened with several organizational changes at Carswell due to SAC's announced reorganization in January this year. On 16 February, the 11th Bombardment Wing, Heavy, established on 18 November 1948, was activated at Carswell. The new wing assumed control of the 11th Bomb Group, attached to the 7th Bomb Wing since 1 December 1948. Next, 19th Air Division, Bombardment, redesignated 1 February as 19th Air Division, was organized on 16 February at Carswell. With this move the division assumed responsibility over the 7th and 11th Bomb Wings at Carswell. Also, the 7th Bomb Wing underwent a complete reorganization on 16 February. The 7th Bomb Group was reduced to one officer and one enlisted in a caretaker status. The 4010th Organizational Maintenance Squadron was divided to form the 4010th Armament Electronic Squadron, activated the same day. Those two squadrons, and the 7th Maintenance Squadron, redesignated the 7th Field Maintenance Squadron on 16 February, were further assigned to the 7th Bomb Wing. The three bomb squadrons, 9th, 436th, and 492nd were attached directly to the 7th Bomb Wing and taken out from under control of the group on 16 February. Finally, the

7th Aviation Squadron, attached to the wing since 1949, remained under the wing's control. At the same time the 7th Maintenance and Supply, and Medical Groups were inactivated this day with the 7th Air Base Group assigned to the 19th Air Division. With all this reorganization taking place the leadership of the wing changed hands as well on 16 February, as Colonel John A. Roberts assumed command of the 7th Bomb Wing from Brigadier General Irvine. Colonel Black, 7th Bomb Group commander, was replaced by Colonel Roberts. Thus, both the wing and group were under his direct command. Colonel Black was reassigned in the wing. General Irvine, previous wing commander, became the 19th Air Division commander the same day.

Three days later, on 19 February 1951, the 436th Bomb Squadron received a plaque from SAC for its distinguished record as the first B-36 unit in SAC to fly over 400 hours in one month.

Following this, five wing B-36Ds took part in a mock bombing mission over Portland, Oregon. The aircraft, TDY to Eielsen AFB, Alaska, since 19 February, launched out of Eielsen on 22 February. The bombers flew a high-level bombing mission over Portland then recovered at Carswell the same day. As the month closed, the wing had ten B-36Ds and nine B-36Bs assigned.

During March 1951, the wing established a new unit flying record when the 436th Bomb Squadron flew 477 hours with six B-36s in 29 days out of Carswell. Also, five B-36D bombers were received in March from the Convair plant, San Diego, California. All total, 20 B-36s were assigned to the wing in March (13-D and 7-B).

From 12 to 16 April, the wing flew its B-36 aircraft in night bombing missions against industrial targets in the Indianapolis, Indiana, area. The purpose of the mission was to determine the wing's bombing capability against a complex industrial target. On 12 April, 17 B-36s (12-D and 5-B) in the wing flew the first sorties on Indianapolis. All aircraft completed the long range flight on 13 April. Eight more B-36s (5-D and 3-B) flew out of Carswell on 16 April to bomb Indianapolis. The bombers recovered at Carswell on 17 April following the mission. During the sorties on 12 and 16 April, the bombers also attacked secondary targets of New York City (B-36Ds only); Oklahoma City, and Austin, Texas (B-36B only) before flying the primary mission over Indianapolis.

No "D" model bombers arrived from the Convair plant in San Diego during April, but the wing flew three "B" models to the plant for modification in late April.

On 24 April, Mr. Alexander P. de Seversky, noted writer, lecturer, aircraft designer, and manufacturer, visited Carswell. He took a flight in a 492nd Bomb Squadron B-36D while at Carswell.

FOURTH WING B-36 ACCIDENT Three days later, on 27 April, the wing recorded its fourth major B-36 crash which occurred during a fighter-bomber interception mission 55 miles northeast of Oklahoma City. During the interception an F-51 fighter hit the bomber resulting in both aircraft crashing. Fourteen individuals were killed and the B-36B was a total loss.

Colonel George T. Chadwell took command of the 7th Bomb Group on 5 May 1951, leaving Colonel Roberts the wing position. Also, Colonel Chadwell, who had been the deputy wing commander, kept that position.

FIFTH WING B-36 ACCIDENT The next day, 6 May, the wing suffered a major B-36 crash. B-36D 49-2660 crashed on landing at Kirtland AFB, Albuquerque, New Mexico. Twenty-three of the 25 onboard were killed. This was the fifth B-36 crash in the wing that destroyed a B-36 since their arrival in June 1948.

Shortly after this, on 14 May, a survey team in the wing deployed from Carswell in a C-124 to investigate the facilities at Goose Bay, Labrador, Canada, for its use in emergency war plan exercises. The team returned 10 days later.

On 17 May, Major General Irvine, 19th Air Division commander, presented Lieutenant Colonel Finlay F. Ross, Jr., 492nd Bomb Squadron commander, the 19th Air Division Achievement Award for Outstanding Flying Safety for April 1951. This was the second consecutive month the 492nd received the award.

B-36F ACCELLERATED SERVICE TEST PROGRAM BEGINS As the month of June opened, three wing bomber crews (S-04, S-18 and S-20) were assigned to temporary duty at the Convair Plant, Fort Worth, to

participate in the B-36F operational testing under the Accelerated Service Test Program. The aircraft flown by the crews was 49-2703, a RB-36F. Two flights were flown on 14 and 15 June out of Carswell. A third flight was conducted from 21 to 22 June, by a 9th Bomb Squadron crew in B-36F 49-2672. Earlier in the month on 4 and 9 June, the wing conducted an operations readiness test in two phases. Phase I involved a simulated deployment; and phase II, a high altitude attack on industrial targets in the Detroit, Michigan area. Final results of the exercise showed the wing was prepared for its mission.

LAST WING B-36B TRANSFERRED FOR CONVERSION The last B-36B in the wing was flown to the Convair plant, San Diego, California, for modification to a "D" model, on 23 June 1951.

On 30 June, the "On Top" modification project, in which a team from the Oklahoma City Air Logistics Area, Tinker AFB, Oklahoma, modified all 22 wing B-36D bombers, closed out.

Under the B-36F Accelerated Service Test Program, started in June, the wing flew three test flights. A fourth flight was accomplished from 3 to 4 July, by a 9th Bomb Squadron crew. This was the first flight in B-36F 49-2672 with the new long-range mixture barrels installed. The flight engineer reported that manual leaning operations were greatly improved with the modification to the barrels.

Next, a special training mission including a high altitude penetration of Eglin AFB, Fort Walton Beach, Florida, utilizing F-84 fighter escort from the 12th Fighter Wing, Bergstrom AFB, Texas, was flown on 10 July. On that date, nine B-36s took part escorted by 18 F-84 fighters. The bombers flew out of Carswell south to Port Arthur, Texas. At Port Arthur the bombers picked up their escort fighters and headed east to Florida reaching Eglin Range. Several F-86 fighters from Eglin AFB intercepted the bombers enroute to targets in the area. Completing the scheduled mission the bombers returned to Carswell and the escort fighters recovered at Eglin AFB, returning to Bergstrom AFB the next day.

On 11 July, a 9th Bomb Squadron crew conducted the fifth B-36F test flight in the B-36F Accelerated Service Test Program using B-36F 49-2672. This flight closed out the flying phase of the B-36F model test program as all six B-36F aircraft (49-2703, 49-2704, 49-2705, 49-2670, 49-2671 and 49-2672) at Carswell returned to Convair for 100 hour inspections, Air Material Command acceptance flights and other inspections.

FIRST B-36 DEPLOYMENT TO CANADA On 17 July 1951, the wing dispatched six B-36 aircraft of the 492nd Bomb Squadron to Goose Bay, Labrador, Canada. The purpose of the mission was to familiarize people in the squadron with the capabilities of the staging base, test these capabilities, provide an opportunity for crews to obtain actual polar experience, and to accomplish a partial profile mission on the return to Carswell. The flight enroute to Goose Bay was used as a routine training mission. All aircraft landed at Goose Bay on 17 July. Two days later, on 19 July, all six bombers flew a polar navigation training mission then recovered at Goose Bay. All six bombers redeployed to Carswell on 23 July. Enroute a partial war plan profile was conducted as the bombers attacked Tampa, Florida; Birmingham, Alabama; Fort Worth; Memphis, Tennessee; Little Rock, Arkansas; and Dallas; before landing at Carswell on 24 July.

July closed out with 24 B-36D bombers assigned to the wing. The wing conducted a radar bomber evaluation mission against a commercial center target in Binghampton, New York, on 4 and 9 August. The exercise was flown to compare the radar bombing accuracy of aircrews using radar predictions based on eight year old photography against the bombing accuracy of crews using recent radar reconnaissance, and to determine the ability of crews to accomplish celestial navigation and electronic countermeasures reconnaissance.

On 4 August, 15 B-36Ds, seven of which had old photography and the remaining eight new, launched out of Carswell. All aircraft flew the mission as scheduled and recovered at Carswell the same day. The crews using new photography were scored effective with the others not. Eight bombers of the 15 deployed out of Carswell on 9 August, to bomb Binghampton, scored effective using the current photography.

1951 SAC BOMBING COMPETITION With the abatement of the threat of World War III developing out of the Korean Conflict, the bombing competition, suspended in 1950, was resumed and expanded. To stress the importance of celestial navigation and to enable reconnaissance wings to compete, navigation was included as a

separate phase of the meet. MacDill AFB, Tampa, Florida, served as the competition headquarters, as well as the staging base for medium aircraft. Carswell AFB was the staging base for heavy aircraft. Held from 13 to 18 August 1951, the third meet to date in SAC, involved 12 bomb wings and three reconnaissance wings flying B/RB-36, B/RB-29, and B-50 aircraft. Also, two Royal Air Force crews from the United Kingdom participated with Washington bombers (Boeing B-29). Bombing requirements included three visual releases and four radar runs, and the navigation phase involving three night celestial navigation legs. Wing aircrews placed in the top ten overall.

WING RECEIVES FIRST CONVAIR B-36F AIRCRAFT On 18 August 1951, the first B-36F 49-2671 was assigned to the 9th Bomb Squadron in the wing. The B-36F was equipped with new WASP Major engines rated at 3,800 horsepower. Also, a K-3 radar system and APG-32 gun laying radar were added. The increased horsepower upped the top speed to 417 mph and the service ceiling to 44,000 feet with a combat payload of 264,300 pounds. A total of 34 B-36F models were eventually produced by Convair with all going to the wing.

FIRST B-36F GUNNERY MISSION The wing conducted its first "F" model gunnery test over the Eglin AFB Gunnery Range, Florida, on 22 August 1951. Results of the test were satisfactory. As the month closed, 25 B-36D and two B-36F bombers were assigned. B-36F 49-2672 was the second "F" model assigned in the wing and went to the 9th Bomb Squadron.

436TH BOMB SQUADRON DEPLOYS TO CANADA A second familiarization flight to Goose Bay, Labrador, Canada, was flown in September 1951. The purpose of the mission was to familiarize the 436th Bomb Squadron with the staging base at Goose Bay, and test the capabilities and facilities of the base. On 16 September, the 436th deployed six B-36D aircraft out of Carswell, landing the same day at Goose Bay. While at Goose Bay, the aircraft flew a polar navigation sortie to Thule, Greenland. The six bombers returned to Carswell on 23 September. Enroute a partial profile mission was conducted. On 30 September, a total of 29 B-36s were assigned in the wing (25-D and 4-F).

9TH BOMB SQUADRON DEPLOYS TO CANADA On 11 October, six B-36D aircraft of the 9th Bomb Squadron deployed to Goose Bay, Labrador, for familiarization training. All aircraft landed without incident the same day at Goose Bay. Two days later on 13 October, the squadron flew a polar navigation mission to Thule, Greenland, and back. The six aircraft departed Goose Bay on 17 October, and flew a modified profile mission enroute to Carswell. This deployment was the third and final squadron familiarization flight in the wing. With this flight all three bomb squadrons were familiar with staging out of Goose Bay. Thus, the wing was set to deploy in the future when tasked at a moments notice.

Also on 11 October, the wing conducted a unit simulated combat mission out of Carswell using three B-36Fs (9th, 436th and 492nd Bomb Squadrons). The mission was flown in the Eglin AFB Range, Florida. All three aircraft completed the mission as scheduled and returned to Carswell on 12 October.

On 29 October 1951, Colonel Roberts was assigned temporary duty at Carswell as Commanding Officer, 19th Air Division. In his absence from the wing Colonel George T. Chadwell, deputy wing commander, assumed the wing commander position.

Following this, the wing closed out October 1951 with 31 B-36s on hand, 25-D and 6-F. During November 1951, five B-36Fs were assigned to the wing. By the end of the month the wing had 36 B-36s (25-D and 11-F) divided among its three flying squadrons.

FIRST RAF BOMBING COMPETITION The Royal Air Force Bomber Command, United Kingdom, held its first Bombing Competition from 12 to 15 December 1951. SAC entered six aircraft in the competition, officially called the Navigation and Blind Bombing Competition. Operating out of RAF Sculthorpe, Norfolk, United Kingdom, were two B-29s (9th Bomb Wing, Travis AFB, California and 301st Bomb Wing, Barksdale AFB, Louisiana), two B-36s (7th and 11th Bomb Wings, Carswell AFB, Texas), and two B-50s (93d Bomb Wing, Castle AFB, California). On 4 December, one 7th Bomb Wing B-36D and one 11th Bomb Wing B-36D deployed from Carswell. Both bombers were to take part on a non-competitive basis to demonstrate equipment in order to effect a mutual exchange of ideas and techniques, and to compare techniques in target study and briefing. Both B-36s landed at RAF Sculthorpe on 5 December. Both aircraft flew the competition route from 12 to 13 December, out of

Sculthorpe. The 7th Bomb Wing deputy commander, Colonel Walter E. Chamber and Air Chief Marshall, Sir Hugh P. Lloyd, Commander in Chief of the British Bomber Command, flew in the 7th Bomb Wing B-36. The aircraft was piloted by Major Artist Prichard, 9th Bomb Squadron. The SAC B-29 team of the 9th and 301st Bomb Wings placed first overall in the competition. The two Carswell B-36s departed Sculthorpe on 14 December and arrived back home on 15 December. As the year 1951 closed 37 B-36s (25-D and 12-F) were assigned in the wing at Carswell.

Category: 08; Photographic Evidence

Subject: **The Sherman, TX Photo Case**
Date: **August 2, 1965**
Location: **Sherman, TX**

Francis Ridge:
3:00 am. This famous case of the photo of a banded light can be found in a lot of UFO books and magazines in the 1960's and later on. Not sure what the object was, but unless the entry from Brad Spark's Comprehensive Catalog of Project Blue Book Unknowns is the same sighting (not an original BB unknown and time not given), there were other strange sightings the same day of a brilliant light in Texas that date. Report details are linked below.

For reports, documentation, analysis or discussions - see below:

Subject: Bright Object at Wagle Mountain Lake
Date: August 2, 1965
Location: Sherman, TX

Francis Ridge:
Not listed among the original BB Unknowns, this case IS listed in Brad Spark's Comprehensive Catalog of Project Blue Book Unknowns, time of incident not given). There were other strange sightings the same day of a brilliant light in Texas that date. Here is what we have so far:

> Aug. 2, 1965. Justin, Texas. 2 Tarrant County deputy sheriffs saw an object as bright as burning magnesium, land as they patrolled near Wagle Mountain Lake. Extensive investigation by police found no traces. (Vallée Magonia 667)

RADCAT Case Directory
Category 9, RADAR

Preliminary Rating: **0**

RADCAT is a revitalized special project now being conducted jointly by NICAP & Project 1947 with the help and cooperation of the original compiler of RADCAT, Martin Shough, to create a comprehensive listing of radar cases with detailed documentation from all previous catalogues, including UFOCAT and original RADCAT.

Radio Amateur Tracks UFO With Radar? Maybe Not

March 1, 1950
Knoxville, Tennessee

Fran Ridge:
S. E. Adcock was a civilian operating a "ham" radar set. The witness and equipment are considered unreliable. The report synopsis by Bruce Maccabee, is fairly accurate but based on FBI documents, and shows that the radar used was able to track an object at 2,000 feet. But it also states that anything else came under serious question and no conclusions could be reached. But when Air Force documents were found (see documents linked below) the witness was found intoxicated, and when his height and speed figures were checked against the actual airliner they were wildly off.

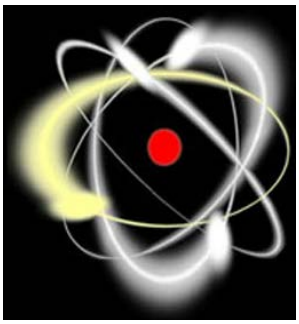
Category 2, Close Encounters

Preliminary Rating: **5**



A Hynek Classification of Close Encounter is usually an incident involving an object less than 500 feet from the witness. The size of the object, viewing conditions, or stereoscopic vision (depth perception) may render the object in greater detail and still qualify the sighting as a Close Encounter even though the object may have been beyond 500'. The incident depicted in the logo was encountered during an intense storm near Princeton, IN, Aug. 1973.

Huge Saucer Over K-25 Area

October 12, 1950
Oak Ridge, Tennessee

Fran Ridge:
October 12, 1950; Oak Ridge, TN.(BBU)
Late Thursday, October 12, 1950, a saucer-looking object was observed over the K-25 area near the NEPA Project area. The object was described as round, as big as a four room house, silver in color, and had a blister at the top of the saucer. The object also had windows. The object rose slowly for about 100 feet, moved forward, rose again about the same distance and then it was gone at a high rate of speed. (Blue Book files, The Knoxville Journal, October 26, 1950).

Oak Ridge Security Patrol Reports Objects At 50'

October 15, 1950
Oak Ridge, Tennessee

Brad Sparks:
October 15, 1950; Oakridge, Tennessee (BBU 819)
3:25 p.m. Involved AESS (Atomic Energy Security Service) Trooper Edward D. Rymer and John Moneymaker of University of Tennessee Research Farm. Described as a strange diving object shaped like bullet with a smoke trail. (Moneymaker saw a double pear-shape). The bullet or pear shape turned into a flat 2x5-inch grayish card shape with the smoke trail turning into a 20-ft long flat shimmering light gray ribbon-like streamer. It had a small black line running down middle, the streamer having a pulsating glow on the end of a 15-ft section, which was also partly transparent and maneuvered at 3 mph to within 210 feet of witnesses. Rymer approached to within 50 ft (but object did not seem larger). The object was at 6-ft height above ground and maneuvered over the road at Solway Gate, which is near Kerr Hollow, to Oak Ridge, then jumped over a 9-ft chain link fence with a terrain-following maneuver (object turned vertical to follow the fence), then rose sharply to negotiate a 30-ft willow tree similarly. The card shape changed to pear shape with same trail while en route to disappearing at increased speed over top of a ridge to the SE about one mile away. Rymer called attention of Hightower, an employee of Maxon Construction Co., who was driving up to Solway Gate, who then saw object disappearing. AESS Capt. Joe Zarzecki arrived just after disappearance of first object but saw 2nd and 3rd. Second similar object appeared shortly afterward seen by all 4 witnesses for about 30 seconds at 300 ft height with similar shape and maneuvers disappearing over same ridge to SE. Then about 5 minutes later a third object with similar shapes and maneuvers, seen for 10 seconds at 500 feet height by all witnesses disappeared over same ridge to SE. One object had a double pear shape. (Berliner; FBI files; BB AFOSI microfilm 90 frames 636-637) ? mins + 30 sees + 10 seconds

Subject: Oak Ridge Security Guard Reports Spinning Object/ Radar Detects UFO
Date: October 16, 1950
Location: Oak Ridge, TN

Francis Ridge:
Surprisingly this was neither listed among the original BB Unknowns, nor the updated Comprehensive Catalog of Project Blue Book Unknowns by Brad Sparks. It wasn't on our site and wasn't listed among the 200 nuclear connection cases by Larry Hatch (NCP-03). The Air Force documents were found originally by Dan Wilson on the BB Archive site and I matched it up with the report by Bruce Maccabee. I then located the AFOSI documents in my files and scanned them in. (See report and document links below). The documents clearly show radar had detected UFOs at the same time.

> NARA-PBB90-638: "At about 1520 EST 16 October, while Special Agent William S. Price was present, a report came from the AEC Patrol to the radar station relating that a Trooper Isabell and four civilian employees at Oak Sidge had observed a "silver disc" hovering over the K-25 Plant in the controlled area. The radar screen was able to pick up an indistinct target about every three (3) or four (4) sweeps of the indicator. An F-82 fighter plane was sent to attempt an intercept of the object. The airborne radar of the fighter picked up a target which later proved to be a light aircraft. The ground observers reported that the F-82 passed under the "silver disc" while it was in pursuit of the light plane. The crew of the fighter observed nothing unusual. Nothing further was learned of the sightings."

Francis Ridge:
Not listed in either BB Unknown list, original or Comprehensive Catalog of Blue Book Unknowns , but has aspects that may ultimately classify it as an unknown. At 4:55 PM on October 20, Larry Riordan, the Superintendent of Security for the X-10 control zone became a witness. While driving to a residential area he saw an object which he thought at first was a balloon which had lost its "basket." It was generally round, appeared to "come together at the bottom in wrinkles (rather indistinct and something was hanging below." It appeared to be 8 to 10 feet long and lead or gunmetal colored. It didn't seem to be moving but, since he was traveling and only saw it for a number of seconds, he couldn't be sure. He was sure it wasn't a weather balloon, although he thought it might have been a gas bag balloon launched by the nearby University of Tennessee Agricultural Research Farm.. On the same day at 3:27 PM the radar unit at the Knoxville airport detected radar targets near the area of Mr. Riordan's sighting and scrambled a fighter plane. The pilot searched the area for about an hour and a half, which included the time of Mr. Riordan's sighting, and found nothing.

Brad Sparks:
The Riordan sighting might be a balloon, but we won't know until AF data can fill in more details.

Case Directory - Category: 01; Distant Encounters

Subject: Oak Ridge I-10 Lab Employee Sees "the Flying Saucer"/Radiation Detected
Date: October 23, 1950
Location: Oak Ridge, TN

Francis Ridge:
This one isn't listed anywhere; Blue Book Unknowns, CCPBBU (Sparks updated list), Hatch's *U* Database with nuclear connection. But the witness told the Clinton Courier-News said he saw an object generally referred to as "the flying saucer". This article was quoted in a 2 November 1950 FBI document. Sighting was not verified by radar, the document (page 2) says.

Bruce Maccabee:
On October 23, at 4:30 PM, Francis Miller, an Oak Ridge laboratory employee, while driving along a road in Oak Ridge saw an object that appeared to be less than half a mile away and between 1,000 and 2,000 feet up. It appeared as an “aluminum flash” that was traveling in a south-southeast direction. He only saw it for a few seconds. Subsequently it was discovered that a nuclear radiation detection station (a Geiger counter) in the vicinity of the sighting registered a burst of alpha and beta radiation. The purpose of this station was to detect any leaks of radiation from the Oak Ridge Laboratory. There was no leakage of radiation, however. An expert from the Health and Research Division analyzed the readings from the Geiger counter and pronounced them unexplained. This association between radiation detection and a UFO sighting was similar to that at Mt. Palomar mentioned in Chapter 13. Whether the reading of the Geiger counter was actually a result of nuclear radiations or whether the presence of the UFO induced a transient electrical fault in the counter or whether there was some other explanation is not known. This case does not appear in the Project Blue Book file.

Bruce Maccabee:
At about 12:50 PM, December 5, the wife of one of the security officers saw an unusual object north of her position, flying apparently over the Post Office building in Oak Ridge. It appeared to be a couple of miles away and 500 feet above the ground. It appeared to be made of highly polished aluminum or metal that reflected the sun. Its shape was round and flat or disklike. She saw the object for about a minute as it flew in a direct course eastward. Ten minutes later another lady at a different location observed the same or a similar object heading westward. The OSI agent who investigated this case learned that there was an east wind at 6 mph and a clear sky. No balloons had been launched near that time. He also learned that there were two aircraft airborne at the time, but both were about fourteen miles south of the witnesses. ATIC subsequently claimed that the witnesses saw an aircraft

RADCAT Case Directory
Category 9, RADAR

Preliminary Rating: **5**

RADCAT is a revitalized special project now being conducted jointly by NICAP & Project 1947 with the help and cooperation of the original compiler of RADCAT, Martin Shough, to create a comprehensive listing of radar cases with detailed documentation from all previous catalogues, including UFOCAT and original RADCAT.

F-82 Attempts Intercept of UFO Over AEC Plant / Radar

Jan. 21, 1951
Oak Ridge, Tennessee

Fran Ridge:
Written off by the Air Force as a ground target and "ducting caused by an inversion", this incident is carried as unknown in the Comprehensive Catalog of Project Blue Book Unknowns by Brad Sparks. The sources are work by McDonald and the FUFOR Index.

Dan Wilson:
January 21, 1951; AEC Plant, Oak Ridge, Tennessee
At 4:20 p.m. an unidentified object was sighted on a radar scope of an F-82 fighter plane over the controlled area at Oak Ridge. The radar operator intercepted an indication of an airborne target at 18m (18,000 yards?). The GCI gave the go ahead to intercept the target. The radar set on the F-82 was "locked on" and the run began. The interception was unsuccessful and the fighter returned to base. In all, three passes were made at targets all with radar indications, but they could not be completed since the target was over the restricted area of Oak Ridge including the X-10 plant.

Brad Sparks:
The F-82 fighter (a Twin Mustang, like a 2-seater version of Mantell's plane) did not "return to base" then come back again. The F-82 went to Lenoir City, about 10 miles S of Oak Ridge labs, as a staging area for its exercise then came back to look for the unknown target again. Lenoir City was not the home base (which was unclear in this poorly documented report but was the 5th All-Weather Fighter Squadron, Knoxville).....Total unknown radar target duration probably 6 minutes but stretched out over an unknown time from 4:20 to at least 4:30 or even 5 PM.

Ref# 160 MUFON UFO JOURNAL (by issue no.) Issue No. 205 MIL. BASE

Francis Ridge:
Not listed in neither the BB Unknowns nor the updated catalog by Brad Sparks, this incident was mentioned in the MUFON UFO Journal, Issue No. 205. An Army document was located and is presented by the link below with a transcript. Briefly, the incident is described here:

> "At approximately 3:00 P.M. on July 19, 1953, an F-86 aircraft was observed flying over the Oak Ridge residential area, making circles at what appeared to the writer to be approximately 2,500 or 3,500 feet. The F-86 flew over the area in this manner for approximately ten or fifteen minutes. The writer, together with his wife, observed the aircraft through a pair of six power field glasses. After the aircraft flew in what appeared to be the direction of Knoxville, Tennessee, a black object moved out of a high white cloud, directly over the area the F-86 had been flying. This object began to travel, at a tremendous speed, in a large circle. This action on the part of the unknown object continued for at least five minutes. During the circle of this object, it appeared at times to be in the shape of a cigar and at other times round."

Date: Mon, 9 May 2005 16:13:01 +0100 (BST)
From: daniel wilson <daniejon2000@yahoo.co.uk>
Subject: Operation Teapot and the Sudden "Storm of unknown flying objects"
To: Francis Ridge <nicap@insightbb.com>

Operation Teapot

1955 - Nevada Proving Ground

Test:	Ess
Time:	20:30 23 March 1955 (GMT) 12:30 23 March 1955 (PST)
Location:	Nevada Test Site (NTS), Area 10
Test Height and Type:	-67 Feet Sub-surface Shot
Yield:	1.2 kt

This LASL test was the sixth to use the Ranger Able U-235 core, this time in a Mk-6 HE assembly. Ess ("Effects Sub-Surface") was a test of atomic demolition munition (ADM) cratering. The 8000 lb bomb was placed in a shaft lined with corrugated steel,10 feet wide and 70 feet deep (so that the bomb center was at -67 feet), which was back-filled with sandbags and dirt prior to firing. The crater was 300 feet wide and 128 feet deep.

Teapot Ess (43 K)

Test:	Apple-1
Time:	12:55 29 March 1955 (GMT) 4:55 29 March 1955 (PST)
Location:	Nevada Test Site (NTS), Area 4
Test Height and Type:	500 Foot Tower Shot
Yield:	14 kt

LASL test of a Class "D" (light weight) thermonuclear weapon primary and radiation implosion system, using small quantities of fusion fuel. The primary failed, yielding much less than the predicted 40 kt. No reaction was detected in the secondary stage. The nuclear system was 29.5 inches wide and 74.6 inches long and weighed 2300 lb.

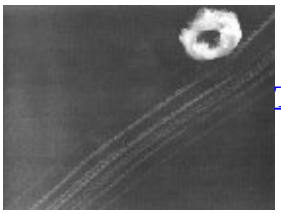
Teapot Apple-1 (38 K)

Test:	Wasp Prime
Time:	18:00 29 March 1955 (GMT) 10:00 29 March 1955 (PST)
Location:	Nevada Test Site (NTS), Area 7
Test Height and Type:	737 Foot Airdrop
Yield:	3.2 kt

This was a repeat LASL test of the Wasp design, using a higher yield core for weapons development purposes, but otherwise identical. B-36 airdrop. The yield was about the same as predicted. As a minor footnote - this shot was fired 5 hours and 5 minutes after Apple-1, the first time in U.S. history that two nuclear explosions were set off in one day.

Test:	HA
Time:	18:00 6 April 1955 (GMT) 10:00 6 April 1955 (PST)
Location:	Nevada Test Site (NTS), Area 1
Test Height and Type:	36,620 Foot Airdrop
Yield:	3.2 kt

This B-36H airdrop was a LASL high-altitude (= HA) test of an air-to-air missile warhead. Similar to the Wasp Prime device (17 inch spherical system weighing 125 lb) in a 1085 lb Mk-5 ballistic case. Due to the extreme high altitude of this test (for an air dropped device) it was parachute retarded to permit the release aircraft to escape to a safe distance, the only parachute weapon drop ever conducted at the NTS.



Teapot HA(22 K)

The nuclear fallout paths from the three tests mentioned above all trailed southeast over Arizona, New Mexico, and over Texas. In this area these is a sudden "Storm" of "Fireballs" see below:

Subject: 18 Flying Saucers seen near Nevada Test Site, April 17, 1952.
To: Francis Ridge <slk@evansville.net>

WORK CREW SPOTS FLYING SAUCERS OVER A-TEST SITE

LAS VEGAS, Nev., April 17 (INS)

Flying Saucers in the area of the Nevada test site, where important new atomic tests are in progress, were reported Thursday.

An Air Force technical sergeant and four civilian workers at the Nellis Air Force Base, near Las Vegas, said they saw 18 circular objects flying an easterly course whcih carried them over or very close to the test site.

Those who reported seeing the objects were T/S Orville Lawson, Rudy Toncer, sheet metal shop foreman, and sheet metal shop workers R.K. Van Houtin, Edward Gregory and Charles Ruliffson.

The objects went by at 12:05 p.m. Van Houtin saw them first and then called attention of the others to them.

The men watched the saucers for about 30 seconds

(Reference: The Salt Lake Tribune, Friday Morning, April 18, 1952, Page 1)
==========

Operation Tumbler-Snapper

1952 - Nevada Proving Ground

Test:	Baker
Time:	17:30 15 April 1952 (GMT) 09:30 15 April 1952 (local)
Location:	Nevada Test Site (NTS), Area 7
Test Height and Type:	1109 Foot Airdrop from B-50
Yield:	1 kt

This device also used the Ranger Able U-235 core in a Mk 4 based test device (weight 10,500 lb).

==========

Note: Official fallout maps show the radioactive debris from Test Baker on April 15, 1952, swirled around for two days and was still in the area of the Nevada Test Site on April 17, 1952.

A part of the fallout cloud moved to the southwest and was over Yuma, Arizona on April 17, 1952. It was here on April 17 and 18, 1952, UFOs were reported.

PROJECT BLUE BOOK UNKNOWNS

April 17, 1952; Yuma, Arizona. 3:05 p.m. Witnesses: group of Army weather observation students, including several graduate engineers. One flat-white, circular object flew with an irregular trajectory and a brief trail, for about 7 seconds.

April 18, 1952; Yuma, Arizona. Time unknown. Witnesses: two Army weather observation students. One flat-white circular object flew for 5-10 seconds in a very erratic manner.

==========

It is most interesting that 18 UFOs were reported near the Nevada Test Site on April 17, 1952 where nuclear fallout was falling from the sky, and on October 30, 1951, 18 UFOs would be seen at the Nevada Test Site again, where fallout was falling.

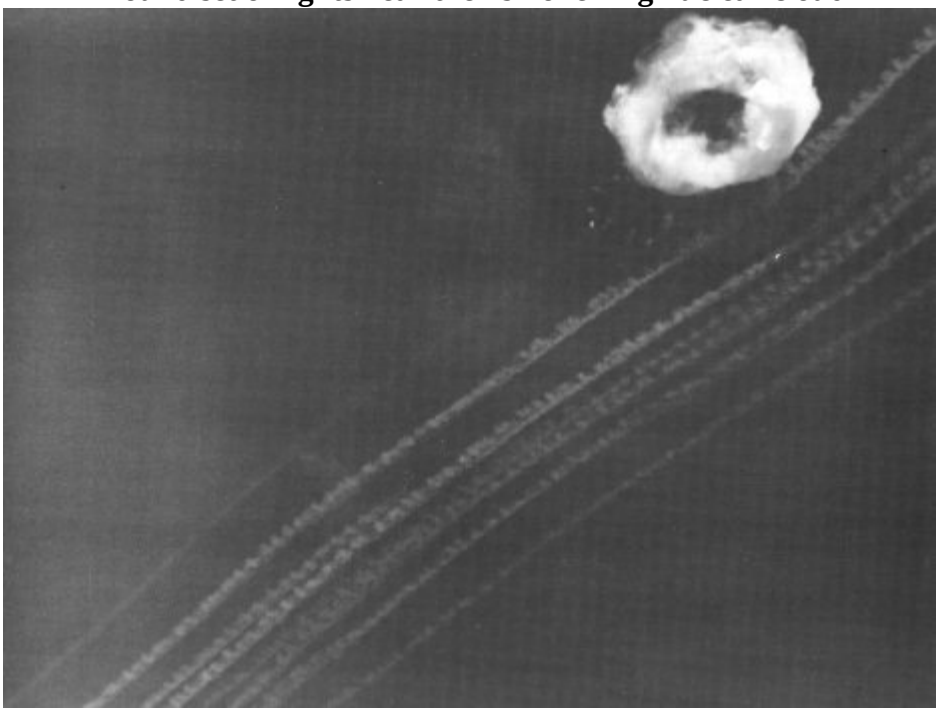
Round set of lights near the "smoke ring nuclear cloud"



Just six days before the above nuclear test shot, musician Andy Florio saw a large disc-shaped object near the ground near Tuscon, Arizona. **The object had lights all around the rim.**

Could the round set of lights near the circular nuclear cloud in the picture above be the same UFO???

Those are contrails near the "smoke ring nuclear cloud" so in effect the set of lights in a circle could be about 100 feet in diameter.
==========

http://www.scientificexploration.org/jse/articles/ufo_reports/rodeghier/1.html

Vehicle Interference Event Summaries

Mar. 30, 1955 0315 U.S., near Tucson, Arizona: Andy Florio sighted a "disc machine" at least **100 feet in diameter**. It made the sound of "electrical humming" and had bluish-green lights on its top, and amber lights from openings on the rim. Florio stopped his car when the radio failed, the lights dimmed, and the car slowed involuntarily to 12-15 mph. The UFO swayed back and forth while hovering and shot a beam of white light at the witness, burning his elbow and bubbling paint on the car. Florio also felt heat and a tingling sensation. Eventually the UFO departed , and when the car was checked, it was found to have a defective battery, dead radio, and only three spark plugs still firing. (CUFOS)

Cambridge, Massachusetts

1. Per request of Dr. A. O. Mirarchi, during recent visit to this base, the following information is submitted.

2. Sightings were made on 27 April and 24 May 1950 of aerial phenomena during morning daylight hours at this station. The sightings were made by Land-Air, Inc., personnel while engaged in tracking regular projects with Askania Photo-theodolites. It has been reported that objects are sighted in some number; as many as eight have been visible at one time. The individuals making these sightings are professional observers therefore I would rate their reliaibility superior. In both cases photos were taken with Askanias.

3. The Holloman AF Base Data Reduction Unit analyzed the 27 April pictures and made a report, a copy of which I am enclosing with the film for your information. It was believed that triangulation could be effected from pictures taken on 24 May because pictures were taken from two stations. The films were rapidly processed and examined by Data Reduction. However, it was determined that sightings were made on two different objects and triangulation could not be effected. A report from Data Reduction and the films from the sighting are enclosed.

4. There is nothing further to report at this time.

UNCL [redacted]

Objects observed following MX 776A test of 27 April 1950

2nd Lt [redacted] EHOSIR 15 May 50 1

1. According to conversation between Col. Baynes and Capt. Bryant, the following information is submitted directly to Lt. Albert.

2. Film from station P10 was read, resulting in asimuth and elevation angles being recorded on four objects. In addition, size of image on film was recorded.

3. From this information, together with a single azimuth angle from station M7, the following conclusions were drawn:

a. The objects were at an altitude of approximately 150,000 feet.

b. The objects were over the Holloman range between the base and Tularosa Peak.

c. The objects were approximately 30 feet in diameter.

d. The objects were traveling at an undeterminable, yet high speed.

The four rare photos at right, showing different stages of the Viking's flight, were made by the Askania theodolite. From bottom to top, they not only record the angle of climb but, more important, report on rocket efficiency by detailing action of engine exhaust through upper atmosphere. When rocket engine operates at its top best, hypersonic shock cones in tail flame appear shaped perfectly as diamonds. If diamonds are in any way distorted, this indicates lack of smoothness in operation. Not too much is yet known about the stability of flames in special regions of the atmosphere. Until there is perfect knowledge of flame stability under all conditions, it would be hazardous to send a manned rocket using chemical fuels into space. Viking flights and tracking telescopes at White Sands are adding to such knowledge. This Viking was perfect. Bottom two photos show the neat shock-diamonds. Third photo up is beginning of fuel burnout. Note last few diamonds and perfect blob of fire exploding out of the nozzle. Top photo is final act of burnout: rocket is still stable, continues on for another 110 miles.

UFO sightings at ICBM sites and nuclear Weapons Storage Areas

By Robert L. Hastings

Although the vast majority of Americans are completely unaware of its existence, the UFO/Nukes Connection is now remarkably well-documented. Air Force, FBI, and CIA files declassified via the Freedom of Information Act establish a convincing, ongoing pattern of UFO activity at U.S. nuclear weapons sites extending back to December 1948.

For more than 30 years, I have been interviewing former and retired U.S. Air Force personnel regarding their direct or indirect involvement in nuclear weapons-related UFO sighting incidents. These individuals—from retired colonels to former airmen—report extraordinary encounters which have obvious national security implications. In fact, taken to their logical conclusion, the reported incidents have planetary implications, given the horrific consequences that would result from a full-scale, global nuclear war.

At the time of their experiences, my former/retired USAF sources held positions ranging from nuclear missile launch and targeting officers, to missile maintenance personnel, to missile security police. The incidents described occurred at Malmstrom, Minot, F.E. Warren, Ellsworth, Vandenberg, and Walker AFBs, between 1963 and 1996. Other sources were stationed at Wurtsmith and Loring AFBs, where B-52 nuclear bombers were based during the Cold War era.

To date, I have interviewed over 50 individuals who were involved in various UFO-related incidents at Strategic Air Command bases or remote sites. I have selected the statements of 20 of those persons for presentation here. An expanded discussion of this material will appear in my forthcoming book, *The UFO/Nukes Connection*.

The testimony below is admittedly anecdotal evidence. Nevertheless, it is offered—often reluctantly—by persons who were entrusted by the U.S. government with the operation or security of weapons of mass destruction. As such, each source was subjected to, and passed, rigorous background checks and personality tests designed to ascertain, with a reasonable degree of certainty, their psychological stability and reliability.

For the moment, the international tensions of the Cold War era have receded. Consequently, the U.S. and Russia are currently downsizing their nuclear arsenals. Nevertheless, vast numbers of nukes still exist and may be unleashed at a moment's notice. Therefore, these weapons remain a potential threat to the future of the human race.

The events described below leave little doubt that our nuclear weapons program is an ongoing source of interest to someone possessing vastly superior technology. Significantly, the reported UFO activity occasionally transcends mere surveillance and appears to involve direct and unambiguous interference with our strategic weapons systems.

Considering these and similar accounts—too numerous and credible to dismiss—I would argue, as others have before me, that the heightened presence of the UFO phenomenon since the end of World War II is a direct consequence of the advent of the Nuclear Age. To suggest that this is the only explanation for widespread UFO sightings during our own era would be presumptuous, simplistic, and undoubtedly inaccurate. Nevertheless, I believe that the nuclear weapons-related incidents are integral to an understanding of the mystery at hand.

Anyone wishing to contact me may do so at hastings444@att.net.

My Sources:

Malmstrom AFB, Montana (1966-67):

1st Lt. Robert C. Jamison—Former USAF Minuteman ICBM targeting officer (Combat Targeting Team Commander), 341st Missile Maintenance Squadron, Malmstrom AFB, Montana:

Jamison states that he assisted in the re-start of an entire "flight" of ten Minuteman ICBMs which had simultaneously and inexplicably shut down immediately after a UFO was sighted in their vicinity by Air Force Security Police. Jamison is certain that the incident occurred at one of the missile flights located near Lewistown, Montana, perhaps Oscar Flight. This event probably occurred on the night of March 24/25, 1967, based on Jamison's portrayal of related events.

Jamison said that while his and other teams were preparing to respond to the stricken flight, they were ordered—as a precaution—to remain at Malmstrom until all UFO reports from the field had ceased. He further states that his team received a special briefing prior to being dispatched, during which it was directed to immediately report any UFO sighted while traveling to or from the missile field. In the event that a UFO appeared at one of the missile silos during the re-start procedure, the team was directed to enter the silo's personnel hatch, and remain underground until the UFO had left the vicinity. According to Jamison, the Air Police guard accompanying the team was to remain outside and relay information about the UFO to the base Command Post. Jamison's own team re-started three or four missiles but did not observe any unusual aerial activity.

Jamison said that while he was at the missile maintenance hangar, waiting to be dispatched to the field, he overheard two-way radio communications at the temporary Command Post, relating to another UFO having been sighted on the ground in a canyon near the town of Belt. He states he recalls hearing that a top commander—either Malmstrom's base commander, or the 341st Strategic Missile Wing commander—was on-site with other personnel. Based on these recollections, it appears that Jamison is describing the well-documented Belt, Montana UFO sighting of March 24/25, 1967.

Jamison said that immediately after the missile shutdown incident, for a period of approximately two weeks, his team received a special UFO briefing, identical to the one described above, before being dispatched to the field.

Jamison said that approximately two weeks after the full-flight missile shutdown, his team responded to another, partial shutdown—involving four or five ICBMs. Prior to being dispatched, Jamison's team received a report that the missile failures had occurred immediately after a UFO was sighted over the flight's Launch Control Facility. Jamison recalls that this incident took place at a flight located south or southwest of Great Falls, possibly India Flight, and during daylight hours.

Jamison said that he had subsequently spoken with several individuals, mostly missile security guards, who had witnessed various UFO-related incidents. He reports that they were "visibly shaken" by their experiences.

Comment: At least five other former or retired USAF personnel—all Minuteman missile launch officers stationed at Malmstrom AFB in 1967—have previously divulged their knowledge of UFO involvement in two separate, large-scale missile shutdown incidents. One of these individuals, former Deputy Missile Combat Crew Commander Robert Salas, has extensively investigated these events, together with researcher Jim Klotz. Their revealing summary of the March 1967 incidents may be found at:

http://www.cufon.org/cufon/malmstrom/malm1.htm

The article above also discusses the Air Force's formal denial of UFO-involvement in the one officially-acknowledged, full-flight missile shutdown incident at Malmstrom AFB—at Echo Flight—despite the missile launch officers' testimony to the contrary. The official disavowal is found in the 341st Strategic Missile Wing's "unit history".

Significantly, the unit historian, David Gamble, told Klotz that while compiling material for the

official history, he had learned of reports of UFO activity within Malmstrom's missile fields. When he made inquiries, Gamble received "no cooperation" from those in-the-know. He further said that written changes regarding "the UFO aspect of the missile shutdown incident" had been made by superiors. The final version of the unit history states, "Rumors of Unidentified Flying Objects (UFO) around the area of Echo Flight during the time of the fault were disproven."

Salas and Klotz have written a thorough and persuasive book, *Faded Giant*, which expands upon their earlier online report.

If Jamison's recollections are correct, and he did indeed respond to a large-scale missile shutdown at Oscar Flight on the same date as the well-documented Belt UFO sighting, then the date proposed for the Oscar event by Salas and Klotz—March 16, 1967—would seem to be in error. Salas has now acknowledged this possibility, however, Klotz remains skeptical about the alternate date.

Prior to my posting the Jamison-related material on the NICAP and NCP websites, I sent it to Klotz for his review. He responded, "I think that while witnesses' memories of 'events' tend to be pretty clear, memories of dates tend to be less accurate. I am a document-driven guy and I'd like to see some documentary evidence of multiple events. Lacking this, I only wish to keep open the idea that memories may be of a 'single' UFO-related missile shutdown event at Malmstrom. Certainly the indications from witness testimony are that multiple events may well have occurred."

For the record: I too would like to see unaltered documents relating to the shutdown events. In the early 1980s, I attempted to access, via the Freedom of Information Act, Office of Special Investigations (OSI) files relating to UFO sightings at Malmstrom's ICBM sites, only to be told that all such documents had already been declassified. However, multiple source testimony strongly suggests otherwise. I think David Gamble's comments above are telling. In my opinion, the documents that might shed light on the true facts relating to the missile shutdowns will remain hidden indefinitely, whereas those supporting the official version of events, including unit histories, will sometimes be declassified.

I also sent my Jamison-related material to Bob Salas. He responded, "What is interesting to me is the briefing Jamison received about how to respond if they sighted a UFO while working in the field. This would be a further indication that there had been experiences with UFOs at [Launch Facilities] prior to Jamison going out to the sites. We have also received similar information from a source we are protecting at this time."

Salas continued, "I [now] think it is more likely that Oscar Flight went down on some date after the Echo Flight [shutdown] and that it could very well have been on the same day as the Belt sighting. One of the factors that lead me to that 'opinion' is the lack of comment about two flights going down in the [now-declassified] telex that went out, and in the unit history. If the two had gone down on the same day, that would have been mentioned. The reason, I think, Oscar wasn't mentioned later is because by then the Air Force wanted to keep a secrecy lid on it and avoid the possibility of a leak by the indication of a growing and continuing problem. That would have made quite some headlines in the press."

Salas concluded, "Remember, from all we have heard from the maintenance people we have interviewed, the rumors and comments [about UFO activity] were rampant. I personally received a call from an NCO after the Oscar shutdowns, practically begging me to come talk to him and others about the incident. Believe me, it was all over the base and some of the troops were flat scared."

In conclusion, Jamison's statements are important because they indicate that the Air Force was fully aware of UFO involvement in at least two missile flight shutdown incidents prior to dispatching the missile maintenance teams to restart the ICBMs. Specifically, according to Jamison, the 341st Missile Maintenance Squadron undertook certain precautions and formally implemented various procedures to protect the teams' safety while in the field. In this respect, his testimony is unprecedented.

Staff Sgt. Louis D. Kenneweg—Former Minuteman ICBM maintenance clerk, 341st Missile

Maintenance Squadron, Malmstrom AFB, Montana:

At the time of the 1967 missile shutdown incidents, Staff Sgt. Louis D. Kenneweg was assigned to the 341st Missile Maintenance Squadron (MIMS) at Malmstrom AFB. His duties at the MIMS hangar included issuing Technical Order kits (T.O.s) to other members of his squadron. As Kenneweg explained, “Each of the repair teams would be required to take T.O.’s in the truck with them. The kit included books or manuals that would contain technical information that the technicians could look up rather than rely on memory. There was also a check list in plastic sleeves, kind of like a pre-flight checklist for a pilot, that they would use before removing the warhead from the missile. Of course there was an awful lot of supervision when that occurred.”

Although the date is uncertain, one night, around 11:45 P.M. Kenneweg was driving to work when he noticed something unusual in the sky. “As I traveled down one of the roads parallel to the flightline,” he said, “I saw something that I first thought was a private plane’s lights, blinking. As I watched it get closer, I realized that it wasn't blinking at all, but zig-zagging. First here, then there, traveling too fast for a plane. Then looming over the flightline. I got up late, and I knew that I had little time, but I stopped anyway. I opened the car door, got out, and focused on the lights. I watched it as long as I could, without being late to work. I remember saying to myself that this pilot was going to be in a lot of trouble, coming across the runway, or at least across the Air Force Base property. I don’t remember it traveling that close to me, but I do remember the image of it disappearing in a low southerly trajectory over the [MIMS] hangar. Of course, it was much farther away than it appeared. At that point, it wasn't ‘blinking’ anymore but had more of a glow. It appeared as a bright light the size of the moon, on a cloudy night, although I don't remember it being cloudy.”

Upon arriving at the MIMS hangar, Kenneweg was confronted by a scene of high activity. “As I entered the hangar I noticed that there were numerous trucks being loaded,” he said, “many more than I had ever seen all at the same time.”

Still puzzled about the strange, zig-zagging light, Kenneweg walked toward the Air Police office, where APs were routinely assigned to accompany the maintenance teams into the missile fields, guarding their trucks and the silos once they opened the gates. When he arrived, he noticed an unusual level of activity there as well. Kenneweg asked the Air Police sergeant on duty whether the base had any helicopters up. The sergeant replied that the helicopters didn’t have radar and didn’t fly at night.

Kenneweg continued, “Back at the office, I issued almost all of the [T.O.] kits on the shelf. I remember saying to myself, ‘I'm running out of kits, this is a busy night.’ Now, I didn’t check the sign-out sheet to see how many kits had been checked out before my shift, but while I was on duty, I did recall that they were almost all checked out. As I count them off in my head today, and try to see them on the shelf, we had a wall with 3 shelves that would hold 25 or so.”

Clearly, a lot of missiles were either undergoing routine maintenance, and/or had gone off Strategic Alert for another reason, all at the same time.

When the maintenance teams returned to the MIMS hangar—Kenneweg first thought that it had been some three hours later, but upon reflection, now believes that it was more than 24 hours later, during his next shift—one of the technicians hinted that something out of the ordinary had taken place in the missile field. “One of the guys mentioned to me that some very weird things were going on that night,” said Kenneweg, “It takes two guys to carry the T.O. kit, and there were other guys behind him, waiting in line to get checked in, and they were all nodding their heads in agreement. But this guy said that he couldn’t talk about it right then. He said he would tell me all about it back at the barracks. Well, like I have said before, I was busy working [a second job] at the Red Lion Supper Club and didn't really have that serious sit-down conversation with that particular airman. But the barracks was buzzing. Stories about how when they got to the [missile silos] and found no damage, and how all the batteries were dead. I also heard a story that [UFOs] were seen on radar, then they were gone.”

He continued, “Our missile sites each had a tertiary power system. The main power source was delivered by Montana Power. Telephone poles, transformers and wire. The second system was the

diesel generators, and the third was the battery back-up within the silo itself. Numerous reports came back saying that they had found no damage to the fences, wires, transformers, microwave intrusion system, locks on the three-foot-thick concrete blast doors, or to the batteries. So, no evidence of damage from intruders or animals, lightning or fire. Just three sources of power vanished and the batteries were dead."

Kenneweg believes that the incident was not isolated. "As I recall," he said, "there were other nights where the guys would come back and look a little shaken, all within that same time-period."

Comment: Based on Kenneweg's description of his own UFO sighting, during which the object appeared to be near or over Malmstrom's flightline at one point, I have speculated that the UFO may have briefly maneuvered near the base's nuclear Weapons Storage Area (WSA), which is located just east of the main runway. The WSA contains Minuteman missile nuclear warheads, known as Re-entry Vehicles (RVs). A review of aerial photographs of Malmstrom, which show the WSA, coupled with an analysis of Kenneweg's probable position near the MIMS hangar, lead to this conjecture. Regardless, another UFO sighting at the WSA, some years later, has been confirmed by two other sources. See Malmstrom AFB, Montana (1975).

Airman 1st Class David Hughes—Former Air Policeman, 341st Combat Defense Squadron, Malmstrom AFB, Montana:

Hughes stated, "I was stationed at Malmstrom from January 1966 through August 1967. I was an Air Policeman, assigned to 'B' Flight, with the 341st Combat Defense Squadron. I worked at the Foxtrot [Flight Launch Control Facility]. Many nights we observed a light in the sky between Choteau and Augusta, Montana."

He continued "This light would move at incredible speeds, make right-angle moves, and continue for hours. When seeking further information from wing command, we were often insulted when told it was a Telstar satellite. On one occasion we were told by other friends working in the [air traffic control] tower at the base that aircraft had been launched to seek to identify a strange radar echo that had appeared on their screens and on the screens of the local airport. This was later denied the next day, but if memory serves, the local newspaper had an story on it the next day. This must have happened sometime in early 1967, or late 1966."

Hughes concluded, "All I know is that some strange things consumed our attention many nights while on patrol. We patrolled from Augusta to Choteau each night and [frequently] saw something that lent credance to the UFO concept. To us, 'UFO' simply meant it was an Unidentified Flying Object, either from our military or some unknown source. We never believed the satellite story. However, when we learned that the jets had been scrambled and the next day it was denied, then we knew something was up."

Malmstrom AFB, Montana (1975):

Staff Sgt. Joseph M. Chassey—Former Minuteman ICBM maintenance technician, 341st Missile Maintenance Squadron, Malmstrom AFB, Montana:

Chassey states that one night in the fall of 1975, he overhead a two-way radio transmission alerting Air Force Security Police about an unknown craft hovering over the base's Weapons Storage Area.

Chassey said that the incident was widely discussed at the missile mechanical shop the following day. He later heard additional details about it from a friend, who was a helicopter re-fueler.

Apparently, two base helicopters had been scrambled to chase the intruder, which rapidly flew toward Belt, Montana, some ten miles distant. As the pursuing choppers neared the town, the unidentified craft quickly doubled-back to Malmstrom—leaving them far behind—and again hovered over the WSA for a short period of time before finally departing.

Chassey states that the object was described as an extremely bright light and was assumed to

have been a bona fide UFO because of its superior capabilities. He emphasized, “It flat outran the helicopters. We heard that it zipped out to Belt and back to the base in no time.”

Chassey, who separated from the Air Force at the end of October, 1975, believes that the incident occurred shortly before he left Malmstrom.

Comment: USAF documents from October 1975, declassified via the Freedom of Information Act, confirm other UFO sightings at the Weapons Storage Areas at Wurtsmith AFB, Michigan, and Loring AFB, Maine. At the time, each base hosted B-52 nuclear bomber squadrons. At Wurtsmith, initial sighting reports referred to the unidentified craft as a “helicopter”, however, the radar operator aboard a nearby KC-135 aircraft later tracked the craft traveling at approximately 1000 knots, far faster than any known helicopter. At Loring, some reports mentioned an “unidentified helicopter” near the WSA. However, eyewitness accounts from a B-52 ground crew indicated that the “helicopter” was bright orange, football-shaped, and had hovered silently. (For an extended discussion of these cases, consult Lawrence Fawcett and Barry Greenwood’s authoritative book, *Clear Intent*, later re-named *The UFO Cover-Up*.)

Lt. Col. Robert Peisher (USAF Ret.)—Former Commanding Officer, Detachment #5, 37th Air Rescue Squadron helicopter unit at Malmstrom AFB, Montana:

Peisher has confirmed the accuracy of Joseph Chassey’s account regarding the incident during which an unknown craft hovered above Malmstrom’s nuclear Weapons Storage Area, one night in the fall of 1975. However, Peisher said that even though his unit’s helicopters had indeed been involved in the intercept attempt, he himself had already been transferred to another squadron when the incident occurred, and had only heard about it “much later”.

Peisher also states that he had once been briefed by local civilian law enforcement about a series of cattle mutilations, many of which had occurred near Minuteman missile sites, during the summer and fall of 1975. He states that he and Cascade County deputy sheriff Captain Keith Wolverton determined that more than 80 such mutilations had occurred within Malmstrom’s missile field boundaries, some quite near various ICBM Launch Facilities (silos).

Peisher further states that he had been informally told about multiple UFO incidents at Malmstrom’s Minuteman missile sites, including one event during which a UFO "the size of a football field" had silently flown over the Echo Launch Control Facility one night in the fall of 1975.

Comment: The following verbatim excerpts are NORAD log entries from November 1975, declassified via the Freedom of Information Act. My own comments and clarifications follow some of the entries (in parentheses):

24th NORAD Region Senior Director’s Log (Malmstrom AFB, MT):

7 Nov 75 (1035Z) Received a call from the 341st Strategic Air Command Post (SAC CP), saying that the following missile locations reported seeing a large red to orange to yellow object: M-1, L-3, LIMA, and L-6...Commander and Deputy for Operations (DO) informed.

7 Nov 75 (1203Z) SAC advised that the LCF at Harlowton, Montana, observed an object which emitted a light which illuminated the site driveway.

7 Nov 75 (1319Z) SAC advised K-1 says very bright object to their east is now southeast of them and they are looking at it with 10x50 binoculars. Object seems to have lights (several) on it, but no distinct pattern. The orange/gold object overhead also seems to have lights on it. SAC also advised female civilian reports having seen an object bearing south of her position six miles west of Lewistown.

(Note that all of these reports refer to the observation of aerial “objects”. Apparently, the Security Alert Teams could not identify them as either military or civilian aircraft.)

7 Nov 75 (1327Z) L-1 reports that the object to their northeast seems to be issuing a black object from it, tubular in shape. In all this time, surveillance has not been able to detect any sort of track

except for known traffic.

(In other words, when these sightings were first reported by SATs, “surveillance”—that is, radar personnel—at Malmstrom AFB and Great Falls International Airport could not detect any unknown aerial objects near the missile sites. As we shall see, radar contact with the UFOs was finally established as the sighting reports continued to unfold.)

7 Nov 75 (1355Z) K-1 and L-1 report that as the sun rises, so do the objects they have visual.

7 Nov 75 (1429) From SAC CP: As the sun rose, the UFOs disappeared. Commander and DO notified.

8 Nov 75 (0635Z) A security camper team at K-4 reported UFO with white lights, one red light 50 yards behind white light. Personnel at K-1 seeing same object.

8 Nov 75 (0645Z) Height personnel picked up objects 10-13,000 feet. Track J330, EKLB 0649, 18 knots, 9,500 feet. Objects as many as seven, as few as two A/C.

(Height-finding radar finally confirmed that UFOs were present, varying over time between two and seven in number.)

8 Nov 75 (0753Z) J330 unknown 0753. Stationary/seven knots/12,000...two F-106...NCOC notified.

(Radar confirmed that one UFO, at an altitude of 12,000 feet, had hovered—that is, was “stationary”—before resuming flight at a leisurely 7 knots, or 9 mph. Shortly thereafter, two F-106s were scrambled to intercept it.)

8 Nov 75 (0905Z) From SAC CP: L-sites had fighters and objects; fighters did not get down to objects.

8 Nov 75 (0915Z) From SAC CP: From four different points: Observed objects and fighters; when fighters arrived in the area, the lights went out; when fighters departed, the lights came back on; To NCOC.

(As SAT personnel at four different locations watched, the UFOs played cat-and-mouse with the F-106s, extinguishing their illumination as the jets approached their position and re-illuminating themselves after the fighters returned to base. The NORAD Combat Operations Center—NCOC—in Colorado Springs, was immediately informed of this incident.)

8 Nov 75 (1105Z) From SAC CP: L-5 reported object increased in speed — high velocity, raised in altitude and now cannot tell the object from stars. To NCOC.

9 Nov 75 (0305Z) SAC CP called and advised SAC crews at Sites L-1, L-6, and M-1 observing UFO. Object yellowish bright round light 20 miles north of Harlowton, 2 to 4,000 feet.

9 Nov 75 (0320Z) SAC CP reports UFO southeast of Lewistown, orange white disc object. 24th NORAD Region surveillance checking area. Surveillance unable to get height check.

(Note the reference to the UFO having a “disc” or saucer shape. Several more log entries from November 9th and 10th confirm that UFOs continued to be reported by SAT teams positioned near various missile silos.)

END OF LOG ENTRIES

Malmstrom AFB, Montana (1992):

Staff Sgt. Joseph M. Brown—Former Security Policeman, 343rd Missile Security Squadron, Malmstrom AFB, Montana:

Comment: I first learned of Joe Brown's experience after he posted a brief summary of it on researcher Ron Wright's Triad Research website. With Wright's assistance, I located Brown and interviewed him.

Brown states that one night in the spring of 1992, he and his security team partner were posted at Alpha Flight missile silo A-3. Due to an alarm system malfunction at the site, the two-man team was staked-out in a security camper near the launch facility, with one man on duty while the other slept. "I believe it was March or April," Brown told me, "site top-side security was down—the IMPSS (Improved Minuteman Physical Security System)—and if I remember correctly, there was no top-side power."

At about 4:30 a.m., Brown noticed a bright white light moving erratically across the sky. In his online posting, Brown had written, "This light was doing some wild things in the sky, sudden direction changes, moving very fast, then stopping, then shooting off in another direction. I watched this for about 15 to 20 minutes."

Then the light appeared to move closer to the silo. "I started getting spooked," Brown wrote, "so I reached out the window of the truck and started banging on the camper shell to wake [my partner] up. He finally came around the front, asking me what was wrong. I pointed to the light and told him I'd been watching it for around 20 minutes and I didn't know what it was. He got into the passenger side of the truck and we kept watching this thing doing its acrobatics."

Brown decided to radio another security team posted at Alpha Flight silo A-10, located some 10 miles away. "They responded hesitantly that they were watching this light," he wrote. The Flight Security Controller (FSC) at the Alpha Flight Launch Control Facility apparently overheard this exchange, because he suddenly broke into the conversation to inquire about the anxious radio chatter between the two security teams. Each confirmed that they were observing the strange light as it raced wildly around the sky.

Brown wrote that the team continued to watch the UFO until around 6:30 to 7:00 a.m., when it suddenly appeared to go straight up and hover. "We could still see the light, but by now it was starting to get daylight. As it got brighter, we could sort of make out a black shape around where the light was. We had binoculars, but even with them, all you could see was a fuzzy outline of sort of a triangle. I can't estimate the height of the object."

Upon returning to Malmstrom, Brown and his partner privately conferred with the security team posted at Alpha Flight silo A-10. The four guards agreed that they would not mention the sighting, and all expressed concern about possible repercussions resulting from their report to the Flight Security Controller.

As the security guards returned their weapons to the armory, they were suddenly ordered to report to a captain assigned to their squadron. Brown can not recall the officer's name but remembers being very concerned by this unexpected development. The captain asked the men to describe what they had seen. He listened carefully and then pointedly suggested that they not discuss the sighting. Brown told me, "At this point, the captain says, well I don't think you saw anything and I wouldn't go around talking about it. You guys are under PRP, remember that!"

Comment: Here is an apparent instance in which the mere mention of the PRP—Personnel Reliability Program—effectively intimidated military UFO witnesses into silence. This Department of Defense directive pertains to those who work with or around nuclear weapons, and dictates their conduct both on and off the job. If an individual's commanding officer judges his or her behavior to be unreliable, and a potential threat to the security of the weapons, a psychological examination of that person is usually ordered. Depending on its outcome, the individual under scrutiny risks being relieved of duty.

Brown stated that a couple of days after his experience at Alpha Flight, he heard that there had been some unusual activity at Malmstrom that same night. Referring to these rumored developments, he told me, "[A friend of mine] was a Tech Sergeant in the [missile] maintenance squadron, and it was a bit unusual for him to actually go to out in the field. He normally trouble-shot stuff on-base. He and I never got to really discuss what had happened...[but] he did tell me

that a lot of maintenance folks were sent out that night. Quite honestly, a lot of us were afraid to talk about it openly, especially after being told we should not talk about anything by our Captain."

Malmstrom AFB, Montana (1995):

UFO sighting by a Minuteman missile maintenance technician, who requests anonymity, as reported to **Tech. Sgt. Jeff Goodrich (USAF Ret.)**—Former Team Chief of Missile Handling, 341st Maintenance Squadron, Malmstrom AFB, Montana:

In the early hours of January 20, 1995, an Alert Response Team, composed of two security police, had been driving to the India Flight Launch Control Facility when they noticed a strange light in the southern sky. As they passed by Minuteman silo I-4, one of the men radioed a missile maintenance team working there, and asked its leader whether he could see the light too. The response was affirmative.

The missile maintenance technician who later reported the sighting to Goodrich said that the light was "large", and displayed numerous smaller lights—red, orange, yellow, green, and blue in color—across its surface. The UFO had been moving very slowly across the missile field, at low altitude. The technician insisted that the object was not an airplane or helicopter. Because he was a member of the missile maintenance team, and not a security policeman, he did not know whether the Alert Response Team had subsequently reported the UFO to the Flight Security Controller at the India Flight Launch Control Facility.

Comment: This UFO was not the first to be reported in Montana during January 1995. A brief entry in the sighting database published by the National UFO Reporting Center (NUFORC) indicates that on the evening of January 5th, an unnamed Air Force officer at Malmstrom AFB had called NUFORC to relay a sighting report which he had just received from someone in the town of Shelby. At about 9 p.m. the unidentified person had observed two objects moving silently through the sky for about two minutes. Although their shape could not be determined, the absence of any sound had apparently struck the sighting witness as unusual, and so a call was made to Malmstrom. Shelby is located almost exactly on the northern boundary of the Quebec Flight Minuteman missile field—with silo Q-18 situated less than two miles east of town, just north of Route 2.

Another entry in the NUFORC database indicates that two days later, on January 7th, at about 3 p.m., an unidentified woman had called Malmstrom AFB regarding a UFO sighting. Unfortunately, the location of the sighting is not specified in the entry.

A third call to NUFORC occurred on January 18th—just two days prior to the incident at India Flight reported to Tech. Sgt. Jeff Goodrich. The reporting center's log states, "An anonymous caller reports multiple UFO sightings reported between Fairfield and Deer Lodge, Montana. Background noise during call sounds like communications noise from some kind of operations center."

The caller told NUFORC that he had received multiple UFO sighting reports, over the period of an hour, from persons located between Fairfield and Deer Lodge. Perhaps significantly, Fairfield lies near the geographic center of the Hotel Flight Minuteman missile field, with silo H-9 situated at the western edge of town, just north of Route 408. Furthermore, if one leaves Fairfield and travels southwest—in a straight line toward Deer Lodge—one will eventually exit the Hotel field and cross directly into the Golf Flight missile field.

In short, nearly half of the countryside between Fairfield and Deer Lodge lies within the boundaries of Malmstrom's Minuteman missile fields. Although no evidence has yet surfaced which would place the reported UFOs in close proximity to specific silos within either Hotel or Golf Flight, the caller from Deer Lodge was nevertheless relaying sighting reports made by persons calling from the heart of "Rocket Ranch" country. The three sighting reports published by NUFORC may be found at http://www.nuforc.org/webreports/ndxlMT.html.

Malmstrom AFB, Montana (1996):

Tech. Sgt. Jeff Goodrich (USAF Ret.)—Former Team Chief of Missile Handling, 341st

Maintenance Squadron, Malmstrom AFB, Montana:

Goodrich states that February 2, 1996, he and an officer, whom I will not identify here, observed a loose formation of five triangular-shaped objects flying above Great Falls, Montana, which is located just west of Malmstrom. At the time of the sighting, both had been working at the Missile Roll Transfer Building, a remote site located some miles from the main base.

When first sighted, the objects were about 75-degrees above the horizon. They made no sound that the two men could discern, and left no contrails. Due to distance and glare, no surface detail was visible on any of the craft. Goodrich noted that the objects flew in unison, moving slowly from north to south. On two occasions, all five appeared motionless for 10-15 seconds. After the second hover, the objects suddenly accelerated, made a sweeping arc to the southwest, and soon disappeared over the horizon.

Goodrich estimated the objects' altitude to be 15-20,000 feet. This guess was based, in part, on statements made to him by personnel working at Malmstrom's air traffic control tower. After contacting them, he had been told that nothing out of the ordinary had been detected on radar at the time of the sighting—but was also told that the tower didn't track aircraft above 10,000 feet. Immediately after contacting the base's air traffic control tower, Goodrich called Great Falls International Airport. The controllers there also denied tracking unknown aircraft at the time of his sighting.

Given that Goodrich reported the UFOs' shape to be triangular, some skeptics might say that he and the officer had merely observed a flight of F-117A "stealth" fighter-bombers. Due to its unique design, an airborne F-117A can appear, from certain angles, to be nearly triangular. Moreover, the aircraft's stealth capability would explain why the flight had not been tracked on radar.

However, because Goodrich is certain that he and the officer had twice observed all five objects briefly hovering, this prosaic proposal would seem an unlikely solution. The F-117A is an amazing aircraft, but it can not remain motionless in the air. Furthermore, Goodrich described the UFOs as being bright white in color and occasionally exhibiting glare as their position varied in relation to the sun. An F-117A is painted flat black and appears dark against the sky, under all lighting and atmospheric conditions.

Jeff included two hand-drawn diagrams of the objects in his report about the sighting. The first one depicts their positions relative to one another in the sky. The second illustrates each object's shape —an isosceles triangle—with two sides of equal length. The third, shorter side was on the trailing edge of each object as it flew.

I asked Goodrich if he could determine whether the UFOs had flown or hovered over ICBM facilities at any time during the sighting. He replied that after the objects turned southwest, and left the city limits, they would have briefly passed over the India Flight missile field. However, he said that it did not appear that they had lingered in that vicinity. Instead, they continued to move steadily away, and eventually faded from view. (It should also be noted that when the objects approached Great Falls, they had to have flown over other missile fields located north of the city, however, I am not aware of any information currently available in the public domain to suggest a close-proximity incident at any ICBM LCF or LF, relating to the sighting.)

F.E. Warren AFB, Wyoming (1965):

Comment: Beginning at 1:30 A.M. on August 1, 1965, various personnel at F.E. Warren AFB, Wyoming—including the base commander—telephoned the Air Force's UFO Project Blue Book, at Wright-Patterson AFB, to report several UFO sightings at Warren's Minuteman missile sites.

The officer who fielded and logged the telephone calls to Blue Book that night was a Lt. Anspaugh. A memorandum summarizing these telephone calls was published in 1972 by Dr. J. Allen Hynek, the civilian scientific consultant to the project, in his book *The UFO Experience: A Scientific Inquiry*.

Inserted below are the verbatim entries in Lt. Anspaugh's memo:

1:30 A.M. - Captain Snelling, of the U.S. Air Force command post near Cheyenne, Wyoming, called to say that 15 to 20 phone calls had been received at the local radio station about a large circular object emitting several colors but no sound, sighted over the city. Two officers and one airman controller at the base reported that after being sighted directly over base operations, the object had begun to move rapidly to the northeast.

2:20 A.M. - Colonel Johnson, base commander of Francis E. Warren Air Force Base, near Cheyenne, Wyoming, called Dayton to say that the commanding officer of the Sioux Army Depot saw five objects at 1:45 A.M. and reported an alleged configuration of two UFOs previously reported over E Site. At 1:49 A.M. members of E flight reportedly saw what appeared to be the same [formation] reported at 1:48 A.M. by G flight. Two security teams were dispatched from E flight to investigate.

2:50 A.M. - Nine more UFOs were sighted, and at 3:35 A.M. Colonel Williams, commanding officer of the Sioux Army Depot, at Sydney, Nebraska, reported five UFOs going east.

4:05 A.M. - Colonel Johnson made another phone call to Dayton to say that at 4:00 A.M., Q flight reported nine UFOs in sight; four to the northwest, three to the northeast, and two over Cheyenne.

4:40 A.M. - Captain Howell, Air Force Command Post, called Dayton and Defense Intelligence Agency to report that a Strategic Air Command Team at Site H-2 at 3:00 A.M. reported a white oval UFO directly overhead. Later Strategic Air Command Post passed the following: Francis E. Warren Air Force Base reports (Site B-4 3:17 A.M.) –A UFO 90 miles east of Cheyenne at a high rate of speed and descending—oval and white with white lines on its sides and a flashing red light in its center moving east; reported to have landed 10 miles east of the site.

3:20 A.M. - Seven UFOs reported east of the site.

3:25 A.M. - E Site reported six UFOs stacked vertically.

3:27 A.M. - G-1 reported one ascending and at the same time, E-2 reported two additional UFOs had joined the seven for a total of nine.

3:28 A.M. - G-1 reported a UFO descending further, going east.

3:32 A.M. - The same site has a UFO climbing and leveling off.

3:40 A.M. - G Site reported one UFO at 70' azimuth and one at 120' . Three now came from the east, stacked vertically, passed through the other two, with all five heading west.

END OF SUMMARY

Airman 2nd Class Robert R. Thompson—Former Air Policeman, 809th Combat Defense Squadron, at F.E. Warren AFB, Wyoming:

Thompson states that he was on duty at the Quebec Flight Launch Control Facility one night in 1965, when he got a telephone call from the underground launch capsule. The Missile Combat Crew Commander asked Thompson and his partner to walk outside and look straight up. Thinking this was a joke of some kind, the two Air Policemen nevertheless complied. Directly overhead, Thompson saw eight stationary lights, much brighter and larger than stars, grouped together in four pairs. Due to their altitude and brilliance, it was not possible to determine the objects' shape or other details.

Thompson said that one light eventually left its position and began to roam among the others, moving slowly from pair to pair. He and his partner watched the mysterious aerial formation for about 10 minutes, before reporting the sighting to the missile commander. In response, Thompson was informed that NORAD, located at Cheyenne Mountain, Colorado, had earlier notified FE Warren

that its radars were tracking eight unknown objects hovering in the vicinity of the Quebec launch control site. Apparently, Warren's Command Center had called the LCF and asked the missile commander to verify their presence.

Said Thompson, "I wasn't sure what we were seeing until I reported back to the launch commander. When he told me of the report of UFOs from Cheyenne Mountain, I could tell by his voice that he wasn't joking." Thompson states that he and his partner were never debriefed, or warned to remain silent about the incident, but he never again mentioned it to the missile commander.

Perhaps significantly, the Blue Book memorandum inserted above may lend credence to Thompson's report. Specifically, this entry:

4:05 A.M. - Colonel Johnson made another phone call to Dayton to say that at 4:00 A.M., Q flight reported nine UFOs in sight; four to the northwest, three to the northeast, and two over Cheyenne.

However, because Thompson can not remember the date of his own sighting at "Q" or Quebec Flight, it may or may not have been the same incident noted above.

In any event, Thompson's sighting was not the last UFO incident to be reported at Quebec Flight during that period. Less than a week later, he had been approached by another individual in his unit, and told about a far more dramatic incident.

"We worked three days on, three days off," Thompson said, "One crew would relieve the other. Shortly after the sighting, when my crew returned to the LCF, an acquaintance came up and told me that while we were off-duty, he had been involved in another UFO sighting, at one of Q-Flight's Launch Facilities."

According to this individual, he and his partner had been on stake-out duty one night, and were sitting in a Security Alert Team (SAT) camper that was parked next to the missile silo. Without warning, the vehicle began to shake violently. He quickly leaned his head out the window and saw a large, very bright light silently hovering directly above the camper. After a few seconds, the shaking ceased and the light rapidly departed.

The SAT guard went on to tell Thompson that he and his partner had later been debriefed by an OSI agent and ordered not to talk about the incident. However, in spite of this warning, he had nevertheless felt compelled to compare notes with Thompson, whose own UFO experience had occurred less than a week earlier, and was common knowledge among the missile guards at Quebec Flight.

After hearing this strange story, Thompson approached the Non-Commissioned Officer In Charge (NCOIC) who had been on duty at Quebec the night of the camper incident and asked him to verify it. To his surprise, the NCOIC did so. Furthermore, he told Thompson that he had personally seen the UFO as it hovered over the LF.

"The Launch Facility in question was the one located closest to the LCF," said Thompson, "Even though it was five, maybe six miles away, the NCOIC told me that, on the night of the incident, he had seen an extremely bright light hovering over its location."

Thompson said that he later heard that the UFO activity at various missile flights had continued for about a month.

Comment: Although the bizarre report involving the camper is strikingly similar to a scene in Steven Speilberg's 1977 movie, *Close Encounters of the Third Kind*, UFO researchers Jim Klotz and Tom Tulien have heard a nearly-identical account from a former USAF missile guard who was stationed at Minot AFB, North Dakota, in 1968.

Airman 2nd Class Terry Stuck—Former Air Policeman, 809th Combat Defense Squadron, F.E. Warren AFB, Wyoming:

Stuck states that one morning in the summer of 1965, while reporting for duty at the Oscar Flight LCF, he was informed about a UFO sighting by the departing night-shift guards. “The night team had observed fast-moving lights or objects,” said Stuck, “vehicles moving with incredible speed.”

Apparently, during the shift-change, the departing security team leader also informed the arriving missile commander about the UFOs. Stuck overheard the exchange. “The OIC (Officer in Charge) was a Captain—I don't recall his name,” said Stuck, “I do remember him saying that he had been a pilot in Korea and had observed UFOs and had reported the incident. He said they had sent him to the base psychiatrist and had basically put a stop on advancements in his career.”

The moral of this story was clear to Stuck and the departing security team leader: Be careful what you report because there may be repercussions. Stuck did not know whether the team leader had ever filed an official report about the incident. In any event, the Oscar Flight UFO sighting incident is not mentioned in the Project Blue Book memorandum inserted above. Perhaps it took place on another date during that period, or perhaps it did indeed occur on August 1st, but went unreported.

A few days after these events, Stuck had his own UFO sighting, again at the Oscar Flight LCF. “The observations,” he recalled, “were actually made in front of the launch control security facility which was at ground level, facing the access gate of the main launch control facility. I was never able to determine the size or shapes [of the UFOs]. When I saw them, they were at extreme distances and were doing right [-angle] turns at unbelievable speeds. I never heard any sounds.”

F.E. Warren AFB, Wyoming (1973-74):

1st Lt. Walter F. Billings—Former Minuteman ICBM launch officer (Deputy Missile Combat Crew Commander), 90th Strategic Missile Wing, F.E. Warren AFB, Wyoming:

I have inserted below excerpts from Billings’ first letter to me, with a few clarifications (in parentheses) and minor modifications relating to grammar and punctuation:

Dear Mr. Hastings,

...I arrived at F.E. Warren AFB in Cheyenne, Wyoming, in late January of 1972 from Vandenburg AFB [where I] had been trained in Minuteman I. After further training at F.E. Warren [I] was sent with the operations crews as a Deputy Missile Commander and assigned to a Squadron for the typical duty as a 2nd lieutenant. I was later trained as a training officer for the [missile] wing in Minuteman I, which encompassed assisting new arrivals in training and running simulators, and other duties. [These were] the standard duties until the Spring of 1973.

As a first lieutenant, along with so many others, [I] went back to school at F.E. Warren to learn the new Minuteman III system that was to be installed during the year of 1973. After training and evaluations, alert duties were assigned for the new system to those that had completed their training. We were to go on alerts as the new missile system was installed. In those days, F.E. Warren had 200 missiles on alert and was very active.

I am afraid that the dates that I will provide are somewhat vague. I wrote my experiences for a publication in this arena back in September 1993, and even then the dates were not exact. Also, some of the missile terminology may not be exact. I have forgotten some of the terms. I am sorry that I did not keep a private log of these events, back when they occurred.

The first event took place in the Fall of 1973. Over half of the LCCs (Launch Control Centers) had been converted to Minuteman III by this time, and I was on alert at Golf LCC. It was late at night. The UHF radio linking all twenty LCCs opened up with urgent talk from India LCC. In those days, the UHF radio was turned on, at all times, and if one LCC spoke to their SAT (Security Alert Team) or other LCCs, all twenty LCCs heard the conversation. After the India crew received a Outer Security Zone [alarm] on one of their missiles, and sent their SAT crew out for the standard investigation trip, we began to hear over the radio the events that developed.

From the UHF radio communication between the SAT and the India LCC crew, as we listened, we

heard that as the truck was heading to the missile silo, the Inner Security Zone [alarm] had been tripped at the silo. Upon arriving near the subject silo, the SAT team observed a bright UFO hovering above the silo. The LCC crew advised the SAT team to proceed no further and to observe only. Approximately a minute later, the UFO moved off slowly for several thousand feet and then sped off at a high rate of speed. The conversation between the India LCC crew and the SAT team was heard by 19 other LCC crews on duty that night.

Upon relief by the next crew and upon return to F.E. Warren AFB, all crews on duty that night were informed that they would not speak to civilians or the news media about what they had heard on the UHF radio. Severe penalties were mentioned for those that did not heed this warning.

We, the LCC crews in general, began to hear rumors and stories, from other officers in operations and maintenance, that SAC headquarters at Offut AFB had sent the OSI (USAF Office of Special Investigations) to investigate this incident by helicopter. The India crew of that night would not speak of the incident at all. There were stories from missile maintenance that the missile in question had been carefully examined and that they found the target tapes (which guide the H-bomb warheads to their targets) on the three warheads had supposedly been erased that night by the UFO. Needless to say, I only heard that these things had occurred. These stories were told between missile guys over the following week, but they were reliable people, who did not speak to civilians or the press about this subject. However, the squadron commanders warned us, again, not to speak of the incident.

The second incident involved an entire missile maintenance crew, I believe six enlisted men and one officer. This also occurred in late 1973. A Minuteman III missile was being worked on for some routine problem during one of those late fall nights. A UFO was observed by the entire maintenance crew. The UFO appeared to be watching the work and was seen for a full five minutes as it maneuvered close to the missile silo. This was told to me by a missile maintenance 1st lieutenant, approximately three days after the incident occurred.

The third incident took place in early Spring of 1974. As I was arriving at Charlie LCC in the morning with my captain, to begin an alert duty, we were told by the staff sergeant and two security police who had been on duty that night, of the strange thing that had happened. They told us that a UFO had actually landed near the LCC and had been observed by the three, and that a minute-by-minute report had been given to the operations crew downstairs. When we asked about this, as we were relieving the LCC crew for our duty to begin, they would not talk about it with us. I heard a few days later that the staff sergeant was in some sort of trouble for speaking to us about what he saw, and that the OSI was again involved.

While I was in SAC, I personally was not directly involved with a UFO incident while on duty. However, during June of 1974, while on a camping trip in Dubois, Wyoming, with three other lieutenants, we observed a UFO flying relatively low. It was similar to the ones that were described to us, in the above three incidents. Since all four of us were Air Force lieutenants, we knew that this low-flying object was not an aircraft. From that time forward, I have had an interest in this subject and have read some on the subject as well.

I can tell you that these three incidents at F.E. Warren AFB did occur. It was a long time ago and I am sure many other things have happened since. I have not been able to find any written statements of these three incidents since. This could be because there was a very good cover-up of the situation at that time, or they were not deemed important enough to bother with. Though, I doubt that the latter is true.

I have always wondered as to what really happened to the missile that had the UFO hovering above it, and if the warhead target tapes had really been erased.

I wish you good luck on any research that you may do on this subject. I doubt that you will receive any help from those that might know the truth. I am sure that the cover-up that I observed many years ago is still in effect.

Thank you for your interest.

Sincerely,

Walter F. Billings

10/18/2002

Comment: In an effort to obtain an informed perspective on Billings' statements, I forwarded his letter to retired USAF Lt. Col. Philip Moore who, in 1978-79, had been the Commander of the 321st Strategic Missile Squadron at F.E. Warren AFB. Moore found the letter to be entirely credible. In an e-mail to me, dated 6/12/05, he wrote, "Billings' statement is totally believable, and his supporting facts are correct in spite of his dates and terminology caveats."

However, I also sent the letter to another former Minuteman missile launch officer who skeptically questioned Billings' use of the term "target tapes", when describing the Minuteman III's guidance system. (While the Minuteman I missile utilized such tapes, the Minuteman III did not.)

When I asked Moore to comment on this particular discrepancy, he replied, "[Regarding] Billings use of 'tapes' to refer to the maintenance part of the [guidance] system, the old tape system was replaced by a plug-in unit system. I think I remember that Billings was at F.E. Warren at the time MMI was deactivated and MMIII replaced it, having served in MMI and retrained in MMIII. Old terminology dies a slow death and the new system was often referred to as 'the tapes' for awhile after MMIII was in-place, until the old-timers got used to the new terminology."

Lt. Col. Moore's own ICBM-related UFO experience is discussed in the Walker AFB section of this article.

