A tube train??

Well, all I can say is that Groom lake must have one immensely large budget, underground rail systems cost about 2.5million dollars per mile. Not forgetting the fact that a private sector construction group would have to have built it.

The engineering involved in this kind of construction besides being beyond the abilities of standard military is complex and involves a large number of men.

It would also have taken a long time to do.

If someone was serious about tracking down the existence, look at old area photographs for signs of severe soil disturbance, excess water in areas, (these are all signs of underground construction) and most importantly an entrance! :)
