Subject: Nellis Insider Claims 3 Types of Craft at 51

I have recently come into contact with someone who claims to have had a tour of Area 51 which he refers to as a branch of Nellis. He said he knew a worker who got him in and gave him a tour. Because I only talked with him for a few minutes we didn't get to talk much but he seemed to know what he was talking about. He said there were basically three jets currently being tested.

- 1) The "Aurora-type Jet" - He described it as heavily swept back wings and a top speed of mach 8
- 2) A pulse jet - This has 2 engine systems, a regular jet turbine system and some kind of single top mount engine.
- 3) Flying Disk - No details given
I'm going to talk to him some more and hopefully get more info later. Yes, I avoided using his name on purpose.