F.E. Warren AFB, Wyoming (1980-81):

Airman 1st Class Jay DeSisto—Former Air Policeman (Law Enforcement), 90th Security Police Squadron, F.E. Warren AFB, Wyoming:

Comment: Jay DeSisto's "UFO" experiences are somewhat different from those reported by my other former/retired USAF sources. For that reason, I have chosen to include his statement to me in its entirety.

DeSisto states, "I was an Airman First Class while stationed at FE Warren, in 1980-81. I worked as an LE (Law Enforcement) with the 90th Security Police Group. I was assigned to base patrol and very soon promoted to the position of Desk Sergeant, even though I was only an airman. Thinking back, I can recall numerous occasions when I was on duty as Desk Sergeant when the security personnel at the Weapons Storage Area would contact me and report 'lights' overhead. I would usually dispatch a base patrolman to the area to confirm the sightings but I cannot recall any specific outcomes. I am sure I would have reported these incidents in the desk blotter."

"While I never experienced or heard of any 'UFOs' while stationed there, there were several times when we were called in for duty on our days off to patrol the base perimeter because there were satellites allegedly overhead taking pictures. I always wondered what those recalls were about. It was strange. Again, no one ever mentioned UFOs, it was always 'satellites'. None of those recalls happened while I was on duty as the Desk Sergeant."

"The 'satellite' incidents were clustered, not spread-out, during my tenure at Warren. I seem to recall they would occur two or three nights in a row. I recall three times when my flight had to report for extra duty. One time we had been out at a bar off-base and when we returned to the base, the gate guards told us to immediately report to the armory to obtain weapons. Even though we had been drinking, they issued us weapons and we were posted on the perimeter of the nuclear Weapons Storage Area on base. It was unusual to use Law Enforcement personnel for this duty in that it was normally a function of the Security Police personnel."

"On two other occasions we were contacted at our barracks and told to report to the armory and obtain weapons. One of those times, I was posted at the Weapons Storage Area and another I was posted at the Combat Command Center doorway. Each time I was recalled for duty, our Flight

Chief, a Tech Sergeant name Robert Moore, explained the situation regarding the satellites. During these instances our group headquarters was very active. Our squadron commander, Major Bernal F. Koersen, was usually present."

"It really did not make sense to us that we were being called in for duty because of a satellite overhead. It seemed odd to have us don combat gear and weaponry. We just accepted the explanation of 'satellites' but, because of the way we were rousted for duty and the command activity present, we knew these incidents were very different from any type of readiness response exercise we had participated in, which were frequent and routine. We were often called in for extra duty during DoD inspections or Global Shield exercises, but again, during the satellite incidents, there was a different feel to the situation and the hurried and tense demeanor of command-level staff was quite different."

Comment: One of my other sources suggests the possibility that the mysterious satellites reported above FE Warren were actually Soviet satellites involved in the verification of the 1979 U.S./Soviet SALT II agreement, which limited the number of strategic missile launchers in each country. However, given the specifics of DeSisto's statement, this theory seems unlikely. Regardless, the Soviet satellite scenario would not explain the unidentified lights reported hovering at low altitude above the base's nuclear Weapons Storage Area.

DeSisto states that those sightings, by Air Force Security Police, had occurred on "numerous occasions" during 1980 and/or 1981. It should be noted that declassified documents from the Air Force Office of Special Investigations (OSI) confirm similar reports of UFOs, in August 1980, near the Manzano Weapons Storage Area, outside Kirtland AFB, New Mexico.

Furthermore, another UFO was observed in December 1980, as it directed laser-like beams of light down into, or near, the Bentwaters AFB Weapons Storage Area, during the now-famous series of sightings at the Anglo-American base, in Suffolk, England.

Walker AFB, New Mexico 1963-65:

Comment: *Florida Today* newspaper columnist Billy Cox conducted the initial interviews with Jerry Nelson and Gene Lamb. His article, "UFOs Haunt Missile Crew", was published in June 2001.

1st Lt. Jerry C. Nelson—Former Atlas ICBM launch officer (Deputy Missile Combat Crew Commander), 579th Strategic Missile Squadron, Walker AFB, New Mexico:

Nelson states that on several occasions, while on alert in the underground launch capsule at Atlas Site 9, missile guards at ground-level had frantically reported a silent, very bright UFO hovering over the site. As he told Florida Today columnist Billy Cox, "The guards were scared. These objects would hover over the silo and shine lights down on them without making any noise." Nelson told me that he had personally been involved in "probably more than three but fewer than ten" such incidents, over a period of a month or so. He also remembered that the sightings had occurred "at least six months, maybe more like a year" after the Cuban Missile Crisis of October 1962, when the squadron had been placed on high-alert.

Oddly enough, when Nelson notified the missile squadron's Command Post about the incidents, his reports met with apparent indifference. Only much later did he learn that agents from the Office of Special Investigation had interviewed another individual regarding his knowledge of a similar incident.

1st Lt. Philip Moore—Former Atlas ICBM launch officer (Deputy Missile Combat Crew Commander), 579th Strategic Missile Squadron, Walker AFB, New Mexico:

Moore, who retired as a Lieutenant Colonel, states that one night in the fall of 1964, while on alert in the launch capsule at Atlas Site 7, his missile commander, Major Dan Gilbert, received an extraordinary call from one of their "sister sites", either Site 6 or Site 8. The commander at the other site reported that an extremely bright light was repeatedly hovering directly over the site, racing away, returning, and hovering again. Apparently, one of the enlisted men at the site, perhaps the security guard, had observed this activity and reported it to the missile commander.

Moore states that some of Site 7's own enlisted men, including Tech. Sgt. Jack Nevins, were ordered up to the "silo cap" to monitor the situation. Moore states, "They reported the UFO zooming from the direction of Site 6 to the direction of Site 8 and hovering for awhile at the end of the movement…They all described it as a silent light that moved extremely rapidly—instant go and instant stop, no getting up to speed or slowing down. The common comment I remember was that everyone thought it was a UFO, and that it was hovering directly over Sites 6 and 8 and nowhere else. Thus, it was specifically interested in those sites."

Moore states that the Site 7 crew were never debriefed and never warned not to discuss the incident. "In other words," he said, "there was no official discussion or acknowledgment." Moore concluded, "I personally believe that there is something to the UFO/ICBM connection. I know the Air Force covers-up when it feels the official need. UFOs over ICBM sites could be one of those official needs."

Airman 1st Class Thomas Kaminski—Former Atlas ICBM Launch Facilities Specialist, 579th Strategic Missile Squadron, Walker AFB, New Mexico:

Kaminski states that he had been at one of the Atlas ICBM launch sites northeast of Walker AFB one evening in 1964, possibly 1965, when the missile commander, Captain D------, directed him topside to view unexplained lights which had been reported to the site. Kaminski states he observed two star-like objects at a great distance, moving in unison.

When he reported his observations to the missile commander, Kaminski was told that the base was tracking the objects on radar and had scrambled two jet fighters to intercept them. Shortly thereafter, he observed the jets attempting to approach the unidentified lights, which then put on a burst of speed and outran the interceptors. The lights disappeared into a Cumulous cloud, followed by the fighters. Moments later, the jets emerged from the cloud but the lights were no longer visible. The fighters changed course and returned to base.

The next morning, upon returning to Walker AFB, Kaminski's missile team was routinely debriefed. He states, "During that briefing, my captain asked, 'Whatever happened to the two UFOs?' The response was, 'What UFOs?' My captain said, 'The ones you sent the fighters up after!' They said, 'We didn't sent up any fighters.' We knew that was the end of that conversation!"

Kaminski also states that he had once observed another UFO display, not at one of the remote missile sites but at Walker AFB itself. "At least half of my barracks saw this," he said, "It was at night and there were two or three lights—possibly four or five—that were moving around in the sky. They looked like stars but, from time to time, they did 90-degree turns. Not all at once though—they moved independently. They obviously knew that they wouldn't run into each other. I don't understand why we didn't hear any sonic booms. That bothers me. They stayed in the same general area [of the sky]. After about 15 minutes, zoom, they were gone." Then he added, "Actually, [sightings of UFOs] were fairly common on base. I think that a lot of guys saw them. It wasn't something that you discussed."

1st Lt. Eugene Lamb—Former Atlas ICBM launch officer (Deputy Missile Combat Crew Commander), 579th Strategic Missile Squadron, Walker AFB, New Mexico:

Lamb states that while he had not personally witnessed any of the UFO-related incidents at Walker's Atlas sites, he had once spoken to a former missile crew commander who had. This individual admitted, decades later, that he had briefly left the launch capsule to go topside to observe strange aerial lights being frantically reported by the missile site's guard. According to Lamb, the officer told him that the lights were unsettling because they had been moving erratically, and faster than jets. He told Lamb that he was familiar with all types of aircraft but had never seen anything like the extraordinary display in the sky above the Atlas silo. According to Lamb, the former officer had said, "These were not just lights. This was something else."

Lamb concluded, "People talked about [the sightings] at Happy Hour, after work, or after we got off-site, but it was kept pretty quiet as far as official statements went. To my knowledge, we were never briefed about it as a unit."

Airman 2nd Class Barry L. Krause—Former Atlas ICBM Missile Facilities Specialist, 579th Strategic Missile Squadron, Walker AFB, New Mexico:

I did not personally interview Krause, who died in 1973. However, on December 20, 1964, he wrote to a civilian UFO research organization, the National Investigations Committee on Aerial Phenomena (NICAP), to report an ongoing series of UFO-related incidents at his squadron's Atlas ICBM sites. In the letter, Krause stated that some of the missile security police whom he had queried about the sightings had deflected his questions by saying that the incidents had been classified "top secret." Krause also stated that, at one point, the UFO incidents had become so numerous, and ominous, that some of the missile guards were balking at reporting for duty.

Comment: Krause's 1964 letter to NICAP, written while the UFO incidents at Walker AFB were ongoing, is extremely important because it provides an unsolicited, contemporary account of some of the sightings at the missile sites. I would like to thank Richard Hall for sharing Krause's letter with other researchers.

Ellsworth AFB, South Dakota (1966):

Staff Sgt. Albert Spodnik (USAF Ret.)—Former Electro-Mechanical technician, 44th Missile Maintenance Squadron, Ellsworth AFB, South Dakota:

Spodnik states that one summer night in 1966, he and a fellow Electro-Mechanical Team technician were dispatched to Launch Facility (silo) Juliet-3 to correct an electrical malfunction. For some reason, both the commercial power supply to the site and the emergency power systems had simultaneously failed, rendering the Minuteman I missile temporarily inoperable. In Air Force parlance, the ICBM had "gone off alert status".

After restoring power to the launch facility, Spodnik and his partner began an automated start-up procedure which would return the missile to normal operational status. When they left the underground silo to take a break, the technicians' security escort alerted them to a sudden, excited exchange over the Crew Cab's two-way radio. As the three men listened, they learned that an armed Air Force Security Alert Team had been ordered to investigate a triggered security alarm at nearby Launch Facility Juliet-5. Furthermore, the missile there had abruptly dropped off alert status. As with Juliet-3, the site had lost commercial electrical power and its diesel-powered generator, designed to charge back-up batteries, had failed to start.

When the Security Alert Team arrived at Juliet-5, they reported that a strange object was sitting on the ground inside the security fence that surrounded the missile silo. As Spodnik and his companions eavesdropped, they heard the Flight Security Controller order the SAT to approach the object. Obviously upset, the team leader responded that he would not do so. He said that his team was parked outside the gate to the launch facility but would go no further. He then reported that the mysterious object was round, apparently metallic, and resting on a tripod landing gear.

As this drama was unfolding over the radio, Spodnik and his companions quickly climbed up on the Crew Cab's roof and flat bed to get a better view of the adjacent missile silo, which was about four miles away. Gazing across the flat, open terrain, they noticed an intense glow that seemed to envelop the entire launch facility, much brighter than the security lights located there.

By this time, the Flight Security Controller had notified Juliet Flight's Launch Commander about the situation. Spodnik could only hear the radio conversation between the Flight Security Controller and the Security Alert Team, but the Launch Commander had apparently ordered the team to approach the unidentified object. Once again, the team leader refused. In a strained voice, he abruptly asked for permission to fire on the object. In response, the Flight Security Controller yelled, "Negative! Don't shoot until you know what's going on!" He then informed the agitated security team leader that the Launch Commander had ordered the men to stand-by while he called the Missile Command Post at Ellsworth AFB. After a few moments, the team leader was told that a helicopter was being sent to the site.

Spodnik states that about 30 minutes after the Command Post had been notified about the UFO landing, he saw the helicopter in the distance, as it approached the stricken launch facility. When it

was about five minutes away, someone screamed into the radio, “There it goes!” Instantly, Spodnik saw a brilliant white light directly above Juliet-5, ascending vertically at enormous velocity. He said that while he couldn’t see the object itself, the light beneath it had the appearance of an “inverted flashlight beam”.

After the furor had subsided, Spodnik and his partner finished their work at Juliet-3 and returned to the base. Upon arriving, they and their security escort were unexpectedly met by the missile maintenance commander, who promptly asked them if they had seen or heard anything unusual while at the launch facility. The security guard readily admitted to eavesdropping on the two-way radio, confessing that he was baffled by what had taken place at Juliet-5.

Glancing nervously at each other, Spodnik and the other technician impulsively denied having witnessed anything out of the ordinary. Both men told the commander that they had spent the entire visit to the launch facility underground, restoring the missile to alert status.

When I asked Spodnik why he had not admitted to listening to the radio chatter, he replied that he and his partner had previously heard rumors about missile technicians being relieved of duty for reporting strange occurrences at ICBM sites. “We heard about people reporting seeing things,” he said, “Not necessarily UFOs, just anything oddball that couldn’t be explained rationally. Those guys were ordered to report to the [base] hospital, examined, and medically discharged as mentally unfit for military service.” Spodnik admitted that he didn’t personally know of anyone who had been treated in this manner, but rumors to that effect had been circulating within his squadron.

Spodnik was undoubtedly referring to a Department of Defense regulation known as “PRP”—Personnel Reliability Program. As mentioned earlier, this directive is designed to govern the behavior of those who work with or around nuclear weapons. Under its guidelines, potentially severe consequences await those judged by their superiors to be psychologically unstable. Several former Air Force missile personnel whom I have interviewed have said that, because of this regulation, they also had concerns about reporting their own UFO sighting, and often did not.

Spodnik said that the maintenance commander, upon hearing his denial, eyed him suspiciously and then ordered the two technicians to report to his office early the next morning. Upon arriving there, Spodnik noticed that the commander had with him an individual dressed in civilian clothes. This person was not introduced, said nothing, took no notes, but listened attentively as Spodnik and his partner answered the commander’s questions about the events of the previous evening. Now very nervous, the pair nevertheless stuck to their story—they had seen and heard nothing. After a several-minute interrogation, the maintenance commander ordered the two men to report to duty.

Spodnik further stated that the neither he nor his partner ever saw their security escort again. Ordinarily, standard duty rotation would have ensured that the same individual be assigned to accompany Spodnik on some future maintenance call, but this never occurred. Spodnik assumed that the escort had been transferred to another base, but never did learn the reason for his sudden departure.

Comment: A second former 44th Missile Maintenance Squadron technician, whom I will not identify, has independently confirmed the essential elements in Spodnik’s account, in particular the landing of the UFO inside the missile silo’s security fence. This individual estimates that the incident occurred in late June or early July, 1966, just prior to his separation from the Air Force.

Ellsworth AFB, South Dakota (1992):

UFO sighting by two Minuteman missile maintenance personnel, whom I will not identify, as reported to **Tech. Sgt. Jeff Goodrich (USAF Ret.)**—Former Minuteman missile technician, 44th Field Missile Maintenance Squadron (FMMS), Ellsworth AFB, South Dakota:

Just before midnight on October 27, 1992, two members of the 44th FMMS, Airman 1st Class Michael R-----, a vehicle controller, and Airman 1st Class Jason B-----, a Minuteman Electro-Mechanical Team technician, were approaching the squadron’s operations hangar when they saw a group of bright, white lights moving rapidly in rigid formation. While no solid object was actually

visible, the fact that the lights did not vary in their positions relative to one another led the witnesses to concluded that they were arranged across the surface of a very large but unseen craft.

As R----- and B----- watched, the light formation moved directly toward the Minuteman missile maintenance hangar, hovered over it momentarily, and then moved away, disappearing behind a bank of low clouds. Both of the observers estimated that at its closest approach, the object was approximately a quarter-mile from them.

Upon arriving at work, the startled eyewitnesses excitedly told those present about the sighting. At that time of night, there wasn't much happening at the hangar and it was relatively empty except for a handful of people in the vehicles and equipment sections.

The next day, another missile maintenance technician, Jeff Goodrich, also learned of the incident. Goodrich had a long-standing interest in UFOs, and was a certified field investigator for the Mutual UFO Network. Using that organization's standard sighting questionnaire, he had R----- and B----- independently record the details of their experience less than two days later.

R----- wrote, "It was kind of foggy out...When I first saw it, I thought it was an airplane, but it moved too smooth and swiftly without noise. I couldn't believe it. I was totally amazed. It was an awesome sight. It seemed to hover about three-to-five hundred feet over the ground and [then] it just sort of disappeared in the air."

In his report, B----- wrote, "I noticed it when I looked out over the hangar where I work. I pointed it out to Mike, who was driving. At first I thought it was an airplane but it was way too big. There were no flashing lights like on most planes and [its] shape was like no plane I've ever seen. I was freaked out [and] Mike almost ran off the road, trying to get a better look at it...It disappeared behind the clouds above the base."

Each airman made drawings of the UFO itself, as well as its position in the sky, relative to the hangar. In R-----'s picture, the lights appear similar to a string of pearls, delineating the presumed boundary of an unseen kidney bean-shaped object. B----- drew essentially the same picture, but with some of the lights positioned away from object's edge. He also depicted it as having more of a boomerang shape.

R----- drew the UFO hovering directly over the missile maintenance hangar, whereas B----- depicted the object approaching the facility from the north, and (as indicated by an arrow) moving into the cloud bank.

Elsewhere on the questionnaire, in the section titled, *Object Description*, R----- wrote that the UFO's apparent width had been "2-3 times the size of a full moon". B----- instead described the lights, writing that each one appeared "2-3 times the size of a star." However, in the *Personal Account* section, he wrote that the object itself had been much larger than an airplane and, in one of his drawings of the entire cluster of lights, he added the caption, "Approx. 300 ft. long".

Neither sighting witness was officially debriefed. It is unknown whether the UFO appeared on radar.

For as God was the help of our reason to illuminate us, so should we likewise turn it every way, that we may be more capable of understanding His mysteries; provided only that the mind be enlarged, according to its capacity, to the grandeur of the mysteries, and not the mysteries contracted to the nar- rowness of the mind.

- Francis Bacon

PREFACE

Very few subjects have attracted as much attention throughout the world as Unidentified Flying Objects. Nearly everyone in the civilized world has at least heard of them. Even some natives beyond the reach of modern communications have described things in the sky that fit the definition. Beyond that, however, there is little unanimity. Every individual has naturally formed his own opinion on the topic, and beliefs vary greatly. Most reasonable people would accept a full and convincing proof of the identity of these mysterious objects. UFOs remain controversial, however, because no attempt at explaining the phenomenon has been entirely successful.

The fundamental fact confronting us is the existence of a large number of UFO sighting reports. Some of these reports may be fraudulent, but most investigators have concluded that the major ity are quite valid; that is, the witnesses themselves believed that they saw something real, external, artificial, and unusual. The primary aim of this book is to seek a satisfactory interpretation, or understanding, of these experiences.

On logical grounds it may be said that all possible explanations can be subdivided into two major categories, namely, A) physically real, manufactured objects that the witness could not relate to anything in his background, and B) something entirely different, such as obscure natural phenomena, hoaxes, or psychic projections. The possibility remains, of course, that the stimulus for a report of the first type was unique to a particular witness and could prove to be quite mundane to more knowledgeable and experienced people. The heart of the whole question, there fore, is whether or not there exists a subset of experiences in Category A that are unique and puzzling to mankind as a whole, including experts in every field. The majority of witnesses think so! This conviction is shared by most of the people who have diligently studied this subject. Contrary views are more popular among those who (a) feel that examination of the data would be undignified, (b) tend to reject any new concept out of hand, and (c) suspend judgment until irrefutable evidence is presented to them. Unfortunately, little progress in this perplexing field can be achieved while the mind is preoccupied with the issue of UFO existence. The reason for this dilemma is that while mentally coursing through the arguments pro and con, one's attention is deflected from discovery of more meaningful detail. The mind is then blocked from further enlightenment. Rational progress can be achieved only by setting such unwarranted skepticism aside, if only temporarily.

For the present purpose, the reader is requested to suspend his doubts and follow the argument that is developed in this book. Simply consider, for the moment, that UFOs are mechanical constructions that appear and behave in general accord with the accounts of the witnesses. Adopting this point of view cannot be harmful and may prove to be beneficial. As a working hypothesis, it will at least free the mind long enough to explore the available data. That alone is considered to be worthwhile. But its ultimate value can be assessed only upon completion of this book. At that time, we will recall that the reality of UFOs was merely assumed, as in a game, and not proven. One can then ask if this stratagem led to a more thorough, comprehensive understanding of the topic. Did it unravel some of the previous mysteries and reveal their true meaning in terms of scientific facts? Did it suggest some experiments in which new ideas may be tested? Affirmative answers to these questions will establish the value of the hypothesis. On the other hand, if the hypothesis fails to bear fruit, it must be uprooted like a barren tree

and thrown out of the orchard. The importance of accepting the reports at face value can hardly be overemphasized. The reader should retain this new perspective throughout the book, otherwise he may become uneasy when some detail of a sighting is brought forth and discussed uncritically. Nowhere does the author attempt to prove the validity of sighting information, or even to evaluate it. The raw data are merely accepted without bias for the purpose of exploration. It is not necessary to believe the data in order to study it. Its truth or falsity will be considered only in the final appraisal.

A fundamental precept of science is the freedom enjoyed by the theorist in devising hypotheses. While hypotheses must accommodate confirmed facts, they need not be reasonable. In fact, major advances in science have been built upon hypotheses that seem to be wildly unreasonable. Even after earning a permanent position in scientific thought, they may yet appear to be quite arbitrary and at odds with reason. In searching for new truth, one simply can not forecast the form it will take. Therefore, justifying an hypothesis is not at all necessary. As a Concession to the reader, ample evidence is presented in Chapter 1 to illustrate why our hypothesis was selected. This data can be a helpful transition for the novice, but it may be skipped by the sophisticated reader who is familiar with it or who recognizes that it is logically extraneous.

The search for truth about UFOs is severely handicapped. First of all, a sighting experience cannot be reproduced in the laboratory. Neither can a UFO be captured for detailed examination. The time and location of future sightings cannot be predicted. Spontaneous sightings are so brief and widely scattered that experts and scientific instruments can not easily be brought to the scene in time to observe the action. Is further understanding, therefore, out of the question? Probably not. But this pursuit of knowledge involves a curious irony. Although the sighting re ports have been derided as "anecdotal records," they are the only source of information on the subject. This reservoir must obviously be tapped if further insights are to be developed. This collection of reports undoubtedly contains some examples from Category B. Some reports that appeared to be well documented have later been exposed as pranks. Such material has occasion ally been accepted uncritically, with adverse effects. -But most worldwide and issuing from diverse cultures. The common discard it. Excessive zeal in this screening process has probably deprived the investigators and the public of some valuable information. To avoid this problem and the corollary one of assessing each report, a different approach has been taken here. Reliance is placed, not so much upon the details of an individual report, as upon the correlations of many independent reports scattered world wide and issuing from diverse cultures. The common elements threading their way through a large number of reports take on the greatest meaning. Several scattered but similar reports afford the opportunity of picking up some detail from one, more from another, and so on, until a composite picture of a typical event can be drawn. The present analysis relies heavily upon these concepts, even at the risk of unwittingly including a few hoaxes, hallucinations, internal eye flashes or whatever. The total number of reports is so large that such contamination of the source material is unlikely to distort the general findings.

The full magnitude of the UFO phenomenon is not commonly realized. A casual observer may have noted a dozen or so newspaper accounts in about as many years. He may have accidentally seen a few magazine articles sandwiched between sensational treatments of hunting polar bears and searching for treasure in the steaming Amazon. He may know of a few books on the subject, but not read them. Newspaper comments on the Condon Report (also unread) have assured him that there was nothing of special interest in the subject. It may be somewhat shocking for him to learn that the average number of reported sightings since 1947 is greater than 200 per year. Over 1,000 sightings were reported in 1967. As these figures apply only to the United States and UFOs are a global problem, the number of sighting reports is substantial. The total is not known, but there is every indication that it is on the order of 500,000 or larger.

While an individual author can do no more than scratch the surface of this voluminous collection, the results of analysis need not be proportionately compromised. After all, the portrait of a tiger can be painted from an adequate number of descriptions, although no testimony is received from the hundreds of people that have been eaten by them. To avoid bias in selecting source materials, the investigation

should depend upon catalogs of sightings that have been laboriously compiled by others. As discussed in Chapter 10, the present work is considered to be only a preliminary investigation that should eventually be repeated and extended on a much more comprehensive scale. It will suffice here to demonstrate a productive method of research by unveiling some new vistas of UFOs even if, at this stage, they are seen "through a glass, darkly."

The nature of the material itself and the anticipated retracing of the steps dictate the need for extensive citing of references. Other considerations also reinforce this choice. Information throughout the book falls into several categories that should be distinguished. Yet the continual use of qualifying language for this purpose would be very burdensome and tedious. Within the framework of the hypothesis that has been adopted, we will allow ourselves to say merely that such and such *happened,* whereas it is actually known only that it was *reported.* Under the circumstances, however, the reader is entitled to know where the information came from so that he can investigate a particular incident further. Much of the information herein comes with impeccable credentials from technical and scientific sources, which can be most helpful in verifying or expanding upon points that are made. Distinctions are sometimes needed between deductions in which the author has every confidence and extrapolations or hunches that have far less secure foundations. Occasional notes can help to keep these chickens and ducks in separate coops. References and comments have been numbered serially and assembled at the end of the book so that a quick referral can usually resolve any fleeting question.

A thorough investigation of UFOs cannot be arbitrarily confined to a few technical fields in which a particular author may be trained. It becomes necessary to follow the tracks of the elusive quarry wherever they may lead. As shall be seen later, they lead into many areas of technical specialty. It can hardly be expected that an author could be uniformly competent in all of them or that his treatment of these subjects would be free of error. It can only be hoped that the general findings are valid, that the various invasions into professional provinces are not offensive to the practitioners, and that their aid will be forthcoming to correct any deficiencies.

Chapter 1

A new fact is battling strenuously for access to your ears. A new aspect of the universe is striving to reveal itself. But no fact is so simple that it is not harder to believe than to doubt at the first presentation.
- Lucretius

CHAPTER 4

SOUNDS

Whether hovering motionless, gliding along at tree-top level, or cruising across the sky, UFOs are notably silent. Astonished witnesses often report that they were certainly close enough to have heard a conventional aircraft. Of course, they expected to hear the sounds generated by the engines, jet exhaust, or propellers, all of which are associated with the means of flight. The lack of such sounds from UFOs clearly indicates that their propulsion systems are unique and unconventional. Even at supersonic speeds, when airplanes invariably produce sonic booms, UFOs remain silent. A physical basis for this unusual performance will become apparent in a later chapter. While the familiar noise of flight is not associated with UFOs, they are known to produce some sounds. In 103 instances of close encounters during the decade 1958-68, witnesses reported hearing sounds and attempted to describe them. (1) As sounds are very difficult to describe, it is not surprising to find that a wide variety of expressions were used. Imagine the sound of a quarter dropping into a coffee can and the numerous adjectives or comparisons that would be evoked from several people in the next room. Further suppose that several different sounds occurred simultaneously, such as

---

slamming a car door and spinning a New Year's noise-maker. Several people called upon to describe this racket would produce a bewildering assortment of words. A reasonable understanding of what they were trying to communicate would require that expressions pertaining to each component of the sounds first be isolated. Then some concept of the sources could be developed from the various expressions and allusions for each component.

While some of the adjectives used by witnesses, such as "dull" and "strange," are essentially without meaning, most of them can be associated with a limited number of different sounds having distinctive characteristics. The following table organizes nearly all the statements by the witnesses into five general categories depending upon the type of sounds that they attempted to describe.

Violent	Low Pitch	Rush Of Air	High Pitch	Signals
bang	hum	whoosh	shrill whir	beeping
loud explosion	low hum	swishing	high pitch	modulated whistle
thundering roar	low buzz	rushing	high pitched hum	signal- like noise
deafening roar	humming	hissing	high speed drill	strange pulsing
shock wave	buzzing	wings	shrieking	shrill beeping
blast	swarm of bees	fluttering	strong whistling	-
roar	humming bees	-	loud turbine	-
-	generator	-	whine	-

-	**electric motor**	-	**piercing whistle**	-
-	**whirring**	-	**jet**	-
-	**strange vibrations**	-	**whistling**	-
-	-	-	**painful**	-
-	-	-	**truck on wet cement**	-

(_____)

transformer and wind **vacuum cleaner**

(_____)

whistling, roar and bangs

It is interesting and reassuring that the descriptions by three witnesses encompassed combinations of the selected categories. For example, an allusion to a "vacuum cleaner" clearly refers to the combination of the noise from rushing air and the high-

---

pitched whine of a turbine. These combinations are designated in the table by lines curving upward toward the appropriate category.

Violent Noises

Two subtypes of violent sounds are clearly discerned - an instantaneous explosion like a shock wave and a loud, continuous noise. These occurred as "it touched the ground," "upon rising" from a low altitude, during "30 seconds before takeoff," and as a UFO "left with a roar and a series of bangs." It appears that these sounds are directly related to the application of power for rapid acceleration or deceleration but they should not be confused with the normally silent landing and liftoff. A large UFO at a distance of 700 meters from a witness was slowly cruising at an estimated 80 km/hr, certainly subsonic; about three seconds after an intense blue light came on, the witness heard a "shock wave."- If the blue light generated a compression wave, it would travel at approximately 1100 ft/sec and reach the witness in just over two seconds. This internal consistency supports a general association between the blue light and the shock wave and the technical implications will be explored later in an analysis of propulsion.

Humming

The second category of sounds, typified as humming, denotes a low level that would not be heard at great distances. The allusion to bees is significant as it provides a specific basis for estimating the frequency or pitch of the sound. Of course, the humming noise of a flying bee comes from the wing beat of about 270 times per second, (3) corresponding closely to the musical note of middle C. Much lower tones, also referred to as humming, are generated by hummingbirds, specifically for the ruby-throated variety, at 70 beats per second for the female and 50 for the smaller male. (4) These tones correspond approximately to the C below the bass clef and the next lower G. They are certainly consistent with the

---

60-or 120-cycle hum produced by electrical apparatus mentioned by several witnesses. It would seem farfetched to search for other causes of this sound when electrical machinery will do so nicely. In view of the brightly lighted interior of UFOs, their numerous navigation lights, and occasional intense beams, a source of electrical power is required. One witness might even be taken at his word, namely, it

sounded like a "generator."

Implied in the discussion thus far is the assumption that witnesses heard the humming sound in the normal fashion, namely, by the pressure of sound waves on the eardrum being transmitted by the bony structure of the inner ear to stimulate the auditory nerve. Any possible alternatives should be taken into account. It was suggested previously that UFOs emit high frequency, electromagnetic radiation that, like radar, would have no effect upon the eardrum. However, medical experiments have shown that some people can hear modulated, radio-frequency energy that they interpret as a "buzzing or knocking" sound. All subjects felt that the sound originated behind their heads regardless of the actual location. (5) Apparently, the pulsed energy bypasses the ear structure and induces signals directly in the auditory nerve. The physical reality of this mechanism was demonstrated when microelectrodes were inserted into a single nerve fiber with subsequent exposure to microwaves, electromagnetic energy in the range of 200 to 3,000 megacycles per second. Electrical potentials from millivolts up to 0.10 volts were measured between the inside and outside of the surface membrane. (6) As these tests were conducted with modulated microwaves it is obvious that the subjects were sensing the pulses of energy, not the carrier frequency. Pulse repetition rates as low as 160 per second are used on the FPS 16 radar at Jodrell Bank, England, (7) and rates as low as 300 per second appear to be common. (8) Thus the buzzing sound heard from UFOs may be stimulated directly within the head of the witnesses by high-frequency radiation being pulsed at a low, audio rate.

In passing, it is noted that voice modulation of microwaves might be developed to communicate with totally deaf people

---

whose ear structure has been destroyed but whose auditory nerve is still intact. Should such prove to be possible and safe, one could also transmit a voice signal some distance on a microwave beam to a person without an electronic receiver. As shall be seen later, something like this may be a part of the total UFO phenomenon.

Rush of Air

Now to the third category of UFO sounds, something similar to the rush of air. Because of the consistency of the descriptions, the sound seems to be well-enough identified but there are no clues to its cause. At this stage of investigation, it can only be guessed that the sound is emitted by agitated molecules in an ionized "skin effect" on the surface of the vehicle. In the electrical breakdown of air along a high-voltage transmission line, called corona, a glow can be seen in the dark and a "hissing" sound becomes audible. (9) A similar electrical discharge may account for the sound of this general type.

High Pitch

It would be of interest and possible value to establish an approximate frequency range for the sound that is characterized by high pitch. At first glance, a "truck on wet pavement" seems to offer little help but it is a useful springboard for understanding the intent of the witness in technical terms. This vague reference is assuredly related to the reaction of the tire tread on the road surface. In seeking a technical interpretation, it can be estimated that the characteristic dimension between elements of a typical tread is one-half inch, that a medium-sized truck has tires of about 3-ft diameter, and that the witness is referring to the nominal speed such as 40 m/hr. Under these conditions, the tread elements would impact upon, and release from, the roadway about 1,400 times per second, creating a moderately high-pitched tone roughly equivalent to the F one octave above the treble clef. This

---

value can only be considered as a crude estimate as it could easily be off by a factor of 2 to 3 in either direction.

Many of the expressions used to describe this sound, "shrieking," "piercing whistle," and "whine" bring to mind the distressing noise of a jet aircraft as the engines are revved up to taxi away from a loading area or in preparation for take-off. This impression is strongly reinforced by explicit comparisons such as "loud turbine" and even "jet." Apparently the witnesses were attempting to describe the high-pitched scream of the engine rather than the roar of exhaust gases.

Most of the offensive noise from jets is generated by the high-speed rotation of the first stage compressor. It consists of a broad spectrum of noise plus several discrete frequencies related to the engine parts and their speed of rotation. A principal source of discrete frequencies is the siren interaction of the inlet guide vanes and the first stage rotor blades. The fundamental frequency can be calculated as the product of the number of blades on the rotor times its speed of rotation. Typically, 30 blades at 10,000 rpm would produce a fundamental of 5,000 cycles per second. In addition, low-order harmonics of significant intensity could be generated with frequencies up to about 12,000 cycles per second. Thus the high-pitched noise of jet engines is composed of several discrete frequencies in the range of 5,000 to 12,000 cycles per second superimposed upon a broad-band background. (10) Tones corresponding to these discrete frequencies, which are very high, can be described accurately as a "whine" or, for the higher ranges, a "whistle." As a point of reference, a l0-kc whistle can sometimes be heard between stations on AM radio.

As the sound heard by one witness reminded him of a "high speed drill," another basis for estimating the frequency is available. Most high-speed drills are driven by electric motors at about 25,000 rpm, or 420 revolutions per second. (11) Fans are normally attached to the spindle for cooling the motor windings, with 15 blades being typical for small sizes. Thus the fundamental frequency from the fan would be about 6,300 cycles per second, not at all inconsistent with previous estimates. Other drill compo-

---

nents, such as gears and bit, are reduced in speed by as much as 10 to 1 but are not notable noise generators.

From these data one may say that UFOs emit high-pitched sounds in the frequency range of about 1,000 to 10,000 cycles per second, probably consisting of several discrete frequencies. All indications are that the sound is caused by rotating machinery and, in particular, by blades attached thereto. In the absence of contrary indications, one would be tempted to guess that the machinery is somehow related to the propulsion system, but definitely not in the sense of ordinary jets. It might be pointed out that high-frequency sounds are significantly absorbed by the atmosphere, whereas low frequencies are practically unaffected; both are subject to attenuation according to the inverse square law. Atmospheric absorption at 8,000 cycles per second varies from 5 to 10 db per 100 meters, depending upon the temperature and humidity. (12) This selective absorption may explain why the high-pitch component is heard only at close range.

Coded Signals

Strange, signal-like sounds were reported in seven of the 447 close-encounter cases being analyzed. Perusal of the listed expressions suggests that "beeping" is the most descriptive term for this sound. While appearing only once in the above list, it was used on three separate occasions. Simultaneous radio interference was sometimes mentioned although it cannot be confirmed that the strange sound was actually emitted by the radios. In fact, radios were probably not involved. A 10-year-old boy saw a bright, silvery object standing on four legs in a wheat field. He heard a beeping sound just before the

object rose from the ground and departed straight up. No radio is mentioned in the report and it seems unlikely that the boy had one in a wheat field. Another similar instance occurred on a beach when a man heard a "modulated whistling" as an object rose off the sand to a height of 20 meters.

In the famous case of Mr. and Mrs. Barney Hill, (13) "beeping"

---

sounds played an unusually significant role. While on vacation trip through New Hampshire, the Hills saw a large UFO approach from great distance and hover low over a field. Barney, who was driving, stopped the car and got out. Overcome with curiosity, he walked toward the UFO until he could see people inside and, with binoculars, could make out a pair of strange eyes staring at him. He fled in terror. The UFO followed their car for some time as the Hills tried to keep it in sight, excitedly discussing their predicament and experiencing a premonition that the people in the UFO would try to capture them.

"Then suddenly a strange electronic beeping was heard. The car seemed to vibrate with it. It was in irregular rhythm-beep, beep-beep, beep, beep-seeming to come from behind the car, in the direction of the trunk." (14)

Since the apparent source of the sound was behind the Hills, it could not have come from a radio. When asked if the radio was on at the time, Barney replied

"No. My radio was not on. It was so late, and I did not think I could get a station. So when I left Canada, I cut my radio off....I don't play my radio when I'm driving." (15)

Upon hearing the "beeping" sound, the Hills experienced an odd drowsiness. Sometime later, a second series of beeps re turned them to normal. They were unaware of anything between the two series of beeps. Much later, however, intervening events were recalled under hypnosis. The Hills had been captured by occupants of the UFO, taken aboard a gigantic vehicle, and subjected to biomedical experiments for nearly two hours. The Hills had fallen under control of the aliens at the first series of beeps. They were released with a posthypnotic suggestion that they would not remember anything about their experience, then awakened with the second series of beeps.

The onset of amnesia in another case was also triggered by beeping sounds.(16) A police officer in Nebraska approached to

---

within 14 meters of a UFO on the highway and heard a shrill, beeping sound. He judged that it took only 10 minutes to return to headquarters, although one-half hour had elapsed. Under hypnosis at the University of Colorado, he recalled the events during the 20-minute period of amnesia. A very small person walked toward him from under the UFO and said that he had come to earth from outer space. (17) It may be assumed that the police officer was monitoring his radio at the time of encounter. However, the similarity of his experience with that of the Hills leads one to suspect that the radio was not involved in transmittal of the beeps.

It appears that beeping sounds near UFOs need not, and probably do not, involve radios, and that they are used to induce hypnotic trances, sometimes subjecting the witness to complete control by the UFO pilots. The mechanism for transmittal of the beeps seems to be encoded signals on a high-frequency carrier in the microwave range as suggested by the correlation between the Hills' experience and laboratory experiments on human subjects. Possible use of this mechanism that is more sophisticated

than raw beeps is treated in a section on language and communication.

CHAPTER SIX

The Presses Roll -The Air Force Shrugs

The Grudge Report was supposedly not for general distribution. A few copies were sent to the Air Force Press Desk in the Pentagon and reporters and writers could come in and read it. But a good many copies did get into circulation. The Air Force Press Room wasn't the best place to sit and study a 600 page report, and a quick glance at the report showed that it required some study - if no more than to find out what the authors were trying to prove - so several dozen copies got into circulation. I know that these "liberated" copies of the Grudge Report had been thoroughly studied because nearly every writer who came to ATIC during the time that I was in charge of Project Blue Book carried a copy.

Since the press had some questions about the motives behind releasing the Grudge Report, it received very little publicity while the writers put out feelers. Consequently in early 1950 you didn't read much about flying saucers.

Evidently certain people in the Air Force thought this lull in publicity meant that the UFO's had finally died because Project Grudge was junked. All the project files, hundreds of pounds of reports, memos, photos, sketches, and other assorted bits of paper were unceremoniously yanked out of their filing cabinets, tied up with string, and chucked into an old storage case. I would guess that many reports ended up as "souvenirs" because a year later, when I exhumed these files, there were a lot of reports missing.

About this time the official Air Force UFO project had one last post death muscular spasm. The last bundle of reports had just landed on top of the pile in the storage case when ATIC received a letter from the Director of Intelligence of the Air Force. In official language it said, "What gives?" There had been no order to end Project Grudge. The answer went back that Project Grudge had not been disbanded; the project functions had been transferred and it was no longer a "special"

---

project. From now on UFO reports would be processed through normal intelligence channels along with other intelligence reports.

To show good faith ATIC requested permission to issue a new Air Force wide bulletin which was duly mimeographed and disseminated. In essence it said that Air Force Headquarters had directed ATIC to continue to collect and evaluate reports of unidentified flying objects. It went on to explain that most UFO reports were trash. It pointed out the findings of the Grudge Report in such strong language that by the time the recipient of the bulletin had finished reading it, he would be ashamed to send in a report. To cinch the deal the bulletins must have been disseminated only to troops in Outer Mongolia because I never found anyone in the field who had ever received a copy.

As the Air Force UFO investigating activity dropped to nil, the press activity skyrocketed to a new peak. A dozen people took off to dig up their own UFO stories and to draw their own conclusions.

After a quiet January, True again clobbered the reading public. This time it was a story in the March 1950 issue and it was entitled, "How Scientists Tracked Flying Saucers." It was written by none other than the man who was at that time in charge of a team of Navy scientists at the super hush-hush guided missile test and development area, White Sands Proving Ground, New Mexico. He was Commander R. B. McLaughlin, an Annapolis graduate and a Regular Navy officer. His story had been cleared by the military and was in absolute, 180 degree, direct contradiction to every press release that had been made by the military in the past two years. Not only did the commander believe

that he had proved that UFO's were real but that he knew what they were. "I am convinced," he wrote in the True article, "that it," referring to a UFO he had seen at White Sands, "was a flying saucer, and further, that these disks are spaceships from another planet, operated by animate, intelligent beings."

On several occasions during 1948 and 1949, McLaughlin or his crew at the White Sands Proving Ground had made good UFO sightings. The best one was made on April 24, 1949, when the commander's crew of engineers, scientists, and technicians were getting ready to launch one of the huge 100-foot-diameter skyhook balloons. It was 10:30 AM. on an absolutely clear Sunday morning. Prior to the launching, the crew had sent up a small weather balloon to check the winds at lower levels. One man was watching the balloon through a theodolite, an instrument similar to a surveyor's transit built around a 25 power telescope, one man was holding a stop watch, and a third had a clipboard to record the measured data. The crew had tracked the balloon to about 10,000 feet when one of them suddenly shouted and pointed off to the left. The whole crew

---

looked at the part of the sky where the man was excitedly pointing, and there was a UFO. "It didn't appear to be large," one of the scientists later said, "but it was plainly visible. It was easy to see that it was elliptical in shape and had a 'whitish silver color.'" After taking a split second to realize what they were looking at, one of the men swung the theodolite around to pick up the object, and the timer reset his stop watch. For sixty seconds they tracked the UFO as it moved toward the east. In about fifty-five seconds it had dropped from an angle of elevation of 45 degrees to 25 degrees, then it zoomed upward and in a few seconds it was out of sight. The crew heard no sound and the New Mexico desert was so calm that day that they could have heard "a whisper a mile away."

When they reduced the data they had collected, McLaughlin and crew found out that the UFO had been traveling 4 degrees per second. At one time during the observed portion of its flight, the UFO had passed in front of a range of mountains that were visible to the observers. Using this as a check point, they estimated the size of the UFO to be 40 feet wide and 100 feet long, and they computed that the UFO had been at an altitude of 296,000 feet, or 56 miles, when they had first seen it, and that it was traveling 7 miles per second.

This wasn't the only UFO sighting made by White Sands scientists. On April 5, 1948, another team watched a UFO for several minutes as it streaked across the afternoon sky in a series of violent maneuvers. The disk shaped object was about a fifth the size of a full moon.

On another occasion the crew of a C-47 that was tracking a skyhook balloon saw two similar UFO's come loping in from just above the horizon, circle the balloon, which was flying at just under 90,000 feet, and rapidly leave. When the balloon was recovered it was ripped.

I knew the two pilots of the C-47; both of them now believe in flying saucers. And they aren't alone; so do the people of the Aeronautical Division of General Mills who launch and track the big skyhook balloons. These scientists and engineers all have seen UFO's and they aren't their own balloons. I was almost tossed out of the General Mills offices into a cold January Minneapolis snowstorm for suggesting such a thing but that comes later in our history of the UFO.

I don't know what these people saw. There has been a lot of interest generated by these sightings because of the extremely high qualifications and caliber of the observers. There is some legitimate doubt as to the accuracy of the speed and altitude figures that McLaughlin's crew arrived at from the data they measured with their theodolite. This doesn't mean much, however. Even if they were off by a factor of 100 per cent, the speeds and altitudes would be fantastic, and besides they looked at

---

the UFO through a 25 power telescope and swore that it was a flat, oval- shaped object. Balloons, birds, and airplanes aren't flat and oval shaped.

Astrophysicist Dr. Donald Menzel, in a book entitled Flying Saucers, says they saw a refracted image of their own balloon caused by an atmospheric phenomenon. Maybe he is right, but the General Mills people don't believe it. And their disagreement is backed up by years of practical experience with the atmosphere, its tricks and its illusions.

When the March issue of True magazine carrying Commander McLaughlin's story about how the White Sands Scientists had tracked UFO's reached the public, it stirred up a hornets' nest. Donald Keyhoe's article in the January True had converted many people but there were still a few heathens. The fact that government scientists had seen UFO's, and were admitting it, took care of a large percentage of these heathens. More and more people were believing in flying saucers.

The Navy had no comment to make about the sightings, but they did comment on McLaughlin. It seems that several months before, at the suggestion of a group of scientists at White Sands, McLaughlin had carefully written up the details of the sightings and forwarded them to Washington. The report contained no personal opinions, just facts. The comments on McLaughlin's report had been wired back to White Sands from Washington and they were, "What are you drinking out there?" A very intelligent answer- and it came from an admiral in the Navy's guided missile program.

By the time his story was published, McLaughlin was no longer at White Sands; he was at sea on the destroyer Bristol. Maybe he answered the admiral's wire.

The Air Force had no comment to make on McLaughlin's story. People at ATIC just shrugged and smiled as they walked by the remains of Project Grudge, and continued to "process UFO reports through regular intelligence channels."

In early 1950 the UFO's moved down to Mexico. The newspapers were full of reports. Tourists were bringing back more saucer stories than hand tooled, genuine leather purses. Time reported that pickpockets were doing a fabulous business working the sky gazing crowds that gathered when a plativolo was seen. Mexico's Department of National Defense reported that there had been some good reports but that the stories of finding crashed saucers weren't true.

On March 8 one of the best UFO sightings of 1950 took place right over ATIC.

About midmorning on this date a TWA airliner was coming in to land at the Dayton Municipal Airport. As the pilot circled to get into the

---

traffic pattern, he and his copilot saw a bright light hovering off to the southeast. The pilot called the tower operators at the airport to tell them about the light, but before he could say anything, the tower operators told him they were looking at it too. They had called the operations office of the Ohio Air National Guard, which was located at the airport, and while the tower operators were talking, an Air Guard pilot was running toward an F-51, dragging his parachute, helmet, and oxygen mask.

I knew the pilot, and he later told me, "I wanted to find out once and for all what these screwy flying saucer reports were all about."

While the F-51 was warming up, the tower operators called ATIC and told them about the UFO and where to look to see it. The people at ATIC rushed out and there it was - an extremely bright light, much brighter and larger than a star. Whatever it was, it was high because every once in a while it

would be blanked out by the thick, high, scattered clouds that were in the area. While the group of people were standing in front of ATIC watching the light, somebody ran in and called the radar lab at Wright Field to see if they had any radar "on the air." The people in the lab said that they didn't have, but they could get operational in a hurry. They said they would search southeast of the field with their radar and suggested that ATIC send some people over. By the time the ATIC people arrived at the radar lab the radar was on the air and had a target in the same position as the light that everyone was looking at. The radar was also picking up the Air Guard F-51 and an F-51 that had been scrambled from Wright-Patterson. The pilots of the Air Guard '51 and the Wright-Patterson '51 could both see the UFO, and they were going after it. The master sergeant who was operating the radar called the F-51's on the radio, got them together and started to vector them toward the target. As the two airplanes climbed they kept up a continual conversation with the radar operator to make sure they were all after the same thing. For several minutes they could clearly see the UFO, but when they reached about 15,000 feet, the clouds moved in and they lost it. The pilots made a quick decision; since radar showed that they were getting closer to the target, they decided to spread out to keep from colliding with one another and to go up through the clouds. They went on instruments and in a few seconds they were in the cloud. It was much worse than they'd expected; the cloud was thick, and the airplanes were icing up fast. An F-51 is far from being a good instrument ship, but they stayed in their climb until radar called and said that they were close to the target; in fact, almost on it. The pilots had another hurried radio conference and decided that since the weather was so bad they'd better come down. If a UFO, or something, was in the clouds, they'd hit it before they could see it. So

---

they made a wise decision; they dropped the noses of their airplanes and dove back down into the clear. They circled awhile but the clouds didn't break. In a few minutes the master sergeant on the radar reported that the target was fading fast. The F-51's went in and landed.

When the target faded on the radar, some of the people went outside to visually look for the UFO, but it was obscured by clouds, and the clouds stayed for an hour. When it finally did clear for a few minutes, the UFO was gone.

A conference was held at ATIC that afternoon. It included Roy James, ATIC's electronics specialist and expert on radar UFO's. Roy had been over at the radar lab and had seen the UFO on the scope but neither the F-51 pilots nor the master sergeant who operated the radar were at the conference. The records show that at this meeting a unanimous decision was reached as to the identity of the UFO's. The bright light was Venus since Venus was in the southeast during midmorning on March 8, 1950, and the radar return was caused by the ice laden cloud that the F-51 pilots had encountered. Ice laden clouds can cause a radar return. The group of intelligence specialists at the meeting decided that this was further proved by the fact that as the F-51's approached the center of the cloud their radar return appeared to approach the UFO target on the radarscope. They were near the UFO and near ice, so the UFO must have been ice.

The case was closed.

I had read the report of this sighting but I hadn't paid too much attention to it because it had been "solved." But one day almost two years later I got a telephone call at my office at Project Blue Book. It was a master sergeant, the master sergeant who had been operating the radar at the lab. He'd just heard that the Air Force was again seriously investigating UFO's and he wanted to see what had been said about the Dayton Incident. He came over, read the report, and violently disagreed with what had been decided upon as the answer. He said that he'd been working with radar before World War II; he'd helped with the operational tests on the first microwave warning radars developed early in the war by a group headed by Dr. Luis Alvarez. He said that what he saw on that radarscope was no ice

cloud; it was some type of aircraft. He'd seen every conceivable type of weather target on radar, he told me; thunderstorms, ice laden clouds, targets caused by temperature inversions, and the works. They all had similar characteristics - the target was "fuzzy" and varied in intensity. But in this case the target was a good, solid return and he was convinced that it was caused by a good, solid object.

And besides, he said, when the target began to fade on his scope he had raised the tilt of the antenna and the target came back, indicating that whatever it was, it was climbing. Ice laden clouds don't climb, he commented rather bitterly.

Nor did the pilot of one of the F-51's agree with the ATIC analysis. The pilot who had been leading the two ship flight of F-51's on that day told me that what he saw was no planet. While he and his wing man were climbing, and before the clouds obscured it, they both got a good look at the UFO, and it was getting bigger and more distinct all the time. As they climbed, the light began to take on a shape; it was definitely round. And if it had been Venus it should have been in the same part of the sky the next day, but the pilot said that he'd looked and it wasn't there. The ATIC report doesn't mention this point.

I remember asking him a second time what the UFO looked like; he said, "huge and metallic" - shades of the Mantell Incident.

The Dayton Incident didn't get much of a play from the press because officially it wasn't an unknown and there's nothing intriguing about an ice cloud and Venus. There were UFO reports in the newspapers, however.

One story that was widely printed was about a sighting at the naval air station at Dallas, Texas. Just before noon on March 16, Chief Petty Officer Charles Lewis saw a disk shaped UFO come streaking across the sky and buzz a high flying B-36. Lewis first saw the UFO coming in from the north, lower than the B-36; then he saw it pull up to the big bomber as it got closer. It hovered under the B-36 for an instant, then it went speeding off and disappeared. When the press inquired about the incident, Captain M. A. Nation, commander of the air station, vouched for his chief and added that the base tower operators had seen and reported a UFO to him about ten days before.

This story didn't run long because the next day a bigger one broke when the sky over the little town of Farmington, New Mexico, about 170 miles northwest of Albuquerque, was literally invaded by UFO's. Every major newspaper carried the story. The UFO's had apparently been congregating over the four comers area for two days because several people had reported seeing UFO's on March 15 and 16. But the seventeenth was the big day, every saucer this side of Polaris must have made a successful rendezvous over Farmington, because on that day most of the town's 3,600 citizens saw the mass fly-by. The first reports were made at 10:15 A.M.; then for an hour the air was full of flying saucers. Estimates of the number varied from a conservative 500 to "thousands." Most all the observers said the UFO's were saucer shaped, traveled at almost unbelievable speeds, and didn't seem to have any set

---

flight path. They would dart in and out and seemed to avoid collisions only by inches. There was no doubt that they weren't hallucinations because the mayor, the local newspaper staff, ex-pilots, the highway patrol, and every type of person who makes up a community of 3,600 saw them.

I've talked to several people who were in Farmington and saw this now famous UFO display of St. Patrick's Day, 1950. I've heard dozens of explanations - cotton blowing in the wind, bugs' wings

reflecting sunlight, a hoax to put Farmington on the map, and real honest-to-goodness flying saucers. One explanation was never publicized, however, and if there is an explanation, it is the best. Under certain conditions of extreme cold, probably 50 to 60 degrees below zero, the plastic bag of a skyhook balloon will get very brittle, and will take on the characteristics of a huge light bulb. If a sudden gust of wind or some other disturbance hits the balloon, it will shatter into a thousand pieces. As these pieces of plastic float down and are carried along by the wind, they could look like thousands of flying saucers.

On St. Patrick's Day a skyhook balloon launched from Holloman AFB, adjacent to the White Sands Proving Ground, did burst near Farmington, and it was cold enough at 60,000 feet to make the balloon brittle. True, the people at Farmington never found any piece of plastic, but the small pieces of plastic are literally as light as feathers and could have floated far beyond the city.

The next day, on March 18, the Air Force, prodded by the press, shrugged and said, "There's nothing to it," but they had no explanation.

True magazine came through for a third time when their April issue, which was published during the latter part of March 1950, carried a roundup of UFO photos. They offered seven photos as proof that UFO's existed. It didn't take a photo interpretation expert to tell that all seven could well be of doubtful lineage, nevertheless the collection of photos added fuel to the already smoldering fire. The U.S. public was hearing a lot about flying saucers and all of it was on the pro side. For somebody who didn't believe in the things, the public thought that the Air Force was being mighty quiet.

The subject took on added interest on the night of March 26, when a famous news commentator said the UFO's were from Russia.

The next night Henry J. Taylor, in a broadcast from Dallas, Texas, said that the UFO's were Uncle Sam's own. He couldn't tell all he knew, but a flying saucer had been found on the beach near Galveston, Texas. It had USAF markings.

Two nights later a Los Angeles television station cut into a regular program with a special news flash; later in the evening the announcer

---

said they would show the first photos of the real thing, our military's flying saucer. The photos turned out to be of the Navy XF-5-U, a World War II experimental aircraft that never flew.

The public was now thoroughly confused.

By now the words "flying saucer" were being batted around by every newspaper reporter, radio and TV newscaster, comedian, and man on the street. Some of the comments weren't complimentary, but as Theorem I of the publicity racket goes, "It doesn't make any difference what's said as long as the name's spelled right."

Early in April the publication that is highly revered by so many, U.S. News and World Report, threw in their lot. The UFO's belonged to the Navy. Up popped the old non flying XF-5-U again.

Events drifted back to normal when Edward R. Murrow made UFO's the subject of one of his TV documentaries. He took his viewers around the U.S., talked to Kenneth Arnold, of original UFO fame, by phone and got the story of Captain Mantell's death from a reporter "who was there." Sandwiched in between accounts of actual UFO sightings were the pro and con opinions of top Washington brass, scientists, and the man on the street.

Even the staid New York Times, which had until now stayed out of UFO controversy, broke down and ran an editorial entitled, "Those Flying Saucers - Are They or Aren't They?"

All of this activity did little to shock the military out of their dogma. They admitted that the UFO investigation really hadn't been discontinued. "Any substantial reports of any unusual aerial phenomena would be processed through normal intelligence channels," they told the press.

Ever since July 4, 1947, ten days after the first flying saucer report, airline pilots had been reporting that they had seen UFO's. But the reports weren't frequent - maybe one every few months. In the spring of 1950 this changed, however, and the airline pilots began to make more and more reports - good reports. The reports went to ATIC but they didn't receive much attention. In a few instances there was a semblance of an investigation but it was halfhearted. The reports reached the newspapers too, and here they received a great deal more attention. The reports were investigated, and the stories checked and rechecked. When airline crews began to turn in one UFO report after another, it was difficult to believe the old "hoax, hallucination, and misidentification of known objects" routine. In April, May, and June of 1950 there were over thirty five good reports from airline crews.

One of these was a report from a Chicago and Southern crew who

---

were flying a DC-3 from Memphis to Little Rock, Arkansas, on the night of March 31. It was an exceptionally clear night, no clouds or haze, a wonderful night to fly. At exactly nine twenty-nine by the cockpit clock the pilot, a Jack Adams, noticed a white light off to his left. The copilot, G. W. Anderson, was looking at the chart but out of the corner of his eye he saw the pilot lean forward and look out the window, so he looked out too. He saw the light just as the pilot said, "What's that?"

The copilot's answer was classic: "No, not one of those things."

Both pilots had only recently voiced their opinions regarding the flying saucers and they weren't complimentary.

As they watched the UFO, it passed across the nose of their DC-3 and they got a fairly good look at it. Neither the pilot nor the copilot was positive of the object's shape because it was "shadowy" but they assumed it was disk shaped because of the circular arrangement of eight or ten "portholes," each one glowing from a strong bluish white light that seemed to come from the inside of whatever it was that they saw. The UFO also had a blinking white light on top, a fact that led many people to speculate that this UFO was another airliner. But this idea was quashed when it was announced that there were no other airliners in the area. The crew of the DC-3, when questioned on this possibility, were definite in their answers. If it had been another airplane, they could have read the number, seen the passengers, and darn near reached out and slugged the pilot for getting so close to them.

About a month later, over northern Indiana, TWA treated all the passengers of one of their DC-3 flights to a view of a UFO that looked like a "big glob of molten metal."

The official answer for this incident is that the huge orange red UFO was nothing more than the light from the many northern Indiana blast furnaces reflecting a haze layer. Could be, but the pilots say no.

There were similar sightings in North Korea two years later - and FEAF Bomber Command had caused a shortage of blast furnaces in North Korea.

UFO sightings by airline pilots always interested me as much as any type of sighting. Pilots in general should be competent observers simply because they spend a large part of their lives looking around the sky. And pilots do look; one of the first things an aviation cadet is taught is to "Keep your

head on a swivel"; in other words, keep looking around the sky. Of all the pilots, the airline pilots are the cream of this group of good observers. Possibly some second lieutenant just out of flying school could be confused by some unusual formation of ground lights, a meteor, or a star, but airline pilots have flown thousands of hours or they

---

wouldn't be sitting in the left seat of an airliner, and they should be familiar with a host of unusual sights.

One afternoon in February 1953 I had an opportunity to further my study sightings by airline pilots I had been out at Air Defense Command Headquarters in Colorado Springs and was flying back East on United Airlines DC-6. There were many passengers on the airplane that afternoon but, as usual, the captain came strolling back through the cabin to chat. When he got to me he sat down in the next seat. We talked a few minutes; then I asked him what he knew about flying saucers. He sort of laughed and said that a dozen people a week asked that question, but when I told him who I was and why I was interested, his attitude changed. He said that he'd never seen a UFO but he knew a lot of pilots on United who had. One man, he told me, had seen one several years ago. He'd reported it but he had been sloughed off like the rest. But he was so convinced that he'd seen something unusual that he'd gone out and bought a Leica camera with a 105 mm. telephoto lens, learned how to use it, and now he carried it religiously during his flights.

There was a lull in the conversation, then the captain said, "Do you really want to get an opinion about flying saucers?"

I said I did.

"O.K.," I remember his saying, "how much of a layover do you have in Chicago?"

I had about two hours.

"All right, as soon as we get to Chicago I'll meet you at Caffarello's, across the street from the terminal building. I'll see who else is in and I'll bring them along."

I thanked him and he went back up front.

I waited around the bar at Caffarello's for an hour. I'd just about decided that he wasn't going to make it and that I'd better get back to catch my flight to Dayton when he and three other pilots came in. We got a big booth in the coffee shop because he'd called three more off duty pilots who lived in Chicago and they were coming over too. I don't remember any of the men's names because I didn't make any attempt to. This was just an informal bull session and not an official interrogation, but I really got the scoop on what airline pilots think about UFO's.

First of all they didn't pull any punches about what they thought about the Air Force and its investigation of UFO reports. One of the men got right down to the point: "If I saw a flying saucer flying wing tip formation with me and could see little men waving - even if my

---

whole load of passengers saw it - I wouldn't report it to the Air Force." Another man cut in, "Remember the thing Jack Adams said he saw down by Memphis?" I said I did.

"He reported that to the Air Force and some red-hot character met him in Memphis on his next trip.

He talked to Adams a few minutes and then told him that he'd seen a meteor. Adams felt like a fool. Hell, I know Jack Adams well and he's the most conservative guy I know. If he said he saw something with glowing portholes, he saw something with glowing portholes - and it wasn't a meteor."

Even though I didn't remember the pilots' names I'll never forget their comments. They didn't like the way the Air Force had handled UFO reports and I was the Air Force's "Mr. Flying Saucer." As quickly as one of the pilots would set me up and bat me down, the next one grabbed me off the floor and took his turn. But I couldn't complain too much; I'd asked for it. I think that this group of seven pilots pretty much represented the feelings of a lot of the airline pilots. They weren't wide-eyed space fans, but they and their fellow pilots had seen something and whatever they'd seen weren't hallucinations, mass hysteria, balloons, or meteors.

Three of the men at the Caffarello conference had seen UFO's or, to use their terminology, they had seen something they couldn't identify as a known object. Two of these men had seen odd lights closely following their airplanes at night. Both had checked and double-checked with CAA, but no other aircraft was in the area. Both admitted, however, that they hadn't seen enough to class what they'd seen as good UFO sighting. But the third man had a lulu.

If I recall correctly, this pilot was flying for TWA. One day in March 1952 he, his copilot, and a third person who was either a pilot dead-heading home or another crew member, I don't recall which, were flying a C-54 cargo airplane from Chicago to Kansas City. At about 2:30 P.M. the pilot was checking in with the CAA radio at Kirksville, Missouri, flying 500 feet on top of a solid overcast. While he was talking he glanced out at his No.2 engine, which had been losing oil. Directly in line with it, and a few degrees above, he saw a silvery, disk shaped object. It was too far out to get a really good look at it, yet it was close enough to be able definitely to make out the shape.

The UFO held its relative position with the C-54 for five or six minutes; then the pilot decided to do a little on-the-spot investigating himself. He started a gradual turn toward the UFO and for about thirty seconds he was getting closer, but then the UFO began to make a left turn. It had apparently slowed down because they were still closing on it.

About this time the copilot decided that the UFO was a balloon; it just looked as if the UFO was turning. The pilot agreed halfway - and since the company wasn't paying them to intercept balloons, they got back on their course to Kansas City. They flew on for a few more minutes with "the darn thing" still off to their left. If it was a balloon, they should be leaving it behind, the pilot recalled thinking to himself; if they made a 45 degree right turn, the "balloon" shouldn't stay off the left wing; it should drop way behind. So they made a 45 degree right turn, and although the "balloon" dropped back a little bit, it didn't drop back far enough to be a balloon. It seemed to put on speed to try to make a turn outside of the C-54's turn. The pilot continued on around until he'd made a tight 360 degree turn, and the UFO had followed, staying outside. They could not judge its speed, not knowing how far away it was, but to follow even a C-54 around in a 360 degree turn and to stay outside all of the time takes a mighty speedy object.

This shot the balloon theory right in the head. After the 360 degree turn the UFO seemed to be gradually losing altitude because it was getting below the level of the wings. The pilot decided to get a better look. He asked for full power on all four engines, climbed several thousand feet, and again turned into the UFO. He put the C-54 in a long glide, headed directly toward it. As they closed in, the UFO seemed to lose altitude a little faster and "sank" into the top of the overcast. Just as the C-54 flashed across the spot where the UFO had disappeared, the crew saw it rise up out of the overcast off their right wing and begin to climb so fast that in several seconds it was out of sight.

Both the pilot and copilot wanted to stay around and look for it but No.2 engine had started to act up soon after they had put on full power for the climb, and they decided that they'd better get into Kansas City.

I missed my Dayton flight but I heard a good UFO story.

What had the two pilots and their passenger seen? We kicked it around plenty that afternoon. It was no balloon. It wasn't another airplane because when the pilot called Kirksville Radio he'd asked if there were any airplanes in the area. It might possibly have been a reflection of some kind except that when it "sank" into the overcast the pilot said it looked like something sinking into an overcast - it just didn't disappear as a reflection would. Then there was the sudden reappearance off the right wing. These are the types of things you just can't explain.

What did the pilots think it was? Three were sold that the UFO's were interplanetary spacecraft, one man was convinced that they were some U.S. "secret weapon," and three of the men just shook their heads. So did I. We all agreed on one thing - this pilot had seen something and it was something highly unusual.

82.The Report on Unidentified Flying Objects

The meeting broke up about 9:00 P.M. I'd gotten the personal and very candid opinion of seven airline captains, and the opinions of half a hundred more airline pilots had been quoted. I'd learned that the UFO's are discussed often. I'd learned that many airline pilots take UFO sightings very seriously. I learned that some believe they are interplanetary, some think they're a U.S. weapon, and many just don't know. But very few are laughing off the good sightings.

By May 1950 the flying saucer business had hit a new all-time peak. The Air Force didn't take any side, they just shrugged. There was no attempt to investigate and explain the various sightings. Maybe this was because someone was afraid the answer would be "Unknown." Or maybe it was because a few key officers thought that the eagles or stars on their shoulders made them leaders of all men. If they didn't believe in flying saucers and said so, it would be like calming the stormy Sea of Galilee. "It's all a bunch of damned nonsense," an Air Force colonel who was controlling the UFO investigation said. "There's no such thing as a flying saucer." He went on to say that all people who saw flying saucers were jokers, crackpots, or publicity hounds. Then he gave the airline pilots who'd been reporting UFO's a reprieve. "They were just fatigued," he said. "What they thought were spaceships were windshield reflections."

This was the unbiased processing of UFO reports through normal intelligence channels.

But the U.S. public evidently had more faith in the "crackpot" scientists who were spending millions of the public's dollars at the White Sands Proving Grounds, in the "publicity mad" military pilots, and the "tired, old" airline pilots, because in a nationwide poll it was found that only 6 per cent of the country's 150,697,361 people agreed with the colonel and said, "There aren't such things."

Ninety-four per cent had different ideas.

Chapter 17

This is the first serious book about UFOs to be written by anyone actively connected with the official investigation of these phenomena. As chief of the Air Force project assigned to the investigation and analysis of UFOs, Mr. Ruppelt and his staff studied over 4,500 reports and discussed them with everyone from out-and-out crackpots to top-level scientists and generals

All reports received were subjected to military intelligence analysis procedures. Astronomers, physicists, aerodynamic engineers, and psychologists were consulted in the course of the Air Force's exhaustive investigations. The official Air Technical Intelligence Center reports of their findings, many details from which are revealed for the first time in this book, contain some completely baffling detailed accounts of UFO sightings by thoroughly reliable witnesses.

Here are the complete official accounts of the classic cases - the Lubbock Lights, the Utah Movies, the Florida Scoutmaster, the Washington Sightings - as well as a wealth of less-publicized but equally amazing incidents.

While others who have written books and articles on UFOs imply that they were conferring with officials in the inner sanctum, Mr. Ruppelt, as this fascinating book makes clear, *was* the inner sanctum.

About the Author

From early 1951 until September 1953, Edward J Ruppelt was chief of the United States Air Force's Project Blue Book, an operation of the Air Technical Intelligence Center. Since 1953 the author has been in close contact with the present project staff and recently made a trip across the country to check current developments. Mr. Ruppelt is now a research engineer for the Northrop Aircraft Company. - 1956

This online book was produced by NICAP Site Coordinator, Francis L. Ridge, and authorized by the Center for UFO Studies

Latest Briefing, February 1, 2017

Fran Ridge

The Nuclear Connection Project was established on July 1, 2003. It has been fourteen very interesting years, probably the most enlightening work accomplished in the last half-century. Enlightening because it tells more about the "why" of the bonified UFO situation than any other field of study.

The evidence for a UFO/Nuclear Connection grows by the day. Official FBI, CIA, Army and Air Force documents establish, beyond a doubt, that UFOs have been seen and reported where uranium and plutonium are mined and manufactured (the Congo, New Mexico, Oak Ridge, Tennessee, the Hanford Plant at Washington, the Savannah River facility at South Carolina). Official reports are on file of UFOs seen where bomb development takes place (Los Alamos, Sandia Base) and where nuclear weapons are stored (Manzano Mountain near Kirtland, NM, and Killeen Base at Camp Hood, TX). Even where the bombs are transported to the testing areas: See U.S.S. Curtiss Incident. The Camp Hood/Killeen incidents are listed in the Project Blue Book "Unknowns". Some of the most dramatic incidents involve interference with our missile sites (shutdown of Minuteman missiles at Malmstrom AFB, Montana). Even the absence of incidents is uncanny, such as during one of the most dangerous periods in history, the Cuban Missile Crisis. Accidental war, where UFOs could be mistaken for Russian missiles or jets during very tense time, was a distinct possibility. Official documents show that UFOs had caused quite a stir at other times in our history, several times setting off nationwide alerts.

Our thanks to all the NCP Staff, in particular, Dan Wilson, for his fine work with the Blue Book files and many of the files below. Our thanks to Rebecca Wise and the Project Blue Book Archive for the documentation which made all this more than just hearsay and inaccurate reporting. The documents speak for themselves. And without our technological workhorse, Jean Waskiewicz, most of what we do would not be usable or even accessable. And Robert Duvall's insight into what all this implies, is right on the mark when it comes to the "connection", both nuclear and strategic. And although not a member of NCP by choice, Robert Hastings has provided more evidence for the nuclear connection in the form of researched and investigated missile incidences, than anybody.

Our primary goal at this time is to research, document, and post reports with the more obvious evidence of nuclear connections, which includes a files on White Sands, Camp Hood, Texas, and Oak Ridge, Tennessee:

Nuclear_Connection_Cases

The New Mexico Sightings
The Killeen Base/Camp Hood, TX Sightings (not yet ready)
The Oak Ridge, TN Sightings (to be updated)

Next, we will continue to research and post potential NC incidents with case synopses and documents on nuclear information on the NICAP site. Any category of UFO report (from category 1 thru 11) can be marked as a potential or suspected nuclear connection case.

Nuclear Connection Project

NCP

The NCP Working Group

Francis L. Ridge

The Project Coordinator was born in 1942 and lives near Evansville, Indiana (Mt. Vernon). Ridge is an experienced investigator officially involved in serious research of the UFO phenomena since 1960. Starting out as head of the seven-man NICAP Subcommittee (National Investigations Committee on Aerial Phenomena) in Indiana in 1960, he became Indiana's MUFON State Director and FI for the Center for UFO Studies in 1989. Ridge has investigated hundreds of cases, and in 2006 re-opened the Mantell case. His computer database lists over 4,000 entries for the region covering Missouri, Illinois, Indiana, Ohio, Kentucky & Tennessee. He operated and directed the MADAR Project (UFO detection) from 1970 to 1995. As head of The Indiana Group he also was in charge of Indiana's Rapid Deployment Team of over 30 FIs and trained over 150 FI's during his tenure. In 1994 he wrote a book, "Regional Encounters: The FC Files". In December of 1997, Ridge set up the NICAP web site to house archived data and more recently set up the NICAP A-Team to peer review that data.

Richard Hall

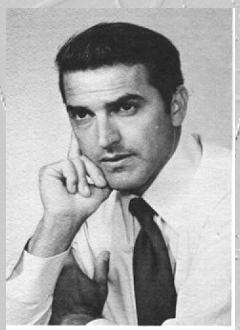
Born in 1930 he resides in Brentwood, Maryland. Hall has been a writer-editor in the Washington, D.C., area for over 40 years, including extensive work on scientific publications. He is former Assistant Director and Acting Director of the National Investigations Committee on Aerial Phenomena (NICAP), and in that capacity was editor of the 200,000-word documentary report The UFO Evidence and consultant to the University of Colorado UFO Project, sponsored by the Air Force Office of Scientific Research. He is a Contributing Editor to the J. Allen Hynek Center for UFO Studies (CUFOS) and a National Board Member of the Fund for UFO Research (1993-present). His latest work is Volume II: The UFO Evidence.

Dan Wilson

Born in 1951 and lives in Painesville, Ohio. He began studying nuclear weapons, the entire nuclear weapons complex, nuclear weapons testing, and nuclear power production in 1988. He has read extensively on the UFO phenomena and has interviewed various witnesses from the Air Force, Navy, and the Atomic Energy Commission. He contributed very interesting information to the newly released book, UFOs and Nukes, by Robert Hastings. Since 1998 he has extracted vital documents from the Project Blue Book Archives for the NICAP site, and in 2006 he discovered documents proving a cover-up in the Mantell case. Since 2003 he has provided valuable researched information regarding UFOs and the nuclear connection and is now an official member of the Nuclear Connection Project.

Jean Waskiewicz

Born in 1948. She is a retired Computer Systems Analyst and retired Michigan Mufon Webmaster. She is a member of Mufon International and served with Michigan MUFON for many years. UFO history is her passion and she loves the search for new data. She has been working feverishly on the NICAP effort since 2004. In 2006 her work on the Mantell case re-investigation for the NICAP team was absolutely essential. Her work in that regard illustrates that she will do whatever it takes to help decipher old documents and make them readable again. Without knowing it she has been in the NCP loop a long time and is now an official member of the NCP team.



Loren Gross

Born 1938. Mr. Gross became interested in UFOs as a teenager when he was a member of the civilian Ground Observer Corps in the 1950's. After graduation from high school, he served four years in the U.S. Air Force as a radar operator with the

Air Defense Command. In 1966 he received his B.A. degree in social science from the University of California at Chico and has since completed postgraduate work in physical science, history, and art. Mr. Gross is the author of many booklets on the early history of the UFO problem: The UFO Wave of 1896 (1974), The Mystery of the Ghost Rockets (1974), and Charles Fort, The Fortean Society, and Unidentified Flying Objects (1976). His most well-known works are the UFOs: A History series of booklets.

Donald A. Johnson, Ph.D.

He is an industrial/organizational psychologist and test developer with many years of consulting experience in career and leadership development, executive coaching, outplacement counseling and personnel selection. Dr. Johnson graduated from the University of Washington (Seattle) with a Ph.D. in Psychology in 1987 and from the University of Colorado (Boulder) with a BA in Anthropology in 1975. Dr. Johnson has had a long term interest in the UFO phenomenon and maintains a computer database of over 150,000 UFO reports for the J. Allen Hynek Center for UFO Studies, called UFOCAT. He is the author of The UFO Phenomenon: A Guide for the Perplexed (in press). He is also an avid student of the effects of rapid climate change events (RCCE) on human cultural and genetic evolution, and is currently doing research for a book on the effects of a bubonic plague epidemic on the population of Iceland.

Steven J. Dunn

Born 1952. After receiving a BA in Physics from The Lincoln University located near Oxford, PA in 1974, he joined the U. S. Navy, obtaining his Surface Warfare Officer qualification. He served as an officer in the U. S. Navy from 1976 to 1986. Since leaving the Navy, he has worked in the ASW field for various government contractors, specializing in software test and evaluation. He served in the Connecticut Army National Guard from 1983-86. He is now working for Logicon-Syscon Corp. in Dahlgren, VA. Married, with 2 children. Is concentrating on the Indian subcontinent for NCP-related sightings, using open sources.

Stanton T. Friedman

Received BSc and MSc degrees in physics from the University of Chicago in 1955 and

1956. He was employed for 14 years as a nuclear physicist for such companies as GE, GM, Westinghouse, TRW Systems, Aerojet General Nucleonics, and McDonnell Douglas on such advanced, classified, eventually canceled, projects as nuclear aircraft, fission and fusion rockets, and nuclear powerplants for space. Since 1967 Friedman has lectured on the topic "Flying Saucers ARE Real!" at more than 600 colleges and over 100 professional groups in 50 states, 9 provinces, 16 other countries. He has published more than 80 UFO papers. He has provided written testimony to Congressional Hearings, appeared twice at the UN, and been a pioneer in many aspects of Ufology including Roswell, Majestic 12, the Betty Hill-Marjorie Fish star map work; analysis of the Delphos, Kansas, physical trace case; crashed saucers, flying saucer technology and challenges to the S.E.T.I. to Investigate) cultists. He has spent many weeks at a total of 20 document archives. Stan has successfully taken on many critics of flying saucers, Roswell, Majestic 12, including winning a debate at Oxford University.

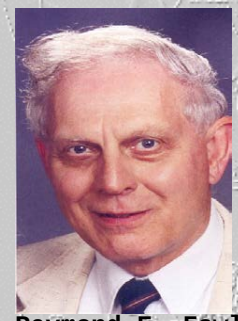
Kevin D. Randle

A professional, investigative journalist who, for almost thirty years, has been studying the UFO phenomenon. During that time he has traveled around the United States and interviewed hundreds of witnesses. Randle was one of the first to examine the infamous Project Blue Book files, the official U.S. Air Force investigation of UFOs. More recently, he investigated the alleged crash of an extraterrestrial ship in the Roswell, New Mexico area. Randle's credentials include journalism and military intelligence training. As a former member of the Aerial Phenomena Research Organization, and currently a special investigator for the J. Allen Hynek Center for UFO Studies, he is considered an expert in the field. For those organizations, he has researched abduction cases, landing trace reports, and occupant sightings. Randle, a respected author, has published more than fifty magazine articles about UFOs.

Robert Duvall

Born in 1957 just northwest of the Hanford nuclear reservation, is married with two children and resides in Edmonds, Washington. He has been in the aerospace electronics field performing mechanical packaging design for 20 plus years. Interests in UFO began at the age of 11, but weren’t strongly pursued until the early 1990’s. Military related sightings received primary attention, and through efforts to separate conventional findings from nuclear, certain patterns were noted. At the urging of a fellow researcher from Japan, he became familiar with the history of nuclear weapons development globally and in 1999 began applying that military/political history to nuclear sighting data to search for

correlation. He is now dedicating all efforts to studying and documenting this apparent correlative activity in an attempt to understand intent around the nuclear weapons issue.



Raymond E. Fowler

Born in Salem, Massachusetts and received a B.A. degree (magna cum laude) from Gordon College of Liberal Arts. His career included a tour with the USAF Security Service and 25 years with GTE Government Systems. He retired early after working as a Task Manager and Senior Planner on several major weapons systems including the Minuteman and MX Intercontinental Ballistic Missiles. Ray Fowler's contributions to UFOlogy are respected by UFO researchers throughout the world. His investigation reports have been published in: Congressional Hearings, Military Publications, newspapers, magazines and professional journals in the U.S.A.and abroad. The USAF UFO Projects' Chief Scientific Consultant, Dr. J. Allen Hynek, has called Raymond Fowler, "An Outstanding UFO investigator . . . I know of none who is more dedicated, trustworthy or persevering." Ray served as chairman of the NICAP Massachusetts Subcommittee, an early warning coordinator for the USAF-contracted UFO Study at the University of Colorado and as a scientific associate for the Center for UFO Study. In later years he served as director of investigations on the board of directors of the Mutual UFO Network. He also has appeared on hundreds of radio/TV shows in the U.S.A. since 1963 including: Dave Garroway, Dick Cavett, Mike Douglas, Good Morning America, Unsolved Mysteries, Sightings and a number of Network and syndicated documentaries on UFOs.

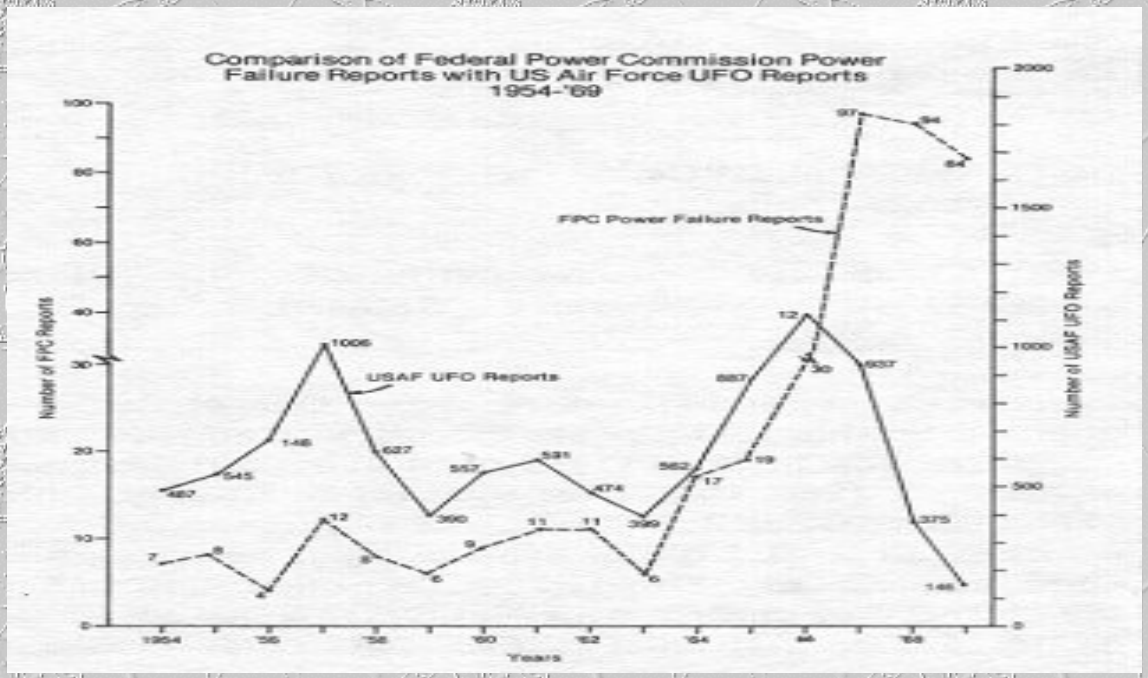
Power Outages & UFOS



"The graph above is a comparison of the Federal Power Commission's power failure reports with U.S. Air Force records of UFO reports from 1954-1969. Using this data, one can plot two curves as shown on the graph. It can be seen from the graph PF and UFO reports are in phase and track each other from year to year. Out of phase conditions do exist, however, for the years 1956 and 1967." - Paul C. Smith.

Below is the part of the testimony by Dr. James E. McDonald before the House Committee on Science & Astronautics, July 29, 1968:

Mr. Ryan:
Let me ask a further question: In the course of your investigation and your study of UFO sightings, have you found any cases where contemporaneously with the sighting of UFO's allegedly, there were any other events which took place, which might or might not be related to the UFO's?

Dr. McDonald.
Yes. Certainly there are many physical effects. For instance, in Mr. Pettis' district, several people found the fillings in their mouth hurting while this object was nearby, but there are many cases probably on record of car ignition failure. One famous case was at Levelland, Tex., in 1957. Ten vehicles were stopped within a short area, all independently in a 2-hour period, near Levelland, Tex. There was no lightning or thunder storm, and only a trace of rain. There is another which I don't know whether to bring to the committee's attention or not. The evidence is not as conclusive as the car stopping phenomenon, hut there are too many instances for me to ignore. UFO's have often been seen hovering near power facilities. There are a small number but still a little too many to seem pure fortuitous chance, of system outages, coincident with the UFO sighting. One of the cases was Tamaroa, Ill. Another was a case in Shelbyville, Ky., early last year.

