Subject: New contact for Area 51

I recently came into contact with with a man who claimed to have visited Area 51. I didn't have a chance to talk to him for very long I'll talk to him more at a later date. Here is what he told me:

There are no aliens at Area 51, it is a Black Project Jet building facility. He referred to it as a "Branch of the Nellis Range" which I find interesting. He told me there are three projects currently underway. A pulse jet which has rides on short bursts of a strong engine possibly with a second system also. The "Aurora" Type jet, with high sweptback wings, it has a top speed of mach 8, and finally the "Flying disk" it is capable of extreme manuevors. It appears that all three have a problem with radiation which leads me to believe that they run on some kind of nuclear propultion. He also told me that no piolet was allowed to fly the crafts for long periods because of this problem. If you have a question for him E-mail me and I'll pass it on. If anyone can verfiy this information it would be greatly appreciated.
