Subject: Thomas Townsend brown site
Date: Tue, 4 Feb 1997 01:49:57 GMT

Early last year the T. Townsend Brown family contracted Optical Multimedia (a small, discrete web site designer/host) to build an internet site dedicated to T. Townsend Brown. The purpose of this site is to be a clearinghouse of documents, pictures, letters, etc. associated with, and by, T. Townsend Brown. The contents are meant to be a representative cross-section of his work in electrogravitics, petrovoltatics, etc. Much of the material has, to this point, been relatively unavailable to the general public, including the Winterhaven and Xerxes documents.

If you are not familiar with his work, T. Townsend Brown was a leader in high voltage electrostatic apparatuses which apparently used localized graviational fields. His work was very controversial due to the possible connection between his work and what is believed to be the method of UFO propulsion. His name is also often mentioned in the same breath as the so-called "Philadelphia Experiment."