Even the famous one, the New York blackout (Nov 9 1965), involved UFO sightings. Dr. Hynek probably would be the most appropriate man to describe the Manhattan sighting, since he interviewed several witnesses involved. I interviewed a woman in Seacliff, N.Y. She saw a disk hovering and going up and down. And then shooting away from New York just after the power failure. I went to the FPC for data, they didn't take them seriously although they had many dozens of sighting reports for that famous evening. There were reports all over New England in the midst of

that blackout, and five witnesses near Syracuse, N.Y., saw a glowing object ascending within about a minute of the blackout. First they thought it was a dump burning right at the moment the lights went out. It is rather puzzling that the pulse of current that tripped the relay at the Ontario Hydro Commission plant has never been identified, but initially the tentative suspicion was centered on the Clay Substation of the Niagara Mohawk network right there in the Syracuse area, where unidentified aerial phenomenon has been seen by some of the witnesses.

This extends down to the limit of single houses losing their power when a UFO is near. The hypothesis in the case of car stopping is that there might be high magnetic fields, d.c. fields, which saturate the core and thus prevent the pulses going through the system to the other side. Just how a UFO could trigger an outage on a large power network is however not yet clear. But this is a disturbing series of coincidences that I think warrant much more attention than they have so far received.

Mr. Ryan.
As far as you know, has any agency investigated the New York blackout in relation to UFO?

Dr. McDonald.
None at all. when I spoke to the FPC people, I was dissatisfied with the amount of information I could gain. I am saying there is a puzzling and slightly disturbing coincidence here. I'm not going on record as saying, yes, these are clear-cut cause and effect relations. I'm saying it ought to be looked at. There is no one looking at this relation between UFO's and outages.

Mr. Roush:
Our time is really running short, Mr. Ryan.

Mr. Ryan:
One final question. Do you think it is imperative that the Federal Power Commission, or Federal Communications Commission, investigate the relation if any between the sightings and the blackout?

Dr. McDonald:
My position would call for a somewhat weaker adjective. I'd say extremely desirable.

Mr. Roush:
Thank you. Thank you, Dr. McDonald.

(Dr. McDonald's testimony is noteworthy because of its directness and force. He considers the extraterrestrial hypothesis the most likely explanation of the phenomena. On examining the *best* UFO evidence, it is certainly possible to rule out practically every other hypothesis, and it is on this basis that Dr. McDonald and others lean toward the theory that we are undergoing surveillance from intelligently guided craft from extraterrestrial sources.)

On Wednesday, July 15, 1998, Joel Carpenter wrote:
"In 1992 "Time" magazine published an article called "The Doomsday Blueprints," an expose of Cold War secrets. The article contained an interview with J. Leo Bourassa, an Air Force officer (I don't think they gave his rank but I would guess he was a Colonel - he supposedly delivered the news of the 1960 U-2 shoot down to Eisenhower) who was the former commander of "High Point" - a bomb shelter complex for the President and executive branch officials. It's better known as Mt. Weather, and is located in West Virginia. The complex was built in the late 1950s. Bourassa had been the commander of the complex for its whole active lifetime - presumably until shortly before the 1992 article was written. He said that during the entire time he had been in charge of the base, he had put it on alert exactly one time. Remember what happened between around 1957 and 1992 - the Berlin crisis, the Cuban missile crisis, several Mideast wars, the KAL shoot down, etc. The one single alert was called on November 9, 1965, the day of the Northeast blackout - because Bourassa

thought a surgical nuclear attack was under way. I wonder if some nuclear sensors somewhere were giving false alarms, or if he just made the assumption on his own." - Joel Carpenter

Nov.65: Power failure and faulty bomb alarms.
"Special bomb alarms were installed near military facilities and near cities in U.S.A. so that news of a nuclear attack would be transmitted before the expected communication failure. The alarm circuits were set up to display a red signal at command posts the instant that the flash of a nuclear detonation reached the sensor and before the blast could put it out of action. Normally the display would show a green signal, and yellow if the sensor was not operating or was out of communication for any other reason. During the commercial power failure in NE United States in November 1965, displays from all the bomb alarms for the area should have shown yellow. In fact two of them from different cities showed red because of circuit errors. The effect was consistent with the power failure being due to nuclear weapon explosions, and the Command Center of the Office of Emergency Planning went on full alert. Apparently the military did not.".

presents

18th Century
UFO Sighting Chronology

Popular Mechanics, September 1930, #3 depicts an 1897 craft
Credit: http://ufopop.org/ (Jim Klotz)

Released, Dec. 17, 2006; updated 14 Jan 2015
This 6-page report is derived primarily from the Magonia Database, sightings catalogued by Jacques Vallee and presented in his great work, Passport to Magonia. No doubt some of these came from Charles Fort. This report deals only with sightings prior to the 20th Century. Four entries, at the time of this writing that is, were taken from the UFO Evidence, 1964 (Hall). The illustration used above came from Jim Klotz' wonderful web site, ufopop.org/.

Our thanks for ALL these chronologies must go to our documentation team: Richard Hall (the original 1968 chronology from UFOE II), William Wise (Project Blue Book Archive), Dan Wilson (archive researcher), and Brad Sparks (Comprehensive Catalog of Project Blue Book Unknowns). Last, but not least, our thanks to Jean Waskiewicz who created the online NICAP DBase (NSID) that helped make it possible to link from the cases to the reports themselves. .

In regard to the "airship sightings" (particularly the 1897 incidents), on June 23 of this year (2006) I received an email from Thomas Eddie Bullard, the leading expert on these events. His email is presented in its entirety in the link given. To summarize, there are two sentences that say it all: "I've come to the conclusion that there are no genuine UFOs among the 1897 airships, though the matter is more complicated that just hoaxes."....."The reliable airship stories are not spectacular and the spectacular airship stories are not reliable. This pattern repeats throughout the two thousand or more reports until there is nothing left that I would want to stand up and defend as a genuine UFO. There are some impressive UFOs pre-1947, but they are not to be found in the various sightings waves of UFO prehistory."

In December of 2006 Dr. Eddie Bullard provided a report by a medical doctor/amateur astronomer that looks like the first incident that can be classified as an actual UFO. See Brad Sparks' report, April 15, 1897; St. Louis, MO.

Francis Ridge
NICAP Site Coordinator

Aug. 6, 1860; Norfolk, Virginia
Two objects, one red and one green, flew overhead together, moving with an undulating motion. (NICAP UFO Evidence, 1964, Hall)

July 1868; Copiago, Chile
A strange "aerial construction" bearing lights and making engine noises flew low over this town. Local people also described it as a giant bird covered with large scales producing a metallic noise. Although not an actual landing, this is the first instance of close observation of an unknown object at low altitude in the nineteenth century. (Magonia #1, Fort 638; Anatomy 11)

Dec. 7, 1872; Banbury, Great Britain
1:00 a.m. At King's Sutton an object resembling a haystack flew on an irregular course. Sometimes high, sometimes very low it was accompanied by fire and dense smoke. It produced the same effect as a tornado, felling trees and walls. It suddenly vanished. (Magonia #2, Fort 189)

1877; England
Three meteor-like objects moving together with "remarkable slowness" flew across the sky, visible about three minutes, "moving with the same velocity and grade of regularity. . [as] a flock of wild geese." [Credit: Charles Fort, from Report of the British Association, 1877-152]

1880; Aldershot, Great Britain
A strange being dressed in tight-fitting clothes and shining helmet soared over the heads of two sentries, who fired without result. The apparition stunned them with something described as "blue fire." (Magonia #3, FSR 61, 3; Magonia)

May 15, 1879; Persian Gulf
9:40 p.m. Two very large "wheels" were seen spinning in the air and slowly coming to the surface of the sea. Estimated diameter: 40 m. Distance between the objects: 150 m. Speed: 80 km/h/ Duration: 35 min. Witnesses aboard the ship "Vultur" (Magonia #4, Round up 17; Anatomy 12)

1880; Eastern Venezuela
A 14-year-old boy saw a luminous ball descending from the sky and hovering near him. He felt somehow "drawn" to it, but succeeded in backing away in spite of his terror. (Magonia #5, Lor. III 2O6)

March 26, 1880; Lamy, New Mexico
Evening. Four men walking near Galisteo Junction were surprised as they heard voices coming from a "strange balloon," which flew over them. It was shaped like a fish and seemed to be guided by a large fanlike device. There were eight to ten figures aboard. Their language was not understood. The object flew

low over Galisteo Junction and rose rapidly toward the east. (Magonia #6, FSR 65, 3)

June 11, 1881; Between Melbourne and Sydney at sea, Australia
4:00 a.m. The two sons of the Prince of Wales, one of them the future king of England, were cruising aboard "LaBacchante" when an object resembling a fully lighted ship was seen ("a phantom vessel all aglow"). (Magonia #7, Fort 637; Anatomy 12)

July 3, 1884; Norwood, N.Y.
Saturn-shaped UFO (globe with central ring) flew slowly overhead. [Credit: Charles Fort, from Science Monthly, 2-136]

Nov. 2, 1885; Scutari, Turkey
Dawn. A luminous object circled the harbor. Altitude: 5-6 m. Illuminated the whole town. Duration: 1 1/2 min, as a bluish-green flame. Then plunged into the sea. Made several circles above the ferry-boat pier. (Magonia #8, LDLN 48; Anatomy 14)

Oct. 24, 1886; Maracaibo, Venezuela
During the night, which was rainy and tempestuous, a family of nine persons, sleeping in a hut a few leagues from Maracaibo, were awakened by a loud humming noise and a vivid, dazzling light, which brilliantly illuminated the interior of the house. The occupants completely terror stricken, and believing, as they relate, that the end of the world had come, threw themselves on their knees and commenced to pray, but their devotions were almost immediately interrupted by violent vomiting, and extensive swellings commenced to appear in the upper part of their bodies, this being particularly noticeable about the face and lips. It is to be noted that the brilliant lights was not accompanied by a sensation of heat, although there was a smoky appearance and a peculiar smell. The next morning, the swellings had subsided, leaving upon the face and body large black blotches. No trace of lightning could afterward by observed in any part of the building, and all the sufferers unite in saying that there was no detonation, but only the loud humming already mentioned. Another curious attendant circumstance is that the trees around the house showed no signs of injury until the ninth day, when they suddenly withered. (From Warner Cowgill, U. S. Consulate, Maracaibo, Venezuela in a letter posted in Scientific American).

Nov. 12, 1887 Cape Race, Atlantic Ocean
Midnight. A huge sphere of fire was observed rising out of the ocean by witnesses aboard the "Siberian." It rose to an altitude of 16 m, flew against the wind, and came close to the ship, then "dashed oft" toward the southeast. Duration: 5 min. (Magonia #9, LDLN 48; Anatomy 14)

1896-1897--Mysterious "Airship" reported all across United States.

1896; Arolla, near Zermatt, Swiss Alps
Aleister Crowley was walking in the mountains when he suddenly saw two little men. He made a gesture to them, but they did not seem to pay attention and disappeared among the rocks. (Magonia #10, Magic Without Tears, by A. Crowley) (Note: Crowley was the notorious Satanist.)

March 26, 1897; Sioux City, Iowa
Approximate date. Robert Hibnight bard was caught by an anchor dropped from an unknown flying machine 22 km north of the town. He was dragged over 10 m and fell as his clothes were torn. (Magonia #11, FSR 66, 4)

March 28, 1897; Omaha, Nebraska
10:30 p.m. The majority of the population observed an object arriving from the southeast. It looked like a huge light, flew northwestward slowly, came to low altitude. A crowd gathered at a street corner to watch it. (Magonia #12, 185)

April 1, 1897; Everest, Kansas

9:00 p.m. The whole town saw an object fly under the cloud ceiling. It came down slowly, then flew away very fast to the southeast. When directly over the town it swept the ground with its powerful light. It was seen to rise up at fantastic speed until barely discernible, then to come down again and sweep low over the witnesses. At one point it remained stationary for 5 min at the edge of a low cloud, which it illuminated. All could clearly see the silhouette of the craft. (Magonia #13, FSR 66, 4)

April 12, 1897; Nilwood, Illinois
2:30 p.m. On the property of Z. Thacker, 19 km north of Carlinville, an unknown object landed. Before the three witnesses could reach it, the craft, which was shaped like a cigar with a dome, rose slowly and left majestically toward the north. Witnesses: Edward Teeples, William Street and Franklin Metcalf. (Magonia #14, 186; Anatomy 12)

Apr. 12, 1897 Girard, near Green Ridge, Illinois
6:00 p.m. A large crowd of miners saw an unknown object land 3 km north of Green Ridge and 4 km south of Girard. The night operator of the Chicago-and-Alton Railroad, Paul McCramer, stated that he came sufficiently close to the craft to see a man emerge from it to repair the machinery. Traces were found over a large area. The object itself was elongated like a ship with a roof and a double canopy. It left toward the north. (Magonia #15, 186,187)

April 14, 1897; Gas City, Indiana
3:00 p.m. An object landed 2 km south of Gas City on the property of John Roush, terrifying the farmers and causing the horses and cattle to stampede. Six occupants of the ship came out and seemed to make some repairs. Before the crowd could approach the object, it rose rapidly and flew toward the east. (Magonia #16, 188)

April 14, 1897; Cleveland, Ohio
Joseph Singler, captain of the "Sea Wing," was fishing with S. H. Davis, of Detroit, when they saw on the lake what they thought was a ship, about 13 m long, with a canopy. A man, about 25 years old, wearing a hunting jacket and a cap, was fishing from the deck of the object. Near him were a woman and a 10-year old child. When the "Sea Wing" came close to the craft, a large, colored balloon rose from the object, which flew up with it to an altitude of about 150 m and circled "like a hawk" before flying away. (Magonia #17, 189)

April 15, 1897; Linn Grove, Iowa
Morning. A large object was seen to fly slowly toward the north. It seemed ready to land and five men (F. G. Ellis, James Evans, David Evans, Joe Croaskey, Benjamin Buland) drove toward it. About 7 km north of Linn Grove, they found the craft on the ground, came within 700 m of it but it "spread its four giant wings and rose towards the North." Two strange figures aboard the craft made efforts to conceal themselves. Witnesses were surprised at the length of their hair. Most residents of Linn Grove saw the craft in flight. (Magonia #18, 190)

April 15, 1897; Howard-Artesian, South Dakota
Nightfall. A flying object coming closer and closer to the ground followed a train, as reported by the engineer, Joe Wright (Magonia #19, FSR 66,4)

April 15, 1897; St. Louis, MO
7:45 p.m. This is the first report from the entire period to be declared a possible UFO. Dr. Eddie Bullard provided this report to Brad Sparks in Dec. 2006. A Medical doctor/amateur astronomer observed a cigar shaped object with a telescope.

April 15, 1897; Perry Springs, Missouri
9:00 p.m. A passenger train on the Wabash line, going toward Quincy, was followed by a low-flying object for 15 min between Perry Springs and Hersman. All the passengers saw the craft, which had a red and white light. After Hersman it flew ahead of the train and disappeared rapidly, although the train was then running

at 65 km/h. (Magonia #20, 190)

April 15, 1897; Springfield, Illinois
Two farm workers, Adolph Winkle and John Hulle, saw a strange craft in a field. They had a discussion with its occupants, a woman and two men, and were told the ship-had flown from Quincy to Springfield in 30 min and that the crew was making electrical repairs. (Magonia #21, FSR 65,1)

April 16, 1897; Downs Township, Illinois
Approximate date. While working in his field, Haney Savidge saw an aerial craft land near him. Six people emerged from it and spoke to him for a few minutes before leaving again. (Magonia #22, 191)

April 16, 1897; Vincennes, IN
9:00 p.m. A mysterious airship passed over the city twice on the night of Friday, April 16. According to the Vincennes Morning Commercial, the airship first appeared about nine o'clock, traveling along the extreme eastern portion of the horizon: A sphere of golden light was first seen in the vicinity of the Union Depot, from down in the city. Those near the ship claimed they could clearly see the dark lines of its car, although no passengers were observed. (The Valley Advance, Vincennes, Indiana, March 18, 1980 Vol. 16, No. 28. Taken from Vincennes Morning Commercial April 16, 1897)

April 17, 1897; Williamston, Michigan
Morning. At least a dozen farmers saw an object maneuver in the sky for an hour before it landed. A strange man near 3 m tall, almost naked and suffering from the heat, was the pilot of the craft. "His talk, while musical, seemed to be a repetition of bellowings." One farmer went near him and received a blow that broke his hip. (Magonia #23; 196)

April 19, 1897; Leroy, Kansas
10:30 p.m. Alexander Hamilton was awakened by a noise among the cattle and went out with his son and his tenant. They saw an elongated cigar-shaped object, about 100 m long with a transparent cabin underneath showing narrow reddish bands, hovering 10 m above ground. They approached within 50 m of it. It was illuminated and equipped with a searchlight. Inside it were "six of the strangest beings" the witness had seen, also described as "hideous." They spoke a language no witness could understand. A cow was dragged away by the object with the help of a strong red cable; it was found butchered in a field the next day. (Magonia #24, Anatomy 16)

April 20, 1897; Homan, Arkansas
6:00 p.m. Capt. James Hooton was hunting in the vicinity of Homan when he heard the noise of a steam engine and found an object in a clearing. It looked like a cylinder with pointed ends, lateral wheels, and horizontal blade over it. Hooton spoke with a man who wore dark glasses and walked behind the craft. There were three or four occupants. The witness was told this was indeed "The Airship" and that it used compressed air for propulsion. Hooton saw the wheels spin as the craft rose and flew away. (Magonia #25, FSR 66, 4)

April 22, 1897; Rockland, Texas
John M. Barclay was intrigued when his dog barked furiously and a high-pitched noise was heard. He went out, saw a flying object circling 5 m above ground. Elongated with protrusions and blinding lights, it went dark when it landed. Barclay was met by a man who told him his purpose was peaceful and requested some common hardware items to repair the craft. He paid with a ten-dollar bill and took off "like a bullet out of a gun." (Magonia #26, 192)

April 22, 1897; Josserand, Texas
Midnight. Frank Nichols, who lived 3 km east of Josserand and was one of its most respected citizens, was awakened by a machine noise. Looking outside, he saw a heavy, lighted object land in his wheat field. He walked toward it, was stopped by two men who asked permission to draw water from his well. He then had a discussion with a half-dozen men, the crew of the strange machine. He was told how it worked but could

not follow the explanation. (Magonia #27, 193)

April 23, 1897; McKinney Bayou, Arkansas
Judge Lawrence A. Byrne of Texarkana, Arkansas, was surveying a tract of land when he saw a peculiar object anchored on the ground. "It was manned by three men who spoke a foreign language, but judging from their looks one would take them to be Japs." (Farish, in Allende Letters (Magonia #28, Award Special, 1968))

April 25, 1897; Merkel, Texas
Evening. People returning from church observed a heavy object being dragged along the ground by a rope attached to a flying craft. The rope got caught in a railroad track. The craft was too high for its structure to be visible but protrusions and a light could be distinguished. After about 10 min a man came down along the rope cut the end free, and went back aboard the craft, which flew away toward the northeast. The man was small and dressed in a light-blue uniform. (Magonia #29, 194)

April 26, 1897; Aquila-Hillsboro, Texas
Approximate date. A lawyer was surprised to see a lighted object fly over. His horse was scared and nearly toppled the carriage. When the main light was turned off, a number of smaller lights became visible on the underside of the dark object, which supported an elongated canopy. It went down toward a hill to the south, 5 km from Aquila. When the witness was on his way back one hour later he saw the object rising. It reached the altitude of the cloud ceiling and flew to the northeast at a fantastic speed with periodic flashes of light. (Magonia #30, 195)

May. 6, 1897; Hot Springs, Arkansas
Two policemen, Sumpter and McLenore, were riding northwest of Hot Springs when they saw a bright light in the sky. About 7 km farther they saw the light again coming down to the ground. One km farther the horses refused to walk. Two men were seen carrying lights. The lawmen took their rifles, called the strangers, and were told that they crossed the country with a flying craft. The silhouette of the machine, about 20 m long, could be seen in the clearing. There was a woman with an umbrella nearby. It was raining, and the younger of the men was filling a large container with water. The elder man had a beard and suggested that the policemen fly with them "to a place where it does not rain." The same witness went back through the same spot 40 min later and found nothing. (Magonia #31, FSR 66, 4)

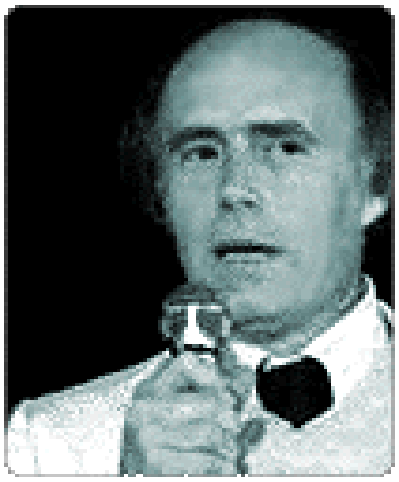
NCP Paper

NCP-14: Saucers Over Oak Ridge



Bruce Maccabee

The summer and fall of 1950 was an important time in the history of UFO phenomena. The first book devoted to flying saucers, Flying Saucers are Real, written by Donald Keyhoe (Fawcett, New York, 1950) was published in June. This book expanded on his True magazine article of six months before. Keyhoe argued that the Air Force was covering up evidence that proved saucers were ET craft because the Air Force was worried about an Orson Wells "War of the Worlds" type of panic if the information became public. Nevertheless, there had been some leakage of information, such as the article by Commander McLaughlin about sightings at White Sands. Keyhoe suspected that such leaks were intended to prepare humanity for the eventual news. Furthermore, he suspected that the arrival of the saucers was related to our detonations of atomic (fission) bombs, which were first tested at White Sands. He suggested that perhaps the aliens wanted to prevent us from destroying the earth with hydrogen (fusion) bombs.

During the time between the publication of Keyhoe's magazine article and the publication of his book, there were important national and international political and military developments which affected the FBI perception of the flying saucer problem. The Cold War was hot. The Berlin Blockade had been successfully overcome, but the Russians had successfully taken over the satellite countries of East Germany, Poland, Czechoslovakia, Hungary and Yugoslavia. Then, on June 25 North Korea marched about 60,000 men into South Korea and began the Korean War. Both the Soviet Union and China were aiding North Korea. The South Korean Army, not fully prepared, collapsed under the weight of the attack and two days later President Truman ordered US troops to South Korea. The next day Seoul fell to the North and General MacArthur reported that the South Korean army was too demoralized to mount an effective resistance. Two days after that Truman ordered U.S. ground forces to Korea. The first post-WWII war was on!

Meanwhile, at the end of January, 1950, President Truman announced that work would begin on the hydrogen bomb. The race for the Super Bomb was on! (The Soviet Union would win this race in 1953.) Suddenly spies were being caught everywhere. In February, Klaus Fuchs was arrested for given secrets of the atomic bomb to the Soviets. (Fuch's spy activities were in large part the cause

of the Soviet Union's successful detonation of a fusion bomb in August, 1949.) FBI Director Hoover made a personal report to President Truman on Fuchs' capture and subsequent confession in Britain. A few days later Senator Joe McCarthy announced that there were over two hundred Communist Party members working for the Department of State. Five months later, about the time that the Korean War began, Harry Gold and David Greenglass were caught and provided information about a spy ring directed by the Rosenbergs which had provided atomic secrets to the Soviets during WWII. All of this espionage activity may have affected the FBI view of the UFO phenomenon because the Air Force was clearly worried about the green fireball and disc phenomena seen near the nuclear installations... could they be related to Communist subversion?... and because Colonel Gasser had indicated that the saucers were man-made missiles...but not made by the USA!

Soon after the publication of Keyhoe's book, and at a time when the Air Force was publicly disparaging the subject, the first highly credible motion picture of saucers was taken at Great Falls, Montana, on August 5, 1950. The Air Force wanted to look at it but didn't want to give the owner, Nicolas Mariana, any hint of particular interest in the subject. According to an AFOSI document, the agent contacting Mariana was to "exercise every caution so as not to unduly excite his curiousity or interest or in anywise conclude that the Air Force may have reversed its policy from that previously announced with regard to the existence or non-existence of such unconventional objects."

In later years this film would cause a great controversy as the Air Force claimed that the two objects in the film were Air Force jets. However the objects certainly didn't look like jets to Mariana and his secretary. When first sighted the objects were quite close and appeared to be round and rotating. Unfortunately by the time Mr. Mariana had obtained his camera they were considerably farther away so the film images appear as small, bright oval dots. The images do not look like jets and a scientific test performed years later indicated that jets filmed under similar circumstances would have been identified as such. The Air Force nevertheless claimed the objects were jets, even though the investigation turned up evidence that the only pair of jets which passed through the area of the sighting did so ten days after the film was shot!

All this time the FBI was quietly monitoring the fireball and saucer situation. Recall that in late August 1950 (see Chapter 14) Agent A. H. Belmont had written a memorandum to Special Assistant D. M. Ladd summarizing recent developments regarding green fireballs and saucers. On October 9 Mr. Ladd wrote a memorandum for Mr. Hoover providing an update on Project Twinkle. The memorandum states that "To date the Air Force has not advised us of any new developments in connection with this project." Evidently the Air Force had not told the FBI about the multiple witness sightings and filming of multiple objects on August 30 and 31. Mr. Ladd also made an explicit comparison between saucer sighting reports (referred to as "complaints") and the war in Korea, which to this point had been going reasonably well, since the North Korean army had not (yet) succeeded in pushing the United Nations and United States forces into the sea:

" According to Bureau files, an average of approximately three or four complaints have been received per month from June through September. These complaints were brought to the attention of OSI. A review of Bureau files does not indicate that there has been any increase in sightings of these phenomena during or as a result of the war in Korea."

Mr. Hoover was probably glad to see that there were so few complaints and that there was no apparent connection with the war. However, there still was the major question of the origin of the phenomena seen near the vital installations and the secondary question of just what the Air Force was doing about it. Mr. Ladd provided the following comments on these subjects:

"The Bureau has been advised in the past by OSI that many of the sightings reported to them were determined by investigation to have been of weather balloons, falling stars, meteorological phenomena and other air-borne objects.

Bureau liaison determined on the morning of October 9, 1950 from OSI headquarters that the investigation of these aerial phenoena are being handled by OSI, Wright Field, Ohio. Their investigation of these phenomena fails to indicate that the sightings involved spaceships or missiles from any other planet or country.

According to OSI, the complaints received by them have failed to indicate any definite pattern of activity. OSI further advised they are closely following the investigation of the captioned matters and they will advise this Bureau of any matters of interest."

Once again the FBI was told that the Air Force was sufficiently worried about these phenomena to continue secretly investigating even though many sightings could be explained. Since the Air Force was once again ruling out the interplanetary and "foreign country" explanations the FBI could only presume that all saucer sightings resulted from misidentifications, delusions and hoaxes.

Then the saucer controversy suddenly heated up again with the publication of the second flying saucer book, Behind the Flying Saucers by Frank Scully (Henry Holt, New York, 1950), in early September. Whereas Keyhoe had based his book on official sources and sightings, Scully based his book on a crashed saucer report! According to Scully a total of three flying saucers had crashed and had been analyzed by government scientists! (Note: there was no connection between Scully's crash story and the Roswell crash story.) The analysis of the saucers showed that they were fantastic devices and were piloted by little man-like creatures. Scully's book claimed that the story was first told during a lecture by oilman Silas Newton at the University of Denver on March 8, 1950 and that he had researched the story. (Recall it was on March 22, 1950 that Guy Hottel, SAC Washington, wrote to Hoover about three crashed saucers, a message that prompted Hoover to ask "what are the facts re flying saucers." See Chapter 14.) It turned out later that the source for Scully's story was a con-man by the name of Silas Newton who claimed he had gotten the details from another man who, in turn, claimed to be one of the government scientists who analyzed the saucers. Scully apparently did not realize the story was fraudulent (it was proven to be a hoax many years later).

Scully's book made quite a splash and regenerated the public saucer controversy, claiming, as it did, that a mysterious government scientist had verified the facts of the crash. Furthermore, Scully severely criticised the Air Force and all government authority, arguing that there had been extreme incompetence, a "double standard of morality" and official censorship. Scully's story was so fantastic that it was almost uniformly panned by the media. On the other hand, Keyhoe's more rational approach was not as flashy, but it convinced more people.

Keeping in mind that these books were coming at a time of "atomic paranoia," it is not surprising to see that Hoover took a particular interest in Scully's book. Ever on the alert for Communist subversion, on October 13 he sent an urgent teletype message to SAC, Los Angeles:

FLYING SAUCERS. YOU ARE INSTRUCTED TO DISCREETLY DETERMINE THROUGH APPROPRIATE SOURCES OF YOUR OFFICE WHETHER FRANK SCULLY AUTHOR OF THE BOOK QUOTE BEHIND THE FLYING SAUCERS UNQUOTE IS IDENTICAL TO THE FRANK SCULLY WHO HAS BEEN ACTIVELY ENGAGED IN COMMUNIST ACTIVITIES SINCE THE LATE NINETEEN THIRTIES IN THE TERRITORY OF YOUR OFFICE.

Evidently SAC, Los Angeles didn't respond immediately because Hoover sent another request on October 17 and yet another on October 18. There is no document in the Flying Disc file which indicates whether or not SAC Los Angeles answered Hoover, or whether Frank Scully, the author, was a Communist sympathizer.

On the same day that Hoover initiated the investigation of Frank Scully, the FBI received the first information on strange happenings at yet another "vital installation," Oak Ridge National

Laboratory in Tennessee. William Gray, SAC Knoxville, reported that radar had detected unidentified objects over Oak Ridge, the home of Project NEPA, the project to develop atomic powered aircraft.... Colonel Gasser's project!

On the 19th of October, before the FBI was fully aware of what was taking place at Oak Ridge, Hoover received from Mr. Ladd more information about Air Force activities:

"The matter of flying saucers was discussed by Special Agent .....(name censored)...with Major General Joseph F. Carroll of OSI on October 16, 1950, at which time General Carroll advised that insofar as he has been able to determine the Air Force is not working on any type of 'flying saucer' or 'flying disc.' General Carroll stated that the Air Force is working on high altitude rockets and jet aircraft. He stated these experiments may account for some of the reports concerning flying saucers but that the air Force is not apparently working on anything which is the cause of the many flying saucers reports. He stated that the Air Force program for investigating reports concerning flying saucers, etc., has been reinstituted at Wright Field and that any pertinent information of interest coming to his attention will be furnished to the Bureau."

Recall that Major General Cabell, Director of AFI, had requested that AMC reinstate the investigation and analysis at ATIC. On September 25, 1950 the Bureau received from Cabell a copy of an intelligence collection memorandum entitled "Reporting of Information on Unconventional Aircraft." This was yet another request to provide sighting information with the added request that "no publicity be given this reporting or analysis activity." The memorandum to Mr. Ladd, quoted above, reflected this new activity at ATIC. Once again, in private the Air Force was contradicting its public stance that saucer sightings were not worthy of attention. In private the Air Force and the FBI found out that sightings which were about to occur at Oak Ridge were worthy of attention...a lot of attention.

Recall that, in January, 1949, Colonel Gasser had reported to the FBI that two photos of a UFO had been taken near Oak Ridge in the summer of 1947. That was the first Oak Ridge sighting. The second occurred at about noon on May 25, 1949. It was a multiple witness sighting of a strange flat metallic object passing over the area while making a cracking noise. The third occurred at 7:00 PM, June 20, 1949. Several people observed three objects, two rectangular in shape and one circular, flying over Oak Ridge. After that there were no unusual observations until March 1, 1950. At 11:15 PM that night a Knoxville radio amateur with experience in radar technology, Stuart Adcock, called the local FBI agent, Mr. Robey, to report that he had detected an object circling at an altitude of about 40,000 feet over Oak Ridge. He was using a surplus military radar set. Adcock reported another detection the next day at 11:15 AM. This time the object was about 100,000 feet up. The Army Counter Intelligence Corps (CIC) and the AFOSI sent representatives to Adcock's house on the night of March 2 and they saw radar returns indicating an object at high altitude at about midnight. Over the next several days Adcock's radar occasionally indicated the presence of an object. The local CIC and OSI agents were not radar experts, but it appeared to them that the radar set was not particularly reliable. (To help in the investigation a radar expert was requested, but he didn't arrive until March 8, two days after Adcock had left town.) The local Navy Training Center radar equipment did not detect anything in the area where Adcock reported a radar taget, but it was not adapted to the detection of objects at such a high altitude. A joint experiment was carried out using both Adock's and the Navy's radar sets. They both detected two aircraft that were flying at 2,000 feet, indicating that Adcock's radar was working correctly. Adcock's last high altitude radar detection occurred during the morning of March 6, after which he left town (reason unknown). The local OSI agent attempted to contact Adcock, but was not able to and the investigation was ended on March 8. There was no conclusion as to what, if anything, Adcock had detected. SAC Robey reported to FBI headquarters that the most impressive thing to him had been the "lack of any agency actually taking responsibility for the situation and taking any action to verify or disprove the threat." He also pointed out that it was many hours after the initial detection or "threat" was reported that any action at all was taken. Evidently Oak Ridge was not as well protected against a threat of sabotage

as the security agencies had hoped!

Seven months later, at 11:25 PM on October 12, a military radar unit at Knoxville Airport suddenly detected 11, "and possibly more," unidentified targets moving over the restricted flight zone at Oak Ridge. This time action was taken. At 11:30, the radar station commander scrambled an F-82 fighter. It was in the air nine minutes later. The fighter was vectored toward two targets and, according to the radar, closed with the targets, but the pilot saw nothing. Ground observations also failed to detect anything in the sky. No unusual objects were seen visually or on radar for the next two days. Then the "dam broke."

On October 15, at 3:25 PM, three Oak Ridge security guards and a caretaker saw an exceedingly strange object, described as looking like a card with a long thin tail, moving through the atmosphere in the vicinity of the restricted zone. It appeared to be carrying out controlled maneuvers. The Knoxville radar showed on its screen some strange targets at the same time as the visual sightings. Again an aircraft was scrambled and saw nothing. The Project Blue Book master list shows that ATIC could not explain the visual sighting.

The next day at about 1:30 PM, John Isabell, a security guard of the Oak Ridge Patrol Force, saw a silver-white spherical object traveling from the southwest to the northeast and passing over the K-25 restricted area at high altitude. It was white or silvery and round like a ball. The second sighting on that day occurred at "exactly 2:55 PM." Mr. Isabell and two other members of the patrol force saw the same round object approaching from the northeast at a lower altitude and speed. The object, while spinning about an axis, traveled in a wide circle toward the southwest and disappeared. In a couple of minutes it reappeared in the southwest at a very high altitude and headed northeast at a high rate of speed. The guard phoned the information on the sighting immediately to headquarters where radar was picking up an indistinct target every third or fourth sweep over the K-25 area. An F-82 was scrambled. The ground witnesses reported that the fighter plane arrived about 15 minutes after the object had disappeared. (The ATIC sighting analysts subsequently decided that this object was a balloon in spite of the decription of spinning amd in spite of the odd flight path.) Later on, during the evening, some of the security guards heard strange, loud noises.

That same day, October 16, the CIC agent decided it was time to review the situation. He wrote a report mentioning the 1947 and 1949 sightings and discussed the recent sightings. The CIC took these sightings very seriously and thoroughly checked the backgrounds of the witnesses by using employment records and FBI reports in order "to ascertain their reliability, integrity and loyalty to the United States Government." The was no reason found to discredit these witnesses, many of whom were professional security guards.

The CIC and the other security agencies discussed the situation and attempted to arrive at some conclusions. The CIC report of these discussions make amusing reading in view of the concerted attempt later on by ATIC to explain the sightings any way possible. One gets the impression from the following document that, when it came to explaining UFO sightings as mundane phenomena, the security officials who were involved in the investigations had "been there, done that" and now they were looking for something new and convincing to explain these sightings:

" The opinions of the officials of the Security Division, AEC, Oak Ridge; Security Branch, NEPA Division, Oak Ridge; AEC Security Patrol, Oak Ridge; FBI Knoxville; Air Force Radar and Fighter Squadrons, Knoxville; and the OSI, Knoxville, Tennessee, fail to evolve an adequate explanation for OBJECTS SIGHTED OVER OAK RIDGE, however the possibilities of practical jokers, mass hysteria, balloons of any description, flights of birds (with or without cobwebs or other objects attached), falling leaves, insect swarms, peculiar weather conditions, reflections, flying kites, objects thrown from the ground, windblown objects, insanity, and many other natural happenings have been rejected because of the simultaneous witnessing of the objects with the reported radar sightings; because of the reliability of the witnesses; because of the detailed, similar description of the objects

seen by different persons; and because of impossibility."

"...because of impossibility"? What was that supposed to mean? It meant that all the suggested explanations had been rejected because, in view of the high quality of the witnesses and the descriptive details, these explanations were impossible. So, having rejected mundane explanations, what were these objects? The CIC agent continued:

"The trend of opinions seem to follow three patterns of thought. The first is that the objects are a physical phenomenon which have a scientific explanation; the second is that the objects are experimental objects (from an undetermined source) guided by electronics and the third is similar to the second except that an intended demoralization or harrassment is involved. The fantastic is generally rejected.

These objects have apparently followed only two patterns. The first is that they were sighted at the same hour on two consecutive days and the second is that the time of flight is either to or from the Northeast and Southwest, which directions (are) parallel the terrain ridges in the locality."

The fantastic is generally rejected?

It is not too surprising that "the fantastic" would not be in an official report. However, the fact that it was rejected means that they at least thought about "the fantastic." They also showed a healthy degree of skepticism regarding the ATIC treatment of such sightings because they questioned the ATIC "identification" of the image in the 1947 photographs as a photographic flaw:

"Attention is invited to the 1947 photograph of a flying object. Atomic Energy Commission officials advise that the Air Force Laboratory at Wright Field, Ohio, indicate that the object is a water spot on the photograph. Because this object does not resemble other water spots of the photograph and because the object in the second photograph is following the dim trail left by the first object, some officials at (the) Atomic Energy Commission question the veracity of this statement. They also believe it is significant that the Air Force did not return the negative of this print."

These security agencies were quite correct to be skeptical of the ATIC treatment of these sightings. The Project Blue Book record shows that the radar sightings were identified as "radar pecularities," the first October 16 sighting was identified as an aircraft and the second as a balloon (even though the description of the object was the same for both sightings!). Only the October 15 sighting discussed above was listed as Unidentified.

Copies of the reports by the CIC agents were made available to the FBI. When he saw them Hoover may have wondered if the saucers had now transferred their activities from the west, where atomic bombs were designed, built and stored, to Oak Ridge where the uranium isotope U-235 was being extracted for use in atomic bombs and where nuclear energy was being studied as a possible source for aircraft propulsive power.

Strange noises were also part of the phenomena reported. Major Ronniger, a Senior Instructor at Oak Ridge, reported that at 3 PM on October 15 he heard a sound like the blast of a jet engine. He and another person searched the sky for such an aircraft but could find none. The next day several security guards reported that around 8 PM they heard what sounded like the blast of a jet several times. Each time the noise lasted about 3 1/2 seconds. "The sounds seemed to leave the vicinity making an ascent almost vertical. None of the guards could see an object in the sky."

By October 16 things were already hot at Oak Ridge, but that was only the beginning. Four days later, at 4:55 PM on October 20, Larry Riordan, the Superintendent of Security for the X-10 control zone became a witness. While driving to a residential area he saw an object which he thought at first was a balloon which had lost its "basket." It was generally round, appeared to "come together at the

bottom in wrinkles (rather indistinct and something was hanging below." It appeared to be 8 to 10 feet long and lead or gunmetal colored. It didn't seem to be moving but, since he was traveling and only saw it for a number of seconds, he couldn't be sure. He was sure it wasn't a weather balloon, although he thought it might have been a gas bag balloon launched by the nearby University of Tennessee Agricultural Research Farm.. On the same day at 3:27 PM the radar unit at the Knoxville airport detected radar targets near the area of Mr. Riordan's sighting and scrambled a fighter plane. The pilot searched the area for about an hour and a half, which included the time of Mr. Riordan's sighting, and found nothing.

Three days later, October 23, at 4:30 PM, Francis Miller, an Oak Ridge laboratory employee, while driving along a road in Oak Ridge saw an object that appeared to be less than half a mile away and between 1,000 and 2,000 feet up. It appeared as an "aluminum flash" that was traveling in a south-southeast direction. He only saw it for a few seconds. Subsequently it was discovered that a nuclear radiation detection station (a Geiger counter) in the vicinity of the sighting registered a burst of alpha and beta radiation. The purpose of this station was to detect any leaks of radiation from the Oak Ridge Laboratory. There was no leakage of radiation, however. An expert from the Health and Research Division analyzed the readings from the Geiger counter and pronounced them unexplained. This association between radiation detection and a UFO sighting was similar to that at Mt. Palomar mentioned in Chapter 13. Whether the reading of the Geiger counter was actually a result of nuclear radiations or whether the presence of the UFO induced a transient electrical fault in the counter or whether there was some other explanation is not known. This case does not appear in the Project Blue Book file.

During the evening of the next day there was a "light in the sky" sighting by two witnesses who were at widely separated locations. The first to see it was Mr. William Fry, the Assistant Chief of Security for Project NEPA. He was at a drive-in theater with his family at about 6:45 PM waiting for the movie to begin when he saw the lighted object in the southwest while casually looking around the sky. He reported to the CIC investigator,

"...I observed what I at first thought to be an unusually bright star. The exceptional brilliance caused me to continue to observe it when it suddenly seemed to change color rapidly from a reddish hue to a bright orange and again to a brilliant light blue. (His wife and son also saw it.) ...A few moments later I heard a plane directly overhead making passes over the Oak Ridge area, which was later identified as one of the F-82 fighter planes from the Air Force unit stationed at McGhee-Tyson Airport..

(At this point Mr. Fry went to a phone and called someone to look, but the person could not see it because of the hills and trees.) While returning to my car I met a friend...who stated he had been observing the object. I continued to observe the object with my wife but it seemed to be in a more northerly position which caused me to select a fixed point to determine whether or not the object was changing in either direction or altitude. There seemed to be a deviation from north to south for approximately five to ten degrees. The changing colors were still very evident but the object seemed to be continually getting smaller and smaller as though it was becoming more distant. At approximately 7:18 by my watch it disappeared from view entirely. During these observations my wife continued to report to me the identical things that I was observing. During the entire time the F-82 airplane continued to make passes over the area until approximately 7:15. The weather conditions were excellent; the air was calm; and the sky was cloudless with the exception of a very slight haze over the distant horizon.

The following morning, upon reporting to work I confided my story to...(name censored)...stationed at Oak Ridge with the NEPA project, but I hesitated to go on record as having observed such an unidentified object."

Mr. Fry did go on record because he learned that he was not the only witness. Air Force Major

Lawrence Ballweg also saw the light. He reported as follows:

"On the evening of 24 October 1950 at approximately 1855 (6:55 PM) I heard a plane fly over my home in the Woodland area. Being a curious individual I went outdoors to watch it with my binoculars. While looking for the plane I saw an object in the western sky which appeared at first to be a star but upon closer observation I noticed that it was rapidly changing colors from red to blue to white. When first seen it appeared to be moving very slowly in a northwest direction. It was moving relative to the other stars. The object was too small to be able to see any details even with the glasses. It disappeared from sight about 1920 (7:20 PM). During this period of time my wife also observed the object."

Mr. Fry then learned that the radar unit had also detected something. He was told that an unidentified object appeared at 6:30 PM at an altitude of approximately 5,000 feet in the same general vicinity as the object he saw. The radar target disappeared at 7:20 PM. The complete radar report to the CIC investigator says that targets appeared at 6:23 PM moving over the restricted flight zone and at 6:26 a fighter was scrambled to the area of the targets but failed to see anything.

Considering that the atmosphere can make a star or planet which is within a few degrees of the horizon appear to change color and move very slightly or twinkle, one might be tempted to identify the light as the bright planet Venus or a very bright star seen in the west an hour after sunset, which was at about 6 PM local dayight savings time. However, two elements of the description reject that sort of explanation. First, the light was described by Major Ballweg as moving relative to the stars. Since Major Ballweg used binoculars to view the light it is likely that his description of motion is accurate. Furthermore, it must have been quite large because Mr. Fry, not using binoculars, also detected motion. Second, Major Ballweg said that the light appeared over a telephone pole that was about 100 yards away. That would make the angular elevation greater than 5 degrees. According to the CIC investigator, Mr. Fry indicated that the elevation from his location was 30 to 40 degrees above horizontal. Hence it was so high in angular elevation that atmospheric effects would not make it appear to change color and there would be no noticeable effects other than the normal twinkling which affects stars at any angular elevation. The final reason for rejecting Venus or a bright star is that Venus was below the horizon at the time and there were no excessively bright stars in that sector of the sky at the time. The disappearance of the radar target at the same time as the light suggests that the UFO was a some kind of metallic unknown object hovering in the vicinity of Oak Ridge. This is another Oak Ridge sighting that is not in the Blue Book file, nor are the following October events.

About six hours later, between 2 AM and 3 AM, October 25, the radar unit reported several slowly moving objects such as had been seen previously. On October 26 at 5 AM Col. Edwin Thompson heard an intermittent noise like the blast of a jet, similar to what had been reported on the 15th and 16th. He saw no aircraft associated with the noise. Three days later seven people waiting at the Knoxville Airport "saw an object traveling to the Southwest at a great rate of speed. (name censored), who has considerable flying experience, was extremely excited and stated that this object was not an aircraft. He described it as a circular object, leaving a trail of smoke."

There were two reported sightings on November 5. At 9:29 AM an object was detected on radar traveling over the restricted area at a speed of 80 mph. A fighter aircraft attempted an intercept and then trailed the object for 20 miles. The pilot reported no visual contact. Two and a half hours later, at 11:55 AM, Don Patrick of the NEPA Division saw a very strangely shaped object travel by, apparently just above the mountain range. It seemed to change rapidly from a pear shape to a bean shape and other sausage-like shapes as it traveled. Although the shape changed the overall size was about constant. It seemed translucent but had definite outlined edges as seen against the sky and background clouds. There was no particular color and there were no bright highlights. Mr. Patrick at first thought it was a balloon but then realized that the shape changes and rapid motions meant it was something else. He told the CIC investigator that "the core (dark triangular portion) remained

constant and the apex of the core varied only a few degrees while the body of the object seemed to change shapes rapidly and would become elongated during a quick movement of the object." Project Blue Book files list this sighting as unidentified.

As part of the CIC agent's attempts to explain these sightings he asked Mr. J. Holland, chief of the Weather Section of the AEC at Oak Ridge, to provide information on balloon launches at the times of the sightings. There was no correlation. The only sighting that could have been a balloon was the October 20 sighting, and even that was not correlated with the Weather Section data. With regard to the radar detections during the previous month, Mr. Holland said radar can be reflected from patches of ionized air and if a large quantity of radioactive material were released it might provide sufficient ionaization of the air. However, he didn't believe any such release had occurred. According the the CIC agent's report the Weather Section would carry out research to determine whether or not "radioactive energy ejections" could cause radar returns. There is no report on the results of the radar research.

Between 5 and 11 PM on November 29 radar targets returned to the Oak Ridge area. Fighters were scrambled. They saw nothing. However, at 7 PM, during this period of radar sightings, graphic records of Geiger counter detections in the restricted area of Oak Ridge indicated an abnormal increase in alpha and gamma radation that could not be attributed to a known source. Apparently this was "too much" for the officials in charge of Oak Ridge security. They held a two day meeting to discuss the "operational difficulties" of the early warning radar of the Air Defense Command at Knoxville. AFI was asked to investigate the situation and to set up a separate radar set for comparison.

The suggestion that some radar targets might be the result of ionization of the air by nuclear radiation must have been on the mind of Mr. Gray, SAC Knoxville, because on December 4 he called FBI headquarters and discussed the speculation that releases of radioactive material could have caused the anomalous radar targets observed. The next day Mr. Hoover sent an urgent teletype to SAC Knoxville: "Arrangements should be made to obtain all facts concerning possible radar jamming by ionization of particles in the atmosphere. Conduct appropriate investigation to determine whether incident occurring northeast of Oliver Springs, Tennessee, could have had any connection with alleged radar jamming." Unfortunately any information that might have been available on the "Oliver Springs" case has not been released. Nor is there any response to Hoover's teletype message.

On December 5 and 6 there was a discussion of the technical aspects of the radar sightings with ATIC and intelligence officials. They concluded that the targets were probably "radar angels" which are reflections of objects on the ground which are observed only because of a temperature inversion which bends the radar radiation downward. On the other hand, that did not mean that there were no flying saucers around. At about 12:50 PM, December 5, the wife of one of the security officers saw an unusual object north of her position, flying apparently over the Post Office building in Oak Ridge. It appeared to be a couple of miles away and 500 feet above the ground. It appeared to be made of highly polished aluminum or metal that reflected the sun. Its shape was round and flat or disklike. She saw the object for about a minute as it flew in a direct course eastward. Ten minutes later another lady at a different location observed the same or a similar object heading westward. The OSI agent who investigated this case learned that there was an east wind at 6 mph and a clear sky. No balloons had been launched near that time. He also learned that there were two aircraft airborne at the time, but both were about fourteen miles south of the witnesses. ATIC subsequently claimed that the witnesses saw an aircraft

Although ATIC would eventually claim that most of these events were mundane (radar anomalies, balloons, aircraft) and leave only two of the Oak Ridge sightings unidentified, the local military officials and scientists were not so certain of easy identifications. They planned to begin their own scientific investigation. Lt. Col. John Hood, the AMC Field Engineering Officer, outlined the plan

in a December 5 memorandum entitled “Technical Approaches to the Problems of UFOs.” He proposed placing radiation counters over a wide area. After there had been sufficient anomalous object reports to establish a pattern, the data recorded by these counters would then be compared for time and location with the sightings “to see if any change in the background (radiation) occurs with the presence of sighted objects.” He also proposed that portable counters be made available which could be taken to the area of a sighting. Along with the counters he proposed that an aircraft with Geiger counters and also a magnetometer be made available. The magnetometer would indicate any fluctuations in the local magnetic field associated with sightings. He also proposed more accurate radars capable of measuring height as well as range and azimuth. This plan was to begin operating near the end of December.

The next anomalous event in the Oak Ridge area was yet another appearance of radar targets which “blanketed the radar scopes in the area directly over the government Atomic energy Commission projects.....these objects could not be identified from the radar image and a perfect fighter interception met with negative results.”

The last Oak Ridge sighting of any consequence occurred at about 8:30 AM on December 18. Groups of people in separate cars traveling to work saw an unusual object fly over the Oak Ridge area. To the Air Force officers in one of the cars it appeared as would a bright reflection from a very distant aircraft. It was southwest of them and they only saw it for a few seconds. At the same time several other NEPA project employees were in another car at a different location. They saw this object for about 30 seconds before it was obscured by the nearby hills. They described it as a bright circular light with an intensity greater than that of the full moon. It was between 15 and 30 degrees above the horizon as it moved in a northwesterly direction. They observed a strange effect on the circular light: it seemed to “darken, starting at approximately 7:00 t o 9:00 o’clock along the perimeter and continuing to darken along the perimeter and inner area until the light was concentrated in approximately 1:00 to 3:00 o’clock position of a very small diameter, at which point it appeared somewhat similar to a large star.”

About the time that Col. Hood’s research plan was to be put into effect the last two Oak Ridge sightings occurred. These were on December 20 and January 16. The December 20 case was another radar-only event (no visual contact) and the January 16 sighting involved sightings of stars. The Oak Ridge flap was over. There were no more sightings until a single one in the late fall of 1951. By that time the research project had effectively died. Thus, as happened with Project Twinkle in New Mexico, just as the local scientists and security agencies were about to carry out precise research that could prove the UFOs were real anomalous objects.... they disappeared!

In retrospect, although it might be possible that some of the radar detections were weather anomalies, often called “radar angels,” caused by temperature inversions in the atmosphere, the visual sightings cannot be so easily dismissed.

RADCAT Case Directory
Category 9, RADAR

Preliminary Rating: **0**

RADCAT is a revitalized special project now being conducted jointly by NICAP & Project 1947 with the help and cooperation of the original compiler of RADCAT, Martin Shough, to create a comprehensive listing of radar cases with detailed documentation from all previous catalogues, including UFOCAT and original RADCAT.

Radio Amateur Tracks UFO With Radar? Maybe Not

March 1, 1950
Knoxville, Tennessee

Fran Ridge:
S. E. Adcock was a civilian operating a "ham" radar set. The witness and equipment are considered unreliable. The report synopsis by Bruce Maccabee, is fairly accurate but based on FBI documents, and shows that the radar used was able to track an object at 2,000 feet. But it also states that anything else came under serious question and no conclusions could be reached. But when Air Force documents were found (see documents linked below) the witness was found intoxicated, and when his height and speed figures were checked against the actual airliner they were wildly off.

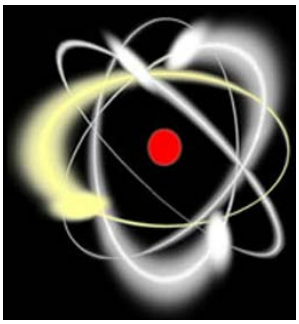
Category 2, Close Encounters

Preliminary Rating: **5**



A Hynek Classification of Close Encounter is usually an incident involving an object less than 500 feet from the witness. The size of the object, viewing conditions, or stereoscopic vision (depth perception) may render the object in greater detail and still qualify the sighting as a Close Encounter even though the object may have been beyond 500'. The incident depicted in the logo was encountered during an intense storm near Princeton, IN, Aug. 1973.

Huge Saucer Over K-25 Area

October 12, 1950
Oak Ridge, Tennessee

Fran Ridge:
October 12, 1950; Oak Ridge, TN.(BBU)
Late Thursday, October 12, 1950, a saucer-looking object was observed over the K-25 area near the NEPA Project area. The object was described as round, as big as a four room house, silver in color, and had a blister at the top of the saucer. The object also had windows. The object rose slowly for about 100 feet, moved forward, rose again about the same distance and then it was gone at a high rate of speed. (Blue Book files, The Knoxville Journal, October 26, 1950).

Oak Ridge Security Patrol Reports Objects At 50'

October 15, 1950
Oak Ridge, Tennessee

Brad Sparks:
October 15, 1950; Oakridge, Tennessee (BBU 819)
3:25 p.m. Involved AESS (Atomic Energy Security Service) Trooper Edward D. Rymer and John Moneymaker of University of Tennessee Research Farm. Described as a strange diving object shaped like bullet with a smoke trail. (Moneymaker saw a double pear-shape). The bullet or pear shape turned into a flat 2x5-inch grayish card shape with the smoke trail turning into a 20-ft long flat shimmering light gray ribbon-like streamer. It had a small black line running down middle, the streamer having a pulsating glow on the end of a 15-ft section, which was also partly transparent and maneuvered at 3 mph to within 210 feet of witnesses. Rymer approached to within 50 ft (but object did not seem larger). The object was at 6-ft height above ground and maneuvered over the road at Solway Gate, which is near Kerr Hollow, to Oak Ridge, then jumped over a 9-ft chain link fence with a terrain-following maneuver (object turned vertical to follow the fence), then rose sharply to negotiate a 30-ft willow tree similarly. The card shape changed to pear shape with same trail while en route to disappearing at increased speed over top of a ridge to the SE about one mile away. Rymer called attention of Hightower, an employee of Maxon Construction Co., who was driving up to Solway Gate, who then saw object disappearing. AESS Capt. Joe Zarzecki arrived just after disappearance of first object but saw 2nd and 3rd. Second similar object appeared shortly afterward seen by all 4 witnesses for about 30 seconds at 300 ft height with similar shape and maneuvers disappearing over same ridge to SE. Then about 5 minutes later a third object with similar shapes and maneuvers, seen for 10 seconds at 500 feet height by all witnesses disappeared over same ridge to SE. One object had a double pear shape. (Berliner; FBI files; BB AFOSI microfilm 90 frames 636-637) ? mins + 30 sees + 10 seconds

Case Directory - Category: 01; Distant Encounters & Category 09; Radar Case

Subject: Oak Ridge Security Guard Reports Spinning Object/ Radar Detects UFO
Date: October 16, 1950
Location: Oak Ridge, TN

Francis Ridge:
Surprisingly this was neither listed among the original BB Unknowns, nor the updated Comprehensive Catalog of Project Blue Book Unknowns by Brad Sparks. It wasn't on our site and wasn't listed among the 200 nuclear connection cases by Larry Hatch (NCP-03). The Air Force documents were found originally by Dan Wilson on the BB Archive site and I matched it up with the report by Bruce Maccabee. I then located the AFOSI documents in my files and scanned them in. (See report and document links below). The documents clearly show radar had detected UFOs at the same time.

> NARA-PBB90-638: "At about 1520 EST 16 October, while Special Agent William S. Price was present, a report came from the AEC Patrol to the radar station relating that a Trooper Isabell and four civilian employees at Oak Sidge had observed a "silver disc" hovering over the K-25 Plant in the controlled area. The radar screen was able to pick up an indistinct target about every three (3) or four (4) sweeps of the indicator. An F-82 fighter plane was sent to attempt an intercept of the object. The airborne radar of the fighter picked up a target which later proved to be a light aircraft. The ground observers reported that the F-82 passed under the "silver disc" while it was in pursuit of the light plane. The crew of the fighter observed nothing unusual. Nothing further was learned of the sightings."

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 01; Distant Encounters

Subject: Objects Sighted Over "Control Zone"
Date: October 20, 1950
Location: Oak Ridge, TN

Francis Ridge:
Not listed in either BB Unknown list, original or Comprehensive Catalog of Blue Book Unknowns , but has aspects that may ultimately classify it as an unknown. At 4:55 PM on October 20, Larry Riordan, the Superintendent of Security for the X-10 control zone became a witness. While driving to a residential area he saw an object which he thought at first was a balloon which had lost its "basket." It was generally round, appeared to "come together at the bottom in wrinkles (rather indistinct and something was hanging below." It appeared to be 8 to 10 feet long and lead or gunmetal colored. It didn't seem to be moving but, since he was traveling and only saw it for a number of seconds, he couldn't be sure. He was sure it wasn't a weather balloon, although he thought it might have been a gas bag balloon launched by the nearby University of Tennessee Agricultural Research Farm.. On the same day at 3:27 PM the radar unit at the Knoxville airport detected radar targets near the area of Mr. Riordan's sighting and scrambled a fighter plane. The pilot searched the area for about an hour and a half, which included the time of Mr. Riordan's sighting, and found nothing.

Brad Sparks:
The Riordan sighting might be a balloon, but we won't know until AF data can fill in more details.

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 01; Distant Encounters

Subject: Oak Ridge I-10 Lab Employee Sees "the Flying Saucer"/Radiation Detected
Date: October 23, 1950
Location: Oak Ridge, TN

Francis Ridge:
This one isn't listed anywhere; Blue Book Unknowns, CCPBBU (Sparks updated list), Hatch's *U* Database with nuclear connection. But the witness told the Clinton Courier-News said he saw an object generally referred to as "the flying saucer". This article was quoted in a 2 November 1950 FBI document. Sighting was not verified by radar, the document (page 2) says.

Bruce Maccabee:
On October 23, at 4:30 PM, Francis Miller, an Oak Ridge laboratory employee, while driving along a road in Oak Ridge saw an object that appeared to be less than half a mile away and between 1,000 and 2,000 feet up. It appeared as an “aluminum flash” that was traveling in a south-southeast direction. He only saw it for a few seconds. Subsequently it was discovered that a nuclear radiation detection station (a Geiger counter) in the vicinity of the sighting registered a burst of alpha and beta radiation. The purpose of this station was to detect any leaks of radiation from the Oak Ridge Laboratory. There was no leakage of radiation, however. An expert from the Health and Research Division analyzed the readings from the Geiger counter and pronounced them unexplained. This association between radiation detection and a UFO sighting was similar to that at Mt. Palomar mentioned in Chapter 13. Whether the reading of the Geiger counter was actually a result of nuclear radiations or whether the presence of the UFO induced a transient electrical fault in the counter or whether there was some other explanation is not known. This case does not appear in the Project Blue Book file.

Ref# 134 GROSS,L.:UFOs a HISTORY-1950/3 books Book # 3 Page 63 MIL. BASE

Bruce Maccabee:
At about 12:50 PM, December 5, the wife of one of the security officers saw an unusual object north of her position, flying apparently over the Post Office building in Oak Ridge. It appeared to be a couple of miles away and 500 feet above the ground. It appeared to be made of highly polished aluminum or metal that reflected the sun. Its shape was round and flat or disklike. She saw the object for about a minute as it flew in a direct course eastward. Ten minutes later another lady at a different location observed the same or a similar object heading westward. The OSI agent who investigated this case learned that there was an east wind at 6 mph and a clear sky. No balloons had been launched near that time. He also learned that there were two aircraft airborne at the time, but both were about fourteen miles south of the witnesses. ATIC subsequently claimed that the witnesses saw an aircraft

RADCAT Case Directory
Category 9, RADAR

Preliminary Rating: **5**

RADCAT is a revitalized special project now being conducted jointly by NICAP & Project 1947 with the help and cooperation of the original compiler of RADCAT, Martin Shough, to create a comprehensive listing of radar cases with detailed documentation from all previous catalogues, including UFOCAT and original RADCAT.

F-82 Attempts Intercept of UFO Over AEC Plant / Radar

Jan. 21, 1951
Oak Ridge, Tennessee

Fran Ridge:
Written off by the Air Force as a ground target and "ducting caused by an inversion", this incident is carried as unknown in the Comprehensive Catalog of Project Blue Book Unknowns by Brad Sparks. The sources are work by McDonald and the FUFOR Index.

Dan Wilson:
January 21, 1951; AEC Plant, Oak Ridge, Tennessee
At 4:20 p.m. an unidentified object was sighted on a radar scope of an F-82 fighter plane over the controlled area at Oak Ridge. The radar operator intercepted an indication of an airborne target at 18m (18,000 yards?). The GCI gave the go ahead to intercept the target. The radar set on the F-82 was "locked on" and the run began. The interception was unsuccessful and the fighter returned to base. In all, three passes were made at targets all with radar indications, but they could not be completed since the target was over the restricted area of Oak Ridge including the X-10 plant.

Brad Sparks:
The F-82 fighter (a Twin Mustang, like a 2-seater version of Mantell's plane) did not "return to base" then come back again. The F-82 went to Lenoir City, about 10 miles S of Oak Ridge labs, as a staging area for its exercise then came back to look for the unknown target again. Lenoir City was not the home base (which was unclear in this poorly documented report but was the 5th All-Weather Fighter Squadron, Knoxville).....Total unknown radar target duration probably 6 minutes but stretched out over an unknown time from 4:20 to at least 4:30 or even 5 PM.

Ref# 160 MUFON UFO JOURNAL (by issue no.) Issue No. 205 MIL. BASE

Francis Ridge:
Not listed in neither the BB Unknowns nor the updated catalog by Brad Sparks, this incident was mentioned in the MUFON UFO Journal, Issue No. 205. An Army document was located and is presented by the link below with a transcript. Briefly, the incident is described here:

> "At approximately 3:00 P.M. on July 19, 1953, an F-86 aircraft was observed flying over the Oak Ridge residential area, making circles at what appeared to the writer to be approximately 2,500 or 3,500 feet. The F-86 flew over the area in this manner for approximately ten or fifteen minutes. The writer, together with his wife, observed the aircraft through a pair of six power field glasses. After the aircraft flew in what appeared to be the direction of Knoxville, Tennessee, a black object moved out of a high white cloud, directly over the area the F-86 had been flying. This object began to travel, at a tremendous speed, in a large circle. This action on the part of the unknown object continued for at least five minutes. During the circle of this object, it appeared at times to be in the shape of a cigar and at other times round."

Subject: March 2-3, 1949, Los Alamos/ Then Killeen Base

To: Francis Ridge, Coordinator, Nuclear Connection Project <nicap@insightbb.com>

This a very interesting time. On March 2 and 3, 1949, there are two UFO reports from Los Alamos, and then on March 6,7,8, 1949, we have UFO reports from Killeen base, and then on the March 8, 1949, we have another UFO report from Los Alamos. Just a wild quess--maybe atomic weapons are being tranferred from Los Alamos to Killeen Base. Would be nice to see a log of when weapons were moved from Los Alamos during 1949.

National Investigations Committee On Aerial Phenomena

Case Directory - Category: 01; Distant Encounters

Subject: The Killeen Base/Camp Hood Incidents
Date: March 17, 1949
Location: Camp Hood, TX

Francis Ridge:
UFOs have been seen where uranium and plutonium are mined and manufactured, where bomb development takes place, and where the bombs are stored, such as Killeen Base. Even where the bombs are transported to the testing areas (USS Curtiss). Surprisingly, the Camp Hood/Killeen incidents are even listed in the Project Blue Book "Unknowns" (case319).

Brad Sparks:
7:52 p.m. Capt. Horace McCulloch, Asst. G-2 of the 2nd Armored Division at the nuclear weapons storage site, was preparing the test firing of flares in order to prove recent sightings were mistakes when he and his men themselves saw aerial phenomena, 7 separate sightings by trained artillery observers in different locations enabled rapid triangulation of large, green, red and white flare-like objects flying in generally straight lines. (FOIA)

Loren Gross:
After becoming a true bomb factory, Sandia (Base) shipped assembled bombs to Fort Hood, Texas, where there was a secure storage site guarded by the 12th Armored Infantry Battalion under the command of the Fourth Army...due to the difficulties previously mentioned (NCP-01 - Loren Gross), it wasn't until the spring of 1949 that the U.S. manufactured enough bombs to have a "stockpile." It is suggested that the "green fireballs" that appeared over Sandia in late 1948 bear a direct relationship to a sudden ramp-up of American nuclear weapon production. Also, later, in March,1949, when strange "flares" appeared around the "Q" area at Fort Hood, it is suggested that this interest by the UFOs was triggered by the recent arrival of the first shipment of atomic bombs which was stored as America's first nuclear bomb stockpile.

Subject: February 2, 1950, 20 Miles East of Rock Springs, Texas, 10th District OSI Unconventional Aircraft Report

To: Francis Ridge <nicap@insightbb.com>

Witness observed a disc-shaped object flying low, estimated at 500 feet. Object was 35-40 feet in diameter, 15-18 feet thick, grayish white in color, with steam or vapor streaming from the rear. Object made a complete turn in a small valley and then moved on at at hight rate of speed in a westerly direction.

Subject: April 18, 1950, Near Memphis, Texas, UFO Report To: Francis Ridge <nicap@insightbb.com>

April 18, 1950. Near Memphis, Texas. 9 a.m.-12:40 p.m. (CST). CAA observers in Clarendon, Texas, saw unidentified object to the SE while observers in Childress about 50 miles SE saw object to NW and triangulated stationary object midway in between near Memphis, for 3+ hrs beginning at 9 a.m., which did not move significantly despite winds aloft. Northrop engineering test pilot Max Stanley and observers Lloyd Balsam and Sam F. West were asked to intercept object as they were about to take off in F-61C (AF 8357) from Amarillo on an MX-775 test (Navaho cruise missile celestial guidance test), and a B-36 also took off from Ft. Worth to intercept. At about 12:20 p.m., F-61C crew reached 20,000 ft near Memphis and saw a translucent silver spherical shaped object to the SE at "considerable distance" at 30,000+ ft with "prominent detents" top and bottom with a dark vertical streak or shadow, and streak tilted occasionally resulting in object moving laterally slowly and briefly, with no visible means of propulsion. Object was visible only when sunlight intermittently reflected on it. Contact with CAA Amarillo Range Station revealed no other aircraft in area at high altitude. Northrop crew flew 10 mins at 200+ mph (150 mph IAS) toward object but could not overtake it though apparently closed distance so that object was better observed, appearing as if possibly a weather balloon, however CAA Amarillo denied the possibility due to winds aloft and extreme length of CAA observation. Object then disappeared behind or into a deck of high altitude cirrus clouds. F-61C continued on SE heading for about 5 mins at 30,000 ft and UFO reappeared slightly to the right and higher, very close to the base of the cirrus cloud deck, and much closer than when it had disappeared. UFO angular size 1/2 of full moon. F-61C made radio contact with B-36 crew at 46,000 ft, above the cloud layer who could not see object. UFO then disappeared again behind or into a cloud [probably after < 1 min], F-61C circled for about 5 mins, then regained object for about 30 secs in a break between 2 clouds before losing sight of it for the last time. F-61C had to descend due to depletion of oxygen supply, 2-3 mins later B-36 broke off attempted intercept too. (Jan Aldrich) 3+ hrs 5+ witnesses 1/2 Full Moon triangulation; test pilot

The Lubbock Lights / Carl Hart Photos

August 25, 1951
Lubbock, Texas

Fran Ridge:
Listed as item 11 under photographic evidence in the Special Evidence section of NICAP's UFO Evidence, is the Lubbock Texas Lights. These photographs by Carl Hart, Jr., show a V-formation of large circular objects. Capt. Ruppelt, head of Air Force Project Blue Book, reported that "In each photograph the individual lights in the formation shifted position according to a definite pattern." Main photograph reproduced in True, May 1954. Skeptics have always had a field day with this one because it seemed to be only a set of photographs, taken by a young, inexperienced photographer, of geese, later explained as moths. Little did anyone know that even the Air Force, including the professors who also witnessed the overflights, did not buy the explanations. In fact, it appears some people, alerted to UFO activity, saw birds; others saw UFOs. And the most damning evidence against birds, a professional photographer, with professional equipment and better film, could not capture lighted bellies of geese. And that's not all. A swept-back winged object was being seen around the country during the period and two radars confirmed an unknown.

Captain Edward Ruppelt:
This target was real. I quickly took out a map of the United States and drew in a course line between Lubbock and the radar station. A UFO flying between these two points would be on a northwesterly heading and the times it was seen at the two places gave it a speed of roughly 900 miles per hour. This was by far the best combination of UFO reports I'd ever read and I'd read every one in the Air Force's files.

Subject: Carswell AFB, Texas, UFO/Nuclear Connection
To: Francis Ridge <nicap@insightbb.com>

There is a possible nuclear connection with sightings in and around the Dallas/ Fort Worth, Texas, area due to the proximity to Carswell AFB, a SAC Base, flying B-29, B-50, and B-36 bombers, whose mission was to wage nuclear war on the USSR. Carswell AFB is approximately 120 miles north of Fort Hood/Killeen Base area and there may have been many nuclear weapon transfers between the two locations. Also, Texas had probably the most Air Force Bases of any state (around 22 bases in the 1940-1950 range).

Carswell AFB

Location:

Two miles northwest of Fort Worth, Texas

Origin of Name:

Named after Maj Horace S. Carswell, killed in a B-24 crash in the South China Sea near Tungchen, China on 26 Oct 1944

Previous Designations:

- Carswell AFB, Texas (????-????)
- Fort Worth AAF, Texas (????-????)

Major Command:

- Air Combat Command (1 Jun 1992-????)
- Strategic Air Command (????-1 Jun 1992)

HISTORY OF THE B-36 PEACEMAKER
"NEVER A SHOT IN ANGER"

SELECT A YEAR:

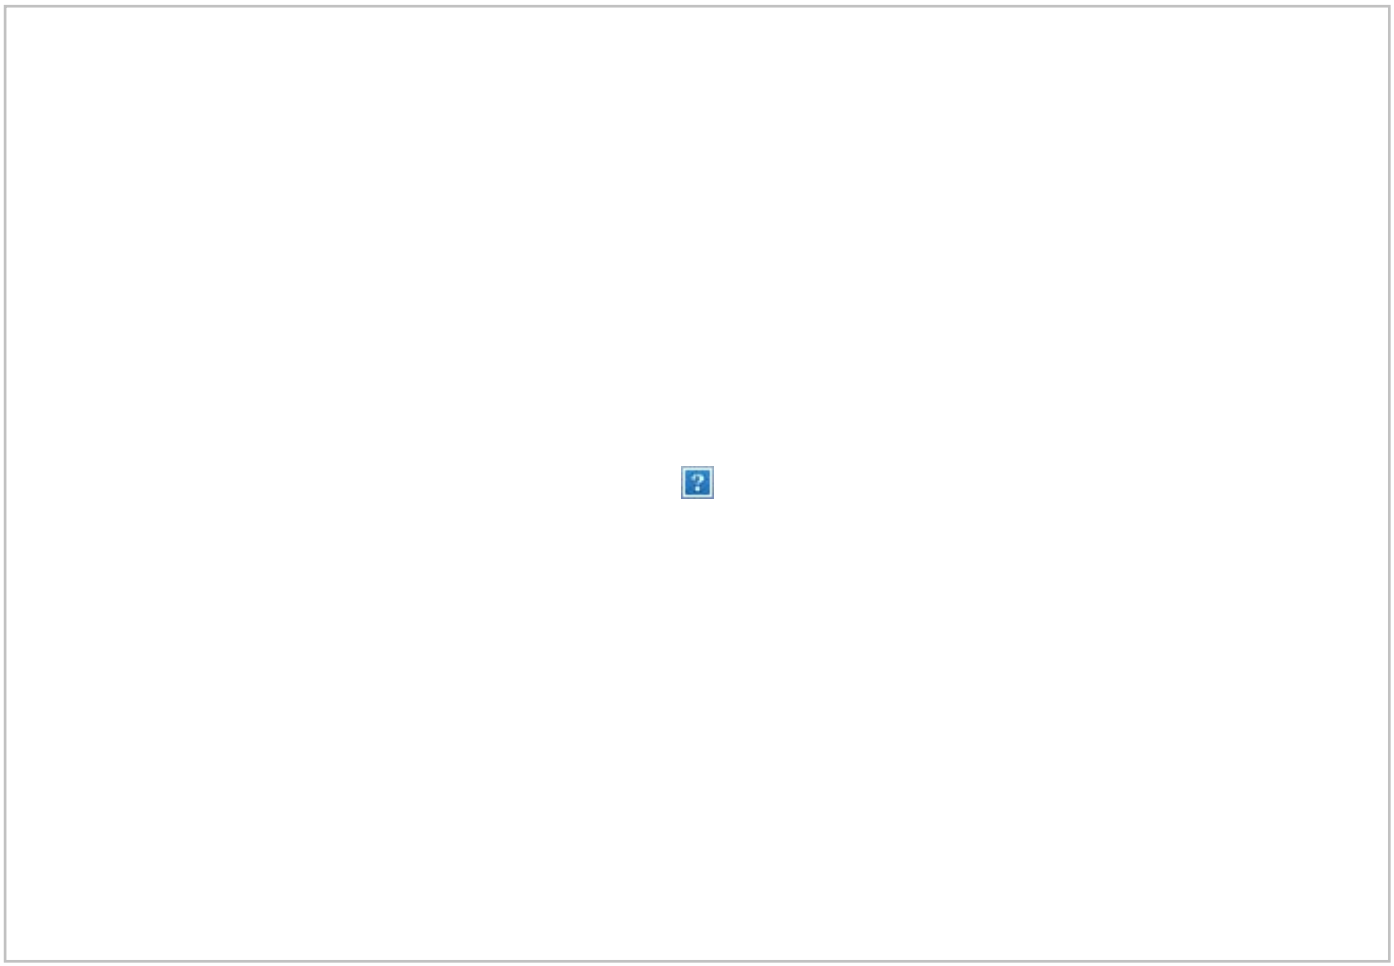
1946	1947	1948	1949	1950
1951	1952	1953	1954	1955
	1956	1957	1958	

1949

RETURN TO TOP

The year 1949 opened with both assigned bomb groups changing commanders. On 2 January 1949, Colonel Bryan B. Harper became the 7th Bomb Group commander, previously held by Colonel Clark, the present wing commander (he held the position of both group and wing commander since November 1947). Colonel Harper had

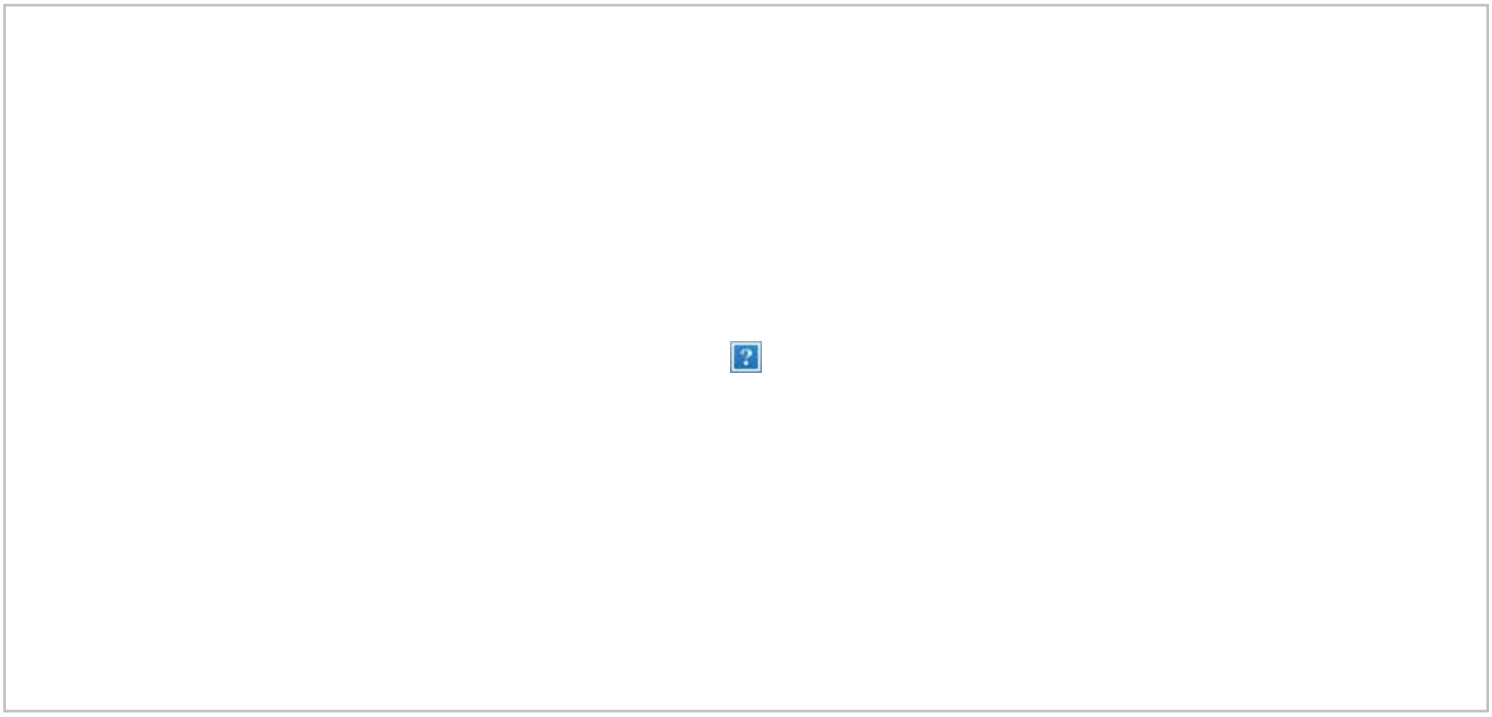
been the deputy base commander at Carswell since November 1947. A few days later, on 11 January, Lieutenant Colonel Harry E. Goldsworthy (later, Lieutenant General) replaced Major Ireland as the 11th Bomb Group commander. Major Ireland moved to the position of 11th Bomb Group executive officer. Colonel Goldsworthy had been the 436th Bomb Squadron commander.



Bob Hope inspecting a B-36 at Carswell on 6 January 1949.
Photo by Frank Kleinwechter

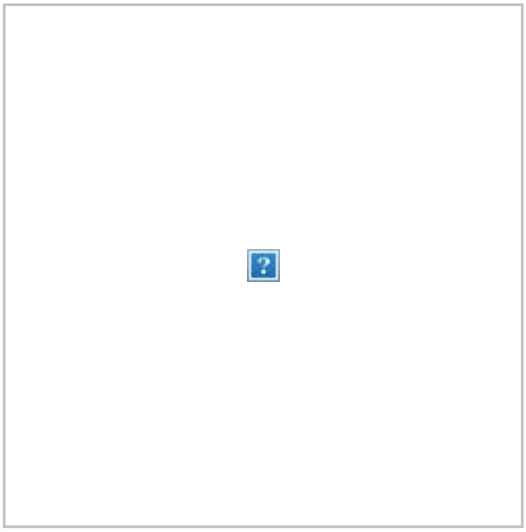
1949 PRESIDENTIAL INAUGURATION FLIGHT A five ship B-36 formation was flown four days later on 15 January 1949, in an air review over Washington, D.C., commemorating the inauguration of the President of the United States, Harry S. Truman. The mission was scheduled to be led by Major General Roger M. Ramey, 8th Air Force commander, but due to difficulties encountered after take off his aircraft returned to Carswell. The lead was then assumed by Colonel Clark, 7th Bomb Wing commander.

11TH BOMB GROUP RECEIVES FIRST B-36 BOMBERS On 17 January, the first B-36A 44-92007 was transferred from the 7th Bomb Group to the 11th Bomb Group. It was further assigned to the 26th Bomb Squadron. A second B-36A 44-02009 was assigned to the 26th on 19 January. That same day, the 11th Bomb Group conducted its maiden flight of a B-36 aircraft in B-36A 44-92007.



44-92007

The 26th Bomb Squadron crew which flew the training flight consisted of: Major Moreland, pilot and 26th Bomb Squadron commander; Captain Warner, Instructor pilot; First Lieutenant Giles, copilot; First Lieutenant Sikes, bombardier; Captain Wolford, navigator; First Lieutenant Weldon and Master Sergeant Benefield, engineers; Staff Sergeants Kelly, Rose and Greenfield, central fire control; Staff Sergeants Taggs, Johnson and Harris, aerial gunners; and Technical Sergeant McLemore, radio operator. Also, on 17 January, the 42nd Bomb Squadron, 11th Bomb Group received its first B-36A 44-92010 with a second B-36A 44-92019 delivered on 21 January 1949. The 98th Bomb Squadron, 11th Bomb Group, received its first B-36A 44-92022 on 19 January.



44-92009

The 11th Bomb Group conducted its maiden flight of a B36 aircraft in B-36A 44-92007 delivered to the 26th Bomb Squadron earlier. The 42nd Bomb Squadron, 11th Bomb Group received its first B-36A 44-92010. The 98th Bomb Squadron, 11th Bomb Group, received its first B-36A 44-92022 on 19 January.

FIRST AERIAL FLIGHT FOR 11TH BOMB GROUP Then on 25 January, the 11th Bomb Group took part in its first aerial review. A total of six B-36s (3-As 11th Bomb Group and 3-Bs 7th Bomb Group) led an aerial review in commemoration of the 7th Bomb Wing and 8th Air Force birthdays over Carswell AFB. Following the B-36s

were B-29s of the 509th Bomb Group, Walker AFB, Roswell, New Mexico and F-82 fighters from Kearney AFB, Kearney, Nebraska. The flight of 7th Bomb Wing aircraft was led by Lieutenant Colonel Ellery D. Preston, 436th Bomb Squadron commander, 7th Bomb Group.

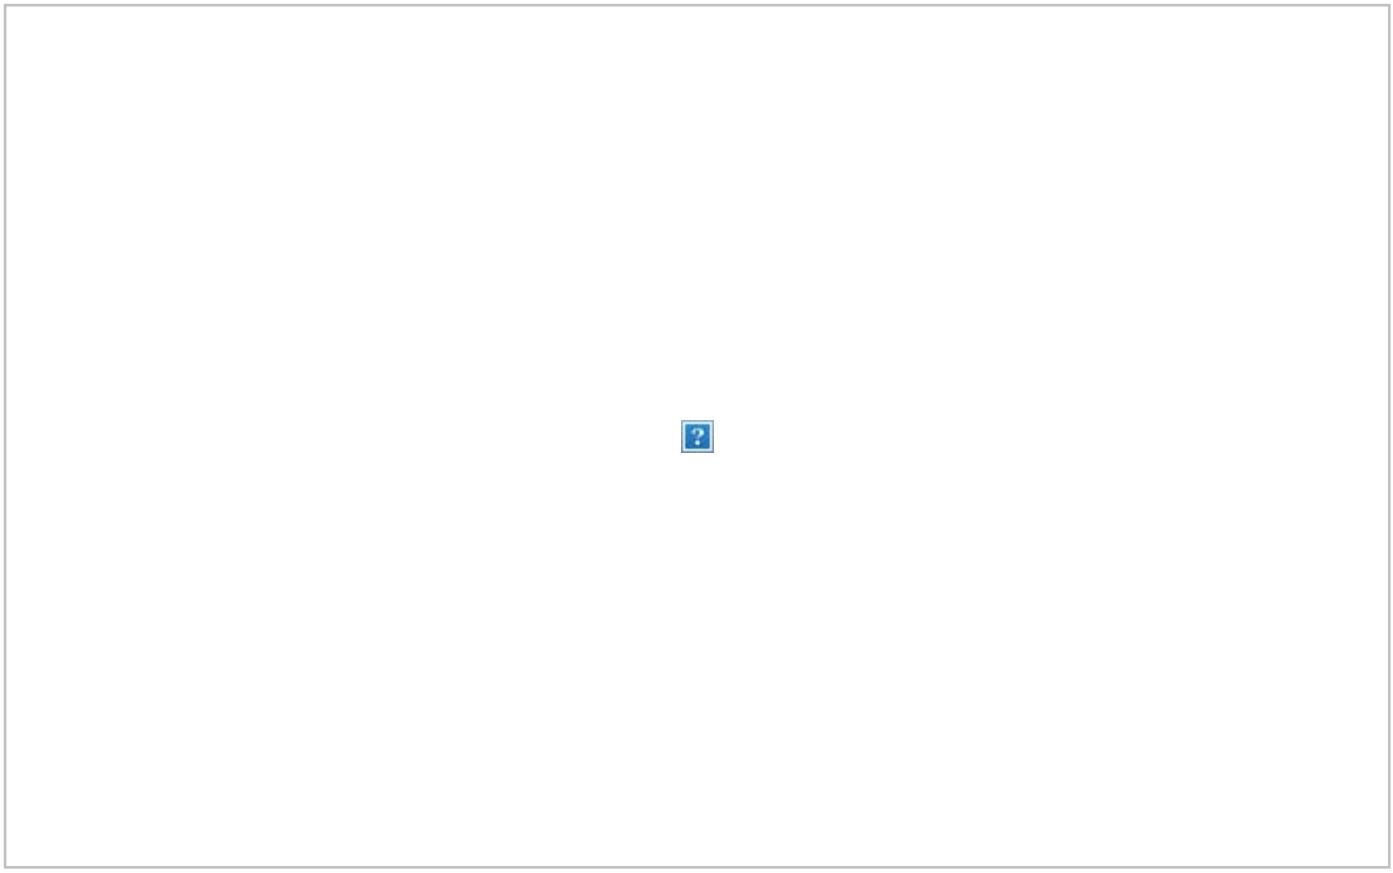
As the month closed the wing had 35 B-36s assigned, 30 in the 7th Bomb Group and five in the 11th Bomb Group. The 9th Bomb Squadron had 11 B-36s (5-A and 6-B), the 436th had 10 B-36s (5-A and 5-B), and the 492nd totaled 9 B-36s (4-A and 5-B). In the 11th Bomb Group, the 26th Bomb Squadron had two B-36As assigned, the 42nd had two B-36As, and the 98th only one B-36A. The 7th Maintenance and Supply Group under the wing was assigned the 7th Motor Vehicle Squadron, Bomb, on 1 February 1949, per SAC General Order 40.

Then on 11 February, Colonel Harper, 7th Bomb Group commander, became the wing executive officer. He was replaced as group commander by Colonel Charles D. Farr, who recently arrived from the Armed Forces Staff College in Washington, D.C.

On 15 February, the 7th Bomb Group, lead by Colonel Clark, wing commander, flew a sixteen ship formation commemorating air progress, in an aerial review over Andrews Field, Maryland. This formation was the largest B-36 formation to date of the world's largest bomber. The 7th Bomb Group transferred a total of six B-36As to the 11th Bomb Group in February. One B-36A 44-92012 to the 26th Bomb Squadron on 4 February, bringing total assigned in the squadron to six. The 42nd Bomb Squadron received three (44-92024, 12 February; 44-92006, 16 February; and 44-92017, 18 February) for five assigned. The last two B-36As (44-92016, 16 February and 44-92021, 18 February) were assigned to the 98th Bomb Squadron which had a total of three B-36As. This left the 11th Bomb Group with a total of 14 B-36As assigned in February. Additionally, B-29A 44-21753 (last 7th Bomb Wing, 7th Bomb Group, 492nd Bomb Squadron B-29 assigned) assigned to Headquarters, Eighth Air Force in December 1948, was pending disposition as the month closed.

NON-STOP B-36 FLIGHT Of importance during the month of March 1949 was a 9,600-mile, non-stop flight by a 492nd Bomb Squadron, 7th Bomb Group, B-36B 44-92035. The flight, lasting over 44 hours, pin-pointed entirely within the borders of the United States, began on 10 March from Carswell. The aircraft flew north to Minneapolis, Minnesota, then turned westward to Great Falls, Montana. From there, the bomber flew a diagonal line across the United States to Key West, Florida. While enroute north to Houston, midway from Key West, the aircraft dropped nearly 10,000 pounds of bombs over the Gulf of Mexico. Crossing over Houston the B-36 headed for Fort Worth. Reaching Fort Worth the bomber flew on to Denver, Colorado, and Great Falls, Montana, before turning and flying to Spokane, Washington. From Spokane, the aircraft flew to Denver. During this leg, the aircraft developed engine trouble and was forced to land two hours early at Carswell. The flight was the longest recorded to date in a B-36.

11TH BOMB GROUP RECEIVES FIRST B-36B AIRCRAFT On 18 March, the 11th Bomb Group received its first B-36B 44-92050, followed by a second B-36B 44-92049 on 19 March. Both aircraft were assigned to the 26th Bomb Squadron. Two more B-36Bs (44-92047 and 44-92051) were assigned to the 42nd Bomb Squadron on 24 March. The 98th Bomb Squadron received the last next B-36Bs in the 11th Bomb Group (44-92053 and 44-92055) on 28 March. Those aircraft resulted in 20 B-36s (14-A and 6-B) assigned to the 11th Bomb Group as March closed.



13 April 1949
Photo by Frank Kleinwechter

On 22 April 1949, two B-36B aircraft of the 9th and 492nd Bomb Squadrons, 7th Bomb Group, flew to Muroc, California, to perform an accelerated service test at 40,000 feet. The mission tested the suitability of the B-36 as a bombing platform for very-large type bombs. The two aircraft returned to Carswell on 10 June 1949. During the month, a total of 25 B-36s were assigned to the 7th Bomb Group (7-A and 18-B). Of those, the 9th Bomb Squadron had eight (2-A and 6-B), the 436th had eight (2-A and 6-B), while the 492nd totaled nine (3-A and 6-B). In the 11th Bomb Group, total B-36s assigned increased by two over last month to 22 for April (14-A and 8-B). The 26th Bomb Squadron had eight (6-A and 2-B), the 42nd totaled eight (5-A and 3-B), and the 98th had six (4-A and 2-B).

May was highlighted by a change of command in the wing commander position. On 11 May 1949, Colonel Clark, (later, Major General) the first 7th Bomb Wing commander, relinquished command to Colonel William P. Fisher. Colonel Fisher arrived from the Air War College, Maxwell AFB, Alabama, where he was serving on the faculty staff. Colonel Clark was reassigned to Headquarters, Eighth Air Force. The same day, Colonel Richard H. Carmichael assumed command of the 11th Bomb Group from Lieutenant Colonel Goldsworthy, who was awaiting further assignment. Colonel Carmichael had been assigned to the Office of the Secretary of the Air Force in Washington, D.C., prior to his becoming the 11th Bomb Group commander.

WING RECEIVES WORLD'S LARGEST LAND AIRCRAFT-CONSOLIDATED XC-99 On 26 May 1949, the 7th Bomb Wing became the first unit in the Air Force to receive the world's largest land aircraft, the Consolidated XC-99, 43-52436 cargo aircraft. The wings were made at the Consolidated Fort Worth plant, then shipped to the Convair plant, San Diego, California, in 1947 for assembly to the fuselage manufactured at Convair. It first flew from San Diego on 24 November 1947. After successful tests in San Diego, it was flown to Fort Worth and modified with the standard four wheel landing gear and bigger engines. It was the sister ship to its far-reaching counterpart bomber, the B-36, and was assigned to the 436th Bomb Squadron, 7th Bomb Group, for a series of inspections prior to reassignment with another Air Force unit at Kelly AFB, San Antonio, Texas, in September 1949. The gigantic, cigar-shaped aircraft had its modification and flight test program administered by the 436th Bomb Squadron. During June, the XC-99 had a complete over-all inspection. Maintenance of the double decked XC-99 was the responsibility of Master Sergeant Howell M. Covert, 436th Bomb Squadron crew chief. He and Technical Sergeant C. E. Cornell, 436th Bomb Squadron, his assistant, had just completed a seven-week

familiarization training course on the XC-99 at the Consolidated plant in Fort Worth. The aircraft bore a striking resemblance to the huge B-36 "Peacemaker". However, the XC-99 was 20 feet longer and 10 feet higher than the slender B-36. Wingspan of both aircraft was 230 feet. Designed from almost identical specifications, except for fuselages, both aircraft were equipped with multiple-wheel main landing gears. Both were powered by six-pusher-type engines located on the trailing edge of the wing. The weight of the aircraft was 265,000 pounds. Also, it could haul 400 fully equipped troops, 100,000 pounds of cargo, or 300 litter patients and their attendants. The volume of the XC-99 interior was 300,000 cubic feet; equivalent to 10 railroad freight cars, with a top speed of 300 mph, and maximum range of 8,100 miles. Service ceiling was set at 30,000 feet. The central portion of the 230 foot wing span was seven and a half feet thick, high enough to permit installation of a catwalk, so that crew members could climb into the wing to check engines during flight. This huge transport had an upper and lower cargo deck, connected by two stairways. The two electrically operated sliding cargo doors in the bottom of the fuselage could be opened in flight to permit dropping cargo. Four electrical hoists, operating on overhead rollers extending the length of each cargo area, were used to load and unload the aircraft. Maintenance people assigned to the 436th Bomb Squadron constructed four specially built loading cranes for the XC-99. These cranes expedited loading the transport.

FIRST AIR FORCE FLIGHT OF CONSOLIDATED XC-99 On 9 June 1949, Captain Deane G. Curry, 492nd Bomb Squadron, made the first Air Force flight in the new Consolidated XC-99 and accomplished six landings at Carswell. During the remainder of June, Captain Curry completed five additional flights, of which one was a night mission, and one an emergency landing at Kelly AFB, San Antonio, Texas. As the month closed the XC-99 was at Kelly undergoing repair and installation of a new engine.

XC-99

During June, the 11th Bomb Group transferred five B-36A aircraft to the Consolidated plant at Fort Worth, and one B-36B to the Oklahoma City Air Material Area, Tinker AFB, Oklahoma, for modification. Six remaining B-36Bs in the group were divided between the three assigned squadrons: 26th, 42nd and 98th Bomb Squadrons. Overall, the 11th Bomb Group had 22 B-36s assigned in June (15-A and 7-B). Also, the 7th Bomb Group received three new B-36Bs from the factory in June, for a total of 24 B-36s (3-A and 21-B) assigned, and one XC-99. Of those, the 9th Bomb Squadron had eight B-36s (1-A and 7-B), the 436th totaled seven B-36s (1-A and 6-B), plus one XC-99. This left the 492nd Bomb Squadron with the remaining nine B-36s (1-A and 8-B). On 1 July 1949, Captain Harold Barry, 492nd Bomb Squadron, flew a B-36B to Chicago, Illinois, for static display at Orchard Park Airport during the National Air Fair. The event was held from 1 to 5 July. Following this the 7th Bomb Group flew seven B-36s in a formation flyover of the National Air Fair in Chicago on 3 July. The next day, the group flew a formation of five B-36Bs over the fair.

BOEING B-29 SUPERFORTRESS ASSIGNED On 6 July, the base swimming pool was opened for use. Two days later, on 8 July, B-29A 44-62044, was assigned to the 492nd Bomb Squadron, 7th Bomb Group. The aircraft was formerly assigned to the 97th Bomb Group at Biggs AFB, El Paso, Texas. The 9th Bomb Squadron, 7th Bomb Group, received two new B-36B aircraft (44-92061A and 44-92064A) from the Consolidated plant, Fort Worth, on 11 July 1949. Also, two 9th Bomb Squadron B-36Bs (44-92033A and 44-92038A) were sent to the Consolidated plant, Fort Worth, for modification in July.

1948 B-36 DEPLOYMENT TO ALASKA Two 492nd Bomb Squadron B-36s departed for Alaska on 25 July 1949 with Major General Roger M. Ramey, 8th Air Force commander, and Colonel Fisher, 7th Bomb Wing commander. This flight was for the purpose of surveying B-36 facilities at Eielsen AFB, Alaska. The aircraft returned to Carswell on 29 July.

LAST WING B-36A'S TRANSFERRED During the month the 7th Bomb Group transferred the last three B-36As to the Air Material Command Storage at the Consolidated plant in Fort Worth. That left the group with 21 B-36Bs, one XC-99 and one B-29A assigned. The 9th Bomb Squadron had eight B-36Bs, the 436th totaled seven B-36Bs and one XC-99 (at Kelly AFB, Texas since late June for engine changes), and the 492nd with six B-36Bs and one B-29A. The 11th Bomb Group acquired four new B-36B aircraft in July, two (44-92053 and 44-92050) went to the 98th Bomb Squadron. Additionally, the 11th sent four B-36As to Consolidated in July for conversion. As the month closed 22 B-36s were assigned to the 11th Bomb Group (11-As and 11-Bs).

August 1949 opened with the official ground-breaking ceremony at Carswell AFB on 5 August, for the new base housing project. Major General Roger M. Ramey, 8th Air Force commander, turned the first earth with a gold-plated spade. He was followed by the 7th Bomb Wing commander, Colonel Fisher. The housing project would include a total of 67 units constructed by McCann Construction Company, Fort Worth, Texas. Following this the 7th Bomb Group changed commanders on 17 August 1949. That date, Colonel John A. Roberts (later Brigadier General) assumed command of the group from Colonel Farr who was reassigned to Fairfield-Suisan AFB, San Francisco, California. Colonel Roberts was previously the Eighth Air Force, Chief of Staff at Carswell.

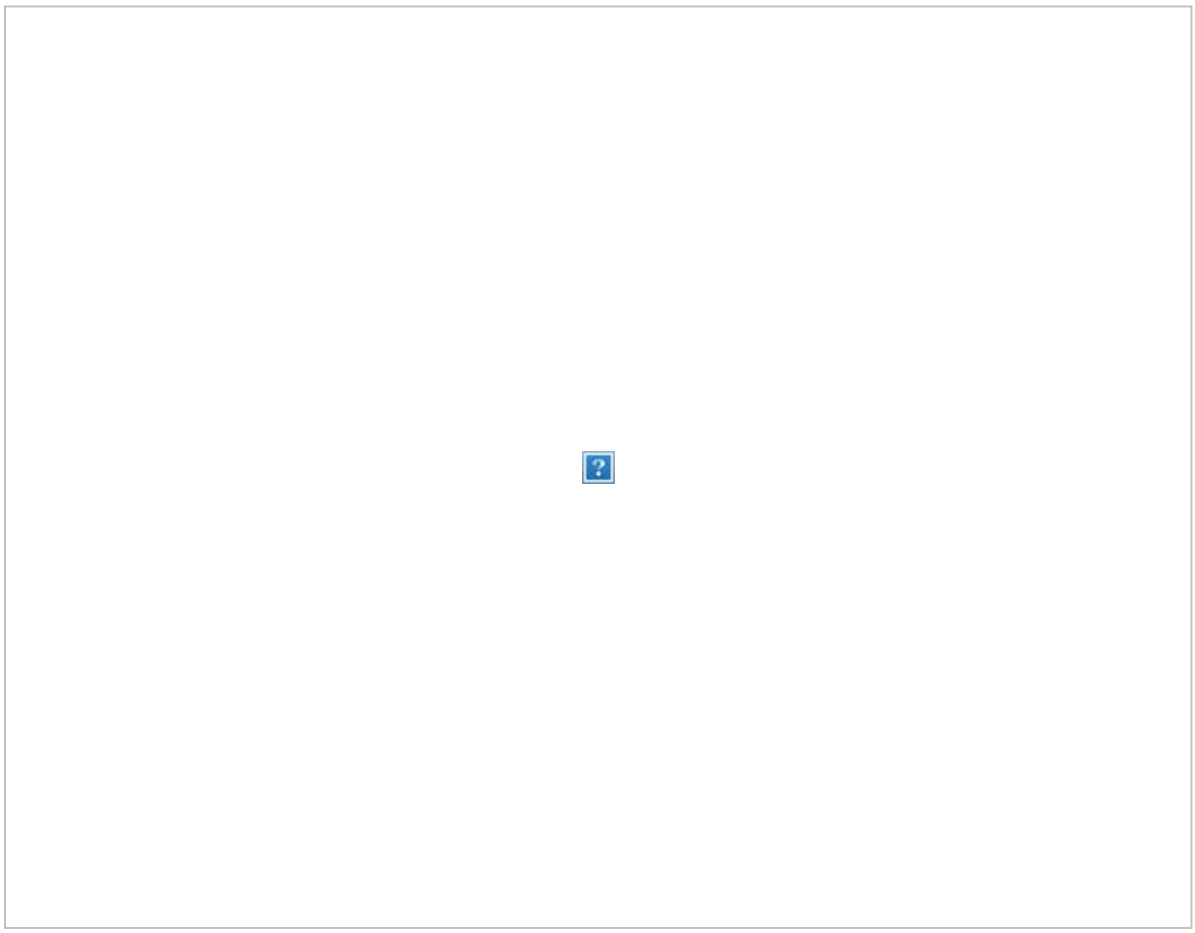
1949 NATIONAL AMERICAN LEGION CONVENTION FLYOVER Next, on 29 August, the wing flew three B-36B aircraft in a flyover at the Pennsylvania Railroad Station, Philadelphia, Pennsylvania, in conjunction with a commemoration of President Harry S. Truman and the Secretary of Defense, attending the National American Legion Convention. During the rest of August the 492nd Bomb Squadron, 7th Bomb Group, conducted a series of polar training missions out of Eielsen AFB, Alaska in the B-36B.

1949 CLEVELAND AIR RACES FLYOVERS During September 1949, wing B-36s flew in several flyover demonstrations. The first occurred on 3 September, when two 7th Bomb Group B-36Bs and one 11th Bomb Group B-36B accomplished a flyover at the Cleveland Air Races, Cleveland, Ohio. On 4 September, three more wing B-36s (2-7th and 1-11th Bomb Group) flew a second flyover at the Air Races in Cleveland. The last flyover for the

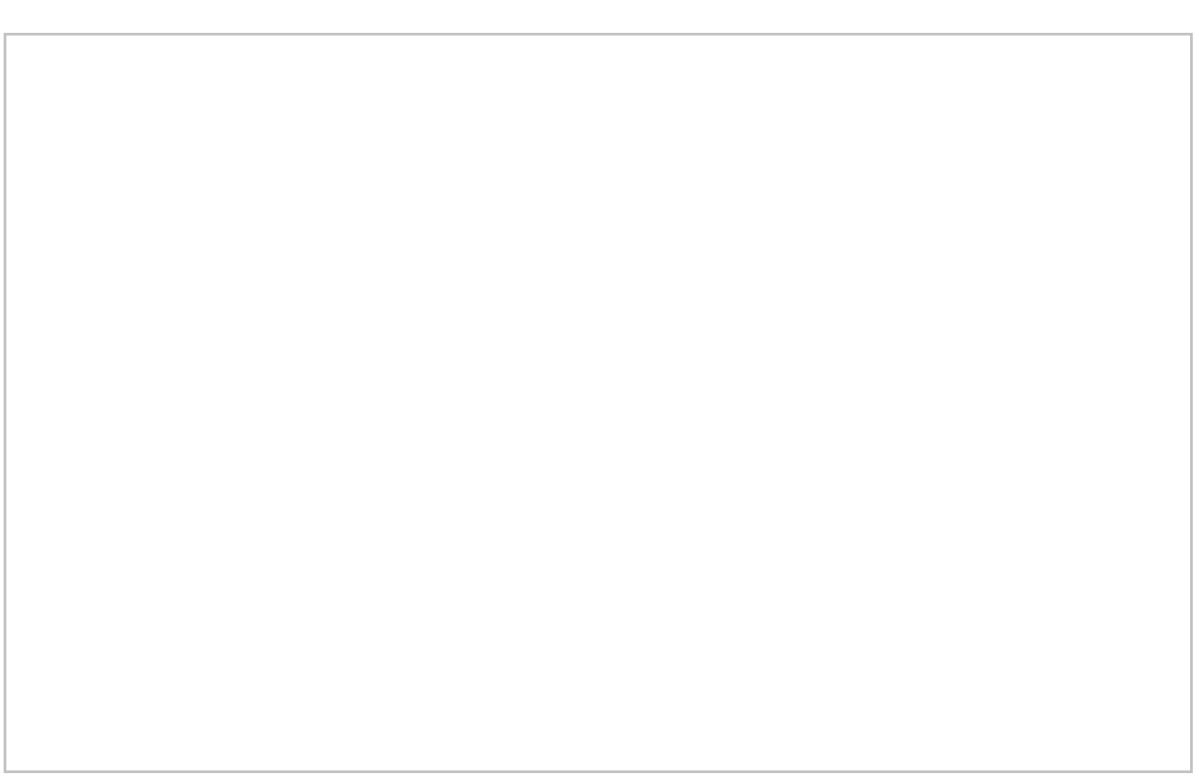
Air Races occurred on 5 September, with three B-36s (2-7th and 1-11th Bomb Group).

One 492nd Bomb Squadron, 7th Bomb Group, B-36B flew a navigational training flight to Eielsen AFB, Alaska, on 14 September. Enroute to Alaska the bomber conducted radar bombing at Stockton, California, and Geiger Field, Washington. The aircraft returned to Carswell on 16 September.

FIRST WING B-36 ACCIDENT The wing recorded its first major accident in a B-36 aircraft on 15 September 1949, when a 9th Bomb Squadron, 7th Bomb Group, B-36B 44-92079, crashed on take-off into Lake Worth, at the north end of the Carswell runway. The cause was attributed to the reversal of some engine propellers during launch resulting in a loss of power during take-off. Five of the 13 crew members were killed in the crash. These were the first fatalities in three years of B-36 operations.



15 September 1949



15 September 1949

The next day, 16 September, the 7th Bomb Wing received Eighth Air Force Operations Order 19-49, dated 15 September 1949. This order instructed that a forward operational area at Eielsen AFB, Alaska, be established for future training flights to Alaska. This exercise was to provide a means of testing the existing facilities at Eielsen and give the wing experience in maneuvers in Arctic flying. The operation was called Operation Drizzle.

Later in the month a distinguished visitor, Lord Arthur Tedder, Marshall of the Royal Air Force, United Kingdom, arrived at Carswell AFB on 21 September. He and his wife, Lady Tedder, viewed B-36 facilities at Carswell, inspected a B-36 and were briefed on Eighth Air Force operations.

1949 SAC BOMBING COMPETITION Convinced that the first SAC Bombing Competition had provided better bombing and a competitive spirit throughout SAC, Lieutenant General Curtis E. LeMay, Commander-in-Chief, Strategic Air Command, decided to make it an annual affair. Held from 3 to 7 October 1949, the second competition included 13 bomb groups: three B-36, eight B-29, and two B-50. The B-36 crews operated out of their home bases. Six crews from the wing took part, three from the 7th Bomb Group (9th, 436th and 492nd Bomb Squadrons), and three from the 11th Bomb Group (26th, 42nd and 98th Bomb Squadrons). Each participating crew accomplished three visual bomb releases and three radar releases from 25,000 feet. The 7th Bomb Group placed 4th overall with the 11th Bomb Group crews last at 13th.

Following return of the competition crews the wing mission changed on 13 October 1949. The higher headquarters directive divided the new mission into three parts as follows:

1. Organize and train a force capable of long range offensive bombardment.
2. To participate in the reserve training program to a maximum extent by training and administering assigned reserve personnel and units.
3. Be prepared to perform those tasks assigned in current emergency plans and related operations plans.

The basic difference between the old and new mission was the wing was no longer required to maintain a force for the purposes of participating in operations involving reconnaissance, photographic, mapping photography, sea search, and anti-submarine patrols.

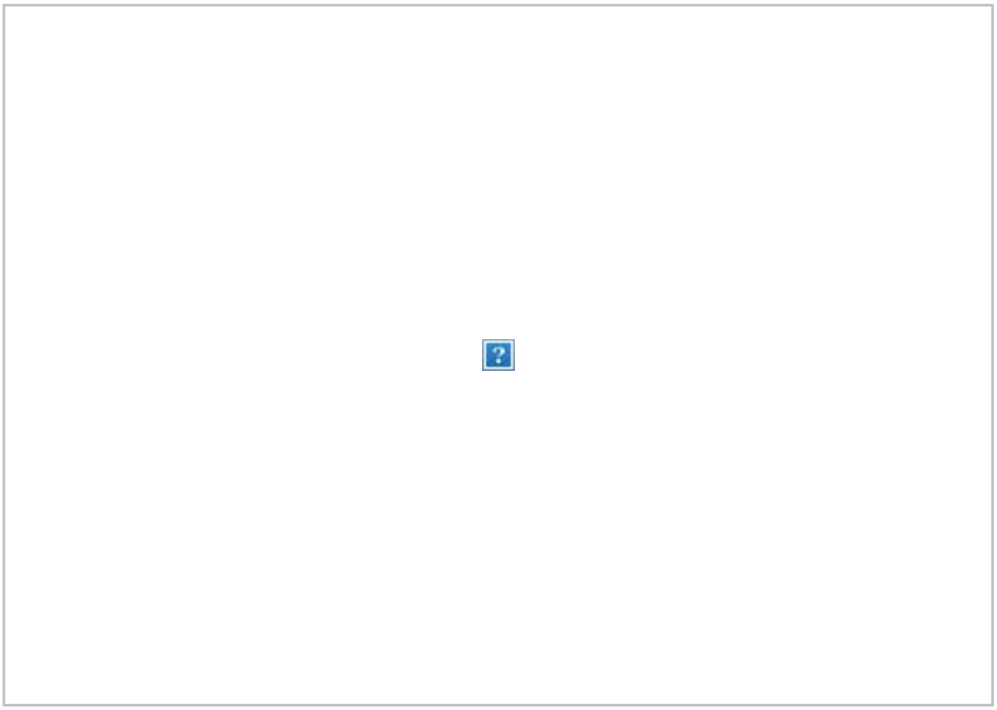
A rather unique method of training men for food service work was adopted by the 7th Food Service Squadron in October. The method was one in which airmen who had completed basic and secondary phases of cookery were given advanced training in local civilian organizations. Several airmen assigned to the squadron were attending cooking courses during October in such establishments as the Hotel Texas, Dean and Kroger Wholesale Meat and Provisions, and Milan Cafeteria, Fort Worth, Texas. Also, the Hotel Mayflower, Washington, D.C. With the knowledge gained from the well-known chefs of these establishments, the 7th Food Service Squadron expected to create culinary masterpieces.

On 24 October 1949, Portugal's Air Force Chief, General Alfredo dos Santos Cintra and party arrived at Carswell. General Cintra viewed a B-36 first hand and toured the Consolidated plant adjacent to the base. He described the Air Force B-36 as further proof that the United States Air Force was in an excellent state of readiness.

WING BEGINS APG-3 RADAR TAIL TURRET TESTING Realizing the necessity of testing and evaluating the APG-3 radar tail turret system, Headquarters, United States Air Force, directed the 7th Bomb Wing to undertake testing. The APG-3 was a radar airborne gun sighting system that provided for aircraft detection and automatic fire control of the tail-turret guns, designed to detect and automatically tract targets up to 5,000 yards in range on fighter-type aircraft. However, it was possible to extend that search range temporarily on fighters. After a particular target had been selected by the gunner-radar operator, the system automatically tracked the target within its angular limits in both range and direction. Also, the system automatically directed and pointed the gun turret in the correct firing position. The only mechanical function of the gunner was the activation of the firing mechanism when the target was in effective firing range. One B-36B 44-92042, of the 26th Bomb Squadron, 11th Bomb Group, was modified for testing as the right gun on the APG-3 was removed and a 35mm Vitarama camera installed in lieu of the turret. The first mission was flown on 25 October 1949, over Eglin AFB Gunnery Range, Florida, at 25,000 feet. Three passes were made on the tail position by two Lockheed F-80 Shooting Star fighters. The F-80 was the first true American jet fighter. Following those passes the APG-3 radar system failed. The malfunction of the radar system was due to low voltage transmitted to the modular and to the antenna tilt motor which became inoperative. Fifty feet of film was obtained and taken to Eglin for operational analysis. As the month closed, 23 B-36Bs were assigned to the wing: 20 in the 7th Bomb Group and 3 in the 11th Bomb Group.

On 1 November, the wing flew its second APG-3 Tail Turret System evaluation test. A total of 12 passes were made in the Eglin AFB Gunnery Range by two F-80 jet fighters at 25,000 feet. Both fighters and the B-36B assigned to the 26th Bomb Squadron, 11th Bomb Group, staged out of Eglin AFB, Florida. The next day, a fighter intercept gun-camera mission was flown on 2 November, out of Carswell in a B-36B of the 7th Bomb Group. Two North American F-82 Twin Mustang fighters from Bergstrom AFB, Austin, Texas, intercepted the bomber at 25,000 feet in the vicinity of Austin. The purpose of the mission, as in any gun-camera mission, was to provide "tracking" and "framing" experience for the B-36 gunners. Also, it provided experience in interception for the fighter pilots. A third test of the APG-3 system was flown out of Eglin AFB on 7 November. A total of 18 passes were made by two F-80 jet fighters on the bomber at 15,000 feet.

ANNUAL AIR INSPECTION From 7 to 18 November 1949, the annual Air Inspection of Carswell AFB was conducted by Eighth Air Force. In general, the inspection team was satisfied with the overall condition of the base over last year's inspection. The day the inspection closed, 18 November, Mr. W. Stuart Symington, Secretary of the Air Force, arrived at Carswell to inspect Eighth Air Force and fly in a B-36. He was greeted upon arrival by Lieutenant General Curtis E. LeMay, Commander-in-Chief, Strategic Air Command, and Major General Roger M. Ramey, Eighth Air Force commander. Mr. Symington stated that the B-36 was "still the best bomber we have", after his flight. Other honored guests in Mr. Symington's party included Senator Lyndon B. Johnson from Texas, Senator Richard Russell of Georgia, Mr. Amon G. Carter, and Mr. D. Harold Byrd, National Vice Chairman of the Civil Air Patrol.



19 November, 1949
VIPs ready for flight in B-36. (L-R): General LeMay, Senator Russell (Georgia), General Roger M. Ramey, Major John Bartlett, Air Force Secretary Symington, Senator Lyndon Johnson (Texas), Representative Thornberry.

A total of 22 B-36s were assigned to the wing (18-7th and 4-11th Bomb Group) as November closed out.

December was uneventful as the wing prepared a second B-36B 44-92078 (436th Bomb Squadron, 7th Bomb Group) for APG-3 modification.

As 1949 closed, the wing bomber inventory included 23 B-36s. The 7th Bomb Group accounted for 18, and the 11th Bomb Group had the remaining 5.

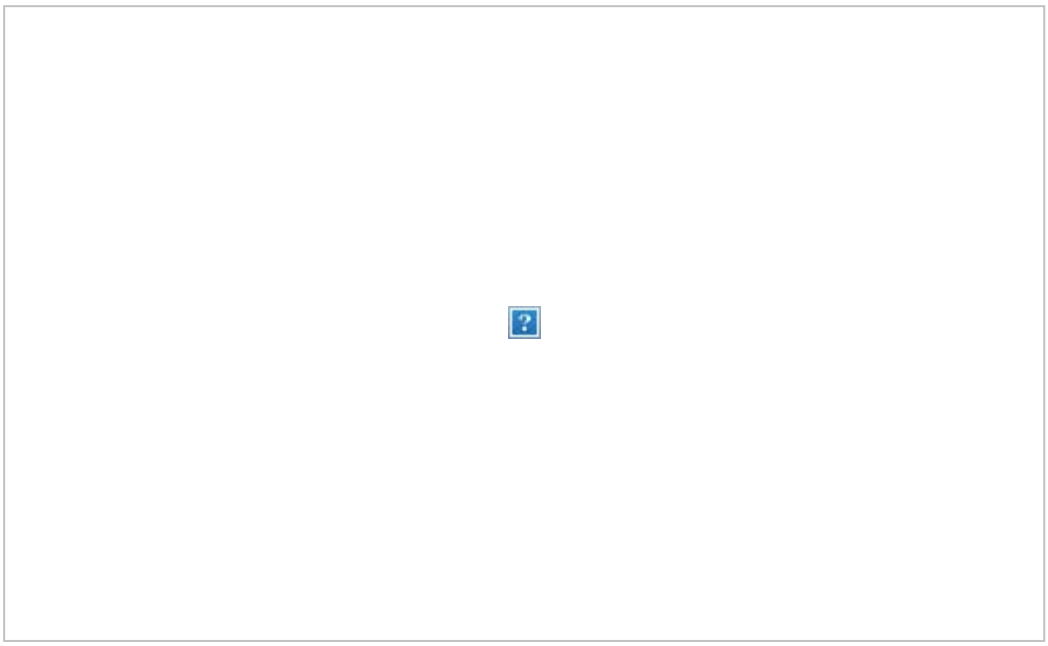
1950

RETURN TO TOP

WING COMMANDED BY BRIGADIER GENERAL A change in the wing command structure started off 1950 when Brigadier General Clarence S. Irvine (later, Major General) assumed command of the wing on 2 January from Colonel Fisher, who became the 43rd Bombardment Wing, Medium, commander at Davis-Monthan AFB, Tuscon, Arizona, the same day. General Irvine previously commanded the 509th Bombardment Wing, Medium, at Walker AFB, Roswell, New Mexico.

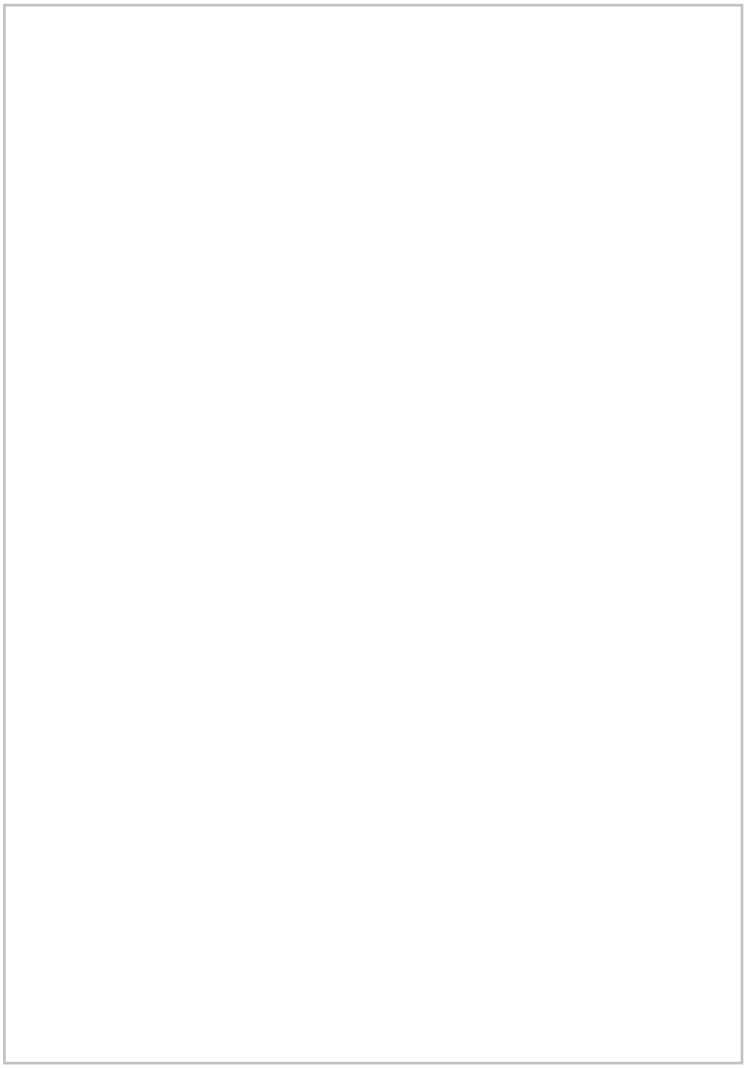
OFFICER FLIGHT ENGINEER SCHOOL ESTABLISHED AT CARSWELL The Officer Flight Engineer School, established by General Irvine on 8 November 1949, at Walker AFB, moved to Carswell on 1 February 1950. The school provided officer flight engineers the opportunity to regain their flying status, which had been suspended since July 1948. Of course, the school was not established for that purpose. The main reason for the school was that General Irvine realized the flight engineer position on present day and future bombers should be performed by a highly qualified technician. On 20 February, the sixth Officer Flight Engineer School class overall, and first at Carswell, commenced with 22 individuals. The length of the course was increased by six weeks to provide for additional B-36 subject matter. Carswell was visited on 3 February 1950, by Colonel Charles A. Lindberg, famed aviator who crossed the Atlantic in the "Spirit of St. Louis". During his visit Colonel Lindberg viewed the B-36, its operations, and training programs.

SECOND WING B-36 ACCIDENT Following this, one of the most important developments in the B-36 program occurred in mid-February as a result of numerous major malfunctions associated with the B-36. Those problems brought the B-36 program down to a low, and were emphasized in a dramatic, but tragic, manner--the crash of B-36B 44-92075 of the 436th Bomb Squadron, 7th Bomb Group, returning from Alaska.



Site of crash of B-36B 44-92075 in British Columbia
Photo by Doug Davidge

The aircraft had been taking part in cold weather maneuvers over British Columbia, Canada. The aircrew abandoned the aircraft when severe icing, plus an engine fire endangered the crew. A total of five out of 17 that parachuted lost their lives. Those five individuals were: 1Lt Holiel Ascol, bombardier; Captain Theodore F. Schreier, copilot; Captain William Phillips, navigator; Staff Sergeant Neal A. Straley, gunner; and Staff Sergeant Elbert W. Pollard, gunner. All except Schreier had streets in base housing named after them later in 1950. To date the streets are still named for those members.



Co-pilot's 7th Bomb Wing pin recovered from 44-92075 in 1998
Photo by Doug Davidge

This was the second recorded B-36 crash in the history of the wing. The engineering difficulties attributed to the crash in Canada were concerned with the following aircraft components, exhaust system, alternators, icing systems, and carburetors. Based on these problem areas and the crash on 14 February, General Irvine imposed flight restrictions on the B-36 aircraft at Carswell effective 15 February 1950. Flying activity ground to a halt following this.

On 24 February 1950, Major General (Retired) Ralph Royce, former 7th Bomb Group commander from 1939-1940, visited Carswell and toured a B-36. General Royce was one of the early pioneers in military aviation dating back to World War I.

The 11th Bomb Group changed commanders on 4 March 1950, as Colonel Bertram C. Harrison took over from Colonel Carmichael, who was transferred to Headquarters, Eighth Air Force at Carswell. Colonel Harrison, former deputy commander of the 7th Bomb Wing, was assigned duties as commander pending arrival of Colonel Thomas P. Gerrity, currently assigned to Air Material Command, Wright-Patterson AFB, Ohio.

Two days later on 6 March 1950, his Royal Highness, Prince Bernhard of The Netherlands, visited Carswell and toured the Consolidated plant at Fort Worth. The next day, 7 March, the Italian Air Force Chief of Staff, Lieutenant General Mario Ajmonecat, visited Carswell and the Consolidated plant at Fort Worth.

Tragedy hit Carswell on 15 March, as the 42nd Bomb Squadron, 11th Bomb Group, hanger burned down. This hanger was originally constructed in June 1943 and relocated in September 1945.

Following this, all the squadrons assigned to the 7th Maintenance and Supply Group, and 7th Air Base Group were

redesignated on 16 March 1950 in that the words "Bombardment, Heavy", were deleted from their titles. The official reason for this action was not known at the time but was presumed it was because no complimentary relationship between any one of those squadrons, and the type of tactical unit on the base under the wing-base theory of organization existed; therefore, those squadrons should not have a designation having reference to the type of tactical unit on base.

The need for a new exhaust system for the B-36, identified in February 1950, was quickly acted upon by Consolidated (Convair) and the Rohr Manufacturing Company, builder of the current exhaust system. Seven modified systems designed by Convair and two designed by Rohr were tested at Carswell during March. Both types failed to correct problems noted in February. Convair and Rohr returned to the drawing board as the month closed. Prior to the close of March, Colonel Geraldine May, Director of Women in the Air Force, toured Carswell on 22 March and viewed a B-36. A few days later plans were developed in maintenance to establish modification docks at Carswell, manned by Convair (formerly Consolidated-Vultee) people, to conduct specially designated modification projects. Plans were placed into operation on 27 March as the docks opened.

FIRST B-36 EXPERIMENTAL LANDING GEAR FLIGHTS The first B-36 take-off and landing with experimental caterpillar-type track landing gear was accomplished on 29 March at Carswell. Although this type of landing gear was not yet an innovation on Air Force B-36 aircraft, it was the latest step in the Air Force's program of track type gear development, and could eventually become an integrated part of the Air Force's production models of the B-36. Present production models of the B-36 were equipped with a four-wheel main landing gear and a dual wheel nose gear. As the month closed the wing possessed 24 B-36B aircraft, 17 in the 7th Bomb Group and seven in the 11th Bomb Group.

March, 1950

SAC REORGANIZES NUMBERED AIR FORCES During March, Strategic Air Command evaluated its

numbered air forces. The Eighth, at Carswell AFB, concentrated on medium and heavy bombers; Fifteenth, at March AFB, California, with medium bombers; and the Second, at Barksdale AFB, Louisiana, devoted exclusively to reconnaissance activities. Expansion and the integration of the B-36 and B-50 in the command created the need for a more balanced organization. Geographic factors also promoted the need for reorganization. For those reasons, SAC realigned the command effective 1 April 1950. Under the realignment, each numbered Air Force received bomber and reconnaissance assets in a geographic region. Second Air Force had eastern bases, Eighth central bases, and Fifteenth the western bases. This left the 7th Bomb Wing under control of Eighth Air Force as before. Barely a month after assuming command of the 11th Bomb Group, Colonel Harrison relinquished command to Colonel Thomas P. Gerrity on 3 April. Colonel Harrison, had been filling in as commander while awaiting arrival of Colonel Gerrity since March. He now assumed the group deputy commander position. Colonel Gerrity arrived from Wright-Patterson AFB, Ohio, where he was assigned to Headquarters, Air Material Command.

During April, 18 complete B-36 exhaust systems from Rohr Manufacturing arrived. This Rohr system fix, known locally as No. VI, consisted of reinforced plates attached to the outer periphery of the shroud cut-out for exhaust port legs. This improved shroud was installed on those exhaust bank segments having the Rohr spider fix.

Certification to build 600 units of rental housing off state highway 183 was received on 15 April 1950 from Scott W. Donaldson, Special Assistant to the Assistant Secretary of the Air Force. The Bucco Corporation of Fort Worth was awarded the 5.2 million dollar contract. Word of the contract was telephoned to Bucco President Raymound E. Buck, by Senator Lyndon B. Johnson and Congressman Wingate Lucas. This project was the first such undertaking in the Fort Worth area, designated solely to provide living quarters for military people. The 600 units would include two and three bedroom houses with 820 to 1,260 square feet of floor space. They would be divided between officers and enlisted in a rent range from $62.00 to $115.00 a month.

As the month closed, two B-36B aircraft were received by the 11th Bomb Group for a total of nine assigned in that unit.

FIRST B-36 LANDING OUTSIDE NORTH AMERICA Also during April, the Operational Engineering Program for B-36 aircraft was started at Carswell. Its purpose was to recommend modifications, maintenance procedures, and miscellaneous reports. The first landing made outside the North American continent by a B-36 occurred on 24 May 1950 at Ramey AFB, Puerto Rico. Brigadier General C. S. Irvine, wing commander, was in the lead aircraft. A total of four B-36s took part commanded by Captain (later, Brigadier General) Wesley L. Pendergraft, Captain George J. Benedict, Captain Artis H. Prichard, Jr., and First Lieutenant Edward C. Barrett; all from the 9th Bomb Squadron.

The same day, two new squadrons were activated and assigned to the wing, the 4010th Organizational Maintenance Squadron and the 4014th Electronic Squadron. Both were further assigned to the 7th Maintenance and Supply Group. The month of June opened with the wing gaining another squadron, the 4005th Women's Air Force (WAF) Squadron. It was designated and assigned to 8th Air Force, and further attached to the wing on 16 June 1950.

SAC FORCES ENTER COMBAT IN KOREA The invasion of South Korea by North Korea on 25 June 1950 brought part of SAC into combat for the first time since World War II. General Hoyt S. Vandenberg, USAF Chief of Staff, ordered two SAC bomb groups on 3 July to deploy their B-29s to the Far East and carry out conventional bombing operations north of the 38th parallel in North Korea. The 7th Bomb Wing, equipped with two B-36 groups was not effected at this time and continued training in the United States.

Five of the 17 units of the base NCO Housing Project (Row Type), ongoing since 1949, were turned over for occupancy on 14 July 1950. The first family presented keys to their new unit was Master Sergeant Leroy J. Wanless. Two days later, on 16 July, the 4010th Organizational Maintenance Squadron was reorganized into specialist teams, one for each tactical squadron in the wing (six total). Each team performed periodic organizational maintenance on assigned aircraft. Also, the 4010th Electronic Squadron was reorganized into specialist teams, one per each tactical squadron. These teams consisted of electronic and instrument specialists who performed periodic maintenance on the instruments and electronic systems of the B-36.

Additionally, the 7th Maintenance Squadron, under the 7th Maintenance and Supply Group, reorganized assigned

people on 16 July into teams to support assigned aircraft. Overall, reorganization of all three above squadrons altered the control of maintenance people by the Maintenance Control Section in the wing and assigned them directly to the tactical squadrons.

During July, the wing unveiled a new flying training program. It consisted of flying simulated combat missions to Limestone AFB, Maine (later Loring AFB), at the rate of one per each day. Maximum training requirements would be accomplished on all missions, including work with fighters of the Eastern Defense Command. The program would start in August.

Arrangements were made with Convair to have the flight section of the Fort Worth plant provide familiarization flights for pilots and flight engineers of the Wing Standardization Board in July. The purpose of these flights was to improve the effectiveness of the people assigned to stand aboard in the operation of the new B-36D model aircraft, scheduled to arrive from the plant in August.

In late July, an accelerated program was put into effort for modification of the carburetor on the B-36B engines. This modification was designed to improve engine performance during take-off, high altitude and ground operations, and to reduce carburetor icing at high altitude.

Following this on 25 July 1950, a contract in the amount of $40,519.00 was awarded to the General Engineering Corporation of Texas, for the installation of a hydrant refueling system at Carswell for tactical aircraft. The system, underground with storage and pump houses, would allow assigned aircraft to refuel or defuel at twice the rate currently done by tank trucks. Construction of the system started 27 July.

The next day, 28 July, ground breaking ceremonies were conducted by Major General Archie J. Old, Jr., new 8th Air Force commander, and Brigadier General Irvine for the new Wherry Housing Project, designated Valley View Housing. The 600-units would relieve the critical housing shortage experienced at Carswell once completed. Estimated completion was set for February 1951.

As the month closed out 31 B-36Bs were assigned to the wing. Of those, 17 were assigned to the 7th Bomb Group and 14 to the 11th Bomb Group.

On 21 August, 18 B-36B aircraft departed Carswell for Limestone AFB, Maine, to participate in a special training mission (Unit Simulated Combat Mission). It consisted of simulated radar bombing of St. Louis, Missouri, using Limestone AFB as the pre-strike launch base. All the aircraft, (9-7th and 9-11th Bomb Group) two from each squadron under respective groups, recovered at Limestone the same day. On 23 August, 17 of the bombers launched out of Limestone. The one bomber left experienced maintenance problems and once fixed returned to Carswell. The flight of bombers flew direct to St. Louis for the simulated bomb run. It was accomplished with no problems as all aircraft recovered at Carswell on 24 August.

WING RECEIVES FIRST CONVAIR B-36D AIRCRAFT While half the wing was TDY at Limestone AFB, Maine, the 26th Bomb Squadron, 11th Bomb Group, took delivery of the first B-36D 49-2653 in the wing on 22 August. The aircraft had six 3,500 horsepower propeller engines and four 5,200 pound jet thrust engines. The addition of jet engines increased the aircraft top speed to 439 mph at 32,000 feet. Also, the aircrew grew to 15: aircraft commander, two pilots, two engineers, bombardier, two radio operators, four gunners, navigator, radar operator (bombardier), and second observer. The second pilot and second radio operator doubled as gunners manning the top forward guns. The second observer manned the nose turret including loading and cleaning the guns.

WING BEGINS B-36B TRANSFER By the end of August, three more "D" models: 49-2647 (42nd Bomb Squadron, 11th Bomb Group), 49-2652 (9th Bomb Squadron, 7th Bomb Group), and 49-2654 (492nd Bomb Squadron, 7th Bomb Group) were delivered to Carswell.

Also, two B-36B aircraft were sent to the Convair Plant in San Diego, California, for modification into "D" models. Overall, a total of 35 B-36s were assigned in August, 19 in the 7th Bomb Group (2-D and 17-B), and 16 in the 11th Bomb Group (2-D and 14-B).

FIRST B-36D GUNNERY MISSION On 12 September 1950, a 26th Bomb Squadron, 11th Bomb Group, B-36D 49-2653 (the first D model in the wing) took part in the first "D" model gunnery mission. It was a test evaluation mission flown over the Eglin AFB Gunnery Range, Florida at 24,000 feet. During the mission seven malfunctions of various types occurred before the plane returned to Carswell. Just over a week later on 20 September, three B-36Ds (436th, 492nd and 9th Bomb Squadrons) of the 7th Bomb Group participated in an exact profile of the war plan. The mission consisted of a night attack on Fort Worth with additional training accomplished by making a simulated bomb run over Birmingham, Alabama. Also, the aircraft conducted a live firing over the Eglin AFB Gunnery Range, Florida, before recovering at Carswell. Later in the month, two more D models arrived brining the total number of B-36D aircraft in the wing to six. The two were assigned to the 436th Bomb Squadron, 7th Bomb Group (49-2650), and the 98th Bomb Squadron, 11th Bomb Group (49-2649).

A total of 37 B-36s were assigned to the wing as September closed out, 20 (17-B and 3-D) to the 7th Bomb Group and 17 (14-B and 3-D) in the 11th Bomb Group.

The remaining eight units of the ongoing NCO Housing Project (Row Type) were completed at Carswell and turned over for occupancy on 12 October. The overall project totaled 17 housing units.

Three 7th Bomb Group B-36D aircraft (9th, 436th and 492nd Bomb Squadrons) took part in a special training mission in October 1950. The purpose was to determine requirements in people, equipment, and supplies for staging through bases other than Carswell or home base. On 13 October, one North American B-25 Mitchell (assigned to Eighth Air Force at Carswell) flew to March AFB, California, with the advance party. The next day, prior to the bombers deploying, a Douglas C-54 Skymaster cargo aircraft launched from Carswell with support people, recovering later in the day at March. The three bombers conducted a simulated bombing mission over Fort Worth after take-off, then proceeded to Phoenix, Arizona, and accomplished a second bombing run. The bombers then flew to the Pacific Ocean for a gunnery mission. Completing this they landed at March AFB. The three bombers launched from March on 16 October and flew to Castle AFB, California. On 17 October, the bombers redeployed from Castle to Carswell. Enroute the bombers took part in a camera gunnery mission at 25,000 feet in Southern California with four Republic F-84 Thunderjet fighters of the 78th Fighter Group, Hamilton AFB, San Rafael, California. The F-84 was a descendant of the first bearer of the "Thunder" name, the Republic P-47 Thunderbolt, famed "Jug" of World War II. Additionally, the bombers conducted a simulated bomb run over San Francisco and Sacramento, California; Phoenix, Arizona; and Fort Worth, before landing at Carswell.

Following this, First Lieutenant Julian T. Williams was assigned the first house in the on going Wherry Housing Project (Valley View Housing) on 19 October 1950.

Next, Lieutenant Colonel Richard T. Black, deputy commanding officer, 7th Bomb Group, was appointed group commander on 24 October, when Colonel Roberts moved up to deputy commanding officer, 7th Bomb Wing.

As the month closed, one B-36D arrived upping total Ds assigned to seven. Overall, the wing had 35 B-36s, 23 in the 7th Bomb Group (3-D and 17-B) and 15 in the 11th Bomb Group (4-D and 11-B).

THIRD WING B-36 ACCIDENT The month of November opened with the 4001st Base Service Squadron, located at Gray AFB, Killeen, Texas, attached to the 7th Bomb Wing. Also, Gray AFB was further designated a sub-base of Carswell AFB. On 22 November, the wing recorded its third major B-36 accident that resulted in the complete destruction of B-36B 44-92035 (26th Bomb Squadron, 11th Bomb Group). Heading for Carswell with three engines out and no engine control the aircraft lost altitude and crashed 20 miles south of the runway. The entire crew bailed out prior to the crash with two losing their lives.

General (Retired) Carl Spaatz, former Air Force Chief of Staff, and former 7th Bomb Group commander (May 1929 to October 1931) arrived at Carswell on 28 November, along with members of the Air Force Academy Site Inspection Team. The purpose of the visit was to view sites for the proposed Air Force Academy. The team departed Carswell on 30 November.

Four B-36D aircraft arrived from the Convair plant, San Diego, California, during late November bringing total "D" models to 11 in the wing. Also, three B-36Bs were lost, two to Convair for modification, and one to crash

noted earlier.

Eight B-36D aircraft (4-7th Bomb Group and 4-11th Bomb Group) deployed to Limestone AFB, Maine, on 30 November to test pre-strike staging facilities, and evaluate B-36D aircraft and combat crews on a profile mission.

On 1 December 1950, six of those B-36s launched out of Limestone and flew direct to Ramey AFB, Puerto Rico. This was the second time wing B-36s had landed in Puerto Rico (previously B-36s had been flown to Alaska). Enroute to Ramey the bombers flew simulated bomb runs one Charleston, South Carolina, and Tallahassee, Florida. The two remaining B-36 bombers at Limestone deployed to Carswell on 5 and 6 December 1950. This operation closed out flying activity for 1950.

Based on the B-36 crash in November gunnery firing training missions were discontinued in the wing. With this action emphasis was placed on gun camera training instead of the live fire previously conducted.

One "D" model B-36 arrived from the Convair plant, San Diego, California on 12 December. As the year closed 12 B-36D aircraft were assigned in the wing.

1951

RETURN TO TOP

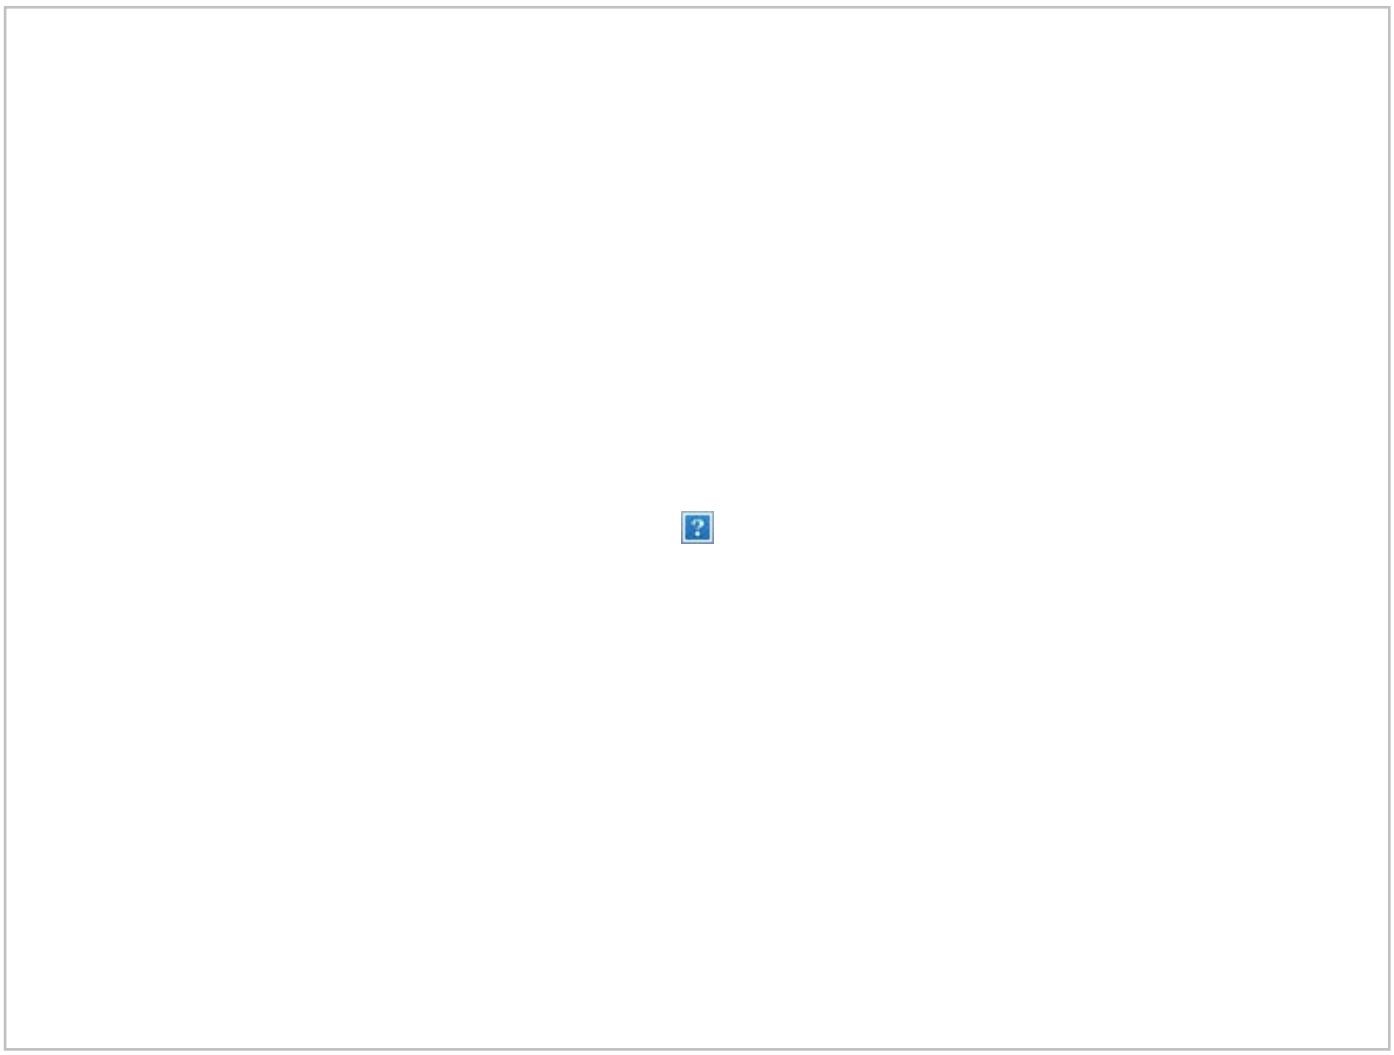
SAC REORGANIZES In January 1951 Headquarters, United States Air Force approved a proposal by General Curtis E. LeMay, Commander-in-Chief, Strategic Air Command, to reorganize SAC's combat forces at base level. Prior to this reorganization, each combat wing consisted of a wing headquarters, a combat group with tactical squadrons, a maintenance and supply group, air base group, and a medical group. This structure existed in most combat wings, including those on both single and double-wing bases. Under the new system, effective 15 February 1951, each wing would reorganize to include a wing headquarters, combat group with tactical squadrons; three maintenance squadrons; an air base group of housekeeping squadrons; a supply squadron; and a medical squadron. Both medical and maintenance and supply groups would be discontinued. The combat group headquarters remained in name only. The wing commander served as the combat group commander. In conjunction with this reorganization, SAC received authority from Air Force to organize air divisions on double wing bases and to operate the air base group on base. Composed of approximately 17 people, representing functions of command, operations, material, and administration, the air division headquarters served as an intermediate echelon of command between the combat wings and the numbered air force. The air division commander exercised direct control over the two wing commanders and the air base group commander.

On 4 January 1951, the 11th Maintenance and Supply Group was activated and attached to the 7th Bomb Wing. The group consisted of: 11th Maintenance Squadron, 11th Supply Squadron, 11th Motor Vehicle Squadron, and the 4014th Organizational Maintenance Squadron (formerly under the 7th Maintenance and Supply Group). The group was further attached to the 7th Maintenance and Supply Group for administrative, operational control, and logistical support.

FIRST B-36 DEPLOYMENT TO THE UNITED KINGDOM AND EUROPE Next, the wing took part in a special training mission to the United Kingdom. The purpose of the mission was to evaluate the B-36D under simulated war plan conditions. Also, further evaluate the equivalent airspeed and compression tactics for heavy bombardment aircraft; and evaluate select crew capability for bombing unfamiliar targets. The aircraft, staging through Limestone AFB, Maine, would land at RAF Lakenheath, United Kingdom, following a night radar bombing attack on Helgoland, Germany. From there the bombers would conduct a simulated bomb run on the Heston Bomb Plot, London, finally landing at Lakenheath. A total of 11 bombers launched out of Carswell on 14 January to Limestone AFB, landing that same day. On 15 January, all were set to depart Limestone. Of those, two aborted shortly after takeoff for engine failures, and three more returned to Carswell that day. The remaining six (one 9th Bomb Squadron, two 436th Bomb Squadron, 7th Bomb Group; and one each from the 26th, 42nd and 98th Bomb Squadrons, 11th Bomb Group) landed at RAF Lakenheath on 16 January following the two bomb runs

scheduled. This was the first deployment of wing and SAC B-36 aircraft to England and Europe. For the next four days the flight flew sorties out of England. The aircraft redeployed to the states on 20 January arriving at Carswell on 21 January.

As January closed, 18 B-36B and 18 B-36D bombers were assigned to the wing. Also, assigned "B" models began rotating to the Convair plant at San Diego, California, for modification to "D" models. This would continue until late June 1951 when all B models would be converted to B-36Ds in SAC.



B-36Bs being converted to B-36Ds at Convair in San Diego

11TH BOMBARDMENT WING AND 19TH AIR DIVISION ACTIVATED AT CARSWELL February opened with several organizational changes at Carswell due to SAC's announced reorganization in January this year. On 16 February, the 11th Bombardment Wing, Heavy, established on 18 November 1948, was activated at Carswell. The new wing assumed control of the 11th Bomb Group, attached to the 7th Bomb Wing since 1 December 1948. Next, 19th Air Division, Bombardment, redesignated 1 February as 19th Air Division, was organized on 16 February at Carswell. With this move the division assumed responsibility over the 7th and 11th Bomb Wings at Carswell. Also, the 7th Bomb Wing underwent a complete reorganization on 16 February. The 7th Bomb Group was reduced to one officer and one enlisted in a caretaker status. The 4010th Organizational Maintenance Squadron was divided to form the 4010th Armament Electronic Squadron, activated the same day. Those two squadrons, and the 7th Maintenance Squadron, redesignated the 7th Field Maintenance Squadron on 16 February, were further assigned to the 7th Bomb Wing. The three bomb squadrons, 9th, 436th, and 492nd were attached directly to the 7th Bomb Wing and taken out from under control of the group on 16 February. Finally, the

7th Aviation Squadron, attached to the wing since 1949, remained under the wing's control. At the same time the 7th Maintenance and Supply, and Medical Groups were inactivated this day with the 7th Air Base Group assigned to the 19th Air Division. With all this reorganization taking place the leadership of the wing changed hands as well on 16 February, as Colonel John A. Roberts assumed command of the 7th Bomb Wing from Brigadier General Irvine. Colonel Black, 7th Bomb Group commander, was replaced by Colonel Roberts. Thus, both the wing and group were under his direct command. Colonel Black was reassigned in the wing. General Irvine, previous wing commander, became the 19th Air Division commander the same day.

Three days later, on 19 February 1951, the 436th Bomb Squadron received a plaque from SAC for its distinguished record as the first B-36 unit in SAC to fly over 400 hours in one month.

Following this, five wing B-36Ds took part in a mock bombing mission over Portland, Oregon. The aircraft, TDY to Eielsen AFB, Alaska, since 19 February, launched out of Eielsen on 22 February. The bombers flew a high-level bombing mission over Portland then recovered at Carswell the same day. As the month closed, the wing had ten B-36Ds and nine B-36Bs assigned.

During March 1951, the wing established a new unit flying record when the 436th Bomb Squadron flew 477 hours with six B-36s in 29 days out of Carswell. Also, five B-36D bombers were received in March from the Convair plant, San Diego, California. All total, 20 B-36s were assigned to the wing in March (13-D and 7-B).

From 12 to 16 April, the wing flew its B-36 aircraft in night bombing missions against industrial targets in the Indianapolis, Indiana, area. The purpose of the mission was to determine the wing's bombing capability against a complex industrial target. On 12 April, 17 B-36s (12-D and 5-B) in the wing flew the first sorties on Indianapolis. All aircraft completed the long range flight on 13 April. Eight more B-36s (5-D and 3-B) flew out of Carswell on 16 April to bomb Indianapolis. The bombers recovered at Carswell on 17 April following the mission. During the sorties on 12 and 16 April, the bombers also attacked secondary targets of New York City (B-36Ds only); Oklahoma City, and Austin, Texas (B-36B only) before flying the primary mission over Indianapolis.

No "D" model bombers arrived from the Convair plant in San Diego during April, but the wing flew three "B" models to the plant for modification in late April.

On 24 April, Mr. Alexander P. de Seversky, noted writer, lecturer, aircraft designer, and manufacturer, visited Carswell. He took a flight in a 492nd Bomb Squadron B-36D while at Carswell.

FOURTH WING B-36 ACCIDENT Three days later, on 27 April, the wing recorded its fourth major B-36 crash which occurred during a fighter-bomber interception mission 55 miles northeast of Oklahoma City. During the interception an F-51 fighter hit the bomber resulting in both aircraft crashing. Fourteen individuals were killed and the B-36B was a total loss.

Colonel George T. Chadwell took command of the 7th Bomb Group on 5 May 1951, leaving Colonel Roberts the wing position. Also, Colonel Chadwell, who had been the deputy wing commander, kept that position.

FIFTH WING B-36 ACCIDENT The next day, 6 May, the wing suffered a major B-36 crash. B-36D 49-2660 crashed on landing at Kirtland AFB, Albuquerque, New Mexico. Twenty-three of the 25 onboard were killed. This was the fifth B-36 crash in the wing that destroyed a B-36 since their arrival in June 1948.

Shortly after this, on 14 May, a survey team in the wing deployed from Carswell in a C-124 to investigate the facilities at Goose Bay, Labrador, Canada, for its use in emergency war plan exercises. The team returned 10 days later.

On 17 May, Major General Irvine, 19th Air Division commander, presented Lieutenant Colonel Finlay F. Ross, Jr., 492nd Bomb Squadron commander, the 19th Air Division Achievement Award for Outstanding Flying Safety for April 1951. This was the second consecutive month the 492nd received the award.

B-36F ACCELLERATED SERVICE TEST PROGRAM BEGINS As the month of June opened, three wing bomber crews (S-04, S-18 and S-20) were assigned to temporary duty at the Convair Plant, Fort Worth, to

participate in the B-36F operational testing under the Accelerated Service Test Program. The aircraft flown by the crews was 49-2703, a RB-36F. Two flights were flown on 14 and 15 June out of Carswell. A third flight was conducted from 21 to 22 June, by a 9th Bomb Squadron crew in B-36F 49-2672. Earlier in the month on 4 and 9 June, the wing conducted an operations readiness test in two phases. Phase I involved a simulated deployment; and phase II, a high altitude attack on industrial targets in the Detroit, Michigan area. Final results of the exercise showed the wing was prepared for its mission.

LAST WING B-36B TRANSFERRED FOR CONVERSION The last B-36B in the wing was flown to the Convair plant, San Diego, California, for modification to a "D" model, on 23 June 1951.

On 30 June, the "On Top" modification project, in which a team from the Oklahoma City Air Logistics Area, Tinker AFB, Oklahoma, modified all 22 wing B-36D bombers, closed out.

Under the B-36F Accelerated Service Test Program, started in June, the wing flew three test flights. A fourth flight was accomplished from 3 to 4 July, by a 9th Bomb Squadron crew. This was the first flight in B-36F 49-2672 with the new long-range mixture barrels installed. The flight engineer reported that manual leaning operations were greatly improved with the modification to the barrels.

Next, a special training mission including a high altitude penetration of Eglin AFB, Fort Walton Beach, Florida, utilizing F-84 fighter escort from the 12th Fighter Wing, Bergstrom AFB, Texas, was flown on 10 July. On that date, nine B-36s took part escorted by 18 F-84 fighters. The bombers flew out of Carswell south to Port Arthur, Texas. At Port Arthur the bombers picked up their escort fighters and headed east to Florida reaching Eglin Range. Several F-86 fighters from Eglin AFB intercepted the bombers enroute to targets in the area. Completing the scheduled mission the bombers returned to Carswell and the escort fighters recovered at Eglin AFB, returning to Bergstrom AFB the next day.

On 11 July, a 9th Bomb Squadron crew conducted the fifth B-36F test flight in the B-36F Accelerated Service Test Program using B-36F 49-2672. This flight closed out the flying phase of the B-36F model test program as all six B-36F aircraft (49-2703, 49-2704, 49-2705, 49-2670, 49-2671 and 49-2672) at Carswell returned to Convair for 100 hour inspections, Air Material Command acceptance flights and other inspections.

FIRST B-36 DEPLOYMENT TO CANADA On 17 July 1951, the wing dispatched six B-36 aircraft of the 492nd Bomb Squadron to Goose Bay, Labrador, Canada. The purpose of the mission was to familiarize people in the squadron with the capabilities of the staging base, test these capabilities, provide an opportunity for crews to obtain actual polar experience, and to accomplish a partial profile mission on the return to Carswell. The flight enroute to Goose Bay was used as a routine training mission. All aircraft landed at Goose Bay on 17 July. Two days later, on 19 July, all six bombers flew a polar navigation training mission then recovered at Goose Bay. All six bombers redeployed to Carswell on 23 July. Enroute a partial war plan profile was conducted as the bombers attacked Tampa, Florida; Birmingham, Alabama; Fort Worth; Memphis, Tennessee; Little Rock, Arkansas; and Dallas; before landing at Carswell on 24 July.

July closed out with 24 B-36D bombers assigned to the wing. The wing conducted a radar bomber evaluation mission against a commercial center target in Binghampton, New York, on 4 and 9 August. The exercise was flown to compare the radar bombing accuracy of aircrews using radar predictions based on eight year old photography against the bombing accuracy of crews using recent radar reconnaissance, and to determine the ability of crews to accomplish celestial navigation and electronic countermeasures reconnaissance.

On 4 August, 15 B-36Ds, seven of which had old photography and the remaining eight new, launched out of Carswell. All aircraft flew the mission as scheduled and recovered at Carswell the same day. The crews using new photography were scored effective with the others not. Eight bombers of the 15 deployed out of Carswell on 9 August, to bomb Binghampton, scored effective using the current photography.

1951 SAC BOMBING COMPETITION With the abatement of the threat of World War III developing out of the Korean Conflict, the bombing competition, suspended in 1950, was resumed and expanded. To stress the importance of celestial navigation and to enable reconnaissance wings to compete, navigation was included as a

separate phase of the meet. MacDill AFB, Tampa, Florida, served as the competition headquarters, as well as the staging base for medium aircraft. Carswell AFB was the staging base for heavy aircraft. Held from 13 to 18 August 1951, the third meet to date in SAC, involved 12 bomb wings and three reconnaissance wings flying B/RB-36, B/RB-29, and B-50 aircraft. Also, two Royal Air Force crews from the United Kingdom participated with Washington bombers (Boeing B-29). Bombing requirements included three visual releases and four radar runs, and the navigation phase involving three night celestial navigation legs. Wing aircrews placed in the top ten overall.

WING RECEIVES FIRST CONVAIR B-36F AIRCRAFT On 18 August 1951, the first B-36F 49-2671 was assigned to the 9th Bomb Squadron in the wing. The B-36F was equipped with new WASP Major engines rated at 3,800 horsepower. Also, a K-3 radar system and APG-32 gun laying radar were added. The increased horsepower upped the top speed to 417 mph and the service ceiling to 44,000 feet with a combat payload of 264,300 pounds. A total of 34 B-36F models were eventually produced by Convair with all going to the wing.

FIRST B-36F GUNNERY MISSION The wing conducted its first "F" model gunnery test over the Eglin AFB Gunnery Range, Florida, on 22 August 1951. Results of the test were satisfactory. As the month closed, 25 B-36D and two B-36F bombers were assigned. B-36F 49-2672 was the second "F" model assigned in the wing and went to the 9th Bomb Squadron.

436TH BOMB SQUADRON DEPLOYS TO CANADA A second familiarization flight to Goose Bay, Labrador, Canada, was flown in September 1951. The purpose of the mission was to familiarize the 436th Bomb Squadron with the staging base at Goose Bay, and test the capabilities and facilities of the base. On 16 September, the 436th deployed six B-36D aircraft out of Carswell, landing the same day at Goose Bay. While at Goose Bay, the aircraft flew a polar navigation sortie to Thule, Greenland. The six bombers returned to Carswell on 23 September. Enroute a partial profile mission was conducted. On 30 September, a total of 29 B-36s were assigned in the wing (25-D and 4-F).

9TH BOMB SQUADRON DEPLOYS TO CANADA On 11 October, six B-36D aircraft of the 9th Bomb Squadron deployed to Goose Bay, Labrador, for familiarization training. All aircraft landed without incident the same day at Goose Bay. Two days later on 13 October, the squadron flew a polar navigation mission to Thule, Greenland, and back. The six aircraft departed Goose Bay on 17 October, and flew a modified profile mission enroute to Carswell. This deployment was the third and final squadron familiarization flight in the wing. With this flight all three bomb squadrons were familiar with staging out of Goose Bay. Thus, the wing was set to deploy in the future when tasked at a moments notice.

Also on 11 October, the wing conducted a unit simulated combat mission out of Carswell using three B-36Fs (9th, 436th and 492nd Bomb Squadrons). The mission was flown in the Eglin AFB Range, Florida. All three aircraft completed the mission as scheduled and returned to Carswell on 12 October.

On 29 October 1951, Colonel Roberts was assigned temporary duty at Carswell as Commanding Officer, 19th Air Division. In his absence from the wing Colonel George T. Chadwell, deputy wing commander, assumed the wing commander position.

Following this, the wing closed out October 1951 with 31 B-36s on hand, 25-D and 6-F. During November 1951, five B-36Fs were assigned to the wing. By the end of the month the wing had 36 B-36s (25-D and 11-F) divided among its three flying squadrons.

FIRST RAF BOMBING COMPETITION The Royal Air Force Bomber Command, United Kingdom, held its first Bombing Competition from 12 to 15 December 1951. SAC entered six aircraft in the competition, officially called the Navigation and Blind Bombing Competition. Operating out of RAF Sculthorpe, Norfolk, United Kingdom, were two B-29s (9th Bomb Wing, Travis AFB, California and 301st Bomb Wing, Barksdale AFB, Louisiana), two B-36s (7th and 11th Bomb Wings, Carswell AFB, Texas), and two B-50s (93d Bomb Wing, Castle AFB, California). On 4 December, one 7th Bomb Wing B-36D and one 11th Bomb Wing B-36D deployed from Carswell. Both bombers were to take part on a non-competitive basis to demonstrate equipment in order to effect a mutual exchange of ideas and techniques, and to compare techniques in target study and briefing. Both B-36s landed at RAF Sculthorpe on 5 December. Both aircraft flew the competition route from 12 to 13 December, out of

Sculthorpe. The 7th Bomb Wing deputy commander, Colonel Walter E. Chamber and Air Chief Marshall, Sir Hugh P. Lloyd, Commander in Chief of the British Bomber Command, flew in the 7th Bomb Wing B-36. The aircraft was piloted by Major Artist Prichard, 9th Bomb Squadron. The SAC B-29 team of the 9th and 301st Bomb Wings placed first overall in the competition. The two Carswell B-36s departed Sculthorpe on 14 December and arrived back home on 15 December. As the year 1951 closed 37 B-36s (25-D and 12-F) were assigned in the wing at Carswell.

National Investigations Committee On Aerial Phenomena

Category: 08; Photographic Evidence

Subject: **The Sherman, TX Photo Case**
Date: **August 2, 1965**
Location: **Sherman, TX**

Francis Ridge:
3:00 am. This famous case of the photo of a banded light can be found in a lot of UFO books and magazines in the 1960's and later on. Not sure what the object was, but unless the entry from Brad Spark's Comprehensive Catalog of Project Blue Book Unknowns is the same sighting (not an original BB unknown and time not given), there were other strange sightings the same day of a brilliant light in Texas that date. Report details are linked below.

For reports, documentation, analysis or discussions - see below:

More Witnesses To The Roswell Incident

The second flight out of Roswell. The nine men who flew the debris to Fort Worth on July 8, 1947. Maj. Jesse A. Marcel, Lt. Col. Payne Jennings, Lt. Col. Robert I Barrowclough, and Maj. Herb Wunderlich.

Capt William E. Anderson, M/Sgt. Robert R. Porter, T/Sgt. William A. Cross, T/Sgt. George M. Ades.

T/Sgt. Sterling P. Bone

The July 8 flight was the second confirmed flight to move the debris east out of Roswell. The first took place on July 6. According to DuBose, it was ordered by Gen. Clements McMullen, deputy commander of SAC, who wanted some of the original debris brought into Roswell by Mac Brazel that very day to be flown to Washington for inspection. The flight passed through Fort Worth where DuBose checked the container (a pouch) holding the debris prior to sending it on its way to its final destination. The destination was Wright Field, after a brief stop at Fort Worth. The flight was piloted by Roswell's base deputy commander, Lt. Col. Payne Jennings.

Lt. Col. Joe C. Briley

Lt. Col. Joe Briley confirmed that Col. Blanchard's "leave" was just a "blind", when in actuality he was at the impact site.

Brigadier Gen. Martin F. Scanlon

Brigadier Gen. Scanlon was involved in the clandestine retrieval of the craft at Roswell.

Major Edwin Easley

After decades of silence, provost marshal, Major Edwin Easley confirmed the bodies as well as the impact site north of Roswell just before his death in 1992. Col. Blanchard ordered Easley to post guards on the access roads to the debris field.

Capt. "Pappy" Henderson

Material had been brought from the debris field and loaded on a C-54, this time flown by Capt. Pappy Henderson to Wright Field in Dayton, Ohio.

Next, go to the July 8, 1947 Press Conference.

NICAP Home Page

The Roswell "Witness" List

Alphabetical listing of those involved in the Roswell incident (as reported in UFO CRASH AT ROSWELL by Kevin D. Randle and Donald R. Schmitt (Avon, 1991):

Armstrong, Captain
- Collected pieces of the crash from the Brazels' two years after the crash

Barnett, Grady L. "Barney"
- Claimed to have found wreckage and bodies on the Plains of San Agustin, about 120 miles from where Mac Brazel found wreckage.

Barrowclough, Lt. Colonel Robert
- Executive Officer of Roswell Army Air Field, Roswell, New Mexico.

Blanchard, Colonel William
- Commander, 509th Bomb Group, Roswell Army Air Field. Upon seeing the material collected at the site by Major Jesse A. Marcel, he ordered the roads leading to the crash site blocked, and later made a special trip to the site.

Brazel, W.W. "Mac"
- Foreman at the Foster ranch in Lincoln County, near Corona, New mexico. He found the crash site on the ranch.

Brazel, Bill
- Son of Mac Brazel and a major witness.

Briley, Lt. Colonel Joe
- In mid-July, 1947 he became the Operations Officer at Roswell Army Air Base.

Brown, Dr. Jerry
- NASA engineer who had worked at White Sands Missile Range. He speculated that the metal found was Duraluminum alloy or a V-2 rocket.

Brown, Sergeant Melvin E.
- Was at the second site, guarding the truck containing alien bodies. He also guarded the hanger at Roswell Army air Field while crates from the site were held there.

Chavez, Senator Dennis
- US Senator from New Mexico. He supposedly called Walter Whitmore, Sr. and suggested that he not air the recorded interview with Mac Brazel.

Clark, Deputy, B.A.
- Took the initial report from Mac Brazel at the Chaves County sheriff's office.

Dubose, Colonel Thomas J.
- Chief of Staff to Brigadier General Roger Ramey. He was photographed in Ramey's office with the "debris."

Easley, Major Edwin D.
- Provost Marshal in charge of the troops clearing the crash site.

Foster, Iris
- Owned a cafe in Taos, New Mexico. She often heard a man call "Cactus Jack," an amateur

archeologist, talk about seeing a downed alien ship.

Gardner, Mary Ann
- Nurse at St. Petersburg Hospital, Florida. She heard an archeologist on her deathbed tell about discovering an alien ship and bodies.

Gardner, Norma
- Typist with top security clearance at Wright-Patterson Air Force Base. She typed autopsy reports on alien beings and saw two bodies.

Haut, 1st Lieutenant Walter
- Public Information Officer at Roswell Army Air Field. He was ordered by Colonel Blanchard to issue a press release stating that a flying disc had been recovered.

Henderson, Captain Oliver W. "Pappy"
- Member, First Air Transport Unit, Roswell Army Air Field, and co-pilot of the first B-29 flight from Roswell to Fort Worth. He also was the pilot of a C-54 flight carrying wreckage from Roswell to Wright-Patterson Field, Dayton, Ohio.

Henderson, Sappho
- Wife of Pappy Henderson. She was told by her husband that he had flown the C-54 to Wright Field.

Jennings, Colonel Payne
- Deputy base and group commander at Roswell Army Air Field. He was the pilot of the first B-29 flight from Roswell to Fort Worth.

Johnson, J. Bond
- Staff reporter for the "Fort Worth Star Telegram." He took photographs of the "wreckage" in General Ramey's office.

Joyce, Frank
- Reporter and announcer for Roswell radio station KGFL. He interviewed Mac Brazel on the telephone before the military arrived and later told a different story.

Kaufman, Frank
- Friend of Warrant Officer Robert Thomas. He said the bodies were sealed in a wooden crate, while still at the hospital.

Lapaz, Dr. Lincoln
- Expert in meteorites; degrees in mathematics and astronomy. He was called in to investigate the crash site.

Maltais, L.W. "Vern"
- Said Barney Barnett had told him he had seen bodies in one- piece grey suits, after which archaeologists and the military arrived.

Marcel, Major Jesse A.
- Intelligence Officer at Roswell Army Air Field, 509th Bomb Group Intelligence Office. He picked up material at the ranch and later flew it to Fort Worth Army Air Field.

Marcel, Jesse Jr.
- Son of Jesse A. Marcel. He saw debris samples that his father brought home and, under hypnosis, was able to recall the designs marking the I-beam.

McBoyle, Johnny
- Station Manager of radio station KSWS, Roswell, New Mexico. He attempted to put the Roswell story out over the wire.

McGuire, Phyllis
- Daughter of Sheriff George A. Wilcox. She saw the military arrive very soon after he father called them.

McQuiddy, Art
- Editor "Roswell Morning Dispatch". Walter Hunt delivered a press release to him, which other military personnel later tried to retrieve.

Newton, Warrant Office Irving
- Weather officer at Fort Worth Army Air Field. He was ordered to General Ramey's office to identify the "wreckage." a Rawin target balloon.

Parker, Jim
- Ranch hand of Mac Brazel's. His some came home from school one day in 1988 reported an Air Force truck in the area.

Payne, Bud
- Neighbor of Mac Brazel. He had gotten thrown off the Foster ranch by the military while chasing a stray cow. He knew exactly where the crash site was.

Porter, Sergeant Robert
- Crewman on the B-29 that flow packages from Roswell Army Air Field to Fort Worth Army Air Field. He claims that Jesse Marcel was on the flight.

Proctor, Floyd
- Mac Brazel's nearest neighbor and husband of Loretta Proctor. Brazel came to their house to show them a piece of the metal.

Proctor, Loretta
- Mac Brazel's nearest Neighbor and wife of Floyd Proctor. She said she remembers her husband trying to whittle on the metal but failing to make a mark.

Proctor, Timothy D.
- Son of Floyd and Loretta Proctor. He found the crash site with Mac Brazel.

Ramey, Brigadier General Roger
- Commander, eight Air Force, of which the 509th Bomb Group was a part.

Rickett, Lewis S.
- Army counter-intelligence (CIC) agent, who assisted in the retrieval of debris from the crash site.

Roberts, Jud
- Minority owner of radio station KGFL, Roswell, New Mexico. He said the military picked up copies of Haut's press release from the media there.

Shirkey, Robert
- Saw wreckage taken by eight or nine men through the Operations Building at Roswell Army Air Field.

Sleepy, Lydia

- Secretary to Merle Tucker in Albuquerque, New Mexico. She was ordered over the telephone to stop transmitting the crash story.

Smith, Sergeant Robert E.
- Member of the First Air Transport Unit at Roswell Army Air Field. He spent an entire day loading three aircraft with the material from the crash site.

Strickland, Lymann
- Neighbor of Mac Brazel. He saw Brazel in Roswell being escorted out of the newspaper offices by three military officers.

Strickland, Marian
- Neighbor of Mac Brazel, wife of Lymann Strickland. An upset Brazel visited them after his release from custody at Roswell Army Air Field.

Thomas, Robert
- Warrant Officer who came in on a special flight to assist in recovery of debris.

Tucker, Merle
- Owner of several New Mexico radio stations. He arrived back from out of town to find that his Roswell station manager had tried to put the crash story out over the wire.

Tyree, Tommy
- Hand for Mac Brazel. He began to work about one month after the crash and remembers that Brazel was irritated because the sheep would not cross the debris field and had to be driven the long way
around to water.

Whitmore, Walter Sr.
- Majority owner of radio station KGFL in Roswell, New Mexico. He hid Mac Brazel from the Military.

Wilcox, Sheriff George A.
- Sheriff of Chaves County, in which Roswell is located. Mac Brazel showed him a piece of the debris and he suggested Brazel contact the military.

Wilmot, Dan
- Resident of Roswell, N.M. He and his wife saw an oval- shaped object fly over their house on July 2, 1947, the probable date of the crash.

Zorn, Vernon D.
- Non-commissioned officer in charge of the Third Photo Unit at Roswell Army Air Field. He said no photos of the crash site were taken by his men.

Next, proceed to Press Conference at Fort Worth.

July 8th, 1947

The Roswell Newspaper & Fort Worth Press Conference

This page chronicles the press releases of July 8, 1947. Quite a bit has already been reported (see Timeline) about the discovery and recovery of the actual crash material. At 11:00 A.M. Lt. Walter Haut finishes the press release he'd been ordered to write and prepares to take it into town. He takes it first to one of the radio stations. By noon he has given a copy of the release to both radio stations and to both daily newspapers.

Roswell Daily Record

RAAF Captures Flying Saucer On Ranch in Roswell Region

Claims Army Is Stacking Courts Martial

House Passes Tax Slash by Large Margin

No Details of Flying Disk Are Revealed

Some of Soviet Satellites May Attend Paris Meeting

Miners and Operators Sign Highest Wage Pact in History

At 2:26 P.M. the story is out on the AP wire. The story announces: "The army air forces here today announced a flying disc had been found."

At 3:00 P.M. Marcel is told that he is going to Fort Worth with the wreckage. Only a few packages are loaded onto the plane. One, a triangular package about two feet long, is wrapped in brown paper. The other three are about the size of shoe boxes. They are so light that it feels as if there is nothing in them. The special flight, a B-29, takes off for the Fort Worth Army Air Field.

Calls come into Roswell from all over the world as the press release hits the various news wires.

Late in the afternoon, reporter J. Bond Johnson of the Fort Worth Star-Telegram is instructed to drive to the base. His editor tells him a flying saucer is coming from Roswell. Four photographs are taken by Mr. Johnson a couple of hours before the press conference, two showing Maj. Gen Roger M. Ramey by himself, and another two with Colonel Thomas J. DuBose. A couple of hours later the press conference takes place.

Brig. Gen. Roger M. Ramey, Commander of the 8th Air Force and "staged" balloon debris

Gen. Ramey and Col. Thomas J. DuBose

General Ramey and Lt. Col. DuBose

Some time before the press conference, at 3:53 PM. Roger Ramey announces that the flying disk has been sent on to Wright Field near Dayton, Ohio.

The press conference is held. Other reporters are present who take more photographs, some of which are shown below.

Marcel with substituted balloon debris on the floor of General Ramey's office

Marcel is shown here in Ramey's office. Before this, the general wants to see where the debris was found. Marcel accompanies him to the map room. Once Ramey is satisfied, they walk back to the general's office, but the debris is gone. In its place is a ripped-apart weather balloon with debris scattered on the floor.

Marcel was told to keep his mouth shut

Warrant Officer Irving Newton properly identifies the substituted debris as a balloon

Warrant Officer Irving Newton is ordered from the weather office at the Fort Worth Army Air Field to Ramey's office. Newton, in front of five or six reporters and officers of the Eighth Air Force, **immediately** identifies the wreckage on the office floor as a balloon. He is photographed and then sent back to his regular duties. Ramey orders his aide, Captain Roy Showalter, to cancel the special flight.

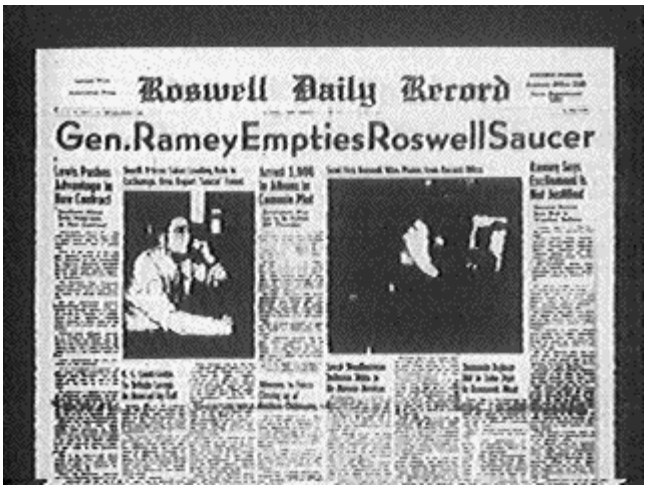
Years later DuBose acknowledges that the weather balloon story was designed to get reporters "off the general's back". And although Ramey, with the reporters watching, ordered the special flight cancelled, it was not. According to DuBose, Major General Clements McMullen, deputy commander of the Strategic Air Command, ordered Ramey to cover up the whole thing. They wanted to "put out the fire" as quickly as they could.

At 6:17 PM. the FBI sends a Teletype message to FBI Director J. Edgar Hoover telling him that a balloon is responsible for the reports. It is on its way to Dayton for examination by army air force experts.

At 7:30P.M. the AP breaks into its last message with a bulletin telling the world that the Roswell flying disk is nothing more than a balloon. Lt. Col. DuBose later told Roswell investigators that the balloon explanation was staged.

Ramey, with the identity of the wreckage established, announces to the world that the officers at Roswell had been fooled by a weather balloon. Ramey also appears on Fort Worth-Dallas radio station WBAP.

An unscheduled flight from Bolling Field (Washington, D.C.) arrives. Lewis Rickett meets it at Roswell and gives the crew a sealed box with wreckage in it. He is required to get a signature before he can surrender it.



Roswell Daily Record

Gen.RameyEmptiesRoswellSaucer

At 10:00 PM. ABC News "Headline Edition" tells the audience that Roger Ramey has identified the Roswell wreckage as a weather balloon.

Harassed Rancher who Located 'Saucer' Sorry He Told About It

And "Mac" Brazel, a very patriotic person, kept the story to himself the rest of his life. If it hadn't been for Maj. Jesse Marcel the Roswell investigation would have never been initiated. Since his announcement hundreds of persons have come forth describing different parts of the incident back in July of 1947.

The Roswell Incident

Timeline

Updated: 6-27-07; 2:20 pm

Wednesday. July 2, 1947
At 9:50 p.m. Mr. and Mrs. Dan Wilmot see an oval object, "like two inverted saucers faced mouth to mouth," passing over their house in Roswell, New Mexico. The object, moving at a high rate of speed, is heading northwest. (Ref. 1)

Friday. July 4, 1947
The first of the special flights from Washington arrives. On the plane is Warrant Officer Robert Thomas. Thomas and his companions are in uniform upon arrival, but quickly change to civilian clothes. Thomas wants an on-site briefing as soon as it could be arranged. These men remain at Roswell throughout the retrieval. (Ref. 1)

William Woody and his father watch a flaming object, white with a red trail, fall toward the ground north of Roswell. (Ref. 1)

During a thunderstorm near Corona, New Mexico, W W. "Mac" Brazel hears a tremendous thunderclap that sounds like an explosion but is somehow different from the rest of the thunder. Others in the area report the same phenomenon. (Ref. 1)

At 11:27 PM. the radar sites continue to watch the object. It seems to pulsate a number of times, then explodes into a starburst. The belief is that the object has now crashed. (Ref. 1)

Jim Ragsdale and Trudy Truelove see a bright flash of light and hear a roaring sound that passes overhead. Ragsdale knows that something has struck the ground close to their campsite. (Ref. 1)

Saturday, July 5.1947
Jason Ridgway (name changed), a sheepherder in central New Mexico, finds the remains of a crashed saucer He spends little time on the site and refuses to tell anyone about it until many years later. Ridgway is a friend of Mac Brazel. (Ref. 1)

Archaeologists, including W. Curry Holden, working the sites around Roswell stumble across the impact site where the object has crashed. One of them heads to the closest phone to tell Sheriff George Wilcox of the discovery of the remains of a crashed aircraft of some kind. (Ref. 1)

Wilcox calls the local fire department to alert them about the crash. One truck, with Dan Dwyer on it, responds to the call. The site is about thirty-five miles north of Roswell. (Ref. 1)

The Roswell Fire Department, escorted by members of the Roswell Police Department, makes a run along Pine Lodge Road northwest ofRoswell. These are among the first civilians to stumble across the impact site. (Ref. 1)

At 5:30 A.M. the military knowing the approximate location of the saucer crash, move in with a carefully

selected team for the recovery of the craft. The soldiers find civilians on the site already. They escort them off while others secure the area. Five bodies are found on the site. The site is cleaned and secured in six hours. (Ref. 1)

Following the rain the night before, Brazel inspects the pastures surrounding the ranch house. Riding with him is the young son of the Proctors, William D. Proctor. During the inspection, Brazel discovers a large debris field. Scattered on the slopes and into the sinkhole and depressions are metal, plastic like beams, pieces of lightweight material, foil, and string. The debris is thick enough that the sheep refuse to cross the field and are driven around it to water more than a mile away. (Ref. 1)

Thomas and his crew move out to the impact site. The bodies, originally covered by sheets, are now in lead-lined body bags. Only those with the highest clearance are allowed close to the center of the impact. Guards are posted, facing out, to keep the curious away (Ref. 1)

John McBoyle, a reporter for radio station KSWS in Roswell, tries to reach the crash site. He phones to report an object looking like a crushed dishpan. He tells Lydia Sleppy, who works at the parent station in Albuquerque, to hang on. She overhears an argument and then McBoyle tells her to forget it, he has made a mistake. McBoyle is about forty miles north of Roswell. (Ref. 1)

Sleppy tries to put a message out on the Teletype. According to Sleppy, the message is intercepted by the FBI in Dallas and she is ordered not to complete the transmission. (Ref. 1)

Melvin F. Brown, who is on guard duty at the impact site, is warned to climb into the back of the truck. Although he has been ordered not to look under the tarp, the moment that everyone's back is turned, he does. He finds the bodies of the alien flight crew. They are small, with large heads and skin that is yellow or orange. (Ref. 1)

Glenn Dennis, the mortician working at the Ballard Funeral Home in Roswell, receives a call from the base mortuary officer, who asks him about small caskets. (Ref. 1)

In Roswell for a conference, C. Bertram Schultz, a vertebra paleontologist, drives north from the city on Highway 285. To the west he sees a number of guards along the highway. Schultz isn't interested in driving to the west, so he doesn't stop, nor is he bothered by the guards. (Ref. 1)

The Roswell base mortuary officer calls again. He asks Glen Dennis questions about what various chemicals would do to blood and tissue. He also wants to know the procedures for preparing a body that has lain out in the elements. Dennis suspects a fatal crash involving a VIP. (Ref. 1)

Glenn Dennis receives a call from downtown Roswell, where an airman had been injured. The funeral home where Dennis works also operates the ambulance service. Dennis drives the injured airman to the base, is waved through the gate, and stops at the rear of the hospital. Parked behind it, at the loading dock and in front of the emergency room, are three ambulances. In the rear Dennis sees small, canoe like devices and strange debris of some sort. (Ref. 1)

The bodies arrive at the base and are taken to the hospital for examination. Dr. Jesse Johnson pronounces them dead. Two doctors who are not assigned to the base but who have arrived on one of the special flights begin the preliminary autopsy. (Ref. 1)

Brazel, taking a few scraps of the material, heads to the home of his closest neighbors, Floyd and Loretta Proctor. He shows them "a little sliver" of material that he can neither burn nor cut. The Proctors suggest he take it into town to show the sheriff. (Ref. 1)

Inside the base hospital at Roswell, Dennis is confronted by two officers. A red haired captain tells Dennis that he has seen nothing and heard nothing; if he opens his mouth, they will be picking his bones out of the sand. (Ref. 1)

Military bases along the West Coast have fighters on standby in case the flying disks are seen. A few bases in Oregon and Washington have planes equipped with gun cameras on airborne alert. (Ref. 1)

Sherman Campbell of Circleville, Ohio, reports to the sheriff that he has what he thinks is an explanation for some of the flying disk sightings. He has found a weather balloon on his farm. It is metallic, with a kite like appendage on it. The device is displayed at the local newspaper office and then returned to Campbell. Jean Campbell (Romero), Campbell's daughter, reports that it is kept in a barn for years afterward. (Ref. 1)

Later that evening, Brazel removes the large, circular piece of the debris from the range. Brazel either loads it into the back of his truck or drags it along behind. He stores it in a livestock shed about three miles north of the crash site. (Ref. 1)

The bodies are sealed into a long crate, which is taken to a hangar. It is left there overnight with spotlights playing on it while MPs stand guard around it. They never approach it. (Ref. 1)

Melvin Brown, along with other soldiers, is ordered to stand guard outside the hanger. Brown's commanding officer approaches and says, "Come on, Brownie, let's have a look inside." But there is nothing to see because everything has been packed and crated, ready for shipment. (Ref. 1)

Sunday, July 6, 1947
Brazel gets up early, completes his chores, and then drives into Roswell, about seventy-five miles away He stops at the office of Sheriff George A. Wilcox. Contrary to published reports, Wilcox is excited about the find and suggests the military at the Roswell Army Air Field be notified. (Ref. 1)

At 11:30 A.M. Dennis finally locates his friend, the nurse, who agrees to meet him for lunch. He drives out to the base to meet her at the officers' club. (Ref. 1)

While waiting for the military officers to arrive, Wilcox dispatches two of his deputies to the ranch. They have only the directions given by Brazel, but both men are familiar with the territory; and Wilcox believes they will be able to find the debris field. (Ref. 1)

William Woody and his father try to drive out toward the area where they'd seen the object coming down, but the roads are blocked. The side roads off Highway 285, from Vaughn and to the west, are guarded by military police who allow no one to pass. (Ref. 1)

Frank Joyce, a reporter and announcer for radio station KGFL, calls the sheriff and asks if anything interesting is happening at the office. Wilcox refers him to Brazel. (Ref. 1)

Colonel William Blanchard, commanding officer, entrusted with oversight of the first and only atomic-bomb strike force in the world, the 509th Bomb Group, orders Jesse A. Marcel, the air intelligence officer, to investigate. Marcel immediately drives to the sheriff's office. Marcel interviews Brazel, examines the pieces of the material that Brazel brought in, and decides he had better visit the ranch to examine the field for himself. (Ref. 1)

Marcel, taking some of the debris with him, returns to the base and reports to Blanchard what he has seen. Blanchard, convinced that he is in possession of something highly unusual, perhaps Soviet, alerts the next higher headquarters. Marcel and Blanchard (and later, Cavitt) all knew this was from not any type of balloon. (Ref. 1)

Marcel returns to the sheriff's office with the senior counterintelligence agent assigned to the base, Captain Sheridan Cavitt. They escort Brazel back to his ranch and examine the debris field. (Ref. 1)

Acting on orders from Major General Clements McMullen, deputy commander of the Strategic Air Command, Blanchard obtains, from the sheriff's office, more of the debris. It is sealed in a courier pouch and loaded on an airplane to be flown on to the Fort Worth Army Air Field, where it is given to Colonel

Thomas DuBose for transport on to Washington, D.C. (Ref. 1)

After Marcel and Cavitt leave with Brazel, the two deputies return to say they did not find the debris field but observed a burned area in one of the pastures. There the sand has been turned to glass and blackened. It looks as if something circular has touched down. (Ref. 1)

At the Fort Worth Army Air Field, DuBose and Colonel Alan D. Clark, the base commander, meet the aircraft from Roswell. Clark receives the plastic bag with the debris and walks to the "command" B-26 to fly it to Washington, D.C., and General McMullen. (Ref. 1)

Because of the distance to the ranch over roads that are less than adequate, Brazel, Marcel, and Cavitt do not arrive until after dark. They stay at the "Hines" house (an old ranch house close to the debris field), eat cold beans, and wait for daylight. Marcel runs a Geiger counter over the large piece of wreckage Brazel has stored in the cattle shed. He detects no sign of radiation. (Ref. 1)

Monday, July 7,1947
At 2:00A.M. a special flight leaves for Andrews AAF in Washington, D.C. Some of the debris and the bodies are on that flight. (Ref. 1)

Brazel takes the two military officers out to the crash site. It is three-quarters of a mile long and two to three hundred feet wide. A gouge starting at the northern end of it extends for four or five hundred feet toward the other end. It looks as if something has touched down and skipped along. The largest piece of debris is recovered at the southern edge of the gouge. (Ref. 1)

The debris is as thin as newsprint, but incredibly strong. There is foil that, when crumpled, unfolds itself without a sign of a wrinkle, I beams that flex slightly and have some symbols on them, and material resembling Bakelite. (Ref. 1)

Walt Whitmore, Frank Joyce's boss at KGFL, arranges for someone to go and grab Brazel at the ranch and bring him back to Roswell. By this time Whitmore figures Brazel was about to become a heavily sought-after man, so what better place to hide him than Whitmore's home? (Ref. 3)

Marcel and Cavitt walk the perimeter of the field and then range out looking for more details or another crash site, but find nothing else. Finally they return and spend the remainder of the day collecting debris. They load the rear of Marcel's car and then the jeep carryall driven by Cavitt. About dusk they begin the trip back to Roswell. (Ref. 1)

Lt. Haut was aware that someone had reported the remains of a downed vehicle by midmorning after his return to duty at the base. He was also aware that Major Jesse A. Marcel, head of intelligence, was sent by the base commander, Col. William Blanchard, to investigate. (Affidavit, Haut)

By late in the afternoon that same day, haut would learn that additional civilian reports came in regarding a second site just north of Roswell. He would spend the better part of the day attending to my regular duties hearing little if anything more. (Affidavit, Haut)

Lieutenant General Nathan E Twining, the commander of the Air Materiel Command, the parent organization at Wright Field, Ohio, and the next higher headquarters for both the Alamogordo Army Air Field and the Kirtland Army Air Field, changes his plans and flies into Alamogordo. (Ref. 1)

General Carl Spaatz, commander of the army air forces, on "vacation" in the Pacific Northwest, tells reporters that he knows nothing about the flying disks or the plans of various local units to search for them. (Ref. 1)

Intrigued by the story Joyce has told him about the telephone interview he'd conducted with Brazel, Walt Whitmore, Sr., wants to learn more. Whitmore, who knows many of the ranchers and is familiar with the

area, drives out to find Brazel. (Ref. 1)

Walt Whitmore, Sr., who asked Brazel to stay the night in Roswell at his home, now brings the KGFL men in..
That eveing the station's minority owner and newsman, "Jud" Roberts, conduct a wire-recorded interview with Brazelr KGFL by now was off the air so the broadcast would have to wait until morning. (Ref. 3)

Tuesday. July 8.1947
At 2:00 A.M. Marcel stops at his house on the way to the base. He awakens his wife, Viaud Marcel, and son, Jesse, Jr., to show them the material. Over the next hour they examine the debris on the kitchen floor. Marcel, Sr., says it was a flying saucer. Marcel is not breaking regulations since nothing has yet been classified. With the help of his son, Marcel loads it into the car to be taken to the base. (Ref. 1)

At 6:00 A.M. Marcel and Cavitt visit with Blanchard in his quarters and tell him what they have seen. (Ref. 1)

Blanchard calls the provost marshal and orders him to post guards on the roads around the debris field, armed guards encircled the primary areas, denying access to anyone without official business. Easley is directed to locate Brazel and have him escort the MPs to the crash site. (Ref. 1)

Blanchard calls Eighth Air Force headquarters and advises them of the new find. By this time no one believes the material is from a Soviet device. (Ref. 1)

Eighth Air Force relays the message up the chain of command to SAC headquarters. (Ref. 1)

7:30 a.m. The regular 8:00 AM staff meeting is moved up to 7:30 A.M. Lt. Haut would attend the regularly scheduled staff meeting. Besides Blanchard, Marcel; CIC [Counterintelligence Corp] Capt. Sheridan Cavitt; Col. James I. Hopkins, the operations officer; Lt. Col. Ulysses S. Nero, the supply officer; and from Carswell AAF in Fort Worth, Texas, Blanchard's boss, Brig. Gen. Roger Ramey and his chief of staff, Col. Thomas J. Dubose were also in attendance. The main topic of discussion was reported by Marcel and Cavitt regarding an extensive debris field in Lincoln County approx. 75 miles NW of Roswell. A preliminary briefing was provided by Blanchard about the second site approx. 40 miles north of town. Samples of wreckage were passed around the table. It was unlike any material I had or have ever seen in my life. Pieces which resembled metal foil, paper thin yet extremely strong, and pieces with unusual markings along their length were handled from man to man, each voicing their opinion. No one was able to identify the crash debris. (Affidavit, Haut)

One of the main concerns discussed at the meeting was whether we should go public or not with the discovery. Gen. Ramey proposed a plan, which I believe originated from his bosses at the Pentagon. Attention needed to be diverted from the more important site north of town by acknowledging the other location. Too many civilians were already involved and the press already was informed. I was not completely informed how this would be accomplished. (Affidavit, Haut)

7:30 A.M. Regular morning staff meeting is moved up to 7:30 A.M. Blanchard discusses the new find and its possible disposition. Attending the meeting are Marcel and Cavitt; Lieutenant Colonel James I. Hopkins, the operations officer; Major Patrick Saunders, the base adjutant; Major Isidore Brown, the personnel officer; and Lieutenant Colonel Ulysses S. Nero, the supply officer There is reason to believe that Lieutenant Colonel Charles W Horton, Lieutenant Colonel Fernand L. Andry; Lieutenant Walter Haut, and Master Sergeant Lewis Rickett may have also been there. (Ref. 1)

Whitmore, his wire-recorded interview with Brazel completed, takes Brazel out to the military base. (Ref. 1)

At 9:00 A.M. Cavitt and Rickett, having returned from assignment in Carlsbad, drive a staff car to the impact site, followed by MPs. They are stopped by the guards who are still posted. When they arrive, they

see that a small containment of debris remains which Rickett is allowed to examine. (Ref. 1)

Whitmore of KGFL receives a phone call from the FCC in Washington. He is told not to air the interview with Mac Brazel. If he does, the station will lose its broadcast license. Later, Senator Dennis Chavez, chairman of the Senate Appropriation's committee, phoned Whitmore to strongly advise him to do as he was instructed. (Ref. 1)

Blanchard and members of the staff confer by phone with higher headquarters. Brigadier General Roger Ramey orders Marcel to Fort Worth. (Ref. 1)

Mack Brazel, the ranch foreman who first discovered the debris field, was abducted and detained by the U.S. Army Air Forces at the guest house for four or five days while cleanup. Military officers begin to interrogate. Brazel was denied access to a phone, was given an Army physical, and was subjected to rigorous questioning and intimidation while under arrest. (Ref. 3)

At 11:00 A.M. Roswell AAF Commanding Officer Col. William Blanchard announced the recovery of a flying disc. Lt. Walter Haut finishes the press release he'd been ordered to write and is preparing to take it into town. He takes it first to one of the radio stations. By noon he has given a copy of the release to both radio stations and to both daily newspapers. (Ref. 1)

Sheriff Wilcox, wondering what happened out at the crash site, sends two more deputies out. This time they run into the cordon thrown up by the rnilitary and are turned back. The army is letting no unauthorized personnel onto the crash site. (Ref. 1)

At 2:26 P.M. the story is out on the AP wire. The story announces: "The army air forces here today announced a flying disc had been found." (Ref. 1)

The phones at the base start ringing. Irritated at his inability to get a line out, Blanchard orders Haut to do something about all the incoming calls. Haut says there is nothing he could do about incoming calls. (Ref. 1)

Robert Shirkey, standing in the operations building, watches as MPs begin carrying wreckage through to load onto a C-54 from the First Air Transport Unit. To see better, he has to step around Colonel Blanchard. (Ref. 1)

At 2:30 PM. Blanchard decides it is time to go on leave. Too many phone callers into the base are asking to speak with him. He, along with a few members of his staff, drive out to the debris field. Those left at the base are told to inform the reporters that the colonel is now on leave. (Ref. 1)

At 2:55 PM. the AP reports in a "95," just under a bulletin in importance, that a flying disk had been found. (Ref. 1)

At 3:00 P.M. Marcel is told that he is going to Fort Worth with the wreckage. Only a few packages are loaded onto the plane. One, a triangular package about two feet long, is wrapped in brown paper. The other three are about the size of shoe boxes. They are so light that it feels as if there is nothing in them. The special flight, a B-29, takes off for the Fort Worth Army Air Field. (Ref. 1)

Calls come into Roswell from all over the world as the press release hits the various news wires. (Ref. 1)

Reporter J. Bond Johnson of the Fort Worth Star-Telegram is instructed to drive to the base. His editor tells him a flying saucer is coming from Roswell. (Ref. 1)

Marcel is in Ramey's office with some of the debris. The general wants to see where the debris was found. Marcel accompanies him to the map room. Once Ramey is satisfied, they walk back to the general's office, but the debris is gone. In its place is a ripped-apart weather balloon with debris scattered on the floor. (Ref.

1)

At 3:53 PM. Roger Ramey announces that the flying disk has been sent on to Wright Field near Dayton, Ohio. (Ref. 1)

More men arrive at the debris field and are assigned to assist in cleaning it. Soldiers with wheelbarrows move across the field, tossing in the debris. When the wheelbarrows are filled, the soldier take the debris to collection points. The debris is then loaded into covered trucks to be driven into Roswell. (Ref. 1)

4:30 PM. CST. General Roger Ramey, the commander of the Eighth Air Force and Blanchard's supervising officer, presented to the press an alternate story: He claimed the Army had recovered a rawin target device suspended by a Neoprene rubber balloon. ("Rawin" is a method of determining wind speed and direction by using radar or radio waves to track a balloon carrying either a radar-sensitive target or radio transponder.) Mack Brazel, the ranch foreman who first discovered the debris field, was abducted and detained by the U.S. Army Air Forces for four or five days while cleanup (Ref. 3)

At 5:30 PM. a solution for the mystery is offered by Major E. M. Kirton who tells the *Dallas Morning News* that a balloon is responsible for all the excitement. (Ref. 1)

5:26 P.M. EDT. ABC_News_July 8. ABC News "Headline Edition" First aired at about 5:26 P.M. this broadcast was re-broadcast at 10:00 P.M. (Rudiak)

Warrant Officer Irving Newton is ordered from the weather office at the Fort Worth Army Air Field to Ramey's office. Newton, in front of a small number of reporters and officers of the Eighth Air Force, identifies the wreckage on the office floor as a balloon. He is photographed and then sent back to his regular duties. (Ref. 1)

At 6:17 PM. CST the FBI sends a Teletype message from the Dallas office to FBI Director J. Edgar Hoover telling him that a balloon is responsible for the reports. It is on its way to Dayton for examination by army air force experts. This telex disputes Gen. Ramey's announcement to the press that the special flight transporting wreckage to Wright Field (Dayton) had been cancelled, as well as Ramey's explanation of a balloon and foil radar target. (Ref. 1)

At 7:30P.M. the AP breaks into its last message with a bulletin telling the world that the Roswell flying disk is nothing more than a balloon. (Ref. 1)

Ramey, with the identity of the wreckage established, announces to the world that the officers at Roswell had been fooled by a weather balloon. Ramey also appears on Fort Worth-Dallas radio station WBAP. (Ref. 1)

An unscheduled flight from Boiling Field (Washington, D.C.) arrives. Lewis Rickett meets it at Roswell and gives the crew a sealed box with wreckage in it. He is required to get a signature before he can surrender it. (Ref. 1)

At 10:00 PM. ABC_News_July 8. ABC News "Headline Edition" 5:26 P.M. re-broadcast (Rudiak).

At 11:59 PM. one of the photographs taken by J. Bond Johnson is transmitted to New York on the news wire. (Ref. 1)

Wednesday, July 9,1947
Morning newspapers trumpet the story that the "flying saucer" found near Roswell is a weather device. Some quote Ramey while others quote "informed" sources, including senators in Washington. (Ref. 1)

Clean-up on the various sites resumes at sunup. The military is trying to get everything picked up before any more civilians stumble across the field. (Ref. 1)

8:00 a.m. Members of the First Air Transport Unit begin loading crates into C-54s. They load three or four aircraft with an intermediate destination of Kirtland. From there they are to be taken on to Los Alamos. Armed guards watch the loading of the aircraft. (Ref. 1)

At approximately 9:30 a.m. Col. Blanchard phoned my office and dictated the press release of having in our possession a flying disc, coming from a ranch northwest of Roswell, and Marcel flying the material to higher headquarters. I was to deliver the news release to radio stations KGFL and KSWS, and newspapers the Daily Record and the Morning Dispatch. (Affidavit, Haut)

By the time the news release hit the wire services, Haut's office was inundated with phone calls from around the world. Messages stacked up on his desk, and rather than deal with the media concern, Col Blanchard suggested that he go home and "hide out." (Affidavit, Haut)

Before leaving the base, Col. Blanchard took Haut personally to Building 84 [AKA Hangar P-3], a B-29 hangar located on the east side of the tarmac. Upon first approaching the building, he observed that it was under heavy guard both outside and inside. Once inside, he was permitted from a safe distance to first observe the object just recovered north of town. It was approx. 12 to 15 feet in length, not quite as wide, about 6 feet high, and more of an egg shape. Lighting was poor, but its surface did appear metallic. No windows, portholes, wings, tail section, or landing gear were visible. Also from a distance, Haut was able to see a couple of bodies under a canvas tarpaulin. Only the heads extended beyond the covering, and he was not able to make out any features. The heads did appear larger than normal and the contour of the canvas suggested the size of a 10 year old child. At a later date in Blanchard's office, he would extend his arm about 4 feet above the floor to indicate the height. Haut was informed of a temporary morgue set up to accommodate the recovered bodies. Haut was informed that the wreckage was not "hot" (radioactive). (Affidavit, Haut)

Jud Roberts along with Walt Whitmore, Sr., attempt to drive out to the debris field but run into the military cordon and are turned back. (Ref. 1)

According to Roswell Army Air Field head secretary Elizabeth Kyle, the telephones at the base are still tied up by the incoming calls. (Ref. 1)

More of the wreckage is brought into the base and is now being taken to be boxed into crates of various sizes and shapes. (Ref. 1)

Bud Payne, a rancher in the Corona area, is chasing a stray cow As he crosses onto the Foster ranch, a jeep carrying soldiers roars over a ridgeline and bears down on him. He is carried from the Foster ranch. (Ref. 1)

At 12:00 PM. the crate that has been sitting in the empty hangar guarded by the MPs is moved out to bomb pit number one. Nothing other than weapons has ever been stored in the bomb pit. (Ref. 1)

In Roswell Floyd Proctor and Lyman Strickland see Mac Brazel under escort by three military officers. He ignores both of them, something that he wouldn't have done under normal circumstances. (Ref. 1)

At lunch the nurse tells Dennis she is sick and wants to return to the barracks. In the course of the meal, she has provided Dennis with an account of what has happened and given him a drawing of the alien bodies. (Ref. 1)

Sometime that morning, Robin Adair, a photographer with AP received a call from main office in New York, was told to get to Roswell immediately, "even if it meant leasing a plane". Before land at Roswell, Adair flew over the sites (2). Many troops, vehicles, and MPs covered the large open field. "One of them (sites) wasn't very distinct. The other was." Something had descended, impacted the ground, and then ascended into the air. (Ref. 3)

Under military escort Brazel is taken into town and into the offices of the *Roswell Daily Record.* There he gives reporters, including Robin A. Adair and Jason Kellahin from Albuquerque, a new story. Now he claims to have found the debris on june 14. He also says he has found weather observation devices on two other occasions, and what he found is no weather balloon. (Ref. 1)

Ramey's weather officer; Irving Newton, says the weather balloon is a special kind. "We use them because they go much higher than the eye can see. (Ref. 1)

An officer from the base sweeps through Roswell picking up copies of Haut's press release, including those at the two radio stations. (Art McQuiddy said that a military officer had retrieved the copies of the press release written by Haut.) (Ref. 1)

Late in the afternoon, a flight crew at the skeet range is told they have a special flight coming up. The squadron operations officer; Edgar Skelly, tells the aircraft commander to keep everyone together. (Ref. 1)

The aircraft loaded by Robert Smith and other members of the First Air Transport Unit takes off for Albuquerque. The crates will eventually reach Los Alamos. All the crates are marked with stencils saying TOP SECRET. (Ref. 1)

Members of the flight crew pulled from the skeet range quickly preflight their aircraft. Once that is accomplished, they taxi out to the bomb pit. The only places on the base where the bomb pit can be observed are the tower and portions of the flight line. (Ref. 1)

A sealed, unmarked wooden crate is brought out and loaded into the bomb bay of the B-29, tail number 7301. Six armed MPs guard it, never allowing it out of their sight. (Ref. 1)

At Fort Worth a number of officers meet the aircraft. One is a man the bombardier recognizes as a mortician with whom he went to school. (Ref. 1)

When the crate is unloaded and taken from the flight line, Jesse Marcel is driven up to the aircraft. He and the crew are told to return to Roswell. There was no briefing given to them at fort Worth. It is clear now that this flight was a diversion. The bodies had already been sent to Andrews. (Ref. 1)

At 6:00 PM. Joseph Montoya returns to the base to catch the courier flight to land. He wants to get out of Roswell and forget what he has seen. (Ref. 1)

Mac Brazel calls on Frank Joyce, this time with a new story, significantly different from the one he told on Sunday. When Joyce points that out, Brazel responds that it "would go hard on him" if he didn't tell the new story. (Ref. 1)

At 8:00 PM. the flight crew is back. Again, they were not debriefed, but are told that they have flown the general's furniture to Fort Worth. They are cautioned not to tell anyone, including their families, what they have done. As far as everyone is concerned, the flight has not taken place. (Ref. 1)

Upon his return, Marcel confronts Cavitt in the intelligence office. Marcel wants to the reports flied in his absence, but Cavett refuses. Marcel points out that he is the senior officer but is told the orders came from Washington. If he has a problem, to "take it up with them." (Ref. 1)

Upon his return from Fort Worth, Major Marcel described to Haut taking pieces of the wreckage to Gen. Ramey's office and after returning from a map room, finding the remains of a weather balloon and radar kite substituted while he was out of the room. Marcel was very upset over this situation. haut and Marcel would not discuss it again. (Affidavit, Haut)

Haut would be allowed to make at least one visit to one of the recovery sites during the military cleanup. He would return to the base with some of the wreckage which he would display in my office. He was aware

two separate teams would return to each site months later for periodic searches for any remaining evidence and was convinced that what he personally observed was some type of craft and its crew from outer space. (Affidavit, Haut)

The *Las Vegas Review-Journal*, along with dozens of other newspapers, carries a United Press story. "Reports of flying saucers whizzing through the sky fell off sharply today as the army and the navy began a concentrated campaign to stop the rumors." The story also reports that AAF headquarters in Washington "delivered a blistering rebuke to officers at Roswell." (Ref. 1)

Thursday, July 10, 1947
As he reads the morning newspaper, Bill Brazel learns about his father's activities in Roswell. He realizes that no one will be at the ranch and makes plans to get down there to help. (Ref. 1)

At the debris field and impact site men are working to get everything cleaned up. They want nothing left and no signs of their presence. (Ref. 1)

Military personnel return to Sheriff Wilcox's office and ask for the box of debris he has been storing for them. Wilcox surrenders it without protest. (Ref. 1)

Mac Brazel is being held in the guest house on the base. The officers there are still trying to convince him that he is not to say anything about what he has seen. They are also trying to keep him out of the way of reporters. He is given a physical by doctors at the base hospital. (Ref. 1)

Sheriff Wilcox calls on Glenn Dennis's father, telling him that his son has gotten himself into trouble out at the base. The sheriff had been visited by a sergeant who wants to ensure Glenn's silence. (Ref. 1)

Major W. D. Prichard from Alamogordo claims that a unit from his base in Roswell launched balloons around June 14. That, according to the article reported in the Roswell Daily Record, is undoubtedly what Brazel had found. (Ref. 1)

Friday, July 11, 1947
The debriefings of all the participants are under way. Participants are taken into a room in small groups and told that the recovery is a highly classified event. No one is to talk about it to anyone. Everyone is to forget that it ever happened. (Ref. 1)

When he tries to contact his nurse friend, Glenn Dennis is informed that she has been transferred from the base and that no one knows where she has gone. (Ref. 1)

Members of the military warn those civilians around Roswell who know something of the events that they can never talk about what happened. In some cases, the witnesses are threatened with death should they speak to anyone. (Ref. 1)

Saturday, July 12, 1947
Bill Brazel and his wife, Shirley, arrive at the ranch, but no one is around. Brazel begins his work, first surveying the ranch to see what needs to be done. He sees no evidence of a continued military presence. The trucks, jeeps, soldiers, and cordon are gone. (Ref. 1)

This weekend no aircraft with gun cameras search for the flying disks. No aircraft on standby wait for orders to take off. In fact, all aircraft are ordered grounded to prevent further searching. (Ref. 1)

Tuesday, July 15, 1947
Mac Brazel returns from Roswell. All he will say about his experience is that his interrogators kept asking him the same questions over and over again and that Bill is better off not knowing what happened. Besides, Mac has taken an oath that he will never reveal, in detail, what he saw. By now most of the world has forgotten that a flying saucer supposedly crashed in New Mexico. (Ref. 1)

Late July 1947
A deeply upset Mac Brazel tells the Lyman Stricklands what happened in Roswell. Through he complains bitterly about his treatment there, he honors his oath of secrecy and says nothing about what he found. (Ref. 1)

Bill Brazel finds one of the pieces of foil-like material his father had described. Brazel shows this bit of debris to Sallye Strickland (later Tadolini). (Ref. 1)

August 1947
Mac Brazel and ranch hand Tommy Tyree spot a piece of wreckage floating in the water at the bottom of a sinkhole. Neither man bothers to climb down to retrieve it. (Ref. 1)

September 1947
Lewis S. Rickett is assigned to assist Dr. Lincoln La Paz from the University of New Mexico. La Paz's assignment is to determine, if possible, the speed and trajectory of the craft when it hit. According to Rickett, they discover a touchdown point five miles from the debris field where the sand has crystallized, apparently from the heat, and they find more of the foil-like material. La Paz, who apparently does not know that bodies were recovered, concludes that the object was an unoccupied probe from another planet. (Ref. 1)

Glenn Dennis learns that his nurse friend has been killed. A letter returned as undeliverable indicates the addressee is deceased. Nurses at the Roswell base tell him that she was killed in an aircraft accident while stationed in London, England. (Ref. 1)

November 1947
Arthur Exon, assigned at Wright Field, flies over the debris field and the impact site. The tracks of the trucks and jeeps are still visible, as is the gouge. (Ref. 1)

September 1948
Rickett, while in Albuquerque, meets with La Paz. La Paz remains convinced that an unoccupied probe from another planet crashed in New Mexico the year before. In his secret dealings with various government projects La Paz has found nothing to cause him to change his mind. (Ref. 1)

October 1948
Rickett meets with John Wirth, another CIC agent. Rickett asks Wirth about the status of the material recovered at Roswell and is told that they had yet to figure it out. According to Wirth, they hadn't been able to cut it. (Ref. 1)

Summer 1950
From time to time in the two years following the crash, Bill Brazel has found "scraps" of the craft. His father confirms this, saying, "That looks like some of the contraption I found." Bill Brazel, in Corona, mentions his discoveries. The next day Captain Armstrong and three others from the Roswell base arrive and ask for the material. Armstrong reminds Brazel that his dad cooperated with them. It is the younger Brazel's patriotic duty to give it up. Brazel can't think of a good reason to deny it to them and surrenders it. (Ref. 1)

Boyd Wettlaufer discusses the crash of an alien spacecraft with Dr. Lincoln La Paz. (Ref. 1)

1952
Major Ellis Boldra, an engineer stationed at Roswell, discovers samples of the debris locked in a safe in the engineering office. In the course of his experiments, he tries to burn and melt it with an acetylene torch and to cut it with a large variety of tools. Although extremely thin, the metal resists his efforts. When crumpled, it quickly returns to its original shape. (Ref. 1)

1961
UPI stringer Jay West is working in Alamogordo, in the area of White Sands Missile Range, when the base public information officer confides he has found a file that mentions the Roswell crash. The file includes a map. The PlO obtains a topographical map of the crash site. He and West make several trips out to try to locate the site. The maps show the debris field and then, to the east, a second site. (Ref. 1)

1969
As Americans walk on the moon, Melvin F. Brown tells his family that he has seen the wreckage of an extraterrestrial craft and the bodies of the crew. He assisted in the recovery; taking the bodies into Roswell. (Ref. 1)

1972
Inez Wilcox tells her granddaughter Barbara Dugger of the involvement of the Chaves County sheriff in the events of 1947. She says her husband, Sheriff Wilcox, was informed that one of the beings survived the crash. Mrs. Wilcox says rnilitary personnel used death threats to keep the family from talking about the events. (Ref. 1)

1978
Pappy Henderson confides in his close friend John Kromschroeder that he flew wreckage from a crashed saucer out of Roswell and to Dayton, Ohio. He shows Kromschroeder a fragment of the debris and tells his friend that he saw alien bodies. (Ref. 1)

Jesse Marcel is interviewed by a number of researchers, including Leonard H. Stringfield and Stanton Friedman. Marcel tells them that he is sure the wreckage is nothing from earth. Later, Marcel grants interviews to various news organizations, but those reports do not gain wide dissemination. (Ref. 1)

December 1979
Reporter Bob Pratt interviews and later publishes his interview with Jesse Marcel in which Marcel "admitted that he was the intelligence officer who had recovered the parts of a flying saucer." (Ref. 1)

1980
Syndicated television program "In Search Of" airs an episode about UFO coverups and interviews Marcel. In the course of that interview, Marcel again insists the material he saw had no earthly origin. (Ref. 1)

January 1980
Charles Berlitz and William L. Moore publish *The Roswell Incident,* the first attempt at a comprehensive analysis of the events at Roswell. In the course of his research, Moore located and interviewed more than seventy witnesses who had some knowledge of the event. (Ref. 1)

1982
After reading a story about the events at Roswell in a tabloid newspaper, Pappy Henderson tells his wife, Sappho, that everything in the story was true. He knows from his own personal involvement. He is surprised that the story is being released and, moreover; that it is accurately reported. He says even the descriptions of the bodies are accurate. (Ref. 1)

October 1988
Jim Parker's son sees a strange pickup truck on the ranch where the debris was found in 1947. Parker and his son chase it down and discover two men sitting in a U.S. Air Force pickup with a camper on the back. Inside are maps of the local area. The men are in their late twenties or early thirties and apparently of low rank. They claim they are surveying the area to put in a radar site to monitor low-flying aircraft. (Ref. 1)

Did Sheridan Cavitt Visit The Same Crash Site? or "Cavitt Emptor!"

by Bruce Maccabee

INTRODUCTION, January, 2001

AS virtually everyone knows, there has been an immense controversy over the so-called Roswell Incident ever since the book by the same name was issued in 1980 (written by Charles Berlitz and William Moore, with investigative work by Stanton Friedman and Bill Moore). The controversy heated up in the latter 1980s as Kevin Randle and Donald Schmidt mounted their own investigation which resulted in two books, the first about the crash at Roswell and the second about "The Truth" of the crash at Roswell. Stanton Friedman and Don Berliner also contributed the story of the crash at Corona (book so named beause the crash site on the Foster Ranch was actually closer to Conona, NM than to Roswell). In the early 1990s there was a General Accounting Office investigation and also an Air Force investigation. It is the Air Force investigation which is of interest because for the first time the only living (in the early 1990's) witness, who was with Jesse Marcel when he retrieved the strange material from the dessert, allowed himself to be interviewed. This witness was Sheridan Cavitt, former counterintelligence officer at Roswell Army Air Force Base. Cavitt was identified as a witness in the early 1980's by Loren Gross who discovered Cavitt's name on a UFO document. Marcel could only recall referring to the man as "Cav" so, until Gross found Cavitt's complete name, it was not possible to search the records to find out who Marcel had taken with him to the crash site. Several months after Gross found Cavitt's name, Moore succeeded in locating him and visiting his house for an interview. However, Cavitt refused to talk about the incident. Years later he also refused to talk to Randle and Schmidt. However, he did talk to the Air Force invesigator and the story below is what he claimed actually happened. The astute reader will realize that Cavitt's testimony is about as solid as a Swiss cheese (full of holes). It is for this reason that Cavitt's testimony is valuable evidence FOR the conclusion that the Roswell debris was truly unusual, as stated by Jesse Marcel.

COLONEL WEAVER'S INVESTIGATION

(The following was written in 1994.) In September, 1994. the Air Force released a 23 page summary of its six month investigation into the 1947 Roswell, New Mexico UFO crash event (the "Roswell Incident"). The summary was written by Col. Richard Weaver. According to Col. Weaver what crashed was not a single weather balloon and radar target, as had been claimed by the Air Force (General Roger Ramey) in July, 1947, but rather a very complex arrangement of many such balloons and radar targets which was flown from Alamogordo Army Airfield on June 4, 1947 and not recovered. The flight was part of a formerly Top Secret project called Mogul. Mogul was intended to detect nuclear explosions by listening for them at high altitudes. Of particular importance is the fact that the balloon and radar reflector structure which the Col. Weaver claims was "the" Roswell crash debris was not constructed with exotic materials. According to Weaver the only difference between it and a normal weather balloon with a radar reflector would have been in the quantity of balloon debris, radar reflector materials and connecting cords, coming from perhaps over two dozen neoprene balloons and several radar reflectors. (The instrument package may have appeared slightly different from the instrument package on a normal weather balloon.)

It is not my intent here to discuss the Mogul hypothesis in any depth....since I think it is quite shallow. Instead, I wish to examine the testimony of Sheridan W. Cavitt, who was at the time the chief Counter- Intelligence Corps (CIC) officer at the Roswell Army Air Base and who is "universally acknowledged to have been involved" in the Roswell recovery. Sheridan Cavitt was interviewed by Col. Weaver during the Air Force investigation. As I read Cavitt's sworn statement (attachment 17 of the AF report) and the transcript of his interview (attachment 18) I was astonished...

very astonished!

There are so many inconsistencies with the testimony of other witnesses that began to ask myself whether or not Cavitt actually visited the site that we think of as "the" crash site.

Let me show you what I mean.

CAVITT'S TESTIMONY

According to Cavitt's sworn statement, he and Jesse Marcel, the base intelligence officer and Louis Rickett, another CIC officer, all went to the crash site at the same time. He goes on to say,

"To the best of my knowledge the three of us traveled to the aforementioned ranch land area by ourselves (that is, no other persons, civilian or military, were with us)"

(my emphasis). In the interview transcript he is quoted as saying,

"To the best of my recollection, I never met the rancher, Brazel."

This directly contradicts Jesse Marcel who said he took "Cav" Cavitt along, but not Rickett, and they both went with rancher "Mac" Brazel who was, after all, the only person who knew where to find the debris. (Note: based on reconstruction from Marcel's story, he and Cavitt went with Brazel to the ranch late on Sunday, July 6, 1947. Marcel said they stayed overnight at the ranch, visited the debris field on July 7 and returned to Roswell at night on July 7.) Therefore, Cavitt's statement, exclusive of the Rickett portion, is, by itself, hard to believe because neither Cavitt nor Marcel could have found the site without Brazel's help. Furthermore, Rickett, when interviewed by UFO investigators, said that Cavitt informed him of the crash material after Cavitt and Marcel had returned from their visit to the crash site. This would have been when they returned to the Roswell base early in the morning of Tuesday, July 8. Then, according to Rickett, he went with Cavitt and another man when Cavitt went there for a second time later the same morning. Rickett could not remember the name of he third man (it was presumably not Marcel, since Marcel had been ordered to fly some of the material to Carswell Air Force Base in Texas). In contradiction to this statement by Rickett, Cavitt told Col. Weaver that he didn't go to the site a second time. Cavitt also contradicted Marcel's claim that they (Marcel and Cavitt) spent the night with Brazel at the ranch (without any running water). According to Cavitt's interview statement, this was

"Totally made up, fabricated or whatever. I didn't have any experiences like that of spending the night out on the ranch."

Cavitt's sworn statement goes on to say,

"When we got to this location we subsequently located some debris which appeared to me to resemble bamboo type square sticks one quarter to one half inch square, that were very light, as well as some sort of metallic reflecting material that was also very light. I also vaguely recall some sort of black box (like a weather instrument). The area of this debris was very small, about 20 feet square, and the material was spread on the ground, but there was no gouge or crater or other obvious sign of impact."

This description of the crash site is contradicted by Marcel who said the area was very large, comparable to a football field in size. Marcel said the arrangement of the debris made it look as if an explosion had taken place in the air while the object was moving rapidly and the explosion caused the material to seem to spread or radiate outward from a small area at one end of the debris field. Cavitt's sworn statment continues with the most amazing revelation of all:

"I recognized the this material as being consistent with a weather balloon.

(my double emphasis). It is truly amazing that Cavitt would claim that he recognized it as balloon debris because there is no indication that he told Marcel of his opinion. Why didn't Cavitt point this out to Marcel? Why did he let Marcel think it was something special, something "ET?" And, why didn't he tell Rickett it was debris from a weather balloon? Further on in the interview we find the statement,

"We gathered up some of this material, which would easily fit into one vehicle. There certainly wasn't a lot of this material or enough to make up crates of it for multiple airplane flights."

Marcel was explicit in indicating that there was a lot of material, some of which filled up the two vehicles which he and Cavitt used to drive to the Brazel ranch on Sunday (Cavitt drove a Jeep carry-all and Marcel a '42 Buick, according to Marcel). According to Bill Brazel, "Mac" Brazel's son, a large number of Army personel appeared at the crash site to pick up the material which was left behind by Cavitt and Marcel. (NOTE: Cavitt's claim that there was not much debris also contradicts the official Air Force story that it was debris from a crashed Mogul balloon device. This would, indeed, have created a considerable amount of balloon and string debris and perhaps wooden structural members. This debris could have been spread over a large area since a Mogul balloon "train" consisted of many balloons tied in groups and extending over a length of several tens of feet, at least. I suppose the cynic with a conspiratorial bent would, at this point, suggest that perhaps Cavitt had not been very well briefed on what he should tell Colonel Weaver! Keep in mind that Cavitt had refused to be interviewed by people before Weaver, and he also refused after Weaver's visit. Yet, he testified that he had been cooperative with other researchers.) Cavitt's testimony continues as follows:

"What Marcel did with this material was unknown to me, although I know now from reading about this incident in numerous books that it was taken to the Eighth Air Force Headquarters in Fort Worth where it was subsequently identified as a weather balloon, which I thought it was all along."

Later in the statement he says,

"I only went to this area once and recovered debris once and to the best of my knowledge there were no other efforts to go back here. If there were they did not

involve me There was no secretive effort or heightened security regarding this incident or any unusual expenditure of manpower at the base to deal with it."

This claim that there was no particular effort expended to deal with this material contradicts numerous witnesses who said that there seemed to be a lot of activity surrounding the material. Still further in the statement he says,

"With regard to claims that we tested this material by hitting it with hammers without damaging it, I do not recall any of us doing so. I also did not test this material for radioactivity with a Geiger counter (or anything else)."

Here he is in conflict with Marcel's statement that some of the men picking up material did "test" it by hammering on it in order to permanently dent it, by attempting to crease it and by attempting to burn it. Marcel said they were not able to dent it, burn it or crease it. Bill Brazel, who collected small amounts of the material during a two year period after the crash, said that he, too, was unable to crease or dent it. (He didn't try to burn it.) Then Cavitt makes a very provocative statement:

"I do not recall attempting to burn any of this debris but my wife tells me she recalled that Jesse Marcel, his wife and son did have a small piece that they held over the fire when we had a cookout."

If true, what happened to that piece? Cavitt ended his sworn statement by reiterating his opinion that it was a balloon as "I thought so at the time and think so now," and by emphasizing that he had not been sworn to secrecy and was not withholding any information.

So! There you have it. Marcel and Rickett and all the others (Brazel, Brazel's neighbors, Sheriff Wilcox, Col. Blanchard, etc.) were all wrong, victims of insufficient education or self-delusion. They couldn't recognize a weather balloon, or a collection of weather balloons. Instead believed that the material was exotic. Then they went further and concluded it was from a "flying saucer." But they were all wrong. Cavitt, alone, realized what it was. At least that is what he and Col. Weaver would have you believe. Does this make any sense? Is is possible to explain how Cavitt's story could be so different without assuming that it is a "tall tale" intended to perpetuate the cover-up? Perhaps so, if we make a hitherto unthought of assumption (lots of people have theorized about what happened at Roswell in order to fill in the blanks in the history of the events; now it's my turn). Here I am making the (charitable?) assumption that Cavitt was telling the truth as he knew it. (I am aware of the alternative...that he had been "advised" how to answer by people presumably unknown to Col. Weaver and the AF investigations team.) The reason that there is a glimmer of "hope' that perhaps "Cav" and Marcel might both be correct is to be found in the transcript of the interview as opposed to the signed statement. Therein we learn that Cavitt and his wife had arrived at the base only shortly before the Roswell event. Weaver asked Cavitt when he was transferred to Roswell and he couldn't remember, guessing at first the fall of 1946, just after graduating from the Fort Holabird (Maryland) Counter Intelligence Corps school. Fortunately his wife was present for the interview and she recalled that it was June, 1947, which, according to Col. Weaver, agreed with the Cavitt's AF records. Cavitt's response to this was

"OK.. I told you my dates are slipping my mind.... It's hard to remember July 1947. I hadn't been there very long."

(my emphasis) Weaver asked Cavitt if he recalled the incident in early July when "you were asked to accompany Major Marcel to go recover the wreckage of anything?" Cavitt answered,

"Well, there again I couldn't swear to the dates, but in that time, which must have been July, we heard that someone had found some debris out not too far from Roswell and it looked suspicious. It was unidentified. So, I went out and I do not recall whether Marcel went with Rickett and me; I had Rickett with me. We went out to this site. There were no, as I understand, check points or anything like that (going through guards and that sort of garbage) we went out there and we found it. It was a small amount of, as I recall, bamboo sticks, reflective sort of material that would, well at first glance, you would probably think it was aluminum foil, something of that type. And we gathered up some of it. I don't know whether we even tried to get all of it. It wasn't scattered; well, what I call, you know, extensively. Like, it didn't go along the ground and splatter off some here and some there. We gathered up some of it and took it back to the base and I remember I had turned it over to Marcel. As I say, I do not remember whether Marcel was there or not on the site. He could have been. We took it back to the intelligence room... in the CIC office."

Then Weaver asked him what he thought it was and Cavitt responded that he thought it was a weather balloon. Later in the interview Cavitt said he made just one trip out to the site and he was sure it was with Rickett, but wasn't sure about Marcel. Weaver asked if he recalled reading about the "flying disc" in the newspaper and Cavitt said he didn't. He only took the paper for some weather reports. At this point his wife made a statement which leads directly to my "solution" to understanding Cavitt's story. She said, "We were so new there. In fact, I think I had just been there just maybe just (sic) a few days because I had been up to my sister's wedding and I don't think at that time we might not even have been taking the paper.... we heard nothing. Of course, we didn't associate with people on the base, either." In the following months and years the Cavitt's got to know the Marcels quite well and become good friends. One may imagine that they worked together quite often in the months and years after "the Roswell crash." These mutually contradictory stories could possibly be reconciled if we assume that Jesse Marcel made one important error of recollection: assume that Marcel was correct in claiming that he was accompanied by a CIC agent, but incorrect in recalling him as being "Cav" Cavitt. Perhaps Cavitt had only been on the base for a week or so based on his wife's testimony so Marcel would not have known him very well at that time. It is a historical fact that when recalling the story in 1979, when he was first extensively interviewed about this, Marcel couldn't remember Cavitt's first name, only that he was called "Cav." Perhaps Marcel was also confused about who actually accompanied him to "the" crash site. Suppose that he thought it was Cavitt, whereas in (my hypothesis) it actually was someone else, perhaps Cavitt's predecessor or some other CIC agent at the base. If this were true, then Cavitt was not involved with "the" Roswell crash. But, if he were not at "the" crash site, then what about his recollections? He clearly (assuming truthful!) recalls finding balloon wreckage with Rickett and, possibly, Marcel. My suggested explanation of Cavitt's story is based on the logical assumption that after the Roswell event was over, and assuming it really was "unconventional," the base would have been hypersensitized to the possibility of other crashes. Perhaps that would also hold true for ranchers in the area. Suppose, then, in the days or weeks following "the" incident, some other crash reports were made and suppose that Cavitt and Rickett and perhaps Marcel, actually went out on one of these and did, indeed, find a balloon. That could, possibly, explain the inconsistency between Cavitt's story and Marcel's. Years later Marcel would remember "the" crash and assume that Cavitt had accompanied him to the site and might forget about or ignore the crashed weather balloon because that was unimportant, whereas Cavitt would remember the weather balloon, but not "the" crash because he wasn't at "the"

crash site. What about Rickett's story? Perhaps he didn't go to "the" crash site after all, but only to a balloon site. Or, perhaps, he, too, incorrectly recalled Cavitt as the CIC officer who took him to "the" site. Naturally I cannot say that this hypothesis is correct, only that it might explain the conflicting testimony of three old men trying to recall the day by day, even hour by hour, events of thirty to forty years before. However, if this hypothesis is correct, then it leads to a mystery of its own: who was the CIC agent with Marcel? Could it have been Rickett, in which case Rickett would have visited the site twice? Or was it someone else? If this hypothesis is not correct and we can't find another which allows for all the witnesses to be telling the truth as they recall it, then it would appear that the blame for the inconsistency must be placed on Sheridan Cavitt. Is Cavitt' story a total fabrication for reasons related to the perpetuation of the cover-up? There is, after all, one undisputable fact in this whole story: Col. Blanchard, the Roswell (Army) Air Force commander, did order the release of the story which said a crashed flying saucer had been found on a ranch near Roswell and had been retrieved by Major Jesse Marcel. Col. Blanchard was not reprimanded for this information release (later on he was promoted to General). Furthermore, the stories told by numerous other witnesses tend to support the officially released story of the crash. The story told by Sheridan Cavitt, assuming that it applies to the same crash, is the only one that clearly contradicts this fact.

NOTE ADDED IN JAN. 2001 After this paper was circulated in 1994 I was told that a search of the information on base personnel at the time of the incident had failed to turn up any CIC officer who could have been at the crash site other than Sheridan Cavitt. Hence we must point the accusatory finger at Cavitt: it would appear that he lied during his tesimony to Col. Weaver.

Found: The Archaeologists

Update: 11/27/98

Kevin Randle

The following information supports the evidence that Barney Barnett was telling the truth when he told others he had been at the crash site of a strange object and saw something other than a balloon, an object and alien-looking bodies in the summer of 1947. It also indicates why there has not been found any supporting evidence for a crash in the Plains of San Agustin. The crash site was just north of Roswell. Not only have the previously unidentified archaeologists been found, but several confirmed the information mentioned by Barney Barnett. Earlier, there was no proof that Barnett had been on the Plains on the day in question. And never has anyone accused Barnett of lying. The following updated report convincingly explains what happened and why some previous information has been conflicting. This is only the beginning. There are more witnesses to be found. Our thanks to Kevin Randle for his permission to post this web page.

Francis Ridge
NICAP Site Coordinator

Kevin D. Randle:
It was Barnett who introduced the concept of archaeologists into the Roswell crash case. Or rather, it was those repeating the Barnett story since Barnett died before any researchers began to investigate. (1) It was Jean Maltais who said they were affiliated with the University of Pennsylvania.(2) The stage was set for an area of investigation that would bear little fruit for more than a decade.

Bill Moore, writing in his 1985 paper about the status of his Roswell investigation, said that the link to the University of Pennsylvania had been confirmed. (3) He offered nothing in the way of evidence that it had been confirmed, just that statement.

As our investigation began in 1989, there was no reason to assume that the Barnett testimony was in error in any fashion. The conventional wisdom accepted the Barnett story at face value, and the search for the archaeologists, potential first-hand witnesses to the craft and bodies, was launched. Following the well-mapped route, we began the task of learning who was working in the state of New Mexico in July 1947, with an emphasis on those working in the area of the Plains of San Agustin.

Records were available listing who was where and what was being done. The archaeological literature provided additional clues, and while some of the records available at the Museum of New Mexico, and the Laboratories of Anthropology both in Santa Fe and the University of New Mexico in Albuquerque, might be incomplete, the articles contained acknowledgement sections listing local help and amateurs who assisted on the projects. In other words, there was a paper trail that would lead back to the archaeologists if any had been involved.

The archaeologists who were working on the Plains or near the Plains in July have been identified and eliminated. All of them have denied knowledge of anything happening there.

(4) Friends of them were located and questioned, in the hope of a lead, but none developed. The only conclusion that could be drawn was that none of them had been involved.

Given the situation, it would be easy to decide that the story of archaeologists had somehow been created between what Barnett actually said and what those he spoke to heard. The Barnett end of the story was created from second-hand testimony, and it is possible that something had been misunderstood. Since no one can now interview Barnett to ask him, investigators were forced to speculate about his testimony

It would have been easy to ignore the archaeologist connection if not for two additional facts. On February 15, 1990, just about a year after we began to actively investigate the Roswell case, a man claiming to be one of the archaeologists called.

According to him, they had been surveying the general area looking for "signs of occupation that predated the arrival of the white man."

That was interesting but entirely irrelevant. Anyone reading anything about the Roswell case would have been able to invent that detail. It was clear from the little that had been said that early-man sites were of interest to archaeologists working in New Mexico. However, when asked if he was one of the archaeologists who had been on the Plains, he said, "No. We were working north of the Capitan Mountains."

That was the new wrinkle. No one had suggested that the archaeologists had been working anywhere other than the Plains of San Agustin. He took it further, saying they had been driving cross-country, searching for evidence that the Indians had been in the area in the ancient past. They came up over a rise, and in the area below, "maybe half a mile, maybe more... was something that looked like a crashed airplane without wings." The caller said that it looked like an aircraft fuselage that was badly damaged, with no sign of a dome, porthole, or hatch. (5)

Interestingly, the man said that he saw another man already there. The archaeologist didn't pay much attention to the other witness, being so concerned with the crashed craft that he said he now knew wasn't an airplane. "It was more rounded." It was so badly damaged that he couldn't tell if it had been disk-shaped or not.

He only saw three bodies. They were small with big heads and big eyes. He said that the head was turned to one side, so that it was difficult to see the facial features. The beings were wearing silver-colored flight suits.

The military arrived moments later. The archaeologist thought there was an officer with them but wasn't sure. All were armed with pistols, and a couple of them had rifles. The archaeologists were ordered away from the craft and stood facing away from it. The man in charge told them that it was of vital national interest that they forget what they had seen. The man then took the names and school affiliations, telling them that grant programs and government funding could disappear if they mentioned what they had seen. (6)

They were then escorted from the area by armed guards. The archaeologist didn't mention what happened to the man who had been there first.

The intriguing aspects of the account were that he didn't report a disk and that they had been escorted from the site. Although nothing had been published about the military cordon, the archaeologist described it correctly, saying that there was an army car sitting at the side of the road with a couple of soldiers standing near it. They were turning back everyone who tried to use the road.

It was an interesting story and the man sounded sincere, but the same could be said for Gerald Anderson. In fact, from one point of view, the Anderson testimony was better because it wasn't anonymous and Anderson did supply some documentation. Only after it all fell apart was the Anderson story rejected for the hoax it was. (7)

The archaeologist changed, significantly, the location of the crash site. He placed it in Lincoln County, near the Brazel ranch. He changed the description of the craft and mentioned only three bodies. It was interesting corroboration of part of the Barnett story, but there were enough differences to suggest the man was relating what he'd seen as opposed to what he read. Unfortunately, with no other information, there was little that could be done to investigate.

But that wasn't the only lead to the archaeologists. After the "Unsolved Mysteries" broadcast of September 1989, Mary Ann Gardner came forward. She had been watching the program with her husband when she turned white and felt her stomach flip over. The story of the archaeologists was one that she'd heard about ten years earlier from a dying cancer patient.

The woman (Gardner couldn't remember her name) had been alone in the hospital. Feeling sorry for her because she had no visitors, Gardner spent as much time as she could listening to the woman's stories. Several times she told about the crash of the ship and the little men she had seen.

According to Gardner, "Basically... they had stumbled upon a spaceship of some kind and... there were bodies on the ground. The army showed up... and chased them away and... told them that if they ever told anything about it, that the government could always find them."

Gardner couldn't get the woman to say much other than that they had been "little people with big heads," and later she added, "large heads and large eyes.

Gardner thought that the military officers had covered the bodies the way police covered accident victims.

Under questioning, Gardner remembered that the woman had used the word "spaceship." Gardner thought that one of the men had entered the ship. He didn't explore it too far and then "the military was everywhere, the army people were everywhere."

The woman, according to Gardner, wasn't supposed to be there. They had been "looking for fossils. That's what she said. They were hunting rocks and looking for fossils.... She went with a friend."

Gardner said that when she first heard the story, in 1976 or 1977, she thought it was the result of a drug-induced fantasy. The woman was on painkillers because of her cancer, but she told the story half a dozen times. It wasn't until the "Unsolved Mysteries" broadcast that Gardner began to believe it. (8)

Of course, there were things to be investigated. Gardner remembered which hospital it had been and was able to provide a time frame for the event. It seemed simple enough to check the records at the hospital for the names of women who died of cancer during those years.

The hospital had been sold, but the hospital administrator said that if someone could get to Florida, the records would be available. But once that happened, there was a series of excuses as to why the records weren't available. Gardner was sure she would recognize the name if she heard it, but there was no way to learn it through the hospital.

The next best thing was to check the obituary pages of the local newspapers, but it was soon

evident that the task was overwhelming. All deaths in the area, and many from the rest of the state, were listed. All hospitals were included. Without a little more information, or another way to limit the search parameters, the task was impossible. (9)

These two cases, one second hand and one from an anonymous source, suggested that the Barnett data-that a group of civilian archaeologists had stumbled onto the crash site-was accurate. It was clear through research that the archaeologists had been neither on the Plains of San Agustin nor from the University of Pennsylvania, and that was about all that was known.

There was, as outlined elsewhere, very good evidence that something unusual happened near Roswell. The Mac Brazel story had a wide range of first-hand sources, documentation, and corroboration. The Barnett story had none of these.

Tom Carey, in fact, remembered the statement made by Moore in 1985 in which Moore claimed that he had confirmed the connection to the University of Pennsylvania. He called Moore and learned that he had spoken to an archaeologist at Pennsylvania who, according to Moore, remembered the story. Moore identified him as Bernard Wailes, who was still at Penn. Wailes denied it was he, said that he hadn't arrived in this country until the 1960s and knew nothing about the UFO crash near Roswell. He didn't even remember meeting Moore. (10)

The search then had to center on the area around the Brazel ranch and the areas north of Roswell. That was where something could be documented to have happened. It was the general area identified by the anonymous archaeologist, and it was about the only clue that was left.

Those at the Laboratory of Anthropology in Santa Fe took a look at all the reports filed from the area north of the Capitan Mountains east toward Roswell. The Museum of New Mexico provided the names of those who had been working in that area from 1945 through 1955.

The two names that popped up were Donald Lehmer and Jane H. Kelly Both were professionals who had written monographs that included information from the proper region. Lehmer, unfortunately, had been killed in an automobile crash, (11) but Kelly was alive and teaching. The scientific director of the Center for UFO Studies (CUFOS), Mark Rodeghier, spoke with her, and she said that she hadn't gotten into the region to make her study until sometime after 1948 (12) That seemed to be documented by her monograph.

Friends and advisors to Lehmer were found and interviewed. Fred Wendorff knew Lehmer well and said that Lehmer had never mentioned a thing to him. Wendorff believed that had Lehmer been involved, he would have said something. Others who knew Lehmer said that he had never mentioned it. Family members were eventually found, including a daughter, Megan, who wrote Tom Carey, "I've talked to my brothers and my father's cousin. He never mentioned anything about the Roswell incident or anything about UFOs to them." (13) That seemed to eliminate Donald Lehmer.

Since we'd already searched through the lists of professional archaeologists who had been working in New Mexico during the summer of 1947, the only thing left was to try to find the amateurs. These ranged from pot hunters to untrained people with an interest in archaeology They rarely, if ever, produced a written record, but professionals often tapped into the amateur network as they conducted their research. Often, when they finished their reports, the names of the amateurs were appended to thank them for their assistance.

The Laboratory of Anthropology library filed not only the monographs prepared by professionals, but the surveys conducted at the request of the Bureau of Land Management.

Using those documents, it was possible to learn the names of some of the amateurs.

There were a number of amateurs who led back into Lincoln and Chaves counties. Lists of amateurs working around the Fort Stanton area, north and south of Roswell, and with the Museum and Art Center in Roswell were obtained. There are a number of important sites in the area, especially along the Hondo River valley leading to the west from Roswell. Those who had worked the sites were identified and, if still alive, contacted. It was another dead end. No one had any first-hand knowledge of the events, and no one was able to think of who it might have been.

Another amateur surfaced by the name of Cactus Jack. After the "Unsolved Mysteries" broadcast, Iris Foster called, telling of an old pot hunter she knew only as Cactus Jack. He told Foster that he had seen the "object which was round but not real big." He claimed to have seen four bodies and said they were small. Their blood, according to Cactus Jack, was like tar, thick and black, and stained the silver uniforms they wore. (14)

Foster couldn't remember Cactus Jack's real name, but her sister Peggy Sparks could. She said it was Larry Campbell, an old-timer who had drifted through parts of New Mexico, Texas, and Arizona his whole life. Campbell, she believed, had been burned a number of years earlier in a fire in Taos and lived at a nursing home in Las Vegas, New Mexico. (15)

A search initiated at the *Taos* News failed to reveal any information about a fire or Larry Campbell. Carey tried to learn if Campbell had ever been in the nursing home in Las Vegas, and the answer was no. (16)Campbell, it seemed, was another dead end.

Interestingly, another Cactus Jack was located. Unfortunately he was in prison in Anthony, New Mexico. A quick check revealed that he was not old enough to be the Cactus Jack of the Roswell crash. (17)

Long lists of archaeologists and anthropologists had been located and many of the people were interviewed. They included Joe Ben Wheat, Jesse Jennings, William Pearce, Art Jelinek, Ridgely Whitman, John Speth, Regge Wiseman, and many more. The lists ranged from people who might have been involved to people who might have known who was involved.

For two years it seemed that nothing concrete could be learned. Had it not been for Gardner and the unidentified archaeologist who called, who seemed to have some inside knowledge, it would be simple to ignore this aspect of the case. The long searches, the checks at universities all over the United States, had failed to find a clue. With few exceptions, all who were interviewed were friendly and interested.

They wanted to help, but a point was reached when the names being given were the same ones already interviewed. There was nowhere to go.

Then Tom Carey received the break. A friend of a new member of Mutual UFO Network (MUFON) told Carey that her father, C. Bertram Schultz, had been telling the story of a crashed flying saucer for years. Although he wasn't an anthropologist, he was a vertebra paleontologist. He had spent time in Roswell and he had spoken to a group of archaeologists in Roswell who knew about the crash. He did, however, see the military cordon as he drove out of Roswell, speaking of guards on the western side of the highway Since he didn't want to drive off to the west, he was curious but unconcerned. (18)

The big question was: could Schultz remember the names of any of those archaeologists. According to him, W. Curry Holden was the leader of the group. (19)

Holden, at one time the chairman of the Department of History and Anthropology at Texas Tech in Lubbock, Texas, was ninety-six years old when he was discovered. Holden, when interviewed in 1992, said that he had been there. He could remember nothing about the event, other than that he had been there and had seen it all. Each time the question was asked during the short meeting, he confirmed that he had seen it all. (20)

Later, both his wife and daughter said that he was easily confused. Memories from his life were jumbled and reordered, and he had never mentioned, to either one, that he had been involved in a flying saucer crash. (21) But Holden had been asked the question three separate times in three separate ways, giving him the opportunity to answer it differently, yet he always responded that he had been there.

Holden's papers, nearly a quarter of a million sheets, had been given to Texas Tech and were there for review. With luck, there would be something in the papers to answer the questions one way or the other.

The weekend when the ship crashed had been a three-day holiday. Holden's records revealed that he had written a check in Lubbock on July 3, that he had been invited to a wedding on July 8, and that he made a bank deposit on July 9. There was no way to prove that he had been in Lubbock on the critical Sunday when the archaeologists had been on the impact site. (22) With Roswell only two to three hours away, and given the history of the region, there was no reason not to believe that he had been there.

Schultz was sure that Holden had been one of the archaeologists. Schultz mentioned that he had seen the cordon himself, (23) and his daughters confirmed that he had been to Roswell many times, particularly to a region south of Roswell. (24)

There are records of Schultz's research as well. Schultz was in southern Nebraska before and after the right date, collecting samples, but again, there is no record of where he was on the critical dates. The field notes, available at the University of Nebraska, were inconclusive, and Schultz's personal diaries were not available. (25)

Interestingly, records from Texas Tech did put Schultz and Holden together at the University of New Mexico for the 46th Annual Meeting of the American Anthropological Association, December 2~31, 1947. Holden attended the meeting, and Schultz spoke about "The Lime Creek Sites: New Evidence of Early Man in Southwestern Nebraska." (26)

Here were two major finds, archaeologists who had claimed to have knowledge of the events in Roswell, one first hand and one who had both first- and second hand information. But more important, both of them placed the site of the event in the Roswell area and not anywhere near the Plains of San Agustin.

The archaeologists had been found, but there weren't the revelations that had been expected. Holden, who died in April 1993, had been unable to share any additional data, and his age prevented a detailed questioning. Schultz, who could be interviewed, only related what he'd heard from Holden, and the little he'd seen himself.

Without these clues, the search would have been abandoned, but Carey couldn't let go. Without the data from the anonymous source and without the new data, the search would have to be ended. There would have been no hope.

But Carey stayed after it, reinterviewing those who had been found and rejected. He talked to Dr. George Agogino, who formally admitted that he had heard the story himself. He knew who had been there. When Carey read him the notes from the conversation with the anonymous source, Agogino said, "That's what he told me." (27)

Agogino didn't want to identify the archaeologist, because the man had made him promise not to tell. Fear of the goverument seemed to be the reason. He didn't want to get into trouble. But Agogino did tell, (28) providing a name as well as a corroborating source.

The search for the archaeologists has nearly ended. Their leader, Dr. W. Curry Holden, has been identified, and he confirmed his involvement. Corroborating witnesses have been found and interviewed. The story of archaeologists on the impact site, just north of Roswell, is true. The details provided by them have been sketchy, but we now have a better understanding of what happened on that New Mexican desert in July 1947. All that remains is to learn the names of the other witnesses and add them to the growing list of people who kept the greatest secret of the twentieth century.

COLONEL BLANCHARD'S PRESS RELEASE

Date: Sat, 14 Mar 1998 15:41:57 -0600
To: slk@world.evansville.net
Subject: File: "CURRENT-ENCOUNTERS LOG9803"

Larry Miller has submitted some interesting material that we are posting. Here is his bio.

Francis Ridge
NICAP Site Coordinator

Lawrence E. (Larry) Miller was raised in Chattanooga Tennessee and attended college at Duke University. After that, he served a 26 year career in the United States Navy as a nuclear submarine officer. Since retirement in 1991, he has worked as a nuclear engineer. His main hobby is investigation of the paranormal. He is 54 years old and lives in Burke, VA. He can be reached on the internet at lemillerla@aol.com.

Colonel Blanchard's Press Release
Copyright 1998 Lawrence E. Miller

(First published in The American UFO Newsletter [TAUFON] VOL. 4 No. 19, Jan./Feb. 1998)

It is my personal opinion that the UFO phenomenon is real and very complex in nature. However, I find the Roswell story full of what appear to me to be gross inconsistencies, logical absurdities and strong, unsettling indicators of hidden agendas being worked by the various "terrestrial" forces that seem to be feeding into it. I also appears to me to have been deliberately manipulated into a world class legend about extraterrestrial contact and government cover up complete with a cast of heroes, villains, saints, and a rigid dogma that seems to have virtually captured most of the attention and resources of the various mainstream UFO groups at the expense of more meaningful research into the UFO phenomenon.

I will hereafter refer to this as the Roswell Legend.

For these reasons, Roswell has come to fascinate me, and I have devoted considerable time and thought to analyzing its many facets. To try to cover all of the reasons why I believe that the "king has no clothes" with respect to the Roswell Legend in one article for TAUFON is impossible.

When discussing the Roswell Legend with my friends, I like to start by sharing my thoughts about a key element in the beginning of the Legend which is the press release by the Roswell base commander, Colonel Blanchard, announcing unequivocally that the U.S. Army Air Force at Roswell had recovered a crashed disc. These comments are strictly my opinions based solely on my reading of material referenced in the next paragraph.

The authors on the subject whose work I have read and studied and who want to promote the Roswell Legend seem to use the press release as some sort of prima facie item of proof of their case without ever subjecting it to any critical examination. I would argue that a close examination of that element of the story raises significant suspicions of something else going on and something quite different from that which the pro-Roswell Legend elements would like to believe. I have read thoroughly The Roswell Incident by Berlitz and Moore, UFO Crash At Roswell by Randle and Schmitt, Crash At Corona by Friedman and Berliner,

and a host of articles on the subject in various newspapers and periodicals including a recent interview with former Roswell Base Public Information Officer, Walter Haut, by the Albuquerque Journal during the Roswell 50th year celebration.

The fairly consistent basics of the story of the events leading to the press release from all my various sources are that Major Marcel returned from the debris field in the wee hours of the morning with a car load of allegedly strange material. Eventually, he had an early morning staff meeting with Colonel Blanchard who is supposedly shown a few small pieces of this strange stuff. Blanchard's reported immediate actions are logical and consistent with standard military procedure in cases where a commanding officer doesn't know what he is dealing with and suspects potentially significant national security issues may be involved. He reportedly orders the entire area sealed off and strong security measures put in place.

So far so good, and his actions make sense, especially in light of the testing of all sorts of advanced rockets, etc. at nearby ultra secret bases such as White Sands. Then, out of the blue, Colonel Blanchard calls Lt. Haut into his office and orders him to make a press release announcing as a certainty that a crashed disc had been recovered.

I very much believe that the precipitous nature of the order and the unqualified certainty of the press release is very important to note and, to me, strongly indicate that a hidden agenda was at work. In other words, I would argue that, at this point, the story of Blanchard's role in things departs logic and common sense unless there was more going on than has been revealed. Ordering the press release was totally inconsistent with his own just delivered instructions for tight security and totally in violation of all the training in such matters that a senior military officer gets during their career.

As a former career military officer, I can assure the reader that every professional military officer knows that press releases from senior military commanders in the field on anything other than trivial, non-controversial matters must be reviewed and approved at the highest levels in Washington. Violation of this rule gets your career ruined very quickly. That Blanchard would on his own initiative order such a momentous press release, which was roughly equivalent to announcing the Second Coming of Christ, after only a cursory look at a few small pieces of the debris and a brief conversation with one major on his staff is not remotely believable to me, especially since he suffered no adverse consequences for his action and was later reportedly promoted to general.

Further, according to the above sources, a sizable force of federal agents and soldiers conveniently and instantly materialized all over not just the Roswell area, but all over New Mexico to cause what appears to have been deliberate mayhem among the local citizens with rather dramatic efficiency, speed, organization and heavy handed, gestapo-style theatrics. I would argue that the reported heavy handed actions of this army of agents and soldiers was totally unprofessional and totally unnecessary in the context of the situation unless they were part of a bigger, hidden agenda. As I study the accounts of this blitz, I sense "showmanship" at work. This certainly arouses my suspicions that these forces were pre-staged with a well orchestrated game plan and were just waiting for their cue, which was Blanchard's expected press release.

I found it interesting to note that Randle and Schmitt in their book noted above made what I regard as a rather clumsy effort to explain why Blanchard would, in the context of the story to that point, do something so illogical as to order his famous press release. Unable to come up with my postulated reason that made any sense, they finally state on page 57 of my Avon 1991 paperback copy, "Blanchard acting on orders issued in Washington, D.C., ordered Walter Haut, the PIO, to issue a press release saying they had recovered a flying disc.'" (Italics added by this author for emphasis.) Having casually dropped this devastating bomb

right into the guts of the traditional Roswell Legend in the form of a definitive statement of alleged fact, they just simply ignore the incredible implications and moved on. They offer no source for such a definitive statement nor do they offer any comment or speculation as to who in Washington might give such an order and why.

In summary, based solely on the version of events related in the above referenced sources, I am forced to strongly suspect that Blanchard, when he ordered his famous press release, was following orders from the highest levels in Washington in accordance with a scripted plan. I believe that pursuing who in Washington gave him his orders for that press release and why is where real Roswell investigators ought to be looking.

by Stanton T. Friedman

Kent Jeffrey's anti-Roswell conclusions (MUFON Journal, June, 1997) are based on the same kind of false reasoning that led to his pro-Roswell views: Don't bother me with the facts, my mind's made up; be enthusiastic and ready to put ones money where ones mouth is, but don't have the facts in hand first; don't bother finding out how security works; believe what one wants to believe. Do one's research by proclamation rather than investigation. Select from the data available to back up your conclusions, and ignore the facts that don't.

Kent stated on a recent radio show with me that he has never had a security clearance and his article certainly shows over and over again that he doesn't understand: that higher classification info cannot be presented in lower classification documents; that having a particular level clearance is not enough to gain access to classified information; that one must have a need-to-know for that information; that people with high level security clearance do not pass on classified information to people not having a clearance and need-to-know for the information.
Kent decided the Santilli footage was fraudulent because of the curled phone cord. I asked if he had checked with the phone company. He said he didn't need to. He knew there were no curled cords in 1947. He was wrong. The patent was granted in 1937 and production began in 1938. I tried to keep him from wasting big money on attorneys because no evidence had been presented that Frank Kaufman had played any roll in intelligence in 1947 (he was a civilian clerk on the base) or needed legal counsel. Kent didn't need any evidence because he and his father had a good visit with Frank. So he wasted thousands of dollars.

I tried to get him to understand that it was ridiculous to jump from talking about events in New Mexico in July, 1947 to demanding the president declassify everything learned about ETs since 1947 which might, of course, include technology of great importance from a military viewpoint. I didn't sign the Roswell Initiative because I do not believe technical data (defensive or offensive) should be put on the table for the Saddam Husseins of the world. Remember that one can't tell one's friends without telling one's enemies.

Kent can't seem to understand the utter foolishness of his comment that information about ETs is "knowledge of profound importance to which we are all entitled". Important? Certainly. But why does he think we are all entitled? There is an annual black budget of $30 Billion. Our elected representatives obviously believe there is a great deal of information to which we are not entitled. Other foolish nonsense includes "The existence of a crashed alien spacecraft would have been much more of a social and scientific issue than a national security issue." Is there no understanding that the government was confronted with a vehicle having exotic flight capability (clearly potentially useful for weapons delivery, for defense, for reconnais- sance) whose origin wasn't known, whose purpose wasn't known, and whose technology would be useful, not only to the US, but to our enemies? What weapons did the aliens have? Would aliens work with our enemies? would they be attacking Earth? These are major security issues.

Kent hardly mentions the security level of the many documents to which he refers, and which he proclaims would have certainly told about a crashed saucer. He acts as if he has seen all the relevant documents, and as though all members of the advisory board would

have had a need-to-know for compartmentalized information. Only one document, as it happens, was TOP SECRET and it dealt with "Analysis of Incidents", not analysis of wreckage; two very different areas of technological investigation. I have been to 17 Archives now. At none of them did I have access to Special Compartmented Information rated, for example, TOP SECRET/UMBRA or ULTRA, or MAJIC. W.B. Smith, in a 1950 TOP SECRET memo said the matter of flying saucers was the most classified subject in the USA, even more than the H-bomb. And Kent thinks we are all entitled to know all about them !!!

Kent talked to 3 former officers of the FTD, none of whom were at Wright Pat in 1947. He insults them by saying if they had known anything highly classified about crashed saucers, they would have told him (no clearance and no need to know) what they knew. The very reason they might have been so kind to him is that they wanted to be sure to dissuade someone so naive that there was anything. Furthermore, I have several times been inside a vault at FTD when I was a project engineer on a contract with them for Aerojet General Nucleonics. It was a very compartmentalized place. The primary focus at FTD was paperwork from foreign scientists, spies, and intelligence analysts. I have trouble believing it was ever FTD's job to go from analyzing wreckage to developing new technology. The U-2, Stealth, SR-71, and a myriad of other technologies were devised by industry under contract to major CIA, USAF, NAVY, or Army groups, NOT at FTD.

General Arthur Exon told me in person that he did NOT have a need to know for all the activities at WPAFB even when he was base commander in the mid 60's. We cannot even be certain that the three officers would have been told about events and wreckage brought there more than a decade earlier. Their concern was the here and the now, the near future, and enemy (not alien) technology. It would have been much more likely to ship wreckage to a highly classified facility such as Area 51 (supposedly established in the late 1940s), or a part of Los Alamos or Sandia. With the very successful Manhattan Project as a shining example, it seems most likely that a Special Project would have been established outside the US Air Force, Navy, or Army.... let's call it Operation Majestic 12.

Kent talks about conversations with B-29 pilots. Why would they have had a need to know for info about crashed saucers? That wouldn't help them be better bomber pilots. Again he insults them by saying that if they knew or had known anything beyond what was in the papers they would have told him. I should mention I attended the 50th anniversary reunion of the 509th in Wendover, Utah and another reunion in Roswell, and talked with loads of people from the 509th. I was also very impressed with the men of the 509th. Kent proclaims, "The most significant and dramatic event in recorded history would surely have been discussed by these men". Security doesn't work this way. In the first place, no need to know. In the second place, if they did know they would have known better than to talk to anybody. Remember that Jesse Marcel was in Intelligence; Cavitt and Rickett were in the Counter Intelligence Corps. None were pilots.

Kent denigrates Pappy Henderson. I spoke with his wife, with his daughter, with his son, with his world War 2 Bombardier. He told none of these people before seeing a newspaper article about the crash after 1980. He did tell his good friend, Dentist John Kromsohroeder, before the article appeared, but with his promise on his honor as a former naval officer, he wouldn’t talk about it. John didn't talk until after the Unsolved Mysteries broadcast which included Sappho Henderson. Pappy, after all, was entrusted with flying VIP’s over the harbor in the Pacific after nuclear weapons were detonated there during Operation Crossroads in 1946.

Kent rattles on about the high reliability of today's aircraft engines implying that alien spacecraft would be much more reliable. One would think the only reason an airplane

could crash was engine failure. Yet Kent himself tells of an MD-88 that crashed because the flaps weren't set properly. The Valujet and TWA 800 crashes didn't occur because there was engine failure, but apparently because of unexpected events having nothing to do with engine reliability. Landing gear have collapsed on airplanes. I hate to remind Kent, a professional pilot, that occasionally pilots make errors too. Sometimes birds are ingested into engines; no fault of the engine. Kent states the craft must be capable of interstellar flight. Why? There are many reports of huge mother ships carrying smaller saucers. Fighters attacking North Vietnam didn't fly there directly from the USA on each mission. Many flew from aircraft carriers located near the front.
Kent acts as though the debris found by Mac Brazel must have been all there was. There have been aircraft accidents where an engine was found many miles from the fuselage. I am convinced, partly from the Eisenhower briefing, as delineated in "TOP SECRET/MAJIC", that alien bodies (NOT time shifted crash test dummies) and other wreckage from inside the craft, were found just a few miles from the debris field. Kent complains about nothing exotic being found because he apparently thinks he knows all about alien spacecraft construction. One of the things that Jesse Marcel senior impressed upon me in 1978 was the LACK of anything conventional.

Kent doesn't know, for example, what the outer hull (skin?) of an alien vehicle would look like. How could indestructible material be spread out? By an incredible explosion induced by a lightning bolt dumping a huge amount of energy into a magnetoaerodynamic propulsion system. The steel left after the Oklahoma city bombing was still very strong even though broken. A radar beam known to be on could have disrupted a propulsion or guidance system causing a collision. After all 40% of the UFO sightings in the summer of 1947, according to Bloecher, involved more than one vehicle. There is ample evidence that another vehicle went down in the Plains of San Augustin, as described in "Crash at Corona", having a gash in the outer hull like two parentheses face to face. This is ignored totally by Kent and others who, for whatever reason, do not want it to be true.

Jesse Marcel spoke to Walter Haut about a piece of the very strong lightweight metal being rested on a rock with the other end on the ground. A sledgehammer was applied with no dent; hardly paper backed foil radar reflector easily torn by a 4 year old. And do you REALLY believe you couldn’t dent a paper-backed foil lying on the ground using a sledgehammer at will ?????

One of the worst things about Kent's article is that it employs tunnel vision. What about the testimony of Bill Brazel, who found strange wreckage himself? Of Judd Roberts the radio station man? Of Elizabeth Tulk and Phyllis McGuire the sheriff's daughters? Of Loretta Procter, of other ranchers? I spoke with all of these in April. What about all the testimony relating to the Plains of San Augustine crash and the easy proof that the NSA and CIA are withholding UFO related information. Why does Kent act as though flying disc and UFO mean the same thing? My lecture is Flying Saucers are Real, NOT UFOs are real because only some UFOs are flying saucers, though all flying saucers are UFOs.

He acts as though the US government would never lie. When the Trinity Site nuclear explosion occurred in July, 1945, a cover story was issued saying an ammunition dump had blown up, but fortunately, no one was injured. During WWII elaborate disinformation schemes were used to misdirect enemy activity. Yes, Virginia, governments do lie, and yes, the US government has recovered two crashed alien saucers in New Mexico in July 1947 complete with bodies, as described in "Crash at Corona" in spite of the attacks of noisy negativists.

Kent blindly accepts the current stories from Cavitt and Newton although they completely contradict earlier stories told by them long before Roswell became a big deal. Their

stories even contradict each other as well as the testimony of Jesse Marcel and Lou Rickett told to me first hand long ago. The only basis for even considering a Mogul balloon explanation is the disinformation newly told by Mac Brazel after having been reprogrammed, (according to Judd Roberts, Bill Brazel, Loretta Proctor, the Stricklands, Frank Joyce) and reported in the Daily Record on July 9, 1947 along with the supposed June 14 recovery date and the sticks and foil nonsense. July 8 articles say the stuff was recovered "last week". Even the RDR says the stuff covered an area 200 yards in diameter; neat trick for a few sticks and foil from a radar reflector. Brazel would never have made the difficult trip to Roswell for a tiny radar reflector. If Cavitt was being truthful, Brazel would have tossed the wreckage (Cavitt said it would fit in one vehicle) in the back of his pickup, and there would have been nothing to take Marcel back to see.

But wait, Cavitt now says he immediately recognized it as a balloon covering an area 20 feet square. Captain McAndrew says it was a huge Mogul train of balloons over 500 feet long with 23 balloons and sonobuoys and radar reflectors. How could that come down in an area 20 feet on a side? Why didn't Cavitt describe any foil and sticks? Could he have thought that he was supposed to say a balloon, rather than a Mogul Balloon? Why had Cavitt tried to convince Don Schmitt and Kevin Randle he wasn't even based in Roswell in early July, 1947 when he now, many years later, has clear recall of a simple balloon? Why did Cavitt lie when he said he went out with Jesse and Rickett and saw nobody else. There was no way he could ever have gone to the debris field without following Brazel.

Marcel and Rickett each said they had gone out separately with Cavitt. Why doesn't Kent tell us the last line of the July 9 article, "I am sure what I found was not any weather observation balloon." Remember that Brazel had previously recovered balloons. Why doesn't Kent mention that Colonel Weaver, in the huge AF report, intentionally eliminated a most important phrase from a July 8, 1947, FBI memo about the supposed balloon, "The object found resembles a high altitude weather balloon with a radar reflector (but that telephonic conversation between their office and Wright Field had not borne out this belief) disc and balloon being transported". The intent is clearly to deceive.

Newton's testimony is very different now from what it was in 1979 to Bill Moore after I had located him. Could it possibly be relevant that both are loyal career officers on nice pensions who need no hassles in retirement? Remember that almost 20 years ago Jesse told me that the wreckage covered a huge area hundreds of yards long and that he and Cavitt each took away only a small portion of it. Remember too that Mrs. Cavitt told Bill Moore, "He's not going to tell you anything. They told him not to." Bill had unfortunately mentioned at the Toronto MUFON conference that we had located Cavitt before he had been visited.

Kent says the symbols drawn based upon Jesse Jr's testimony are the same as recalled by Newton. They look about as much alike to me as Greek and Russian letters. Did it not occur to Kent that Newton might have seen Jesse’s symbols at the Roswell museum or on an extruded replica? Funny, he hadn't mentioned the symbols years ago. Funny that the CIA's most sophisticated photo analysis couldn't find any of that wonderful toy factory tape in the photos.
In short, Kent Jeffrey's enthusiastic "definitive" article is a splendid example of propaganda, NOT investigation.

Mack Brazel RECONSIDERED

BY THOMAS J. CAREY and DONALD R. SCHMITT

Maggie and Mack Brazel in 1951, four years after the Roswell Incident. Photo courtesy of Bill Brazel Jr.

Were it not for William Ware "Mack" Brazel (1899-1963), there would never have been a Roswell Incident - at least not one known to the general public. In July 1947, the 48- year-old Brazel was scratching out a living as foreman of the J. B. Foster sheep ranch located 30 miles southeast of the small cattle town of Corona, New Mexico. The family lived in Tularosa, while Mack stayed on the ranch in a shack without a telephone, electricity, or even running water. The nearest neighbor was 10 miles.

As has been reported many times before, one day he discovered a mass of material strewn over a section of the vast hardscrabble grazing grounds and thought it strange and significant enough to warrant notifying the Chaves County sheriff, probably on July 6, who in turn called the Roswell Army Air Field. He did this not just because of a sense of patriotism, but also because the material was interfering with ranch operations, as the sheep wouldn't cross the debris field.

The military, in the persons of Maj. Jesse Marcel and Capt. Sheridan Cavitt, followed Brazel back to the ranch that same day. After spending the night, they spent the next day inspecting and collecting the debris, which they took to the base by the early morning of July 8. In short order, Col. William Blanchard, the commanding officer at Roswell, issued a press release stating that a "flying disk" had been recovered. Almost immediately after Blanchard's astonishing claim, Brig. Gen. Roger Ramey, his superior in the chain of command, held a press conference in Fort Worth, Texas, in which a battered balloon-borne radar reflector was said to be the "disk" found by Brazel.

A follow-up article in the Roswell newspaper on July 9 is the only contemporary published record of what Brazel said ("Harassed Rancher Who Located 'Saucer' Sorry He Told About It"). It was based on an interview conducted in the offices of the *Roswell Daily Record* on the afternoon of July 8. The description of the debris he furnished sounds much like a small part of a Project Mogul balloon array, similar to that from weather balloons, which is the accepted skeptical explanation today for the event. Though Project Mogul was indeed a top-secret project, the neoprene rubber balloons and paper-backed aluminum foil radar targets used in it were not. In the article, Brazel describes a collection of "tinfoil", "tape," "sticks," and "rubber," which was so limited in size that it could be rolled up in a small bundle. But then he said the debris took up an area about 200 yards in diameter, vastly greater than the remains a Mogul array would produce.

Apparently unnoticed and certainly unappreciated by reporters at the time were Brazel's final comments. The article concluded by noting that Brazel had previously found weather balloons on the ranch on at least two occasions, and he firmly stated, "I am sure what I found was not any weather observation balloon."

Brazel concluded by venting obvious frustration, saying that with the possible exception of a bomb, he would never report another object found on the ranch. The contradiction between his mundane description of the debris and his claim that this was not a weather balloon would reverberate almost endlessly when the Roswell controversy exploded into public consciousness.

THE HISTORICAL MACK BRAZEL

With that, Brazel and the Roswell disk faded into obscurity. It was not until 31 years later that Marcel spoke out, saying that what he found at the Foster ranch was "not from this Earth." Roswell was revisited by researchers, who produced persuasive circumstantial evidence indicating that the original Blanchard disk story was closer to the truth than the weather-balloon explanation.

What follows is an attempt to piece together the historical Mack Brazel and his role in the Roswell events. To this end, we have relied on the recollections of family, friends, and the few others who had contact with him during the critical days of July 1947. You may have read some of this information before, but in this article we refine our picture of Brazel's role and present new findings about what he may have discovered.

In preparing this overview, we have relied on the original interviews made and published by William Moore, Stanton Friedman, Kevin Randle, and Donald Schmitt when he was Randle's research partner, as well as our own recent field work.

W. WARE "MACK" BRAZEL

We'll begin with his nickname. Most accounts refer to him as "Mac," partly because researchers heard the name and applied the most logical phonetic spelling. And his family tells us he was so named after former President William McKinley. However, family documents show that the spelling "Mack" was always used. Indeed, the inscription on his tombstone reads *W. Ware Mack Brazel.*

The Brazel's final resting place in Tularosa, New Mexico

In addition to the first-person interview with Brazel at the *Roswe// Daily Record,* we know

of three other interviews. The first was done on the spur of the moment by Roswell radio station KGFL announcer Frank Joyce on Sunday, July 6. Joyce made it a practice to call Chaves County Sheriff George Wilcox for news leads. It happened that Brazel was in Wilcox's office at the time, relating his discovery of strange debris. Wilcox put Brazel on the telephone, and Joyce proceeded to interview him.

The second instance was an interview conducted at the home of Walt Whitmore, the owner of KGFL. This was probably done late on Monday, July 7. The interview was recorded on a wire recorder, which was the technology available at the time. The interview was meant to be aired as a scoop, but was never played on the air. Unfortunately, the recording has been lost to us because it was confiscated by the Army on the afternoon of July 8 and never returned during their operation to kill the original disk-retrieval story and remove all contrary evidence.

The third and last interview was conducted by an El Paso radio station. We know only that it took place, and can only guess that Brazel repeated the story he gave the *Roswell Daily Record.*

Based on our investigations and reasonable deduction, it seems almost certain that only the Joyce and Whitmore interviews presented Brazel's story in honest, undistorted fashion. At some point on July 7-8, Brazel was placed in military custody at the base. His statements during this period are therefore suspect and may be the result of coercion. Family members believe that Brazel was frightened or bought off by the military, and that his July 8 *Roswell Daily Record* interview, in particular, was, at least in the main outlines, dictated to him by the Army. One of the goals of our reinvestigation of Brazel has been to determine why he, alone among Roswell witnesses, was detained by the military.

THE HARASSED RANCHER

Mack Brazel's name first surfaced in public in the July 9 *Roswell Daily Record* article. Although the paper did not print a photo of Brazel, many other papers throughout the country did. Apparently his picture was the first Wirephoto electronically transmitted from Roswell. When this picture appeared in the *Albuquerque Journal,* it alerted his son Bill Jr. to the fact that his father was the center of a large controversy and that he might need some help.

The same page of the *Journal* carried the debunking story from Ramey's Fort Worth office, headlined "Gen. Ramey Empties Roswell Saucer." Brazel is also mentioned by name in this article.

FAMILY LORE

Mack Brazel died in 1963 at the age of 64, and his wife Maggie died in 1975 at the age of 73. Thus both were dead well before any researcher could interview them about the events in 1947

But there remain a number of family members who can fill us in on Mack's character and personality. They tell us he was a throwback to the "old-time cowboys." Frank Joyce, the KGFL announcer, described him to researcher William Moore as dirt-in-the-pores-of-the-skin type of guy." Joyce continued, "He didn't say a whole lot," and "(he) was a man of few words," but "his word and hand-shake were bond."

Mack's son Bill was interviewed by various researchers, including Moore, Friedman, Randle, and Schmitt. Bill maintained that he was able to learn very little directly from his father about the Roswell events. Moreover, Bill says that his father confided nothing about it

to his mother. But Bill believes that Mack did pass on at least some fragments of the story to Bill's wife Shirley, but that she was never given all the facts. Shirley Brazel died in 1996. Randle and Schmitt interviewed her on several occasions prior to her death. It has never been clear which details of Bill's recollections of his father's Roswell adventures came from discussions with Mack or from what Shirley told him.

Bill Jr. believes that his father ". . . took the most part of what he knew to the grave with him." His father did tell him that he was upset and bitter at being "put in jail" for a week for simply doing what he thought was a "good deed." All family members interviewed by Moore gave it as a truism that Mack had been sworn to secrecy for reasons patriotic, and that he took his oath very seriously because he was a man of his word. Other relatives swear that the military threatened his family. Another family story has it that Mack was particularly incensed at having endured a "head to foot" physical examination by the military before they would release him and allow him to return home.

Mack's older sister Lorrene Ferguson died in 1983, but she confirmed for Moore her brother's extreme reluctance to talk about the events. This is also confirmed by Mack's daughter, Bessie Brazel Sebreiber, who was 14 years old at the time of the Roswell events. She told Carey and Schmitt in a July 1999 interview, "We were told not to talk about this at all." She testified to her father's veracity most emphatically, saying, "If Dad said something happened, it happened! No ifs, ands, or buts about it." Mack's youngest child, Vernon, was 7 years old at the time of the incident. Unfortunately, he disappeared under mysterious circumstances in 1960 and has never been heard of again. Another son, Paul, died in 1997. He was employed running a ranch in Texas for the same J. B. Foster that employed his father in 1947, but when interviewed said he had no direct knowledge of the events.

FRIENDS AND NEIGHBORS

Brazel's friends and neighbors had much to say, particularly about his "change of life" after his return from military custody. According to his nearest neighbor, Floyd Proctor (d. 1987), when interviewed by Moore in 1979, Mack was in a state of excitement and very talkative about his discovery when he saw Proctor a day or two prior to his trip to Roswell and the sheriff's office. According to Proctor, Mack "just wouldn't shut up about it." Proctor's wife Loretta said Mack was returning her 7-year-old son Dee, who had been visiting the Foster ranch that day. He had brought a small piece of the wreckage with him to show the Proctors, who encouraged him to report it to the authorities for the $3,000 reward offered for proof of "flying disks."

Floyd and Loretta Proctor, Brazel's nearest neighbors in 1947, who saw a piece of the debris and advised Mack to go to the authorities in Roswell.

Proctor confirmed for Moore that Brazel had been kept in military custody for about a week, after which he would not talk about the event, preferring instead to change the subject or briefly repeat the balloon story if pressed. Proctor also described being in Roswell with another neighbor, L. D. Sparks, during the period of Brazel's detention. Brazel was surrounded by about half a dozen military escorts as he walked down the street. He was behaving strangely, according to Proctor, and pretended that he did not recognize Proctor and Sparks when they passed. This episode was corroborated in a 1988 interview we conducted with Sparks in his Roswell home, and also by Leonard Porter and Bill Jenkins, two other neighbors of Brazel who were there at the time.

L.D. Sparks, who saw Brazel under military custody in 1947.

In a 1998 interview, former real estate salesman Howard Scoggin of Las Cruces, New Mexico, described a 1959 encounter with Mack Brazel. Scoggin had gone to a local restaurant for lunch with a friend who pointed out Brazel sitting alone at another table. Against his friend's advice, Scoggin got up and approached Brazel, and asked him about the 1947 incident. Without saying a word, Brazel clenched his fist tightly, grimaced, and contorted his face, and then slowly rose out of his chair. Fearing for his personal safety, the surprised Scoggin backed away, while Brazel slowly stalked past him and out of the restaurant, leaving his food on the table. It was like watching one of those werewolf movies, when the star turns into the monster," said Scoggin almost 40 years after the encounter.

A former ranch hand of Brazel's, Ernest Lueras, was recently interviewed by the authors at his Corona filling station. Lueras recalled a time when he and Mack drove from Corona to Tularosa, a drive that on today's modern roads takes three hours to complete. The trip was made sometime after the 1947 events but before Mack left Corona for good to open his own business in Las Cruces (a meat-packing enterprise). The reason Lueras recalls this drive so vividly after all these years is Brazel's very odd behavior. After making several attempts at conversation, Lueras finally gave up. The rest of the trip was made in total silence. Lueras was nonplussed, and did not know what to make of the silent treatment from his boss.

Today, Lueras states his belief that 'They (the military) really messed him up."

WHAT BRAZEL FOUND

As related by William Moore in *The Roswell Incident*, Mack told friends and family that the debris came from an airborne explosion not a crash~because it consisted of separate pieces spread over a large area. Vegetation in the area of the debris was singed. The debris was like nothing he had ever seen before: "very odd... the strangest stuff he had ever seen." The metal was different from any metal he was familiar with because he could not cut, scratch or whittle it with his knife.

Strange writing or symbols on some of the Roswell debris have been described by other witnesses, such as Maj. Marcel and his son, Jesse Marcel Jr. Mack told friends and family about seeing similar markings, including Bill Jr., Mack's older sister Lorrene Ferguson, and Proctor. Bill recalled his father describing the writing as like "figures," and thought his father meant it resembled the ancient Indian petroglyphs or rock figures common in the Southwest. On the other hand, Ferguson and Proctor recalled Mack's description as being more like the "wiggles" one finds on wrappers of Chinese or Japanese firecrackers, and that they were in various pastel colors.

Of great importance is Bill Jr.'s statement that his father told him the Army had admitted they had definitely established that "it wasn't anything made by us." Mack may well have been told this during his detention as a means to convince him of the need for his cooperation. However, there is nothing in the record to indicate that either Mack, his family, or friends ever raised or broached the topic of bodies.

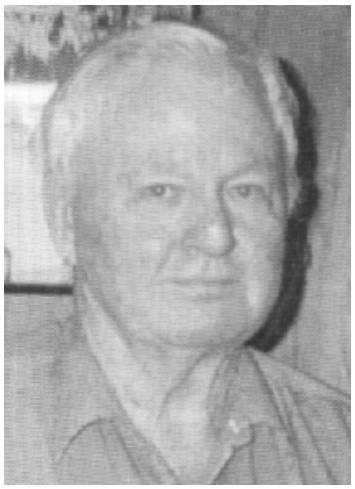
BRAZEL SEES THE SHERIFF

These maddeningly fragmentary descriptions are all we can gather from Brazel's family and friends, conveyed to them at first enthusiastically, and later most grudgingly. What-ever it was that fell on the ranch, Brazel packed a small amount of it in a box and delivered it to the Chaves County sheriff. When the military was advised of the discovery, they found it so provocative that they immediately dispatched two senior officers to follow Brazel to the remote site to investigate - on Sunday of the Fourth of July week end.

Significantly, those officers were the head intelligence officer of the 509th Bomb Group and the officer in charge of the Counterintelligence Corps unit at Roswell. They were not accompanied by any other enlisted personnel, another fact underscoring the extraordinary importance and sensitivity the military lent to Brazel's story. A fair speculation is that the Foster ranch discovery was not the first anomalous debris to be found in the Roswell area. This would explain the quick, high-level military response to Brazel's account.

FRANK JOYCE RECALLS "W. W."

Joyce was not interviewed until 1982 when Moore, following a tip, located him in Albuquerque. In 1947, Joyce was a 24-year-old announcer for KGFL in Roswell. He was also a stringer for the United Press wire service, meaning that he would place interesting stories on the press wire for national pickup. It was in this capacity that he got into trouble with the Army Air Force for placing the Blanchard "captured disk" release on the UP wire. This made the claim an international sensation, instead of a story confined to Roswell. Joyce left town in 1948, never to return, and settled in Albuquerque where he worked in radio and television as a news and features announcer for over 40 years.



Frank Joyce today.

Joyce said the Blanchard press release was delivered to him by hand by Lieut. Walter Haut, the Roswell public information officer. At the time of the interview with Moore, Joyce was still leery of talking about his involvement in the 1947 events, citing his reluctance to reveal information about what seemed a top-secret topic that could harm national security if disclosed, as well as concerns about his job as a media personality. So it would seem that, understandably, Joyce told the truth to Moore then, but not the entire truth.

According to Joyce, he had been "spinning records" and reporting the local news on his Sunday afternoon radio show on July 6. As was his habit, he called Sheriff Wilcox while a record was playing to inquire about newsworthy items. Wilcox put Brazel on the telephone and Joyce interviewed him off the air. Joyce then suggested to Wilcox that the military be contacted, and Wilcox followed the advice.

Curiously, Joyce went into detail for Moore about what Brazel did ***not*** tell him he found during that first interview, such as "balloon parts" and "balsa parts." But there is nothing about Brazel's description of what he *did* find, which must have formed the substance of the interview. Instead, Joyce talked about Brazel's frame of mind during the conversation, characterizing him as "terrified," but without elaboration or explanation.

He then discussed a second interview that he had with Brazel. We didn't mention this earlier because, unlike the other four interviews discussed previously, this second interview with Joyce is the only one where Brazel admitted he was coerced. Joyce described how Brazel came into the radio station a few days after the Sunday phone call to change his story. Upon hearing the new version, Joyce confronted Brazel off the air. "Just a minute!" said Joyce, "You know that this story that you've told me now in no way matches the story you told me on the phone." After a pause, Brazel leaned closer and told Joyce, "Look, son. You keep this to yourself. *They* told me to come in here and tell you this story or it would go awfully hard on me *and you" (*emphasis added per our interview with Joyce in 1998).

"I CAN'T GO INTO THAT"

Moore asked Joyce if Brazel had mentioned bodies to him on the phone. Joyce's cryptic response was, I can't go into that. I don't want to say." Moore pressed for more, but Joyce concluded by saying, "I think I've said all I want to on that. I made up my mind a long time ago that I would only go so far with that part of the story. That rancher apparently died with what he knew.... Whatever that thing was, the rancher *saw it all,* and it didn't originate on this planet. What I heard later about the Air Force having bodies of little men from space... was totally consistent with what I had heard at the time." We have to wonder about this last statement. Heard from whom at the time?

It is interesting that when this interview was done, the topic of bodies at Roswell had never been raised. The only flying-saucer account that mentioned bodies and seemed to fit the Roswell/ Corona timefrarne was that of Barney Barnett (d. 1969), who placed a crash with bodies on the Plains of San Agustin, 150 miles west of Roswell.

Although Moore wrote extensively on Roswell after this interview, he apparently never interviewed Joyce again, as the information in his articles from Joyce remained essentially unchanged.

JOYCE TALKS TO RANDLE AND SCHMITT

Joyce was approached again in 1989 by the team of Kevin Randle and Donald Schmitt. Joyce was still nervous about talking and refused to allow the interview to be taped. He repeated much the same story he had given Moore seven years before, but provided a few minor additions. Joyce said that Sheriff Wilcox was not impressed with Brazel's story and did not believe it. Because of this, Brazel asked Joyce for advice, and Joyce told him to call the air base. This is a minor change from his first version, where Joyce claimed he told Wilcox directly to call the base.

Joyce told Randle and Schmitt that Brazel had related "everything" on the telephone, but, as in the Moore interview, then refused to say more or answer specific questions about what it was that Brazel had found. Now he added that when Brazel visited the radio station several days later, there were several military men waiting outside in the lobby. And in this retelling, Joyce added a new and extremely provocative detail. "As he was leaving, Brazel turned and said, 'You know how they talk about little green men? Well, they weren't green.'"

Randle and Schmitt interviewed Joyce again in 1990. Joyce appeared to be more open and forthcoming, but little new was learned, although Joyce again reiterated that Brazel had told him the "whole story" during that first phone call. And he ended his account with Brazel uttering the same "little green men" line.

Joyce was interviewed four more times by Randle and Schmitt between March 1991 and September 1992. He added details to his previous accounts, such as where Brazel was standing during the discussion at the station, and how he (Joyce) conducted himself during what seems to have been a very lively discussion between the two men. He added that Brazel had said nothing during the telephone conversation about his family being at the ranch (an important point, given later claims by Besse Brazel Schreiber about her presence there). Also, the size of the debris field Brazel described in the telephone conversation was much larger than that conveyed during the later meeting.

And when Joyce retold the part where he confronted Brazel about the discrepancies between the first and second accounts, he now quoted himself as specifically saying, "The story is different, especially about the little green men." To which Brazel replied, "Only they weren't green."

Researcher Karl Pilock interviewed Joyce in 1992 and got the same account. Joyce repeated this version for the *Albuquerque Journal* during the 50th anniversary of the Roswell Incident, capping the "little green men" statement with, "And that is Gospel."

So there has been an evolution over the years from "I won't talk about it," to "The stories about bodies are consistent with what I heard at the time," to "Brazel said, 'You know how they talk about little green men?'" to Joyce asking, "What about the little green men?" This evolving testimony took 10 years for Joyce to produce the current, and presumably final,

version. Interestingly, Joyce says he did not speak about Roswell at all for 20 years after the event. Why has he slowly revealed more that he knows? Are the changes in his original account believable? Perhaps he feels more secure as the years have passed and the Roswell Incident has become known to a wide public. In our judgment, the trend in Joyce's story has been in the direction of a more complete recounting of his exchanges with Mack Brazel, rather than confabulation or falsehood. We conclude that Joyce is a credible witness, whose story is substantially correct.

Given Joyce's testimony, we must seriously consider the idea that Brazel saw bodies associated with the crash. Maybe the military showed Mack a body to convince him to keep quiet. But that doesn't make sense. Why show the find of the millennium to a civilian? So despite all the interviews with Joyce, we felt another was important to clarify this matter.

JOYCE TALKS TO CAREY AND SCHMITT

In May 1998 we visited Frank Joyce. After preliminary niceties, Joyce turned into a man on a mission. "I'm going to tell you fellows something I've never told anyone. Don't stop me once I get started, or I might realize what I am doing and shut up."

"When Wilcox put W. W. (Joyce calls Brazel "W. W.") on the phone, I could tell right away that here was a very distraught man on the other end of the line. He started in complaining about a lot of stuff scattered all over his ranch, and that the sheep wouldn't go around it to get to their usual watering place."

The following is a reconstruction of the original telephone conversation between Brazel and Joyce, based on Joyce's comments to us in this interview.

Brazel: [angrily] Who's gonna clean all that stuff up? That's what I wanna know. I need someone out there to clean it up.

Joyce: What stuff? What are you talking about?

Brazel: [somberly] Don't know. Don't know what it is. Maybe it's from one of them flying saucer things.

Joyce: Oh, really? Then you should call the Army air base. They are responsible for everything that flies in the air. They should be able to help you or tell you what it is.

Brazel: [At this point, according to Joyce, Brazel really started "losing it."] Oh, God. Oh, my God. What am I gonna do? It's horrible, horrible, just horrible.

Joyce: What is? What's horrible? What are you talking about?

Brazel: The stench! Just awful.

Joyce: Stench? From what? What are you talking about?

Brazel: They're dead.

Joyce: What? Who's dead?

Brazel: Little people.

[At this point, Joyce thought to himself, "This is crazy!" He decided to play the role of devil's advocate to a story he did not believe.]

Joyce: What the...? Where are they? Where did you find them?

Brazel: Somewhere else.

Joyce: Well, you know, the military is always firing rockets and experimenting with monkeys and things. So, maybe...

Brazel: [Shouting] God dammit! They're not monkeys, and they're not human!

With that, Brazel ended the conversation.

Joyce continued, "A day or so later W. W. called me at the station to tell me that he didn't have the story quite right the first time. So, I invited him over to the station. When he arrived, I could see the military waiting for him outside in the lobby, and he appeared to be under a great deal of stress. He then told me the new story, and that's when I challenged him about it and made the little green men comment, referring back to our original telephone conversation. That's when he replied that they weren't green, and out he went.

KGFL as it appeared in the 1940's (left); today the old station is a hair salon.

BRAZEL AND BODIES

Did Brazel find bodies? Even though we consider Joyce to be a credible witness, his testimony needs independent corroboration, particularly with such an important claim. It is one thing to say, as Marcel said many times, that the debris was "not of this Earth." But adding bodies - also not of this earth - raises the stakes immensely.

Just before she died in 1985, Wilcox's widow Inez stated that her husband was informed about the incident by "someone who came into town." Then her husband "Went out there to the site. There was a big burned area, and he saw debris. It was in the evening. There were 'space beings.' Their heads were large. They wore suits like silk."

Recall that the family and the neighbors and friends of Mack Brazel were told nothing about bodies by Mack. On the other hand, there exists a collection of testimony to the effect that alien bodies were recovered. Some parties state this plainly, others are circumspect. A review of all this testimony is beyond the scope of this article. Suffice it to say that Joyce's version of Brazel's statements finds considerable support, including new information that we have uncovered. Here are two examples.

We have located a woman currently living in Ruidoso, New Mexico, who recounted an intriguing story involving her ex-husband, who had been an enlisted man stationed at

Roswell. It was the summer of 1947, and she remembers him coming home one evening in a state of high excitement. She tried calming him down, and it was then that she noticed an unusually foul smell coming from his uniform. After she got him calmed down, she was able to get from him that he had been sent on a detail to a ranch "up near Corona" where some bodies had been found. She immediately washed his clothing and he took a long shower to remove the smell, which lingered.

We are in contact with the family of the late Meyers Wahnee, who was a pilot and air crew commander of the 714th Bomb Squadron, 448th Bomb Group. His picture is stamped on the back, "Official Photo, Air Force Photo Services, Roswell, New Mexico." The "Chief," as he was called, told his family of the 1947 Roswell events during the last year of his life (he died in 1981). He told them that the incident was true and that he was involved. He said that there were *three* separate sites. Bodies were found and first flown to Texas. Of special interest to us here, besides his mention of a third site, is his testimony to his wife and two children about "decomposing body parts" found among the debris at the Foster ranch. "It really happened," he told them. We can speculate that he felt free to talk about the events in 1981 because Roswell had become widely known.

Finally, there is this bit of evidence. Five years ago, the 81-year-old Loretta Proctor became extremely ill. With a life-threatening blood clot in her neck, her reclusive son Dee felt compelled to drive her to a remote location on the former Foster ranch where he told her that Mack Brazel had found "something else." This site is located ahout *2.5* miles east-southeast of the debris field. Loretta Proctor eventually recovered, but what was it that would cause a son to risk the health of his mother to embark on such a dangerous and uncomfortable trek? The question now seems to us to have been answered. Loretta will not volunteer anything beyond the "something else" statement for now, and Dee, who is now 59, will not talk to anyone.

SOME THINGS ARE BETTER LEFT ALONE

Clearly, in light of the new information presented here regarding Mack Brazel's role, there are more questions that require answers. We are confident our investigation is heading in the right direction, whatever the outcome. The reticence of some witnesses only adds fuel to the suspicion that something more was involved than debris.

Like so many others involved, former KGFL owner Walt Whitmore took secrets to his grave. Near his death, Joyce visited him and the talk turned to Roswell. Joyce asked the critical question: Were there bodies? Whitmore replied, "Some things are better left alone." And he would
say no more.

Thomas J. Carey is a CUFOS board member specializing in the Roswell Incident; Dona/d R. Schmitt is a longtime investigator and coauthor of two hooks on the subject. This report was published by the J. Allen Hynek Center for UFO Studies in the Winter 1999 issue of the IUR (International UFO Reporter).

Roswell: Clashing Visions of the Possible

By Michael Swords
IUR, Fall 1997, Volume 22, Number 3

Michael D. Swords is professor of natural sciences at Western Michigan University, Kalamazoo, and a former editor of the ***Journal of UFO Studies.***

Roswell is obviously a highly divisive topic in ufology. People accept or reject it, often emotionally, for reasons which seem to the listener unclear, even after patient attention. The possibility of a crashed disk, and the necessary astoundingly successful security required, alternatively violates or coheres with visions of reality held dear by the loudest, and occasionally less civil, discussants. But these deeper visions of reality, or what the writers and speakers of these schools want to believe, remain largely undescribed. This paper would like to pretend for the moment that such individuals and their constricting views of reality are not part of the serious Roswell exploration, as I believe they are not, no matter how much we are lumbered with them.

Instead I would like to present a few thoughts on what is a more intriguing and potentially productive aspect of the Roswell debate: that intellectually honest and unprejudiced ufologists *also* differ markedly in their views about the crashed disk hypothesis, and what the mode of reality is that seems to be acceptable to some and not to others. I have sat around tables with reasonable people (and good friends) such as Mark Rodeghier and Tom Deuley, and listened as one researcher fails to convince another, and they end by amicably agreeing to disagree.

The main problem in these discussions between reasonable people has been the unique complexity of the Roswell case. Nothing in ufology has been remotely like it in terms of numbers of witnesses, variety and quality of researchers, fragmented information, and *the lack of a comprehensive, clear research document* to which all discussants can refer. Because of this complexity, perhaps no single researcher can wrap his mind completely around the case, and so all commentators work partly from ignorance. Whereas this situation should inspire humility in the intensity of conclusions, it unfortunately encourages the opposite in persons of strongly constricting visions of reality, and even muddies the exchanges between good, honest seekers of the truth.

Documents like the recent Air Force releases can appear to be reasonable to many people, only because of the case's complexity and the absence of a clear, comprehensive research document. This, and this alone, allows shoddy, incomplete research and "explanation" to address tiny elements of the case and pretend to address the entire complex. Some anti-Roswell ufologists have become masters of the "cut-a-branch-and-say-you-killed-the-tree" methodology. And Kent Jeffrey's recent change of mind about the case seems also influenced by this style of analysis. In many simpler UFO cases this approach might be reasonable. They are usually dependent upon very few elements. In the Roswell case, potshots and tree trimmings are important, but some humility and perspective should be applied when it comes to claiming what that trimming has actually done to the tree. In the real world, trimming often makes a tree healthier. Again, I want to emphasize that without a clear and comprehensive research document defining the ease, no one, supporter or detractor, has a clear idea of what they're aiming at. My friends and colleagues, Kevin Randle and Donald Schmitt, wrote good books but not this sort of document. That was not their intent in made-for-the-public publications. We are still looking for the research-usable publication from some source, however.

Because I cannot unravel the whole Roswell case in an article (due mainly to my patchy understanding of the details, let alone the length it would take), I would like to present what I believe to be the general hypothetical model that the reasonable pro-crash researchers are working with, and examine its strength and weakness. The pro-crash researchers base their views strongly in the historical context of the UFO phenomenon of the late 1940s and early 1950s. The anti-crash researchers seem to base their views in a different historical context: not UFOs, but their view of the way government and the military "should really work."

What ingredients interest the pro-crash researchers from which they build their working hypothesis? The first stone is really the foundation stone, and surprisingly almost never enters the discussion: that there was a huge wave of flying disk sightings being reported all over the country in the summer of 1947, and which continued intermittently as essentially the same phenomenon through 1952. This outbreak of anomalous aerial events was apparently well-witnessed and very convincing to those who studied it. What were they convinced of? That these *were flying disks;* technical craft performing beyond our own capabilities of the time, and of a very unusual configuration. Almost every discussion of the Roswell event skips lightly over this UFO context, and most begin talking as if the report were to be properly viewed as an isolated event.

This apparently stems from the time-honored tendency in UFO research to view each case separately and to admit that X never can prove Y. This, of course, is true. But at the same time, X very often can form a relevant context for Y, and make of Y a reasonable working hypothesis. This seems to me to be important in the sociology of the discussion. Accepting that Y is a reasonable working hypothesis due to its context in the 1947 wave, would take some of the ridicule and attack-dog mentality out of the discussion at the beginning. "I can see where you're coming from, but here's where I disagree." Perhaps, the debate could then proceed upon hypotheses, rather than ad hominems ("how could anyone be so foolish... etc."). And a second, perhaps irresolvable, concern: We should generally be more willing to credit the context of individual cases in ufology. As long as everyone insists on fighting every case in isolation to the death, there will never be any ufology. A field of study is always composed of a whole constellation of related or potentially related phenomena, for which there exist theories and working models which organize the pieces, have a remembered history, and direct subjective discussion. Our pseudoufology tends to feature isolation, no memory or history, and subjective argument.

Every pro-crash researcher that I know well feels that there is strong evidence of a large wave of aerial anomalies taking place in 1947, and that a reasonable and strong hypothesis for this is that craft beyond our current technical capabilities were being seen. I am not certain that the anti-crash researchers (again, I am not speaking of debunkers or other intellectually dishonest writers) feel as strongly about the 1947 wave and key cases such as Kenneth Arnold, C. J. Zohn, and E. J. Smith. For the pro-crash researcher, though, the wave and its several-year continuance of disks and radar reports form a powerful context within which the possibility of a crash is reasonable.

So what of the case itself? Lying on top of the foundation stone context are the three "columns" from which all the rest of the research on Roswell has sprung:

A. The news story release by the air base that they had in fact captured a flying saucer;

B. The testimony of Major Jesse Marcel, combined with his job responsibility, qualifications, and presumed character; and

C. The several descriptions of the Brazel ranch debris and the site.

The news release. At least this is something no one doubts happened, and apparently no one doubts that it was ordered by the base commander. Pro-crash researchers view this in regard to the simplest hypothesis: the release meant what it said. Any other hypothesis is entertainable, but it must make a case for a not insignificant reinterpreting of the release. When the second release comes out denying the conclusions of the first, the roles of the pro- and anti- crash researchers are reversed, but, I believe, not equally. The first release clearly inspired the second. Almost as clearly, that "inspiration" came from somewhere off the base. In that sense, it is reasonable to view the first release as originating at the site which was in contact with the material in the fullest and most direct way; and the second release not. There is still much latitude for rationalization upon this either way, but the fact of the release exists, and the simplest hypothesis is that the commander meant it.

One can imagine that the commander issued this press release whimsically or without much thought or having even bothered to look at the materials and the facts themselves, but that sort of behavior too would require some major rationalizing or guesswork. I submit that it is not unreasonable to suppose that base commander Blanchard familiarized himself quite extensively with whatever in formation and materials he had available before composing his release. If so, one is left with the problem of how Blanchard could have looked over and handled whatever his personnel had brought in, and decided that it was a flying disk, if in fact it was nothing more than U.S. produced balloon technology? For thc school-of-nothing-really-happened, one would hope that the required hypothesis of:

A. Blanchard didn't even look at the materials and still ordered an astounding release; or

B. Blanchard didn't think the stuff was really unusual, but wrote this anyway would be at least a little uncomfortable. And, in a civilized ufology, it would be nice to hear the anti-forces admit the discomfort, as, I believe, the reasonable pro-forces do when it comes to the "how could you keep that secret?" problem.

Major Jesse Marcel. Rightly or wrongly, pro-crash researchers view Major Marcel as a responsible and competent soldier, of good qualifications to distinguish between mundane balloon debris and something extraordinary, and of good character well beyond the creation of elaborate public hoaxes on potentially important matters. This characterization of Marcel may be in error, but, given his position in July 1947, some serious rationalization by counterviews must be made to cast him into a light of incompetence, irresponsibility, and/or dishonesty. Realizing how important Marcel is to the case has apparently spawned just such attempts to attack him.

I might add that the ad hominem attack is becoming a standard weapon in the arsenal of ufological debaters. In a field so dependent upon testimony and researcher competence and honesty, *maybe* one can understand this, but in today's climate it seems well out of control and terminally destructive. We have often seen that debunkers fall back on this as a last (vicious) line of defense: Father Gill messianicly lording it over the "primitive," impressionable Papuans; Cash and Landrum trying to rip off the government for "faked" injuries; Levelland or Socorro inventing cases to boost tourism. But perhaps we can do better as a community of cooperating colleagues. We have gone for years without good reason to doubt Jesse Marcel's character and competence. Now that the anti-forces recognize that the Roswell case is unlikely to fall as long as Major Marcel stands, we are seeing a variety of attempts to chop him down. Let us hope that this "analysis" is at least done civilly, honestly, sensitively.

7he debris field and the debris. It is the (apparent) fact that not only Major Marcel but several persons saw the crash debris (piecemeal or at the ranch) and that the descriptions are roughly consistent. Some people describe a self-forming metal (crumple-up, uncrumple by

itself) which, if real, would be extremely strange even now (even given Nitinol as its cousins), let alone in 1947. Marcel does not describe this. But even without the miracle fold-out metal, the debris seems very unusual for strength and lightness, and inconsistent with things like balloons and their instrument packages. The amount of debris stated to be at the ranch site also seems inconsistent with any balloon project.

Taking these three elements together in the historical context of the UFO wave, pro-crash researchers have reasoned this way:

1. There seem to have been a lot of reports of technological disk-shaped craft of superior aeronautical performance flying about.

2. Roswell Army Air Field's commander reported that he and the base had found a crashed one.

3. The head of base intelligence reported (many years later) that this was true and that it wasn't any balloon, and that as far as he could tell the material was unearthly.

4. The characteristics and amounts of the debris reported seem inconsistent with any known U.S. (or other) technical project which could have crashed there.

Conclusion. 'The Roswell event was a crashed non- terrestrial technology" is a reasonable working hypothesis.

A large amount of research and writing then exploded from there, as we all know. Some of the testimonies seemed to fit nicely with the hypothesis, some not. Everyone chose how and where they wanted to rationalize. But a second major debate front occurred. This was the anti-crash writers' context: How in the world could you have a real ET-Roswell, and also have the near-total silence from military, science, NASA et al, as if it never happened? The simple anti-answer: It *didn't* happen. Who knows what went on with the 1947 UFOs, the release, Marcel, and the debris, but it must have been mainly a packet of errors of some kind. This is not an unreasonable set of concerns, and it taxes the pro-crash researcher to model what could have happened. Here is a rough characterization of the pro-crash reality model vis-a-vis what happened post-crash and "cleanup."

The pro-crash view of the importance of the military gaining possession of materials from a piece of extraterrestrial technology is that this would be seen by the Pentagon *immediately* to be of highest importance and needing highest secrecy. Therefore, extreme precautions would be taken and plans made to place all aspects of this under such secrecy. Other than the mess at Roswell itself, this sort of plan should have been doable, maybe easier than we know. There have been many secret projects kept very "dark," and many, apparently, with very few persons aware of what the whole picture was all about. I am reminded of the following situation from (roughly) the same era.

In 1954 Eisenhower was scared to death about the possibility of a surprise nuclear attack by the USSR. He had grave reasons for keeping his feelings and what he might do about this problem absolutely secret. Ike had an Office of Defense Management which contained a Science Committee with many of the nation's elite and war-tested scientists on board. He spoke to J. Robert Oppenheimer and the good doctor suggested this committee.

Normally Ike would have discussed such momentous matters with his National Security Council, but, in his mind, this was too big even for them. Science Committee big wheels, James Conant of Harvard and James R. Killian of MIT, were called in. They suggested a special group of highest secrecy to make the necessary study. Its name was the Technological Capabilities Panel, and it was composed of an elite group of academics,

industrialists, and the military. There were only 50 (or so) persons involved who knew what was going on, and they reported only to Ike.

The structure of the Panel was a Steering Committee with three Project Teams, plus a military advisory committee, and a "communications working group." I don't know what this latter was, but perhaps it was the "service" group which handled all the materials, documents, communique's, etc. for the big brains. When their study was done, Ike listened to their report without inviting his National Security Council to attend.

What the pro-Roswellians imagine is something like the model in Diagram 1: an unavoidably messy situation in the Roswell area, both physically and socially, which was "cleaned up" by whatever means available as quickly as possible. Lots of leaks and unauthorized knowledge would be part of that mess, and lots of leaks occurred as expected. Secondly, almost no one would have to be in the know at Fort Worth, and that would be easy to secure. Thirdly, almost no one (other than a few lab scientists) would have to be in the know at Wright Field (or wherever), and that would be easy to secure. The number of people in the Pentagon (and related D.C. scientists) would initially be a little messier, but the problem could be kicked far upstairs very quickly and generally organized and controlled. The vast majority of military, political, and intelligence functions would be left entirely out of this situation, as it would be imperative for them to go forward with their business as if we had nothing hot to hide. Only if anything of real technical importance ever emerged from the testing would a decision have to be made to "alter human history." That decision would not be a crude decision, but as subtle an "interference" as possible. All decisions made would be driven by security issues alone. None would be driven by "science" or desire to explore.

This sort of highest-level elite program and security is what the pro-crash people require (and feel would be reasonable) in order to deal with the post-cleanup research and information blackout on the crashed disk. They see this project as being set up in principle (i.e., minimizing the number of persons, even within the Pentagon or at the research labs, who would be exposed to the materials or information in any way which would be suggestive of their nonterrestrial provenance) immediately; and tightening the security to a narrower need-to-know group with time. This is why pro-crash researchers aren't shocked by highly placed intelligence officers (like General George Schulgen or Colonel Howard McCoy) acting like they knew nothing about the reality of a crashed disk. People in their same positions weren't in on things like Ike's TC Panel; small elite extra-secret projects can be extremely selective, and should be. In analogy to the TCP, if there were only about 50 persons in the know totally, who would they be? There were only about a half-dozen military in Ike's group. The bulk were the Conants and Killians of the country.

This scenario seems unacceptable to the anti-crash researchers. They (apparently) feel that either:

A. You couldn't form this program effectively; or

B. Leaks would occur all over the place in time; or

C. Certain persons should have been in on this no matter how elite it was and that the persons (in their opinion) didn't act as if they were in on the secret.

Well, who really is to say? Without documentation either way this falls apart into another rationalization debate. As a person who tends to defend the reasonability of the ET-hypothesis for Roswell, I will (without grave claims of certitude) offer this:

A. It seems to me that the military, CIA, et al., have formed all sorts of extremely effective

secrecy programs, and had ready-made secret labs at Wright-Patterson T-3 Engineering (and elsewhere) immediately available to lock almost anything up tight.

B. Same answer as above, regarding "leaks." I would add that although no catastrophic leaks have occurred other than Major Marcel himself, a case could be made for a slow but steady number of minor leaks occurring over the whole 50-year period.

C. And as for who should or should not have been in the inner circle, that is guesswork, and I haven't heard many compelling arguments that any one person lower than someone like Vandenburg absolutely had to be part of this. To speak to the case of one of my favorite guys, Colonel Howard McCoy of Wright Patterson's T-2 intelligence division: As bright a guy as Mack was, he was the wrong guy for this task. His division was for analyzing intelligence reports, not testing metals and materials, or even biological specimens. I realize that many reasonable people will not be able to accept this sort of scenario, but we should (I believe) accept one another's viewpoint to the extent that we recognize where we're coming from, and admit that neither side knows what the upper echelons of the Pentagon would do or were capable of doing in the face of such a problem.

Schools of thought on Roswell are numerous, and every person seems to have his own unique take on it. I believe that it is informative, however, to break the schools of people who have an opinion down into four: the extra positive (X+), the positive (+), the negative (-), and the extra negative (X-) The extra positive and extra negative schools write and speak as if they have concretely made up their minds, and that there's nothing any longer to be said except monitor one another and release occasional nuclear volleys. Maybe something can come of this sort of behavior, but I doubt it. Almost by definition, concrete does not meditate, grow, and evolve. Unfortunately for most of us and the public, these nuclear volleys are all we tend to hear. They polarize the issue so strongly, and create false impressions of the unity of all elements of testimony at play, that people begin to see the case as an all-or-nothing situation (accept everything that I believe or none of it). Even worse, some people get the impression that the entirety of ufology is riding on the ease, a peculiar notion only explainable by watching too much pop media.

But more quietly, positive and negative individuals try to discuss the issues with more give and take and civility to their colleagues. We need to hear more of this sort of exchange and less from bomb-throwers.

In my observation of these debates (the saner sides of them anyway), the responsible anti-crash discussants cannot buy the level of secrecy and selectiveness of need-to-know personnel required by the pro-crash people to understand Pentagon and Project Sign behavior. They, therefore, doubt the crash evidence.

The responsible pro-crash discussants begin by being impressed with the debris-related testimonies, and therefore are led to imagine secrecy scenarios of an extreme nature. I believe that the pro-crash researchers (like pro UFO researchers) tend to trust testimony, especially when it is corroborated somehow, and the anti-crash persons do not. Also, the pro-crash side tends to see the case as a large constellation of many elements, and the anti-crash side tends to isolate bits, pick away at them, and, sometimes, forget case elements which are less easy targets.

My article has had the goal of clarifying a little of the different worlds that even good UFO scholars live in when it comes to Roswell. In my opinion there has never been a good focused debate on critical aspects of this ease, nor a research resource that would make such a debate feasible. But it's something that the serious people in the field need to do if the status of the crash event is ever to be made more understandable to any of us and to the

history of our field. We need a workshop of rational and respectful give-and take on this ease, and a solid research document on case elements and their sources to emerge from it. Is anyone interested?

DAN WILSON

Dan Wilson was born in 1951 and lives in Painesville, Ohio. He began studying nuclear weapons, the entire nuclear weapons complex, nuclear weapons testing, and nuclear power production in 1988. He has read extensively on the UFO phenomena and has interviewed various witnesses from the Air Force, Navy, and the Atomic Energy Commission. He contributed very interesting information to the newly released book, UFOs and Nukes, by Robert Hastings. Since 1998 he had extracted thousands of vital documents from the Project Blue Book Archives for the NICAP site and discovered many new reports that others have been able to add to the collection of BB unknowns. What most people did not know was that he had done all of this from a computer at the local library! It wasn't long after finding this that we were able to buy him his own personal computer. Since 2003 he had provided valuable researched information regarding UFOs and the nuclear connection and was an official member of the Nuclear Connection Project. In 2006 when I re-opened the Mantell case, Dan discovered documents that proved that the object identified as the source of the incident was over 400 miles away when encountered by Mantell. With the help of numerous members of NICAP's A-Team, including Jean Waskiewicz, Brad Sparks, Barry Greenwood, Mary Castnor and others, we were able to produce a major investigative report* with an analysis by Brad Sparks proving a cover-up in the Mantell case. Dan had been working on UFO cases involving UFOs and aircraft accidents and I created a folder on the site called /aca/.

On Jan 27, 2015, I received the last email from Dan Wilson. After months of harassment by unknown sources his computer had been hacked in December and by now it had been destroyed. Only Robert Hastings may know of what happened after that. (Fran Ridge)

Marcel's pre-Roswell UFO sighting
Marcel's debris descriptions

BACKGROUND

Major Jesse Marcel was the head intelligence officer, or A-2, at Roswell Army Air Field during the famous Roswell events of July 1947. He was the first to investigate the crash material found by rancher Mac Brazel on his ranch 75 miles northwest of Roswell. Upon returning to Roswell base, he was ordered by the Roswell base commanding officer, Col. William "Butch" Blanchard, to fly the material he recovered to Wright Field, Ohio, first stopping at Fort Worth to show what had been found to Brig. Gen. Roger Ramey, head of the Eighth Air Force, and Blanchard's superior officer. In the meantime, Blanchard issued a press release saying that they had recovered a "flying disc," and that it was being flown to higher headquarters. Within an hour, Gen. Ramey was publicly retracting the flying disc press release, and telling the media that what had been found was a weather balloon with its radar target. Upon Marcel's arrival at Fort Worth, Ramey then had a civilian press photographer take photos of himself, his chief of staff, Col. Thomas Dubose, and Marcel with balloon material, and declared that to be what was found at Roswell. In addition, a press conference was held shortly afterwards, where Ramey had one of his weather officers (Irving Newton) identify the displayed material as coming from a weather balloon.

But when located 30 years later, Marcel told a different story. He said the material at Brazel's ranch had highly unusual physical properties beyond human technology and was "not of this earth," definitely NOT balloon material of any kind. He further added that the material publicly shown by Ramey in Fort Worth was a substituted weather balloon swapped for the real debris he had brought Ramey from Roswell, a statement further corroborated by Dubose, then a retired Air Force brigadier-general when he testified. While Ramey was displaying the weather balloon for the press, the real material was forwarded to Wright Field and the material analyses labs there.

Despite other witnesses backing up Marcel's statements of unusual debris and a cover-up, debunkers of Marcel and Roswell have generally claimed that Marcel was somehow caught up in the flying saucer hysteria of the time, overreacted and misidentified simple balloon debris, misled Blanchard, somehow causing Blanchard to issue the inflammatory press release, and then further compounded matters by misbehaving in front of Ramey and the press. If this debunking portrait of Marcel were true, then some note of Marcel's poor judgment and misbehavior as an intelligence officer during the Roswell events should have been made subsequently by Marcel's superior officers. Also his future career as an intelligence officer should have been severely affected.

As it turns out, once Marcel's service record began making the rounds in 1996 and 1997, it became clear that Marcel was generally very well thought of by his superior officers both before and after the Roswell events, including those directly involved in Roswell, such as Col. Blanchard and Gen. Ramey. There are no clear references to the Roswell events in his post-Roswell evaluations, which are

overwhelmingly laudatory. Blanchard's evaluations of 6 May 1948 and 2 Aug 1948, and Ramey's evaluation of 19 Aug 1948 are particularly relevant here.

In addition, Marcel's career did not seem to suffer any adverse effects. He remained the head intelligence officer at Roswell for another year. He was promoted to Lt.-Colonel in the Air Force Reserve the following November (both Blanchard and Dubose recommended approval) and was not quietly let go when his commission ran out in early 1948, as might well have happened if the Air Force felt they had a rash and unreliable intelligence officer who caused them a great deal of public embarrassment. Instead he was recommissioned, and was soon transferred to Washington D.C. in August 1948 for higher intelligence work. (Ramey registered a mild protest, saying he had nobody to replace him.)

First he was made the SAC (Strategic Air Command) Chief of a presumed foreign technology intelligence division, an odd assignment for somebody who allegedly couldn't identify even mundane balloon debris. (Actual job position: Chief, Alien Capabilities Section, Intelligence Division, Hq. SAC) Then at the Pentagon's insistence, he was soon transferred to the Top Secret Special Weapons Project, given access to highly sensitive material, and served as the primary briefing officer for the higher brass in the project. There he also received two highly laudatory evaluations. Obviously the Air Force continued to feel Marcel was an extremely competent and trustworthy intelligence officer following the Roswell incident. None of this fits the profile of someone who badly bungled his intelligence job at Roswell, as the debunkers contend.

Included is a collection of Marcel's postwar evaluations and commendations, both before and after the Roswell events. Background material and my comments as to their significance are included. Interested readers can look them over for themselves and form their own opinion of Marcel as an intelligence officer and as a person.

Some of the evaluations were clipped at the edges by whomever originally copied Marcel's service file. In the case of Blanchard's two 1948 evaluations, the missing portions of the standardized word descriptions have been pasted in from another evaluation so they can be read in full. Some cleaning up of otherwise difficult-to-read text has also been done. Otherwise, the various documents are exactly as I received them.

LIST OF EVALUATIONS AND COMMENDATIONS; COMMENTS ON SIGNIFICANCE

1. Lt. Col. James Hopkins, 30 June 1946, Efficiency Report, Roswell (1 page, 1 page missing from back)

Significance: First post-war military evaluation of Marcel, useful for comparison and baseline purposes. As in many other evaluations, special note is made of Marcel's exceptional hard work. But Marcel is marked down slightly for organizational abilities, force, and leadership. Otherwise generally excellent and superior marks with overall numerical rating of high excellence. The average numerical score (5.2) is identical to the next two evaluations by Blanchard and Jennings.

Lt. Col. James Hopkins, 509th Operations Officer

2. Brig. General Roger M. Ramey, 26 July 1946, Commendation, Operation Crossroads, South Pacific (1 page)

Significance: Establishes that Ramey, head of the Eighth Air Force, was already well-acquainted with Marcel and his intelligence work before the Roswell events. Ramey commends Marcel for his handling of security, complex intelligence reports, and staff briefings for the 509th Bomb Group during Operation Crossroads (South Pacific A-bomb tests). Ramey as a major player in the later Roswell events would have known if Marcel bungled or mishandled his job during the Roswell events. (Compare with Ramey's evaluation of Marcel, 18 Aug 1948, a year after Roswell.)

3. Major General W.E. Kepner, 16 August 1946, Commendation, Operation Crossroads (1 page)

Gen. W. E. Kepner

Significance: Another commendation for Crossroads, this time from Gen. Kepner, Deputy Task Force Commander for Aviation. **Kepner commends Marcel for "superior performance."** These various commendations indicate that Marcel was instrumental in handling security for the A-bomb tests and also the assembling of "vast amounts of information needed for the training of crews." Given Marcel's involvement in security for the A-bomb tests, it makes it very unlikely he would have later broken security at Roswell to announce a crashed flying saucer, another charge by some debunkers contrary to all evidence. As in many places in his record, Marcel's exceptional hard work and devotion to duty are also noted. **Also states that Marcel can wear the Army Commendation Ribbon by direction of the Secretrary of War.** Compare to very similar commendation for Crossroads from Admiral Blandy, issued in Oct. 1948.

Kepner became chief of the A.F.'s Atomic Energy Division and Special Weapons Group at the Pentagon. He may have been one of those at A.F. headquarters requesting Marcel's transfer to the Special Weapons Project in the summer of 1948.

4. Vice Admiral William H. P. Blandy, 31 October, 1946, Endorsement, Operation Crossroads (1 page)

Adm. Blandy & Gen. Ramey at Operation Crossroads, 1946

Significance: Blandy, a famous WWII admiral, Commander of the Joint Task Force, and Commander-in-Chief of the Pacific Fleet, **personally wrote a brief endorsement "highly recommending" Marcel for the permanent award of the Army Commendation Ribbon.** Despite Blandy's recommendation and previous permission by the Sec'y of War that Marcel could wear the ribbon, a later review panel turned it down. This resulted in Blandy issuing his own commendation to Marcel in Oct. 1948, several months after the Roswell events.

5. Col. William Blanchard, 8 Jan 1947, Efficiency Report, Roswell (1 page)

Significance: First of three such reports by Marcel's Commanding

Col. Blanchard greets Gen. Ramey at Roswell, 1947

Officer (C/O) at Roswell. Compare with following one by Jennings and Blanchard's two other evaluations. Blanchard rates Marcel's work as "Excellent" overall (compare numerical ratings to Hopkins and Jennings), and compliments him on his exceptional experience in intelligence work and for his diligence and hard work.

This evaluation was written while the 509th was hurridly trying to become operational by February 19 as a permanent atomic bomber base. Qualified personnel were being assembled and training missions run to satisfy requirements to become operational. A base history lists Marcel as being one of seven "key personnel" in this process, along with Blanchard, Jennings, and Hopkins.

6. Lt. Col. Payne Jennings, 30 June 1947, Efficiency Report, Roswell (1 page)

Lt. Col. Payne Jennings, Roswell Deputy Base Commander

Significance: Jennings was the Roswell Deputy C/O and this evaluation was written a week before the Roswell events. Jennings later personally piloted Marcel's plane with crash debis to Fort Worth to meet Gen. Ramey. Marcel was obviously not Jennings' kind of officer. This is the least complimentary of Marcel's service evaluations, Jennings, unlike Blanchard and others, downgrading Marcel for overdiligence and lack of imagination and initiative. The numerical ratings, however, were nearly identical to those of Blanchard's, with the same overall rating of "Excellent." Notice that somebody examining this evaluation before I received a copy attached a "Post-It" to the document singling out the phrase "lacking imagination and initiative." This one phrase in isolation was all that was quoted from Marcel's many evaluations and was used to debunk him in a San Francisco/Oakland television broadcast in 1996 (KTVU), where the reporter was a former Air Force intelligence officer.

7. Admiral William. H. P. Blandy, Oct. 1947, Commendation, Operation Crossroads (1 page)

Adm. William H. P. Blandy

Significance: Written for Marcel by Blandy (now Commander-in-Chief of the Atlantic Fleet) after a review board on decorations ignored Blandy's personal recommendation that Marcel receive the Army Commendation Ribbon. Note this was written four months after the Roswell events. The fact that a famous admiral would go out of his way at a later date to issue the commendation is a good indication of the regard in which Marcel was held by the upper brass before and after Roswell. Almost the identical wording as Gen. Kepner's commendation in August, 1946, and obviously quoted from it, **noting Marcel's essential contributions to security and the handling of intelligence used in the training of crews for Operation Crossroads**. Blandy became a well-known admiral in the U.S. because of the heavy American press coverage of Crossroads. On July 9, 1947, he was

widely quoted in various Roswell press stories expressing moderate skepticism about the flying saucers. (See, e.g., New York Times, July 9, 1947) Whether he was "put up to it" or just doing this on his own is unknown. However, immediately prior to this, on July 7, Blandy had a unique private meeting with Pres. Truman and his Naval aide, one of a number of unusual "coincidences" surrounding the Roswell incident. A similar private meeting occurred with New Mexico Senator Carl Hatch, requested suddenly by Hatch, also on July 7.

8. Col. William Blanchard, 6 May 1948, Efficiency Report, Roswell (3 pages)

Significance: **The first of Marcel's evaluations following Roswell, Blanchard gives Marcel high numerical ratings in all categories, and his descriptions of Marcel as an intelligence officer and person are overwhelmingly complimentary**. Given Blanchard's deep involvement in the Roswell events, including his "flying disk" press release, his strong praise of Marcel soon after Roswell seriously undercuts debunker arguments that Marcel was an incompetent and rash intelligence officer who bungled the Roswell events and embarrassed his C/O and the Air Force. Debunkers, however, neglect to mention the rest of this evaluation and only note the one slightly negative comment, "His only known weakness is an inclination to magnify problems he is confronted with." But a thorough reading of this report and the next one indicates that it was unlikely that Blanchard was referring to Marcel's conclusions or work product, which received high ratings, but to something else (perhaps his perfectionist tendencies noted in other evaluations, such as Jennings'). Blanchard wouldn't be recommending Marcel for higher intelligence work and calling him highly dependable in his next evaluation if Marcel had magnified simple balloon material into a flying saucer, resulting in Blanchard being publicly embarrassed. Also observe that Blanchard notes that Marcel was exceptionally well qualified, cool-headed, highly logical, businesslike, and well-respected by all, again belying efforts to portray him as impulsive and incompetent.

This evaluation is also interesting in that it was endorsed by Col. Thomas Dubose, Gen. Ramey's Chief of Staff, who later backed up Marcel's story of Ramey swapping a weather balloon for the real Roswell material. Dubose states he doesn't personally know Marcel and is trusting Blanchard's judgment. Despite this, Dubose recommended Marcel for Air Staff and Training School, which would be preparation for possible future command positions. Furthermore Blanchard and Dubose (acting on behalf of Gen. Ramey) recommended Marcel's promotion to Lt.-Colonel in the Reserves the previous October & November, just 4 months after Roswell. Obviously Dubose knew of Marcel's record even if he didn't know him personally. Dubose also met Marcel in Fort Worth during the Roswell events and was a high-level eyewitness to what happened. So not only does Dubose have nothing negative to say about Marcel, he was also recommending him for promotion and advanced training following the Roswell incident. This again indirectly supports

that Marcel handled his job properly.

9. Col. William Blanchard, 2 Aug 1948, Efficiency Report, Roswell (3 pages)

Significance: **Written at the time Marcel was being transferred from Roswell to Washington for higher intelligence work, the report has even more highly complimentary personal comments about Marcel but slightly lower numerical ratings than Blanchard's previous report.** The only real significant negative is Blanchard rating Marcel at the bottom of eight officers of the same grade that he had evaluated in terms of overall usefulness to the Air Force. This might be mitigated by Roswell being the only atomic bomber base at the time and composed of elite, hand-picked men. Marcel would have faced unusually high-caliber competition. Furthermore, unlike most other officers at Roswell, Marcel was a civilian WWII draftee and not a West Point graduate (as was, e.g., Col. Blanchard). Academy graduates are almost automatically going to be given preference over draftees. Similarly, because Roswell was a bomber base, Blanchard was a bomber pilot himself, and this was the Air Force, Blanchard would again probably give preference to pilots as Air Force assets over intelligence officers (assuming most of these other men were pilots). Comments like these came from Gen. Ramey below, where he states that he thought Marcel command officer material, but he would never make general because he lacked a pilot's rating. Otherwise, Blanchard's personal comments definitely indicate that he had very high regard for Marcel both as an intelligence officer and person. **Note that Blanchard calls Marcel highly dependable, highly qualified, and highly recommends him for higher intelligence work**.

(Blanchard was a 4-star general and AF Vice Chief of Staff from 1965-66 when he died suddenly, just before becoming Chief of Staff.)

10. Col. John D. Ryan, 12 Aug 1948, Recommendation, Roswell (1 page)

Gen. John D. Ryan, Air Force Chief of Staff, 1967-1971

Significance: Although this was a routine recommendation, note that **Ryan terms Marcel's work and service "most exemplary" and "most outstanding."** Who was Ryan? He was a future A.F. Chief of Staff and Chairman of the Joint Chiefs of Staff. (An historical side note, his son Gen. Michael Ryan was A.F. Chief of Staff from 1997-2001. Another side note, Blanchard was destined to be the next AF Chief instead of Ryan, but he died of a heart attack at the Pentagon in 1966.) When this recommendation for Marcel was written, Ryan was about to replace Blanchard at Roswell as C/O, while Blanchard became the Director of Operations for the 8th AF in Fort Worth. At the time of the Roswell events, Ryan had been Ramey's Operations Officer, or A3. There is some circumstantial evidence linking him to the Roswell affair. The day before Gen. Ramey's weather balloon/radar target debunking of Roswell, Ryan was talking to the press about radar targets in a story musing about the origins of the flying saucers. Given Ryan's prior

remarks and his position as Op Officer for the base, Ryan could conceivably have been responsible for procuring a radar target as part of a cover story.

11. Major General Roger Ramey, 19 Aug 1948, Evaluation, Roswell (1 page)

Significance: Another important post-Roswell evaluation of Marcel by a superior officer familiar with him and closely involved in the Roswell events. **Ramey first calls Marcel's services to his command "outstanding," and then notes at the end that he believed Marcel would eventually become a Command Officer based on the progress and high caliber of his past performance and growth.** More highly complimentary remarks from somebody in-the-know, belying debunker contentions that Marcel had mishandled earlier events in Roswell and in Ramey's office in Fort Worth. **Ramey also registers a mild protest over Marcel's transfer, noting he had nobody to replace him.**

(In 1950 Ramey became USAF Director of Operations at the Pentagon. From 1954-1956 he was commanding officer of the 5th AF in Korea and Japan. He retired a three-star general in 1956 after a brief stint as head of the Air Defense Command)

12. Lt. Col. Ray McDuffee, 30 June 1949, Report of Officer Effectiveness, Special Weapons Program, Pentagon, Washington D.C. (3 pages)

Significance: First of two evaluations by McDuffee during Marcel's new assignment with the Special Weapons Program. This was a Top Secret program to assess the ongoing development of Soviet nuclear capabilities. Marcel was named Officer in Charge of War Room, and according to Marcel's job description in these evaluations, was in charge of a staff that prepared special briefings and reports for the higher brass on the latest changes in intelligence. Marcel also had a job title of Assistant for Atomic Energy during this period. **McDuffee is highly complimentary about the way Marcel handled his job, his personal intelligence, and his unusually diverse technical and intelligence background. Like Blanchard, he also makes special note of Marcel's high moral integrity, extreme hard work, and high standards for his work product** (in modern terminology, he might be seen as a workaholic with a streak of perfectionism).

13. Lt. Col. Ray McDuffee, 30 July 1950, Report of Officer Effectiveness, Special Weapons Program, Pentagon, Washington D.C. (3 pages)

Significance: Written as Marcel was in the process of getting a hardship discharge from the service. **Very similar to McDuffee's previous evaluation of Marcel with slightly higher numerical ratings placing him in a superior category.** The indorsing officer took

exception, saying the numerical ratings were too high, since McDuffee was primarily rating Marcel's briefing room presentation work rather than his overall 9301 (combat intelligence officer) duties. **McDuffee does make special note, however, that Marcel was a "thoroughly qualified" combat intelligence officer. Section VI giving Marcel's primary job description, places him squarely in the intelligence loop as the primary briefing officer for the higher brass**, relevant to another controversy about Marcel, whether he might have written a special report later used by Truman to announce the first Soviet A-bomb blast.

Subject: February 17, 1949; Albuquerque, NM. OSI Cases 23 & 24

To: Francis Ridge <nicap@insightbb.com>

Blue Book index has two sightings for February 17, 1949, Albuquerque and Sandia Base.

Brad Sparks:
Cases 23 and 24 are apparently the same object viewed at different or overlapping times on its trajectory. Case 23 is truck driver Herman Wilcox at about 6 PM (actually 5:57) from near Grants, NM, and Case 24 is UNM Prof. Marvin May at 5:57 PM from Albuquerque (who with his training in meteorite tracking with LaPaz has the more accurate time than the truck driver). There were also about 100 guards at Sandia Base including the Officer of the Guard, sighting it at 5:59-6:06 PM evidently.

From: "Jan Aldrich" <project1947@earthlink.net>
To: nicap@INSIGHTBB.COM

Subject: Los Alamos Sighting from NICAP files May, 1949

This sighting is from a collection of Keyhoe letters collected and retyped by Ted Bloecher....Ted bugged Keyhoe to bring in his letters from home and retyped them for the NICAP files. In addition Ted went through the files and retyped any letters he found directed to Keyhoe. Here is one below.

Rebecca LeTourneau retyped this up for us.

Jan Aldrich
Project1947

Copy of Witness' letter to Major Keyhoe, dated Jan. 27, 1961:

> Jan. 27, 1961
>
> Major Donald E. Keyhoe, U.S.M.C., Ret.
> N.I.C.A.P. (Etc.)
>
> Dear Major Keyhoe:
>
> May I say that I believe we have met before. It seems to me that I met you and Mrs. Keyhoe at a social function in Detroit, probably in 1950 or 1951. . . In any event, my object in writing you was to first offer my thanks as an interested and avid fan of yours. I haven't missed an article or release under your name. Secondly, I want to relate my personal sighting of UFO's.
>
> During the period from 1948 to 1950, I was employed as a technician for the Atomic Energy Commission at Los Alamos, New Mexico. During the month of May, 1949, the following event took place. About 10:30 AM, during a week day, my attention was attracted by a group of men outside the laboratory in which I was working. Joining them I looked skyward and at an altitude of approx. 9,000 ft. I observed 13 saucer shaped objects in a perfect straight line formation. During this observation period of about forty five minutes, several of the objects would suddenly leave this formation and with a tremendous burst of speed climb to what I think was about 20,000 ft.
>
> During this sighting, (witnessed by hundreds of residents and workers, also school children) may I add this observance. The atmosphere was clear, not a cloud in the sky and visibility unlimited. Our oldest children who were eleven and twelve at that time, related this event in a school report when we returned to California from this base. They were called liars. Rather than have them ridiculed, I asked them not to mention it again. I have served as Sr. Engineer in charge of static testing the 2nd stage of the "Minute Man" missile besides other programs and I think I have the

technical ability to make such an observation and report it as seen.

Everyone making these observations in the past, including myself, must either be stupid or our military personnel must have very good reasons for their denial of these stories. I feel it is about time that the Air Force should get off the fence and choose sides. Isn't there a solution?

Just couldn't resist dropping you a letter after reading the enclosed article. Please excuse my rusty typing and drop me a line when you have the time.

Sincerely,
E. M. (Ernie) Hunt

Sighting No. 175

Photograph of Unknown Aerial Phenomena taken at Datil, New Mexico by Cpl Lertis E. Stanfield, Holloman Air Force Base, New Mexico on 24 and 25 Feb 1950. An analysis of the above photograph was made by Dr. Lincoln LaPaz, Head of the Institute of Meteorics, University of New Mexico, Albuquerque, New Mexico, who reached the following conclusions;

a. The angular diameter of the perfectly round luminous object Stanfield observed was approx imately 1/4 of a degree.

b. The angular velocity of the object in the sky was greater than half a degree per minute.

Dr. LaPaz stated that on the basis of the results (a) and (b) above, the object seen by Stanfield was not the moon (for the angular, diameter is too small), it was not Venus or any other planet (for the angular diameter was too large), and it was not a bright fixed star slightly out of focus (for the observed rate of motion is double that due to the diurnal rotation of the earth).

Immediate Saucer Alert!

The Mystery of December 6, 1950

by Bruce Maccabee

(This article was presented at the Symposium of the MUTUAL UFO NETWORK in July, 1999. The information presented here is also presented in somewhat different format in the book, THE UFO-FBI CONNECTION, by Bruce Maccabee, (Llewellyn Pub., 2000)

ABSTRACT

For an hour the United States military was under a condition of national emergency during the morning of December 6, 1950. Two days later the FBI was informed that the Army's Counter Intelligence Corps had been placed on Immediate High Alert for any information related to flying saucers. Were these two documented events related? This paper contains a discussion of the possibility that a flight of saucers caused the emergency and that the crash of one of them near the Texas-Mexico border on or about December 6, 1950 caused the immediate high alert.

PART 1: NATIONAL EMERGENCY

LOCATION: WHITE HOUSE, WASHINGTON, D.C,
OFFICE OF THE PRESIDENT OF THE UNITED STATES
DATE: DECEMBER 6, 1950
TIME: 10:30 AM

(The President is preparing for a conference with British Prime Minister Clement Attlee. The secure phone rings. It is the Undersecretary of Defense Robert Lovett.)

Mr. President. I don't know whether this is related to the war in Korea, but it might be. Our northern tier radars have picked up a flight of several dozen aircraft approaching our east coast. They are unidentified and do not respond to our signaling. They could be Russian bombers. If they proceed on the present course they will be over Washington D.C. in several hours, having passed over major cities along the East Coast. The Continental Air Command has scrambled and is on high alert. We have begun preparations for a National Emergency and handling of the press. I suggest you take any precautions you think necessary in the event that this is an attack. I'll keep you informed. After I hang up all civilian communications with the Pentagon will be cut off.. I will keep you informed as the situation develops. Good-bye.

Shock! Could this be the realization of his worst nightmare? By resisting the North Korean aggression had President Truman brought on the most-feared consequence, nuclear war with the Soviet Union? Were these Soviet bombers loaded with atomic bombs to drop on Boston, New York and Washington, D.C.? Impossible, he thought as he placed the phone in its cradle. I don't believe it. The CIA has not reported any troop movements or aircraft activity that would suggest the Russians were preparing to attack. And yet, the radar had detected something. It must have been something big to cause this much activity by the Continental Air Command. Despite his apprehension he proceeded to the meeting with Mr. Clement Atlee as if nothing were happening. But, in the back of his mind he knew that some objects were approaching the United States. What were they?

****

What you have just read is partly fiction and partly fact.

Something DID happen that morning, something that has been glossed over in the history books as an accident of the radar. But was it? Read on. What follows is NOT fiction.

PART 2: IMMEDIATE HIGH ALERT FOR FLYING SAUCERS

URGENT. DECEMBER 8. RE: FLYING SAUCERS.

This office very confidentially advised by Army Intelligence, Richmond, that they have been put on immediate high alert for any data whatsoever concerning flying saucers. CIC here states background of instructions not available from Air Force Intelligence, who are not aware of reason for alert locally, but any information whatsoever must be telephoned by them immediately to Air Force Intelligence. CIC advises data strictly confidential and should not be disseminated (sic).

The above teletype message is contained in file 62-83894, the flying disc file of the FBI, the REAL X-Files! (The Truth is In Here!)

How very strange for the Army's Counter Intelligence Corps (CIC) to be put on immediate high alert for any data regarding objects/phenomena/craft which the U. S. Air Force had publicly and repeatedly claimed can all be explained and are no threat to the security of the United States! Are we to presume the CIC has nothing better to do than to run around chasing will o the wisps and similar ethereal things of no consequence to national defense? Of course not! We may imagine that Air Force Intelligence, headquartered in the Pentagon, requested the immediate high alert because something had happened, something related to flying saucers that demanded immediate attention. Evidently whatever had happened was so serious a matter that the CIC was not told the reason for the high alert. Not only that but the high alert condition was confidential and not to be disseminated which suggests that the CIC agent broke security by telling the FBI agent in Richmond.

What had happened? Even today we don't know ... but based on other information we can make a guess.

PART 3: THE COLONELS STORY

In 1977 Retired Air Force Col. Robert Willingham filed a report with NICAP regarding his observation of what he believed to be a Crashed Saucer.

What?

Did he say a Crashed Saucer?

Yes, he did. And here is what happened, according to the affidavit he filed with the National Investigations Committee on Aerial Phenomena (NICAP) and now in the file of the Center for UFO Studies (CUFOS). (NICAP was a civilian UFO research group founded in the latter half of the 1950s. It was the largest such group in the 1960s but it closed in the late 1970s. CUFOS, founded in the early 1970s, still exists in Chicago.) The complete affidavit is presented in A History of UFO Crashes by Kevin Randle (Avon Books, NY, 1995). Supplemental information is in parentheses:

> Down in Dyess Air Force Base in (Abilene) Texas, we were testing what turned out to be the F-94 (Lockheed Starfire, jet fighter, top speed about 600 mph, operational in 1950). They reported on the scope that they had an unidentified flying object at a high speed going to intercept our course. It became visible to us and we wanted to take off after it. Headquarters wouldn't let us go after it and we played around a little bit. We got to watching how it made 90 degree turns at this high speed and everything. We knew it wasn't a missile of any type. So then, we confirmed it with the radar control station on the DEW (Distant Early Warning) line (NORAD - North American Defense Command) and they kept following it and they claimed that it crashed somewhere off between Texas and the Mexico border.
>
> We got a light aircraft, me and my copilot, and we went down to the site. We landed out in the pasture right across from where it hit. We got over there. They told us to leave and everything else and then armed guards came out and they started to form a line around the area. So, on the way back, I saw a little piece of metal so I picked it up and brought it back with me. There were two sand mounds that came down and it looked to me like this thing crashed right between them. But it went into the ground, according to the way people were acting around it. So we never did get up to the site to see what had crashed. But you could see for, oh I'd say, three to five hundred yards where it went across the sand.
>
> It looked to me, I guess from the metal that we found, that it either had a little explosion or it began to disintegrate. Something caused this metal to come apart.

> It looked like something that was made because it was honeycombed. You know how you would make a metal that would cool faster. In a way it looked like magnesium steel but it had a lot of carbon in it. I tried to heat it with a cutting torch. It just wouldn't melt. A cutting torch burns anywhere from 3200 to 3800 degrees Fahrenheit and it would make the metal hot but it wouldn't even start the metal to yield.

According to Willingham, some time later he took the metal to the Marine Corps testing lab in Hagarstown, MD and gave it to some person for testing. When he returned for the results a few days later he was told there was no such person working there. Later was told never to talk about the incident. He signed a secrecy oath (which he apparently broke in 1977).

Todd Zechel, who was active in UFO research in the latter 1970s, investigated Willingham's story. In the middle 1980s Zechel told me some of the information he had learned from his investigation. According to Zechel this crash occurred between Dec. 5 and Dec. 8, 1950. (Randle lists the date as December 6.) It was Zechel's opinion based on Willingham's story and a document (discussed below) that the crash occurred on December 5, the recovery occurred on December 6, a general alert to counterintelligence was sent out on December 7, and the FBI learned about it on December 8. Zechel told this author that in 1978 he and a Japanese TV documentary team chartered a plane and flew, with Col. Willingham, to the location of the crash. It was roughly in the vicinity of Del Rio, Texas (Zechel did not tell me the exact location.). Del Rio is about 230 air miles from Abilene.

According to Zechel, Willingham said that the UFO was at an altitude of about 50,000 ft (nearly the maximum altitude of the F-94) and traveling 3 to 4 times faster than the jet, i.e., several times the speed of sound. It did a right angle turn, then slowed and started wobbling. Then it dropped downward continuously and went out of the pilots sight. Radar in Texas tracked the object until it went off the screen in a manner which suggested a crash. Willingham and the copilot returned to Dyess AFB, landed and got a small civil air patrol plane and flew to the border area where they thought it had crashed. (Depending upon the speed of the small aircraft and the exact location along the border, it could have taken two hours or more from the time the object appeared to crash until Willingham reached the site.) Willingham said that the Mexican military had reached the site before he got there. The Mexican military cordoned off the area and waited for US Air Force personnel to arrive

Zechel further told me that in 1975 he was fortunate to obtain a declassified but formerly Top Secret document which stated that Carswell Air Force Base, Fort Worth, Texas, had recovered some foreign object on December 6 or 7. He said the document referred to a high alert status because of the nature of the recovery, but the document did not specify what had been recovered. (Zechel did not provide me with a copy of this document.)

(For what its worth, the controversial Eisenhower Briefing Document released in 1987 by Timothy Goode and, independently, by William Moore, also claims a crash near the Texas-Mexico border on December 6.)

There is a discrepancy in Willingham's story which probably is a result of faulty memory. He said that the UFO was detected by the radar control station on the DEW (Distant Early Warning) line (NORAD - North American Defense Command) and that the DEW radar kept following it and they claimed that it crashed somewhere off between Texas and the Mexico border. The DEW line was not established until late 1953 and it was located in Alaska and northern Canada, so it could not possibly have tracked an object over Texas. The closest Air Defense Command radar at the time was at Walker AFB at Roswell, NM. However, this was also too far away. On the other hand there were Air Force bases in Texas which probably had radar installations that could have tracked the object reported by Willingham. Dyess AFB at Abilene is more than 200 miles from the Del Rio area of Texas. This is beyond the range of typical radar installations of the time (see discussion below) and so a radar at Dyess would not have been able to determine that an object went below the radar horizon or crashed at the distance of Del Rio. However, a radar installation at Kelly AFB, Brooks AFB or Randolph AFB, all near San Antonio, could have tracked an object to the vicinity of Del Rio without exceeding the range of the radar

PART 4: DISCONNECTED EVENTS?

So far we have three seemingly disconnected events: a documentable (see below) national emergency by the Defense Department on December 6, 1950, a documentable immediate high alert for saucer related information on December 8 and witness testimony about a flying saucer crash near the Texas-Mexico border on or about December 6, 1950. Could these be

related?

The existence of the FBI teletype message raises (at least) two related questions: why an immediate high alert, and why on December 8? Neither of these questions can be definitely answered at the present time because the CIC and Air Force records relating to this simply have not been found, even after a search, at my request, of CIC records by the Army Security agency. However, I can speculate that if a saucer had crashed on December 6 and been retrieved on the 6th or 7th, the Air Force intelligence may well have issued requests for immediate information in order to find out if any sightings had been made or if any other saucers had crashed. The high alert condition could then have been communicated to the FBI in a confidential way a day or so later (i.e., Dec. 8).

Whether the Air Force intelligence or the CIC received any special UFO information is not known. However, there were sightings on December 6 which are in the Blue Book file: one at West Springfield, Massachusetts (near Westover AFB) at 8:16 AM (one object, half-moon shaped, fast, flying in a southerly direction) and one at Fort Myers, Florida at 5 PM (a former aircraft purchasing agent and four boys, using 10-power binoculars, saw a 75' object, 3-4' thick with a bubble on top, silver colored with a red rim and having two white and two orange jets along the side; the center revolved when the object hovered and then it flew away very fast). The first object was identified as a aircraft by Project Blue Book; the second was unidentified. (The next sighting listed in the Blue Book file was in London, England, on December 9. Another of the only about 700 unidentified sightings in the Blue Book collection occurred on December 11 in Alaska.)

PART V: A RADAR EMERGENCY

So, what really happened on December 6 that nearly caused a national emergency?. The full story is not known, but the available information is intriguing. As you read the following discussion keep in mind that the global political situation was hot. There were two wars and two races: a Cold War between the USA and the Soviet Union and a Hot War in Korea, a missile race and an atomic bomb race. Russia and China were becoming potent Communist adversaries of the capitalist democracies. Their states purpose was to overthrow the capitalism. They were investing major portions of their country's resources into armaments and armies. The war in Korea was viewed as the first real military contest between communism and capitalism, and it was not going well for the USA and South Korea. Ever since the beginning of the war in June, 1950, the U. S. government had been worried about the Chinese response to the attempt of the United Nations to preserve the independence of South Korea. These worries increased after General MacArthur landed at Inchon in September and succeeded in driving the North Korean army back across the 38th parallel (the agreed-upon northern boundary of South Korea). In October and November U. N. troops pushed into North Korea under MacArthur's orders to destroy the North Korean army. Finally on November 25 the Chinese counterattacked with about 200,000 men, a number which doubled over the next month. U.N. forces, numbered at about one half the Chinese force, were once again in danger of complete defeat. This was causing a near panic situation in the USA. President Truman was worried about the possibility that the war would widen, even bringing on World War III, which could necessitate a nuclear response and nuclear armageddon. The Joint Chiefs of Staff (the top brass of all the armed services) had sent a warning to U. S. forces commanders throughout the world of a heightened possibility for world war. It was against this background of war jitters that a large group of unidentified aircraft was suddenly detected approaching the USA from the north, from the general direction of the Soviet Union! Was this the feared attack? Some important people were afraid it was!

There are three published versions of what happened during the morning of December 6. The version presented here first comes from the autobiography of Secretary of State, Dean Acheson, Present at the Creation (W.W. Norton Pub., NY; pages 479-480). The second version, published in The Wise Men by Walter Isaacson and Evan Thomas (Simon and Shuster, NY; 1986; pages 544-545) is based in an interview with Mr. Acheson. It differs slightly from Mr. Acheson's own version. The third is in Memoirs of Harry S. Truman: Years of Trial and Hope 1946-1952 (Vol. 2, page 405).

Looking first at Secretary Acheson's autobiography we find that:

> On the morning of December 6, soon after my arrival at the (State) Department, Deputy Secretary of Defense Lovett telephoned a report and an instruction from the President. Our early warning radar system in Canada had picked up formations of unidentified objects, presumably aircraft, headed southeast on a course that could bring them over Washington in two or three hours. All interception and defense forces were alerted. I was to inform but not advise the Prime Minister (Clement Atlee of Britain). The Pentagon telephones would be closed for all but emergency defense purposes and he could not talk again. Before he hung up, I asked whether he believed

> that the objects that were picked up were Russian bombers. He said that he did not. Getting Oliver Franks (the British ambassador) on the telephone I repeated the message. He asked whether the President had canceled the eleven-thirty meeting with Attlee, and was told that he had not. We agreed to meet there. Before ending the talk, he wondered about the purpose of my message. I suggested fair warning and an opportunity for prayer. As we finished, one of our senior officials burst into the room. How he had picked up the rumor I do not know, perhaps from the Pentagon. He wanted to telephone his wife to get out of town, and to have important files moved to the basement. I refused to permit him to do either and gave him the choice of a word-of-honor commitment not to mention the matter to anyone or being put under security detention. He wisely cooled off and chose the former. When we reached the White House, Lovett told us that the unidentified objects had disappeared. His guess was that they had been geese.

There are several important points to keep in mind as you read the following versions of what happened. Acheson said that early warning radar in Canada had detected formations (plural) of unidentified objects, presumably aircraft which were headed southeast in a direction that could put them over Washington, DC in 2 to 3 hours. Using an estimated top speed of 300 mph for Soviet bombers, this would put them a mere 600 - 900 miles from Washington. Acheson's story indicates that President Truman already knew about the unidentified aircraft and wanted Acheson to inform the British ambassador. Acheson ended his story by saying that, after he arrived at the White House, that is, at about 11:30 AM, Defense Undersecretary Lovett told him he guessed that the objects were geese.

The next version of the story, told in The Wise Men, is based on an interview with Mr. Acheson:

For a moment on the morning of December 6, he thought his nightmare (of world war) had come true. At 10:30 AM Bob Lovett called him from the Pentagon and abruptly informed him in his laconic voice: When I finish talking to you, you cannot reach me again. All incoming calls will be stopped. A national emergency is about to be proclaimed. We are informed that there is flying over Alaska at the present moment a formation of Russian planes heading southeast. The President wishes the British ambassador to be informed of this and be told that Mr. Attlee should take whatever measures are proper for Mr. Attlee's safety. I've now finished my message and I'm going to ring off. Acheson cut in, Now wait a minute, Bob, do you believe this? No, Lovett replied, and hung up. Acheson sat in his office and waited. The Air Force scrambled. A senior official burst in asking permission to telephone his wife to get out of town and wondering if he should begin moving files to the basement. Acheson tried to soothe him. A few minutes later Lovett calmly called back. The radar blips were not Soviet bombers after all. They were flocks of geese.

This version makes it seem that the alert period was very short, only a few minutes. However, by combining the information in this version about the beginning time, 10:30 AM, with the information in Acheson's biography about the ending time (after Acheson arrived at the White House), about 11:30 AM, we find that the alert lasted about an hour. This version is more specific as to where the objects were: they were detected over Alaska, which is over 3,000 miles from Washington, D. C. If that were true it would have taken not just two to three hours but much more than 10 hours for the planes to arrive over Washington.

President Truman wrote about the same episode:

> Shortly before we went into that morning meeting, Under Secretary Lovett called from the Pentagon, reporting that the radar screens of some air defense installations in the far north were reporting large formations of unidentified planes approaching. Fighter planes were sent up to reconnoiter and alerts were flashed to air centers in New England and beyond. But about an hour later -- while I was meeting with (Clement) Attlee -- Lovett notified me that the report had been in error. Some unusual disturbance in the Arctic atmosphere had thrown the radar off.

President Truman's version of the event suggests that the objects may have been detected north of the eastern United States rather than over Alaska. The fact that fighter aircraft were scrambled indicates that this alert was treated as a serious event by the Continental Air Command. Truman's explanation is somewhat different from Acheson's. Here we learn that the radar detections were caused by some sort of atmospheric disturbance.

An unpublished version of this event is found in the official transcript of the meeting between Truman and Atlee which is

preserved at the Truman library:

> At this point (in the meeting) Mr. Connelly entered the room and handed the President a report from Deputy Secretary of Defense Lovett. Mr. Lovett was reporting that the alert that had reached the President an hour earlier when it was thought that a large number of unidentified airplanes were approaching the northeast coast of the United States, had now been due to erroneous interpretation of atmospheric conditions. The President informed the Prime Minister that the report of the planes was in error. The Prime Minister expressed relief and gratification.

This version, based on notes made at the time rather than upon memories years afterward, says the unidentified objects were approaching the northeast coast of the United States, clearly contradicting Acheson's assertion that they were detected over Alaska, unless, of course, there were two groups of objects. Furthermore, this version indicates Lovett was the source of the atmospheric effects explanation mentioned by President Truman. But Lovett was also the source of the geese explanation reported by Acheson. So, which explanation was right? Or was neither correct?

A report carried by the International News Service reported yet another explanation:

Washington D.C., 6 December 1950 (INS):

> "A warning of an impending air attack resulted in a false alarm in this capitol city today. No air raid alarms were sounded, but functionaries charged with the Civil Air Defense of Washington were alerted that an unidentified aircraft had been detected off the coast of the State of Maine at mid-day. Later, a spokesman for the Air Force stated that interceptor aircraft had been dispatched , and that the object in question had been identified shortly thereafter as a North American C-47 aircraft which was approaching the continent from Goose Bay, Labrador. The warning was said to have been useful in verifying the efficiency of the Washington Civil Defense System. Civil Defense officials declined to comment on the incident."

This report, supposedly based on an Air Force statement, says the radar target was from a single C-47 (capable of up to 220 mph at altitudes up to 24,000 ft) approaching from Goose Bay, Labrador, a location about 500 miles north-northeast of the northeastern top of Maine. It says nothing about unknown aircraft over Alaska. Detection of planes near or over northeastern Maine (coming from the direction of Goose Bay) would be more compatible with the claim in Acheson's autobiography that the planes were several hours from reaching Washington, DC (the northeastern corner of Maine is about 700 miles from Washington, D.C., 2 1/3 hours at 300 mph).

It appears that this supposed attack did have repercussions in Alaska. The New York Times published a story with a December 7, Anchorage Alaska, dateline which said that All military personnel in Alaska were called on alert tonight (i.e., Dec. 6), but Air Force officials said that the order was purely a precautionary measure. Military police rounded up soldiers and theaters and radio stations made special announcements that troops were to return to their posts. Within a few hours there were no military personnel to be seen on Anchorage streets. Officials at Elmendorf Air Force Base said the alert had been in effect since the outbreak of the fighting in Korea. But they added that the AirFforce had increased its vigilance here in recent days.

Further evidence of the official jitters is in the statement in the Washington Post on December 10 that President Truman is seriously considering declaration of national emergency which could lead to an immediate all-out mobilization.

Over Alaska? Over Labrador? Flocks of Geese? Arctic atmospheric effects? A single C-47 aircraft? Or something else? Not until 1987 was further information on this event released by the Air Force, and sparse information at that! What follows was found by Don Berliner by accident during a search of declassified files of the Office of the Secretary of Defense, Record group 330, July 1, 1950 to December, 1951 (at the National Archives).

THE COLONEL'S MEMORANDUM

On December 6, Air Force Colonel Charles Winkle, Assistant Executive in the Directorate for Plans, wrote a memorandum for Secretary of Defense George Marshall about this event. It confirms the alert:

SUBJECT: Air Alert - 1030 Hours , 6 December 1950

1. The ConAC (Continental Air Command) Air Defense Controller notified the Headquarters USAF Command Post that at 1030 hours a number of unidentified aircraft were approaching the northeast area of the United States and that there was no reason to believe the aircraft were friendly.
2. This information was further amplified at 1040 hours as follows. By radar contact it was determined that approximately 40 aircraft were in flight, at 32,000 feet, on a course of 200 degrees in the vicinity of Limestone, Maine.
3. The emergency alert procedure went into effect immediately.
4. The Office of the President was notified. Brigadier General Landry returned the call and stated that the President had been notified and that:
   a. All information in this matter was to be released by the Department of the Air Force.
   b. Office of the President would release no information.
   c. The substance of a and b above was to be passed to the Office of the Secretary of Defense.
5. At 1104 hours the ConAC Air Defense Controller states that the original track had faded out and it appeared that the flight as originally identified is a friendly flight.
6. ConAC took immediate action to dispatch interceptors on the initial contact.

PART VI: RADAR ANALYSIS

The technical information in this document is sparse, but there are details which, when combined with the known capabilities of radar, call into question all of the previous explanations. In order to understand why, one must learn about the capabilities and locations of early warning radar installations in Maine.

By the beginning of WWII radar technology had developed to the point that aircraft detections at 150 miles were common. After the Japanese attack in December, 1941, the Army deployed, along the east and west coasts of the US, radar sets capable of detecting aircraft at 150 mile range at 20,000 ft elevation. By the late 1940s there were radar sets capable of a 200 mile range at 40,000 ft. The question now becomes, what were the capabilities and locations of the long-range search radar installations in Maine?

A valuable reference in this regard is Searching the Skies; The Legacy of the United States Cold war Defense Radar Program published by the USAF Air Combat Command (David Winkler, June, 1997) which recounts the history of the early warning radar that was set up by the Air Defense Command. These radar installations were dedicated to the detection of incursions into US airspace from the north. Generally they were located at sites where there already were radar installations used for other purposes such as air traffic control of military and civilian aircraft. Of course, there were also search radar installations at civilian airports and Air Force bases. One of these probably was at Loring AFB at Limestone, Maine, or at Presque Isle AFB at Presque Isle, Maine.

According to Searching the Skies,, in December, 1950 there was an AN/CPS-5 and also an AN/TPS-10A radar at Dow AFB near Bangor, Maine. These are Army/Navy (AN) search radars. The CPS-5 was a search radar and the TPS-10A was a height finder. The combination of these radars gave a solid search of up to 60 miles at 40,000 ft but often had success tracking aircraft as far as 210 miles away.

By combining the known radar capabilities with the information in Winkles document one can make a crude estimate of the speed of the objects. If we assume that the initial detection (10:30 AM) was made by the radar at Bangor, at the limit of its detection range, then at that time the objects were about 200 miles north-northeast of Bangor. About 10 minutes later (10:40 AM) the objects were in the vicinity of (over?) Limestone, Maine, which is about 150 miles north-northeast of Bangor. Hence these objects would have traveled about 50 miles in 10 minutes corresponding to a speed of 300 mph, the upper limit for long range bomber aircraft in 1950, but easily attained by fighter aircraft.

This speed calculation is based on the assumption that the initial detection was not made by radar installations that were closer to the northern border of Maine. The only reason for making this assumption is that the existence of a long range radar at Dow AFB is documented. I have no documentation on long range radar installations that may have been at Loring AFB, or at the nearby Presque Isle AFB, both of which are near the northeastern border of Maine. The capabilities of these assumed radars are unknown. However, according to Searching the Skies, there was an AN/TPS-1B long range search

radar that came on line at Loring AFB for use by the Air Defense Command or by ConAC in February, 1951. It is quite likely that this radar or one like it was already operating as an air traffic control radar at the Air Force Base in December, 1950. This type of radar had a capability of detecting aircraft at altitudes up to 10,000 ft at a range of 120 miles. At closer ranges it could detect aircraft at higher altitudes.

If we assume that a radar such as this made the initial detection then the estimated speed will be considerably larger than the 300 mph calculated above. Assume that at the initial detection was made about 100 miles from Loring AFB at Limestone. Then, ten minutes later the objects were in the vicinity of Limestone. Maine. That would mean they had traveled nearly 100 miles in 10 minutes for a speed of 500 - 600 mph, far in excess of anything but the fastest fighter jets of the time. Similarly, if the detection had been made from Loring AFB by a radar with a range of 200 miles, then the initial detection could have occurred when the objects were about 200 miles from Limestone. To travel 200 miles in 10 minutes requires a speed of 1,200 mph.

SNAFU OR SAUCERS? (SNAFU: situation normal, all fouled up)
As the preceding discussion shows, there is not enough information about the radar detections to allow an exact calculation of the speed of the objects. However, it appears that they were traveling at least 300 mph and quite likely twice that and perhaps over 1,000 mph.

The radar operators tracked the objects for ten minutes and determined that there were 40 objects (aircraft) flying at a rather high altitude (32,000 ft) and traveling south-southwestward (a course of 200 degrees). This course would take them over the eastern USA, roughly toward Washington, D.C.

The fact that the Air Force bases scrambled aircraft to intercept and identify the intruders means the radar images were so good that the operators were certain that these objects were real, unidentifiable yet solid targets, presumably aircraft, and not accidents of the radar. This is decidedly different from what the operators would have concluded had the radar showed relatively slow moving geese or atmospheric effects such as a radar mirage due to temperature inversion. Geese and atmospheric effects don't travel at hundreds of miles per hour along continuous tracks for many minutes.

The statement that there was no reason to believe the aircraft were friendly means that the Continental Air Command radar operators were not able to identify the aircraft from a known flight plan, nor were they able to communicate with the aircraft by radio. Had the aircraft been a single C-47 they certainly could have identified it as friendly since it would have responded to the numerous requests to identify itself. Furthermore, it would not have been as high as 32,000 ft, flying as fast as 300 mph and there likely would have been a flight plan. The intruders, on the other hand, were flying high, fast and were radio-silent.

According to Winkles document the radar track faded out at 11:04 AM, or about 24 minutes after the objects were near Limestone. If the objects had continued on the 200 degree course at a speed of 300 mph they would have traveled about 100 miles from Limestone and would have been nearing the limit of a 120 mile radar range. If they had been traveling at 600 mph, they would have been beyond the range of the of Limestone radar which would explain the fading of the track. (One would expect, however, that they would have been tracked by the Dow AFB radar as they continued southward.)

The strangest statement in the document is: it appears that the flight as originally identified is a friendly flight. What does that mean, it appears? Didn't they know for certain? Didn't they track the friendly aircraft until they were positive? Are we to believe that the Continental Air Command scrambled aircraft and put the USA into a state of immediate high alert and then weren't able to positively identify the aircraft?

One would expect if there had been upwards of forty friendly aircraft coming from the north toward the USA border someone would have been aware of it. There would have been a flight plan. At the very least these aircraft would have acknowledged the attempts to contact them by radio, attempts which must have been made numerous times starting with the first detection by radar. Either the flight plan or the radio identification would have been passed to the local commanders of the Continental Air Command aircraft to prevent needless scrambling of aircraft.

If these intruders were group of friendly aircraft why did Undersecretary of Defense Robert Lovett tell Dean Acheson that flocks of geese flying over Alaska caused the radar targets? Why did Undersecretary Lovett tell the President that arctic atmospheric conditions caused the radar targets? Why did the Air Force tell the press that a single C-47 caused the alert?

Presumably these were the explanations offered by the Top Brass after being told the details by the people who were directly involved with the radar detections and the scramble. Were the Top Brass embarrassed by the initial misidentification of a friendly flight and afraid to admit it? (I doubt that. They admitted to the press that it was a single C-47.) Or did the Top Brass, for whatever reason, not tell the President and the Undersecretary of Defense what these targets really were? Or were these people told but, when writing about it years later, they could not recall or could not reveal the exact nature of these objects to anyone else?

There must be other Air Force documents not yet released which clarify this situation. However, based on the information available in this document combined with the fact that CIC was put on immediate high alert for flying saucer information only two days later, I can suggest another explanation: perhaps the radar targets were flying saucers!

Perhaps one of them caused the 5 PM sighting in Ft. Myers, Florida.

And perhaps one of them flew somewhat erratically over Texas and crashed in Mexico. Perhaps. Will we ever know?

ACKNOWLEDGMENTS
I thank Don Berliner, Stanton Friedman, Kevin Randle, Todd Zechel, the FBI, Charles Winkle, Dean Acheson, Harry Truman and approximately forty high-flying aircraft for making this mystery possible.

Radar Inspired National Alert

Northeastern United States
December 6, 1950

From: Bruce Maccabee <brumac@compuserve.com>
Date: Fri, 30 Jan 1998 12:02:20 -0500
Fwd Date: Fri, 30 Jan 1998 12:59:11 -0500
Subject: Re: PROJECT-1947: Ruppelt, Air Defense & UFOs

Bruce Maccabee:
On another matter, regarding the Air defense Command and radar: I have been trying to locate records related to the radar inspired national alert on December 6, 1950 at about 10:30 AM when radar picked up a number of objects approaching the northeastern United States. I have a chapter on this in my book THE UFO-FBI CONNECTION because two days later, according to a message found in the FBI file, the counter-intelligence corps was put on immediate high alert for any information related to flying saucers (Dec. 8). There appear to be NO RECORDS OF THIS EVENT in the files of the Secretary of Defense, other than one document which provides a few details that could only have come from other documents .

Furthermore, it is clear that the SECDEF office was involved in this event which resulted in planes being scrambled AND THE PRESIDENT AND SECRETARY OF STATE BEING ALERTED!

Could this be a real radar detection of a group of UFOs that was effectively covered up by the defense department? Hard to know. Truman comments briefly about this event in his memoirs (Chapt.25, Vol. II). So on Dec. 6, there were no doubt fears of a surprise Soviet air attack. Truman wrote:

< SNIP valuable comments about war jitters regarding the Korean war and the possibility of direct Russian attack, and the implications of "the bomb.">

Truman wrote in his memoirs of the Dec 6 alert:

"Shortly before we went into that morning meeting, Under Secretary Lovett called from the Pentagon, reporting that the radar screens of some air defense installations in the Far North were reporting large formations of unidentified planes approaching. Fighter planes were sent up to reconnoiter and alerts were flashed to air centers in New England and beyond. But about an hour later -- while I was meeting with Attlee --Lovett notified me that the report had been in error. Some unusual disturbance in the Arctic atmosphere had thrown the radar off."

If the Dec. 6 event was indeed caused by an "atmospheric disturbance," then why the CIC high alert two days later for any information on flying saucers?

Was Truman really told it was atmospheric, or was he really told that it wasn't Soviet bombers (the primary concern), but flying saucers instead? It's impossible to know from the scant information that we have.

True it is: we don't have enough information. But what there is paints a picture of confusion:

(a) Truman, in his memoirs, says Lovett (Under Sec of Def. under George Marshal, SECDEF) told him it was atmospheric disturbance (this also appears in the minutes of the meeting)

(b) Secretary of State Dean Acheson was told of the alert by Lovett at about 10:30 AM. Acheson wrote: "Our early warning radar in Canada had picked up formations of unidentified objects, presumably aircraft, headed on a southeast course that would bring them over Washington in two or three hours."

An hour later, during which time Acheson went to the White House, "Lovett told us the unidentified objects had disappeared. His guess was that they had been geese."

(c) International News Service carried a report of the event. After reporting on the alert and scramble. INS wrote, "Later a

spokesman for the Air Force stated that interceptor aircraft had been dispatched and that the object in question had been identified shortly thereafter as a North American C-47 which was approaching the continent from Goose Bay..."

(d) A memorandum written by AF Col. Charles Winkle on dec 6 (afternoon?) entitled "air alert 1030 hours" says that the Continental Air Command Air Defense Controller ...at 1030 hours...(reported) a number of unidentified aircraft..approaching the northeast ....and there was no reason to believe they were friendly." At 1040 hours the information was "further amplified" by radar contact which showed 40 aircraft in flight at 32,000 feet near Limestone, Maine.

The alert procedure went into affect and the President was notified. At 11:04 hours the radar track had "faded out and it appeared that the flight as originally identified is a friendly flight."

"Atmospheric? Geese? One C-47? A friendly flight? Wait a minute. You can bet that the initial 1030 detection was by radar, probably at a distance of about 200 miles (typical for search radar even in those days). Assuming the detection was made by "lashup" radar at Limestone, Maine, then if there were 40 "aircraft" in the vicinity of Limestone only 10 minutes later they must have traveled nearly 200 miles in 10 minutes.... or nearly 600 mph.... FAST for those days.

Also, you can bet that contact signals were repeatedly sent from the ground to these aircraft. Had they been friendly they would have responded. They certainly weren't Russian bombers.... so
WHAT WERE THEY?

Or maybe something else was happening to trigger the Dec. 8 alert. Dec. 6 is also the day of the rumored flying saucer crash in northern Mexico with retrieval by the U.S. military.

NOTE: This is the "Col Willingham" report made first in the late 1970's. However, Willingham never specified said Dec. 6.

This was a date invented by someone (Todd Zechel? Kevin Randle?). Willingham only said 1948-49, perhaps 1950. HE couldn't pin down a date. This is being checked on.

Radar Inspired National Alert

Northeastern United States
December 6, 1950

David Rudiak:
A Blue Book unknown case also occurred that day in Fort Meyer, Florida where a 75 foot saucer was seen through binoculars by a former aircraft purchasing agent. Ruppelt wrote of the first UFO/radiation detection case at Los Alamos in Dec.1950. From Dec. 14-20, FBI memos mention three more UFO reports by radar operators and employees at OAK RIDGE. Two jet intercepts were attempted and on 12/14, "a group of objects blanketed the Radar Scopes..." for 3 hours. These incidents had been preceded by a flurry of 15 such UFO reports back in Oct. over Oak Ridge, also investigated by the FBI. The one that occurred on Oct. 23 is also mentioned by Ruppelt in his UFO radiation chapter. One FBI memo stated "Geiger counters in the vicinity [had] unexplainable readings at about this time."

For all we know, this may only represent a fraction of UFO activity at the time. The UFOs over our atomic installations like Los Alamos and OAK RIDGE must have been the most alarming. Maybe the Dec.6 incident really was a false alarm, but the military in conjunction with the other UFO incidents were concerned that we might not be able to distinguish a genuine Soviet attack from the UFOs that were flying around. Perhaps this triggered the alert on Dec. 8 for any additional information on the UFOs. It could have been fears of an accidental nuclear war with the Soviets at the height of the Korean War.

Jan. 16, 1951; Artesia, New Mexico. Time unknown. Witnesses: Two members of a balloon project from the General Mills . Aeronautical Research Laboratory, the manager of the Artesia Airport, and three pilots. The balloon crew was observing their 110' balloon at an altitude of 112,000' when a dull white, round object was spotted. It appeared larger than the balloon, but made no movement. Later, the balloon crew and the others saw two objects from the airport; flying side-by-side, they circled the balloon and flew away to the northeast. The second observation lasted about 40 seconds. Note: there is confusion over the date of this case, with some USAF records showing it as 1952; however, 1951 appears to be correct.

REMARKS SUMMARY OF INFORMATION

1. On 2 Sept 80, SOURCE related on 8 Aug 80, three Security Policemen assigned to 1608 SPS, KAFB, NM, on duty inside the Manzano Weapons Storage Area sighted an unidentified light in the air that traveled from North to South over the Coyote Canyon area of the Department of Defense Restricted Test Range on KAFB, NM. The Security Policemen identified as: SSGT STEPHEN FERENZ, Area Supervisor, ATC MARTIN W. RIST and AMN ANTHONY D. FRAZIER, were later interviewed separately by SOURCE and all three related the same statement; at approximately 2350 hrs., while on duty in Charlie Sector, East Side of Manzano, the three observed a very bright light in the sky approximately 3 miles North-North East of their position. The light traveled with great speed and stopped suddenly in the sky over Coyote Canyon. The three first thought the object was a helicopter, however, after observing the strange aerial maneuvers (stop and go), they felt a helicopter couldn't have performed such skills. The light landed in the Coyote Canyon area. Sometime later, three witnessed the light take off and leave proceeding straight up at a high speed and disappear.

2. Central Security Control (CSC) inside Manzano, contacted Sandia Security, who conducts frequent building checks on two alarmed structures in area. They advised that a patrol was already in the area and would investigate.

3. On 11 Aug 80, RUSS CURTIS, Sandia Security, advised that on 9 Aug 80, a Sandia Security Guard, (who wishes his name not be divulged for fear of harassment), related the following: At approximately 0020 hrs., he was driving east on the Coyote Canyon access road on a routine building check of an alarmed structure. As he approached the structure he observed a bright light near the ground behind the structure. He also observed an object he first thought was a helicopter. But after driving closer, he observed a round disk shaped object. He attempted to radio for backup patrol but his radio would not work. As he approached the object on foot armed with a shotgun, the object took off in a vertical direction at a high rate of speed. The guard was a former helicopter mechanic in the U.S. Army and stated the object he observed was not a helicopter.

4. SOURCE advised on 22 Aug 80, three other security policemen observed the same aerial phenomena described by the first three. Again the object landed in Coyote Canyon. They did not see the object take off.

CONTINUED FROM COMPLAL FORM 1, DTD 9 Sept 80

5. Coyote Canyon is part of a large restricted test range used by the Air Force Weapons Laboratory, Sandia Laboratories, Defense Nuclear Agency and the Department of Energy. The range was formerly patrolled by Sandia Security, however, they only conduct building checks there now.

6. On 10 Aug 80, a New Mexico State Patrolman sighted an aerial object land in the Manzano's between Belen and Albuquerque, NM. The Patrolman reported the sighting to the Kirtland AFB Command Post, who later referred the patrolman to the AFOSI Dist 17. AFOSI Dist 17 advised the patrolman to make a report through his own agency. On 11 Aug 80, the Kirtland Public Information office advised the patrolman the USAF no longer investigates such sighting unless they occur on a USAF base.

7. WRITER contacted all the agencies who utilized the test range and it was learned no aerial tests are conducted in the Coyote Canyon area. Only ground test are conducted.

8. On 8 Sept 80, WRITER learned from Sandia Security that another Security guard observed a object land near an alarmed structure sometime during the first week of August, but did not report it until just recently for fear of harassment.

9. The two alarmed structures located within the area contain HQ CR 44 material.

COMPLAINT FORM
ADMINISTRATIVE DATA

KIRTLAND AFB, NM 13 Aug 80, Possible Hostile Intelligence Intercept Incident, Frequency Jamming.

DATE: 14 Aug 80
TIME: 0730

PLACE: AFOSI District 17, BID, KIRTLAND AFB, NM

SOURCE AND EVALUATION: 1960th Communication Officer

RESIDENCE OR BUSINESS ADDRESS: 1960 COMMSq KAFB, NM

PHONE: 4-5098

REMARKS SUMMARY OF INFORMATION

1. On 13 Aug 80, 1960 COMM Sq Maintenance Officer reported Radar Approach Control equipment and scanner radar inoperative due to high frequency jamming from an unknown cause. Total blackout of entire radar approach system to include Albuquerque Airport was in effect between 1630-2215 hrs. Radar Approach Control back up system also were inoperative.

2. On 13 Aug 80, Defense Nuclear Agency Radio Frequency Monitors determined, by vector analysis, the interference was being sent from an area (V-90 degrees or due East). On DAF map coordinates E-28.6. The area was located NW of Coyote Canyon Test area. It was first thought that Sandia Laboratory, which utilizes the test range was responsible. However, after a careful check, it was later determined that no test were being conducted in the canyon area. Department of Energy, Air Force Weapons Laboratory and DNA were contacted but assured that their agencies were not responsible.

3. On 13 Aug 80, Base Security Police conducted a physical check of the area but because of the mountainous terrain, a thorough check could not be completed at that time. A later foot search failed to disclose anything that could have caused the interference.

4. On 13 Aug 80, at 2216 hrs., all radar equipment returned to normal operation without further incident.

5. CONCLUSION: The presence of hostile intelligence jamming cannot be ruled out. Although no evidence would suggest this, the method has been used in the past. Communication maintenance specialists cannot explain how such interference could cause the radar equipment to become totally inoperative. Neither could they suggest the type or range of the interference signal. DNA frequency monitors reported the interference beam was wide spread and a type unknown to their electronical equipment. Further checks of the area was being conducted by Technical Services, AFOSI.

6. High command interest item. Briefings requested IAW AFOSIR 124-4 be completed at HQ AFOSI/IVOE. HQ CR 44 and 51 items.

Ref: Request for Photo Imagery Interpretation Your MSG 292030Z Oct 80.
Subject Case NR: 8017D93-126 HQ CR 44
1. Subject Negatives/Film were analyzed by HQ IVT and 7602 AINTELG, it and the following results were found:
A. Negative #1: Depicting C-5A aircraft on approach and streaking unidentified aerial object in lower right portion of film. Film found to be unaltered. Size differential was not consistent with size of aircraft. Conclusion: Inconclusive
B. Negative #2: Depicting cylinder shaped unidentified aerial object in upper left portion of photo. Film found to be unaltered. Film showed object to be consistent with field depth and consistent with relative size of fixed objects. Conclusion: Legitimate negative of unidentified aerial

object. Bolton/Reinfeld method did not reveal visible markings on object.
C. Negative #3: Depicting irregular shaped unidentified aerial object in seven frames of 8MM film. Because of the size and apparent speed of object no further classification or conclusion could be drawn. Film shown to be unaltered.
D. 34 inches of 8MM film: Depicting apparent colored object moving in front of still camera. Film found to be unaltered. Spectrography revealed colors to be basic prism features. Depth analysis revealed object to be within 152MM of camera. Object was not consistent with relative size of fixed objects observed for several seconds in film. Conclusion: inconclusive.
E. Original Negative Depicting Unidentified Object: Film found to be unaltered. Because of a lack of fixed objects in the film, no depth analysis could be performed. Bolton, Reinfeld method revealed object to be saucer shaped, approximate diameter 37 feet. Object contained a trilateral insignia on the lower portion of object. Conclusion: Legitimate negative of unidentified aerial object.
2. Ref your request for further information regarding HQ CR 44, the following is provided: Capt. Grace 7602 Aintelg, INS contacted and related following: (S/WINTEL) USAF no longer publicly active in UFO research, however USAF still has interest in all UFO sightings over USAF installation/test ranges. Several other government agencies, lead by NASA, actively investigates legitimate sightings through covert cover. (S/WINTEL/FSA) One such cover is UFO Reporting Center, US Coast and Geodetic Survey, Rockville, MD 20852. NASA filters results of sightings to appropriate military departments with interest in that particular sighting. The official US Government Policy and results of project Aquarius is still classified top secret with no dissemination outside official intelligence channels and with restricted access to "MJ Twelve". Case on Bennewitz is being monitored by NASA, INS, who request all future evidence be forwarded to them thru AFOSI, IVOE.
4. Ref your request for technical assistance. Because of a chance of public disclosure, no knowledgeable personnel with SPA will be provided. Continue to receive assistance from individuals mentioned in your message, Miller, fugate. Because of the sensitivity of case, request they be thoroughly debriefed at regular intervals.

NATIONAL SECURITY AGENCY
CENTRAL SECURITY SERVICE
Fort George G. Meade, Maryland 20755-6000

Serial: J9014C

15 APR 1986

This responds to your letter of 7 March 1986 in which you further narrowed your Freedom of Information Act (FOIA) request for records pertaining to Project Aquarius.

The document located in response to your request as stated in your 7 March letter has been reviewed by this Agency as required by the FOIA and has been found to be currently and properly classified in accordance with Executive Order 12356. This document meets the criteria for classification as set forth in subparagraphs 2, 4, and 8 of section 1.3 and remains classified TOP SECRET as provided in section 1.1 of Executive Order 12356. The document is classified because its disclosure could reasonably be expected to cause exceptionally grave damage to the national security. Because the document is currently and properly classified, it is exempt from disclosure pursuant to the first exemption of the FOIA (5 U.S.C. section 552(b) (1)).

In addition, this Agency is authorized by various statues to protect

certain information concerning its activities. We have determined that such information exists in this document. Accordingly, those portions are also exempt from disclosure pursuant to the third exemption of the FOIA which provides for the withholding of information specifically protected from disclosure by statute. The specific statutes applicable in this case are Title 18 U.S. Code 798; Title 50 U.S. Code 403(d) (3); and Section 6, Public Law 86-36 (50 U.S. Code 402 "note").

No portion of the information is reasonably segregable.

Since your request has been denied, you are hereby advised of this Agency's appeal procedures.

Any person denied access to information may, within 45 days after notification of the denial, file an appeal to the NSA/CSS Freedom of Information Act Appeal Authority. The appeal shall be in writing addressed to the NSA/CSS FOIA Appeal Authority, National Security Agency, Fort George G. Meade, MD 20755-6000. The appeal shall reference the initial denial of access and shall contain, in sufficient detail and particularity, the grounds upon which the requester believes release of the information is required. The NSA/CSS Appeal Authority shall respond to the appeal within 20 working days after receipt.

In your letter, you take exception to the amount requested by this Agency for manpower and computer search fees to process your original request for all information on Project Aquarius. Please be advised that NSA search and duplication fees are computed in accordance with guidance promulgated in sections 6-201 and 6-202 of Dod Directive 5400.7-R

Sincerely,

JULIA B. WETZEL
Director of Policy

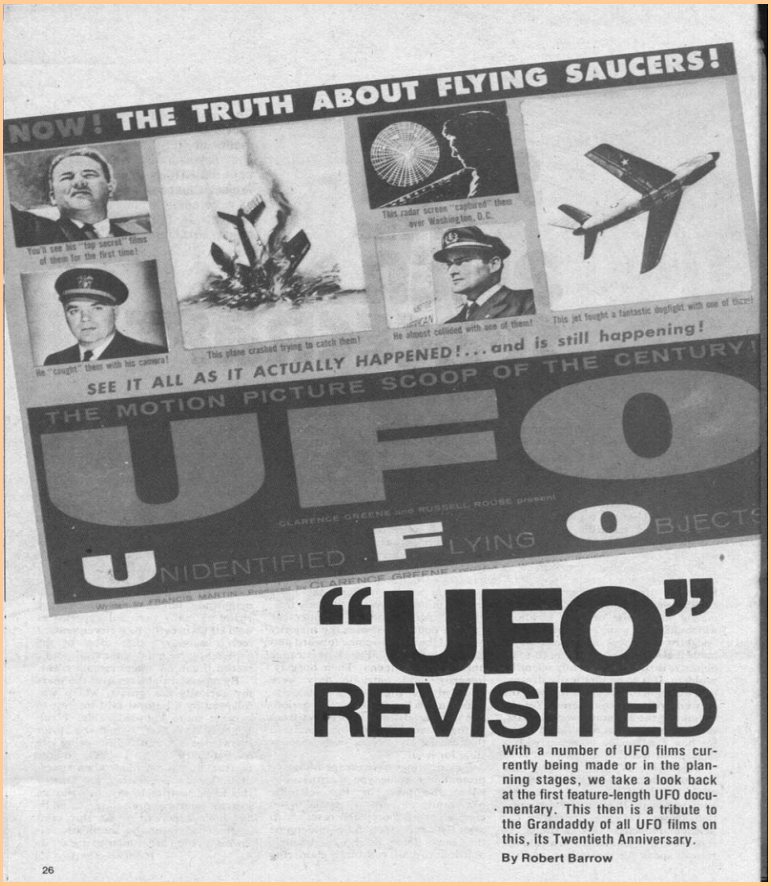
"U.F.O." REVISITED

"Unidentified Flying Objects", 1956 A Greene-Rouse Production.

By Robert Barrow (1976)



Note: This great article concerning the documentary film, appeared in 1976 in OFFICIAL UFO Magazine and was very extensive. The entire article [14 pages of regular type] was retyped into two web pages by Jerry Washington & Francis Ridge. Part one is the Al Chop story, of which the documentary was based. Part two covers the other persons portrayed in the movie.

With a number of UFO films currently being made or in the planning stages, we take a look back at the first feature-length UFO documentary. This, then, is a tribute to the Granddaddy of all UFO films on this, it's Twentieth Anniversary.

Most of U.F.O. concerned the official activities of Albert M. Chop. In the fifties, he watched the UFO story in the making with government officials. Today, he has dealings with the government's atomic energy project.

Al chop

Al Chop (Tom Towers) is promoted to Chief of the Press Section at the U.S. Air Force's Air Materiel Command. Soon after, he is transferred to the Pentagon and assigned to Project Blue Book.

"I saw an unidentified

Actor Tom Towers as Al Chop

flying object." Clarence Greene, producer of the 1956 United Artists release, "U.F.O.," Recently gave me this answer when I asked why he decided to make the movie. In 1956, Greene was a partner in Greene-Rouse Productions, Los Angeles. Today, he is President of Tower Productions, located in the same city.

Since "U.F.O.," Greene has produced a number of motion picture features: "The Fastest Gun Alive," "New York Confidential," "The Oscar," "Caper of the Golden Bulls," and others. Because of his simply-stated reason, Clarence Greene produced a major motion picture dealing with the UFO subject which surfaced in 1956, 92 minutes in duration, 8,166 feet in length, and shot in black & white - except for two actual films of UFOs which were offered in their original color.

During an August night in 1952, Greene and a friend were standing outside the formers house. The friend called attention to an object in the sky that looked like a "sphere of light." For five minutes they watched the UFO maneuver through stops and turns until it finally sped away over the horizon. Later, Greene learned that the UFO had also been seen by members of the Ground Observer Corps.

The producer readily admitted that the sighting made "an indelible impression" on him. The next day, he told his partner, Russell Rouse, and the Greene-Rouse staff of the incident. This was a harsh period of time for sighting witnesses who made their reports public, and now Clarence Greene knew how others must have felt in the face of contempt and ridicule.

"I was to learn," he explained, "that hundreds of other sightings had been made, with the sighters reluctant to mention it for fear of ridicule. I found myself becoming irritated at the scoffers. I was at a complete loss to understand why there seemed to be such a determined effort to suppress all news of UFOs by what seemed to be a planned campaign of skepticism and scoffing."

Greene decided the public should know the facts about "flying saucers." He began to delve into the UFO enigma. He discovered that Albert M. Chop, who had once been the Pentagon's Press Information Specialist and handled UFO news was nearby on the West Coast.

I had several meetings with him," Greene stated. "Chop was reluctant to talk at first. But when he realized I was dead serious about the unidentified flying object business, he gave me a breakdown on Project Blue Book, code name for the investigation of UFO." Chop and certain newsmen subsequently arranged a meeting between Greene and Capt. Edward Ruppelt, USAF Reserve, former Director of Project Bluebook.

"Together," Greene continued, "we went into a lengthy and exhaustive study of reports, various documents and affidavits of UFO sightings and reports from radar experts which, with some heretofore top secret motion pictures, in color, of flying saucers, form the basis of the film."

When some of Tom Towers' friends in Detroit learned that U.F.O. was coming to town in 1956, they arranged to have his name put up in lights on the marquee of the KRIM Theater. Towers recalls that his friends owned the theater, and sent him this photo "much to my pleasure and surprise."

Several months ago, Greene assured me that there was no official opposition to his plans to make the movie, nor was there any from his colleagues when they learned of this first-time event. He had no trouble in negotiating for use of the Montana (Mariana) and Utah (Newhouse) UFO films, which had only recently been declassified and made available publicly.

However, according to David Michael Jacobs in his excellent book, "The UFO Controversy in America" (1975, Indiana University Press), there was official concern going on in the background over Green's movie. Jacobs stated that Capt. George T. Gregory, who became head of Project Bluebook in April, 1956, was a UFO "debunker." He and the Air Force were obviously very concerned with "U.F.O."

Quoting Jacobs: "Gregory kept a file of all the movie's reviews, notifications, and advertisements, carefully underlining every statement that might cause problems for the Air Force or generate interest in UFOs. From Richard Dyer McCann's review in the 'Christian Science Monitor,' Gregory singled out the statement, 'It will almost certainly stir up a storm of public controversy,' and added the marginal note, 'This is something that neither PIO (Office of Public Information) or ATIC would like to undergo again!'_ ATIC asked (Dr. J. Allen) Hynek (AF Chief UFO Consultant) and Air Force officers to review the film before its release, and asked photo experts to compare copies of the Mariana and Newhouse films with the excerpts shown in the movie. ATIC Chief Scientist A. Francis Arcier met with agency officials to discuss the preparation of a case file giving the official Air Force explanation for every sighting portrayed in the film.

"When the film was released in May 1956, the 'storm of controversy' turned out to be little more than a light mist. "U.F.O." was successful, but it did not cause flying saucer hysteria, criticism of the Air Force, or more UFO reports."

Air Force concern was probably legitimate at the time, for Greene had gone straight to the source by getting technical assistance from people like Chop, Ruppelt and Dewey J. Fournet Jr. (Fournet, as an AF Major, had been the AF UFO Project Monitor).

Clarence Greene demanded realism in his movie. Several key people played their own roles. Many of the "extras" in "U.F.O." were officials or members of the Los Angeles Sheriff's Department who had experiences with UFOs and UFO reports. They offered their cooperation by "moonlighting" in the movie. And while it is true that "U.F.O." is a film composed of unknown actors, there is a scene during portrayal of the legendary 1952 radar-visual sightings over Washington. DC where a well-known name is involved. The voice of the pilot of "Red Dog One," who is surrounded by UFOs

while in flight, is that of veteran actor Harry Morgan who plays [played] Col. Sherman Potter on the television series, "M*A*S*H."

Despite Greene's painstaking concern for authenticity (even the script went through some severe changes in the interest of accuracy - the final production seems totally unlike many of the original pages of the script). "U.F.O." did not "make bricks" at the theaters. This seems to be a real anomaly, considering the period interest and enthusiasm for unusual and science-fiction films. Why didn't "U.F.O." captivate everybody with its enticement for real oddities?

At any rate, according to Albert Chop in a letter he wrote me in 1966 (he was then Deputy Public Affairs Officer for NASA in Houston), "The documentary "U.F.O." accurately portrays my role in Project Bluebook. We tried, and I think succeeded, in keeping the film honest and accurate.

Perhaps that is the main reason why the producer and all participants failed to realize any monetary gains from the effort. According to the books," Chop certified, "the producer lost over a hundred thousand [dollars].

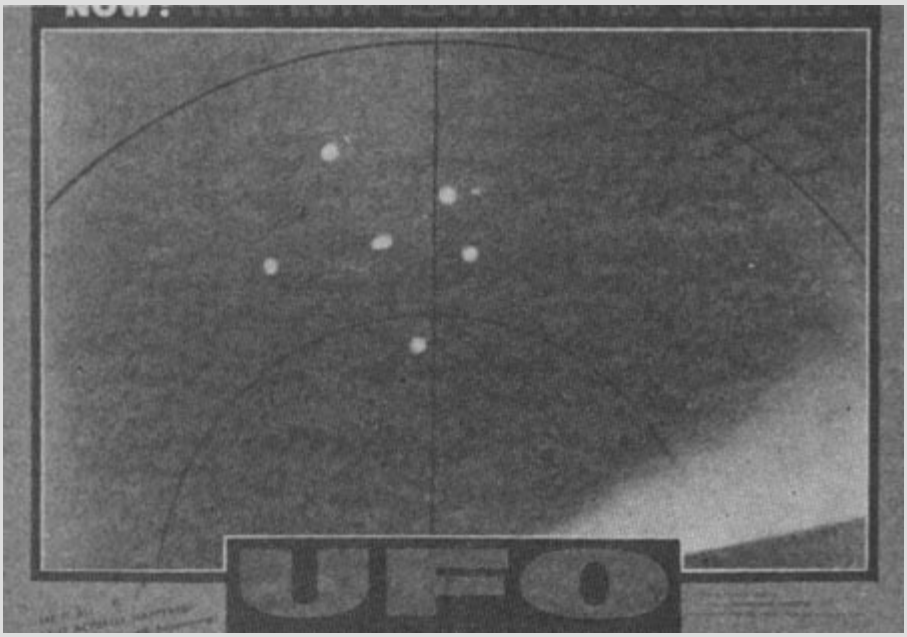
"Maybe a little of the Hollywood touch would have helped."

I asked Greene why the movie lost money at the box office. Was it possible, I queried in a letter, that the country wasn't ready for the documentary-like motion picture in 1956?

"It is possible," he replied, "but the audience wasn't ready."

He had "no way of knowing" how "U.F.O." might have done if it were filmed today instead of in 1956. Further, Greene disclosed that he never considered making a "U.F.O. Part II."

No matter, though, how the movie fared at the theaters. UFO researchers and "fans" can be grateful to Clarence Greene for his concern with honesty in the documentary.



Washington, D.C. UFOs show up on radar, surrounding "Red Dog One" jet interceptor.

"I made "U.F.O." because of a simple, but most urgent belief," Greene stated when the movie opened in 1956, "that the public should know the true facts about flying saucers."

Well, what about Al Chop and UFOs? This is the man whose background of UFO knowledge and work for the government in the early fifties precipitated Clarence Greene's efforts in making a movie about his official UFO experiences.

Prior to Chop's assignment to the Pentagon's UFO Press Desk, Chop acted as Chief of the Press Section, Headquarters, Air Materiel Command, USAF, at Wright-Patterson AFB. At that time

he wrote press releases, unsigned articles and responses to various inquiries. These duties were routine to the job. Among the unsigned pieces Chop wrote was one on helicopters which were becoming popular for use in the Korean conflict. The article saw print in "Newsweek" and assorted newspapers across the country.

Chop's opinion about UFOs at the time was: "this whole saucer business is pure, unadulterated bunk." He was as confirmed a skeptic as there could be.

However, after his promotion to Chief of the Press Section at A.M.C., he began to change his mind. Chop talked with top government personnel who were certain UFOs existed. He learned the government was, indeed, vitally concerned about UFOs.

When he was transferred to the Pentagon's Press Section, by request of Colonel Richard Searles, Chop - much to his surprise - was assigned directly to UFO investigation. It was here that he met Maj. Dewey Fournet of the Current Intelligence Branch. Chop worked closely with Fournet (UFO Project Monitor) and Capt. Ruppelt, head of Project Bluebook. Throughout the months he served with the official project, Chop cautiously began to accept the reality of UFOs.

What caliber of UFO sightings did it take to alter his skepticism of "flying saucers?" One early report from 1951, mentioned in "U.F.O.," Was sophisticated enough to make a big impression on Al Chop. He recently recalled:

"There was a report from General Mills' scientists who were tracking a large weather balloon with a theodolite," Chop began. "They saw an object descend on their balloon and make several passes at it. When the balloon was retrieved, it had a ten-foot dent in its side. The report contained figures on elevation, wind direction, and details on the appearance and exit of the UFO."

Considering the position Al Chop held, enviable from the viewpoint of a UFO researcher, it is easy to realize how the Pentagon's Press Chief became a believer.

"You must remember," he continued, "that I was privy to the project files. These contained hundreds of official reports of UFO encounters made by military personnel from all branches of the service. They were all classified with a high degree of security classification.

"Almost all of these made pretty scary reading from the verbatim descriptions of the pilots concerned."

By the time Chop viewed the famous Utah and Montana films, two years later, his observation of them "merely strengthened my personal beliefs and theories on the subject of UFOs_I leaned heavily toward the extraterrestrial theory prior to viewing the Montana and Newhouse films."

Chop described for me what it was really like to have been on the scene during the incredible incidents depicted in "U.F.O." Without a doubt, his most hectic time with the official project came during the classic month of July 1952, when up to 14 UFOs (at one time) appeared several times over Washington, DC On July 20, when the things first flew over the nation's capital, Chop was home sleeping through the chaos. But for the next week his desk was bombarded with press queries from across the country.

Then, a week later, Al Chop really became firmly involved in UFO history. It was July 26, around midnight, when the phone at his home rang.

"The initial phone call was received from the FAA Public Information Officer at the airport (Washington National)." The officer told Chop the UFOs over DC Were being tracked on radar.

Dewey J. Fournet, Jr., today: In the early fifties Major Fournet was the Monitor of the UFO Project. He, Chop and Ruppelt worked closely together.

"I told him I would be there as quickly as I could make it. After dressing, I called Major Fournet at his home and gave him what information I had. I asked my wife, Dolores, to come with me." This is one of the few points on which the movie and reality differ. In "U.F.O." Chop (played by Tom Towers) tells his wife "don't wait up" and leaves for the airport by himself.

Speeding to Washington National, the Chops' kept looking skyward, hoping to see the objects which some people were seeing visually. There was nothing in sight.

"I was rather apprehensive, but for no particular reason," Chop recalls. "All reports (of previous sightings) failed to mention any hazard to the observers. I did wonder what fate had decreed that I would be a part of the UFO project.

" In my haste I did probably run a few red lights or stop signs. However, there was extremely light traffic at that time of the morning, and I made the trip in a matter of 20 minutes or less."

The movie "U.F.O.," like many written accounts of the Washington National Sightings, concerned itself with the prominent details. I thought it would be interesting to ask Chop about the lesser known, obscure factors of this arrival at the airport.

"Well," he went on, "a routine evening in an airport traffic control center can best be described as exceedingly monotonous at least back in 1952 when most airplanes were slow prop jobs and air travel was not at its heyday. The military planes had their own airport facilities and were not using Washington National runways except on special occasions. So, there usually was very little conversation among tower personnel except the routine conversation and the usual low-key conversation between controllers and aircraft pilots flying in their vicinity."

But, true to the setting of the motion picture which dramatized this summer night in 1952, "The atmosphere was 'electric.' Everyone was aware that something unusual was going on. There were at least a dozen news media representatives on hand. They were confined to an ante room outside the radar room.

They were all clamoring for access to the radar." Chop immediately gave permission for the newsmen to watch the unknowns on the radar scope. "So, we had a mixed bag of reporters, including photographers, government personnel and airport control operators. Major Fournet arrived soon after I let the reporters into the room."

In "U.F.O.," Chop is seen

Al Chop (Tom Towers) watches UFOs on radar as the things continue their maneuvers over Washington, D.C. in 1952. The other officials are portrayed by Los Angeles law enforcement officers, who provided their talents to U.F.O.

to refuse reporters access to the radar, which is inaccurate, though news personnel were asked to leave during intercept attempts, as was Mrs. Chop.

I asked Chop how everyone in the scope room felt when one of the pursuing pilots (Red Dog One) was surrounded by UFOs visually and on radar. Was there a sense of helplessness or disbelief?

"Disbelief No! Helplessness Yes!" he insisted. "As we looked up at each other while watching that intercept attempt, you could imagine each of us trying to think of something that would be helpful.

I might also add there were no disbelievers around that scope. We all knew these objects represented something with which we could not cope."

All of this happened for several hours, while the radar room was in constant contact with the radar personnel at Andrews AFB (where UFOs were simultaneously tracked on radar). "These people were as apprehensive as we."

Skipping ahead to the present year, I asked Chop if his views on UFOs had changed since 1956, when the movie portrayed him as accepting the extraterrestrial theory for UFOs.

"I have not changed my theories on this subject as expressed in the film, except to consider the possibility that these objects could originate from another dimension in time and space.

It does seem improbable that physical objects can travel the vast distances between star systems in a profitable time span as we measure time and longevity here on our planet Earth." Chop has apparently done some thinking in this realm; he has discussed, for example, various theories on what happens to dying stars that eventually become "holes" in space, with top physicists.

Clarence Greene indicated in 1956 that Chop was reluctant to assist with "U.F.O." Chop bears this out.

"When first approached about helping with the documentary back in 1954, I was extremely wary about getting involved. However, in subsequent discussions with Greene and Russell Rouse, I became convinced they really wanted to do an unbiased, objective documentary that would shed some light on this subject for the general public.

"A secondary, yet very important objective, was to try to stimulate more interest in UFOs among the scientific personnel in our country."

Did you like the finished product? Any regrets about the movie?

"I continue to have mixed emotions concerning our efforts. I think we did make a contribution but we didn't achieve our goals. I am reminded of this every time I meet up with, or read about, an individual who flatly states there is nothing to the subject.

"One wonders," Chop considers, "what it will take to get people on Earth vitally interested. I wince when I think of the cost of the University of Colorado's 'Condon Study.'

"It is so damn obvious to anyone involved in the project that the 'findings' are nothing but a calculated farce. But why? Somewhere, there's a reasoned motive I will never understand."

Drawing again on his own experiences with the official UFO investigation, Al Chop commented on a couple of names which are familiar to many UFO researchers.

"It was interesting to observe from the sidelines how Dr. Robert L. Baker changed 180 degrees from a disbeliever to one embracing the extraterrestrial theory as a result of his study of the Montana and Newhouse films. In similar fashion, it was interesting to observe the change in Allen Hynek. I met him many years ago when his primary mission in the project seemed to be that of casting discredit on all those who reported UFO encounters."

Chop finally left the Press Desk at the Pentagon "because it was apparent the lid was back on the project and I don't believe in working in a vacuum." Nor did he like working in the Washington, DC area.

His only recent efforts on the UFO subject went into the syndicated TV documentary, "UFOs: Past, Present and Future," presented by Allen Sandler. Chop had not seen the feature, but heard from various people that it was a "good effort."

"Clarence Greene and Russell Rouse, as well as Allen Sandler, all lived up to my expectations as well as their own word concerning film documentaries. I have no regrets over being part of their efforts. I am disappointed that we could not achieve more with the material we had to work with, but I think we did make a good start."

In response to a question about UFO investigations of today, Chop believes "the news media has come a long way in their treatment of UFO reports. Unfortunately, the government policy has not changed noticeably...it still exudes an air of disinterest in the subject...it is downplayed as being of no particular importance. It is regrettable that our government officials cannot be more candid about their activities in this respect."

Seemingly, Chop doesn't buy the story that the government stopped investigating UFOs when Project Bluebook closed: "Our military forces and national security agencies have the continuing responsibility of investigating everything and anything that might prove a 'possible' threat to our country.

"It follows, then, quite naturally, that UFOs must continue to be investigated thoroughly or the agencies concerned are not doing their assigned job."

Chop indicated a preference that might surprise veteran UFO researchers. "I would welcome an opportunity to be involved in any official government dealing with UFOs.

It would have to be an objective, unclassified effort, with security classification limited to a genuine need to safeguard our own hardware performance. "And," he reflected, offering a quick qualifying remark, "since that will never come about in my lifetime, I prefer to sit on the sidelines as an observer."

"That's my reasoning," Chop said, "and it goes all the way back through Projects Sign, Grudge, and Bluebook, which should tell you something about the continuing need for study efforts."

Al Chop. With his background, he could only be an asset to a private UFO investigation. He departed from NICAP many years ago because "UFO authors" had distorted his image and tried to tie in his UFO-NICAP affiliation with his NASA employment. There was no such connection, but Chop, tired of the lies and angered by the inaccuracies, left the UFO scene.

Aside for his respect for the movie that portrayed him so well, Chop is a good, longtime friend of Major Donald E. Keyhoe (USMC, ret.) and staunchly lauds Keyhoe's pioneering UFO work.

Al Chop. After these years, he keenly reinforces what many UFO researchers tend to forget: "Someone, somewhere, has got to have the responsibility in our national security plans to continue the investigation of unknown objects reported in our skies."

End of Part One.

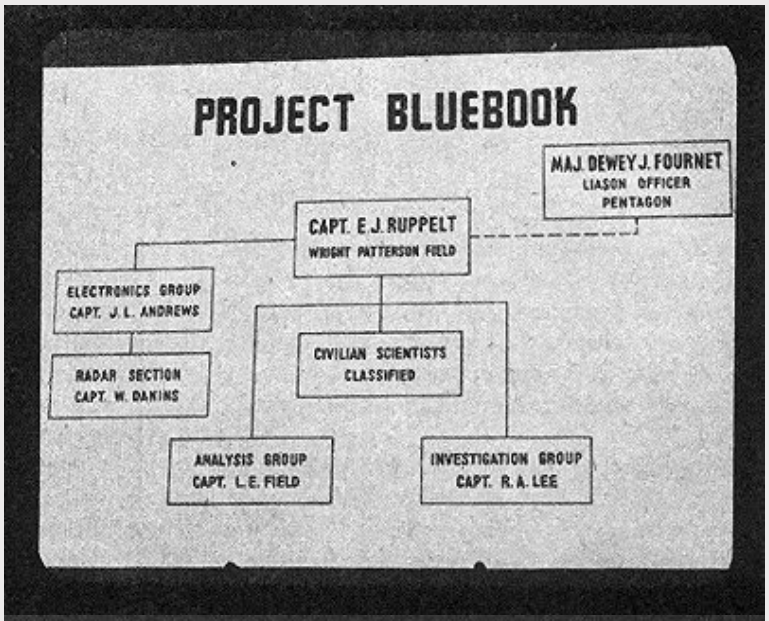
Next and final installment: The other players.

"UNIDENTIFIED FLYING OBJECTS":

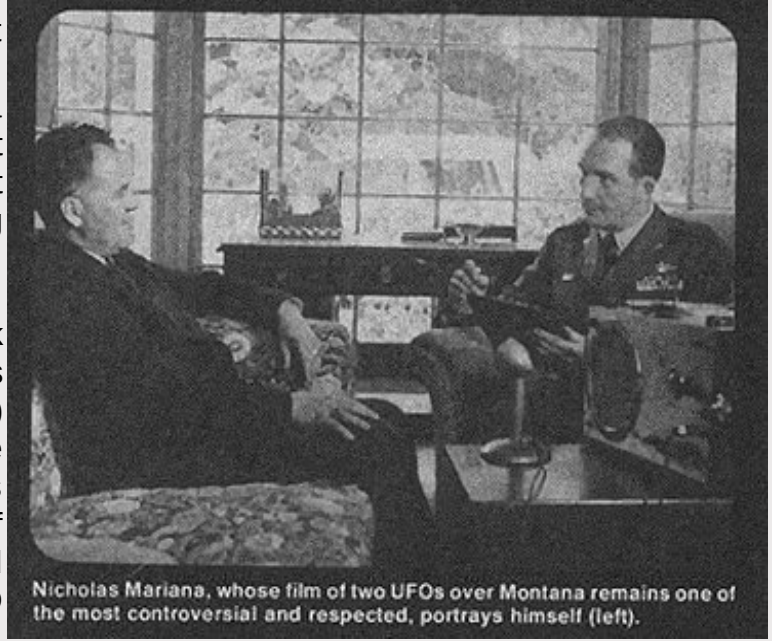
A Most Remarkable UFO Documentary Film

BY ROBERT BARROW (Winter 1977/78, Argosy)

Most science fiction movies which have dealt with the UFO topic have done so in anything but a sober fashion. But, if, you happen to watch the late-late show on TV, you might be lucky enough to catch the pioneer of serious UFO documentaries -- a film entitled, appropriately enough, "Unidentified Flying Objects." You'll be in for a real treat.



Chop (Tom Towers), is given a tour of a military radar facility by radar expert Wendell Swanson.



Nicholas Mariana, whose film of two UFOs over Montana remains one of the most controversial and respected, portrays himself (left).

Every few weeks, somewhere in the United States or overseas, a TV station airs an old 1956 motion picture on its late-late show or afternoon movie feature. *TV Guide* lists its title as "U. F. 0.," though the more wordy program logs might print the elaborate title of the United Artists release, "Unidentified Flying Objects."

Filmed primarily in black and white (except for two short, authentic UFO movies, shown in their original color), this Clarence Green-Russell Rouse production enjoyed only less than moderate success during its initial release to international movie houses 21 years ago.

However, a recent research session on the film's background, which led me to contact people in 17 cities among 12 states, convinced me that "U. F. 0." is truly a documentary, dealing fairly and, for the most part, accurately with the UFO subject is it was treated by the U.S. Government during the late 1940's and early fifties.

And "U.F.O." is a remarkable piece of work for its time. Whereas the other major studios have only recently considered the UFO) theme for *serious* motion picture productions, the l956 United Artists documentary was a far-sighted film. Most of the science-fiction movies which inundated the fifties, you may recall, dealt with the UFO

topic in *anything but* a sober mariner!

What was "U.F.0." about? On the surface, it seemed to make a good case for the existence of UFOs. In a deeper sense, the movie explores a very important historical aspect of the official U.S. investigation of the aerial phenomenon.

Unfortunately, United Artists' U.S.A. pressbook did not describe the film's storyline in detail, but a rare copy of the London, England "U.F.O." pressbook that I stumbled upon does. Following, then, is United Artists' English synopsis of the motion Picture---which I have paraphrased and added to in some spots in order to include other related material about this true motion picture account.

This writer, who openly confesses his respect for "U.F.0.," urges that the reader be on the lookout for the movie. I hope, too, that you enjoy viewing a few of the rare promotional photos herein that accompanied the film during its theater days..

Clarence Greene (Producer) and Wendell Swanson, a radar expert who played his own rule in "UFO," are shown discussing the motion picture script.

Radar expert Wendell Swanson, seated, talks about his field with producer Clarence Greene and the Late Capt. Edward J. Ruppelt, who was probably the best known former chief of Project Bluebook.

Albert M. Chop (played by Tom Towers), right, gives information to a personnel clerk at the Pentagon prior to undertaking his UFO duties.

SYNOPSIS

(1956 Press release by United Artists Corp., notes in italics added by Robert Barrow)

When Albert M. Chop (*played by Tom Towers, a veteran newsman)* reported to work on the Public Information Office desk of Air Materiel Command at Wright Patterson Air Base early in 1950, he airily dismissed press queries about Unidentified Flying Objects with, "This whole saucer business is pure, unadulterated bunk." He believed this despite all reports of sightings and the death of Captain Mantell, in 1948, while chasing a flying saucer.

Promoted to Chief of the Press Section at A.M.C., he soon began to have doubts. Startled to find that a famous scientist, Dr. Reiskaywitz, had an open mind on flying saucers, it was unsettling for Chop to learn from the Public Information Officer that Project Sign had not been closed down but

merely renamed Project Grudge. Most disturbing of all was the Colonel's reluctance to express any opinion on flying saucers.

When Chop was transferred to the Press Section in the Pentagon, by the special request of Col. Richard Searles, he felt sure he was finished with flying saucers. Instead, he was assigned directly to the investigation. Project Grudge was expanded and renamed Project Bluebook by U.S. Air Force Intelligence and Captain Edward J. Ruppelt was made chief of it *(Ruppelt played himself in the movie, adding to its historical value and authenticity). (NICAP note: Robert Barrow advised us that he did not make this statement and that Ruppelt did NOT appear in the film, although others did)*

Soon afterwards, Chop *(the real Albert Chop approved every line of the script dealing with himself)* learned from Major Dewey Fournet of Current Intelligence Branch, that the Air Force actually had motion pictures of U.F.O's. Fournet showed him the Montana film, explaining that, after thorough analysis, the objects remained unidentified *(the real Dewey J. Fournet, like Chop, also approved every line in the script regarding his official activities, though Fournet's role was played by an actor).*

Chop also learned that more film had been shot in Utah by Navy Photographer Newhouse *(Delbert Newhouse himself was interviewed in the movie),* and that Ruppelt and his staff were analyzing it. Later, after studying thousands of reports and analyses of sightings, Chop joined the top Pentagon brass for a viewing of the secret Utah film *(Nicholas Mariana, having photographed two UFOs in Montana, also appeared in the documentary).* The reports stated, "Not balloons, not aircraft, not birds, not faked," The Official conclusion was "Unknowns." The Utah film was never shown to the press, nor was its existence revealed *(until much later).*

On July 20, 1952, the Unknowns moved in

A GREEN-ROUSE PRODUCTION

Chop (Tom Towers), seated at left, sits through a classified showing of the Utah UFO film with highranking military officers. These men and many other extras in "UFO" were really members of the Los Angeles Police Dept.

for the first time over Washington, D.C.- Chop, who had slept through it all, was mobbed by queries from editors all over the country.

One week later, the night of July 26, Chop was called to C.A.A. Headquarters. Radar was again picking up Unknowns over the Nation's Capital. For six hours, Chop and Major Foumet were eye witnesses to the radar contact while UFOs hovered over Washington. Jet interceptors were sent up, and visual contact was made in addition to the radar sightings. This incident also was kept secret from the press and public. Even the White House was misinformed.

Chop and his wife discover that LIFE has hit the nation's newsstands with an important article suggesting that UFOs are very much a reality, and that they may be extraterrestrial.

The press demanded explanations. They knew that interceptors had been sent up, and now they wanted the facts. The; Chief of Staff ordered a press conference the next day (*film clips from the conference are included in the movie).* Chop and Ruppelt were present when General Samford stated there were "credible observers of relatively incredible things."

At home, Chop gets a fateful telephone call from a government official—UFOs are over Washington, D.C. for the second time in a week.

From that night on, Chop was convinced there was no longer any controversy as to whether or not there were U.F.O's moving in the atmosphere. They were an undeniable fact. The only questions left now were, "What are they?" and "Where do they come from?" He was also convinced that there was intelligence behind the objects and that

their source was, space.

(A final note: In the years following his own official UFO activities and the production of "U.F.O.," the real Mr. Albert M. Chop has considered other UFO theories besides the extraterrestrial idea, though he still, to this very day, remains certain that the phenomenon is real and demands a full investigation.)

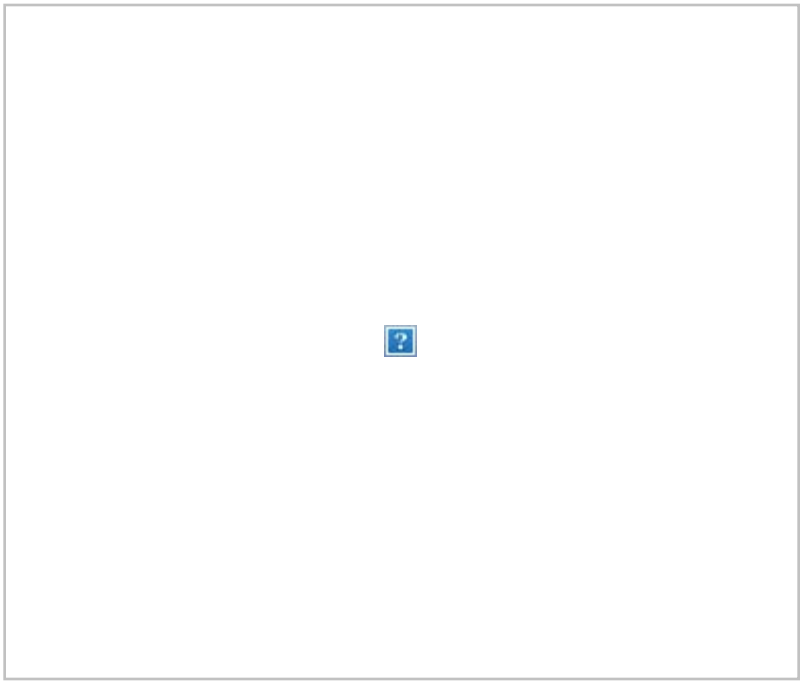
THE ZETA RETICULI INCIDENT

The Age of Nearby Stars

By Jeffrey L. Kretsch



The controversial interpretation of the Hill "star map" conducted by Marjorie Fish includes the sun and 15 nearby stars. These stars make an ideal case study for stellar age determination as described in this article. For further details specifically about this map, see in Focus and the December issue.

Commentary

Editor's Preface

The lead article in the December 1974 issue of ASTRONOMY, entitled "The Zeta Reticuli Incident", centered on interpretation of a map allegedly seen inside an extraterrestrial spacecraft. The intent of the article was to expose to our readers a rare instance where astronomical techniques have been used to analyze a key element in a so-called "close encounter" UFO incident. While not claiming that the analysis of the map was proof of a visit by extraterrestrials, we feel the astronomical aspects of the case are sufficiently intriguing to warrant wide dissemination and further study. The following notes contain detailed follow-up commentary and information directly related to that article.

The age of our own sun is known with some accuracy largely because we live on one of its planets. Examination of Earth rocks -- and, more recently, rocks and soil from the moon -- has conclusively shown that these two worlds went through their initial formation 4.6 billion years ago. The formation of the sun and planets is believed to have been virtually simultaneous, with the sun's birth producing the planetary offspring.

But we have yet to travel to any other planet -- and certainly a flight to the surface of a planet of a nearby star is an event no one reading this will live to witness. So direct measurement of the

ages of nearby stars -- as a by-product of extrasolar planetary exploration -- is a distant future enterprise. We are left with information obtained from our vantage point here near Earth. There is lots of it -- so let's find out what it is and what it can tell us.

When we scan the myriad stars of the night sky, are we looking at suns that have just ignited their nuclear fires -- or have they been flooding the galaxy with light for billions of years? The ages of the stars are among the most elusive stellar characteristics. Now, new interpretation of data collected over the past half century is shedding some light on this question.

Computer models of stellar evolution reveal that stars have definite lifespans; thus, a certain type of star cannot be older than its maximum predicted lifespan. Solar type stars of spectral class F5 or higher (hotter) cannot be older than our sun is today. These stars' nuclear fires burn too rapidly to sustain them for a longer period, and they meet an early death.

All main sequence stars cooler than F5 can be as old or older than the sun. Additionally, these stars are also much more likely to have planets than the hotter suns.

There are several exciting reasons why the age of a star should be tracked down. Suppose we have a star similar to the sun (below class F5). If we determine how old the star is, we can assume its planets are the same age -- a fascinating piece of information that suggests a host of questions: Would older Earthlike planets harbor life more advanced than us? Is there anything about older or younger stars and planets that would make them fundamentally different from the sun and Earth?

Of course we don't know the answer to the first question, but it is provocative. The answer to the second question seems to be yes (according to the evidence that follows).

To best illustrate the methods of star age determination and their implications, let's select a specific problem. "The Zeta Reticuli Incident" sparked more interest among our readers than any other single article in ASTRONOMY's history. Essentially, that article drew attention to a star map allegedly seen inside an extraterrestrial spacecraft. The map was later deciphered by Marjorie Fish, now a research assistant at Oak Ridge National Laboratory in Tennessee.

In her analysis, Ms. Fish linked all 16 prominent stars in the original map (which we'll call the Hill map since it was drawn by Betty Hill in 1966) to 15 real stars in the southern sky. The congruence was remarkable. The 15 stars -- for convenience we will call them the Fish-Hill pattern stars -- are listed on the accompanying table.

Since these stars have been a focus of attention due to Ms. Fish's work and the article mentioned above, we will examine them specifically to see if enough information is available to pin down their ages and (possibly) other characteristics. This will be our case study star group.

The Fish-Hill Pattern Stars

Gliese Cat. No.	Alternate Name	Spectral Type	W - Velocity	Total Space Velocity	Galactic Orbit Eccentricity	Galactic Orbit Incl.
17	Zeta Tucanae	G2	-38	70	.1575	.0529
27	54 Piscium	K0	10	45	.1475	.0260

86	HD 13445	K0	-25	129	.3492	.0269
86.1	HD 13435	K2	-37	41	undetermined	undetermined
95	HD 14412	G5	-10	33	.1545	.0025
97	Kappa Fornax	G1	-13	35	.0186	.0078
111	Tau 1 Eridani	F6	14	81	.0544	.0078
136	Zeta 1 Reticuli	G2	15	79	.2077	.0321
138	Zeta 2 Reticuli	G1	-27	127	.2075	.0340
139	82 Eridani	G5	-12	37	.3602	.0310
231	Alpha Mensae	G5	13	22	.1156	.0065
Sun	Sol	G5	0	0	.0559	.0091

All the stars listed here are main sequence or spectral group V stars. Tau Ceti has a slight peculiarity in its spectrum as explained in the text. W- velocity is the star's motion in km/sec in a direction above or below (-) in the galactic plane. Total space velocity relative to the sun is also in km/sec. Data is from the Gliese Catalog of Nearby Stars (1969 edition).

Consider, for example, the velocities of these stars in space. It is now known that the composition and the age of a star shows a reasonably close correlation with that star's galactic orbit. The understanding of this correlation demands a little knowledge of galactic structure.

Our galaxy, as far as we are concerned, consists essentially of two parts -- the halo, and the disk. Apparently when the galaxy first took shape about 10 billion years ago, it was a colossal sphere in which the first generation of stars emerged. These stars -- those that remain today, anyway -- define a spherical or halolike cloud around the disk shaped Milky Way galaxy. Early in the galaxy's history, it is believed that the interstellar medium had a very low metal content because most of the heavy elements (astronomers call any element heavier than helium "heavy" or a "metal") are created in the cores of massive stars which then get released into the interstellar medium by stellar winds, novae and supernovae explosions. Few such massive stars had "died" to release their newly made heavy elements. Thus, the stars which formed early (called Population II stars) tend to have a spherical distribution about the center of the galaxy and are generally metal-poor.

A further gravitational collapse occurred as the galaxy flattened out into a disk, and a new burst of star formation took place. Since this occurred later and generations of stars had been born and died to enrich the interstellar medium with heavy elements, these disk stars have a metal-rich composition compared to the halo stars. Being in the disk, these Population I stars (the sun, for example) tended to have motions around the galactic core in a limited plane -- something like the planets of the solar system.

Population II stars -- with their halo distribution -- usually have more random orbits which cut through the Population I hoards in the galactic plane. A star's space velocity perpendicular to the galactic plane is called its W-velocity. Knowing the significance of the W-velocity, one can apply this information to find out about the population classification and hence the ages and compositions of stars in the solar neighborhood -- the Fish-Hill stars in particular.

High W-velocity suggests a Population II star, and we find that six of the 16 stars are so classified while the remaining majority are of Population I. A further subdivision can be made using the W-velocity data (the results are shown in the table below.

Population Classification of the Fish-Hill Stars

Old Population I (1 to 4 Billion Years Old)
Gliese 59
Gliese 67
107 Piscium
Older Population I (4 to 6 BillionYears Old)
Tau 1 Eridani
Tau Ceti
Alpha Mensae
Gliese 95
Kappa Fornax
54 Piscium
Sun
Disk Population II (6 to 8 Billion Years Old)
Zeta 1 Reticuli
Zeta 2 Reticuli
Intermediate Population II (About 10 Billion Years Old)
Zeta Tucanae
Gliese 86
Gliese 86.1
82 Eridani

According to this classification system (based on one by A. Blaauw), most of the 16 stars are in the same class as the sun -- implying that they are roughly of the same composition and age as the sun. The sun would seem to be a natural unit for use in comparing the chemical compositions and ages of the stars of the Fish-Hill pattern because it is, after all, the standard upon which we base our selection of stars capable of supporting life.

Three stars (Gliese 59, 67 and 68) are known as Old Population I and are almost certainly younger than the sun. They also probably have a higher metal content than the sun, although specific data is not available. The Disk Population II stars are perhaps two to four billion years older than the sun, while the Intermediate Population II are believed to be a billion or two years older still.

For main sequence stars like the sun, as all these stars are, it is generally believed that after the star is formed and settled on the main sequence no mixing between the outer layers and the thermo-nuclear core occurs. Thus the composition of the outer layers of a star, (from which we receive the star's light) must have essentially the same composition as the interstellar medium out of which the star and its planets were formed.

Terrestrial planets are composed primarily of heavy elements. The problem is: If there is a shortage of heavy elements in the primeval nebula, would terrestrial planets be able to form? At present, theories of planetary formation are unable to state for certain what the composition of the cloud must be in order for terrestrial planets to materialize, although it is agreed to be unlikely that Population II stars should have terrestrial planets. But for objects somewhere between Population I and II -- especially Disk Population II -- no one really knows.

Although we can't be certain of determining whether a star of intermediate metal deficiencies

can have planets or not, we can make certain of the existence of metal deficiencies in those stars. The eccentricities and inclinations of the galactic orbits of the Fish-Hill stars provide the next step in the information sequence.

The table above also shows that the stars Gliese 136, 138, 139, 86 and 71 have the highest eccentricities and inclinations in their galactic orbits. This further supports the Population II nature of these four stars. According to B.E.J. Pagel of the Royal Greenwich Observatory in England, the correlation between eccentricity and the metal/hydrogen ratio is better than that between the W-velocity and the metal/hydrogen ratio. It is interesting to see how closely the values of eccentricity seem to correspond with Population type as derived from W-velocity -- Old Population I objects having the lowest values. Since the two methods give similar results, we can lend added weight to our classification.

So far all the evidence for metal deficiencies has been suggestive; no direct evidence has been given. However, specific data can be obtained from spectroscopic analysis. The system for which the best set of data exists also happens to be one of the most important stars of the pattern, Zeta 1 Reticuli. In 1966, J.D. Danziger of Harvard University published results of work he had done on Zeta 1 Reticuli using wide-scan spectroscopy. He did indeed find metal deficiencies in the star: carbon, 0.2, compared to our sun; magnesium, 0.4; calcium, 0.5; titanium, 0.4; chromium, 0.3; manganese, 0.4; iron, 0.4; cobalt, 0.4; nickel, 0.2, and so on.

In spite of the possible error range of about 25 percent, there is a consistent trend of metal deficiencies -- with Zeta 1 Reticuli having less than half the heavy elements per unit mass that the sun does. Because Zeta 1 Reticuli has common proper motion and parallax with Zeta 2 Reticuli, it probably also has the same composition. Work done by M.E. Dixon of the University of Edinburgh showing the two stars to have virtually identical characteristics tends to support this.

The evidence that the Zeta Reticuli system is metal deficient is definite. From this knowledge of metal deficiency and the velocities and eccentricities, we can safely conclude that the Zeta Reticuli system is older than the sun. The question of terrestrial planets being able to form remains open.

The other two stars which have high velocities and eccentricities are 82 Eridani (Gliese 139) and Gliese 86. Because the velocities of these stars are higher than those of Zeta Reticuli, larger metal deficiencies might be expected. For the case of Gliese 86, no additional information is presently available. However, some theoretical work has been done on 82 Eridani concerning metal abundances by J. Hearnshaw of France's Meudon Observatory.

Although 82 Eridani is a high velocity star, its orbit lies largely within the galactic plane, and also within the solar orbit. Its orbit is characteristic of the Old Disk Population, and an ultraviolet excess indicates only a mild metal deficiency compared to the sun. Hearnshaw's conclusions indicate that the metal deficiency does not appear to be any worse than that of the Zeta Reticuli pair.

Because Gliese 86 has a velocity, eccentricity and inclination similar to 82 Eridani, it seems likely that its chemical composition may also not have severe metal deficiencies, but be similar to those of 82 Eridani.

Tau Ceti appears to be very much like the sun except for slight deficiencies of most metals in rarely seen abnormal abundances of magnesium, titanium, silicon and calcium. Stars in this class are known as alpha-rich stars, but such properties do not appear to make Tau Ceti unlikely to have planets similar to the sun's.

Tau 1 Eridani, an F6V star, has a life expectancy of 4.5 billion years -- so it cannot be older

than the sun. The low eccentricities and low moderate velocity support an age and composition near that of the sun.

Gliese 67 is a young star of at least solar metal abundances, considering its low velocity and eccentricity.

Having covered most of the stars either directly or simply by classifying them among the different Population classes, it is apparent that there is a wide age range among different stars of this group as well as a range of compositions. It is curious that the stars connected by the alleged "trade routes" (solid lines) are the older and occasionally metal deficient ones -- while the stars connected by dotted lines seem to be younger Population I objects.

A final point concerning the metal deficiencies is rather disturbing. Even though terrestrial planets might form about either star in the Zeta Reticuli system, there is a specific deficiency in carbon to well within the error range. This is disturbing because carbon is the building block of organic molecule chains. There is no way of knowing whether life on Earth would have emerged and evolved as far as it has if carbon were not as common here.

Another problem: If planets formed but lacked large quantities of useful industrial elements, could a technical civilization arise? If the essential elements were scarce or locked up in chemical compounds, then an advanced technology would be required to extract them. But the very shortage of these elements in the first place might prevent this technology from being realized. The dolphins are an example of an intelligent but nontechnical race. They do not have the means to develop technology. Perhaps some land creatures on another planet are in a comparable position by not having the essential elements for technological development. (This theme is explored in detail in "What Chariots of Which Gods?", August 1974.)

This whole speculation certainly is not strong enough to rule out the Fish interpretation of the Hill map given our present state of knowledge. Actually in some respects, the metal deficiencies support the Fish hypothesis because they support an advanced age for several of the stars -- suggesting that if cultures exist in these star systems, they might well be advanced over our own.

The fact that none of the stars in the pattern is seriously metal deficient (especially the vital branch high velocity stars 82 Eridani and Gliese 86) is an encouragement to the Fish interpretation -- if terrestrial planets can form in the first place and give rise to technical civilizations. Once again we are confronted with evidence which seems to raise as many questions as it answers. But the search for answers to such questions certainly can only advance knowledge of our cosmic environment.

Jeffrey L. Kretsch is an astronomy student at Northwestern University working under the advisement of Dr. J. Allen Hynek. For more than a year Kretsch has been actively pursuing follow-up studies to the astronomical aspects of the Fish-Hill map. More of his studies and comment s appear in In Focus.

Pattern Recognition & Zeta Reticuli

by Carl Sagan & Steven Soter

"The Zeta Reticuli Incident" is very provocative. It claims that a map, allegedly shown on board a landed extraterrestrial spacecraft to Betty Hill in 1961, later drawn by her from memory and published in 1966, corresponds well to similar maps of the closest stars resembling the sun based on stellar positions in the 1969 Gliese Catalog of Nearby Stars. The comparison maps were made by Marjorie Fish using a three dimensional physical model and later by a group of Ohio State University students using a presumably more accurate (i.e., less subjective)

computer generated projection. The argument rests on how well the maps agree and on the statistical significance of the comparison.

Figure 1 [not available here] show the Hill map and the Ohio State computer map with connecting lines as given in the ASTRONOMY article. The inclusion of these lines (said to represent trade or navigation routes) to establish a resemblance between the maps is what a lawyer would call "leading the witness". We could just as well have drawn lines as in the bottom of Figure 1 to lead the other way. A less biased comparison of the two data sets, without connecting lines as in Figure 2, shows little similarity. Any residual resemblance is enhanced by there being the same number of points in each map, and can be accounted for by the manner in which these points were selected.

The computer star map includes the sun and 14 stars selected from a list of the 46 nearest stars similar to the sun, derived from the Gliese catalog. It is not clear what criteria were used to select precisely these 14 stars from the list, other than the desire to find a resemblance to the Hill map. However, we can always pick and choose from a large random data set some subset that resembles a preconceived pattern. If we are free also to select the vantage point (from all possible directions for viewing the projection of a three dimensional pattern), it is a simple matter to optimize the desired resemblance. Of course such a resemblance in the case of selection from a random set is a contrivance -- an example of the statistical fallacy known as "the enumeration of favorable circumstances".

The presence of such a fallacy in this case appears even more likely when we examine the original Hill drawing, published in The Interrupted Journey by John Fuller. In addition to the prominent points that Betty Hill connected by lines, her map also includes a number of apparently random dots scattered about -- evidently to represent the presence of background stars but not meant to suggest actual positions. However, three of these dots appear in the version of the Hill map used in the comparison, while the others are absent. Thus some selection was made even from the original Hill map, although not to the same extent as from the Gliese catalog. This allow even greater freedom to contrive a resemblance.

Finally, we lear from The Interrupted Journey that Betty Hill first thought she saw a remarkable similarity between her UFO star map and a map of the constellation Pegasus published in the New York Times in 1965 to show the position of the quasar CTA-102. How many star maps, derived from the Gliese catalog or elsewhere, have been compared with Betty Hill's before a supposed agreement was found? If we suppress information on such comparisons we also overestimate the significance of the result.

The argument on "The Zeta Reticuli Incident" demonstrates only that if we set out to find a pattern correlation between two nearly random data sets by selecting at will certain elements from each and ignoring others, we will always be successful. The argument cannot serve even to suggest a verification of the Hill story -- which in any case is well known to be riddled with internal and external contradictions, and which is amenable to interpretations which do not invoke extraterrestrial intelligence. Those of us concerned with the possibility of extraterrestrial intelligence must take care to demand adequately rigorous standards of evidence. It is all too easy, as the old Chinese proverb says, for the imprisoned maiden to mistake the beating of her own heart for the hoof beats of her rescuer's horse.

Steven Soter is a research associate working under the advisement of Carl Sagan, director of Cornell University's laboratory for Planetary Studies.

Reply: by Terence Dickinson

The question raised by Steven Soter and Carl Sagan concerning the pattern resemblance of the Hill map and the computer generated projection of the Fish pattern stars is certainly a key question worthy of discussion. Next month two authors will make specific comments on this point.

Briefly, there is more to discounting the Fish interpretation than pattern resemblance. We would have discounted the Fish interpretation immediately on pattern resemblance alone. The fact that all the connecting lines join stars in a logical distance progression, and that all the stars are solar type stars, is significant. Ms. Fish tried to fit hundreds of other viewpoints and this one was the only one that even marginally fit and made sense in three dimensions and contained solar type stars. in this context, you could not "have just as well drawn the lines...to lead the other way".

Naturally there was a desire to find a resemblance between a group of nearby stars and the Hill pattern! That's why Marjorie Fish built six models of the solar neighborhood containing the relative positions of up to 256 nearby stars. The fact that she came up with a pattern that fits as well as it does is a tribute to her perseverance and the accuracy of the models. Stars cannot be moved around "to optimize the desired resemblance". Indeed Marjorie Fish first tried models using nearby stars of other than strictly solar type as defined in the article. She found no resemblances.

The three triangle dots selected from the background dots in the Hill map were selected because Mrs. Hill said they were more prominent than the other background stars. Such testimony was the basis of the original map so we either accept Mrs. Hill's observations and attempt to analyze them or reject the whole incident. We feel there is sufficient evidence compelling us not to reject the whole incident at this time.

We too are demanding rigorous standards of evidence to establish the reality of extraterrestrial intelligence. If there is even the slightest possibility that the Hills' encounter can provide information about such life, we feel it is worth pursuing. The map is worthy of examination by as many critical minds as possible.

Reply: by David R. Saunders

Last month, Steven Soter and Carl Sagan offered two counterarguments relating to Terence Dickinson's article, "The Zeta Reticuli Incident" (ASTRONOMY, December 1974).

Their first argument was to observe that the inclusion of connecting lines in certain maps "is what a lawyer would call 'leading the witness'." This was used as the minor premise in a syllogism for which the major premise was never stated. Whether we should consider "leading the witness" a sin or not will depend on how we conceive the purpose of the original article. The implied analogy between ASTRONOMYmagazine and a court of law is tenuous at best; an expository article written for a nonprofessional audience is entitled, in my opinion, to do all it can to facilitate communication -- assuming that the underlying message is honest. Much of what we call formal education is really little more than "leading the witness", and no one who accepts the educational goals objects very strongly to this process. In this context, we may also observe that Soter's and Sagan's first argument provides another illustrative example of "leading the witness"; the argument attacks procedure, not substance -- and serves only to blunt the reader's possible criticism of the forthcoming second argument. This paragraph may also be construed as an effort to lead the witness. Once we have been sensitized to the possibilities, none of us needs to be further misled!

The second argument offered by Soter and Sagan does attack a substance. Indeed, the editorial

decision to publish the original article was a responsible decision only if the issues raised by this second line of possible argument were fully considered. Whenever a statistical inference is made from selected data, it is crucial to determine the strenuousness of that selection and then to appropriately discount the apparent clarity of the inference. By raising the issue of the possible effects of selection, Soter and Sagan are right on target.

However, by failing to treat the matter with quantitative objectivity (by failing to weigh the evidence in each direction numerically, for example), they might easily perform a net disservice.

In some situations, the weight of the appropriate discount will suffice to cancel the clarity of a proposed inference -- and we will properly dismiss the proposal as a mere capitalization on chance, or a lucky outcome. (It is abundantly clear that Soter and Sagan regard the star map results as just such a fortuitous outcome.) In some other situations, the weight of the appropriate discount may be fully applied without accounting for the clarity of the inference as a potentially valid discovery. For example, if I proposed to infer from four consecutive coin tosses observed as heads that the coin would always yield heads, you would properly dismiss this proposal as unwarranted by the data. However, if I proposed exactly the same inference based on 40 similar consecutive observations of heads, you would almost certainly accept the inference and begin looking with me for a more systematic explanation of the data. The crucial difference here is the purely quantitative distinction between 4 and 40; the two situations are otherwise identical and cannot be distinguished by any purely qualitative argument.

When Soter and Sagan use phrases such as "some subset that resembles", "free also to select the vantage point", "simple matter to optimize", and "freedom to contrive a resemblance", they are speaking qualitatively about matters that should (and can) be treated quantitatively. Being based only on this level of argument, Soter's and Sagan's conclusions can only be regarded as inconclusive.

A complete quantitative examination of this problem will require the numerical estimation of at least three factors, and their expression in a uniform metric so that wee can see which way the weight of the evidence is leaning. The most convenient common metric will be that of "bits of information", which is equivalent to counting consecutive heads in the previous example.

One key factor is the degree of resemblance between the Hill map and the optimally similar computer-drawn map. Precisely how many consecutive heads is this resemblance equivalent to? A second key factor is the precise size of the population of stars from which the computer was allowed to make its selection. And a third key factor is the precise dimensionality of the space in which the computer was free to choose the best vantage point. If the first factor exceeds the sum of the other two by a sufficient margin, we are justified in insisting on a systematic explanation for the data.

The third factor is the easiest to deal with. The dimensionality of the vantage-point space is not more than three. A property of the metric system for weighing evidence is that each independent dimension of freedom leads us to expect the equivalent of one more consecutive head in the observed data. Three dimensions of freedom are worth exactly 3.0 bits. In the end, even three bits will be seen as relatively minor.

The second factor might be much larger than this, and deserve relatively more discussion. The appropriate discount for this selection will be log2C, where C is the number of distinct combinations of stars "available" to the computer. If we were to agree that C must represent the possible combinations of 46 stars taken 14 at a time, then log2C would be 37.8 bits; this would be far more than enough to kill the proposed inference. However, not all these combinations are equally plausible. We really should consider only combinations that are adjacent to one another

and to the sun, but it is awkward to try to specify exactly which combinations these are.

The really exciting moment in working with these data came with the realization that in the real universe, our sun belongs to a closed cluster together with just six of the other admissible stars -- Tau Ceti, 82 Eridani, Zeta Tucanae, Alpha Mensae, and Zeta 1 and Zeta 2 Reticuli. The real configuration of interstellar distances is such that an explorer starting from any of the seven should visit all of them before venturing outside. If the Hill map is assumed to include the sun, then it should include the other members of this cluster within an unbroken network of connections, and the other connected stars should be relatively adjacent in the real universe.

Zeta Reticuli occupies a central position in all of the relatively few combinations that now remain plausible. However, in my opinion, the adjacency criteria do leave some remnant ambiguity concerning the combination of real stars to be matched against the Hill map -- but only with respect to the region farthest from the sun. The stars in the closed cluster and those in the chain leading to Gliese 67 must be included, as well as Gliese 86 and two others from a set of five candidates. Log2C for this remnant selection is 3.9 bits. we must also notice that the constraint that Zeta Tucanae be occulted by Zeta Reticuli reduces the dimensionality of the vantage-point space from 3.0 to 1.0. Thus, the sum of factors two and three is now estimated as only 4.9 bits.

The first factor is also awkward to evaluate -- simply because there is no standard statistical technique for comparing points on two maps. Using an approximation based on rank-order correlation, I've guessed that the number we seek here is between 11 and 16. (This is the result cited by Dickinson on page 15 of the original article.) Deducting the second and third factors, this rough analysis leaves us with an empirical result whose net meaning is equivalent to observing at least 6 to 11 consecutive heads. (I say "at least", because there are other factors contributing to the total picture -- not discussed either by Dickinson or by Soter and Sagan -- that could be adduced to enhance this figure. For example, the computed vantage point is in good agreement with Betty Hill's reported position when observing the map, and the coordinate system implicit in the boundaries of the map is in good agreement with a natural galactic coordinate system. Neither have we discussed any quantitative use of the connections drawn on the Hill map, which were put there in advance of any of these analyses.)

In the final interpretation, it will always be possible to argue that 5 or 10 or even 15 bits of remarkable information simply isn't enough. However, this is a matter for each of us to decide independently. In deciding this matter, it is more important that we be consistent with ourselves (as we review a large number of uncertain interpretations of data that we have made) than that we be in agreement with some external authority. I do believe, though, that relatively few individuals will continue a coin-tossing match in which their total experience is equivalent to even six consecutive losses. In scientific matters, my own standard is that I'm interested in any result that has five or more bits of information supporting it -- though I prefer not to stick my neck out publicly on the basis of less than 10. Adhering to this standard, I continue to find the star map results exceedingly interesting.

Reply: by Michael Peck

Carl Sagan and Steven Soter, in challenging the possibilities discussed in "The Zeta Reticuli Incident", suggest that without the connecting lines drawn into the Hill map and the Fish interpretation there is little resemblance between the two. This statement can be tested using only X and Y coordinates of the points in the Hill map and a projection of the stars in the Fish pattern. The method used for the comparison can be visualized this way:

Suppose points of the Hill map and the Fish map are plotted on separate glass plates. These plates are held parallel (one behind the other), and are moved back and forth and rotated until the patterns appear as nearly as possible to match. A systematic way of comparing the patterns would be to adjust the plates until corresponding pairs of points match exactly. Then the other points in the patterns can be compared. Repeating this process for all the possible pairs of points (there are 105 in this case), the best fit can be found. Mathematically, this involves a change of scale and a simple coordinate transformation. A computer program was written which, using X and Y coordinates measured from a copy of the Hill map and a projection of the Fish stars, and using the Hill map as the standard, computed new X and Y coordinates for the Fish stars using the process described. >From these two sets of coordinates, six quantities were calculated: the average difference in X and Y; the standard deviation of the differences in X and Y, a measure of the amount of variation of the differences; and correlation coefficients in X and Y. The coefficient of correlation is a quantity used by statisticians to test a suspected relation between two sets of data. In this case, for instance, we suspect that the X and Y coordinates computed from the Fish map should equal the X and Y coordinates of the Hill map. If they matched exactly, the correlation coefficients would be one. If there were no correlation at all, the value would be near zero. We found that, for the best fitting orientation of the Fish stars, there was a correlation coefficient in X of 0.95 and in Y of 0.91. In addition, the average difference and the standard deviation of the differences were both small -- about 1/10 the total range in X and Y. As a comparison, the same program was run for a set of random points, with resulting correlation coefficients of 1/10 or less (as was expected). We can conclude, therefore, that the degree of resemblance between the two maps is fairly high.

From another point of view, it is possible to compute the probability that a random set of points will coincide with the Hill map to the degree of accuracy observed here. The probability that 15 points chosen at random will fall on the points of the Hill map within an error range which would make them as close as the Fish map is about one chance in 10 to the fifteenth power (one million billion). It is 1,000 times more probable that a person could predict a bridge hand dealt from a fair deck.

Rebuttal: To David Saunders and Michael Peck

by Carl Sagan and Steven Soter

Dr. David Saunders last month claimed to have demonstrated the statistical significance of the Hill map, which was allegedly found on board a landed UFO and supposedly depicted the sun and 14 nearby sunlike stars. The Hill map was said to resemble the Fish map -- the latter being an optimal two-dimensional projection of a three-dimensional model prepared by selecting 14 stars from a positional list of the 46 nearest known sunlike stars. Saunders' argument can be expressed by the equation SS = Dr -(SF + VP), in which all quantities are in information bits. SS is the statistical significance of the correlation between the two maps, DR is the degree of resemblance between them, SF is a selection factor depending on the number of stars chosen and the size of the list, and VP is the information content provided by a free choice in three dimensions of the vantage point for projecting the map. Saunders finds SS = 6 to 11 bits, meaning that the correlation is equivalent to between 6 and 11 consecutive heads in a coin toss and therefore probably not accidental. The procedure is acceptable in principle, but the result depends entirely on how the quantities on the right-hand side of the equation were chosen.

For the degree of resemblance between the two maps, Saunders claims that DR = 11 to 16 bits,

which he admits is only a guess -- but we will let it stand. For the selection factor, he at first takes SF = log2C = 37.8 bits, where C represents the combinations of 46 things taken 14 at a time. Realizing that the size of this factor alone will cause SS to be negative and wipe out his argument, he makes a number of ad hoc adjustments based essentially on his interpretation of the internal logic of the Hill map, and SF somehow gets reduced to only 3.9 bits. For the present, we will let even that stand in order to avoid becoming embroiled in a discussion of how an explorer from the star Zeta Reticuli would choose to arrange his/her/its travel itinerary -- a matter about which we can claim no particular knowledge. However, we must bear in mind that a truly unprejudiced examination of the data with no a priori interpretations would give SF = 37.8 bits.

It is Saunders' choice of the vantage point factor VP with which we must take strongest issue, for this is a matter of geometry and simple pattern recognition. Saunders assumes that free choice of the vantage point for viewing a three-dimensional model of 15 stars is worth only VP = 3 bits. He then reduces the information content of directionality to one bit by introducing the "constraint" that the star Zeta Tucanae be occulted by Zeta Reticuli (with no special notation on the Hill map to mark this peculiarity). This ad hoc device is invoked to explain the absence of Zeta Tucanae from the Hill map, but it reveals the circular reasoning involved. After all, why bother to calculate the statistical significance of the supposed map correlation if one has already decided which points represent which stars?

Certainly the selection of vantage point is worth more than three bits (not to mention one bit). Probably the easiest circumstance to recognize and remember about random projections of the model in question are the cases in which two stars appear to be immediately adjacent. By viewing the model from all possible directions, there are 14 distinct ways in which any given star can be seen in projection as adjacent to some other star. This can be done for each of the 15 stars, giving 210 projected configurations -- each of which would be recognized as substantially different from the others in information content. And of course there are many additional distinct recognizable projections of the 15 stars not involving any two being immediately adjacent. (For example, three stars nearly equidistant in a straight line are easily recognized, as in Orion's belt.) Thus for a very conservative lower bound, the information content determined by choice of vantage point (that is, by being allowed to rotate the model about three axes) can be taken as at least equal to VP = log2(210) = 7.7 bits. Using the rest of Saunders' analysis, this would at best yield SS = zero to 4.4 bits -- not a very impressive correlation.

There is another way to understand the large number of bits involved in the choice of the vantage point. The stars in question are separated by distances of order 10 parsecs. If the vantage point is situated above or not too far from the 15 stars, it need only be shifted by about 0.17 parsecs to cause a change of one degree in the angle subtended by some pair of stars. Now one degree is a very modest resolution, corresponding to twice the full moon and is easily detected by anyone. For three degrees of freedom, the number of vantage points corresponding to this resolution is of order (10/0.17) cubed ~ (60) cubed ~ 2 X 10 to the fifth power, corresponding to VP = 17.6 bits. This factor alone is sufficient to make SS negative, and to wipe out any validity to the supposed correlation.

Even if we were to accept Saunders' claim that SS = 6 to 11 bits (which we obviously do not, particularly in view of the proper value for SF), it is not at all clear that this would be statistically significant because we are not told how many other possible correlations were tried and failed before the Fish map was devised. For comparison, there is the well-known correlation between the incidence of Andean earthquakes and oppositions of the planet Uranus. It is unlikely in the extreme that there is a physical causal mechanism operating here -- among other reasons, because there is no correlation with oppositions of Jupiter, Saturn or Neptune. But to have found such a correlation the investigator must have sought a wide variety of correlations of seismic events in many parts of the world with oppositions and conjunctions of

many astronomical objects. If enough correlations are sought, statistics requires that eventually one will be found, valid to any level of significance that we wish. Before we can determine whether a claimed correlation implies a causal connection, we must convince ourselves that the number of correlations sought has not been so large as to make the claimed correlation meaningless.

This point can be further illustrated by Saunders' example of flipping coins. Suppose we flip a coin once per second for several hours. Now let us consider three cases: two heads in a row, 10 heads in a row, and 40 heads in a row. We would, of course, think there is nothing extraordinary about the first case. Only four attempts at flipping two coins are required to have a reasonable expectation value of two heads in a row. Ten heads in a row, however, will occur only once in every 2 to the tenth power = 1,024 trials, and 40 heads in a row will occur only once every 2 to the fortieth ~ 10 to the twelfth power trials. At a flip rate of one coin per second, a toss of 10 coins requires 10 seconds; 1,024 trials of 10 coins each requires just under three hours. But 40 heads in a row at the same rate requires 4 X 10 to the thirteenth power seconds or a little over a million years. A run of 40 consecutive heads in a few hours of coin tossing would certainly be strong prima facie evidence of the ability to control the fall of the coin. Ten heads in a row under the circumstances we have described would provide no convincing evidence at all. It is expected by the law of probability. The Hill map correlation is at best claimed by Saunders to be in the category of 10 heads in a row, but with no clear statement as to the number of unsuccessful trials previously attempted.

Michael Peck finds a high degree of correlation between the Hill map and the Fish map, and thereby also misses the central point of our original criticism: that the stars in the Fish map were already preselected in order to maximize that very correlation. Peck finds one chance in 10 to the fifteenth power that 15 random points will correlate with the Fish map as well as the Hill map does. However, had he selected 15 out of a random sample of, say, 46 points in space, and had he simultaneously selected the optimal vantage point in three dimensions in order to maximize the resemblance, he could have achieved an apparent correlation comparable to that which he claims between the Hill and Fish maps. Indeed, the statistical fallacy involved in "the enumeration of favorable circumstances" leads necessarily to large, but spurious correlations.

We again conclude that the Zeta Reticuli argument and the entire Hill story do not survive critical scrutiny.

Dr. Steven Soter is a research associate in astronomy and Dr. Carl Sagan is director of the Laboratory for Planetary Studies, both at Cornell University in Ithaca, N.Y.

Is the Fish Interpretation Unique?

by Robert Sheaffer

The story of Marjorie Fish's attempts at identifying the star patterns sketched by Betty Hill was told in "The Zeta Reticuli Incident" by Terence Dickinson in the December 1974 issue. This pattern of solar type stars unquestionably bears a striking resemblance to the map that Betty Hill says she saw while she was being examined aboard a flying saucer. But how significant is this resemblance? Is there only one pattern of stars which will match the sketch convincingly?

Betty Hill herself discovered an impressive resemblance in a star map published in the New York Times. In 1965 a map of the stars of the constellation Pegasus appeared in that newspaper, accompanying the announcement by a Russian radio astronomer (Comrade Sholomitsky) the radio source CTA-102, depicted in the map, may be sending out intelligent radio signals. Intrigued by this remarkable claim, Betty Hill studied the map, and added the corresponding star names to her sketch. As you can see, the Pegasus map -- while not exactly like the sketch --

is impressively similar. If CTA-102 -- appearing near the "globes" in her sketch -- was in reality an artificial radio source, that would give the Pegasus map much additional credibility.

However, the case for the artificial origin of quasar CTA- 102 soon fell flat. Other scientists were unable to observe these reported strange variations which had caused Sholomitsky to suggest that CTA-102 might be pulsing intelligently.

In 1966, when Marjorie Fish was just beginning her work, Charles W. Atterberg (employed by an aeronautical communications firm in Illinois) also set out to attempt to identify this star pattern.

"I began my search by perusing a star atlas I had on hand," Atterberg explained. "I soon realized that this was a pointless and futile project." Any star pattern useful for interstellar navigation, he reasoned, would not be Earth-centered as are the familiar constellation figures. Thus Atterberg began to look in three dimensions for a pattern of stars that would approximate the Hill sketch.

Working from a list of the nearest stars, Atterberg "began plotting these stars as they would be seen from various directions. I did this by drawing the celestial position of a star, I would draw a straight line penetrating the sphere at a known position, and measure out to the distance of the star...It at first took me hours to plot this out from any one particular direction."

When plotting the stars as seen from a position indefinitely far away on the celestial equator at 17 hours right ascension, Atterberg found a pattern of stars conspicuously similar to the Hill sketch. After much work he refined this position to 17 hours 30 minutes right ascension, -10 degrees declination. The resulting map resembles the Hill sketch even more strongly than does the Fish map, and it contains a greater number of stars. Furthermore, all of the stars depicted in the Atterberg map lie within 18.2 light-years of the sun. The Fish map reaches out 53 light-years, where our knowledge of stellar distances is much less certain.

Carl Sagan states in *Intelligent Life in the Universe* that, excluding multiple star systems, "the three nearest stars of potential biological interest are Epsilon Eridani, Epsilon Indi and Tau Ceti." These three stars from the heart of the Atterberg map, defining the two spheres in the very center of the heavy lines that supposedly represent the major "trade routes" of the "UFOnauts". Epsilon Eridani and Tau Ceti were the two stars listened to by Project Ozma, the pioneering radio search for intelligent civilization in space.

Other heavy lines connect the spheres with the sun, which we know has at least one habitable planet. Thinner lines, supposedly representing places visited less frequently, connect with Groombridge 1618, Groombridge 34, 61 Cygni and Sigma Draconis, which are designated as stars "that could have habitable planets" in Stephen H. Dole's Rand Corporation study, Habitable Planets for Man. Of the 11 stars (not counting the sun) that have allegedly been visited by the aliens, seven of them appear on Dole's list. Three of the four stars which are not included are stopping points on the trip to Sigma Draconis, which Dole considered to have even better prospects than Epsilon Eridani or Epsilon Indi for harboring a habitable planet.

Another remarkable aspect of the Atterberg map is the fact that its orientation, unlike the Fish map, is not purely arbitrary. Gould's belt -- a concentration of the sky's brightest stars -- is exactly perpendicular to the plane of the Atterberg map. Furthermore, it is vertical in orientation; it does not cut obliquely across the map, but runs exactly up and down. A third curious coincidence: The southpole of the Atterberg map points toward the brightest part of Gould's belt, in the constellation Carina. The bright stars comprising Gould's belt might well serve as a useful reference frame for interstellar travelers, and it is quite plausible that they might base a navigational coordinate system upon it.

No other map interpreting the Hill sketch offers any rationale for its choice of perspectives. The

problem with trying to interpret Betty Hill's sketch is that it simply fits too many star patterns. Three such patterns have been documented to date. How many more exist undiscovered?

Robert Sheaffer is a computer systems programmer currently working at NASA's Goddard Space Flight Center in Greenbelt, MD.

Reply: by Marjorie Fish

Basically, Robert Sheaffer's contention is that at least three patterns can be found that are similar to Betty Hill's map, and therefore, more such interpretations are likely. If one stipulates that any stars from any vantage point can be used, then I agree that many patterns can be found similar to the map. However, if one uses restrictions on the type of stars, according to their probability of having planets and also on the logic of the apparent travel paths, then it is much more difficult. The three maps were: (1) Betty Hill's interpretation of the constellation Pegasus as being similar to her map, (2) Charles Atterberg's work, and (3) my work.

When I started the search, I made a number of restrictions including:

1. The sun had to be part of the pattern with a line connected to it, since the leader of the aliens indicated this to Betty.
2. Since they came to our solar system, they should also be interested in solar type stars (single main sequence G, probably also late single main sequence F and early single main sequence K). These stars should not be bypassed if they are in the same general volume of space.
3. Since there are a number of the above stars relatively near the sun and the pattern shows only 12 stars, the pattern would have to be relatively close to us (or else they would be bypassing sunlike stars, which is illogical).
4. The travel pattern itself should be logical. That is, they would not zip out 300 light-years, back to 10 light-years, then out 1,000, etc. The moves should make a logical progression.
5. Large young main sequence stars (O, B, A, early F) which are unlikely to have planets and/or life would not be likely to be visited.
6. Stars off the main sequence with the possible exception of those just starting off the main sequence would probably be avoided as they are unsuitable for life and, due to their variability, could be dangerous.
7. If they go to one star of a given type, it shows interest in that type star -- so they should go to other stars of that type if they are in the same volume of space. An exception to this might be the closest stars to the base star, which they might investigate out of curiosity in the early stages of stellar travel. For example, they would not be likely to bypass five red dwarfs to stop at the sixth, if all six were approximately equal in size, spectra, singleness or multiplicity, etc. Or, if they go to one close G double, they would probably go to other close G doubles.
8. The base star or stars is one or both of the large circles with the lines radiating from it.
9. One or both of the base stars should be suitable for life -- F8 to K5 using the lowest limits given by exobiologists, or more likely, K1 given by Dole.
10. Because the base stars are represented as such large circles, they are either intrinsically bigger or brighter than the rest or they are closer to the map's surface (the viewer) than the rest -- probably the latter. This was later confirmed by Betty Hill.

Mrs. Hill's interpretation of Pegasus disregards all of these criteria.

Atterberg's work is well done. His positioning of the stars is accurate. He complies with criteria 1, 2, 3, 5, 6 and 8; fairly well with 4; less well with 9, and breaks down on 7 and 10. I will discuss the last three of Atterberg's differences with my basic criteria in the following paragraphs:

Relative to point 9, his base stars are Epsilon Indi and Epsilon Eridani, both of which are near the lower limit for life bearing planets -- according to most exobiologists -- and not nearly as suitable as Zeta 1 and 2 Reticuli.

Concerning point 7, I had ruled out the red dwarfs fairly early because there were so many of them and there were only 12 lined points on the Hill map. If one used red dwarfs in logical consecutive order, all the lines were used up before the sun was reached. Atterberg used red dwarfs for some of his points to make the map resemble Betty Hill's but he bypassed equally good similar red dwarfs to reach them. If they were interested in red dwarfs, there should have been lines going to Gliese 65 (Luyten 76208) which lies near Tau Ceti and about the same distance from Epsilon Eridani as Tau Ceti, and Gliese 866 (Luyten 789-6) which is closer to Tau Ceti than the sun. Gliese 1 (CD-37 15492) and Gliese 887 (CD-36 15693) are relatively close to Epsilon Indi. These should have been explored first before red dwarfs farther away.

Red dwarfs Gliese 406 (Wolf 359) and Gliese 411 (BD + 36 2147) were by passed to reach Groombridge 1618 and Ross 128 from the sun. Barnard's star would be the most logical first stop out from the sun, if one were to stop at red dwarfs, as it is the closest single M and is known to have planets.

Since Atterberg's pattern stars include a number of relatively close doubles (61 Cygni, Struve 2398, Groombridge 34 and Kruger 60), there should also be a line to Alpha Centauri -- but there is not.

Relating to point 10, Atterberg's base stars are not the largest or brightest of his pattern stars. The sun, Tau Ceti, and Sigma Draconis are brighter. Nor are they closer to the viewer. The sun and 61 Cygni are much closer to the viewer than Epsilon Eridani. The whole orientation feels wrong because the base stars are away from the viewer and movement is along the lines toward the viewer. (Betty Hill told me that she tried to show the size and depth of the stars by the relative size of the circles she drew. This and the fact that the map was alleged to be 3-D did not come out in Interrupted Journey, so Atterberg would not have known that.)

Sheaffer notes that seven of Atterberg's pattern stars appear on Dole's list as stars that could have habitable planets. These stars are Groombridge 1618 (Gliese 380, BD + 50 1725), Groombridge 34 (Gliese 15,BD +43 44), 61 Cygni, Sigma Draconis, Tau Ceti, Epsilon Eridani and Epsilon Indi. Of these seven, only Epsilon Eridani, Tau Ceti and Sigma Draconis are above Doles' absolute magnitude minimum. The others are listed in a table in his book Habitable Planets for Man, but with the designation: "Probability of habitable planet very small; less than 0.001." Epsilon Eridani was discussed earlier. Sigma Draconis appears good but is listed as a probable variable in Dorrit Hoffleit's Catalogue of Bright Stars. Variability great enough to be noticed from Earth at Sigma Draconis' distance would cause problems for life on its planets. This leaves Tau Ceti which is one of my pattern stars also.

Another point Sheaffer made was that orientation of my map was arbitrary compared to Atterberg's map's orientation with Gould's belt. One of my first questions to Betty Hill was, "Did any bright band or concentration of stars show?" This would establish the galactic plane and the map's orientation, as well as indicate it was not just a local map. But there was none indicating that if the map was valid it was probably just a local one.

The plane of the face of my model map is not random, as Sheaffer indicated. It has intrinsic value for the viewer since many of the pattern stars form a plane at this viewing angle. The value to the viewer is that these stars have their widest viewing separation at that angle, and their relative distances are much more easily comprehended.

My final interpretation of the map was the only one I could find where all the restrictions

outlined above were met. The fact that only stars most suitable for Earthlike planets remained and filled the pattern seems significant.

Marjorie Fish is a research assistant at Oak Ridge National Laboratory in Tennessee.

Zeta Reticuli -- A Rare System

by Jeffrey L. Kretsch

Zeta Reticuli is a unique system in the solar neighborhood -- a wide physically associated pair of stars almost exactly like the sun. After searching through a list of stars selected from the Gliese catalog on the basis of life criteria, only one other pair within a separation of even 0.3 light-years could be found. (This pair -- Gliese 201 and Gliese 202, a K5e and F8Ve pair separated by 0.15 light-years -- is currently being investigated.) Zeta Reticuli is indeed a rare case.

Based on the Fish interpretation of the Hill map, the Zeta Reticuli pair forms the base of the pattern. If the other stars in the patter fit, it is a remarkable association with a rare star system.

In order to deal with this problem, I decided to computer the three-dimensional positions of the stars and construct a three-dimensional model showing these stars positions.

Speaking quantitatively, I discovered the two patterns are certainly not an exact match. However, if one considers the question of match from the standpoint of how the Hill pattern was made as opposed to the derived pattern's means of reproduction, the quantitative data may not be a complete means of determining whether the two patterns "match" or not. For example, the Hill pattern was drawn freehand -- so one would have to determine how much allowance one must give for differences in quantitative data. In such areas, I am not qualified to give an opinion. However, because the map was drawn freehand from memory, the fact that the resemblance between the Fish map and the Hill map is a striking one should be considered.

In my work I was able to verify the findings of Marjorie Fish in terms of the astronomy used.

Jeffrey L. Kretsch is an astronomy student at Northwestern University.

Introductory Remarks by Richard Hall

Dr. James E. McDonald and I met in the early 1960s through the pages of Weatherwise, a publication of the American Meteorological Society. As Executive Secretary of the National Investigations Committee on Aerial Phenomena (NICAP), I had written a letter to the editor expressing NICAP's interest in falls of chunks of ice from the sky, a scientific anomaly that had already come to McDonald's attention.

Having recently graduated from Tulane University, specializing in scientific philosophy and mathematics, I was an admirer and proponent of the text book scientific method that I had studied. I was especially interested in applying it to the fascinating and potentially significant reports of scientific anomalies -- like UFOs, "ice-falls", and another contemporary issue, the so-called "sky-quakes". These were unexplained aerial explosions that often rocked civilian communities and were assumed to be caused by jet aircraft exceeding the spend of sound and causing "sonic booms", even when no jets were in the area.

McDonald had served in naval intelligence and aerology in the U.S. Navy during World War II. He had received a B.A. in chemistry at the University of Omaha, an M.S. in meteorology from M.I.T., and a Ph.D in physics from Iowa State University (1951). He joined the University of Arizona faculty in 1954, teaching physics and meteorology, and became a full professor in 1956. He also served as Associate Director of the Institute of Atmospheric Physics (1954-1956) and Scientific Director (1956-1957). His principal research interests related to physical meteorology, cloud physics and precipitation processes, meteorological optics, atmospheric electricity, and weather modification.

McDonald embodies the principles of science that I had learned, and he understood from the history of science that anomalies often hinted at gaps in our scientific knowledge. The study of them could lead to important discoveries. He was open-minded about human testimony, and thoroughgoing in his analysis of data. His approach was energetic, even zestful, and no stone was left unturned when he was examining some feature of the UFO problem.

We became close friends and comrades in our mutually perceived mission to help make the world aware of the solid basis for taking the UFO phenomenon seriously. The reason: consistent reports of UFOs from members of society whose testimony on other matters would never have been questioned. Over occasional doses of tequila, and with great humor and camaraderie, we regularly debated the omnipresent issue of "grand cover-up" versus "grand foul-up" without ever resolving anything. We also spent countless hours discussing all facets of the subject, comparing notes, and working out strategies.

McDonalds's energy was legendary, and he was an activist scientist who liked to make things happen. When some skeptical objection was made in the name of science, he would study the area of science in question intensively, and usually shoot holes in the skeptic's argument. His incisive mind and analytical powers were impressive. Where others argued qualitatively for some position, McDonald would analyze it quantitatively and demonstrate how reasonable or unreasonable the argument was.

He examined such esoteric topics as ball lightning, "swamp gas" (methane) and its properties, plasmas, balloon patterns in the atmosphere, and radar propagation anomalies, and his writings on those topics in relation to UFO reports remain among the clearest and most cogent ever produced. Those who would cast off UFOs as a nonsense problem are forced to deal with McDonald's analysis indicating otherwise. Here was a scientist who served on panels of the National Academy of Sciences and the National Science Foundation, highly regarded both nationally and internationally, who -- following where the evidence led -- came up with a "politically incorrect" reading of the situation that tended to make him a scientific outcast in some quarters. As wild as it might sound, he said, UFOs do appear most likely to be extraterrestrial probes of some kind, and we had better face up to it.

I treasured his friendship and feel a great and irreplaceable loss as a result of his premature death in 1971. His smiling face and great sense of humor, his human decency and kindness, linger in my memory. McDonald's writings, including his voluminous correspondence, are an important legacy that deserve wider circulation. At this writing, his collected papers are being prepared for public access as a special collection at the library of the

University of Arizona, partly under a grant from the Fund for UFO Research. Also, a biography of McDonald is being written by Ann Druffel.

In compiling and editing this sample of his correspondence and papers taken from our personal collections, we are fortunate to have the services of Valerie Vaughn, former librarian at the Institute of Atmospheric Physics, University of Arizona, where McDonald was employed. His UFO work is here placed in the context of his broader scientific interests and activities. These writings illustrate both McDonald the scientist and McDonald the human being.

- Richard Hall, Chairman
Fund for UFO Research
January 21, 1995

Foreword

In 1989-90 I had the opportunity to work as the sole librarian for the Institute of Atmospheric Physics, University of Arizona, where I first came across the legacy of scientific accomplishments of one of the former professors, Dr. James E. McDonald. I was immediately impressed by McDonald's contributions to scientific literature and set out to compile an annotated bibliography of his writings. Coming from a "regular" scientific background myself, I was typically unfamiliar with certain subjects normally "rejected" by scientific establishment, and was astounded to discover McDonald's "other life," his serious study of UFOs.

By probing and investigating the Institute's locked rooms and cabinets to which McDonald's UFO writings had been banished, I followed a trail that gradually opened up a whole territory of "hidden" knowledge. The pursuit to find and catalog everything McDonald had written led me into contact with his devoted former secretary and his wife Betsy, both of whom had saved original documents that might have otherwise succumbed to the Institute's attempt to cleanse its eighteen-year connection with McDonald and the associated 'taint' of UFOlogy.

In 1990 I produced Science and Conscience, an annotated bibliography of McDonald's writings, but was still unaware of the full extent of his influence in the UFO community 25 years earlier. The publication of this modest bibliographic attempt drew me into contact with experts such as Richard Hall who had been researching UFOs for decades, and I began to realize the historical importance of McDonald and his efforts to bring the UFO problem into a wider, more serious and scientific context of the human quest for knowledge.

From the writings collected through the Institute's library and McDonald's wife, and Richard Hall's personal collection McDonald's letters and transcribed lectures, I have compiled what I believe is a representative sampling of the work of this prolific writer. This collection is by no means complete, for the total volume of McDonald's writings and research on UFOs fills many file cabinets. This book is presented simply as an introduction to the extensive and incomparable contribution of James E. McDonald to the Science of UFOlogy.

Valerie Vaughan
Amherst, Massachusetts

Introduction

These days you can pick up almost any best-selling book about UFOs and you won't see more than a bare mention of Dr. James E. McDonald. Yet, only twenty-five years ago, this man was so instrumental in awakening public interest in UFOs that he could be called one of the founding fathers of today's UFO movement. The fact that his name and his influence are absent from recent, popular encyclopedias and accounts of the history of UFOs is but one of the many curious omissions comprising the general covered-up nature of the whole UFO phenomena.

We look at the overwhelming number of popular books recently published on UFOs, alien contacts, conspiracy theories, and abductions, and we get the impression that much of what has been previously hidden has now been revealed. From this outpouring of true-experience literature we think we have a grasp of the history of the UFO movement. This book you hold in your hands now is an attempt to rectify this mistaken assumption. Through the writings of one man who was both observer and participant, we find a clear documented record of the development of awareness and suppression of UFO data, from 1947 through 1971. We also find the organized approach of one of the very few scientists who ever considered the UFO problem at all. Recognizing that UFOs defied the current understanding of physics, McDonald risked professional credibility in order to examine the sighting evidence in its scientific context, using the available data from radar, meteorology, electromagnetism, and credible witnesses.

McDonald was an atmospheric physicist who wrote highly technical papers for professional journals as well as general science articles "for the people." He was one of that rare breed of scientists who are knowledgeable and interested in many fields outside their own specialty. Topics of McDonald's writings include cloud physics, precipitation enhancement, inadvertent weather modification, the atmospheric effects of fallout, nuclear reactor hazards, unusual atmospheric phenomena (rainbows, cloudrings), air pollution, the effects of supersonic transports on air quality, the ozone and related health problems. He wrote about the physics of baseball, the use of chemical mace, arid lands and hydrology problems, paleoclimtology, and the history of meteorology.

McDonald established himself as a respected authority and leader in the field of atmospheric physics. He was an active member of the American Meteorological Society, the American Geophysical Union, the Arizona Academy of Science, and a senior physicist of the Institute of Atmospheric Physics and Professor of Meteorology at the University of Arizona. Positions he held included Research Associate, Cloud Physics Project, University of Chicago, and member of the Advisory Panel on Weather and Climate Modification for both the National Science Foundation and National Academy of Sciences. He was a member of the Advisory Panel of Project Stormfury and the President's Scientific Advisory Committee Panel on Hurricane Seeding.

But the man also had a conscience. He belonged to the American Civil Liberties Union and the American Humanist Association. He observed the effects of weather modification and warned against the problems. He was one of the first scientists to notice that certain types of emissions would soon affect the ozone layer, he saw the dangers of nuclear reactors and chemical mace, and he spoke out. Always he was the scientist, supporting his ideas with facts about the atmosphere.

This collection of McDonald's writings offers a perspective on the state of science during the 1950s and 60s. They give a view into how scientific ideas were handled or avoided by individuals within academia and the government. These two decades witnessed the growth of Big Science, experimentation with climate modification, the proliferation of nuclear weaponry and chemical warfare, the first serious questioning of atmospheric pollution, and the role that humans and their technology played in the deterioration of the atmosphere. McDonald wrote about all these issues from both a scientific and a conscientious standpoint. He discussed the related political and moral implications which scientists faced at that time ... and still do.

It was McDonald's firm belief that the people's right to know what the scientific establishment was doing was vital in the functioning of a democracy, and that scientists had an important responsibility to be concerned about

the consequences of their research and their role in educating the public. It is the spirit of these ideas that have led the editor to present this collect of writings.

We begin our story with the scientific writings, for that is where McDonald began ... as a scientist.

To: Francis Ridge <nicap@insightbb.com>

The 509th Composite Group and the UFOs/
Tinian, Guam, and Saipan

In May 1945, the 509th Composite Group started arriving on Tinian Island in the Mariana Islands. Tinian Island is located between Guam to the south and Saipan to the north. Operating out of North Field, Tinian Island, it was the 509th Composite Group that dropped the two atomic bombs on Japan on August 6 and 9, 1945, at Hiroshima and Nagasaki.

Reportedly:
During the summer of 1945 naval air search radar picked up large groups of unidentified objects traveling over the open sea over an area between Guam and Saipan. These objects were moving at over an estimated one thousand miles per hour.

See the information below.
==========

The 509th Composite Group and the UFOs

During the latter part of the month of May 1945, the greater part of the 509th Composite Group arrived on Tinian Island in the Mariana Islands, western Pacific Ocean. The movement was done via C-54 or B-29 aircraft following a route from the United States to Hickman Field, Hawaii, to Johnston Island, to Kwajalein Island in the Marshall Islands, and then on to Tinian Island. **(1)** The first C-54, number 9009, of the Advanced Air Echelon flew from Kwajelein to Tinian on May 22, 1945.

Northern Mariana Islands

==========

Summer 1945; at sea between Guam and Saipan

A Naval Radar Officer reports:
During the summer of 1945, at sea between Guam and Saipan, our air search radar on several occasions picked up a large group of pips approximately one hundred miles away on a course that would bring them directly overhead. We challenged them but got no response. Their speed on our plot indicated over one thousand miles per hour. These groups passed overhead at approximately two thousand feet and showed up on the radar screen as definite solid (not fuzzy) objects. When our visual spotters reported there was nothing in view, I personally went out and searched the sky with no luck. Our gear was carefully checked and calibrated and was in good order. These were definitely not ioized clouds, inversions, sea gulls, mechanical defects, or any other common explanations. After many months of operating radar gear one knows when they have a definite solid object on the screen, and for my money these were solid although invisible objects. Subject: Ref. 9 - Gen. Twining at Roswell

To: Fran Ridge, The Roswell Group

Pages 42-45 of my book TOP SECRET/MAJIC clearly delineate that I was able to prove that Twining went to New Mexico on July 7 and left on July 11, 1947. I had managed to obtain flight logs for him and his pilot William McVey. I met with the latter in the DC area. Twining's daughter had given me his name and location. Twining's log had been in a box that had finally been declassified for me at the Library of Congress Manuscript Division...home of about 120 Archive Boxes of Twining's papers.

The front page of the Roswell Daily Record (An Evening paper) for July 8 (with the famous headline "RAAF Captures Flying Saucer on Ranch in Roswell Region") has an article in the lower right quadrant "Air Force General Says Army Not Doing Experiments" datelined Portland, Oregon, July 8. Twining is the general. Many morning papers carried the headline on July 9. Furthermore the Alamogordo News (a morning paper) of July 10 had a big front page story "Fantasy of "Flying Disc" Explained Here" complete with three pictures of the launch staged (on July 9) for the Press of a weather balloon radar reflector combo. The work was done by Twining's AMC people. The paper on July 14 noted (without any pix) that Twining had made a "routine" inspection of the Alamogordo base with a high powered group on July 11.

Twining had authority in Alamogordo, not in Roswell. Roswell AAF was a SAC base and not an R and D location. The Plains of San Agustin crash wreckage would have gone there and not to Roswell. Please note also the comments in the EBD saying that the covert operation had begun on July 7 and that Twining and Van Bush worked on the investigation. McVey, who was also Twining's aide, said Twining and Bush met often. There is also a July letter from Twining to Boeing on July 17 saying he had had to cancel a long planned trip to Seattle "due to a very important and sudden matter.. I have been away quite a bit". He had been in New Mexico.

There were several printings of TSM beginning in 1996 and of the 2nd edition of 2005. The latter has a 5000 word afterword dealing with objections that have been raised to the EBD, TF, and CT memos. Copies are available and are listed on my website at www.stantonfriedman.com . I guess I am pleased that interest is finally being shown.

Stan Friedman

Letter from Michael Swords to Fran Ridge in August 2007

Pdf version with illustrations

Dear Francis, Early August 2007

I finished reading your essay ("Roswell & the Wave of '47") about a week ago, and am just now getting around to writing.

The essay's good, and, as I have spent so much time with my head in that old history of our favorite hobby, I welcome all the respectable research that I can read.

I'd like to pass on a few meager comments for whatever good they might do. Regarding the base structure at Wright-Pat: as you know the base is a glued-together organization which has three different loc's (T-1, T-2, and T-3 in the old days). T-1, to the east, is Peterson Field, which was a relatively normal airbase, whose commanding officer was junior to the powers in T-2 and T-3. T-3, to the west, was the hi-technology "engineering" area, Wright Field, where the eggheads resided and this included several Nazi post-war "imports". In between, but on the Patterson side is/was T-2, the AMC/ATIC "Intelligence" division, home of Sign, Ruppelt et al. T-2 can be taxi'd to by landing at Patterson. If you could taxi to T-2 by landing at Wright, it wouldn't be a normal procedure, and I don't believe that they did thing that way.

During WWII and just after, the boys picking up air crash "junk" from the war were flying them (the pieces of planes, etc) into T-3 for the engineers to analyze – not the T-2 for the "intelligence" guys. That made sense. The engineers (even Mack McCoy and Alfred Loedding) had their offices (McCoy & Loedding double located) in the T-3 area, and T-3 was where the big "spaces" and equipment was.

I believe that the Roswell "stuff" went to T-3, not T-2.

These are my reasons, bleak as they are:

a) T-3 did that job & was geared to it;

b) T-3 had the on-site brains for it;

c) T-3 had large facilities which could be made secret;

d) The olde rumors have always said Wright, and although there's no "Hangar 18", there is a building 18 which looks (by position & function) to be a good candidate for all this;

e) One of Schmitt's witnesses (Henderson? or I think one of the 1st hands) said he flew to Wright field.

Well, I suppose all that could be viewed as trivial, but it points out one other thing to me if it was true – the T-2 personnel need not have been in this particular loop. I'd guess McCoy and Twining were, and maybe that's why McCoy was very particular about misrepresenting the status of "no crashes" in the so-called "McCoy memo" – in an ultra Top Secret situation he'd been told to absolutely minimize the distribution of knowledge that there might have been a crash. (& the generally-constituted USAF Scientific Advisory Board had no need to know this particular "operation" – it wasn't their job.) Leaks & gossip undoubtedly trickled around WRPAT, and some ultimately got to "us", but the bulk of T-2 was probably left guessing, just like the bulk of

everyone else. (Pentagon USAF, CIA, etc).

That's what (maybe) I know. I've attached a couple of maps for whatever use they might be.

God Bless & Peace,

Mike Swords.

PS. I'd like to hear you continue to analyze the peculiar sightings pattern you've teased out.

NICAP Home Page

Date: Fri, 20 Jul 2007 18:49:03 +0000
From: arc1@att.net (Richard Haines, NARCAP)
Subject: Lightning strikes and airplane crashes
To: nicap@insightbb.com, shg@mail.project1947.com

Dear Fran,
You have asked some interesting and complex questions. Here is some information for your possible use:

Documented crashes of airplanes due to lightning strikes: (list not complete)

26 June 1959	Milan, Italy	Lockheed Constellation
8 Dec. 1963	Elkton, Maryland	B-707 (Pan Am)
1981	Germany	commercial airliner
2000	China	commercial airliner
22 Aug. 2006	Sukha Balka, Ukraine	Tu-154 commercial airliner

How Frequent is This event? Statistical estimates vary as to the number of times a given airplane is struck by lightning during a "typical" year. Early estimates put the number at "slightly more than once per year" (ref. 1) but more recent estimates by Boeing state "...every commercial airplane is hit by lightning on average about twice a year." (ref. 2)

Because of the use of many techniques and materials the charge (estimated to be at least 200,000 amperes), is conducted effectively away from critical components and fuel tanks.

Considering the enormous number of commercial. military, and private airplane flights every day around the world, the probability of a crash caused directly by a lightning strike is extremely small. I doubt very much that it has even been calculated.

Different Levels of Damage. A Lockheed Field Service Digest (ref. 3) indicated that lightning can produce a variety of effects (although damage will be slight). Fortunately, there have been no recorded incidences of airplane passengers being killed by lightning during a flight. External (aluminum skin) pitting and occasional (hole) puncture occurs. The geometric vector of the lightning bolt relative to the aircraft's surface, relative aircraft velocity, conducting quality of the metal, and other factors determine the exact nature and appearance of these skin "burns" and arcing effects. Another effect is transient.

Radio and navigation equipment failure often occurs during a lightning strike. Modern commercial airplanes are so well shielded (grounded) these days that such effects are typically transient and non-destructive. Nevertheless, so-called all glass cockpits employing computers and plasma instrument displays are more susceptible to transient, high current arcs.

Dielectric radomes are struck by lightning in flight. The exact reason(s) is not yet known. In addition to pitting and small holes literaly burned through the non-conductive material, the intense heat can expand and cause explosions into the shell.

Protruding antennas are also commonly struck by lightning in flight. The charge can gain entry to the interior of the airplane along this pathway and expose personnel

to hazardous voltage levels. Much work has been done to develop spark-over arresters, dc blocking condensers, and static leak resistors to help control such effects.

Hinged parts such as are used in control surfaces of airplanes are also susceptible to damage; bonding jumpers are attached between these surfaces and fixed portions of the fuselage.

I'm sorry, but I'm out of time. I hope this will help you in some way.

ROBERT TODD
2528 BELMONT AVENUE
ARDMORE, PENNSYLVANIA 19003

CONFIDENTIAL

9 January 1976

Mr. Sherman J. Larsen
President
Center For UFO Studies
P.O. Box 11
Northfield, Illinois 60093

Dear Mr. Larsen:

By now you have received the copies of correspondence I have received over the past year or so, and have had time to review the contents. As you will notice, a copy of JANAP 146 (E) was to be supplied to me. I have finally received that copy.

I notice that the copy of JANAP 146 your Center is selling consists of only six pages. I was wondering if this is because your Center thought it better to limit the number of pages, or because you did not have a full copy of this publication. In case you don't have a full copy, I must tell you that the information contained in the pages not offered by your Center are much more interesting than those you include. JANAP 146 contains a detailed list of information to be reported--information which could only apply to UFOs.

If your Center hasn't obtained the full copy, please let me know and I will send you one.

Regarding the "Estimate of the Situation." My requests have failed to surface a copy of this document. However, I am positive that it did exist. Additional substantiation of its existence was provided by a Mr. Harry Woo. Mr. Woo was the photo-analyst to whom then Major Dewey Fournet took the Utah and Montana films within the Navy's Photo Intelligence Center. Mr. Woo, in a telephone conversation with me, confirmed the fact that he was shown a copy of the "Estimate" by Major Fournet. Since Mr. Woo did not work for PIC until at least 1952, the Estimate survived long after it was supposedly ordered destroyed. (Mr. Woo, by the way, went to work for the CIA sometime around 1955--as a photo-analyst. He said he did not perform analysis on any UFO photographic materials for CIA.)

Mr. Woo also informed me that he had been invited to a special Pentagon briefing where a gun-camera film of a UFO was shown. He stated that the film was of poor quality and

Wendy Connors
FADED DISCS
Collection

showed only a blurred image. Even more interesting, however, was his reluctance to discuss the subject of UFOs. He seemed to feel that all this information was still highly secret. He was particularly reluctant to discuss his participation as a "witness" before the Robertson panel.

Mr. Woo also informed me that the Navy had seriously considered starting their own UFO investigating program. He said they didn't because of a lack of facilities.

Because I do not know if Mr. Woo would mind having his name mentioned, I have classified this letter "Confidential."

Regarding the matters of Major Fournet and Mr. Woo. I noticed that Mr. Dewey Fournet was slated to be a guest at the Ft. Smith, AR, UFO conference. I assume you would be able to get in touch with Mr. Fournet and confirm this information on your own--if you are not aware of it already.

If you would, please contact Mr. Fournet and ask him where he last saw a copy of the "Estimate" and what date it was. This may give me some clue as to where it is now. Also, if possible, ask him if there was any information contained in the Project Blue Book files on the CIA. It might also be interesting to know if the administrative and policy papers of Blue Book were as few when he was associated with the Project as they seem to be now. Masses of correspondence are missing. This, as I'm sure you know, is particularly true of the Project Sign and Grudge records.

I would also like to know if the "source" you alluded to in your letter of November 22, 1975, can obtain classified Air Force Intelligence documents. If so, I have a suggestion.

I am still working on obtaining CIRVIS and MERINT reports. My requests are very much up in the air--no pun intended--at the present moment. Could your Center benefit from photographic materials submitted along with CIRVIS reports? (What a stupid question!) I don't think there would be <u>any</u> way around paying for material of this type, source or no source.

I do not know how extensive your Center's files are. Do you have any information on a sighting at Luke AFB, Arizona, where gun-camera film footage was taken? (It occurred in March of 1953.) Also, do you have any information on a sighting at Osceola, Wisconsin, in July 1952? Film was also taken in this case.

Wendy Connors
FADED DISCS
Collection

Various other requests have the potential of supplying valuable information. Unfortunately I cannot determine their worth until I see them. And Freedom of Information Act requests take an inordinate period of time to process.

I really would appreciate your cooperation on the matters to be asked of Mr. Fournet. I've tried to obtain his address from the Air Force, but the Air Force is slightly less than cooperative. As a matter of fact, in response to my request the Air Force used the word "alleged" while referring to his association with Blue Book. A fact I'm sure Mr. Fournet would find humor in.

Sincerely,

Robert Todd

From AP 1550

From detailed study of reports selected for their impression of veracity and reliability, several conclusions have been formed:

(a) This "flying saucer" situation is not all imaginary or seeing too much in some natural phenomenon. Something is really flying around.

(b) Lack of topside inquiries, when compared to the prompt and demanding inquiries that have originated topside upon former events, give more than ordinary weight to the possibility that this is a domestic project, about which the President, etc. know.

(c) Whatever the objects are, this much can be said of their physical appearance:

1. The surfaced of these objects is metallic, indicating a metallic skin, at least.

2. When a trail is observed, it is lightly colored, a Blue-Brown haze, that is similar to a rocket engine's exhaust. Contrary to a rocket of the solid type, one observation indicates that the fuel may be throttled which would indicate a liquid rocket engine.

3. As to shape, all observations state that the object is circular or at least elliptical, flat on the bottom and slightly domed on the top. The size estimates place it somewhere near the size of a C-54 or a Constellation.

4. Some reports describe two tabs, located at the rear and symetrical about the ~~line~~ axis of flight motion.

5. Flights have been reported, from three to nine of them, flying good formation on each other, with speeds always above 300 knots.

6. The discs oscillate laterally while flying along, which could be snaking.

Special Agent [redacted] of the Liaison Section, while discussing the above captioned phenomena with Lieutenant Colonel [redacted] of the Air Forces Intelligence, expressed the possibility that flying discs were, in fact, a very highly classified experiment of the Army or Navy. Mr. [redacted] was very much surprised when Colonel [redacted] not only agreed that this was a possibility, but confidentially stated it was his personal opinion that such was a probability. Colonel [redacted] indicated confidentially that a Mr. [redacted] who is a scientist attached to the Air Forces Intelligence, was of the same opinion.

Colonel [redacted] stated that he based his assumption on the following: He pointed out that when flying objects were reported seen over Sweden, the "high brass" of the War Department exerted tremendous pressure on the Air Forces Intelligence to conduct research and collect information in an effort to identify these sightings. Colonel [redacted] stated that, in contrast to this, we have reported sightings of unknown objects over the United States, and the "high brass" appeared to be totally unconcerned. He indicated this led him to believe that they knew enough about these objects to express no concern. Colonel [redacted] pointed out further that the objects in question have been seen by many individuals who are what he terms "trained observers," such as airplane pilots. He indicated also that several of the individuals are reliable members of the community. He stated it is his conclusion that these individuals saw something. He stated the above has led him to come to the conclusion that there were objects seen which somebody in the Government knows all about.

Mr. [redacted] pointed out to Colonel [redacted] that if it is a fact experimentations are being conducted by the United States Government, then it does not appear reasonable to request the FBI to spend money and [illegible] time conducting inquiries with respect to this matter. Colonel [redacted] stated that he agreed with Mr. [redacted] in this regard and indicated that it would be extremely embarrassing to the Air Forces Intelligence if it later is learned that these flying discs are, in fact, an experiment of the United States Government.

Mr. [redacted] subsequently discussed this matter with Colonel L. R. Forney of the Intelligence Division of the War Department. Colonel Forney stated that he had discussed the matter previously with General Chamberlin. Colonel Forney indicated to Mr. [redacted] that he has the assurance of General

National Investigations Committee On Aerial Phenomena

Form: 97 Initial Report
Date: Thurs, 30 May 2007, 11:13:23 -0500
From: Larry Fawcett and Barry Greenwood <uhrhistory@comcast.net>

Subject: Intrusions at Loring AFB - 1975

Source: Clear Intent, 16-26
To: nicap@insightbb.com

On October 27, 1975, security personnel assigned to the 42nd Security Police Squadron, Loring Air Force Base, Maine, were on duty in the munitions storage area, positioned on the northern perimeter of the flight line. Nuclear weapons were stored there in igloo-type huts covered with dirt to camouflage them from aircraft flying in the air corridors above. The dump is more than a half mile long and is surrounded by a twelve-foot-high chain-link fence with barbed wire on top. The area in and around the dump is patrolled day and night by the 42nd Police with K-9 patrols and manned vehicles. It is a highly restricted location, both on the ground and in the air.

At 7:45 P.M., Staff Sgt. Danny K. Lewis of the 42nd Police was on duty at the dump when he spotted what he thought was an aircraft flying at low altitude along the northern perimeter of Loring. Lewis watched as the unknown aircraft penetrated the perimeter at an altitude of approximately 300 feet. From his location, Lewis could see a red navigation light and a white strobe light on the craft.

At about the same time, Staff Sgt. James P. Sampley of the 2192nd Communications Squadron, who was on duty in the control tower, observed the unknown aircraft on the tower radar screen. Its position was approximately ten to thirteen miles east-northeast of the base. Numerous attempts were made to radio the aircraft for identification and to advise it that it was entering a restricted area over the base. All communication bands, military and civilian, were used in an attempt to contact the unknown aircraft, but without results. The unknown aircraft began to circle, and at one point

16

it came to within 300 yards of the nuclear storage area at an altitude of 150 feet.

At the storage area, Lewis notified the Command Post of the 42nd Bomb Wing that an unknown aircraft had penetrated the base and was within 300 yards of the weapons area. The commander of the 42nd Bomb Wing implemented a Security Option 3 alert, which brought the base up to major alert status. The Command Post called the tower and requested a radar tract on the unknown. At 8:45 P.M., Sgt. Grover K. Eggleston of the 2192nd Communications Squadron was on duty at the tower when the call from the Command Post came. He began observing the unknown aircraft. Six minutes later, while watching the radar screen, Eggleston noted that the unknown craft appeared to be circling approximately ten miles east-northeast of the base. This action lasted for forty minutes when, suddenly, it disappeared from the screen. Either the object had landed, or it had dropped below the radar coverage.

The Wing Commander arrived at the weapons storage area seven minutes after the initial sighting was made. Immediately, other units of the 42nd Police began pouring into the area. Security vehicles with blue flashing lights were converging from all over the base. Through the Loring Command Post, the Wing Commander requested fighter coverage from the 21st NORAD Region at Hancock Field, New York, and the 22nd NORAD Region at North Bay, Ontario, Canada. However, fighter support was denied by both regions. The Wing Commander then increased local security posture and requested assistance from the Maine State Police in trying to identify the unknown craft, which

they presumed was a helicopter. A call was made to local flight services for possible identification, without results.

The 42nd Security Police conducted a sweep of the weapons storage perimeter inside and out. An additional sweep was made of the areas that the craft had flown over. All actions produced no results. The craft broke the circling pattern and began flying toward Grand Falls, New Brunswick, Canada. Radar contact was lost in the vicinity of Grand Falls bearing 065 degrees, twelve miles from Loring. Canadian authorities were not notified.

No further unusual events occurred throughout that night. Priority messages were sent to the National Military Command Center in Washington, D.C., the Chief of Staff" of the U.S. Air Force, the USAF Forward Operations Division at Fort Ritchie, Maryland, and Strategic Air Command headquarters at the 8th Air Force and the 45th Division informing them of what had taken place. The base remained on a high state of alert for the rest of the night and into the early morning hours of October 28.

Could the unknown have been an aircraft that had strayed off course? Then why, when it was challenged by the tower, was there no response? Most pilots carry charts that show the restricted areas they cannot fly over. Why did the unknown circle at low altitude over the weapons storage area? Was this a one-time incident? Would it happen again? Probably all these

questions were pondered while teletypes were sent, briefings were held, and phone calls were made.

The unknown craft was thought to be a helicopter because of its flight characteristics. It hovered at times and dropped straight down below radar sweeps, and its size was similar to that of a helicopter. Little did the baffled observers know that this was only the beginning of a series of events that would take place over the next few nights, not only at Loring, but at other SAC installations along the northern tier bases and surrounding area.

On October 28, 1975, at 7:45 P.M., Sgt. Clifton W. Blakeslee and Staff Sgt. William J. Long, both assigned to the 42nd Security Police Squadron, were on duty at the munitions storage area. Along with Sgt. Danny Lewis, both Sgts. Blakeslee and Long spotted what appeared to be the running lights of an aircraft approaching Loring Air Force Base from the north at 3,000 feet. The aircraft did not come closer to Loring than about three miles at this time, and it was observed intermittently for the next hour. On first spotting the craft, Sgt. Lewis called the Command Post and advised it that the unknown craft had returned to Loring. Lewis reported that he could see a white flashing light and an amber or orange light. Once again, the Commander, 42nd Bomb Wing responded. Rushing to the area of the storage dump, he observed the unknown craft. He reported seeing a flashing white light and an amber-colored light on the object also. The speed and movement in the air suggested that the craft was a helicopter. From 7:45 P.M. to 8:20 P.M., it was under constant observation, both visually by the personnel in the storage area and electronically by the control tower radar, which showed the craft at a position three miles north of the Loring perimeter.

The unknown craft would appear and disappear from view, and, at one point, appeared over the end of the runway at an altitude of 150 feet. The object subsequently shut off its lights and reappeared over the weapons storage area, maintaining an altitude of 150 feet.

At this time, Sgt. Steven Eichner, a crew chief on a B-52 bomber, was working out of a launch truck along with Sgt. R. Jones and other members of the crew. Jones spotted a red and orange object over the flight line. It seemed to be on the other side of the flight line from where the weapons storage area was located. To Eichner and Jones, the object looked like a stretched-out football. It hovered in midair as everyone in the crew stared in awe. As they watched, the object put out its lights and disappeared, but it soon reappeared again over the north end of the runway, moving in jerky motions. It stopped and hovered. Eichner and the rest of the crew jumped into the truck and started to drive toward the object. Proceeding down Oklahoma Avenue (which borders the runway), they turned left onto the road that led to the weapons storage area. As they made the turn, they spotted the object about 300 feet in front of them. It seemed to be about five feet in the air and hovered without movement or noise. Exhibiting a reddish-orange color, the object was about four car lengths long. Eichner described what he saw next:

> The object looked like all the colors were blending together, as if you were looking at a desert scene. You see waves of heat rising off the desert floor. This is what I saw. There were these waves in front of the object and all the colors were blending together. The object was solid and we could not hear any noise coming from it.

They could not see any doors or windows on the object nor any propellers or engines which would keep the object in the air. Suddenly, the base came alive. Sirens began screaming. Eichner could see numerous blue lights on police vehicles coming down the flight line and runway toward the weapons storage area at high speed. Jones turned and said to the crew, "We better get out of here!" They immediately did. The Security Police did not try to stop them. Their interest was in the object over the storage dump, not in the truck which was in a restricted area. The crew drove the truck back to its original location and watched from there. The scene at the weapons storage area was chaotic, with blue lights rotating around, and the vehicles' searchlight beams shining in all directions.

The men in the crew decided not to report what they had seen, because they had entered a restricted area and could have been arrested for the violation.

The object shut off its lights and disappeared, not to be seen again that night. The 42nd Police conducted a security sweep of the weapons storage area inside and out, with no results. Radar had once again briefly tracked the object heading for Grand Falls, New Brunswick, finally losing the unknown at Grand Falls itself.

Priority messages were sent to the National Military Command Center in Washington, the Chief of Staff of the Air Force, the Air Force Forward Operations Division at Fort Ritchie, Maryland, SAC Headquarters, and the 9th Air Force, 45th Division, advising them that an unknown object had penetrated the base and had been in the nuclear storage area.

Because of the activity of the previous two days, Col. Richard E. Chapman, Commander of the 42nd Bomb Wing, had requested air support in the form of a National Guard helicopter and crew that was currently located at Loring. He wanted to be ready in case the intruder returned on the night of the twenty-ninth. This request was sent through military channels and was approved with the following constraints: The helicopter was to be used for tracking and identification only; apprehension by U.S. personnel was not authorized. There was to be no crossing of international borders, and only U.S. personnel, preferably military, but including the FBI, FAA, and Border Patrol representatives, if necessary, could be on board the National Guard helicopter.

Orders were given to place the helicopter and crew on "Full Time Training Duty." This, in essence, federalized the National Guard helicopter.
Brig. Gen. C. D. Roberts, USMC, Deputy Director for Operations, National Military Command Center, established a conference call with Major General Burkhart at SAC and Chapman, informing them of their approval

to use the helicopter. With the constraints, Chapman stated that there was no point in using the helicopter if it couldn't cross the border. Brig. Gen. Roberts notified Major General Sniffin, Director of Operations, DCSOPS (Deputy Chief of Staff for Operations and Plans) of the border-crossing issue. Permission to cross was requested of Canadian officials and subsequently was granted.

Sniffin called Roberts to inform him that permission had been granted to cross the border. This, in turn, was relayed to Col. Chapman at Loring. At 7:00 A.M., Col. Al White of the 112th Army National Guard Medical Company (Air Ambulance) in Bangor, Maine, ordered one UH 1 (Huey helicopter) to Loring with Chief Warrant Officer Bernard Poulin and Chief Warrant Officer Eugene E. Herrin aboard. After being told that their mission was secret, they were ordered to report to Col. Chapman.

On August 27, 1982, Bernard Poulin was interviewed by Larry Fawcett. His recollection of his mission was as follows:

> Upon our arrival at Loring AFB, we were briefed by the Wing Commander, Col. Richard Chapman. We were

> informed that all the sightings of this craft or whatever you want to call it had been late night or early morning. We launched the next morning. Aboard my helicopter were one member of the Canadian Royal Mounted Police, one member of the Maine State Police, and several Air Security police officers. The Air Police had a radio in the back of the helicopter and when the reports of the intruder started to come in, they would direct me to the location in which the object was seen. The reason the Maine State Police and the Canadian Police were aboard was that there had been a lot of drug operations going on in the area, and the powers to be thought that this is what was occurring at the base, but this never panned out, to the best of my recollection.
>
> Well, we were launched on the first search mission after ground personnel started to see or hear the, quote, if you will, "UFO" go by. So, we would launch, and I believe that we were in the air for around 40 minutes looking for this thing, with the idea that it was a rotary-type craft we were searching for. We were vectored in by ground personnel to different spots on the base where the ground personnel were seeing or hearing it. All this time we were being tracked by base radar [traffic control radar which is designed to pick up aircraft], and radar was not painting the object that was being reported. Ground personnel would call and say the object is at this location, but radar would not pick it up.
>
> Well, anyway, we hunted around, and we didn't see anything. Again they would call and say they could hear it at a location, and we would go there, but could not see it. We would then shut down and wait for the next call. And that went on for a couple of nights. This, again, was early evening or early in the morning. I can recall on the second night of the mission radar picked up a return, but it turned out to be a KC-135 tanker returning from overseas.

Poulin was asked: "According to some of the documents, personnel on the ground were reporting that at times you would bring your craft within 100 feet of the intruder, yet you could not see it?" He answered:

> Yes, well, we could go real low to where they said it was and would turn on our search light and sweep the area with the light, but we never saw the craft. After it was over, we discussed our mission. The powers to be were quite concerned about what was going on and if we were able to see anything. They maintained all along up there, you know, those are pretty sensitive places and they have to know what the hell was going on.

When they arrived at the base, the security lid was on so tightly that both pilots were permitted to call their wives only once to say that they were on a mission. In a meeting with Chapman, Poulin recalled the Commander saying, "We've got to keep the lid on the fact that someone has been able to penetrate in and around the bomb dump, and we don't know what's going on. We've got to find out what is going on and prevent it from happening again."

At Loring, additional manpower was armed and ready for deployment. The Security Police Battle Staff was to be manned at Central Security Control. An additional two-man mobile patrol was assigned to the weapons storage area during the hours of darkness, while a ten-man reserve force was standing by, ready for deployment. A two-man patrol would be positioned at key vantage points about one mile north of the base for added surveillance. An SAC/SP message informed northern tier bases of the situation and recommended a "Security Option Three" alert all along the U.S.-Canadian border.

The message went to Pease AFB in New Hampshire, Plattsburgh AFB in New York, Wurtsmith AFB in Michigan, Kinchloe AFB in Michigan, Sawyer AFB in Michigan, Grand Forks AFB in North Dakota, Minot AFB in North Dakota, Malmstrom AFB in Montana, Fairchild AFB in Washington, and Barksdale AFB in Iowa. The subject-identifying line of the message was "Defense Against Helicopter Assault," and it read:

> The past two evenings at one of our northern tier bases, an unidentified helicopter has been observed hovering over and in the near vicinity of the weapons storage area. Attempts to identify this aircraft have so far met with negative results. In the interest of nuclear weapons security, the action addresses will assume Security Option 3 during hours of darkness until further notice. Actions also should be taken to re-establish liaison with local law enforcement agencies that could assist your base in the event of a similar incident. Bases should thoroughly

review and insure all personnel are familiar with actions to take in association with the helicopter denial portion of your 207-xx plan.

On October 30, the Maine National Guard helicopter was replaced by a USAF helicopter and crew from Plattsburgh Air Force Base.
The following evening there were several reports of unknown objects suspected to be helicopters, at distances varying from directly over the base to 10 nautical miles northeast of the base. Some reports were confirmed on RAPCON radar with altitudes between 300 and 5,000 feet.

Additional, sporadic reports of helicopters continued well into December, though many of these were subsequently identified as normal helicopter traffic. In these reports, however, a distinction was drawn between the October sightings and later reports: Robert Fauk, Deputy Chief Patrol Agent with the U.S. Border Patrol, said he felt that an alleged helicopter report of November 18 was not the "Midnight Skulker of Loring." He added, "This craft was too slow and too small to be the craft they had problems with at Loring."

Two days before, Caribou police received telephone calls at 1:30 A.M. and 2:00 A.M. from an unnamed woman reporting bright, glowing lights that changed colors. Before long, reports came in from, among others, four Caribou police officers, one state Civil Defense officer, three Aroostook County deputy sheriffs, on-duty personnel at Loring, and several police officers from the communities of Limestone and Fort Fairchild. Descriptions were vague, but involved mainly blinking green and red lights and, in at least one instance, an exhaust or smoke emission.

After the woman's 2:00 A.M. call had come in, Officer Paul B. Michaud was on duty at the Caribou police station desk. He said, "When she first called, I thought she was seeing things or looking at the moon, but when I went out and looked, it was there."

"There was a real bright light. It hovered for a long time," Michaud said. He monitored the object for some time after. Referring to the original woman caller, Michaud said, "She called back about a half hour later and wanted to know what we were doing about it. She called back again. She probably stayed up all night."

Michaud was quite emphatic about his opinion of the object. "I'm twenty-eight years old, and I never saw anything like it. I don't believe in flying saucers or anything like that, but I don't know what that was."

An interesting addendum to this report is the fact that an airman at Loring told Caribou police that an unidentified object had briefly appeared on a radar screen and was located about fifteen miles across the border into Canada. Yet several days later, Lt. Robert Barca, Loring's Assistant Information Officer, said that his office was not too sure where the information came from, but a recheck showed Loring's radar screen did not track "the thing," according to reporter Christopher Spruce of the Bangor Daily News.

On October 12, 1982, Larry Fawcett interviewed Dean Rhodes, who, at the time of the overflights at Loring, was the reporter for the Bangor Daily News covering the story. During his investigation of the overflights, Rhodes traveled into Canada to check the possibility that the objects seen had originated from the Canadian side of the border.

He went to the airport in Grand Falls, New Brunswick, and spoke to pilots who were familiar with helicopters. No one there could shed any light on who or what had flown over Loring. A friend of Rhodes in the town of Van Buren, Maine, near the border, seemed convinced that this "helicopter" had come from a construction site located in the St. Johns Valley. Rhodes

questioned people at that site, including workers who would have known about the usage of a helicopter. They stated that no helicopter flights went into Maine at any time and no one knew of anyone owning such a vehicle in the area.

When Rhodes checked with the FBI in Boston, he was told that the aerial intrusions over Loring remained under investigation and that they had no idea as to who was responsible. A later Freedom of Information request was filed by the authors with the Boston FBI office, asking for documents concerning the identity of the object. The FBI completely denied any knowledge of the craft or who may have been responsible for the flights.

The Royal Canadian Mounted Police (RCMP) also responded similarly to inquiries about the object.

Rhodes checked with the U.S. Customs office at the Limestone border station and learned that a Customs officer, John J. Stedman, saw a light to the east around 1:30 A.M. Its maneuvering caused Stedman to tentatively identify it as an aircraft, probably a helicopter. Stedman saw what appeared to be a single white landing light and noted "vertical and horizontal movement." He estimated the altitude at about 5,000 feet. Rhodes learned that an RCMP officer who viewed the object from Stedman's border point said he didn't think the object was moving. "It was more than a mile and a half inside Canada, because from the TransCanada Highway, it still was quite a distance away. The TransCanada Highway lies more than a mile and a half inside the border. The officer said he had thought the object was more like a heavenly body than an aircraft."

According to confidential RCMP reports, the object was spotted over Grand Falls, New Brunswick, each time it was seen at Loring. When asked how the object was detected, RCMP Superintendent G. E. Reid said he would just "like to leave it as it is." An RCMP investigation of the Grand Falls incident was conducted, but no details were ever released.

On October 31, 1977, The National Enquirer sent a series of questions to the Secretary of the Air Force about the Loring incident, among other events. The questions, with the Air Force's answers are as follows.

> Reference mystery helicopters flying over Loring, Wurtsmith, Minot, October 27,29, and 31, and November 7,8,9, and 19,1975. Some over the weapons storage areas:
>
> 1. Were they identified or traced?
> A. No, the overflights were not identified as helicopters. Unsuccessful attempts were made to trace the sighted craft.
> 2. Was it ever definitely established that they were helicopters, or was this
> an assumption made based on sound, light, etc? A. No. The helicopter assumption was based on the sound and light perceptions
> of the eyewitnesses.
> 3. Were there any markings on any of the aircraft? A. No markings were identified.
>
> 24 Intrusions at Loring
>
> 4. Did they appear to be any known type of helicopter?
> A. Type of aircraft could not be identified due to limited visibility.
> J. How is it possible that any unidentified craft can get inside an AFB without
> being detected? A. On the dates in question the unidentified aircraft entered the airspace of
> each base at night and were detected.
> 6. Is there any explanation why OSI agents and others aboard could not see the intruding copter when people on the ground could see both the chase copter and the intruder?
> A. No explanation of this occurrence has been postulated.
> 7. Why was no attempt made to contact the copter by radio? A. Unknown.

Note the comments here. While the former public stance had been "helicopters," (as was also stated to Loring base personnel), suddenly the objects "were not identified as helicopters." No markings were identified nor could the type of aircraft be identified. And the objects could not be tracked with any certainty. Then, what was seen? Answer: Unknown!

According to an Air Force Office of Special Investigations (OSI) teletype dated October 29, 1975, Loring had been through this experience before. The teletype says briefly, "This incident closely parallels a similar helicopter sighting earlier this year." However, in a letter dated April 21, 1977, titled "Overflight of USAF Installations by Unidentified

Aircraft," OSI states: "AFOSI files revealed no record of the overflight of Loring AFB, ME (LAFB) in Jan. 1975 as reported in referenced letter." The referenced letter is one written on March 31, 1977, by Col. Richard Chapman, Commander of the 42nd Bomb Wing at Loring, certainly one source who would know about the earlier incident. What was so sensitive about the January 1975 overflight that OSI denied any knowledge of it, even in the face of the Loring Commander's statement? The authors have been unable to obtain further details about this affair, but it adds one more piece to a puzzle of mystery.

Yet more evidence of the strange nature of the Loring intruder followed. A paralegal aide in Washington, D.C., Robert Kinn, responded to a story about the Loring sightings in the Washington Post of January 18, 1979. Kinn said that he and another student attended Bowdoin College during 1975. One night in October, when all the activity occurred at Loring, Kinn and his friend were near the Brunswick, Maine, Naval Air Station. According to Kinn, "It came in very low, at treetop level from the ocean. It was like a helicopter, but different. More than twice the size of a normal helicopter. It had red lights and a white light. It would make ninety-degree turns and fly very fast."

"The base lighted up like a Christmas tree. There were trucks going every which way. It stayed over the base for five or ten minutes and then scooted over the Atlantic."

"We thought it might have been a vertical takeoff plane. We could tell it was not a normal helicopter," Kinn said. He added, "Both of us associ-

ated the sighting with a UFO activity; the excitement on the base was way out of the usual."

Could the Brunswick Naval Air Station UFO be the same object as that which was seen at Loring? According to a spokesman for the station, there had been no UFO sightings at the base for eight years. A vertical takeoff plane was stationed at Brunswick at the time, but there was no evidence linking it to the UFO sighting.

Occurring on the same day as the first Loring report (October 27) was the experience of David Stephens. We present this case, with little comment, as possibly having some relation to the other sightings. We find no evidence that the witnesses knew anything about the intense activity in Maine at the time. Indeed, the story was reported in the Lewiston Daily Sun on October 28, only a day after the first Loring report and fully two days before the first Loring press notices.

During the morning of October 27, Stephens, twenty-one years old, and a roommate, Glen Gray, eighteen, were listening to records in their trailer in Norway, Maine. Suddenly, a loud bang was heard. Both men went out to see what happened, but found nothing.

Later, Stephens and Gray decided to go for a ride in their 1968 Plymouth to kill time. They headed south on Route 26 toward Lake Thompson in Oxford, Maine. After traveling a quarter of a mile, they claimed that an "unknown force" wrenched the wheel of the car away from them. According to Stephens, "The car automatically turned. From then on, we couldn't control it."

As it developed, the car traveled well over a hundred miles per hour, over a distance of eleven miles to a field at Poland, Maine. It was here that they noticed two bright lights in a field. They thought that these were the lights on a truck, but shortly after they saw them, the lights began to rise, giving the impression of a helicopter.

Whatever it was, it rose above the trees adjoining the field and swerved silently in front of their car. The object was cigar-shaped, with red, green, and blue lights on the side, and about the size of a football field. The men, very frightened, drove away. After going a quarter of a mile, they noticed that the two bright lights on the object went out and another very bright light suddenly struck their car, causing Stephens and Gray to black out. They woke up after what they supposed was five minutes. It turned out that hours had apparently passed.

They started driving, only to lose control again and unwillingly drive to Tripp Pond. The huge UFO was there waiting. Two other domed, saucer-shaped objects were seen cavorting in the sky above the pond. The two saucers then skimmed

low over the pond and released a gray smoke which surrounded the car. The men saw the large UFO high in the air through the smoke. Suddenly, all of the objects and the smoke disappeared. Dawn broke shortly after.

2C Intrusions at Loring

Both men drove home and discovered a variety of physiological effects. Their hands and feet were swollen. Teeth were loose. Red rings had appeared around their necks, and they had severe chills. The next night they phoned the sheriff, who turned out to be very skeptical of the report when he came out to visit the men. Who could blame him!

Later, during December and January, Stephens met with Dr. Herbert Hopkins of Old Orchard Beach, Maine, who put him through eight sessions of hypnotic regression to discover details of the missing time. An even more unusual story came out.

Stephens recalled his car moving sideways, and the next thing he knew, he was inside the large UFO, standing in a dome-shaped room. A humanoid creature entered the room. According to Stephens, "He was four and a half feet tall, dressed in a dark robe. His head was shaped like a big light bulb. He had slanted eyes, no hair, and no mouth." Stephens was told he wouldn't be harmed.

He entered another room with five other entities standing around a long table. They asked Stephens to get up on the table and prepare for an examination. Stephens resisted and struck one of the creatures, without effect.

Stephens next found himself on the table being examined with a small, square machine with an extension arm and a probe on the end. The machine had many dials and lights on it. With it, the entities took skin and nail samples, hair and blood, and a button off Stephens' jacket. He was injected with a brown fluid which acted like a sedative. They said it wouldn't hurt him.

Stephens woke up after an undetermined time in his car next to Gray. The car was facing an oak tree. At might be expected, no one believed Stephens' extraordinary story, but he was fully convinced, along with Glen Gray, that it did happen.

We should add that while no solid evidence exists to substantiate the story by itself, several curious factors appear. First, the account coincided with the first outburst of sightings at Loring. Second, the Stephens' sighting location was less than forty miles from the Brunswick Naval Air Station, scene of the Kinn report. Third, Stephens and Gray described their UFO at first as looking like a helicopter, again like the Loring and Brunswick reports.

This string of events in Maine turned out to be merely the tip of the iceberg in a nationwide UFO blitz which received remarkably little media attention at the time.

Subject: UFO Circles Weapons Storage Area

Loring AFB, ME
October 27, 1975

NMCC Documents (6) (Fran Ridge files)

Although it is no longer an active Air Force Base today, in 1975 Loring AFB was a Strategic Air Command Base and a storage site for nuclear weapons. The nukes were stored in a fenced weapons dump consisting of small huts covered with dirt for camouflage from the air. It was patrolled day and night by the 42nd Security Police Squadron.
